DEMONS AND SPIRITS (Coptic).—The beliefs of the Coptic Christians on the subject of demons and spirits were derived from those of their pagan predecessors in the Græco-Roman period (see 'Egyptian' art. below), and show interesting traces of Gnostic influence. In spells to ward off the attacks of devils the designations of the sons are given, and the mysterious magical names of the spirits are recited, confused in true Gnostic fashion with the Hebrew appellations of the Deity. Here is a typical invocation :

'Pantokrator Iaō Sabaōth Mōneous Soneous Arkēous (?) Adonai Iaō Elōi, who is in the Seventh Heaven and judgeth the evil and the good : I conjure thee to-day, thou that providest for me the twenty thousand demons which stand at the river Euphrates, beseeching the Father twelve times, hour by hour, that He give rest unto all the dead.'

Here we have the Gnostic spirit Iaō confused (naturally enough) with the Deity (Jahweh), but he is not the Deity who is appealed to later on as 'the Father.' However, Iaō Sabaōth in Coptic spells is hardly to be distinguished from the Deity. Good spirits are invoked as

'ye who are upon the northern and eastern sides of Antioch. There is a myrtle-tree, whose name is the Achelousian (*sic*) lake which floweth from beneath the throne of Iaō Sabaōth.'

This is a very curious confusion of classical Hades-allusions with the Gnostic-Christian throne of Iaō-Jahweh. For the rest, it is the usual gibberish of the medicine-man. The names of the Deity and those of the angels are often confused : Emmanuel appears as the name of an angel, with Tremouel and Abraxiel ; the last has a very Gnostic sound.

Chief among the good spirits were, of course, the archangels—sometimes four, sometimes seven : 'those who are within the veil' (*καρὰ τὴν αἴθρα*). Each man had a guardian angel, who specially protected him against evil. With the angels are invoked also the cherubim and seraphim, and the four-and-twenty elders, and even the four beasts that uphold the throne of the Father. These were all conceived as objective spiritual beings, to be invoked in prayer against evil. The names or descriptions of the spirits had to be known, or they could not be invoked : some appear named after the letters of the alphabet, others are merely 'those who come up with the great stars that light the earth.' This is a very old Egyptian touch, and reminds us of the ancient dead who were thought to walk among the stars, the *akhmu-sek*.

Among the evil spirits we find, of course, Satan, whose name in one case is Zēt—an interesting survival of the name of the old Egyptian Typhonic god Set. Fate (*Μοῖρα*) seems to occur as an evil demon. Disease was thought to be largely due to the attacks of devils, and especially so in the case of epilepsy. It has been conjectured, with probability, by Crum (*Catalogue of the Coptic MSS in the British Museum*, 1905, p. 253, n. 9) that the name *ἐπιληψία* has been corrupted into the name of a female demon, Aberselia, Berselia, or Berzelia, who appears in an Ethiopic transcription as Werzelyā. Berselia was apparently regarded as a flying vampire, and classed in Coptic vocabularies as a kind of bird. A demon of the mid-day heat appears in the Ethiopic versions of the 'Prayer of S. Sisinnius,' with the 'Werzelyā' mentioned above (references in Crum, *loc. cit.*).

Magical charms (*φουλακτῆρια*) against the attack of demons were common enough. They were usually written on slips of parchment and enclosed in a little leather box, generally tied to the arm or, no doubt, hung about the body just as the modern charm of the Egyptian *fellāh* is worn. The contents are usually vague invocations, as has been seen. One of the finest is the MS Or. 5987 of the British Museum (published by Crum,

op. cit. 1008), from which excerpts have been given above. Cf. art. CHARMS AND AMULETS (Abyssinian).

The usual Coptic word for a demon or spirit, good or evil, is *īḥ*, which is the Old Egypt. for a good spirit. The term *hik*, for an evil spirit, which is the same as Old Egypt. *hekau*, 'magic' or 'enchantment,' occurs occasionally. The appellation *refšaar*, 'sunderer,' 'divider,' is a tr. of the Gr. *διάβολος*, which is itself often used in Coptic. For 'angel' the Gr. *ἄγγελος* is used.

LITERATURE.—In addition to that cited in the text, see list of authorities appended to art. CHARMS AND AMULETS (Abyssinian).

H. R. HALL.

DEMONS AND SPIRITS (Egyptian).—1. Scope of the article.—The delimitation of an investigation on the subject of demons and spirits presents no little difficulty in religions which are of so distinctly animistic a character as those of Egypt. In the first place, we cannot divide the subject and study angelology and demonology separately, because spirits are never good or bad by constitution or in their origin ; this aspect is of relatively secondary formation or date (see DUALISM [Egypt.]). In the second place, the various kinds of demons or spirits of the dead, although in very many cases their characteristics, powers, attributes, and dwelling-places are identical with those of the other spirits, really belong to a different category from the latter (see below, § 9 ; and cf. art. STATE OF THE DEAD [Egypt.]). Lastly, with such a vast array of demons, properly so-called, as we have in Egypt, a short account like the present can give only the general characteristics, while, as to particular personifications, it can mention only the principal ones whose active and definite rôle is witnessed to by texts or representations. In a world in which all beings and objects possess a 'demon' or 'demons,' we must confine our attention to those which are of special importance in the life of the gods or of men.

2. Pre-historic demons and spirits.—Our information on the earliest period is preserved in the earliest texts (numerous chapters of the Book of the Dead), some of them going back even to pre-historic times (as the funerary chapters of the proto-Theban coffins, certain parts of the celebrated ritual of 'the opening of the month,' and especially the Pyramid Texts). The chief demons and spirits in these are called sometimes *biu*, sometimes *khui* (see below). The meaning of the special terms by which they are designated is very difficult to state accurately. Of the significance of such terms as *afau*, *utenu*, and *ashmu*, we must admit that as yet we have no precise knowledge. The passing allusions in a very few texts seem to indicate that they were conceived under the form of 'devouring spirits,' troops of monkeys, lizards, and hawks. These are, in any case, survivals of the most ancient periods. The same is true of the jackal-demons (Pyramid of Pepy II., line 849). The higher and lower 'Beings of Sit' lead us to suppose a classification of spirits into heavenly and earthly. The *rokhitu* are, according to the texts, both spirits full of wisdom and personifications of the powers opposed to (and vanquished by) Egypt or the gods of Egypt. There is much discussion as to the best translation of this word. The present writer thinks that the French word *malin*, 'mischievous,' might be taken as an exact equivalent of the Egyptian term with its double meaning. The *urshu* play a somewhat more definite part of 'watchers.' They are bands of demons who watch, lie in wait for, keep their eyes upon. This function has followed naturally from the ordinary evolution of meaning : from having simply designated an individual characteristic, neither good nor bad,

it has become a protective function of a specially determined group of men or a locality, heavenly or earthly. The *hunmamit* are often mentioned; they even figure in a number of representations that have not yet been noticed—if, as the present writer suggests, it is indeed figures of these spirits that are carved on several parts of the sacred furniture (tabernacles, shrines of the sacred barque, supports for vases or utensils of worship), represented in a number of temple bas-reliefs and in frescoes of Theban tombs. They have hardly ever been studied, except by Budge (*Gods of the Egyptians*, i. 159), who quotes, without approving, the view that they are the great flock of souls of future generations. This view does not seem sufficiently borne out by the texts. The *hunmamit* of the primitive cults seem rather to have been swarms of spirits of a beneficent character, in the sense that they watched over the safety of the sun, at the time when the religious world consisted of innumerable bodies of spirits and an impersonal sky-god with no precise attributes, and when the various heavenly bodies (even the most important ones, like the sun) were entrusted to the care of spirits, who directed their movements, defended them, repulsed their enemies, etc. In the historical period, the power and individuality of the gods proper were detached from the mass of spirits, and left a more and more vague rôle to all the demons of this category. The *hunmamit* are also often confused, in the Theban texts, with the sun's energy, and are, it would appear, its effluences or rays. Some also become angel-choirs, traditional accessories, and practically a simple *motif* of ornamental symbolism attached to certain objects of ritual and worship. They may be compared, from this point of view, with various angels and spirits of Oriental angelology, such as, e.g., the cherubim (*q.v.*).

An important class of demons is made up of the 'spirits' (*biu*) (1) of Pu and Dapu, (2) of the East and the West, (3) of Khimunu, (4) of Nekhen, and (5) of Heliopolis. The polytheism of the historic period reduced these spirits also to the rôle of simple attendants, who hailed the sun when it rose (or the king on his coronation, etc.), carried the litters of the Divine *bâri*, and performed other humble or vague functions (see below). Theology has made several attempts to assimilate them to secondary gods of the pantheon with proper names (e.g. Book of the Dead, 'Chapters on knowing the *biu* of . . .'). These explanations at least enable us to reconstruct several of the phases of their original function, of which the geographical symmetries (earthly or heavenly) are a survival. These demons were once the guardian genii of the geometrical divisions (two or four) of the universe; they supported the mass of the firmament at its extremities, and welcomed or destroyed the souls of the dead as they arrived at the borders of the earth. Their stellar rôle also seems to have been considerable; they inhabit certain constellations, or the sanctuaries on earth that are the magical counterparts of those regions of the heavenly sphere. Sometimes they inhabit a special region of the firmament (e.g. the *biu* who inhabit, in the territory of Heliopolis, the 'Abode of the Combatant,' the magical representation of this celestial abode); sometimes they escort certain heavenly bodies (stars or planets), whose guardians they are, across the vault of heaven. Polytheism makes these bodies divine persons, and reduces them to the position of devotees of the sun. Finally, theology confuses them more and more with the various 'souls' of the gods, employing the evolution in meaning of the word *biu* itself. A great number of these spirits are classed together under the vague title of 'followers of

Hor,' whence the priesthood deduced more and more lofty funerary meanings in relation to the lot of the dead.

The historic period, however, preserves a fugitive rôle for them on certain occasions of immemorial tradition, just as the material part of the cult continues to reproduce their images. The 'spirits' of the North and South become a sort of heraldic representation of the forces of the world considered as composed of two halves, or they are transformed into genii guarding the frontiers of Egypt, the sum of the whole earth. They play a part also in several incidents in the coronation of the king. Other spirits, as the 'demons' of one of the Anubis, regarded as a constellation of the Northern world (cf. Brugsch, *Rel. und Myth.*, Leipzig, 1884-1888, p. 671), perhaps the Great Bear (cf. the jackal-demons mentioned above), or as the genii of other parts of the astral world, reappear as figures in the mysterious ceremonies of the royal coronation or the jubilee (see Naville, *Festival Hall*, London, 1892, pl. ix.-xi., for specimens of these figures, whose mystical value has been very much exaggerated by modern writers). As a general rule, however, their rôle is a purely traditional one, and their exact nature does not seem to have been early understood.

Besides the innumerable representations of *biu* and *rokhitu* in statues, statuettes, bas-reliefs, frescoes, etc., several other spirits have left material traces of their former rôle in parts of sacred furniture, on which they are seen as traditional figures, symbolic or even purely ornamental. The most characteristic are certain animal figures on sacred vessels and on some of the statuettes traditionally placed on board the sacred barques used in processions to convey the Egyptian gods, in representations of their journeys in the other world. Thus the 'griffin,' which is found on the bow of all the barques of solar gods, seems to have been one of these spirits before it became confused with the 'warlike soul' of the god; and the same may be said of the birds that are placed in rows on the bow of the boat of Râ (cf. the boats of el-Bersheh), or those on the strange boat of Sokharis (a good example in the temple of Deir el-Medineh). The interpretations of these figures as the 'followers' or as the 'souls' of the god are of later date, and represent two attempts to adapt them to developed beliefs. They seem really to be a survival of the time when these groups of 'demons' had an active share in the general direction of elementary forces. The predominance of 'functional epithets' serving as collective names for the majority of these demons is perhaps one of the most significant facts in this connexion.

The whole question of these groups of spirits calls for an exhaustive study, which would yield the most ancient form of Egyptian religious thought that could be attained, and would also explain the development of forms of this kind (similar to those of certain religions of modern savage Africa) into polytheisms proper. Such a study should be joined logically with an account of primitive Egyptian religion, comprising both the animistic manifestations of all kinds of 'spirits' and the existence of a sky-god similar to the god postulated in so many parts of the continent of Africa. This vague, primordial god—who, however, has no demurgical functions whatsoever—is found in Egypt in two parallel forms, proceeding from two great local systems of mythology: (1) the sky-god Hor, and (2) the sky-goddess Nuit (subdivided even earlier into the day-sky, Nuit, and the night-sky, Naut). A foundation might be found in the data supplied for one part in the very remarkable work of Budge in his *Gods of the Egyptians* (see *Lit.*).

3. Historic period: number, aspects, forms.—The Egyptian terrestrial and ultra-terrestrial worlds are naturally peopled with an infinite number of demons and spirits. But, if we look closely, we find that this body of spirits is not so great as that of many other religions. It shows neither the abundance of the Chaldaeo-Assyrian religions or of Mycenaean demonology (see Pottier, *BCH*, 1907, p. 259), nor even the crowd of devils and spirits of Vedic religion. The number of 4,601,200 demons, given in ch. lxiv. of the Book of the Dead, is a *ἄραξ λεγόμενος* which does not correspond with any teaching or fact of any importance. As a matter of fact, ancient Egypt has not, to our present knowledge, left any of those terrible lists of demons and spirits which we find in so many other countries.

These legions of beings, generally invisible, but always provided with material bodies, are per

ceptible to men at certain times, or to those who can fortify themselves with the necessary charms and formulæ. Their size does not seem ever to have been a question of interest to the Egyptians. No text mentions giants, though one passage in the Book of the Dead speaks of demons 'twelve feet high' (ch. xliv.), this modest figure being evidently the *summun*. None of the numerous paintings of demons of the under world makes them any larger than the men or beasts of the terrestrial world, except in the case of a certain number of serpents (where, however, as a rule, we are dealing with allegorical or symbolical serpents). Nor do any of the ancient texts make allusion to extraordinary dimensions. The difference between Egyptian and Oriental religions in this respect is noteworthy.¹ Another difference also is the absence in Egypt generally of the monstrous or hideous forms which are very characteristic of the majority of demonologies known to us. Most of the demons of the 'hours of hell' are wild beasts, reptiles, lizards, human forms with black bodies (*shades* [?]); these forms are more especially the 'enemies of Râ'), or somewhat colourless combinations of animal and human forms. The demons who frequent the way to the other world in the Book of the Dead are especially serpents, crocodiles, and monkeys. (The gigantic insect *abshait* [cockroach?] is chiefly an artifice of the artist to show up the traits of this enemy of the dead.) There is only one monster—with a lion's tail, the body of a monkey (?), and the face of a bearded man—which has some claim to a terrifying appearance (Book of the Dead, ch. xxiii.). The demons of the 'seven-headed serpent' type of the Pyramids are a very unimportant exception. Finally, the fantastic animals of the desert—winged lions with hawks' heads, wild beasts with serpents' heads, with winged heads placed on their backs, etc.—are not, as we have said, *afrit*, or demons. It was actually believed that such beings existed in distant parts, as well as the lion with human head, the prototype of the Sphinx. The spirits, good and bad, attached to the celestial world, have usually the form of birds. The *rokhitu* are represented as a kind of hoopoe still existing in Upper Egypt; the *biu* have hawks' or jackals' heads—a relic of the time when they moved under the complete forms of these very animals; other *biu* are entirely birds; the *hunnamit* are either birds or men with birds' heads; and the evil demons proper, the enemies of Râ (see below) are simply serpents, antelopes, gazelles, crocodiles, or anthropoids.

4. Classes, localities, and attributes.—In the absence of demonologies composed by the Egyptians themselves, we may form a material estimate of the principal kinds of 'spirits' and their functions in *historical* Egypt from the following very condensed account, adopting the somewhat rough, but clear, classification of spirits according to the region they inhabit—the sky, the earth, the other world. This classification has the further merit of being that used in the earliest epochs by the incantation formulæ of the magicians, and there is, therefore, a possibility that it corresponds, to a certain extent, with the divisions imagined by the Egyptians themselves.

(a) *The celestial world*.—Several of the pre-historic groups already mentioned persist, but with a much less important position, and more and more confused with souls or manifestations of the gods. A certain number of spirits not mentioned above appear in the representations, but are absorbed in a subordinate or momentary

¹ The Giant Monkey, Gigantic Crocodile, and Great Hippopotamus of the Theban texts (cf. Maspero, *Études égyptiennes*, Manuel de Hiérarchie, Paris, 1883) are terms designating at this time constellations, and not stellar spirits, as, indeed, shown by their representations in the astronomical ceilings.

function, e.g. the bands of dog-headed monkeys who attend the sun at its rising and setting—a theme popularized in thousands of papyrus-vignettes, in temple bas-reliefs, and in the magnificent obelisk statues of Luxor, the temple of Maut, and the great temple of Ipsambul of the Theban period; the rowers of Râ's barque in the 9th hour of his voyage round the world; and the jackals that draw this barque at the 11th hour. In the rôle of all these anonymous troops of demons we have a clear survival of the time when they played a prominent part in the direction and protection of the heavenly bodies, each controlling a definite part of the firmament, and to this point also a study of primitive Egyptian religion ought to devote special attention.

The material fact that these spirits and others of the same type were carried to the under worlds in the sun's journey is a simple artifice of Theban theology, and Maspero (*Myth. archéol.* ii, 34 ff.) has shown that these different under worlds, compiled in actual geographical order, are a product of local mythologies which really describe the world of night and the celestial world.

The groups of very feeble demons and spirits which are devoured by the stronger ones (Pyramid Texts) are not mentioned in the texts or drawings of the historic period. No doubt the whole conception was thought barbarous (see below).

(b) *The earth*.—As in all the religions, classical and unclassical, of the ancient world, the universe of Egyptian religion is full of all kinds of demons, closely resembling those found in the religions mentioned above or among the savages of to-day. But in Egypt there is no proper classification of spirits belonging to water, to rocks, woods, marshes, etc. Furthermore, their multiple rôles in dreams, or in illnesses of man or beast, seem to belong rather to the popular domain than to official beliefs. It would appear, from a study of the texts of both kinds, that historic Egypt had already, to a great extent, got rid of that *naïveté* which is the characteristic of polydemonism in primitive Animism, and which persists so strikingly in Chaldæo-Assyria in the organized cults. The distinction between official and popular religion, however, is still a delicate question of the appreciation of facts, and especially of the period. It is, nevertheless, certain that phenomena such as storms, floods, and epidemics are attributed to the gods in historic Egypt, and not to the demons, as in Chaldæo-Assyrian belief. On the other hand, the inscriptions from the temple of Abydos prove that the priesthood frankly admitted that demons were continually prowling about in the air, ready to do harm, and that it was necessary to purify the king's retinue with charms, as it proceeded to the temple. The fumigations and incantations that took place at funerals bear witness to the same practice, while the famous inscription of the Princess possessed of Bakhtan proves the official belief in demoniacal possession. The literature shows us that the demons, as in all other countries, inhabited by preference desert places, the borders of marshes, and cemeteries (where they become confused with ghosts properly so called); and it is a certain fact that their power was greatest at night. They were also most powerful on certain days of ill omen, on which the influence of the good gods was diminished, as is proved by the horoscopic papyri of Leyden and London. The light of the sun put them to flight. They were combated, according to varying circumstances, by means of talismans, amulets, incantations, etc., and in all these innumerable details Egyptian differs from other religions in a material way only, and not in doctrine. It is also very difficult to see a specially Egyptian characteristic in the almost complete confusion that exists, in all these attributes of the earthly demons, between demons proper and the ghosts of the dead; and, as the latter have the same name of *khui* in a number of cases, it is sometimes almost impossible

to distinguish whether such and such a case of illness, dreams, possession, torment, etc., is the work of a demon or of the dead. Sometimes the Egyptian text is quite clear, e.g. in the formulæ relating to 'the imprisoning of the shades of the dead that can do harm' (Book of the Dead, ch. xcii. line 10); and we can proceed gradually to certain classifications by variants.

When well considered, Egyptian ordinary life does not seem to have been so much overshadowed and tormented by the constant fear of demons as in the case of many other religions of civilized and non-civilized peoples. While the official cult admits the hidden presence of numerous demons, we do not find it going the length of constantly trying to dispel them, e.g. during the performance of duties, at the opening of the tabernacle, or, again, at the time of sacrificing. (Porphyry, however, says that the priests beat the air with whips to put the demons to flight [*de Philos. ex oraculis haurienda*, ed. Wolf, 1856, p. 148].) The Egyptians do not, like the Indians, trace trenches round their offering. (Notice, however, in the foundation-rites of a temple, the purification of the ground by means of a mockchase of evil spirits, performed by the king and figures dressed as gods.) Nor does any Egyptian text ever say that demons are specially dangerous at the time of death, as is taught, e.g., in the *Avesta*. The dead, it is true, are protected against demons during the preparations for the funeral; they are surrounded, on their way to the grave, by every kind of magical precaution; at the grave itself, talismans and phylacteries of every description protect the coffin and mummy (note that these precautions are meant both to ward off the demons of this earth as they prowl around the grave, and to accompany the dead, by magic, on his journey to the other world); mystic eyes are painted on the proto-Theban sarcophagus, and other precautions of the same kind are the finishing touches. But all these precautions do not amount to so much as we find, in this connexion, in civilized religions of the highest organization; and we may say that the dying Egyptian was not tormented by terrors of the demoniacal order so much as most races with systems of organized beliefs. We must not be misled by the constant presence and importance of demons in the literature. No one would think of maintaining that the thought of Satan and his demons was a continual weight on the ordinary life of a man of our European Middle Ages; and yet the popular tales, processes of justice, legends, and even theology itself, gave the demons of this time a power, a multiplicity, and a constant aggressiveness which are greatly in excess of anything that we learn of ancient Egypt in this respect.

(c) *The other world* (this term including the various classes of regions separating Egypt from the abodes of the dead, under whatever form they may be conceived, and these abodes themselves: paradise, Elysian fields, caverns, 'passages,' *rositiu*, etc.).—An account of all the demons of the other world cannot be attempted here. A good idea of them may be obtained from the indexes in the various editions of Budge's *Book of the Dead*, or from Maspero's *Études de mythologie et d'archéologie égyptienne*, ii. 1-180 (for the royal tombs). These demoniacal spirits are as numerous as the devils of the under world in all other religions. They are the inhabitants of night. It is worthy of remark that none of them has any symbolical value; the majority are simple repetitions of beings like the mischievous or terrifying beings of the earth. In the group of books of the Book of the Dead type we have tree-spirits, monkeys, crocodiles, a considerable variety of serpents, lions, etc., and the vignettes of the Theban epoch employ all the precision that could be desired on the subject. In the series of the type 'Book of Hours,' 'Book of Hell,' 'Book of the Gates,' etc., we have a more sombre view of the demons, yet still of the same specific character: the serpents vomit flames; a great number of these demons, in the shape of men, of animals, or of mixed form, are armed with weapons of various kinds, but are not fantastic. Their names are far oftener functional epithets than true proper names, and this fact is of importance for the historian of religions. The onomastic list, however, is quite short, and shows the poverty of Egyptian thought on this point: 'the Archer,' 'the Pikeman,' 'the Lancer,' 'the Cutter,' 'the Ripper,' 'the Bounder,' etc. The female demons have the same names, or are called 'the Lady of Terror,' 'the Lady of the Sword-thrusts,' 'the Brave,' 'the Violent.' The serpent demons are called 'Life of the Earth,' 'He who lives on gods'

(= eater of gods[?]). The guardian serpents Akaba, Jetba, and Tokahiru, and the viper Naga are deities by this time rather than demons (see below).

Generally speaking (without distinguishing the various classes of under-world literature), the original Animism of Egypt is reflected in the number of demons that are simply the 'spirits' of material objects: a thread and its different parts (ch. cliii.); a boat, each part of which has its genius (ch. xcvi.); posts, doors, parts of a building, boxes, etc. This process is all the more logical from the fact that Egyptian beliefs naturally admitted that every object, natural or manufactured, on this earth possessed a spirit or a demon—rocks and trees as well as houses, pillars, sceptres, clubs, etc.; and iconography sometimes shows these spirits with their heads appearing out of the objects they inhabit. The evolution of belief consisted mainly, here as elsewhere, in gradually 'detaching' the 'spirits' from their objects; and the demons of our present discussion were transformed step by step into *guardians*, and, in the case of some of them, into *masters*, of these objects. The latter privileged members have contributed to the number of the gods.

5. *Nature*.—By means of a large number of accurate texts, we can form an estimate of the constitutional character of the demons and spirits of Egypt, and by the aid of the ancient texts we can get back to the very beginning of their formation. All our information is in absolute conformity with the general animistic character of the primitive religions of the Nile Valley. The universality of 'spirits' in Egypt is well known, and we have just seen that there is not a single being or object, natural or manufactured, but has its demon or demons. Their different names of *bin* and *khru* did not imply any difference of nature originally, and the ancient texts show, by variants, that the two terms are frequently interchanged. They merely signify the different degrees of carnal materiality of these souls or spirits—which are always material (see BODY [Egyp.]). The word *bin* seems later to have tended to belong to demons and spirits of a beneficent character, while the name *khru* was given by preference to maleficent spirits; but this indefinite classification has arisen purely from later dualistic thought (see DUALISM [Egyp.]).

Now, these texts clearly prove that the demons are absolutely the same in the essentials of their nature and attributes as the most ancient Egyptian gods. The formulæ confuse them constantly. Demons and gods have the same 'determinative' in hieroglyphic script (the three signs of the 'axe' [really a mast with two pennants], or the archaic sign of three hawks perched on a sort of gibbet). At first, the strongest devoured the weakest impartially; and later, the dead, assimilated by magic to these strongest members (cf. Pyramid of Unas, line 506 ff.), are shown devouring the *notiru* (gods) as well as the *khru* (demons).

A single characteristic will serve to distinguish them, and to indicate the process by which the gods gradually emerged from the dense crowd of demons. The demons, or genii, or spirits, are *anonymous* groups, with only a collective name, and confined to a special activity or settled function. As they did not all have the same activity or the same importance, certain groups of them rose by a slow process of elaboration to higher dignity. The others remained for ever a few millions of obscure spirits, whose mode of life was of no importance; or else they formed the troops of spirits of which examples are given in § 2. In the groups with important functions, the characteristics led to fusion with a more individual being provided with a proper name. Difficult as it is to

draw the line of demarcation between a god and a demon in such a conception, a careful examination of the texts leads to the conclusion that the mark of a god is possession of a name. A demon possessing a name is already a god, a *notir*. The case is incontestable for well-established gods like Sorku (the crocodile) and Ririt (the hippopotamus); it is equally incontestable for demons like Apôpi and the twenty-three great serpents of the Pyramid formulæ, or the other reptiles named in the rest of the sacred literature; it can be demonstrated for demons like the cat of the sacred tree *ashdu* in the famous ch. xvii. of the Book of the Dead, and for all the principal demons in the descriptions of the other world. Each one is in every way a true god from the time that it has a name, both for its life and for its aspect. Power, the amount of reverence inspired, and the importance of functions are only questions of degree, insufficient to separate, in this religion, a number of humble gods from demons. Even specialization in a unique or momentary action is not a criterion. Naprit, demon of harvests, Ranninit, Maskhonit, the 'Seven Hathors,' and many others of this type are deities rather than demons, from the very fact that they have names; and, if the cult they receive is humbler than that of other gods, it is identical in conception and form. (Here there is a noteworthy difference from what is said of Semitic spirits by Lagrange, *Rel. sem.*², Paris, 1905, p. 16.)

We may now class the innumerable personalities mentioned in the Egyptian texts not among the demons and spirits, but, more rationally, as gods. The following are the chief: the spirits of the seasons, months, days, hours, *decani* (see CALENDAR [Egyp.]), the winds, planets, stars, etc. The astrological nature of nearly all these entities will be noticed by all, and confirms what we have seen of the stellar character of numbers of these groups of spirits before polytheism. The texts show, further, that a number of those spirits, escaping the secondary character of the mass, were treated exactly as true gods by the Egyptians, with a tendency to be assimilated to the principal great gods. It will be observed also that the demons remaining in anonymous groups still retain some worship on certain occasions in the historic epoch. Under the Memphites, for example, there are priests of the 'spirits' of Heliopolis, Buto, and Nekhen (= el-Kab).

The fact that demons become gods by a process of 'emergence' goes a long way to explain why there are not in Egyptian religion, as in other religions, lists and hierarchies of demons and angels. Not only is there nothing resembling the sort of fixed castes of angelologies or demonologies of other races, but there are not even chiefs of groups or protagonists, like, *e.g.*, the Chaldean demon of the south-west wind. The fact is that, as soon as a primitive group attained to importance in the gradual comprehension of the world-forces, it detached a god from itself, who absorbed his group entirely or became a chief; so that the demons, good and bad, always arise directly from a god, and naturally share his character and attributes.

6. *Rôle and character.*—Just as the demons have at first no hierarchy, so they have no general characteristic rôle, no functions of general cosmogony, directed for or against the harmony of the *kôsmos*. The distribution of their activities into functions that are always very limited and highly specialized is a strong proof of the antiquity of their formation. Their power does not go the length of raising a scourge like a tempest (see above), or, like the Indian demons, of preventing rain. This paucity of attributes, in a character otherwise always material, and this distribution of groups of spirits without classification, make it quite comprehensible how their final rôle and their good or bad aspect depended, in the era of polytheistic formations, upon the relative character of the gods round whom they were grouped, since such a god was simply the synthesis of the activities of which the demons were the analysis. The god himself was at first of vague significance as regards his general rôle in the

progress of the world; it was only when he had acquired a more precise energy that he brought along with him his troop of demons—good or bad for man. It would thus be precarious to attempt much precision regarding Egyptian religions. The necessarily *un-moral* character of the spirits does not allow of any classification which would arrange them by 'angelology' and 'demonology'—these terms being used with a moral signification. Even in the historic period their original character remained ineffaceable: the demons were, first of all, the inhabitants of a place or an object, the guardians of a locality, of a door, a passage; they ended, more or less, by having a god as sovereign; while they modelled themselves on his nature and tendencies. But one point is clear, that they are subject to their god, and consequently favourable and subject to his relatives and friends, and hostile to others. They are, then, good spirits for the living or dead man who is assimilated by worship or magic to the congregation of their master, bad spirits to all others; and the whole Book of the Dead, which has not the least moral character (even the famous ch. cxv. of Confession), is essentially neither more nor less than a series of proofs that magic alone is capable of winning over the demons of the other world, and making them defenders of the dead, or at least submissive spirits. Nothing shows the persistence of these conceptions so well as certain passages, preserved down to the historic period, in which, *e.g.*, the demon, 'the serpent who devours souls,' is considered dangerous to the sun itself, which has to take great care when passing over its back (Tomb of Seti I., third hour of hell; theology has invented symbolic explanations, but the primitive fact is clear).

7. *Final organization.*—The organization of all these incoherent spirits, united by chance facts (and by nothing but facts) around multiple gods of early polytheism, was the result of great labour. It must have taken local theologians a long tale of centuries; nevertheless it always presented great gaps. It can be partly reconstructed by the help of the texts of the Memphite and proto-Theban coffins. The unifying of provincial eschatologies under the form of the Theban 'Book of the Dead' or of the various 'Books of the Under World' ('Hours,' 'Doors,' etc., of the royal hypogæes, etc.) has been one of the greatest aids to this work of harmonization, which adjusted the demons more or less successfully to the gradual conception of the *kôsmos*.

This formation of armies of good and evil, being the final characteristic of unified Egyptian religion, is too important to be studied in connexion with demons alone. It will be treated in the art. DUALISM (Egyp.). For the understanding of the present article we may note here only the following facts: the grouping around the sun and his companions of former adjutant demons of the Stars, or vassals of Thoth, Horus, Hathor, etc.; the inverse grouping, around the Great Serpent Apôpi and his officers, of the chief demons opposed to the sun. Finally, a god of order and light, Osiris-Râ, is opposed, with all his allies, to a Sit-Apôpi, the prince of evil and darkness, and the enemy of order. The struggle continues without truce and with its fixed dates (see CALENDAR [Egyp.]), until, in the last period, Sit-Apôpi becomes confused in Coptic religion with Satan. This dualism, already developed in the Theban era, throws light upon the representations of the under world of this period, in which armies of demons, under command of Râ, tear, stab, decapitate, slaughter, and burn legions of the damned.

The damned are not sinners in the moral sense, but adversaries of Râ, conquered enemies. This task was reserved for the last centuries—to transform hostility to the sun, Râ, into hostility to the moral law of Râ-Osiris; but the task was accomplished (see DUALISM [Egyp.]). Even the forty-two judges of the Negative Confession are only silent demons with no moral rôle, and quite artificial; and Shait, the demon who devours the souls rejected by Osiris, is only an entity with no moral character.

The absence of a part in the good or evil of the moral world appears still more clearly in the conception of the rôle of demons in connexion with the living. There is no single Egyptian text in which they have any part in the sins of men, or in suggesting evil thoughts, or even, as in Assyria, in sowing seeds of envy, misunderstanding, and family quarrels. They are restricted exclusively to physiological evil.

Petrie's remarkable book, *Personal Religion in Egypt before Christianity* (London, 1910), shows, however, a class of demons in the hermetic literature who play a perverse part (see pp. 42, 49, 54, 88, 115, 166). But, in spite of the author's efforts to assign the first compositions to a very ancient period, the earliest date he can reach (5th cent.) merely succeeds in showing the coincidence of these new ideas with the Persian dominion; this emphasizes the resemblance between these non-Egyptian characters and the teaching of the Persian religion. We may add that at no time in Egyptian religion is the army of demons ever seen increasing its ranks by the soul of a single sinner.

8. Popular demonography.—The phase of demons which has attracted the keenest attention of Egyptologists is their rôle in popular life and literature and in current magic. The causes of this are the abundance of information furnished by papyrology, the picturesqueness and precision which such documents give to the knowledge of Egyptian life, and the data they supply for the study of magic. From a comparative point of view, however, such a study does not exhibit many of the characteristic traits. An account—even highly condensed—of the activity of demons in Egyptian life or superstition would require considerable space (see CHARMS AND AMULETS [Egyp.], MAGIC [Egyp.]). As everywhere, here the demons are at the command of the magician, to bring about dreams and illnesses, human or animal; or else they themselves cause these phenomena, just as they cause madness and epilepsy (see DISEASE AND MEDICINE [Egyp.]).

The horoscopic or simply superstitious influence of days, the force of the voice, the sensitiveness of demons to song, to the *carmen*, the chant, are facts that apply to all popular religions. The purely Egyptian traits are not many: the demons have sex (see Hierarchic Papyrus); there are none of the sexless demons of Assyria. The popular literature (see the Story of Satni-Khamois) seems to indicate the possibility of belief in *incubi* or *succubæ*, but the passages, which are very numerous, require to be discussed carefully. The threatening aspect of demons in connexion with infants (see CHILDREN [Egyp.]; also Berlin Papyrus, 3027) is also the same as appears elsewhere. On the other hand, we must remember the restrictions made above—the abundance of demons in the magic and literary papyri is not to be taken as a faithful picture of the actual life of the Egyptians. It will be noticed, further, that the Egyptians never mention demons who are wantonly cruel, or thirsting for blood, death, and carnage, as in Chaldeo-Assyria, or demons who dare to attack the gods (the combats between Rā and the demons of Apōpi are *antagonism*, which is a different thing). The purely animistic character of these demons, struggling to live on their own account, but never doing evil for evil's sake, is worth noting. Finally, the sum of all the innumerable details supplied from Egyptian evidences shows us a state of affairs (1) differing only by attenuation from that of the ancient civilizations of the classic East or the societies of the savages of modern Africa, and (2) somewhat similar to the classical Mediterranean civilizations of the Europe of the Middle Ages or of the Renaissance.

As in all religions during decline, we observe at later epochs the growth of demoniacal beliefs in connexion with black magic, and in opposition to the official cults. The combination of Egyptian

with other Asiatic or Mediterranean demonologies shows itself in the demotic papyri, and particularly in the *tabellæ devotionis* (see MAGIC [Egyp.], and, provisionally, Budge, *Egyptian Magic*, or Erman, *Die ägypt. Rel.*, ch. vii.).

9. Ghosts.—The complexity of the Egyptian notion of personality is an initial difficulty in the way of classifying the phenomena relating to ghosts. The eight or nine elements which, in the historic period, constitute a person (see BODY [Egyp.]) have each their fate, form, and habitation in the second existence. The only one of these that concerns our present purpose is the *khu*.

The etymology of the word *khu* is still very doubtful, and we cannot deduce any indication whatever of the primitive rôle from the radical meaning of the word. The sense of 'luminous,' 'brilliant,' has suggested to several authorities the explanation based on the phosphorescence of putrefying flesh, or on the will-o'-the-wisps playing in certain parts of Egypt on the skirts of the desert, supposed to be the favourite haunts of ghosts. A loftier interpretation has been proposed, taking the word *khu* as a brilliant spark, a part of the solar substance. But this seems to involve the theological speculations which played upon the amphibological meaning of the word when solar theories held the first rank in eschatological doctrine. The signification '*honoris* or *timoris causa*,' which would attach a complimentary meaning of 'resplendent' or 'glorious' to the epithet *khu* given to the ghosts of the dead, seems more probable, but has never yet been definitely proposed by the Egyptological School. The present writer would suggest, finally, a connexion between this name of 'luminous,' which is the intrinsic meaning of *khu*, and the special soul 'which shines in the eyes,' and to which a great many peoples accord a particular personality. The observation of the difference between the lustre of the living eye and the dullness of the dead eye suggested, in Egypt as among those peoples, the idea of a special 'soul-force' having magic virtues of its own (which would justify, besides, all the magic relating to the power of the look), and continuing to live after death with the various attributes which we accord to ghosts. There is, however, no formal proof by texts of this explanation.

The *khu* is generally a wretched being. It has never been credited with a lofty rôle. It is a *priori* a wandering, unhappy, hungry being, a sort of outcast from the great crowd of the dead and other 'spirits'—such as a dead man, *e.g.*, whose grave has been destroyed, and whose soul, double, etc., have perished by privation or by the attacks of monsters. Accordingly, we never find the *khu* of a king or a nobleman appearing in the texts in the rôle of 'ghost,' as this rôle is always a humble and maleficent one. The attributes of the Egyptian ghost, then, reduce themselves finally to those of harmful demons, and agree very largely with what is believed on the subject in all religions. Ghosts afflict people with 'demonic possession' in all its varieties; they torment in dreams (*q.v.*); they find their way into the interior of the body of living people, and cause innumerable ills (see DISEASE AND MEDICINE [Egyp.]); they appear suddenly to terrify the living, especially at certain hours of the night, and preferably in the neighbourhood of cemeteries, or in places reputed to be their favourite haunts (cf. Maspero, *Contes populaires, passim*); they attempt to violate any woman they can take by surprise in a lonely place (*e.g.* one of the chapters of the Book of the Two Ways, in which a magic power is accorded the *khu* 'of taking by force any woman he wants'); or, in order to devour living substance, they throw themselves into the body of beasts, excite them to frenzy, and cause them to die; the *khuu* of women dying in child-birth aim especially at causing infants to die (cf. the curious formulæ of the papyrus *Zaubersprüche für Mutter und Kind*, published by Erman, 1901; see also Erman, *Religion*, p. 158, etc., for other good examples of the part played by ghosts; this belief is analogous to numerous beliefs throughout all Africa). The *khuu* of suicides, executed criminals, unburied dead, and shipwrecked sailors are particularly tormented and miserable. It was to them that the magician of the later centuries applied by preference—conjuring, invoking, and putting them at his service for his thousand and one evil purposes:

tormenting in sleep, causing death by enchantment or by fever, assisting lovers to exact vengeance, or helping those who wished to attract or recall an unfaithful mistress (cf. the series of *tabellae devotionis*, the dominating Egyptian element in which is nevertheless tinged with magic of Asiatic or North African origin). The baleful activity of all these ghosts is naturally specially excited at certain unfavourable times in the calendar (see CALENDAR [Egyp.]), and they come in their hordes at these times to join the troops of evil 'spirits' struggling against order (see DUALISM [Egyp.]), just like a band of plunderers accompanying the real combatants. Very seldom do we find mention of a *khu* playing the simple inoffensive part of a ghost (Budge cites one example, in *Egyp. Magic*, Lond. 1899, p. 219, of a *khu* which points out to a mortal a suitable place for building a tomb), this form of activity being reserved especially for the 'doubles' and the 'souls' (see STATE OF THE DEAD [Egyp.]).

10. Conclusions.—The original complete confusion of troops of demons (or spirits) with the earliest gods has been affirmed repeatedly in this article. On the other hand, it has been said that the spirits of the dead were confused with the demons as to habitat, needs, functions, character, and powers. This double assertion would require a more detailed demonstration than is here possible. Presented thus in a condensed form, it seems to lead, by syllogism, to an equating of the spirits of the dead with the first gods, in whole or in part. But, as a matter of fact, no theory of Egyptian religion could be more contrary to truth or more capable of vitiating all knowledge of that religion. Never at any time or under any form did the Egyptian dead become gods. The case of the sons or heirs of gods (chiefs and kings) belongs to an entirely different category, and the confusion of the dead with Osiris, or some other of the gods of the dead, by magic or by religious process is either an eunymous assimilation or an absorption of the dead man's personality by an already existing god. It is, therefore, absolutely necessary to insist on the fact that the demons and spirits, the original forms of the Egyptian gods, have nothing to do with the spirits of the dead in their essential nature, but merely resemble them in the aspects of their activity (see STATE OF THE DEAD [Egyp.]). Between the nature of 'spirits' and 'demons'—all those myriads of beings, this 'dust of gods' from which the gods sprang—and the nature of the spirits of the dead there is an impassable limit set which Lang has called 'the abyss of death.' The spirits, or *khuu*, of the Egyptian dead come from beings who did not exst before their birth on earth, who have known physical death, and are liable to suffer the 'second death,' or final destruction. None of these three characteristics can be applied to the demons or genii any more than to the first of the actual gods, who became detached from their various innumerable troops of spirits. Later theologies credited the gods of the historic period with having been born, and even attributed to Osiris or his mythological 'doublets' a physical death. They never touched on the third characteristic. And, on the other hand, Egypt never knew of an ordinary mortal who became a god, or for whom there was such a possibility even under the humble form of a demon.

LITERATURE.—The provisional state of the sources and evidence regarding demonology has been noted in the course of the article. The whole theory of spirits has never been gathered together in one work; views on the spirits, however, are scattered through all the works that discuss Egyptian religion. We may only mention, among those in which the information is more specially grouped, the following: E. Amélineau, *Prolegomenes*, Paris, 1908 (where an exactly opposite euhemeristic theory is supported at length); E. A. W. Budge, *Egyptian Magic*, London, 1901, *Gods of the Egyptians*, do. 1904, *Liturgies of Funerary Offerings*, do. 1909, *Opening of*

the Mouth, do. 1909, and *Book of the Dead*, do. 1909; A. Erman, *Die ägypt. Relig.*, Berlin, 1906; G. Maspero, *Études de mythol. et d'archéol.*, vol. II, Paris, 1893, and *Contes populaires*, do. 1908; W. M. F. Petrie, *Religion and Conscience in Ancient Egypt*, London, 1898. A certain number of details are given in the manuals of Egyp. religion of Ermon (Paris, 1910), Petrie (London, 1906), Virey (Paris, 1910), and A. Wiedemann (Münster, 1890). The documentation proper naturally fills the whole series of Egyptological monumental bibliography. See especially, besides the works already mentioned, E. Lefébure, *Hypogées royales de Thèbes*, Paris, 1883; and P. Lacan, *Sarcophages antérieurs au Nouvel Empire*, Indexes, Cairo, 1903-1906. GEORGE FOUCART.

DEMONS AND SPIRITS (Greek).—Students of Greek literature cannot fail to be impressed by the complex system of the Olympian theocracy, and by the richness of legendary fable which envelops it. In variety of detail and precision of outline it seems to be separated by long periods of development from the vague beliefs and rude ceremonies which characterize the religions of primitive man. But, while it is certain that the Greek gods, as they appear in literature, are the product of a long course of evolution, beliefs in the existence of various supernatural beings, which belong to an earlier stratum of religious thought, and can be paralleled from the records now available of savage superstitions, continued to maintain themselves during historical times. Of these intermediate beings the most important are those known as demons.

1. In early times.—In early religion the most powerful forces are those which are comprehensively attributed to Animism. To these belong the notions that all natural objects are informed with a living principle akin to the human soul, and that the souls of the dead continue to visit the haunts with which they were familiar in life. To the operation of these spiritual powers are ascribed such of the vicissitudes of life as cannot be explained by visible agencies. Similarly, it is inferred that the soul of a living man may be temporarily detached from its normal habitation in the body, as in sleep or trance; and that the bodies of the living may be possessed by alien spirits, as in epilepsy, lunacy, or hysteria. There is plenty of evidence that beliefs of this kind flourished in ancient Greece as vigorously as they have survived in mediæval and modern times; and the general name of 'demons,' which the Greeks gave to certain of these invisible but potent spirits, has been adopted by modern writers, who employ the term 'demonology' to describe the science relating to supernatural beings with a nature intermediate between that of gods and men.

But, in the exposition of these beliefs, we are met with difficulties arising from the nature of the evidence. We cannot reach the crude fancies of the vulgar in their original form, but are obliged to view them through the transfiguring medium of literature. The rationalizing genius of the race stands in our way. The notices relating to demons are drawn, for the most part, either from the writings of philosophers, who endeavoured to harmonize current superstitions with their own interpretation of the universe; or from poetry, where the creative imagination insensibly tones the simple outlines of the popular conception.

The earliest text requiring notice is the passage of Hesiod (*Op.* 122 ff., 251 ff.) in which he identifies the demons with the souls of those who lived in the Golden Age. They are described as continuing in the upper world, kindly guardians of men, distributors of prosperity and wealth, but wrapped in darkness so as to be invisible while they wander over every region of the earth. Here we meet the statement that the demons are the souls of the dead, overlaid with the legend of the Four Ages and the deterioration of mankind. For the popular belief on which it rests we must refer to passages

where the Greek *δαίμονες* is employed, like the Latin *manes*, to denote the spirits of the departed (Lucian, *de Luctu*, 24; for the evidence of inscriptions, where *θεοὶ δαίμονες* = *dis manibus*, see Roscher, i. 929; Frazer, *Pausan.*, 1900, iv. 24). The literary evidence is hardly less conclusive, when we find Darius and Alcæstis described as demons in reference to their condition after death (*Æsch. Pers.* 623; Eur. *Alc.* 1003), and when the Muse prophesies that Rhesus, though dead, shall rest hidden in a Thracian cave as a man-demon (*ἀνθρωποδαίμων*, Eur. *Rhes.* 971). See, further, Usener, *Götternamen*, p. 248 ff.; a somewhat different view is taken by Rohde, *Psyche*, i. 95, 153. As the shades of ancestors, so long as they are treated with due respect, are expected to show favour, a reference to the 'good demon' sometimes implies nothing more than this (Waser, in Pauly-Wissowa, iv. 2012). But the good demon also appears in circumstances which cannot be associated with ancestor-worship. In Boeotia a sacrifice to the good demon was made the occasion for first tasting the new must (Plut. *Qu. Conv.* iii. 7. 1, p. 655 E); and at Athens it was the custom after dinner to pour out a small libation of unmixed wine in his honour (Aristoph. *Eq.* 85, etc.). At other times he is the personification of good fortune, as the protecting spirit of a community, a family, or an individual; in this sense, Nero arrogated to himself the title of 'good demon of the world' (*CIG* iii. 4699). See Rohde, i. 254 f.

With the various manifestations of the good demon we may contrast cases where the influence of the spirit was pernicious. An evil spirit was often conceived as a ghost.

A good illustration is afforded by the story of Euthymus the boxer, who fought with a 'hero' enshrined at Temesa in S. Italy. This was the ghost of one of Odysseus' crew, Polites or Alybas, who had been stoned to death by the people of Temesa for ravishing a girl. Every year the ghost required the dedication to him of the fairest maiden in Temesa as his wife, which was yielded by the townsfolk in order to save themselves from his wrath. The practice was of immemorial antiquity at the time when Euthymus chanced to come to Temesa, and, having entered the temple, saw the maiden, and fell in love with her. So Euthymus put on his armour, and, when the ghost appeared, withstood his assault and vanquished him; and the hero, driven from the land, plunged into the sea, and was never seen again. Pausanias, who tells the story (vi. 6. 7-11), as well as other authorities (Strabo, p. 255; Suid. s.v. *Εὐθύμος*), had seen a picture illustrating the event which he records, and, in the course of describing it, he quaintly remarks: 'The ghost was of a horrid black colour, and his whole appearance was most dreadful, and he wore a wolfskin.' The ghost-idea is less prominent in the story of the demon of Anagyrus, one of the Athenian demes, who destroyed the family of a neighbouring peasant for a trespass committed on his sanctuary (Suid. s.v. *Ἀναγυράριος δαίμων*).

Hesiod (*Op.* 159, 172) distinguished between 'heroes' and 'demons,' and later philosophical speculation treated demons as belonging to a higher grade of dignity (Plut. *de Def. Or.* 10, p. 415 B). But in stories like the above the two terms are used without distinction; and heroes as ghostly beings were considered so dangerous that persons passing by their shrines were warned to keep silence, lest they should suffer injury (Hesych. s.v. *κηλητροί*). The belief that a hero is incapable of conferring blessings, and is only powerful to work ill, is enforced by Babrius, *Fab.* 63.

Other evil demons are represented as specially attached to an individual. Thus, the dread and strange vision of monstrous and fearful shape which appeared to M. Brutus in his last campaign announced itself to him as his evil demon (Plut. *Brut.* 36). Or an avenging demon may be the instrument appointed to punish the crimes of a particular family, as when, in the *Agamemnon* of Æschylus (1477), after the murder of her husband, Clytemnestra boasts that she herself is the incarnate demon of the Pelopids, 'so gross with overgrown flesh.' In such capacity the evil demon

often bore the special title of 'Alastor'; and in the *Persæ* (357) the slave Scænnus, who entrapped Xerxes into a fatal manœuvre, so that he lost the battle of Salamis, is described by the Persian messenger to Atossa as having been inspired by an *alastor*. Sophocles, in referring to an action impossible for any one but a madman, does not hesitate to say: 'Who would choose this, unless maddened by avenging fiends?' (*δοῖς μὴ 'ἔ' ἀλαστροφῶν νοοῖς* [*Trach.* 1235]). It would be easy to multiply instances where demonic agencies are made responsible for good or evil fortune; and it is not surprising that the prevalence of such opinions opened the door to chicanery and imposture. Among the crowds of oracle-mongers, diviners, and interpreters of dreams, who swarmed at Athens during the latter part of the 5th cent. B.C., were some who professed to foretell the future by the agency of familiar spirits obedient to their summons. A notorious instance was Eurycles the ventriloquist (*ἐγγαστριμύθος, στερρημύτης*), who, by giving utterance to his oracles in a feigned voice, persuaded his hearers that they were the pronouncements of a demon lodged within his own breast (Aristoph. *Vesp.* 1019; Plut. *Soph.* 252 C and the scholl.). This proceeding corresponds exactly with the methods of savage magicians, as reported by E. B. Tylor in his article on 'Demonology' (*EBR* vii. 63).

The notion of a guardian spirit, which watches over a man from his birth, directs his actions, and may be either friendly or hostile, was widely entertained among the Greeks. It is best expressed in the famous fragment of Menander (550 K.): 'By every man at birth a good demon takes his stand, to initiate him in the mysteries of life.' This is not a literary fancy, but a popular opinion: 'There are many who have a craven soul, but a good demon,' says Theognis (161). Or we may appeal to Pindar, a witness of a very different type (*Pyth.* v. 122): 'The mighty purpose of Zeus directs the demon of those whom he loves' (see W. Headlam, in *JPh* xxx. [1906] 304; Rohde, ii. 316; Usener, 296). But, in regard to the force of particular passages, there is room for disagreement. The word *δαίμων* is used in such a way that it is often difficult to seize its exact significance in a particular context. Thus, besides bearing the special meaning with which we are now concerned, it may be employed either (1) as a synonym of *θεός*, distinguishable, if at all, as expressing the Divine power manifested in action rather than the Divine personality as an object of worship; or (2) in the abstract sense of *destiny*. Yet, although we may sometimes hesitate (as, e.g., in Eur. *Ion*, 1374, *Supp.* 592) between the abstract and the concrete meaning, with a view to the selection of an English equivalent, it is unlikely that to a Greek the word ever became so colourless as the tr. 'fate' or 'destiny' suggests. That this was the original sense, as has been suggested in recent times (Gruppe, *Gr. Mythol.* 991, n. 4; see, however, Usener, 292), is hardly credible.

We have seen that the belief in the separate existence of the soul after death leads to the assumptions that the souls of the dead are powerful over the living, and that other potencies of a similar character, spirit-like but not souls, exist independently and visit the earth. A further step is taken when these demons are regarded as capable of entering into and possessing human bodies (Gomperz, *Greek Thinkers* [Eng. tr. 1901], ch. i. §§ 5, 6). This may be illustrated by the various instances in which the human representative is permanently or temporarily identified with the Divine being whose power he assumes. Hermes became incarnate in the ministrants at the oracle of Trophonius at Lebadea (Pausan. ix. 39. 7), Bacchus in the *mystes* (schol.

on Aristoph. *Eg.* 408). Similar is the inspiration drawn from the chewing or eating of magic substances, such as the laurel leaves sacred to Apollo (Soph. frag. 811, etc.), or the honey which inspired the Thriæ on Parnassus (Hom. *h. Herm.* 560). These are special applications of the general belief in demonic possession, which is implicit in the use of the adjectives *εὐδαίμων*, *κακοδαίμων*, etc., and is expressed by that of the verbs *κακοδαίμονᾶν*, *δαίμονι-ζεσθαι* (Soph. frag. 173), and *δαίμονᾶν* (Eur. *Phæn.* 888, with the present writer's note). The demon which took possession of a man's body was sometimes conceived as a fiery spirit, which raised the blood to a condition of fever. Hence the fiery emblems of love (Gruppe, 849, n. 7), which permeates the frames of its victims with a feverish ecstasy. Hippocrates found it necessary to combat the superstition that epilepsy is due to some god—Poseidon, Apollo, Ares, or Hecate—having taken possession of the sick man (*Morb. sacr.* 592 K). Phædra's wasting sickness is attributed by the chorus in the *Hippolytus* of Euripides to possession by Pan, Hecate, the Corybantes, Cybele, or Dictynna (141–147); and the sudden illness of Glaucus, described in the *Medea*, was thought by those present to have been caused by the anger of Pan (1172). See also Usener, 294.

2. In the classical age.—The Olympian religion, if we may call by this name the impression which we receive from Greek literature about the ordinary beliefs of the classical age, is a composite structure, largely built up by the transference from past generations of elements on which time has worked an essential change. The demons passed into gods; the shadowy gods became definitely conceived personalities. A good illustration of this process may be taken from the development which can be traced in the notions entertained of the Nymphs (Gomperz, i. 26). The Oreads, Dryads, and Naiads owe their origin to the fetishism which believes that every natural object is endowed with a living spirit. In course of time the spirit is separated from its environment: the Dryad, for example, inhabits the oak, but the oak itself is no longer animate. But the indwelling spirit has not yet become immortal; the Dryad cannot outlive the oak (Hom. *h. Aphrod.* 257; Apoll. Rhod. ii. 481). A later stage has been reached when Homer describes how the Rivers and Nymphs were summoned by Zeus to join the conclave of the immortals (*Il.* xx. 7 ff.). We need not pause to illustrate the process by which a tribal deity has been elevated to national dignity, or a god with limited powers has merged his identity in the attributes of an Olympian. Other demons have taken subaltern rank in the celestial hierarchy, as when the Corybantes are classed as the attendants (*πρόδρομοι*) of Rhea (Strabo, 472), and the Satyri attach themselves to Dionysus. *Eurynomus*, a grisly demon who ate the flesh of corpses, was painted by Polygnotus among the inhabitants of the lower world; he was blue-black in colour like a carrion-fly, his teeth were bared, and he was sitting on the skin of a vulture (Pausan. x. 28. 7). Dionysus was sometimes attended by *Akratos*, the potent spirit of the unmixt wine (Pausan. i. 2. 5); and *Aphrodite* by *Tychon*, perhaps the spirit of good luck, not unlike our Puck or Robin Goodfellow (Gruppe, 853, n. 2). Even the hell-hounds of Hecate are recognized as evil demons (Euseb. *Præp. Evang.* iv. 23. 7, 8).

It has recently been contended (Farnell, *CJS* v. [1909] 444) that the personification of abstract ideas as Divine beings claiming our veneration and worship is to be explained as due to the demonic power which was attributed by a primitive habit of mind to any outbreak of excessive emotion. Typical cases are quoted from the ceremonial observances paid in various parts of Greece to Shame, Pity, Laughter, Fear (Pausan. i. 17. 1; Plut. *Cleomen.* 9). If the suggestion is correct, it throws a remarkable light upon the development of Greek psychology. It is

easier to recognize primitive ideas in the delification of *Madness* (Pausan. viii. 34. 1) and *Hunger* (Plut. *Qu. Conv.* vi. 8. 1, p. 604 A). The *Manias* are supposed by Pausanias to be the *Erinyes* under another title, as producing frenzy in their victims. But *Hunger* is hardly to be explained as the concrete embodiment given to the sufferings of starvation. Rather we should infer that the failure of the crops through drought, and the wasting of the flocks and herds through disease, were taken as irrefragable testimony to the operation of a malignant and supernatural power. In order to avert such a calamity, an annual expulsion of a disease-laden scapegoat in the character of a slave, who was beaten with rods of willow to the words of the refrain, 'Out of doors with famine, and in-doors with plenty and health!' took place at the town of Chæroneia in Boeotia. Plutarch, in the passage quoted above, tells us that he had himself performed the ceremony when holding the office of chief magistrate. For its significance, see Frazer, *GE*², 1900, iii. 124f.

Again, as the crude fancies of primitive superstition ceased to correspond with advancing enlightenment, they tended to gather round them the details of legendary adventures, and to become associated, in the record of a mythical past, with particular localities or heroic names. The Sphinx, a ravening monster, compact of indigenous stories of a destructive dragon fused with Oriental or Egyptian elements, was localized in Boeotia and connected with the story of *Œdipus*. The *Harpies* or 'Snatchers' (Hom. *Od.* xiv. 371), another composite notion in the evolution of which wind-demons and death-angels had taken part, survived ultimately for their share in the punishment of *Phineus*, which was related as an incident in the voyage of the Argonauts. They are nearly related to the *Erinyes* and the *Sirens*—both chthonic agencies; but, whereas the belief in an avenging spirit punishing homicide survived longer, and has preserved the *Erinyes* in literature as a potent spiritual force, the *Sirens* soon passed into the region of fairy-land, and were remembered chiefly from Homer's description of them in the *Odyssey*. The *Gorgons*—also under-world powers and storm-spirits—are hardly known to tradition except through the adventures of *Perseus*.

Besides these, there was a whole host of *sprites*, *bogeyes*, and *hobgoblins* which remained nearer to their primitive associations. Their names are generic rather than personal, and they were rarely dignified by a connexion with some heroic tale. Such was *Empusa*, a demonic apparition that appeared sometimes at mid-day and sometimes by night. She had the power of continually changing her shape, but could be detected, it would seem, by the donkey's leg which was her constant attribute (see Dem. xviii. 130; Aristoph. *Ran.* 289 ff.). *Gello*—a name which has been compared with the Arabic *ghoul*—was a spectre which kidnapped children. Almost unknown to literature, the name lasted through the Middle Ages, and survives in some localities down to the present day (Maas, in Pauly-Wissowa, vii. 1005). Somewhat more familiar to us is *Mormo*, a bogey of the nursery, invoked to frighten children (Theocr. xv. 40; Xen. *Hell.* iv. 4. 17)—perhaps a hypocoristic form of *Mormolyke*—a werewolf (*μορμολύκεα*, Plat. *Phædo*, 77 E, etc.). Another bogey-name is that of *Lamia*, who was said to have the remarkable power of taking out her eyes and putting them back at pleasure. She also was a kidnapper and murderess of children, and is sometimes identified with *Mormo* and *Gello*, as if these were different names of the same monster. But in *Lamia* there are more traces of a definite personality; and she has almost become a mythical heroine, as a Libyan queen beloved by Zeus, whose children were killed by Hera, and who in consequence revenged herself by killing other children (see Didymus *ap. schol.* Aristoph. *Pax*, 758). To the same class belonged *Acco* and *Alphito*—words of doubtful meaning which perhaps signify 'booby' and 'grey-head'. (Chrysipp. *ap. Plut. de Stoic. rep.* 15, p. 1040 B). *Ephialtes* was the name given to the spectre in-

vented by the ignorant to account for the nightmare which results from indigestion; and he is not always distinguished from *Epiales*, the cold shivering-fit which preceded an attack of fever (Aristoph. *Vesp.* 1037). *Ephialtes* was sometimes figured as the long-eared owl (*ōros*). Owls (*ōrnyx*) were regarded as birds of evil omen (*Poeta Lyrici Græci*⁴, ed. Bergk, Leipzig, 1878-82, iii. 664), and as embodiments of the spirits of the dead which appear by night to suck the blood of the living—a superstition which survives in modern Greece.

For the conception denoted by *Keres*, which is closely allied to, and largely co-extensive with, the present subject, see the article under that title.

3. In the hands of the philosophers.—We have now to examine how the popular belief in demons was treated by the philosophical schools. Thales is credibly reported to have said (Arist. *de Anima*, i. 5. 411a 8) that all things are full of gods, and it is hardly to be doubted that in so maintaining he sought to explain Animistic beliefs by the application of rational principles. By the Pythagoreans a belief in demons was always fostered, especially in their character as representing the souls of the dead. They entertained no doubt that such demons were visible as if in actual bodily presence, and were surprised that any one should deny that he had ever seen a demon (Arist. frag. 193 [Rose]). All the air, they said, is full of souls, and these are called demons and heroes. It is they who send dreams and signs of disease and good health not only to men, but also to sheep and cattle. With them relations are established by purification and expiation, by divination and by omens (Diog. Laert. viii. 22). Hence Aristoxenus (Stob. *Flor.* 79. 45) is following Pythagoras when he recommends the worship of gods and demons, and the Golden Poem places the heroes and subterranean demons, i.e. the souls of the dead, after the gods, but as worthy of honour corresponding to their degree. Later doxographers (Aët. *Plac.* i. 8. 2) join Pythagoras with Thales, Plato, and the Stoics in holding that demons and heroes are spiritual substances, or souls separated from bodies, and that there are good and bad demons corresponding to the same varieties of soul. There is also attributed to Pythagoras the fantastic notion that the sound emitted from a brass gong when struck is the voice of a demon shut up within the metal (Porphy. *Vit. Pyth.* 41). The popular idea of an indwelling demon, by which a man is possessed or controlled, was refined and interpreted by several philosophers. To Heraclitus (frag. 119 [Diels]) is ascribed the pregnant saying that 'character is each man's demon,' his inner self is his true divinity, and his fate is moulded by his own individuality. The same thought is expressed by Epicharmus in a simpler form: 'His disposition is to each man a good or bad demon' (frag. 258 [Kaibel]). Similar but less striking is the saying of Democritus that 'blessedness dwells not in herds or gold, but the soul is the dwelling-place of the blessed being' (frag. 171 [Diels]). Democritus (Sext. *adv. Math.* ix. 19) explained the belief in gods by degrading them to the level of demons, which he held to be material images perceptible to our senses, long-lived but not immortal. Empedocles speaks of the wanderings of wicked demons, which have been cast out of the abodes of the blest but return there after a banishment of 30,000 years, during which they pass through various stages of incarnation (frag. 115, 2). These *daimones*, as Hippolytus explains, are human souls; but they are not necessarily separable entities, since the figurative language of the poem requires to be controlled by the materialism of the philosophical system which it expounds (see Burnet,

Early Greek Philosophy, 1892, p. 271; Rohde, ii. 178 ff.).

Socrates was in the habit of asserting that he was frequently impeded by a Divine sign from taking a particular course of action. This customary sign was imparted through the medium of a warning voice, and was manifested on trifling as well as on important occasions (Plat. *Apol.* 31 D, 40 A). The deduction that Socrates intended to imply that he was guided throughout his life by a familiar spirit, though at one time generally held, has in recent years fallen into disfavour (see Zeller, *Socrates* [Eng. tr. 1868], p. 82 ff.; H. Jackson, in *JPh* v. [1873] 232 ff.). But, whatever may have been the real intention of Socrates, it can hardly be denied that, in a society where the belief in the existence of demons was widely prevalent, to many of his hearers the Divine sign must have suggested such an agency.

Plato, in this sphere as elsewhere, has gathered up the threads of previous speculations and woven them into new combinations by the play of his philosophic fancy. In accordance with popular tradition, he says that the demons are the bastard sons of gods by nymphs or some other mothers (*Apol.* 27 D). The demons are of an airy substance, inferior to the heavenly ether, and serve as interpreters between gods and men (*Epinom.* 984 E). Love is a great demon; like all spirits, he is intermediate between the Divine and the mortal; he conveys to the gods the prayers and sacrifices of men, and to men the commands and replies of the gods (*Symp.* 202 E). This recalls the Pythagorean doctrine previously quoted, and Proclus says it is also Orphic; modern critics have seen in it a mode of reconciliation between the old theology and the new conception of an inaccessible god (Gruppe, 1054). Plato accepts the popular view of demons, as identical with the souls of the dead: when a good man dies, he is honoured by being enrolled as a demon, which is only another form of *daimon*, 'the wise one' (*Cratyl.* 398 B). Every man has a distinct demon which attends him during life and after death (*Phædo*, 107 D, *Rep.* 617 D). Each demon has his own allotted sphere of operation, and watches over his appointed charge like a shepherd over his flock (*Polit.* 271 D, 272 E). The last-quoted passages are drawn from the narratives of the myths with which Plato diversified his more formal arguments, and his true mind is to be sought rather in a passage of the *Timæus* (90 A) in which, with a reminiscence of Heraclitus, he declares that God has given to each man, as a guiding genius, the supreme form of soul within us, the rational faculty which dwells in the summit of our body and lifts us towards our celestial kindred.

Aristotle is reported to have assented to the belief that all men have demons which accompany them during the whole period of their mortal existence (frag. 193 [Rose]); but it is impossible to say whether he attached to it any philosophical importance. Xenocrates agreed with the statement in the *Timæus*, that the soul of man is his guardian spirit (Arist. *Top.* ii. 6. 112a, 37); and he also maintained the existence of a number of good and bad demons (Zeller, *Plato*, etc. [Eng. tr. 1876], p. 593). But the school which did most to establish a belief in demons as a part of the mental equipment of its students was unquestionably the Stoic. The Stoics sought with unwearied industry to bring every conception of popular religion into connexion with their own theology; and their doctrine of pantheism enabled them without difficulty to find a place for the demons within their system. They were firmly convinced of the existence of demons, which, having like passions with men, and responding to their desires and fears,

their pains and pleasures, superintended and directed their fortunes (Diog. Laert. vii. 151). These demons are composed of soul-substance, which is not scattered and lost, as Epicurus maintained (frags. 336, 337 [Usener]), at the dissolution of the body, but, having in itself the principle of permanence, is located in the region beneath the moon, and sustained, like the other stars, by the exhalations rising from the earth (Sext. adv. Math. ix. 71). Posidonius, who gave particular attention to the matter, explained that human souls after death are not sufficiently pure to reach the upper ether, and are restricted to the lower level, where they congregate among the demons. Hence it is that, with the strictest accuracy, the soul dwelling within the body may be described as the 'demon born with us' (Schmekel, *Philos. d. mittl. Stoa*, Berlin, 1892, p. 256). On the other hand, the Epicureans controverted these fairy-tales: there are no such beings as demons; and, even if there were, it is inconceivable that they would assume human shape, or that it would be possible for them to communicate with us by speech or otherwise (Plut. *Brut.* 37; see, further, Epicur. frags. 393, 394 [Usener]).

In writers of a later period, such as Maximus Tyrius, Apuleius, and Philostratus, the maxims of demonology have come to be commonplaces, partly owing to the influence of the sources which we have enumerated, and partly by the contact with Oriental civilizations, which had become continually more intimate since the beginning of the Hellenistic epoch (Rohde, ii. 364; Gruppe, 1468). Since the demons were regarded as unceasingly active in the service of the gods, they were assigned a definite place in the celestial hierarchy of the Neo-Platonists, as subordinate to angels and archangels (Porphyry, *Ep. ad Arnob.* 10; demons were first associated with ἀγγελοι by Philo, according to Dieterich, *Nekyia*, 61). Hence, as part of the machinery by which the apologists of paganism sought to shore up their tottering edifice against the assaults of the Christians, they appear with considerable frequency in the controversial writings of the early Fathers of the Church.

It is not within the scope of this article to examine the various methods employed by Greek magic for the purpose of averting, deceiving, or conciliating evil spirits. The details will be found elsewhere under the titles CHARMS AND AMULETS, MAGIC, etc. It is only within recent years that the comparative study of anthropology has shown the way by which the future investigation of Greek religion must travel. But the evidence of ritual drawn from literary sources is difficult to appraise; partly because the development of theology tended to obscure the primitive elements, and partly because the ritual facts, even when separated from later accretions, are capable of various interpretations. It is well established that the beating of drums and cymbals, and particularly of various kinds of bronze vessels (schol. ad Theocrit. ii. 36), was intended to frighten away any demons which might be at hand on important or ceremonial occasions; similarly, the use of iron was effective against demonic influence (Riess, in Pauly-Wissowa, i. 50). When, however, the desire to be on good terms with evil demons is held to be the leading motive in such various rites as sword-dances, the ploughing with magic animals, the smearing of the face with chalk or meal, or the dressing of a boy in girl's clothes (cf. *CLR* vii. [1893] 243), it must be remembered that such hypotheses are far removed from certainty. The debatable evidence will be found collected in Gruppe, 894 ff.

For demons in relation to the Orphic cults, see ORPHISM.

LITERATURE.—The main facts are summarized in the articles, s.v. 'Daimon,' by von Sybel, in Roscher, i. 938, and by Waser, in Pauly-Wissowa, iv. 2010, where references are given to the less accessible of the special treatises. See also R. Heinze, *Xenocrates*, Leipzig, 1892, pp. 78-123; J. Tamburino, *de Antiquorum Dæmonismo*, Giessen, 1909. Much useful information will be found in O. Gruppe, *Gr. Mythol. und Religionsgesch.*, Munich, 1906; J. E. Harrison, *Proleg. to the Study of Gr. Religion*, Cambridge, 1909; A. Dieterich, *Nekyia*, Leipzig, 1895, esp. pp. 46-62; H. Usener, *Götternamen*, Bonn, 1896, esp. p. 292 ff.; E. Rohde, *Psyche*, Tübingen, 1907.

A. C. PEARSON.

DEMONS AND SPIRITS (Hebrew).—It will be most convenient to divide the material into three periods: pre-exilic, exilic and post-exilic, and Apocryphal.

I. THE PRE-EXILIC PERIOD.—1. In the early Heb. poems there is but one allusion to an angel, and none to spirits or demons. The 'holy ones' in Dt 33², later supposed to be angels (cf. Ac 7⁵⁵, Gal 3¹⁹, He 2²), were probably not a part of the original text (cf. Driver, *Deuteronomy*, Edinburgh, 1895, p. 392 ff.). In Jg 5²⁸ we read: 'Curse ye Meroz, saith the angel of Jahweh.' Probably the angel was a manifestation of Jahweh, as in the J document.

2. Our next earliest evidence is in the J document. In Gn 3²⁴ cherubim are said to have been the guardians of Eden's entrance. There is reason to believe that these beings were personified winds. They find a counterpart in the winged figures of the Assyrian sculptures, which are often pictured in the act of fertilizing the sacred palm tree; hence Tylor suggested that they were winds—a view now accepted by many others.¹ The association of such figures with the tree of life would lead to the view that they were denizens of Paradise, and hence guardians of the tree of life. Apart from the cherubim, no other spirits appear in the early chapters of Genesis, but Jahweh Himself deals directly with men. This is the case in the Eden narrative (Gn 3), the Flood story (chs. 6-9), the confusion of tongues (ch. 11), and the story of Abraham (ch. 15). In the last-mentioned passage Jahweh appears as a flame of fire.

In Gn 16⁷ we first come upon the 'angel of Jahweh,' who found Hagar in the wilderness and aided her, but whom, as v. 13 shows, Hagar regarded as Jahweh Himself. The word here and elsewhere in the OT translated 'angel,' *mal'ak*, is from a root which appears in Arabic as *laka*, and in Ethiopic as *la'aka*, 'to go' or 'send as a messenger.' In this case *mal'ak Jahweh* means a special mission or coming of Jahweh to accomplish a special purpose. The 'angel' is not, accordingly, an angel in the later acceptance of the term.² The same is true of the following instances, which all appear in J, or in literature closely akin to it.

In Gn 18 the word 'angel' is not used, but Jahweh is said to have visited Abraham. The 'two angels' of ch. 19 are a later addition to the narrative, and, in the language of a later epoch, describe Jahweh's companions. In Gn 32²⁴ a 'man' comes and wrestles with Jacob; he is in reality Jahweh, though not formally declared by the text to be so. This 'man' represents a 'mission' or 'coming' of Jahweh, as did the 'angel of Jahweh' in ch. 16. It is probably this 'man' who is referred to in Gn 48¹⁶ as 'the angel which hath redeemed me [Jacob].' In Ex 3² the 'angel of Jahweh' appeared to Moses in the burning bush, but it was Jahweh Himself who saw that Moses turned aside to see the bush (v. 4), and Jahweh who spoke to Moses (v. 7). Similarly, the 'angel of Jahweh' appeared in the way to stop Balaam (Nu 22²²⁻³⁵). In Jos 5¹³⁻¹⁵ a 'man' appeared to Joshua as the captain of the host of Jahweh; he was the same manifestation elsewhere called the 'angel of Jahweh.' In Jg 2¹ the 'angel' or 'manifestation' of Jahweh moved up from Gilgal to Bethel. The 'angel of Jahweh' appeared to Gideon (Jg 6¹¹), and it is clear from vv. 21-23 that He was Jahweh Himself. The same is true of the 'angel of Jahweh' who appeared to the wife of Manoah in Jg 13². In 2 S 24¹⁷ David falls into the hand of Jahweh, who turns out (v. 19) to be His angel.

In all these passages the 'angel of Jahweh' is

¹ Cf. Barton, *Sem. Or.*, London, 1902, p. 91, and the references there given; also Skinner, *Genesis*, Edinburgh, 1910, p. 89 ff.; for a divergent view, see art. CHERUB, vol. iii. p. 508 ff.

² Cf. W. E. Addis, *Documents of the Hexateuch*, London, 1892, i. 24, n. 1.

Jahweh Himself, who has come upon some special mission. Perhaps it was regarded as a kind of partial manifestation of Jahweh, but at all events there was no clear line of distinction between Jahweh and His angel. These manifestations of Jahweh were regarded as blessed or beautiful things, so that, when it was desired especially to praise a man, one said to him: 'Thou art good in my sight as an angel of God' (cf. 1 S 29⁹, 2 S 14^{17, 20} 19²⁷). At the same time, the term *mal'ak* was often used to designate the messenger of a king (see 1 S 11³ 16¹⁹ 19^{11, 14, 20}, and cf. 1 K 20⁸, Jer 27⁸).

In the J document other beings of the Divine order besides Jahweh are represented as real. These are called 'sons of God' (*bene hā-'elohim*) in Gn 6^{2, 4}, where they are said to have taken human wives and to have begotten the heroes who lived in olden days. These beings are not called angels, and do not appear again in pre-exilic literature.

3. In the E document the same conditions of thought prevail, though here angels appear at times in numbers.

In Gn 22¹ an angel called to Abraham out of heaven to prevent the sacrifice of Isaac. The present text calls him the 'angel of Jahweh,' but it is thought that in the original form of the text he was called the 'angel of God.' In Gn 28¹² Jacob saw the angels of God ascending and descending upon the ladder of his dream, but they were so closely associated with God that he said: 'This is none other than the house of God.' In Gn 31¹¹ the 'angel of God' appeared to Jacob in Aram, but v. 13 tells us that he said: 'I am the God of Bethel.' The angel was, then, only a manifestation of God. In Gn 32¹² the 'angels of God' met Jacob, and he said: 'This is God's host.' Here apparently the angels were a manifestation of God and of His attendant company of spirits. In Ex 34⁹ it was God Himself who called to Moses out of the burning bush. In Ex 14¹⁹ the 'angel of God' who had gone before the camp of Israel removed and went behind. This angel performed the same function as the pillar of cloud in the J document (cf. Nu 20¹⁶). That the 'angel of God' was practically identical with God is shown in Ex 23^{20, 22}, where God declared that His 'name' was in the angel that should go before Israel.

There is, then, no radical difference of conception between J and E. In both of them the angel of the Deity is usually a manifestation of Deity Himself, though in one instance (Gn 32¹²) the angels are apparently the spirits who accompany God. In Jg 9²³ (a passage which G. F. Moore [*SBOT*, New York, 1898] attributes to E), God is said to have sent an evil spirit between Abimelech and the men of Shechem; and similarly in 1 S 16^{14-16, 22} 18¹⁰ (a passage which Budde attributes to J) an evil spirit from God is said to have come upon Saul.

4. This last conception is similar to that in 1 K 22¹⁹⁻²³, where Jahweh is thought of as surrounded by a host of spirits. These spirits were as yet undifferentiated. They had no moral character; they were neither angels nor demons, but took on their character from the nature of the tasks which they were given to perform. Jahweh Himself was responsible for whatever was done; He lured Ahab to his death; it was at His bidding that one of the spirits became a lying spirit in the mouths of Ahab's prophets to accomplish this end. The spirits of Jahweh's court were not the only spirits in which the Hebrews of the period believed. In 2 K 2¹² and 6¹⁷ reference is made to a kind of horsemen of the air, who seem to have been regarded as spirit defenders of Israel, for one passage relates that, when the chariot of fire took Elijah away, Elisha exclaimed: 'The chariots of Israel and the horsemen thereof!' and the other represents these horsemen as the defenders of Elisha from a foreign army.

5. There are few other references to angels or spirits before the Exile. An early Ephraimite narrative (1 K 19⁹) tells us that an angel touched Elijah and awakened him. One late prophetic narrative tells us twice that an angel of Jahweh spoke to Elijah (2 K 1^{8, 15}), while another, also late (1 K 13¹⁶), tells that an angel spoke to another prophet. In 2 K 19³⁵ = Is 37³⁶ we are told

that an angel of Jahweh smote the Assyrians of Sennacherib's army. Pre-exilic prophets make almost no reference to angels, although Hosea (12⁴) declares that Jacob 'had power over the angel.' This is a reference to the 'man' of Gn 32²⁴, and is the only occurrence of 'angel' in a pre-exilic prophet. The Deuteronomist makes no mention of angels. One Deut. editor refers to the 'angel of Jahweh' (Ex 33²), but he was influenced by E.

6. One other class of supernatural beings of the time before the Exile remains to be considered, viz. the seraphim. Our knowledge of them is gained from one passage only, Is 6¹⁻⁷. In his vision, Isaiah saw Jahweh, above whom the seraphim were standing. Each one had six wings, and they constantly uttered the trisagion. At the sound of their voices 'the foundations of the threshold were moved.' Finally, it was one of these who took from the altar a live coal and touched the prophet's lips. It is clear that, like the cherubim, the seraphim were not angels (i.e. messengers), but were attendants of Jahweh. Like the cherubim, they are composite figures, and later Jewish thought placed them with the cherubim in Paradise (cf. En. 61¹⁰ 71⁷, Slav. En. 20⁴ 21¹).

Various explanations of the name and nature of the seraphim have been offered. (1) An old explanation, now generally abandoned, derived *serāph* from the Arab. *ṣarṣa*, 'to be eminent in glory,' and held the seraphim to be a kind of archangels. (2) Delitzsch and Hommel have connected it with the Assyrian *ṣarrāpu*, the 'burner,' an epithet applied to the Bab. god Nergal, a sun-deity; but, although an old syllabary says that this was the epithet of Nergal in the 'Westland,' no such deity has appeared in any real Canaanite source, and is consequently improbable. (3) Cheyne (*EBJ*, art. 'Demons') has, under the influence of the previous suggestion, attempted to connect the name of the god *Resef*, whose name occurs in a Phoen. inscription (*CIS* 1. 38). This he equates with *serāph*, supposing that a transposition of letters occurred—a solution which seems even more improbable. (4) Less satisfactory still was Hitzig's suggestion that *serāph* is to be connected with the Egyptian *Serapis*. (5) More recently Marti and others have connected the seraphim with the Egyptian griffins found, for example, in a XIIth dynasty tomb at Beni Hassan. These griffins were winged, were guardians of the grave, and in demotic were called *serēf* (cf. R. Pietschmann, *Geogr. der Phönizier*, Berlin, 1889, p. 177 ff.). (6) Probably the true explanation connects the seraphim with the fiery (*serāphim*) serpents of Nu 21⁶, and supposes that the seraphim were primarily serpents. This view is supported by the fact that Heb. tradition gave the serpent a prominent rôle in Paradise (cf. Gn 3), that they worshipped serpent-god down to the time of Heseekiah (2 K 18⁴⁵), that there was at Jerusalem a well called the 'Dragon's fountain' (Neh 2¹⁸; probably the modern Bir Eyyub), that a brazen serpent was found at Gezer in the pre-exilic Hebrew stratum (R. A. S. Macalister, *Bible Side-Lights from the Mound of Gezer*, London, 1906, p. 76), and that in En. 20⁷ serpents (Gr. *δράκοντες*) are associated with the cherubim in Paradise, as in the Enoch passages cited above seraphim are associated with the cherubim. In course of time these serpents of Paradise were regarded as the attendants or guards of Jahweh, and were given wings, etc. to make them composite.

In pre-exilic Hebrew thought, then, Jahweh had three classes of attendants—cherubim, spirits, and seraphim. The cherubim and seraphim were guardians of Paradise and attendants of Jahweh. The spirits were His courtiers, and might be sent on missions by Him. They played, however, a very small part. Jahweh Himself was thought to appear in special manifestations to accomplish His purposes. Such manifestations were called the 'angel of Jahweh,' or the 'angel of God.'

7. Of demons in this period there are but slight traces. In the old poem which now forms Dt 33 it is said in v. 13 that the 'deep' (*t'hôm*) 'coucheth' (*rôbezeeth*) beneath. Driver has noted (*Deut.* p. 406) that *rôbezeeth* is ordinarily used of an animal; and, when one recalls that under the kindred name *Tiamât* the deep was personified in Babylonia as a dragon, and that this dragon appears in post-exilic Heb. literature as Rahab and Leviathan (see below), it becomes probable that Dt 33¹³ personified the subterranean abyss as a great dragon or demon. In Dt 32¹⁷ Hebrews are said to have sacrificed to *shedim*, not to 'Eloah' (God). *Shedim* was understood by the translators of the Septuagint as

demons, but, as it is made parallel with 'foreign gods' (cf. v. 16), and is the equivalent of the Assy. *šēdu*, or bull-deity, it is probable that it is used here as the name of a foreign deity. The fact that the root *šēd* became in later Judaism the general term for 'demon' (cf. Jastrow, *Dict. of the Targ., Talmud, and Mid.*, New York, 1903, p. 1558a) does not prove this inference wrong. If this view is correct, it makes no difference to our subject whether we date Dt 32, with Ewald and Dillmann, in the reign of Jeroboam II; with Kuenen and Driver, about 630 B.C.; or, with Steuernagel, in the Exile.

There are no clear references in pre-exilic literature to other demons, but it is probable that the Hebrews of the period believed that demons inhabited waste places, and that they endeavoured to propitiate them. The sacrifice to the wilderness demon Azazel (*q.v.*) (Lv 16) is clearly a survival from pre-exilic days, and it is probable that Lilith (Is 34¹⁴) was an old wilderness demon.

II. EXILIC AND POST-EXILIC CANONICAL MATERIAL.—1. In Ezekiel the term 'angel' does not occur, though in 2²⁸ and in 40³ a supernatural man appears who performs the functions of an angel. In the former passage he directs the marking of idolaters for destruction; in the latter he measures off the dimensions of the new sanctuary. The older belief in spirits survives to some extent in Ezekiel. In 2² 312. 14 8¹ a 'spirit' is said to have come upon Ezekiel and filled him with ecstatic inspiration. This spirit was one of the members of Jahweh's court, of which 1 K 22 gives such a vivid description (cf. Toy, *SBOT*, New York, 1899). This usage of 'spirit' is found only in the earlier chapters of Ezekiel, and in 8¹ is made synonymous with 'the hand of Jahweh.' In 11⁵ the term 'spirit' occurs, but it here approaches more nearly the spirit of Jahweh, and does not seem to denote a separate entity of a lower order. It inspires the prophet to reflexion rather than ecstasy. In other parts of Ezekiel 'spirits' do not occur.

2. In *Deutero-Isaiah* angels are not mentioned, and in *Trito-Isaiah* only one reference to an angel or spirit is found, viz. 'the angel of his [Jahweh's] presence' [Heb. 'face'], Is 63⁹. The expression occurs in a poetic reference to the angel mentioned in Ex 23²¹, of whom it was said, 'My name is in him.' The term 'presence' or 'face' seems to be borrowed from Ex 33²⁹, where Jahweh says to Moses: 'My presence shall go with thee.' The reference in Isaiah really betokens a post-exilic literary survival of a pre-exilic idea.

3. In *Zechariah* the 'angel' in the function of messenger appears as a fixed idea. The angel talked with the prophet, and in this way Zechariah received all his prophetic messages (cf. Zec 1² 11. 12. 13. 14. 19 5⁵ 10 6⁴ 8). The angel is here clearly an intermediary between God and man. Zechariah never is said to have seen God. In Zechariah, too, we meet for the first time with the division of angels into ranks. In 2³ 4 one angel is clearly the commander of another, and sends him on a mission. The 'angel of Jahweh' appears here also as a kind of guardian of Israel, since he protects the priest, the representative of the nation. In 1¹³ and 4¹³ the angel of Jahweh appears as a kind of Grand Vizier among the other angels. Possibly this early differentiation of angels into ranks was due to Persian influence, though this seems improbable, for, when this prophecy was written, only twenty years had elapsed since Cyrus's conquest of Babylonia and Palestine.

4. In the Book of *Job* we have different strata. The prologue is older than the poem, and may have been composed before the Exile. In it Jahweh is represented as surrounded by a court of

supernatural beings. These are called *bene hā-'elohim*, or beings of the Divine order—the old name employed in Gn 6²⁻⁴. These beings are pictured as free to walk through the earth wherever they will, but upon appointed days they gather to pay their court to Jahweh. Satan is still a member of this group, though he has become offended and has lost his faith in the existence of disinterested virtue. He is permitted to go forth upon a mission of experimentation—a mission which proves most painful to his victim. The whole conception is quite akin to that of 1 K 22. In the poem, which is later than the prologue, little is said of angels, though that little is of interest. In 5¹ the possibility of angelic intercessors is referred to. The angelic beings are here called 'holy ones.' In 4¹⁸ and 15¹ these 'holy ones' are said to be less pure than God, but much holier than men. The 'angel' of 33³⁸ (RV) is better rendered, with the margin, 'messenger,' since Elihu is referring to himself and not to a heavenly messenger (cf. Barton, *Com. on Job*, N.Y., 1911). In 38⁷ the 'sons of God' of the prologue are referred to, and are identified with the morning stars.

5. In the *Psalter*, angels are messengers of either good or evil. Ps 34⁷ declares: 'The angel of Jahweh encampeth round about them that fear him,' i.e. he is their protection. Ps 35⁶ declares that God lets His angel chase and persecute the wicked. Similarly, Ps 78⁴⁰ declares that God cast upon the Egyptians 'the fierceness of his anger, wrath, indignation, and trouble, a band of evil angels.' Here the angels are personifications of the wrath and indignation of Jahweh. Ps 104¹ reverses in a way the process, declaring: 'He makes his angels winds.' The angels as guardians are again referred to in Ps 91¹¹: 'He shall give his angels charge over thee, to keep thee. They shall bear thee up in their hands.' Ps 103²⁰ and 148² call upon angels as well as men to praise God. Ps 89⁶ 7 implies that God is surrounded in heaven by a council of angels. This is also implied in Ps 103²⁰ 21 and 148², where the angels are spoken of as the 'ministers who do God's pleasure,' and as 'his host.' In Ps 8², where the present text, in speaking of man, reads: 'Thou hast made him little less than God' ('*elohim*'), the reference is probably to angels, and the original text was, perhaps, 'sons of God' ('*bene hā-'elohim*').

6. The *Priestly document* contains no reference to angels. It conceives of God as far away, but also as so powerful that He can simply speak and His word is obeyed. It represents Him in Leviticus as speaking to Moses, but how He spoke it never tells. It gives no hint that it was through angels.

7. The same is true of the Books of *Chronicles*, which are closely dependent upon P for their point of view. The Chronicler mentions angels in two passages only, 1 Ch 21 and 2 Ch 32²¹. The former passage is dependent on 2 S 24, and has taken over the angel who inflicted the punishment for David's census (see vv. 9. 11. 12. 13. 14. 15); the latter is dependent upon 2 K 19³⁵, and has taken over the story of the angel who destroyed Sennacherib's army.

8. Angels do not really appear in the Book of *Ecclesiastes*. The word 'angel' is found, it is true, in 5⁸ (Heb. 5⁵), but it is probably a reverent way of referring to God Himself (cf. Barton, *Ecclesiastes*, in *JCC*, 1908). The Chronicler had set the example for this procedure by making the angel who afflicted Israel stand for God (cf. 1 Ch 21¹⁶ 20).

9. In the Book of *Daniel* the belief in angels re-appears, and they are thought to be exalted far above man (see 3¹⁶⁻¹⁸ 10¹⁶). In 3²⁵ an angel comes in human form to deliver the three children from the fiery furnace (cf. v. 28), and in 6²² God's angel

is said to have stopped the mouths of the lions. The conception of the division of angels into ranks, which was found in Zechariah, re-appears in an accentuated form in Daniel. Each nation apparently has a 'prince' or archangel detailed to look after its interests, so that there is a 'prince of the kingdom of Persia' (10¹²⁻²⁰), a 'prince of Greece' (10²⁰), and a 'prince of Israel' (10²¹). The last mentioned is Michael, who was 'one of the chief princes' (10¹³ 12¹). Possibly this conception is also found in Is 33^{21a}, which dates from about 335-333 B.C. In Daniel, too, we come upon a new feature found in no other canonical book of the period: the angels, or at least the archangels, begin to have names. In addition to Michael, already mentioned, 'the man Gabriel' (Gabriel means 'hero or man of God') appeared to impart wisdom to Daniel (8^{16a} 9^{21a}). The giving of definite proper names to angels—a feature very common in some of the apocryphal books—marks another step forward in the evolution of the conception.

10. Taking the post-exilic time as a whole, some interesting general facts with reference to angels may be gathered. They are called by a variety of names: 'sons of God,' i.e. of 'elohim' (Job 1² 2¹, Dn 3²⁵); 'elohim,' i.e. 'gods' (Ps 8² and perhaps 97²), 'sons of the mighty,' i.e. of 'elim,' lit. 'gods' (Ps 29¹ 89⁶); 'elim,' or 'gods' (Ex 15¹¹); 'gibborim,' or 'heroes' (Jl 3 [4]¹¹); 'shomerim,' or 'keepers' (Is 62²); 'host of the height' (Is 24²¹); 'morning stars' (Job 38⁷); 'vrim,' i.e. 'watchers' (Dn 4¹⁷ 14¹); 'holy ones' Zec 14⁵, Ps 89⁷), and 'princes' (Dn 10^{13. 20. 21}). Although angels are once identified with stars (Job 38⁷), there is no attempt in the canonical books, such as appears in some of the apocryphal books, to define the nature of angels or to tell the substance of which they are composed. The term 'host of the height' applied to them in Is 24²¹ is, no doubt, a modification of the pre-exilic phrase 'host of heaven,' which was applied to the stars. During the last years of the Judean monarchy those had been worshipped (see Jer 8², Zeph 1⁵, Dt 4¹⁹); they were then considered as gods, and the prophets opposed their worship. As the close of the Exile drew near, Jahweh was declared to be supreme over them (Is 45¹; cf. 40²⁶), and in Neh 9⁶ they are said to worship Jahweh. Apparently it was believed that this host was not subdued to the position of subordinates and worshippers without a struggle (see Job 25², Is 24²¹ 27¹ 34²), and the reference in 27¹ to Leviathan, which, as shown below, is a name for the Bab. dragon Tiamat, suggests that the idea of a struggle was borrowed from the Babylonian Creation Epic.

It has been held by some that the division of angels into ranks and the belief in archangels point to the fact that the angels originated in the subjugation of other gods to Jahweh. The argument in favour of this view is strong. It would seem improbable that the development of archangels was due in the first place to Persian influence, for they appear already in Zechariah, when Persian influence was too new. The fact that in Daniel the different archangels are each the prince or guardian of a special nation is in favour of the origin suggested, for it assigns to them just the rôle that the national gods of the heathen world had performed.

The functions of angels were various. They acted as Jahweh's court (Job 1. 2) and as His council (Ps 89⁷); they might be intercessors for men (Job 5¹), or guardians of the righteous (Ps 34⁷), whom they bear up in their hands (Ps 91^{11a}, Nu 20¹⁶ [P]); they are the guides and channels of Divine revelation to prophets (Zec 1^{9. 11. 12. 13. 14. 19} etc., Dn 8^{16a} 10^{13-16a}); they inflict punishment on the wicked (Ps 78⁴⁹); some of them guard the nations (Dn 10^{20. 21}); and in general they do whatever Jahweh wishes to have done.

Angels during this period were for the most part without names. There are only three exceptions

to this: the 'angel of his presence' (Is 63⁹), which, as pointed out above, is a poetic way of referring to a pre-exilic idea; and the individual angels Michael and Gabriel. These last appear in Daniel only, the latest book of the canon to contain any reference to angels. They are canonical examples of a tendency which is abundantly illustrated in the apocryphal literature to individualize angels and to attribute permanent characteristics to them. The name *Michael*, meaning 'Who is like God?', was a natural one to apply to an angel, though it had previously been borne by a number of men (see Nu 13¹³, 1 Ch 5^{13. 14} 6⁴⁰ 7³ 8¹⁶ 12²⁰ 27¹⁸, 2 Ch 21², and Ezr 8⁸). *Gabriel*, as already noted, signifies 'man of God,' and was also a natural name to give an angel.

11. The Hebrew belief in demons belongs especially to the time after the Exile. There were several causes which led to this belief. In pre-exilic times, it had been thought that Jahweh did everything, both good and bad. Amos says (3⁹): 'Shall evil befall a city and Jahweh hath not done it?' This evil might be accomplished through the agency of non-ethical spirits, as in 1 K 22¹⁹⁻²³, but Jahweh was in reality responsible for it. As in the case of the spirit that visited Saul, it might be called an 'evil spirit' (1 S 16^{14a}); but this only signified that its effects were undesirable, not that the spirit was morally bad. The spirit in this case came from Jahweh, and He was really responsible. This view was entertained by one writer until near the close of the Exile, for Deutero-Isaiah represents Jahweh as saying: 'I make peace, and create evil' (Is 45⁷). In the time after the Exile, men began to feel that to attribute evil to God was to think unworthily of Him; hence the occurrence of evil was ascribed to the agency of demons. This was, however, only one of the forces at work. With the triumph of monotheism the belief in the reality of the heathen deities did not altogether disappear, and those gods whose worshippers had been hostile to Israel, or had opposed the prophets so as to be denounced in the sacred books, were reduced to the rank of demons. From time immemorial, too, the belief had existed that dark and deserted localities were inhabited by unfriendly spirits. From the earliest times, pains had been taken to propitiate some of these by sacrifices, and such unfriendly spirits now became demons in the commonly accepted view. Then, too, the old mythology had preserved the memory of a heavenly court of spirits, or *bene hä-elohim*. It kept alive the memory of how some of these spirits had been commissioned in the olden time to bring men to destruction, and from this circle of ideas there was born a belief in an arch-enemy of good—Satan—who has since held a large place in the world's thought. Some of these demons were believed to inhabit the deserts and to roam about at night (cf. Is 13²¹ 34¹⁴). Like the *jinn* of the Arabs, they were supposed to take on the forms of wild animals. Some of them still maintained the quasi-Divine character which they had possessed before the Exile, and sacrifices were still offered to them. Once it is implied that the home of the arch-demon is in Sheol (cf. Job 18¹⁴).

Of individual demons, the one that played the largest part in later thought is Satan, though he appears in but three passages of the OT. (a) The earliest of these is the prologue of Job, which may be pre-exilic. Here Satan is one of the 'sons of God,' or 'spirits,' who compose the court of Jahweh. Much of the character of the un-ethical spirit which was sent on a mission of evil to men still attaches to him, but he has developed beyond this, for he has become permanently sceptical of disinterested virtue. He can do nothing without

Jahweh's permission, but his state of mind is thought to be a cause of regret to Jahweh. In consequence of Jahweh's concern for Satan and His desire to win him once more to a proper attitude, He permits him to make investigations in disinterested virtue by bringing evil upon Job. In this narrative Jahweh is represented as ultimately responsible for the evil, but it is permitted for a good end—the scattering of the doubts which had invaded the angelic circle and embittered one of the courtiers of heaven.

(b) In Zec 3¹ Satan appears to oppose the high priest Joshua before the 'angel of Jahweh.' The 'Adversary' (for such is the meaning of the name *Satan*) stands in the court of Jahweh as a public prosecutor, and, as Joshua is the representative of the nation, so Satan is the adversary or prosecutor of the nation. The fact that the angel of Jahweh rebukes him shows that Satan has undertaken his evil opposition to the people of God on his own initiative and not by Divine permission, as was the case in the Book of Job. His malignity is accordingly somewhat more developed, and in the circle of ideas represented by this passage Satan really relieves Jahweh of the responsibility for evil.

(c) The only other OT passage where Satan is mentioned is 1 Ch 21¹, which is a further witness to the fact that Satan was now held to be responsible for the existence of evil. The chapter gives an account of David's census and of the punishment for it, and is dependent on 2 S 24; but, whereas it is said in Samuel that Jahweh said to David, 'Go, number Israel,' because He was angry with the people, it is said in Chronicles that Satan 'moved David to number Israel.' Satan is clearly a development out of the group of spirits which were in earlier days thought to form Jahweh's court, members of which were sent upon errands of disaster to men.

Another demon who appears in one post-exilic canonical passage (Lv 16) is *Azazel* (g.v.). In the ritual of the Day of Atonement it is prescribed that a goat shall be chosen 'for Azazel,' that the sins of the people shall be confessed over him, and that then he shall be sent into the wilderness by a special messenger and turned loose (cf. Lv 16^{8, 10, 20}). The goat is in reality a sacrifice to Azazel. The ritual of this chapter is clearly a survival from pre-exilic days. It is also clear that Azazel was a wilderness demon, and probably the sacrifice was originally offered to him to propitiate him. It is, accordingly, a survival from a kind of worship of fear. The name *Azā'zēl* signifies 'entire removal.'

Another class of demons were *se'irim*, lit. 'hairy ones' (RV 'satyrs'; marg. 'he-goats'), who, like Azazel, were thought to inhabit wastes and ruins. Is 34¹⁴, in a picture of the future desolation of Edom, says that 'satyr shall call to his fellow there'; and Is 13²¹, an exilic passage, in portraying the desolation of Babylon, declares that 'satyrs shall dance there.' Just as the Arabs degraded the gods of the heathen to *jinn* and attributed to them some of the hairy characteristics of animals, so these satyrs appear to have been originally heathen deities (cf. W. R. Smith, *Rel. Sem.* 120 ff.). It is for this reason that Lv 17⁷ prohibits, for the future, sacrifice to satyrs, implying in the statement that they had been the recipients of sacrifices in the past. Similarly 2 Ch 11¹⁶, in reproducing 1 K 12³¹—the statement concerning Jeroboam's arrangements of priests for the high places—amplifies it by saying that he appointed 'priests for the satyrs and calves which he had made.'

The *shedim* which are mentioned in Dt 32¹⁷ are once referred to in a post exilic canonical writing, Ps 106³⁷, where *shedim* is a synonym for demons.

The word really, as the parallelism shows, refers to the heathen deities of the Canaanites, whom some of the post-exilic writers made satyrs, as just noted. That it was the intention of the Psalmist to call them demons here is confirmed by the fact that in the Mishna and Talmud *shed* is the root used to designate demons in general (cf. Jastrow, *Dict.* p. 1558a).

Is 34¹⁴ mentions *Lilith* (RV 'night-monster') in connexion with satyrs. It is probable that the name is connected with the Heb. root for 'night,' and that *Lilith* was a night-monster or demon which was thought to lurk in desolate places.

The 'horse-leech' (*'alūqā*) of Pr 30¹⁵ was perhaps a demon. While there was a large leech to which the name was applied, it was also regarded by the Jews of later time as the name of a demon. This seems to be the case in the Targ. to Ps 12⁹, which says: 'The wicked go round in circles like *'alūqā*, who suck the blood of men.'

In Ca 27³⁰ the Shunammite adjoins the daughters of Jerusalem 'by the roes and hinds of the field.' These are here probably not simple animals, but faun-like spirits by whom, as by other supernatural beings, adjurations could be made.

In four passages (all exilic or post-exilic) a great demon or dragon called Rahab appears. She was surrounded by a host of helpers, but after a severe struggle she and her helpers were overcome by Jahweh. The passages are: Is 51⁹ 'Art not thou he who hewed Rahab in pieces, who pierced through the dragon?'; Job 9¹³ 'The helpers of Rahab do stoop under him; how much less shall I answer him?'; Job 26^{13, 15} 'He quelleth the sea with his power, by his understanding he smiteth through Rahab; by his breath the heavens are bright,' etc.; Ps 89¹⁰ 'Thou hast broken Rahab in pieces as one that is slain; thou hast scattered thine enemies with the arm of thy strength.' It has long been recognized (see the writer's art. 'Tiamat' in *JAOS* xv. [1890]) that Rahab in those passages is simply another name for the Bab. primeval sea-monster *Tiamāt*. She is, accordingly, here not a native Heb. demon. For the original picture of her and her helpers, see L. W. King, *Seven Tablets of Creation*, London, 1902, Tablets ii. and iv. Although Rahab is not native to Heb. soil, she plays a considerable part in post-exilic thought. Jahweh was naturally substituted for Marduk in the story circulated among the Hebrews, and His worshippers magnified His power as they thought of the might of this terrible dragon of a demon.

In at least two passages this primitive Bab. monster was known among the Hebrews as *Leviathan*. In Job 3⁸ *Leviathan* is evidently a mythical dragon capable of darkening the day, while in Ps 74¹⁴ we read, 'Thou brakest the heads of *Leviathan* in pieces,' and vv. 16, 17 go on to speak of the creation of the sun, the fixing of earth's bounds, and the making of summer and winter. In the psalm, therefore, we clearly have a reference to the Bab. Creation Epic, and it is probable that the passage from Job refers to the same monster. In Job 41 the crocodile is described under the name *Leviathan*, but in vv. 19-21 the description of the natural animal is mingled with elements drawn from a mythical fire-breathing dragon. It is probable, therefore, that *Leviathan*, like Rahab, was the Bab. *Tiamāt* under another name.

III. IN APOCRYPHAL LITERATURE.—While but few individual demons can be traced in the canonical literature, the apocryphal writings bear witness to the fact that the popular thought abounded with them. In the Apocalyptic writings of the Jews, composed prior to A.D. 100, all the main features of belief in spirits, angels, and

demons which appear in the canonical literature were continued and heightened. There is, however, a great difference between them in this respect. Some of them, like Sirach and Maccabees, make almost no reference to angels. Sirach mentions only the angel that destroyed the Assyrian army (48²¹), the writer of 1 Mac mentions angels only in referring to this event (7⁴¹), while the author of 2 Mac refers to them only in saying that the Jews of the Maccabean time prayed that an angel might be sent to smite the Greeks, as one was sent to smite the Assyrians (cf. 11⁶ 15^{22*}). Similarly, the Wisdom of Solomon makes no reference to angels except that in describing the Exodus it declares that the word of God was an active angel of vengeance (cf. Wis 18¹⁵). In some of the Enoch apocalypses, on the other hand, belief in angelic and demoniacal agency is carried to great length. This is especially true of the oldest Enoch apocalypse (Eth. En. 1-36), of the Parables (Eth. En. 37-71), and of the Slavonic Enoch. Other works make a more moderate use of this belief, although it clearly underlies all their thinking. This is true of Tobit, the Testaments of the Twelve Patriarchs, the Apocalypse of Baruch, the Greek additions to Daniel, 2 Esdras, and the Book of Jubilees. The beliefs continued and were in some respects intensified, but, in proportion as the writers came under the sway of Greek rationalistic thought, they ceased to feel the need for such supernatural agencies. The author of Jubilees, in re-telling the story of Genesis, employs angels only where they appear in that book.

1. In certain writers the old tendency to attribute a spirit to everything still manifests itself. The author of the Enoch Parables speaks of a spirit of the sea, of hoar-frost, of hail, of snow, of fog, of dew, and of rain (Eth. En. 60¹⁷⁻²¹), while his favourite title for God is 'Lord of spirits' (38², 4 39¹² and *passim*). The author of Jubilees speaks of the spirits of fire, wind, darkness, hail, snow, frost, thunder, cold and heat, winter and summer (Jub 2¹), but he calls them angels at the same time, and he also terms the 'watchers' (an older name for angels) the 'fathers of spirits' (10⁶). These two agree in making spirits of the phenomena of Nature. In a different vein from those, the Testaments of the Twelve Patriarchs make spirits of man's immoral tendencies. Those spirits are in reality demons, and are under the direction of Belial, the prince of demons (see art. BELIAL). Thus, we are told that there are seven spirits of deceit (Reuben 2¹). These seven are said to be the spirit of fornication, of insatiableness (resident in the belly), of fighting (resident in the liver and gall), of obsequiousness and chicanery, of pride, of lying and fraud, and of injustice with which are thefts and acts of rapacity (cf. Reuben 3²⁻⁶, Simeon 6⁷, Judah 20³, Dan 5⁴, Gad 4⁷). Later additions make the senses and sleep spirits of wickedness (Reuben 2³ 3¹). The function of these spirits was to lead men into various sins, and, after having done so, to take vengeance on them (Levi 3²). The evil spirit which a man had served was said to await his soul as it left his body at death in order to torment it (Asher 6⁹). In most of the Apocryphal books the spirits have passed over either into angels or into demons.

2. Through literary influence there is a slight survival of the Cherubim and Seraphim of an earlier time. They, together with the Ophanim (serpent-beings developed out of the original Seraphim), are said to be holy angels who praise God (Eth. En. 61¹⁰ 71⁷, Slav. En. 20¹ 21¹); but these beings play no important part in the thought of the period.

3. It is far otherwise with the angels, who are

declared to be innumerable (Apoc. Bar. 59¹¹). This clearly represents the view of several of these writers. Thus the author of the Enoch Parables declares that the Most High is accompanied by 1000 × 1000 and 10000 × 10000 angels (Eth. En. 60¹ 71¹²). Angels were thought to be the agency by which everything was performed. Thus, it is said that myriads of angels accompany the sun on his course (Slav. En. 11⁴ 24), and that 400 take the sun's crown to God at sunset, and return it to the sun in the morning (14² 3). How vast must have been, then, the number of all the angels!

These numerous angelic hosts were believed to be divided into ranks. Distinguished from the common mass, the archangels commanded and directed others. This division appears most clearly in the evil angels or demons, a long list of whose leaders is given in the earliest Enoch apocalypse and in the Enoch parables (cf. Eth. En. 6⁷ and 69²). This list will be further considered in discussing demons below. The good angels had similar chiefs, of whom Gabriel was one (Slav. En. 21⁶). But, apart from the archangels, the angelic hosts were thought to be divided into several ranks. It is said in Slav. En. 20⁸ that, as the Lord sat on His throne, the heavenly hosts stood on the ten steps of it according to their rank. This implies that there were numerous gradations of rank. Four angels were called 'angels of the throne.' They were Michael, Gabriel, Uriel, and Raphael (Eth. En. 9¹ 40² and *Sib. Or.* ii. 215), though two passages (40⁹ 71⁹) substitute Phanuel (*i.e.* Penuel) for Uriel. Just as human hosts had human commanders, so the archangels were the commanders of the others. Thus in the Testament of Levi 3^{30*} the angel of the Presence is counted an archangel, to whom angels below make an announcement of what is transpiring. This development of the angelic hosts into ranks was to some extent reflected in the canonical literature, and its later development may have been influenced by contact with Persian thought.

As to the nature of angels, the conception was not uniform. At first they were considered a kind of supernatural men: thus, in all the books that speak of them, they are frequently called 'men' (see, *e.g.*, Slav. En. 1-7). They are, like men, said to possess bodies and spirits (Eth. En. 67⁸). They intermarried at one time with human women (Eth. En. 7¹, Slav. En. 18⁴). Enoch after translation became an angel (Slav. En. 22), showing that they were considered in many ways kindred to men. This view is a survival of the old conception reflected in Gn 6²⁻⁴. Gradually another view developed, according to which the constitution of angels was quite different from that of men. They are, accordingly, said to have a nature like that of fire (Slav. En. 29¹ 2), and to have been made at the beginning of flame and fire (Apoc. Bar. 21⁶); their splendour is said to be equal to that of the stars (51³). This view was, in some cases where tradition perpetuated the crasser view, blended with the other. Thus Enoch was thought to have been put through a process of purification and glorification before he became an angel (Slav. En. 22); and later, when he was permitted to return to the earth for thirty days, an angel chilled his face, apparently to dim the lustre of its angelic glory, before he descended to mingle with men (cf. Slav. En. 36² 37¹ 38¹). The forces of Nature were at times regarded as angels. Thus frost, hail, and fog are so designated in Eth. En. 60¹⁷⁻¹⁹, and the author of Jubilees calls these and similar forces of Nature indifferently 'spirits' and 'angels' (Jub. 2¹). At the same time angels were thought to have definite limitations. They were not able to hinder the work of God (Eth. En. 41⁹); they were ignorant of their own origin (Slav. En. 24⁸); fallen angels could not see the glory of God

(Eth. En. 14²¹, Slav. En. 24²), and Enoch, a man, interceded for them (Eth. En. 15³).

The whole course of Nature was thought to be carried on by angelic agency. Myriads of angels attend the sun (Slav. En. 14), they regulate the courses of the stars (ch. 19), they guard the habitations of snow (ch. 5), and keep the treasures of oil (ch. 6). Spirits or angels control the lightning, causing a pause before the thunder comes (Eth. En. 60¹³⁻¹⁵). They control the workings of frost, hail, mist, dew, and rain; they preside over the treasures of these (vv. 16-22). Activities of many other kinds were attributed to angels. They kept the garden of Eden (Slav. En. 8); fiery angels now surround Paradise (30¹); and angels built the ark (Eth. En. 67²).

One of the important functions of angels was to guide and instruct the great apocalyptic seers. The angel of peace went with Enoch (Eth. En. 40⁴ 43³), and conducted him to the first heaven (Slav. En. 3), while Gabriel later took Enoch to God (20²). An angel talked to Ezra (2 Es 24⁴, 46, 48 51⁵ 71); and Uriel was sent to Ezra (4¹, 36 51⁵, 20 71 10²⁸, 29). An angel revealed to Jacob Reuben's sin with Bilhah (Test. of Reuben 3¹⁸); an angel invited Levi to heaven, and showed him the secret of heaven to prepare him for the priesthood (Test. of Levi 2⁶ 5¹); an angel informed the patriarch Judah that he should be king of Jacob (Test. of Judah 21⁵), and announced to Jacob the birth of Rachel's children (Test. of Issachar 2¹). The angel of peace guides the soul of a good man at death (Test. of Benj. 6¹). Angels, called 'watchers,' came to earth in the days of Jared to teach men (Jub. 4¹⁶); an angel, spoken of as a 'holy one,' called to Hagar (17¹⁴); angels went up and down the ladder of Jacob's dream (27²¹); angels smote the flames of fire for the three children (v. 36). An angel told Habakkuk to carry his dinner to Daniel who was in the lion's den at Babylon, and took Habakkuk by the hair and transported him from Judæa to Babylon for this purpose and back again (Bel vv. 34-39). The angel Raphael came to heal Tobit's blindness (To 3¹⁷), accompanied the young Tobias (54-6, 21), instructed him how to drive an evil spirit away (6. 8²²), was sent by Tobias to Media after money (9¹⁰), opened Tobit's eyes (11²², 25), and was offered half the money (12⁶). Angels are portrayed as pitiful; they were in anguish when Zion was delivered to destruction (Apoc. Bar. 67²); and they are also represented as intercessors (Test. of Levi 3⁴ 5⁷, Test. of Dan 6²). It thus appears that all possible helpful agencies were attributed to them.

As angels were God's agents for blessing, so they were His instruments of chastisement. In the time of the Maccabees, prayer was offered that an angel might destroy the Greeks, as an angel destroyed the Assyrians (2 Mac 11⁵ 15²²). Enoch in the place of punishment saw angels administering torture (Slav. En. 10²²). It was believed that on the Day of Judgment an angel would be appointed avenger (Assump. Mos. 10²). An angel of God is said to have received orders to cut a sinner in twain (Sus vv. 28, 29). The word of God was said to have been an active angel of vengeance on the night of the Exodus (Wis 18¹⁰), and two angels were believed to have once descended from heaven to bind a hostile king (3 Mac 6¹⁸). When Jerusalem was destroyed, four angels stood at its four corners with lamps and accomplished its ruin (Apoc. Bar 7⁸ 8¹). There was also an angel whose chief function was to bring death (21²). Whatever, therefore, needed to be accomplished, whether good or bad, there was an angel to do it.

The tendency observable in a slight degree in the canonical literature to give the angels individual names appears in a greatly heightened form in the Apocryphal literature.

4. The conceptions of demons which appear in the Apocryphal literature are of four distinct types. Two of these regard the arch-demons as fallen angels, but in one type this angelic genesis of demons is much more prominent than in the other. (a) In the canonical literature discussed above, Satan was regarded as one of the number of the Divine beings who formed Jahweh's court (Job 1. 2). The steps by which in the canonical literature he became the great opposer of good have already been sketched. In one type of Apocryphal thought he became the arch-demon, who tempted man and led him astray (see Wis 24⁴ and Slav. En. 3²¹). These writers simply took Satan over from the canonical literature, and his semi-Divine or angelic origin apparently was forgotten. The author of Wisdom moved in an atmosphere of philosophic thought in which neither angels nor demons played any considerable part. The author of Slavonic Enoch, though he makes much of angels, has almost nothing to say of demons. He probably believed in them, but the interest of his narrative led him to place the emphasis elsewhere. These writers call Satan by the Gr. tr. of his name, *diabolos*, or 'devil.' They identify him with the serpent of Eden, and account for the origin of sin by his agency in leading man astray.

(b) The authors of Eth. En. 1-36 and of the Enoch Parables (En. 37-71) represent a different type, being much more keenly interested in tracing the origin of demons and of evil. Instead of taking one arch-demon from the canonical literature, they go back to the narrative of Gn 6²⁻⁴, and account for the origin of demons and of sin by elaborating the hint there given. Persian dualism had sufficiently influenced their thought, so that matter was to them corrupt. That angels should come to earth and have connexion with human wives implied, they thought, a previous rebellion and sin on the part of the angels. The hint which supplied the point of departure for this view was probably given by the story of Satan in the prologue of the Book of Job. Those angelic hosts who sinned were numerous, but they were led by certain archangels, whose names are given somewhat differently by the two writers. These with their followers landed on Mount Hermon, and, after satisfying themselves with human wives, taught men various sins, some teaching one and some another. One taught enchantments, another astrology, another the making of swords, another the art of abortion, and another that of writing. The one who taught the use of coats of mail and of swords also seduced Eve (cf. Eth. En. 6-9 and 69). These writers, like the author of the J document of the Hexateuch, regarded the arts of civilization as having had a common origin with sin. Among the names of these arch-demons the canonical names of Satan and Azazel are found, but they play a comparatively small part. The rôle of Azazel is more prominent than that of Satan. The larger number of these angels (and to them are attributed the most hurtful influences) are called by names not found in the canonical literature. It appears from these names that many of them were called by names appropriate to angels. The degradation of the names to demons was in accord with the theory that they were fallen angels. In one passage (Eth. En. 21⁶) they are identified with the stars. Having introduced sin into the world, those fallen angels were regarded as the presiding geniuses of various forms of transgression and corruption. They were themselves, however, thought to be already undergoing punishment. They were bound and were being tormented by a great fire (Eth. En. 21⁵⁻¹⁰ 54¹⁻³).

(c) The Book of Tobit represents a third type of thought. In it but one demon appears,—*Asmodeus*,—and he is clearly, as his name implies, of Persian

origin (but see Ginzberg, *JE* ii. 217-219). The author of this book had so come under Persian influence, probably by living in the East, that its demonology or demonological vocabulary influenced him more than did that of the canonical, or even the apocryphal, writings of his people.

(d) A fourth type of thought is represented by the Testaments of the Twelve Patriarchs and the Ascension of Isaiah. In these works the demonology, while very real and all-pervasive, is made up in a rational way, and such contact as it has with canonical thought is at quite a different point of that thought. As mentioned above, the world is thought to be pervaded by evil spirits, but these are simply the personification of the evil propensities of man—jealousy, lust, pride, chicanery, injustice, rapacity, etc. Writers who thus made evil spirits of the sinful tendencies of men about them moved in a somewhat different realm of thought from those who connected these evil spirits with the story of Gn 6³⁻⁴ and gave to them orthodox Hebrew names. Over this mass of evil spirits the two writers under consideration believed that Beliar presided. Beliar to them takes the place of the devil in Wisdom and the Secrets of Enoch, of Semyaza in the other Enoch books, and of Asmodeus in Tobit. Beliar is a form of *Belial* (see vol. ii. p. 458^b f.). Belial had been used by Nahum (1¹⁰) as the name of a great evil power. Possibly Belial was an old name for Sheol, though that is uncertain. It it were so, it is easy to see why these writers took it as the name of the prince and leader of all evil and destructive spirits.

To most Jews of the period, as indeed to most men of that time, the world was full of supernatural agencies. As there were angels to accomplish every good act, so there were demons or evil spirits to perpetrate every evil deed or to prompt every sinful impulse. Some of the writers, however, manifest no trace of this demonology; such are Ben Sira and the authors of the Books of Maccabees. The subject-matter of Sirach as well as the philosophical point of view of its author excluded any reference to them, while the author of 1 Mac had probably come so far under the influence of incipient Sadduceism that demons had little or no place in his thought. To most men, however, demons in one form or another were very real, and played an important part in life.

GEORGE A. BARTON.

DEMONS AND SPIRITS (Indian).—1. Prevalence of the belief in spirit influence.—The people of India, particularly the forest tribes and the lower castes, from the cradle to the grave or burning-ground, are oppressed with a feeling best described as demonophobia—the belief that they are haunted by evil spirits of all kinds, some malignant fiends, some mischievous elves, to whose agency are attributed all kinds of sickness and misfortune. Their worship is a worship of fear, the higher gods, particularly in the opinion of the less intelligent classes, being regarded as otiose and indifferent to the evils which attack the human race, while demons are habitually active and malignant.

Among the Thāris of the Himālayān Tarāi, 'the bhūts, or demons lurking in the forest trees, especially the weird cotton

tree (*Bombax heptaphyllum*), and the *prets*, or spirits of the dead, lead them a very miserable life. When the last ray of light leaves the forest, and the darkness settles down upon their villages, all the Thāris, men, women, and children, huddle together inside their fast-closed huts, in mortal dread of those ghostly beings, more savage and cruel than the leopards, tigers, and bears that now prowls about for their prey. Only the terrible cry of "Fire" will bring these poor fear-stricken creatures to open the doors and remove the heavy barriers from their huts at night. And even in the daytime, amid the hum of human life, the songs of the birds, and the lowing of the cattle, no Thāri, man, woman, or child, would ever venture along a forest-line, without casting a leaf, a branch, or a piece of old rag, upon the *bansati* (Skr. *vanaspati*, "king of the woods"), formed at the entrance of deep woods, to save them from the many diseases and accidents the goblins and malignant spirits of the forests can bring upon and cause them" (S. Knowles, *The Gospel in Gonda*, 1889, p. 214).

In S. India, where this belief is even more widely spread than in the N., 'every village is believed by the people to be surrounded by evil spirits, who are always on the watch to inflict disease and misfortunes of all kinds on the unhappy villagers. They lurk everywhere, on the tops of palmyra trees, in caves and rocks, in ravines and chasms. They fly about in the air, like birds of prey, ready to pounce down on any unprotected victim, and the Indian villagers pass through life in constant dread of these invisible enemies. So they turn for protection to the guardian deities of their village, whose function it is to ward off these evil spirits and protect the village from epidemics of cholera, smallpox, or fever, from cattle disease, failure of crops, childlessness, fires, and all the manifold ills that flesh is heir to in an Indian village' (Bishop H. Whitehead, *Bull. Madr. Mus.* v. 126 f.). Traill, who took over charge of Kumaun in 1820, reported that the population was divided into two classes, human beings and ghosts (E. S. Oakley, *Holy Himalaya*, 1905, p. 217 f.). For other testimony to the same effect, see S. Mather, *The Land of Clouds*, 207 ff.; Sir W. Sleeman, *Rambles and Recollections*, 1833, p. 288 ff.; Bishop R. Caldwell, 'The Tinnevely Shanars', in B. Ziegenbalg, *Genealogy of the S. Indian Gods*, 1869, p. 156 ff. This feeling of pessimism, due partly to racial idiosyncrasy, partly to the rigour of their environment, has prevailed among the races of India from the very earliest times (see H. Oldenberg, *Rel. des Veda*, 1894, p. 39 f.; Atharvaveda, *SBE* xlii. *passim*).

2. Origin and character of the cult of demons and evil spirits.—Demonolatry, the worship of devils or demons, is a form of belief in its origin independent of Brāhmanism or the orthodox form of Hinduism, though the latter has in many cases annexed and absorbed it (see § 12). The cultus is a true form of worship, and here the distinction between 'deity' and 'demon' is unmeaning, the latter being, as in the case of the orthodox gods, controlled by true worship or propitiation. But, like similar forms of popular belief in other parts of the world, it is amorphous and ill-organized, possessing little or no sacred literature and no established priesthood. The most obvious distinction is between non-human and human spirits.

(a) *Non-human spirits or fiends* are 'endowed with superhuman powers, and possess material bodies of various kinds, which they can change as they list, and which are subject to destruction. As free agents, they can choose between good and evil, but a disposition towards evil preponderates in their character' (G. Oppert, *Original Inhabitants of Bharatavarsa or India*, 515 f.). The so-called Asuras, Dānavas, Daityas, and Rākṣasas belong to this group, 'all personations of the hostile powers of Nature, or of mighty human foes, both which have been eventually converted into superhuman beings.' This group as a whole seems to be derived from pre-Animistic beliefs, the worship or dread of 'powers' (*numina*, not *nomina*), the vague impersonations of the terror of night, hill, cave, or forest. They appear in the Vedas as malevolent beings hostile to the orthodox gods (A. Macdonell, *Vedic Mythology*, 1897, p. 156 ff.). Max Müller and J. Muir agree in denying that all these Vedic evil spirits were borrowed by the Aryans from the aborigines of India (*Contributions to the Science of Mythology*, 1897, i. 212; *Original Sanskrit Texts*, 1860, pt. ii. 380 ff.). It is safer to believe that among both Aryans and non-Aryans they were the result of pre-Animistic beliefs common to both races. At the same time, it is probable that the Aryan view of the demon world was coloured by their association with the indigenous races.

'The black complexion, ferocious aspect, barbarous habits, rude speech, and savage yells of the Dasyus, and the sudden and furtive attacks which, under cover of the impenetrable woods, and the obscurity of night, they would make on the encampment of the Aryas, might naturally lead the latter to speak of them, in the highly figurative language of an imaginative people in the first stage of civilisation, as ghosts or demons; or even to conceive of their hidden assailants as possessed of magical and superhuman powers, or as headed by devils. . . . At length the further advance of the Aryas would either drive the Dasyus into the remotest corners of the country, or lead to their partial incorporation with the conquerors as the lowest grade in their community. When this stage was reached, the Aryas would no longer have any occasion to compose prayers to the gods for protection against the aboriginal tribes; but their superstitious dread of the evil spirits, with which the popular mind in all ages has been prone to people the night, would still continue' (*Orig. Skr. Texts*, pt. ii, p. 409 f.). Hence it was the habit in ancient, as well as in modern times, to personify Nisi or Night as a demon; she comes at midnight, calls the house-master, and forces him to follow her whither she will; she drags him into the forest, drops him among thorns, or on the top of some high tree; and it is very dangerous to answer her call (*JASB* i. [1886] 49 f.; *Kāthā-sarīt-sāgara* of Somadeva, tr. C. H. Tawney, 1880, li. 604; Lal Behari Day, *Govinda Samanta*, 1874, i. 9; *NINQ* iii. [1894] 199).

As representing the vague terrors felt by early man in the desert and forest, these Indian spirits resemble in many ways the Arabian *jinn* (W. R. Smith, 119 f.); or, as Westermarck (*MI*, 1903, ii. 589) designates them, 'beings invented to explain what seems to fall outside the ordinary pale of Nature, the wonderful and unexpected, the superstitious imaginations of men who fear'. Hence many of the Indian races represent their deities or demons as inhabiting wild hills or lonely forests. The Meithei believe that their demons occupy hills (T. C. Hodson, *The Meithei*, 1903, p. 120). The Konga Malaysians of Cochin worship two demoniacal deities named after the rocks in which they reside; Sasthi, a sylvan deity, is adored by the Vallans, and is said to live in a hill; the Eravallans believe that their forests and hills are full of dangerous demons, who live in trees, and rule the wild beasts, some of them afflicting particular families or villages, and are propitiated to relieve their hunger, not in the hope of gaining any benefit for their worshippers; the Nayadis worship a group of forest demons, one of which brings them game, and is abused for his ingratitude if the hunt proves unsuccessful (L. K. Iyer, *The Cochin Tribes and Castes*, i. 41, 239, 47, 63). Trees are also a favourite demon-haunt (Tylor, *Prim. Cult.*, 1873, ii. 221). The Izhuvans believe that trees are occupied by demons; and, when it is proposed to cut a tree, a notice to the demons is written on the bark informing them that it is intended to eject them (Iyer, i. 281; cf. Crooke, *PR*, 1896, ii. 90 f.; E. V. Russell, *Census Rep. Central Provinces*, 1901, i. 92). Many of the non-Aryan tribes in Bengal worship deities who reside in hills. Such are the Juangs, Santāls, Oraṇs, Cheros, Kandhs, and Bauris (Risley, *Tribes and Castes of Bengal*, 1891, i. 353, ii. 233, 145, i. 202, 403, 80). The Todas believe that, before they were created, their gods occupied the Nilgiri Hills; they now reside in heights close to the Toda hamlets (Rivers, *The Todas*, 1906, p. 182 f.). In the same class are the water spirits or deities found all over the country, which are malevolent, and drag down unwary travellers—an idea which appears in the classical tale of Narcissus (Crooke, i. 42 f.; Frazer, *GP*, 1900, i. 293). These Rākṣasas, Dānavas, or Daityas still maintain their position in popular belief, the tradition surviving through the study of the Epic literature and the older collections of folklore, like the Jātakas or the tales of Somadeva.

(b) *Human spirits*.—The second and much more important class of evil spirits is that of the ghosts of human beings, known collectively as *Bhūta* (Skr. rt. *bhū*, 'to become, be'). In contradistinction to the fiends or non-human spirits, these are the malignant spirits of men, which for various reasons cherish feelings of hostility to the human race, and, if not expelled or propitiated, do endless mischief. Among the more primitive or debased tribes the belief that disease and death are the result of the normal or abnormal processes of Nature is only imperfectly realized; and these and other calamities are regarded as the work of evil spirits, sometimes acting on their own initiative, sometimes incited by a sorcerer or witch.

3. The *Bhūta*: their characteristics.—In 8. India three terms are used to designate these spirits—*Bhūta*, *Preta*, *Pisācha*, the first name being ordinarily applied to all three classes.

'These beings, always evil, originate from the souls of those who have died untimely or violent deaths, or been deformed, idiotic, or insane; afflicted with fits or unusual ailments; or drunken, dissolute, or wicked during life. The precise distinction between the three classes is that the *Preta* (Skr. rt. *pre*, 'to depart from life') is a ghost of a child dying in infancy, or of one born deformed, imperfect, or monstrous—events attributed to neglect in performing certain ceremonies prescribed during the ten days when, according to popular notions, the limbs of the

embryo are forming in the womb; such a ghost becomes a misshapen, distorted goblin. The *Pisācha* ['*fish-eater*'], on the other hand, is derived rather from mental characteristics, and is the ghost of madmen, habitual drunkards, the treacherous and violent-tempered. . . . *Bhūtas* emanate from those who die in any unusual way, by violence, accident, suicide, or sentence of law; or who have been robbers, notorious evil-doers, or dreaded for cruelty and violence. The death of any well-known bad character is a source of terror to all his neighbourhood, as he is sure to become a *Bhūta* or demon, as powerful and malignant as he was in life' (M. J. Walhouse, *JAI* v. 408 f.). They are represented with small thick bodies, of a red colour, with pigtales round their heads, horrible faces, the teeth of a lion in their mouths, and their bodies covered with ornaments (Caldwell, in Ziegenbalg, 155). In the Deccan they live in large trees, empty houses, or old walls; they often appear as a deer, a tall figure, a strange ox or goat; if a person sleeps under a haunted tree, cuts a branch of it, defiles the abode of the *Bhūta*, or jostles one on the road, he falls sick or some ill-luck befalls him (*BG* xviii. pt. i. 292). In Gujarat the *Bhūta* and *Preta*, like the European Vampire, are believed to take possession of a corpse, and speak through its mouth; they appear in the form which they possessed when living; enter a living man, and cause him to speak as they please; afflict him with fever or other disease; appear as animals, and frighten people by vanishing in a flame of fire; remain sometimes invisible, and speak only in whispers; a *Bhūta* has been known to come to fistcuffs with a man, or to carry him off and set him down in a strange place; cases have been reported in which women have been found with child by them; when a *Bhūta* appears in a tree, a pile of stones is raised at its root, to which every passer-by adds one; if stones be not procurable, a rag is stuck to the tree, which is hence known as the 'Rag-uncle' (cf. Harland, *LP*, 1896, ii. 175 f.; Crooke, *PR* i. 161 f.; *Dalpatrām Dāyā*, 'Ehoot, Nibundh', in A. K. Forbes, *Rās Māla*, 644 f.). The *Bhūta* eat filth, and drink any water, however impure; they cannot rest on the ground, and for this reason a peg, or brick, or bamboo pole is placed at their shrines on which they may sit or perch; they speak a sort of gibberish in a nasal tone, and hence 'goblin speech' (*pisācha bhāṣa*) is the term applied to the jargon in the mediæval drama and in modern English (*PR* i. 238); those who come from dead Brāhmins are wheat-coloured, while others, like the ghost of a negro, are black and specially dreaded (ib. i. 236 f.). As a rule they are helpless by day, and move abroad at night; but mid-day, when they cook, and evening are especially dangerous times, and women should not move about, especially at midday, unprotected (E. Thurston, *Castes and Tribes of S. India*, vi. 230; A. K. Iyer, i. 150; *BG* xviii. pt. i. 292; *PNQ* iv. 182; cf. the similar classical belief (Theocrit. *Idyll* i. 15; Lucan, *Pharsal* iii. 428; R. Rodd, *Customs and Lore of Modern Greece*, 1892, p. 181; J. T. Bent, *The Cyclopes*, 1885, p. 86); cf. also art. CALENDAR (Celtic), vol. iii. p. 82).

4. Spirits of the murdered, the unsatisfied, the foreigner.—Of these classes of *Bhūta* the most dangerous are the spirits of the murdered, the unsatisfied, and the dreaded foreigner.

(a) *Spirits of the murdered*.—All over the world the ghost of a murdered person is believed to cherish an angry passion for revenge (Westermarck, i. 418 f.). Some of the most dangerous *Bhūta* are of this class.

In Coorg the demon most widely feared is that of a magician who was shot. Elmakital, mother of seven sons, who was buried as a sacrifice under the walls of the Kolhapur fort (cf. Crooke, ii. 173 f.), causes food supplies to dwindle, the milk to give no butter, and the cattle to sicken; the Oraṇs distinguish three classes of such demons, who are known as the *Bhūta*, 'wanderers who have lost their way,' including those who have been murdered, hanged, or killed by a tiger (G. Richter, *Manual of Coorg*, 1870, p. 165; *Mem. As. Soc. Bengal*, i. 1906, i. 1401). Several of the most widely revered local deities of N. India are the spirits of persons, particularly Brāhmins, who have lost their lives in some tragical way, and the ghosts of dead bandits, or of those who were slain by tigers or other wild animals (E. A. Gait, *Census Rep. Bengal*, 1901, i. 196 f.; Crooke, i. 191 f., ii. 218 f.).

Hence comes the conception of a special Brāhman demon, known as Brāhma-rākṣasa, Brāhma-daitya, Brāhma-purusa, or popularly as Brahman, the spirit of a murdered Brāhman. The Brāhman being himself spirit-laden, his ghost is invested with special potency for good or evil. In Bengal

'such spirits are specially powerful and malicious. Sometimes they are represented as a headless trunk, with the eyes looking from the breast. They are believed to inhabit large trees by the side of a river or in some lonely place, whence they throw stones at travellers and lead them astray on dark nights, and we betide the unfortunate who should give one of them cause for offence (e.g. by unwittingly felling the tree in which they have taken up their abode), or who was in any way responsible for his death. He can only escape the evil consequences by making the Brāhman his family deity and worshipping him regularly' (Gait, i. 198; Crooke, ii. 78). In W. India the rulers of the

¹ Hereafter cited as *MASB*.

State of Śaṅkavāḍī are afflicted by the demon-spirit of a Brāhman killed in the 17th century. He is particularly excited if any one uses his seal of office, and down to the present day a Brāhman is always employed to seal the State papers (BG x. 440). In the Deccan the Brāhma-samandhi, the spirit of a married Brāhman, haunts empty houses, burning grounds, river-banks, seldom attacks people, but when he does attack them it is difficult to shake him off (ib. xiv. 415). In the same region the Brāhma-purusa is the spirit of a miser Brāhman, who died in grief, intent on adding to his hoard; when he lives in his own house, he attacks any member of the family who spends his money, wears his clothes, or does anything to which in life he would have objected (ib. xviii. pt. i. 553 f.).

(b) *Those who have left this world with unsatisfied desires.*—The spirits of the unhappy or unsatisfied fall into several groups:—

(a) *Unhappy widows and widowers, childless women.*—Among these the most dreaded is the Churel, Churail, Chudel, Chudail, or the Alwantin, as she is called in the Deccan—the spirit of a pregnant woman, one dying on the day of childbirth, or within the period of puerperal pollution.

In the Panjāb she appears as a pretty woman, with her feet turned backwards, and is specially dangerous to members of her own family (PNQ ii. 168 f.). Among the Orāons, when the exorcist forces her to appear in the flame of his lamp, she looks like the Dākini, the common type of ogress; but her feet are distorted, she is hunch-backed, and has a large hole in her belly like the hollow in a tree (MASB, 1906, i. 140). In Madras a woman who dies prematurely, especially as the result of suicide or accident, becomes a she-devil, known by the euphemistical title of Mohāni, 'the charmer,' and she so continues until her normal term of life is over (NINQ, 104). In the Deccan the Jakhin (Skr. *yakṣiṇī*, rt. *yakṣ*, 'to move') is the spirit of an uneasy married woman, who haunts bathing and cooking rooms, attacks her husband's second wife and children, takes her own children from their stepmother, or, like the British fairies, steals babies and returns them after a time (BG xxiv. 416). The spirit of a deceased husband or wife, particularly the latter, is most dangerous to his or her successor. This is, in part, an explanation of the objection felt among the higher castes to widow-marriage, of the custom of performing the rite at night in order to avoid the observation of the angry spirit, and of the use of sundry ceremonies which repel evil spirits (R. E. Enthoven, *Bombay Census Rep.*, 1901, i. 208). Among the Kolis of Ahmadnagar a widow bride is held to be unlucky for three days after her marriage, and must take care that no married woman sees her until that period is over; if after such a marriage the widow bride or her husband should fall sick, the medium, when consulted, usually reports that it is caused by the spirit of her first husband, who is annoyed because his wife has married again; the bride has to give a feast, spend money in charity, and wear in a copper case round her neck a tiny image of her late husband, or set it among the household gods (BG xvii. 206). Such amulets are known in the Panjāb as 'the crown of the rival wife' (*saukan mawā*), and to them all gifts made to her are presented as a measure of precaution (H. A. Rose, *Census Rep.*, 1901, i. 121). Sometimes the widow wears a gold-wire bracelet on her right wrist, and every year, in the name of her deceased husband, feeds a Brāhman woman whose husband is alive, and gives her clothes (BG xxii. 814). When a widow of the Let tribe in Bengal marries again, her second husband is usually a widower, and he places the iron bangle of his first wife on the arm of her successor (E. A. Gait, i. 421). In the Deccan the Ārā is the spirit of a young woman who committed suicide after bearing one or more children; she attacks young women, and must be propitiated by offerings of cooked rice, turmeric, red powder, and a bodice (BG xviii. pt. i. 553). The Hadal or Hedali, the spectre of a woman dying in pregnancy or childbirth, is plump in front and a skeleton behind, lives in wells, trees, or dark corners of the house, attacks women, and, sometimes appearing as a beautiful woman, lives with men until her fiend nature or spectre form is discovered (ib. xviii. pt. i. 554). The corpses of women dying under such circumstances are often burnt in order to prevent sorcerers from digging them up and using the unborn fetuses or the bones of the mother for purposes of Black Magic (ib. xxiii. 201; A. K. Iyer, i. 771 f.).

(β) *Unhappy children and the unmarried.*—Under the influence of the same belief that the spirits of those dying with unsatisfied desires become malignant, children and unmarried persons are included in the army of evil spectres.

In the Himālaya, the Tōlā or Māsā (the latter a term ordinarily used to designate cemetery spectres) are the spirits of children or bachelors, sometimes appearing in the form of a 'vill-o'-the-wisp, banished from the society of other spirits, living in wild and solitary places, sometimes prowling about in the form of bears or other wild animals. They are, as a rule, harmless, and their present estate is only temporary, because after a time they undergo transformation, and assume other shapes (Crocket, i. 281; Oakley, 218).

The spirits of the unmarried dead form a large group.

In S. India such spirits are called Virika (Skr. *vīra*, 'heroic,' eminent'), 'and to their memory have small temples and

images erected, where offerings of cloth, rice, and the like are made to their *manes*. If this be neglected, they appear in dreams, and threaten those who are forgetful of their duty' (F. Buchanan, *A Journey through Mysore, Canara, and Malabar*, i. 359; cf. ii. 120, 152, where the name is extended to the spirits of bad men, who afflict the living). In Kanara, if neglected, such spirits send pestilence among men and sheep, and disturb people by dreams and nightmares (BG xv. pt. i. 300). In the Deccan the Jhoting is the spirit of a youth dying unmarried and leaving no relatives; it lives in trees, ruins, or burial-grounds, is most faithless and can be bound by no oath, personifies absent husbands, leads wayfarers into pools and drowns them, waylays postmen, who are safe so long as they do not lay down their bags (BG xviii. pt. i. 554). Elsewhere the Jhoting is the ghost of a low-caste Hindu who died with unsatisfied desires, wears no clothes, and lets his hair flow loose; he lives in a house of his own, but, if this be burnt or pulled down, he removes to a river or well; he fears to enter sacred places, or to attack persons learned in the Vedas and strict in the performance of their religious duties (ib. xxiv. 417). In the Deccan those who die after the rite of thread-girding and before marriage become evil spirits, known as Muñjā (Skr. *mūñja*, 'the fibre girdle of the Brāhman') or Ākhavā (Skr. *akṣavāga*, 'eight years old') (ib. xviii. pt. i. 539 f.). Such spirits are greatly feared in the Panjāb, where they are known by the euphemistical title of 'father' (*pitā*); shrines are erected to them near tanks, and offerings are made (NINQ v. 179). A typical case of the defilement of the unmarried is found in the cult of Dūhā Deo, 'the defiled bridegroom,' which seems to have originated in the Central Provinces, where a bridegroom on his wedding journey was killed by a tiger or in some other tragical way; at marriages a miniature coat, shoes, and bridal crown, with a little swing to amuse the child, are offered to him (R. V. Russell, i. 80; Crooke, i. 119 f.). In the Panjāb, under the influence of Vaisnava beliefs, he is said to represent the relationship of God to the human soul, exhibited as that of a lover to his mistress (H. A. Rose, i. 130). For similar legends of a bride and bridegroom turned into stone, see J. Grimm, *Faust, Mythol.*, Eng. tr., 1888, iv. 1446; W. C. Borlase, *Dolmens of Ireland*, 1897, ii. 549.

(c) *Spirits of foreigners.*—The same feelings of awe or fear naturally attach to the spirits of dead foreigners, whose valour, cruelty, or other qualities have impressed the minds of a subject people.

At Sahāranpur a Musalmān named Allāh Baksh, who died in a state of impurity, has become a dangerous demon, worshipped by the lower castes of Hindus (NINQ v. 193). Such a spirit is known by the euphemistical title of Mamdūh 'praised,' 'famous,' or as Najia, 'the impure one.' He wears a Musalmān dress, with his hair on end, and carries branches in his hands; even the Pir, or saint, sometimes becomes hostile to people who unguardedly sit upon his tomb, spit at it, or in other ways annoy him (ib. v. 106; BG xxiv. 416 f., xviii. pt. i. 554). People resort to the shrine of a Muhammadan saint Alam Pir, at Muzaffargarh in the Panjāb, to procure release from such spirits. In fact, the Indian Muhammadans have appropriated much of the demonology of their Hindu neighbours, and exorcism and the modes of securing control of evil spirits have become important branches of science (G. A. Herklotz, *Qanoon-e-Islam*, 1893, p. 201 ff.; BG ix. pt. ii. 147 f.). In the same way the dread spirits of Europeans are propitiated. That of a certain Captain Fole, killed at Travancore in 1809, is appeased with gifts of spirits and cigars (CASE i. 104; E. Thurston, *Ethnographic Notes*, 1906, p. 294 f.). Similar cases of the propitiation of the spirits of European men and women are common in various parts of the country (Crooke, ii. 199; BG xviii. pt. i. 413, pt. iii. 447; NINQ ii. 93; PNQ ii. 123). In some places, however, such spirits are regarded as kindly, as in the cases of General Raymond, who died at Haldarābād in 1798, and Colonel Wallace, who died in the Deccan in 1809 (S. H. Bilgrami and C. Willmott, *Hist. and Deser. Sketch of H. H. the Nizām's Dominions*, 1883, ii. 600 ff.; BG xviii. pt. iii. 447 f.).

5. *Modes of repelling or conciliating evil spirits.*

—Various methods are employed to repel or conciliate evil spirits. If the spirit after death is to pass to the home of the Pitrī, or sainted dead, or to undergo the necessary stages of transmigration, it is necessary that the funeral rites (*śrāddha*) shall have been duly performed (see ANCESTOR-WORSHIP [Indian], vol. i. p. 450 ff.). Hence the family spirit is usually benevolent, if care be taken to provide for its wants. Thus arises the very common classification of spirits into the 'inside' and the 'outside'—the former usually friendly; the latter, being foreigners, usually hostile. The Orāons divide their spirits into those of the house, the sept, the village, and the Bhūla, or dangerous wanderers (MASB, 1906, i. 138). In the Deccan there are 'home' and 'outside' spirits, the latter not being greatly feared, because, though every field has its evil spirit, they are restrained by the Guardians (see § 9), who are more powerful and able to control them. The friendly house spirit generally merges

into the protecting family deity, like Gumo Gosāin, the Mālē god who dwells in the house pillar, or Dharma Pennū, the Kandh god of the family or tribe (Risley, ii. 58, i. 403).

In any case, after a time, usually represented by the period of human memory, the spirit automatically passes to its rest, and ceases to be a source of danger to the survivors.

In the Deccan the life and influence of a Bhūta last for four, and the evil conditions of haunted places for two, generations (BG xviii. pt. i. 555); the Hpon of Upper Burma worship only their fathers and mothers (Gazetteer Upper Burma, i. pt. i. 568, 600; cf. Crooke, i. 178).

When the inability to perform the funeral rites and the consequent restlessness or maliciousness of the spirit are due to the absence of the corpse, as in the case of death occurring in a strange land or the failure to recover the body, the relatives perform the funeral in effigy.

Among the Garos, when a man dies away from his village and cannot be cremated at home, the relatives buy a number of cowrie-shells and put them in a pot to represent the bones of the dead man, or erect a mortuary hut in which they are deposited (A. Playfair, *The Garos*, 1909, p. 111). In some cases, among orthodox Hindus, the corpse is represented by branches of the sacred *Butea frondosa* tree—the head by a coco-nut; pearls, or, failing them, cowrie-shells, for the eyes; the whole being covered with paste made of ground pulse to simulate the flesh, and a deer-skin representing the cuticle; the officiating priest, by the use of magical formula (*mantra*), infuses life into the image, the animating principle being represented by a lamp placed close by; when the lamp goes out, the usual funeral rites are performed (NINQ iii. 201; cf. BG xviii. pt. i. 564). When the death of a relative occurs under an unlucky constellation in a Brāhman family, a special quieting rite (*śānti*) is performed to appease the uneasy spirit.

Even in the case of those dying in a natural way, precautions are taken to prevent the spirit from returning to its original home from the burial- or cremation-ground.

Among the Madras tribes, when a Bāvuri is being buried, the friends say: 'You were living with us; now you have left us. Do not trouble the people'; the spirit of a dead Savara is solemnly adjured not to worry his widow: 'Do not send sickness on her children. Her second husband has done no harm to you. She chose him for her husband, and he consented; O man, be appeased! O unseen ones! O ancestors! be you witnesses' (Thurston, i. 179, vi. 321). When the corpse of a Taungtha is carried outside the house, the chief mourner pours water on it, saying: 'A stream divides countries, so may the water now poured divide us!' (Gazetteer Upper Burma, i. pt. i. 557).

Another plan is to endeavour to deceive the spirit, so that it may not find its way back, by taking it out of the house feet foremost, or through a door not usually opened for ingress and egress.

The Meithei never carry the corpse over the threshold of the main door; sometimes a hole is cut in the wall, or the tiny side entrance is used (Hodson, 117). Among the Maghs of Bengal, when the master of the house has died, the mourners on their return cut away the house ladder, and creep in through a hole cut in the back wall, in order to baffle the ghost (Risley, ii. 34). A similar device is that of making the corpse-bearers change places on the road to the grave, and turn the corpse in the opposite direction (BG xviii. pt. i. 424; ix. pt. i. 48). With the same intention, the mourners are forbidden to look back when leaving the cemetery (Crooke, ii. 56 f.), the evil influence being communicated through the sight (E. Crawley, *The Mystic Rose*, 1902, p. 115; *FL* xviii. [1907] 845).

Sometimes the repression of the evil spirit is secured in a physical way.

The thumbs and great toes of the corpse are tied together to prevent the ghost from 'walking,' or it is tied up in a cotton bag, as among the Bhotiyas (Playfair, 106; Thurston, iii. 104, iv. 371, 494, v. 483, vii. 83; Gazetteer Upper Burma, i. pt. i. 557; *MASE*, 1905, i. 109). Among the Koyis of Madras, when a girl dies of syphilis, a fish-trap is erected to catch the spirit, and prevent it from entering the village (Thurston, iv. 55). Some people, when returning from the funeral, fling pebbles towards the pyre to scare the spirit, or make a barricade of thorny bushes between the grave and the house (Crooke, ii. 57; Risley, ii. 76). With the same intention, the names of deceased relatives are tabu for a generation, to avoid recalling their spirits; or, when parents die, men assume the names of their deceased grandfather; women, of their grandmother (Sir R. Temple, *Census Rep. Andaman Islands*, 1901, i. 253). One reason given for the wide-spread custom of shaving after a death is that it changes the appearance of the mourners so as to deceive the pursuing spirit, or removes the shelter in which it may hide and cling to the mourner (Frazer, *JAF* xv. [1886] 99). To prevent the spirit rising from the grave and 'walking,' it is a common practice, particularly among menial castes, to bury the corpse

face downwards, and to pile stones and thorns on the grave (Thurston, iv. 322, 374, vii. 426; Gait, i. 419; Crooke, ii. 60; BG xxii. 196; cf. R. S. Hardy, *Eastern Monachism*, 1850, p. 522).

Precautions in the case of more dangerous spirits.

—Precautions of this kind are more urgent in the case of spirits specially malignant.

In the case of the Churel, sometimes the corpse of a woman dying pregnant is cut open and the child removed; or the spirit is scared by fire, earth, and water; or iron nails are driven into her fingers, and the thumbs fastened together with iron rings (Crooke, i. 272 f.). The Orāns carry the corpse of such a woman to a distance, break the feet above the ankles, and twist them round, bringing the heels in front, into which they drive long thorns; they bury her deep in the earth face downwards, and place with her corpse the bones of an ass, reciting the anathema. 'If you come home, may you turn into an ass!'; the roots of a palm-tree are also buried with her, with the curse: 'May you come home when the leaves of the palm wither!'; when they leave the burial-ground, they spread mustard seeds along the road, saying: 'When you try to come home, pick up all these!' (*MASE*, 1906, i. 140). This last charm is very common, and is one of the usual impossible tasks found in the folk-tales (Crooke, i. 273 f.; BG xix. 134, xxiv. 417; Steel-Temple, *Wide-awake Stories*, 1884, p. 430). These precautions, under Brāhman guidance, have been elaborated into a special funeral ritual for women dying during the menstrual period, after the sixth month of pregnancy, and within ten days after childbirth (BG xviii. pt. i. 561 f.).

The misery of the unmarried dead is relieved by the curious rite of marriage with the dead (cf. Frazer, *Pausanias*, v. [1898] 389 ff.)—a custom which in India seems to prevail only in Madras and among some Burmese tribes.

When a Toda boy dies unmarried, a girl is selected; her head is covered by her father with a mantle, and she puts food into the pocket of the mantle of the dead; the Nambūthiri Brāhmins perform the rite of tying the marriage necklace on a dead unmarried girl (Rivers, 367, 701; *Bull. Madras Mus.* ii. 61). The disgusting custom of enforced sexual connexion by a male with such a dead girl, ascribed by Abbé Dubois to the Nāyars, seems to be based on a misunderstanding of this rite of mock marriage (J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*, 1906, p. 16 f.). Besides the Todas and Nambūthiris, several S. Indian tribes perform this mock marriage, such as the Badagas, Billavas, and Komatis, while among the Pallis and Vaniyans the dead bachelor is solemnly married to the *arka* plant (*Calotropis gigantea*) (V. N. Aiyar, *Travancore State Manual*, 1906, ii. 259; Thurston, i. 117, 250 f., iii. 334, v. 197, vi. 22, vii. 315). Among the Chins of Upper Burma, if, before the great contracting ceremony is completed, either party dies, the rites are continued with the corpse, which is kept unburied until the rite is finished; in this they probably follow the custom well established among the Chinese (Gazetteer Upper Burma, ii. pt. ii. 303; J. M. de Groot, *Rel. Syst. of China*, 1894, ii. 800 ff.; J. H. Gray, *China*, 1878, i. 216 f.).

6. Possession by spirits.—Possession by evil spirits or demons is of two kinds:

'The theory of embodiment serves several highly important purposes in savage and barbarian philosophy. On the one hand, it provides an explanation of the phenomena of morbid exaltation and derangement, especially as connected with abnormal utterance, and this view is so far extended as to produce an almost general doctrine of disease. On the other hand, it enables the savage either to "lay" a hurtful spirit in some foreign body, and so get rid of it, or to carry about a useful spirit for his service in a material object, to set it up as a deity for worship in the body of an animal, or in a block or stone or image or other thing, which contains the spirit as a vessel contains a fluid: this is the key to strict fetishism, and in no small measure to idolatry' (Tyler, i. 123).

These two varieties of spirit possession can be traced in Indian beliefs.

(a) *Abnormal or disease possession.*—In the first place, we have cases of abnormal possession. Certain persons are supposed to be specially liable to spirit possession, thus defined by a native writer:

'The men most liable to spirit attacks are the impotent, the lustful, the lately widowed, bankrupts, sons and brothers of whores, convicts, the idle, brooders on the unknowable, gluttons, and starvers. The women most liable to spirit attacks are girls, young women who have lately come of age, young widows, idlers, whores, brooders on the unknowable, irregular or gluttonous eaters, and all sickly women. Women are especially liable to spirit attacks during their monthly sickness, during pregnancy, and in childhood; and men, women, and children are all apt to suffer when, dressed in their best, they go to gardens or near wells. Intelligent and educated men and healthy intelligent women are freer than others from spirit attacks' (BG xxii. 813).

Demon possession thus accounts for various abnormal states of mind and for the phenomena classed as hysteria. Hence patients, particularly women, suffering in this way require special pro-

tection, or it is necessary to expel the demons by whom they are possessed.

In Cochín, among the Eravallars, if a pregnant woman dreams of dogs, cats, or wild animals coming to attack her, she is believed to be possessed by demons. An exorcist, or 'devil-driver,' is called in, who makes a hideous figure on the ground representing the demon, sings, beats a drum, mutters spells, burns frankincense, and waves round the head of the patient an offering of food for the demon, on receiving which he leaves her (A. K. Iyer, i. 461, 107; Thurston, ii. 73, 214). In the Panjab, a woman after *chūdhī* is specially liable to the attacks of demons, and has to wear an iron ring, made, if possible, out of an old horse-shoe, and to keep a fire burning near her (PNQ iii. 81). For the same reason, at the puberty rites of a girl, offerings are made to demons (A. K. Iyer, i. 146). The same is the case with people at various crises of their lives, such as the bride and bridegroom, the mourners, and the corpse-bearers at funeral rites. Such persons are protected by various charms and amulets (see CHARMS AND AMULETS [Indian], vol. iii. p. 441 ff.).

(b) *Conciliation by gifts of food, etc.*—Attempts are often made to conciliate demons on such occasions by throwing food for them by the roadside or in the house.

In the Himalāya, food is waved round the head of a possessed person and left out on the road by night, any one touching it being liable to spirit attack (PNQ iii. 75). When a birth occurs in the family of a Chitpāvan Brāhman, cooked rice, on which a dough lamp is placed, is laid in a corner of the street (BG xviii. pt. 1. 1181). When the Reddis of Bijapur disturb the field spirits at the first ploughing, pieces of coco-nut are thrown on each side of the plough track; and at a Brāhman funeral in the Deccan a man carries a winnowing-fan full of coco-kernel which he scatters abroad (G. xxiii. 147, xviii. pt. 1. 149). The Kūki priest, in cases of sickness, prescribes the appropriate victim, and eats its flesh, throwing what he cannot eat as an offering into the jungle (R. T. Dalton, *Descriptive Ethnology of Bengal*, 1872, p. 46).

(c) *Expulsion of spirits by flagellation.*—Especially in the case of attacks of the hysterical kind, the patient is soundly beaten, until the demon speaks through him or her, and promises to depart.

'If the devil should prove an obstinate one and refuse to leave, charm they never so wisely, his retreat may generally be hastened by the vigorous application of a slipper or broom to the shoulders of the possessed person, the operator taking care to use at the same time the most scurrilous language he can think of' (Bishop R. Caldwell, writing of the Tinnevely Shanars, in Ziegenbalg, 164). In the Deccan one plan of scaring a demon is for the exorcist to take the possessed person before an idol, seize him by the top-knot, and scourge and abuse him until the Bhūta says what offering or penance will satisfy him (BG xviii. pt. 1. 292). The tortures inflicted on supposed witches and other possessed persons have resulted in death or serious injury (NINQ iii. 202 f.; N. Chevers, *Manual of Medical Jurisprudence for India*, 1870, p. 548 ff.; for further accounts of exorcism by flagellation, see Crooke, i. 99, 155 f., ii. 34; cf. Frazer, *GB*² iii. 127 f., 215 f.). In Car Nicobar true ceremonial murders of men, women, and even children have been performed for the public benefit by organized bodies, because the victims are considered dangerous or obnoxious to the community; the murdered persons are charged with possession by an evil spirit as illustrated by their propensity to witchcraft, incendiarism, homicide, failure to cure diseases, or theft; but the root cause is that the victim is believed to be possessed by a demon, and hence dangerous; his limbs are broken, he is strangled, and his corpse is flung into the sea (Sir R. Temple, 210).

(d) *Expulsion of disease spirits.*—The evil spirits most generally feared are those which bring disease. To their agency are attributed epidemics in general, especially cholera, plague, or smallpox, and maladies which are unforeseen or those which indicate spirit possession, such as fits, fever, rheumatism, colic, and the like. Such spirits are often got rid of by transference, the spirit being compelled or induced to remove to another village or to some distant place.

In the Panjab, if the fever spirit be detected, the officiant goes at night to a graveyard, brings home some earth, lays it near the patient, and next day suspends a string from an acacia tree, on which it is believed that the spirit hangs itself; or a string is wound in seven strands from toe to head of the patient, and then it is tied round the tree, in the hope of conciliating the tree spirit which causes the fever spirit to depart (PNQ i. 40). In Upper Burma, when children fall ill, an egg, some of the child's hair, and some sweetmeats are placed on a little boat and consigned to the river, which carries away the spirit; by a later conception this is supposed to be an offering to the water Nāt or spirit (*Gazetteer*, ii. pt. 1. 291 f.; cf. Frazer, *GB*² iii. 97 ff., 105 f.). A very common method is to convey the disease by means of a scape-animal from the infected area. In Berār the cholera spirit is expelled by yoking a plough, and driving it round the village to form a sacred circle, which foreign and hostile spirits cannot pass; a fowl and a goat are sacrificed and buried in the ground, and near them the beam and

plough-yoke are fixed, daubed with red lead, and worshipped; a cart is then dragged containing the image of Mari, the disease goddess, from her shrine, to the village boundary, where the image is worshipped, and a buffalo calf is sacrificed and buried (NINQ iv. 206 f.). In the Telugu country the scape-animal is a buffalo, and, as the image of the goddess is carried in procession, people flourish sticks, swords, or spears, and cut up lines and throw them into the air in order to induce the hungry spirits to seize them and thus be diverted from attacking the man who bears the image (*Bull. Madr. Mus.* v. 130).

7. Possession by spirits of the exorcist.—The exorcism of evil spirits by a professional exorcist has been reduced to a system, and prevails widely in all parts of the country, particularly in S. India. In N. India the medium is known as Bhagat (Skr. *bhakti*, 'fervent faith'), Syānā, 'the wise one,' Ojhā (Skr. *upādhyāya*, 'teacher'); among the hill tribes of Central India as Baigā, Bhomkā, Parihār, or Demano; in the Deccan as Jantā, 'the knowing one,' or Devrishī, 'holy saint.' He is distinguished from the Mantri, who learns by orthodox methods the charm formulae (*mantra*) from a teacher (*guru*), by the fact that he does not undergo special training, but works through the inspiration of a familiar spirit or guardian, which enters him when he works himself up into the proper state of ecstasy. This ecstatic state occurs on various occasions and for various purposes. His special province is the expulsion of various kinds of disease; but he also becomes possessed at death rites, when he identifies and announces the pleasure of the spirit, at name-fixing, when he decides the proper name of the child, and at other domestic and religious rites. The medium in his ecstatic state is seized with revolting cramp-like contortions and muscular quivering, head-wagging, and frantic dancing, which usually end in complete or partial insensibility. When Sir C. A. Elliott witnessed a séance, 'the man did not literally revolve; he covered his head well up in his cloth, leaving space over the head for the god to come to; and in this state he twisted and turned himself about rapidly, and soon sank exhausted. Then, from the pit of his stomach, he uttered words which the bystanders interpreted to direct a certain line of conduct for the sick man to pursue. But perhaps the occasion was not a fair test, as the Parihār strongly objected to the presence of an unbeliever, on the pretence that the god was afraid to come before so great a *hākīm* [official]' (*Settlement Rep. Hoshangabad*, 1867, p. 120). Compare the account by Capt. W. L. Samuels, in Dalton, 232 f., quoted above, vol. ii. p. 488 f.

(a) *Tabus imposed upon the medium.*—The medium is subject to numerous tabus.

The god 'would leave his head' if either a cow or a Brāhman attended the rites, thus proving their non-Aryan origin. The Kotā medium must not speak directly to his wife or to any other woman for three months before the rite; he may not sleep on a mat or blanket; at the feast he must have no congress with his wife (Thurston, iv. 10 f.). In the Deccan he loses his power if his lamp goes out while he is eating, and thus leaves him exposed to demon assault; if he happens to hear a menstruous woman speak; if any one sweeps his room; if the name of any spirit is mentioned. Should any such events occur, he must stop eating and fast during the remainder of the day. He must avoid certain vegetables and fruits, and must never eat stale or twice-cooked food. If he be a Musalman, he must not eat a special kind of millet, or food cooked by a menstruous woman (BG xxiv. 418).

(b) *Methods of identifying spirits by the medium.*—The medium uses varied methods of identifying the spirit which has seized his patient.

In the Panjab he waves corn over the sick person, and, making a heap for each suspected demon, keeps on dropping grains that on which the last falls indicating the offender (NINQ i. 128). The Berār medium hangs a string over a wood fire and repeats spells; when the smoke touches the string, the appropriate formula is indicated (PNQ ii. 170). The Kāchārī medium lays out thirteen leaves, each assigned to a special god, and, hanging a pendulum from his thumb, lets it move; when it touches a particular leaf, that deity must be propitiated (Dalton, 85). In the Gujarāt an officiant tied charmed threads round the house, drove a charmed iron nail into the ground at each corner and two at the door; the house was purified; a Dev, or orthodox god, was installed, and before his image was placed a drawn sword, a lamp lit with butter, and a second lit with oil, while the medium continued to mutter charms for forty-one days, and occasionally visited the cremation ground to make propitiatory offerings to the offended spirit. In another case the spirit was actually expelled, and buried under lime, salt, mustard, lead, and stones, to prevent him from 'walking'; and, as an additional precaution, a charmed iron nail was driven into the

ground. Fumigation of the patient with the smoke of pepper and dogs' dung, as a means of inconveniencing the demon, was also recommended (A. K. Forbes, *Rās Mālā*, p. 657 f.).

8. **Shamanism.**—Such methods naturally develop into the practices which have been roughly classified under the head of Shamanism (*q.v.*), though this term is often applied to demonology in general. Bishop Caldwell recognizes various points of contact between the systematized methods of exorcism known as 'devil dancing' and 'devil driving' in S. India and the Shamanism of High Asia; the absence in both of a recognized priesthood; the recognition of a Supreme God to whom, as he is too kindly to do them harm, little worship is offered by the people; the absence of belief in metempsychosis; the objects of Shamanistic worship being not gods, but demons, which are regarded as cruel, revengeful, capricious, and are appeased by blood sacrifices and wild dances; the medium exciting himself to frenzy, and pretending, or supposing himself, to be possessed by the demon to whom worship is being offered, and whilst in this state communicating to those who consult him the information he has received (*Dravid. Gram.*, 1875, p. 580 f.).

Performances of this kind are uncommon in N. India, except in the Himalāya and among other hill and forest tribes. In Kumaun, when a person believes himself to be possessed by a demon, he calls his friends to dance it away; the dance goes on daily for as long as six months in some cases, and, as an additional precaution, large fires are kept alight (Oakley, 207 f.). When the Garos do devil-driving, it is in the name of their god Kalkamā, who holds in his hands the spirits of men; sacrificial stones are erected to him, and are smeared with the blood of the animal victim (Playfair, 82). The methods in use in S. India, where the system has been more fully elaborated, are of the same kind, and need not be more fully described. The basis of the performance is that the officiant, in dress, weapon, and ornaments, impersonate the demon whom they desire to propitiate and cause to depart. (See illustrations of such performers among the Parjāyans and Panans of Cochín, in A. K. Iyer, i. 83, 178. Full details will be found in the writings of Bishops Caldwell and Whitehouse already quoted, and in A. C. Burnell, 'The Devil Worship of the Tulavās', *IA*, 1894.)

Blood-drinking.—The most loathsome incident in these rites is when the medium, in order to bring himself into communion with the deity or demon, and thus gain inspiration, drinks the blood of the sacrificed victim.

The low-caste Mādiga who impersonates the demon Viraveśin or Poturājā, 'buffalo king', kills the sacrificial goat by strangling it with his teeth and tearing the throat open (Oppert, 461, 476). The same rite is performed by other mediums of the same class (*Bull. Madr. Mus.* v. 165 f.; Thurston, iv. 187; A. K. Iyer, i. 311). In N. India similar rites are found among the Tantrik mediums, as when, at the Bhairava festival in Nepal, a band of masked, yelling devils beset and torture the buffalo victim, drink the blood, and eat pieces of the raw, bleeding flesh (*PNQ* iii. 105; cf. the account in H. A. Oldfield, *Sketches from Nepal*, 1880, li. 345 f.). In some cases in S. India the victim is slightly wounded, and forced to eat rice soaked in its own blood; if it eats, the omen is good, but in any case the victim is slain (*Bull. Madr. Mus.* v. 178). The blood is used as a charm, as at Trichinopoly, where clothes soaked in it are hung on the eaves of the houses to protect the cattle from disease; or it is smeared on the doorposts of the shrine, or collected in a vessel and laid before the goddess for her refreshment (*ib.* v. 173, 141, 164).

9. **Worship of Guardians.**—Particularly in S. India, the chief reliance for protection against demons is placed in the Guardians. These are, first, the Grāmadevatā, or local village-deities; secondly, the leaders of the hosts of evil spirits, who, by appropriate conciliation, can be induced to keep their demon bands under control, and prevent them from doing injury to mankind.

(a) *The Grāmadevatā.*—The Grāmadevatā, 'gods of the village,' or, as they are called in N. India, the Dihvār (with the same meaning), are generally non-human spirits, though their ranks are sometimes recruited from those of human origin. They are often identified with the Earth Mother or with the wider host of Mothers (Mātā), the worship of whom prevails widely in W. India. (For Mother-worship, see A. Barth, *Religions of India*, 1882, p. 202 n.; Bishop Whitehouse, in *Bull. Madr. Mus.* v. 116 f.; Monier-Williams, *Brahmanism and Hinduism*, 1891, p. 225 f.). The connexion of this worship of the female powers with the matriarchate is not clearly established in India. But women are generally supposed to be more susceptible than men to spirit influence, and are mysterious beings charged with supernatural energy (Westermarck, i. 620, 695 f.). Hence we find women participating in demon propitia-

tion. The Orīs believe that women, known as Bisahī, control the terrible Bhūta known as Dāyan. The woman who desires to acquire this power strips off her clothes (see above, vol. iii. p. 447), wears a girdle of broken twigs taken from a broom, and goes to a cave, the resort of the Dāyan. There she learns spells (*mantra*), and at each séance puts a stone into a hole. If at the end of a year the hole is full, she has become an expert, and can take away life and restore it. If the hole be only partially full, she has the power only of taking away life. Every year she is obliged to sacrifice a black cat and pour its blood into the hole. She and the Dāyan alone can set the Bhūta in action, and to these all diseases are attributed. When a child dies, any Bisahī in the village is charged with causing the death (*MASB* i. 144).

As examples of these village guardians we have Chhapki or Chhapkai, the low-caste Hindu guardian in the Deccan, who lives in marshes and attacks children. To appease her an image is made of earth taken from the banks of a river; offerings are made to it, and it is finally thrown into water (*BG* xxiv. 416). The field guardian of the Reddis of Bijapur lives in a stone under a sacred tree, which is smeared with red lead, and offerings are made before beginning ploughing (*ib.* xxiii. 147). Darhā is the guardian of the Birhors of Bengal, and is represented by a piece of bamboo stuck slantwise into the ground (Risley, i. 188). Naturally such village guardians are often embodied in the boundary stone. The chief object of worship of the Dāngs of Khāndesh is Simariā Dev, the boundary god, the Sewapriyā of the Bhuiyars (*BG* xii. 801; Crooke, *TC* ii. 98). The worship of boundaries (*simanta-pūjā*) is part of the orthodox marriage rite (*BG* xviii. pt. i. 129). In Tanjore the Ellai-kai, or boundary stone, is the subject of remarkable worship (*Bull. Madr. Mus.* v. 117 f., 161 f.).

(b) *The demon Guardians.*—In S. India the chief of these is Aiyānar, 'honourable father,' or, as he is also called, Sāstra or Sāstra, 'ruler' (Oppert, 505). Mounted on a horse or elephant, he rides sword in hand over hill and dale to clear the land from evil spirits; any one who meets him and his demon troop dies at once; when he is not riding, he appears as a red-coloured man, wearing a crown, with lines of sacred ashes (*vibhūti*) on his forehead, and richly dressed; he has two wives, Pūranāl and Pudukkal, who are worshipped with him (Oppert, 505; *Bull. Madr. Mus.* v. 118; A. K. Iyer, i. 312 f.). In the Himalāya the demons go about on horses, in litters, or on foot, led by Bho-lanāth; death seizes any one meeting them; Airi patrols the land with his dogs (*JASB*, 1848, p. 609; Crooke, i. 282 f., 280; cf. the European legend of the Wild Huntsman, the Orion of Greek legend, Wuotan of Germany [Frazer, *Pausan.* v. 82; Grimm, iii. 918 f., 941 f.]).

The Deccan guardian is Vetālā, who also appears as a goblin tenating dead bodies (see the *Vetāla-pañchavṃśatikā* included in Somadeva, *Kathā-sarīr-sāgara*, tr. C. H. Tawney; and Sir E. Burton, *Vikram and the Vampire*, 1870). He is represented in human form, but his hands and feet are turned backwards, his eyes tawny green, his hair standing on end; he holds a cane in his right hand and a conch-shell in his left; when he goes his rounds, he is dressed in green, and sits in a litter or rides a horse, while his attendants follow, holding lighted torches and shouting (*BG* xviii. pt. i. 291, xxiv. 415). In the villages, as a guardian, he occupies a stone smeared with red paint, the top roughly carved into a man's face; but more usually he resides in the pre-historic stone circles scattered over the hills, the centre stone representing the demon, and the surrounding pillars his attendants (*ib.* xviii. pt. i. 291, 553, pt. iii. 347, 388, xxiv. 415).

Like him is Bhairava or Bhairon, who seems to be in origin an old earth-god, the consort of the Mother. In his form as Kāl Bhairava he cures diseases caused by demons (*ib.* xi. 461, xiv. 73, xviii. pt. i. 289). As Bahiroba he is widely revered, and the Dhāngars of Sātra bury his image with the rich men of the tribe to protect them from evil spirits (*ib.* xi. 461, xiv. 73, xix. 105).

In N. India, where the belief in demons is less intense, the local village-deities, and, in particular, Hanumān, the monkey-god, are installed as guardians at the foundation of every settlement.

10. **Periodical or occasional expulsion of evil spirits.**—The periodical or occasional expulsion of evil spirits is as common among many Indian tribes as it is among other primitive races (Frazer, *GB* iii. 39 f.).

This is often done at the close of the harvest season, which is regarded as a period of licence. About harvest time the Karenis of Upper Burma take a piece of smouldering wood from the house fire, place it on a bamboo, and carry it ceremonially outside the village; they are unable or unwilling to explain the object of the rite, but they say that it keeps off fever and other sickness from the house (*Gazetteer*, i. pt. i. 580). Among the Taungthas of the E. frontier there is a general cleaning up of the village after an epidemic, the place being surrounded with a cordon of fresh-spun white threads, and the blood of sacrificed animals scattered (T. H. Lewin, *Wild Races of S.E. India*, 1870, p. 196 f.). The people of Lower Burma expel the cholera demon by scrambling on the house roofs, laying about them with bamboos and billets of wood, drum-beating, trumpet-blowing, yells, and screams (C. J. F. Forbes, *British Burma*, 1878, p. 233; Shway Yoe, *The Burman*, 1882, ii. 105 f.). Similar harvest-rites are found among the Ho and Mundārī tribes in Bengal and those of the N.W. frontier (Dalton, 190 f.; J. Bid-dulph, *Tribe of the Hindoo Koshi*, 1880, p. 108). At the annual

Maier feast the priest scatters rice; all persons supposed to be possessed with devils scramble for it, and are finally cured by drinking the blood of a sacrificed buffalo (Daiton, 270). The Kandhis practise a similar rite at seed-time (W. Macpherson, *Memorials of Service*, 1865, p. 357.). In Bengal, during the Holi spring festival, people light torches and fling them over the boundary of the next village, the custom often giving rise to riots (PNQ iv. 201). Even among many of the higher castes, like the Prabhus of Bombay, in order to expel evil spirits at a marriage, a servant rises early and sweeps the house, gathers the sweepings into a basket, lays on it an old broom, a light, some betel, and four copper coins, and waving the basket before each room says: 'May evil go, and Ball's kingdom come!' She then drives the master of the house to the door, and, warning him not to look back, places the sweepings on the roadside and brings back the coins (BG xviii. pt. i. 252.). In Upper India the Divili, or feast of lights, is the occasion for observances of the same kind, the lamps scaring demons, and a regular rite of scaring poverty or ill-luck from the house being performed (JA xxviii. [1903] 237 ff.; NINQ v. 125; Crooke, ii. 158 f., 296 f.). Often these rites take the form of a mock combat or a tug of war, in which one party represents the good, and the other the evil, spirits, arrangements being made that the former shall be victorious. The Burmese Nāts are propitiated by a tug of war, the victorious side being supposed to get better crops; and if, after the contest, rain happens to fall, the efficacy of the appeal is placed beyond question; this is also done in seasons of drought (Gazetteer Upper Burma, ii. pt. ii. 95, 279, iii. pt. ii. 64). Among the Aos of Assam, at a festival held in August, there are tugs of war lasting for three days between the young men and unmarried girls of each clan (khet) (E. A. Gait, *Census Rep. Assam*, 1891, i. 244). In Ahmadnagar, in April-May, the boys of one village fight with slings and stones against those of another; it is believed that the non-observance of the rite causes failure of rain, or, if rain falls, a plague of field rats; a fight duly waged is followed by plentiful rainfall (BG xvii. 722 f.; cf. the Greek *Aphobakia* and *airopokrovia* [Farnell, *OGS* iii. 98, 99; J. E. Harrison, *Prolegomena*, 1903, p. 155; Crooke, ii. 820 f.).

11. Gaining control of a demon.—In the rites of Black Magic, a demon, if he can be brought under the control of a medium or magician, plays an important part; he may be used as a protector by his master, or his owner may let him loose to work mischief on those whom he desires to injure. The magician, by the use of spells (*mantra*), can often induce him to enter some receptacle, and he thus becomes a marketable commodity.

When the sale of a Bhūt has been arranged, the Ojhā hands over a corked bamboo cylinder which is supposed to contain him. This is taken to the place, usually a tree, where it is intended that he should in future reside; a small ceremony is performed, liquor being poured on the ground, or small mounds (*pinḍā*) erected in his honour, and the cork is then taken out, whereupon the Bhūt is supposed to take up his abode in the place chosen for him. His function is to watch the crops and guard them from thieves, and, if any one should be hardy enough to steal from a field thus guarded, he is certain to be stricken by the Bhūt, and in a few days will sicken and die' (E. A. Gait, *Census Rep. Bengal*, 1901, i. 196). Among the Puliavans of Madras, 'a man who wishes to bring a demon under his control must bathe in the morning for forty-one days, and cook his own meals. He should have no association with his wife, and be free from all pollution. Every night, after 10 o'clock, he should bathe in a tank or river, and stand naked up to the loins in water, while praying to the god whom he wishes to propitiate, in the words: "I offer thee my prayers, so that thou mayst bless me with what I want." These, with his thoughts concentrated on the deity, he should utter 101, 1001, and 100,001 times during the period. Should he do this, in spite of all obstacles, and intimidation by the demons, the god will grant his desires' (Thurston, vi. 231). In Mysore, among the Hasulās and Maleyās, jungle tribes, when a man dies, his spirit is supposed to be stolen by some one else's devil, who is pointed out by the astrologer, who divines by throwing cowrie-shells or rice. The heir, then, as a measure of precaution, redeems the spirit by offering a pig, fowl, or other gift; and he promptly shuts it up in a pot, where it is periodically supplied with drink and food to prevent it from 'walking' and doing mischief (S. L. Eber, *Mysore*, 1897, i. 214; cf. 'The Fisherman and the Jinni', Sir R. Burton, *Arabian Nights*, 1898, i. 84 ff.; PNQ ii. 170). The power of a demon is believed to rest in his hair, and, if a man can succeed in cutting off the topknot of a Bhūt, the latter will be his slave for life (NINQ iii. 180). In Travancore, Kutichāttan, the boy imp, if fed, watches the property of his owner; the master of such a demon possesses infinite powers of evil; but these, if wrongly exercised, recoil upon him, and cause him to die childless and after terrible physical and mental agony (N. Subrahmanya Aiyar, *Census Rep.*, 1901, i. 303). Siddharāja, the great Chālukya king of W. India, is said to have performed his acts of heroism by aid of a demon which he subdued by riding a corpse in a cemetery (BG i. pt. i. 174).

12. Relation of demonology to orthodox religion.—From Vedic times the gods ever war against the demons (A. Macdonell, 156 ff.). Kṛṣṇa slays the demoness Pūtānā; Trīvārtā, the whirlwind demon; Aṣṭa, the bull demon; Keśin,

the horse demon (F. S. Growse, *Mathura*², 1883, pp. 55, 62). Many gods and goddesses take their cult-titles from their conquest of demons; Devī as Mahiṣa-mardini, Indra as Vṛtrahan, Viṣṇu as Kaiṭabhajit and Madhusūdana. The scenes of these ghostly combats are still shown, like the gloomy cave at Yān in Kanara, whence Śiva dislodged the demon occupant; the water which flows from hot springs is the blood of the Rākṣasas slain by some deity, or such wells are the haunts of demons which, if not conciliated, bring disease (BG xv. pt. ii. 355, xiv. 373; L. A. Waddell, *Among the Himalayas*, 1899, p. 203). This opposition between the worker by magical arts and the priest who works by the aid of the gods is one of the primary facts of Hinduism (Sir A. C. Lyall, *Asiatic Studies*², 1907, i. 101 ff.). Even among some of the forest tribes the supremacy of the god over the demon is admitted; but, as already stated, no clear distinction can be drawn between god and demon. The Oṛāons believe that their tutelary deity, Pāt, controls all the Bhūts, except the Dayāṇ; and the Kannikans of Madras will not worship the demon Chāthān at Cranganore because he is a rival of the local orthodox god (MASE, 1906, i. 142; A. K. Iyer, i. 143).

But, as a matter of fact, this opposition between demonolatry and the orthodox religion is little more than nominal, and popular Hinduism consists of a veneer of the higher beliefs overlying demon-worship, the latter being so closely combined with the former that it is now impossible to discriminate the rival elements. This combination is especially apparent in S. India, where Brāhmanism appeared at a comparatively recent period and was forced to come to terms with the local Dravidian beliefs. In particular, in the Tamil districts, the demon cultus has been elaborated under Brāhman guidance, as is shown by the ceremonial washing of demon images, elaborate processions in their honour, and other forms of an advanced species of worship. While the original Grāmadevatī are, as a rule, female, here their male consorts tend to acquire a more prominent position. Aiyānār, for instance, has become entirely independent, occupies a shrine of his own, and has a special festival, and sacrifices are made to his attendants, Maduravīran and Mūnadian. As a concession to Brāhman feeling, blood sacrifices are falling into abeyance, and, when these are offered to a goddess, she is often veiled, and a curtain is drawn during the blood-sacrifice to Aiyānār, or the offering is made not to him but to one of his attendants (Bishop Whitehead, *Bull. Madr. Mus.* v. 160). In some places Brāhmins are beginning to act as priests to the village goddesses; but the slaying of victims is left in charge of the low-caste priests; and Brāhmins who serve in village shrines are regarded, among their own body, as holding a distinctly lower position than those who are engaged in secular pursuits (ib. 127 f.). The fusion of the two faiths usually manifests itself in the acceptance by the orthodox gods of the demons as their followers or assistants. This is particularly noticeable in the Śakta and Śaiva cultus, Vaiṣṇavism having little sympathy with the cruder rites of demonism. The village goddesses tend to become Śaktis, or manifestations of the female energy of Nature; Śiva himself has, as one of his cult-titles, Bhūteśvara or Bhūteśa, 'lord of demons'; his son Gaṇeśa or Gaṇpati takes his name as lord of his father's attendant demons (*gana*); in the Karnatak, Aiyānār is identified with Harihara, a duplex figure embodying Śiva and Viṣṇu.

The corrupt Mahāyāna form of Buddhism current in Tibet and the Hīmalāya has largely adopted Shamanistic beliefs, drawn from the Animistic devil-dancing cults of the Bön, resembling in many

ways the Taoism of China, and reinforced from Indian Tāntrik beliefs (L. A. Waddell, *Buddhism of Tibet*, 1895, pp. 19, 34, 477; Sir H. Yule, *Marco Polo*, 1871, ii. 61f.).

This process of the absorption of demonolatry by orthodox Hinduism naturally results in the decrease of the former, as intelligence, education, and the active missionary efforts of the orthodox priesthood extend. This is admitted by several native writers. One, speaking of Bengal, states that the numbers of the Bhūts have largely been reduced; fifty years ago there were as many millions of demons as there are men at the present time; characteristically, he seems to attribute this reduction in numbers to the facilities now offered by railways of visiting Gaya and other places for the purpose of performing the obsequial rites which appease the angry spirits of the dead (*NINQ* iii. 199). From Bombay we learn that in Kolhapur some of the most dreaded evil spirits have recently disappeared—the Brahman ghosts having left the country because they dislike the cow-killing permitted by the British Government; the Muhammadan demons because pork is now freely eaten; only the low-caste spirits are left, and their influence has become much reduced (*BG* xxiv. 421). Even in Cochin and Travancore, the homes of demon-worship, it is said to be gradually giving way to Hinduism, as represented by the cults of Śiva, Subrahmanya, and Gaṇpati or Gaṇeśa (A. K. Iyer, i. 311).

LITERATURE.—The cults of the demons and evil spirits of India have been as yet imperfectly studied, because many of these rites are repulsive, and performed in secret, and thus do not readily come under the observation of Europeans, while they are offensive to many students of Hinduism belonging to the higher and learned classes. The material, which is of great extent and complexity, is scattered through the anthropological literature of India, some of which has been quoted in the course of this article. It is most abundant in S. India. Much information will be found in the *Census Reports*; the *Manual of the Administration of the Madras Presidency*, 1885-93; the *Bulletins of the Madras Museum*; the *District Manuals*, esp. that by W. Logan on Malabar, 1887; general treatises, such as E. Thurston, *Castes and Tribes of S. India*, 1909; V. N. Aiyar, *Travancore State Manual*, 1906; B. L. Rice, *Mysore*, 1897; F. Buchanan, *A Journey through Mysore, Canara, and Malabar*, 1807; L. K. Anantha Krishna Iyer, *The Cochin Tribes and Castes*, vol. i. (all published), 1909; P. Percival, *The Land of the Veda*, 1854; S. Mather, *The Land of Charity*, 1871; R. Caldwell, *Compar. Gram. of the Dravidian or South-Indian Family of Languages*², 1875, in which and in B. Ziegenbalg, *Genealogy of the South-Indian Gods*, 1869, the work of the former writer on the Śhānakas of Tinnevely is reproduced; G. Oppert, *The Original Inhabitants of Elanur, vārṇa or India*, 1908; Sir M. Monier-Williams, *Brahmanism and Hinduism*⁴, 1891; in A. K. Forbes, *Rās Malā*, 1878, is reproduced the *Bhoot Nibandh or the Destroyer of Superstitions regarding Daimons*, by Trivedi Dāpatrām Dāyā, issued in an Eng. tr. in 1850. To these may be added special monographs, such as P. Dehon, S.J., 'Religion and Customs of the Ūraṇas,' in *Mem. As. Soc. Bengal*, i. (1906); A. C. Burnell, *The Devil Worship of the Tulavās*, reprinted from *IA*, 1894; H. Whitehead, 'The Village Deities of Southern India,' in *Bull. Madr. Mus.* v. (1907); M. J. Walhouse, 'On the Belief in Bhūtas—Devil and Ghost Worship in Western India,' in *JAI* v. (1876) 408.

W. CROOKE.

DEMONS AND SPIRITS (Jain).—Superhuman beings, according to the Jains, fall into two categories—the denizens of hell (*nārakas*), and the gods (*devas*). A sub-division of the latter distinguishes good and bad gods (*dāvi*, and *āsuri gati*); the bad gods are also spoken of as *kudevas* or *kadamaras*. Demons would come under the two heads *nārakas* and *kudevas*, and ghosts under that of *kudevas*. It must, however, be kept in mind that, according to the Jains, neither the state of a god nor that of a demon is permanent, but both have their individually fixed duration, which may extend to many 'oceans of years.' The state which a soul may attain in the scale of beings and the duration of this state—his individual lot—depend on the merits and demerits (*karma*) of the soul; when the allotted time is over, the soul will be re-born in some other state according to his *karma*.

A god may be re-born as a hell-being, but the latter will be re-born as an animal or a man only.

The *nārakas*, or hell-beings, have a demoniacal nature, but they cannot leave the place where they are condemned to live, nor can they do harm to any other beings than their fellow *nārakas*. The souls of those who have committed heinous sins are on death removed in a few moments (see **DEATH AND DISPOSAL OF THE DEAD (Jain)**) to one of the seven nether worlds which contain the different hells (see **COSMOGONY AND COSMOLOGY (Indian)**, § 4). There the soul of the condemned is fitted out with an enormous body of a loathsome shape comparable to that of a plucked fowl. The hell-beings possess superhuman mental powers (*avadhi*); they avail them, however, only to find out their enemies and to fight each other. In addition to the pains produced by the wounds they inflict on one another and by the tortures they have to undergo in some hells, the hell-beings continually suffer from extreme heat or cold, the intolerable stink, and the horrid sounds which prevail in the hells, and they can never appease their hunger and thirst. The *nārakas* do not die, however much they are mangled; but their wounds close at once like a furrow in water. They die at their allotted time after a miserable life, which may extend, in the lowest hell, to 33 oceans of years.

The remaining demons and the ghosts are contained in the two lowest sub-divisions of the gods: the *bhavanavāsins* or *bhaumeyakas*, and the *vyantaras*. The lowest class of the *bhavanavāsins* (i.e. gods who live in palaces) are the *asurakumāras* or simply *asuras*. They reside in mansions of their own below the surface of the earth, in the upper half of *Ratnaprabhā*, the highest of the seven nether worlds. As in Hindu mythology, the *asuras* may be good or bad; but there are fifteen extremely wicked *asuras*—Ambariṣa, etc.—who administer tortures in the three uppermost hells; in a former life they had delighted in wanton cruelty. The remaining classes of *bhavanavāsins*, *nāgas*, etc., seem to be demi-gods rather than demons.

The *vyantaras* include demons, goblins, ghosts, and spirits, who live on, above, or below the earth. They are divided into eight classes, viz. *kinmaras*, *kimpuruṣas*, *māhoragas*, *gandharvas*, *yakṣas*, *rākṣasas*, *bhūtas*, and *piśāchas*, all of which occur almost identically in Hindu mythology. The last four classes contain demons and ghosts, but they are not demoniacal as a whole. There are even among the *rākṣasas* good ones, adorers of the *tirthakaras*, who may take *dikṣā*, etc. In narratives the demoniacal character is usually indicated by an epithet, e.g. *duṣṭa-vyantara*. Generally speaking, the notions of the Jains on demons, ghosts, etc., are very much the same as those of the other Hindus; but the position of the superhuman beings has been, in many regards, altered by the efforts of the Jains to introduce systematical order into the mythological conceptions current at the time when their religious teachings were reduced to a definite form.

LITERATURE.—Umāśvāti's *Tattvārthadhigama Sūtra*, chs. 3 and 4 (tr. ZDMG ix. [1906] 309 ff.); Vinayaviṣaya's *Lokaparakāśa*, 1906, 9th and 10th sargas.

H. JACOBI.

DEMONS AND SPIRITS (Japanese).—**I. Ghosts.**—'The difficulty,' says a Japanese writer, 'of collecting materials for an article about ghosts is that there are so many of them.' Ghosts and ghost-stories are too numerous to admit of tabulation or classification. There are certain traditional forms which they are supposed to assume. They are mostly of the female sex, are clad in white flowing robes which conceal the

absence of legs, and dishevelled hair hangs loosely over their shoulders. As a rule they are supposed to bear some resemblance to the living original, but this is not invariably the case. The ghosts of the wicked bear on themselves the marks of the punishments they are enduring in the invisible world: they appear with one eye, or three eyes, with a long tongue protruding beyond their lips, or with a long flexible neck like that of a serpent. These corporeal peculiarities are supposed to be the results of the *karma* of a previous existence. The Japanese ghost is not generally malicious: there are times, however, when he can exhibit an amazing amount of perverse and wicked ingenuity.

Dr. T. Inouye, who has devoted much thought to the question of ghosts, summarizes their appearances as follows. (1) They are commonly seen in the twilight or at dead of night when everything is black and indistinct. They appear, (2) as a rule, in lonely or solitary places; or (3) in houses recently visited by death, or that have long been deserted, in shrines, temples, graveyards, or among the shadows of willow-trees. It is very rarely that a ghost appears to a group of persons; apparitions are mostly vouchsafed to single individuals, and especially to persons out of health, feeble in body and mind, deficient in knowledge, and impressionable. There is nothing specially new in Inouye's conclusions: they are given here to show that the Japanese ghost is very much what the ghost is supposed to be elsewhere.

2. Warnings of approaching death.—It is common among temple folk in Japan to say that at the moment of death the soul will often go to the temple to give notice of its death. On such occasions, a jingling or rattling sound is heard by the temple-gate or in the main hall of worship, and it is held that whenever these sounds are heard they are invariably followed by the announcement that a parishioner, male or female, has died. The man from whom the present writer obtained his information warned him that these stories must not be looked upon as mere idle tales. The thing is of constant occurrence, now as in the past. Two stories from *Tôno Monogatari* will illustrate this point.

A certain rich parishioner of a temple in the township of Tôno, in the province of Rikuchû, had long been confined to his bed with a disease which was known to be incurable. One day, however, the incumbent of the temple was surprised to receive a visit from the sick man, who was welcomed with the greatest cordiality, and regaled with tea and cakes. After a long and pleasant conversation, the visitor rose to take his leave. A novice followed him to the front gate. The old man, passing through it, turned suddenly to the right and disappeared mysteriously from sight. The servants in the temple were in the meantime making the discovery that the cakes had been left untouched and the tea spilled on the mats. Several persons afterwards asserted that they had seen the old gentleman walking mysteriously down the street. The man died that evening, and the family maintained that he had been lying unconscious on his bed all day. The spilling of the tea is characteristic of many of these stories: it seems to be the proper thing for the Japanese ghosts to do.

Another very pretty story comes from the lonely mountain village of Shimo Niigawa, on the banks of the Karobe in Echû. The wife of a carrier, living with her husband and son, near to a mineral spring, fell into the river, as she was returning after dark on a moonless night from the spring, and was drowned. Husband and son were awaiting her return at home, very anxious because of the lateness of the hour. Finally, they concluded that, owing to the darkness, she had decided to stay the night somewhere, and would return the next morning. As the boy lay dozing on his bed he was awakened by something tugging at his hand. Seeing nothing, he went to sleep again. But the tug at his hand came again, and the touch was like that of his mother's hand. Then he called his father, and, striking a light, found that the place upon which the strange fingers had closed was covered with blood. The next morning his mother's dead body was found among the rocks in the river bed. The palm of her hand was all torn and bleeding. Evidently, in her fall, she had made a wild grab at some stone or tree, and injured it.

3. The limbs of a ghost.—While the common ghost, and especially the stage-ghost, is generally

conceived as a head and shoulders ending off in vague draperies, the following story of the Haunted House of Yotsuya will show that underneath the vague draperies a real man is supposed to exist.

The house in this story was haunted by a troublesome and noisy ghost who allowed the inmates no rest at night. The landlord could find no tenant though the rent was ridiculously low. At last a man, tempted by the cheap rent asked for the otherwise desirable residence, determined to face the ghost and lay him if possible. He shut himself into the house at night and awaited the ghost's arrival. At the wretched hour he came. He was not, however, a terrible ghost at all. When he found that the man showed no disposition to run away he became quite gentle and opened his grief. In the days of his flesh he had been a fighting man, and had had the misfortune to lose his leg as the result of one of his battles. The severed limb lay buried beneath the house, and a one-legged ghost in the realm of the spirits was an object of ridicule. He had long haunted the house for the purpose of recovering his lost limb, but unfortunately he had never yet succeeded in persuading any mortal to listen to his plaint. The man promised to give him assistance, and, instructed by the ghost, proceeded to dig at a certain spot beneath the house. Presently, there arose from the hole a misty shape, a fleecy cloud, in appearance like the leg of a man which drifted off, and joined itself to the body of the ghost. 'Thank you,' said the happy ghost, 'I am satisfied now.' And he ceased to haunt the house. The story shows that the Japanese ghost is thought of as being the exact spiritual counterpart of the material man.

4. Ghostly counterparts of material objects.—The Japanese ghost rarely (if ever) appears naked. He appears sometimes in his grave-clothes, but very frequently in the ghostly counterparts of the clothes which he habitually wore in his material life. He often has a spiritual sword, and has been known in stories to commit murder, e.g. strangling, with the ghostly counterparts of material objects, such as a rope or a piece of tough paper.

A Kyôto story, dating from the Kyôhô era (A.D. 1716-1785), tells of a murdered woman who was buried along with her newborn infant, the latter not being truly dead at the time of interment. Prompted by maternal instinct, the ghost of the woman escaped from the tomb and went into the city to buy food for her infant. Two or three times she appeared at a certain shop and purchased some rice-jelly. On each occasion she was served by a different member of the family—by an apprentice, by the mistress, and finally by the master. The sadness of her face impressed itself on the memory of each, and each had a distinct recollection of having seen the woman take out of her purse the proper sum of money and lay it down on the mat before her. In each case, when, after the departure of the woman, they went to take up the money, it had disappeared and could nowhere be found.

It is evident that the Japanese ghost is thought of as surrounded by ghostly counterparts of all the objects that surround him in this world—in other words, there is, in the Japanese mind, a spiritual world which is the exact counterpart of the material world in which we live.

5. Close connexion between the two worlds.—These two worlds are looked upon as being very closely connected. The spiritual world lies as near to the material, and is as closely interwoven with it, as the spirit of man is with his body. The link of connexion is never broken, and the Japanese ghost feels the same keen interest in the welfare of his family, province, or country that he felt when alive.

There are many stories to illustrate this: for example, one recently published by Viscount Tani in the *Kokumin Shimbun*, of a certain Hamada Rokunôjô, a *samurai* of the Tosa clan, who, having been beheaded (A.D. 1674) with his whole family on account of embezzlement of provincial funds, appeared to his judge on the day following the execution, to relieve himself of an important message which oppressed his mind. In many stories, the constant persecutions of a stepmother worry her hated stepson into a monastery, where he can have no further influence over the family finances. A pious priest of Heizan, who had spent many years in the continuous recitation of the Hoke Kyô, edifies (or annoys?) the community by continuing the same practice in the darkness of the tomb. The ghost of a murdered man gives no rest to judges, councillors, or kinfolk, until he has secured the acquittal of a wrongfully accused person and the arrest of his own guilty brother.

These are but a few instances out of the many ghost stories with which Japanese literature and folk-lore abound. Whether the tales are true or not does not matter. The important thing is that they all illustrate the constant belief of the

Japanese in the reality of the spirit world, and in the constant and close interest which its denizens take in the concerns of men.

6. Effects of this belief on conduct.—‘Are you not ashamed,’ says a kind-hearted husband, in one of Tokutomi’s novels, to his spiteful wife,—‘are you not ashamed to stand before the family *ihai* (tablets of the dead), when you have been treating your own brother’s child with such cruelty?’ There can be no doubt that the belief in the continued interest taken by the dead in the concerns of the world they have left behind them has exerted in the past, and still exerts, a great influence on the moral conduct of the individual Japanese. The influence is fostered by the presence on the domestic shrine of the tablets of the dead, by the observances on death-days and other anniversaries of the dead, by the ceremonies, joyous and otherwise, of the Urabon Festival, by the many lustrations of the Shinto rites, and by the practice, observed in private households as in the great affairs of State, of announcing to the spirits of the deceased, as matters that must touch them closely, any events of importance that have taken place in the family circle or the country. When the second Tokugawa Shōgun, Hidetada, wished to change the succession in his family, he was only dissuaded from his designs by the consideration of the fact that he would have to notify the change by some messenger sent expressly to the realms of the dead. Imperial messengers are constantly being sent to announce some event to the spirits of the Imperial Ancestors, and the Shōkonsha shrines which, during the present reign, have been erected in Tokyo and elsewhere, to the memory of the patriot dead who have died for sovereign or country during the Meiji period, represent the enlargement by design of an old belief that has always been present in Japan under one form or another. The spiritual world of the Japanese is no longer bounded by the narrow limits of the province. Like their patriotism, it has become Imperial: for what lies outside the bounds of the Empire the Japanese have but little concern.

7. The spirits of material objects.—The Japanese ghost differs from ours in conception. It is not, as with us, just the spiritual *portion* of a man, separated at death from the body. It is the *whole man* spiritualized, the exact, immaterial counterpart of the material man. Every material object (*e.g.* money, as we saw above) has this spiritual counterpart, and there has from the earliest times been a tendency to personify the spiritual counterparts of material objects, especially things remarkable for beauty, majesty, age, and the like. We hear occasionally of the ghost of a teapot, a badger, or the like; the poetic imagination of the Japanese has peopled her wilds with gods or spirits of the mountain, the cascade, the tree, the well, the river, the moon, and above all, the sun. The indigenous Japanese cult is threefold. It is nature-worship, ancestor-worship, and, as a corollary to the latter, ruler-worship.

8. The spirits of animals.—If man has a spiritual counterpart to his material self capable of leaving the latter and of continuing its existence apart, and if the same can be said of plants, mountains, and other inanimate bodies, it stands to reason that the same qualities ought, logically, to be attributed to the animals. All animals are, in Japanese popular thought, thus endowed with spiritual counterparts, and some more conspicuously than others. Foxes, badgers, bears, and the like are able not only to appear before the eye in the spiritual counterpart of their own material shape, but even to enter into the bodies of men and other animals, and to speak and act through them.

The fox.—The fox is the hero of a thousand stories. He has, *e.g.*, been known to change himself into a tree. In a legend from Nara we read of a Shinto priest from the Kasuga shrine who, having lost his horse, went into the forest to search for it. He was astonished to see a giant cryptomeria in a place where none had stood only a few days before, and, in order to make sure that he was not being bewitched, discharged his arrow against the tree. The next day the tree had disappeared, but on the place where it had stood there was a poor little dead fox with an arrow through its heart. Again, the fox has been known to turn into a woman, not only as a temporary disguise, but permanently; and there is a popular play known as the *Shinoda no mori*, or ‘Forest of Shinoda,’ which turns entirely on the supposed marriage of a man with a vixen who had assumed the form of a young woman. The plot has an extremely sad and tragic dénouement. The story of the midwife who was tricked by a fox into assisting at the accouchement of his wife is also a favourite one which may be found in many districts.

The cult of the fox, whilst probably indigenous to Japan, is also found in China, and many of the fox-legends are probably importations. When the fox can find a human skull, and put it on its head, and then worship Myōken, the polar star, it obtains its power of assuming the human form. It is very fond of assuming the shape of a beautiful maiden, and chooses the twilight for the exercise of its witchery. The witchery of a fox is rarely of a malicious kind. It has indeed been known to deal swift and sharp retribution to men for acts of injustice and cruelty, but it is, as a rule, mischievous rather than spiteful, and there are not a few instances in which the fox has shown great gratitude. There are no stories which tell of the fox requiring good with evil; but it never omits to requite evil with evil.

A story from Kai tells of a *samurai* who shot at a fox with intent to kill. He missed his aim, but the fox did not forget the hostile intention, and when the *samurai* got home he found his house on fire. On the other hand, a story from Ōmi tells of the gratitude of the fox to whom the priests had shown kindness; and the great Nichiren, who had a very tender heart for animals, was said to have two familiar and attendant foxes who accompanied him everywhere, predicting the future, and warning him of coming dangers. A story is also told of a certain Yasumichi, who held the office of Dainagon and resided at Takakura, near Kyōto. The grounds surrounding his mansion were so full of foxes that they became a nuisance to the neighbourhood, and Yasumichi was minded to get rid of them. He appointed a day for a great fox-hunt; but, on the evening before, a fox appeared to him in the shape of a handsome boy, and in the name of the whole tribe, promised the best of behaviour if only Yasumichi would spare them. Yasumichi did so, and never repented of the bargain.

For further stories relating to the power of metamorphosis ascribed to the fox, as well as for similar stories relating to other animals, the reader is referred to M. W. de Visser’s excellent treatises on the ‘Tengu,’ the ‘Fox and Badger,’ and the ‘Cat and Dog,’ in Japanese folk-lore, appearing in vols. xxxvi. and xxxvii. of the *Transactions of the Asiatic Society of Japan*.

9. Possession by foxes and other animals.—What we have hitherto said has related to the supposed power of the fox and certain other animals of bewitching men by assuming phantom bodies. In fox-possession, the spirit of the animal intrudes itself into the body of a man or woman, in such a way that the intruding spirit exercises a control, more or less absolute, over the person in whose body it resides. This power is ascribed not only to the fox, but to the dog, the monkey, the badger, and the serpent. Strange to say, these beliefs are more prevalent in Kyūshū and S.W. Japan than in the North and North-eastern districts, and it seems not unnatural to ascribe them to Malay rather than to Chinese or Mongolian influences. The following is a list of the names commonly given to these forms of possession, together with the localities in which they are said to be especially found:

Name.	Locality.
<i>Kitsune-tsuki</i> , ‘fox-possession’	No definite locality.
<i>Nekogami</i> , ‘cat-god’	“
<i>Tanuki-gami</i> , ‘badger-god’	“
<i>Inugami</i> , ‘dog-god’	Itchū, Awa, Tosa, and parts of Kyūshū.

Name.	Locality.
<i>Sarugami</i> , 'monkey-god' . . .	Shikoku.
<i>Hebi-gami</i> , 'serpent-god' . . .	Iyo.
<i>Tôbyô</i> (meaning unknown) . . .	Bitchû, Bingo.
<i>Hinomataki</i> . . .	

(These two are forms of *Kitsune-tsuki*.)

<i>Ninkô</i> , 'human fox' . . .	Izumo.
<i>Izuna</i> , . . .	Shinano.

[*Oni-tsuki*, or 'demon-possession,' in the strictest sense of the term, and possession by *Tengu*, are omitted here, as they will be discussed later on. The reader is again recommended to study de Visser's illuminating pages.]

10. *Oni*.—This is the name given to a certain class of supposed beings of hideous aspect and Herculean strength. They often assume the human form, with the addition of a pair of bull's horns, and a tiger's skin thrown around their loins. These two special symbols denote, so it is said, that they came into the world of men through the *kimono*, or 'spirit-gate,' which, following the arrangement of the Japanese zodiac, is situated in the *ushi-tora* ('bull-tiger') direction (see below).

The word *oni* is said to be of Chinese origin, and to denote 'hidden' or 'secret.' It is therefore connected in idea with the Japanese *kakureru*, 'to go into concealment,' used of the death of eminent persons, and it is thus plain that the primary conception of the *oni* is that they are the spirits of the dead. The oldest purely Japanese term seems to have been *mono* ('the beings,' an euphemism based on the idea of *de mortuis nil nisi bonum*); *arakami*¹ or *araburukami* ('wild spirits'), and *shikome* ('ugly women'), appear to have been used later, and later again we get the word *mononoke* ('spiritual beings'). Many Japanese will say that *mono* or *mononoke* are essentially evil beings, but there seems to be no inherent reason for such a supposition. A still more modern word is *bake-mono* ('beings possessed of magical powers'). These words show the beliefs of the Japanese regarding the dead. Death is liberation from the trammels of fleshly existence. The dead, therefore, possessing greater freedom, have larger powers than the living, though their existence is hidden from our eyes. They are the *kishin* or the *kami*, dwelling in the dark regions of *yomi*. But there are many different types of *oni*, and some of them, unable to rest in the dull peace of Elysium, turn to more active employments. In the *Kojiki*, the *yomotsu shikome* drive Izanagi out of Hades; and the *araburukami*, changing himself into a bear, is slain by a celestial thunderbolt discharged by Takemikadzuchi.

11. *The oni as modified by Confucianism and Buddhism*.—The introduction into Japan of Chinese and Indian influences brought with it certain modifications of the *oni*. The *Kojiki* itself is a book largely influenced by China; it is, therefore, possible that the idea of the *yomotsu shikome* may not be a purely Japanese one. To Buddhism is certainly due the idea which makes of the *oni* the attendants of the god of Hell, Yama. In a story in the *Ujijûi Monogatari* they appear as fairies, amidst surroundings which are almost German.

An old woodcutter, who has a large wen upon his right cheek, is overtaken by a storm and compelled to pass the night in a hollow tree. Unintentionally, he becomes a spectator of the revels of the *oni*, who dance around his tree. The old man, who is a good dancer himself, joins in the dance, and, after a very delightful night, promises to come again to his new-made friends. The *oni* are a little doubtful as to his sincerity, and take the wen off his right cheek as a pledge. When he returns, he becomes an object of envy to his neighbour, who is also a woodcutter, and who has also a wen, but on his left cheek. The neighbour determines that he will also try his luck, and takes his place in the hollow tree to wait for the *oni* dance to commence. But he is not a good dancer, and the *oni* lose their temper. They drive

him out of the dance ring, and, as he flees, one of them takes the wen which they had taken from his predecessor and throws it at his right cheek, where it sticks. Thus the man returns home with a wen on either cheek.

Some of the tricks ascribed to the *oni*, such as the stealing of a lute belonging to the Emperor Murakami (A.D. 947-968), which is afterwards mysteriously lowered by invisible hands from a high tower, and so restored, seem to suggest a credulity that was easily imposed upon. When a woman disappeared from a public park in Kyôto, being last seen walking hand in hand with a man, and when a search made for her resulted only in the discovery of a pair of arms and a leg, the police of the period (A.D. 885-889) were probably very glad to be able to plead that it was the work of the *oni*. An oil-pot, rolling of its own accord along the streets, and entering a house, where it kills a young girl, ought to satisfy the most exacting of spiritualistic seances.

12. *The word oni as applied to living persons*.—Whilst *oni* corresponds roughly to the *ki* of Confucianism, or to the *gaki*, or inhabitants of the Buddhist *Prêtaloka*, it is also sometimes metaphorically applied to living people. Thus we get *oni-musha*, 'a fierce warrior'; *oni-shôgun*, 'a daring general'; *oni-kage*, 'a spirited horse.' A beautiful but hard-hearted woman is an *oni*, an ugly, evil face is *oni-zura*, and there is a phrase, *oni no jûhachi*, which suggests that the devil was a handsome enough fellow in his youth.

13. *Adaptations of Indian stories*.—The Japanese *oni* is sometimes conceived of as playing the part of Mâra, the Tempter, who so constantly comes between Buddha and his disciples, and who is the enemy of truth. More frequently he is the *Yaksha* or *Rakshasa* of Indian demonology. It has been conjectured that the *Onigashima* of the popular Japanese story is the *Yaksadvipa* of the *Jâtakas*. In the same story, the *onitaiji*, or attack on the demons, is said to be an adaptation of Râma's invasion of Ceylon, as given in the *Mahâbhârata*.

14. *Tengu*.—We now come to the consideration of the mysterious beings known as *tengu*. The popular explanation of this term is 'heavenly dog'; but the word also appears as *tenko*, 'heavenly fox,' and *tenkô*, 'heavenly light.' The Buddhist explanation of the word *tengu* is 'light and darkness,' 'freedom and non-freedom,' 'enlightenment and error.' Thus considered, the *tengu* is a being in whom are united both sides of these antitheses. A similar interpretation makes *ten* to be the heavenly *mantra* which dominates the *Vajradhātu*, or Diamond World, and *gu* to be the earthly *mantra* which rules in the *Garbhadhātu*, or Womb World. The *tengu* participates in the nature of both worlds.

Shintoist and Confucianist writers, Baron Tsuda, for example, do not hesitate to denounce the *tengu* as nothing but figments invented by a crafty priesthood for the purpose of deceiving an ignorant people. It is, nevertheless, interesting to speculate on the sources from which the conception of these fabled creatures came. The *tengu* is frequently found in Chinese literature, and it may perhaps be said that the idea of these beings came from a close observation of animals in their native haunts. The Buddhist monks of old generally built their temples in the recesses of solitary mountains, and one of the commonest of the titles bestowed on the founder of a temple or seat is that of *kaisan-shônin*, 'the venerable opener of the mountain.' Japanese legend connects all the great *kaisan*, e.g. Saichô, Kôbô, Nichiren, etc., with stories of the *tengu*, and the favourite haunts of these creatures are famous temples, such as Hiyei, Kurama, Atago, Kompira, Omine, Ontake, Oyama, Miyôgi, Akiha, and Nikkô. The frolicsome antics of animals who believe themselves to be absolutely unobserved by human eyes might easily give birth to legends of

¹ In the days of the anti-Christian persecutions, Christian emblems and books were occasionally saved from desecration or destruction by being shut up in shrines dedicated to supposed *arakami*, where they were safe, owing to the superstitious fears of the people. The present writer has been told of a crucifix which was thus treated; also of a copy of the Christian Scriptures.

tengu and other weird beings. There would also be ground for imagining that some of the staidier of the brute creation were re-incarnations of *yamabushi* and other pious recluses.

15. *Garuda*.—Undoubtedly the *tengu* are connected with the *Garuda* of Buddhist mythology. *Tengu* will appear as priests, riding on foxes, carrying feather fans, or even swords like *samurai*; but their commonest form is that of a bird of prey not unlike an eagle or a vulture.¹ It is a safe generalization to make, that, whenever a *tengu* is represented with the beak and claws of a bird, or with wings to fly with, the prototype is the *Garuda*. When the *tengu* takes some other form, e.g. a shooting star, a white badger, and so forth, the original conception is to be looked for, not in India, but in China. But, whether Indian or Chinese, the *tengu* are always subject to the sacerdotal power of the Buddhist priesthood. Some have been Buddhist priests before their present incarnation; some become converted as *tengu*, and so procure re-birth as members of the order. They can hypnotize men into seeing many things that have no existence, but their power does not last for more than a week. When the Sabbath Day comes, their power comes to an end.

16. *Tengu-possession*.—*Tengu*-possession differs in kind from that by *oni*, or any of the bewitching animals. There is no mischief in it, and no devilry. When a man is obsessed by a *tengu*, he merely becomes preternaturally learned or solemn, reading, writing, or fencing with a skill that would not be expected from him.

17. *Exorcism*.—When a man is possessed by a *tengu*, exorcism is of little importance. For possession by evil spirits, foxes, badgers, and the like, there are many forms of exorcism in vogue, the sect of Nichiren being especially noted for its labours in this kind of healing. The most famous place near Tokyo is at the village of Nakayama, where, at a certain temple belonging to the Nichiren sect, periodical retreats are held for the purpose of driving out evil spirits of all kinds (see an art. on 'Buddhistische Gnadensmittel,' in the *Mitteilungen der deutschen Gesellschaft für Natur- und Völkerkunde Ostasiens* [vol. v., Tokyo, 1907]).

18. *Spirits of the house, etc.*—Spirits have much to do with the Japanese conception of the house. No building can take place without a reference of some sort to them. But this is a large subject, and will be more conveniently treated in connexion with the house.

LITERATURE.—In addition to the authorities quoted in the text of this article, the present writer has drawn mainly upon three sources, all Japanese:

- (i.) The *Journal of the Tokyo Anthropological Society*.
- (ii.) *Tenizoku Bukkyō Shimbun*, a weekly journal published under the auspices of the reforming school of Buddhists, also in Tokyo.
- (iii.) *Tō-a no Hikari* ('The Light of the Far East'), the organ of the Tokyo Philosophical Society.

A. LLOYD.

DEMONS AND SPIRITS (Jewish).—There can be no hesitation in saying that the existence of spirits was, during most periods of Jewish history and in most places, regarded as incontestable. Yet this statement is capable of being modified in no small degree. It has been stated, on the one hand, that demonology obtained so strong a grasp of the popular mind as completely to fetter it with superstition and to stifle all higher aspirations; that religious teachers and thinkers were themselves not free from these ideas; and that this belief obscured and in many ways detracted from the value of their ethical teachings. On the other hand, this has been too categorically denied by

¹ It is to be noticed that there are *otengu*, 'big *tengu*,' with red faces and long human noses; there are also *kotengu*, 'small *tengu*,' with beaks. These are also known as *karakuri*, 'crow *tengu*.'

writers who hold diametrically opposite views. As might be expected, the truth lies in the golden mean. The human mind and soul are capable of accommodating simultaneously opinions which are not only inconsistent, but even mutually exclusive. It is just because man does not always trouble to disentangle his thoughts and to harmonize them that he is willing to retain the incongruent. Consequently a whole-hearted belief in the supremacy of the Godhead need not necessarily exclude an acknowledgment of the working of other powers. To arrive at the conclusion that one or the other of these beliefs must be rejected requires considerable progress along the path of mental reasoning.

The belief in spirits during post-Biblical times was a legacy from earlier periods (see esp. the 'Assyr.-Bab.' and 'Hebrew' artt. on the present subject). What Chaldaea, Arabia, and Egypt gave to Canaan underwent substantial change, and received additions from internal and external sources. In Palestine itself, Galilee¹ may be singled out as being the centre where demonology was strongest, but this must not by any means be taken to exclude other parts. Many causes contributed to the diffusion of these ideas. The ever-growing intercourse with the Greek and Roman world, produced by commercial and political circumstances, can scarcely have failed to make the Jews acquainted with many new forms of spirits. The Jews from the Diaspora who re-visited their native land cannot have returned entirely empty-handed, and foreign ideas must have found a fruitful soil in those parts where religious influences were weakest to counteract them. By a people naturally given to syncretism, dryads and satyrs would easily be associated with *shedim* and *se'irim*. Moreover, the intercourse between the coastland of Palestine and the Aegean and Cypriot ports must have led to an interchange of ideas as well as of commodities. But, without going so far afield as Greece, there were enough territorial influences at hand to account for many foreign elements in Jewish demonological beliefs and practices.

A complete list of the various forms of demons may be seen in *J.E.* art. 'Demonology.' The scope of the present article is to furnish suggestions which may in some cases account for their existence. While frankly admitting the origin of a large number to be purely superstitious, there are yet many for which other explanations must be sought. The area to be considered is immense, and references of great importance occur in all branches of literature—Apocrypha and Pseudepigrapha, New Testament and Patristic writings, and Talmudic and Rabbinic works of all ages, including Halakha, Haggada, and Qabbala. On account of this wide area, great care must be exercised in drawing conclusions. Demons occurring in late books must be traced to their earliest sources. An isolated reference in the *Shulhan 'Arakh* (1555) requires investigation as to whether it be a mediaeval invention or a lingering survival of a primitive superstition. Secondly, references must be examined to see whether they are the utterances of individuals or genuine examples of popular belief; and distinctions must be drawn between local and general beliefs, between Semitic and non-Semitic, and between Jewish beliefs and those borrowed by Jews from their neighbours in European countries. A requirement, more vital than any of the foregoing, is the exercise of careful analysis in selecting Talmudic material. It is absolutely necessary to assign each authority to its proper local and chronological category; that is to say, evidence which applies to Babylon is inadmissible for Palestine; that which is found to occur in Galilee cannot be used to prove argu-

¹ Cf. H. Grätz, *Gesch.*, Leipzig, 1888, iii. 282.

ments for Judæa; and the same care must be exercised in respect of chronology.

In investigating Talmudic evidence as to spirits, the reader will notice, at the outset, different attitudes adopted by the Rabbis in dealing with this question. In some cases the reality of demons seems to be taken for granted absolutely; in others it seems, with no less certainty, to be denied. Stories occur in which both these attitudes may be traced simultaneously. The reason for this may be found if the nationality of the respective teachers be sought. It has already been stated that Galilee was the centre of Palestinian demonology, and it will almost invariably be found that *Galilean* teachers *accepted*, while *Judean* teachers *rejected*, the existence of spirits. The numerous instances which the NT furnishes would have been impossible save in Galilee; there is a strong similarity between these and those adduced by Galilean Rabbis. The same must be said of those Rabbis who came from Mesopotamia. As they were brought up in surroundings in which superstition was rife, their teaching was tinged by a belief in spirits, and in comparison with them the clarity of Palestinian teaching stands out in bold relief.

Justin Martyr (*Dial.* i. 85) accuses the Jews of employing amulets and conjurations to no less an extent than the heathen. The evidence of R. Simon b. Yohai, a Galilean Tanna of the 2nd cent., is equally conclusive for Galilee. Thus Bab. *Erubbin*, 64b, states:

"The Master says: 'We do not pass by food (which is lying in the street, and which may have been used for protection against spirits).' R. Yohanan in the name of R. Simon b. Yohai says: 'This decision applies only to the earlier generations, when the daughters of Israel were not practised in all arts of magic (מכישפא); but nowadays, when the daughters of Israel are indeed practised in all magical arts, this does not apply. It has been taught that one should pass by loaves, but not small pieces.' R. Asi said to R. Ashi: 'Do they, then, not use small pieces also for this purpose?' [Note that none of these Rabbis is a Judean. Simon b. Yohai was a Galilean, and R. Asi and R. Ashi were Babylonians.]

The difference between Judæa, on the one hand, and Galilee and Babylon, on the other, may be demonstrated by the story related about Zonin and the Palestinian Aqiba in Bab. *Aboda Zarā*, 55a: 1

"Zonin said to R. Aqiba: 'Both of us know that there is no reality in idols, but how is it that we see men going to them lame and returning sound?' He replied: 'I will relate to thee a parable. There was once in the city an honest man, with whom all the inhabitants would deposit their money without witnesses. One man, however, would always do so before witnesses. On one occasion he forgot and omitted the witnesses. Then said the wife of the honest man to him, Now we can deny him; but he replied, And indeed since he is foolish, shall we lose our faithfulness?' So also is it with chastisements (i.e. diseases). When they are sent upon man, the precise limits of their duration are specified; they are adjured and warned at what moment, by what physician, and by what drug they are to leave the patient. When the time arrives for the diseases to depart, and it happens that the sufferer is at the (heathen) temple, the diseases say: 'By rights we should not go, but shall we prove unfaithful to our oath for the sake of a fool?'"

These and similar anecdotes, which are to be found in the same place, show that the Pal. Rabbis placed no reliance in spirits and conjurations. It should be noted that R. Aqiba (A.D. 50-135) says of himself elsewhere (*Sem.* viii.; *M. K.* 21b): 'The people of the south know Aqiba, but whence should the people of Galilee know him?' It was in Galilee that the people believed in possession by evil spirits and in the actuality of demons (e.g. NT references), whereas in Palestine the views of Aqiba prevailed.

One of the favourite forms of procuring intercourse with spirits was by spending the night in a cemetery. In connexion with this practice, reference should be made to Jer. *Terumoth*, i. fol. 40a, outer column, line 29; *Gittin*, vii. beginning, fol. 48b, outer column (ed. Krotoschin, 1866), and Bab. *Hagiga*, 3b, near end. In all these cases invocation

1 The Gemara is attempting to account for God's tolerating idols and superstitions, and for the fact that spirits do sometimes accomplish cures.

of spirits is mentioned: e.g. *למחרת*, he who burns incense to the *shedm*, and he who passes the night by the graves in order to enter into communion with an unclean spirit. These customs are strongly condemned, and are viewed as an indication of insanity (i.e. one who participates is a *mad*). With these passages may be compared the story in *Levit. Rabba*, xxvi. 5:

R. Berekhya in the name of R. Levi relates that a *kohen* and an Israelite were possessed by a demon and went to a skilled physician, who prescribed for the Israelite, but left the *kohen* neglected. The latter asked the reason, and the physician replied: 'He is an Israelite, and is of those who spend the night at the graves; but thou, who art a *kohen*, dost not act thus, therefore I left thee and prescribed for him.'

This story illustrates the difference between the ignorant and the learned classes; it should be contrasted with the statements of Athenagoras (*Legatio pro Christianis*, chs. xxiv., xxvi., xxvii.), to whom demons were a vivid reality.¹

Probably the earliest demons are those originating from the movements of celestial bodies and from natural phenomena. To the former, of course, belong Bab. and, later on, Persian examples. Similarly the sand-storm in the desert may be safely held to account for some of the aspects of the Arabic *jinn*. So, too, Ps 91⁶ 'the destruction that wasteth at noonday' may not improbably refer to the burning heat of midday. The development of this idea may be found in Bab. *Pesahim*, 111b ff., where the same word *qetebh* occurs.

Inasmuch as the functions of religion were, among the Jews, very wide, the scope of the teacher's activity extended to many branches which would not to-day be considered as belonging to the true sphere of religion. He legislated for social as well as for religious matters; the daily intercourse between man and his neighbour was the object of his attention. Consequently, when there are found quasi-religious references to spirits, in connexions which seem very remote from religion in its modern signification, it must be remembered that the word has been greatly restricted in the process of time. In turning back to those spirits which may perhaps have their origin in natural phenomena, the foregoing must be borne in mind. Thus in *Pesahim*, 111b, to which reference has been made, the following statement occurs:

"From the first of Tammuz to the sixteenth there can be no doubt as to their actuality; after that date it is doubtful. They may be found in the shadow of ivy which is stunted (not a yard high), and in the morning and evening shadows which are not a yard high, but chiefly they may be found in the shadows of a privy."

The Gemara does not particularize the spirits mentioned in the passage cited, which follows references to many varieties of spirits. There cannot, however, be much doubt that the *qetebh meriri*, or spirit of poisonous pestilence, is meant, although the passage might refer generally to *shedm*, for this spirit is described a few lines earlier in the Gemara:

"The *qetebh meriri* is of two kinds; one comes in the morning, the other in the afternoon. The former is called *qetebh meriri*, and causes mealy porridge to ferment (lit. it appears in a vessel of mealy porridge and stirs the spoon). The latter is the pestilence which destroyeth at noonday; it appears like a sieve on the horns of a goat, and it turns like a sieve" (*ib. supra*).

It would not seem a very rash assumption to regard this spirit as the development and personification of midsummer heat. Tammuz is elsewhere stated to be the height of summer, e.g. *Shab.* 53a, where a popular proverb is quoted to the effect that even in Tammuz the donkey feels the cold. The fact that attention is drawn to those shadows which afford insufficient protection from the rays of the sun, and the stress laid on the evil effects of proximity to a privy, render this view more prob-

1 It may be mentioned, incidentally, that the term for possession by a demon is *npz*, *npz*. The spirits are said to have been created on Friday afternoon before Sabbath; see *Gen. Rabba*, vii. 7; *Pirke Aboth*, v. 9, where they are included in the category of mythical phenomena.

able; so also does the mention of the action of heat on food and on animals (cf. the danger of sleeping under the rays of the moon [Pes. 111a, near foot]).

Closely allied to spirits which are embodiments of natural phenomena are those which affect man in his daily life. In the Gemara on the tenth Mishna of *Pesahim* many are mentioned. Under the guise of demons, they teach lessons in cleanliness, sobriety, care, and economy. For instance, 'Rei Laqis says: "Whosoever does one of the following four things risks his life, and his blood is on his own head, namely: he who performs his natural functions between a palm tree and a wall; he who passes between two palm trees; he who drinks borrowed water; he who passes over spilt water, even if his own wife has spilled it in his presence."

It is unnecessary to show what points underlie these warnings, which are, moreover, still further discussed in the Gemara; but it is well to note that the form of the warning has changed somewhat. The demon is implied, but not actually expressed. Similar instances are the following:

'The Genius (גנין = Pers. *zad*; so Goldschmidt, in his tr. of Jer., p. 711) of sustenance is called Cleanliness; the Genius of poverty is called Dirt.' R. Papa says: 'A man should not enter a house in which there is a cat, barefooted. Why? Because a cat kills and devours serpents, and serpents have small bones; should one of these bones enter his foot, it could not be dislodged and would become dangerous. Others say that a man should not enter a house in which there is no cat, by night. Why? Because a serpent could, unknown to him, become attached to him.'¹

One of the peculiarities of the Hebrew language, as compared with Greek, is its paucity of abstract nouns. Although Aramaic, especially that dialect in which the Talmud is composed, has a far larger vocabulary than Mishnic Hebrew, yet it cannot be denied that the mind of the Jew preferred nouns of a concrete meaning. This fact deserves recognition when considering demonology. The vocabulary contained no word which could adequately render such terms as 'dirt,' 'infection,' 'hygiene,' etc., and in dealing with scientific terms it was, and is still, a matter of extreme difficulty to find suitable translations. This fact will be evident to any one who attempts to render into classical or even Mishnic Hebrew a piece of philosophical prose which could be turned into classical Greek with facility. Consequently the personification of a quality is sometimes to be disregarded, and the underlying principle must be extracted. It might be urged that the Greek no less than the Hebrew people had its demons; but other circumstances, which will readily suggest themselves, have to be taken into account. Instances of this kind are the following:

In *Yoma*, 77b, reference is made to the demon אשכנז, whose name also occurs in *Ta'anith*, 20b, where the kind actions of R. Huna are enumerated. *Shibda* clings to the finger-tips and afflicts people, especially young children, who eat with unwashed hands. R. Huna was acquainted with this demon, and used to place a jar of water ready, saying, 'Whosoever wishes, let him come and wash his hands so as to avoid the danger from the *Shibda*.' Kohler (*JE*, art. 'Demonology', p. 517, foot) associates *Shibda* with croup. In the same way the *Shulhan 'Arukh* preserves an early reference to the evil spirit which clings to a man's unwashed finger-tips, and urges the necessity of washing them. It is scarcely conceivable that the evil spirit in this case can have any other meaning than dirt—a word for which the Heb. language does not contain an appropriate equivalent.

It is possible that the demon *Lilith* (see Is 34¹⁴; *Erubhin*, 18b, 100b; *Gen.* R. xx.) belongs to this category. Adam is said to have married *Lilith* in addition to Eve, and filled the world with *shedim* and demons of every description, which she bore him. Then, seized with jealousy of Eve's children, she attacks and attempts to slay newly-born infants. The story recalls the myth of Latona's anger against the children of Niobe, but perhaps the *Lilith* idea is a personification of the perils which beset women in child-birth.

Kohler (*loc. cit.*) enumerates many instances of demons of disease; e.g. *ruah serada*, cataplexy; *ruah palga*, headache; *ben n'f'lim*, epilepsy; *ruah qardevayach* (καρδαχός), melancholy;

¹ In this case, although the demon has become completely rationalized, the warning is addressed to a man's common sense, and not to his fear of the supernatural. Yet it must be borne in mind that Papa, a Bab. Amora (A.D. 300-376), was noted for his belief in demons. Cf. especially the *Shema* recited at the end of a *massékhta*.

for all of which suitable Heb. equivalents are lacking; it cannot be from pure choice that demonology was called upon to furnish descriptive titles.

There are cases in which demons and spirits are cited as playing pranks of a harmless or even amusing character, comparable to those of fairies and kelpies in folk-lore. The fact that such stories are found in most abstruse portions of the Gemara supports the idea above suggested. Children accompanied the Rabbis and listened to their discussions, and a story of the marvellous and supernatural may have been purposely introduced in order to stimulate wandering wits or as a reward for diligent attention.

On the other hand, it cannot be denied that in many cases the demon is of a purely superstitious nature, e.g. *Berakhoth*, 6a:

'It is taught: Abba Benjamin says, "Were mortal eye capable of seeing everything, it would be impossible for any human being to exist on account of the Mazzikim ('Harmers')." Abaye says, "They are more numerous than we, and surround us as the mounds of earth (thrown up by the plough) surround the furrow." R. Huna says, "Each of us has a thousand on his left, and a myriad on his right." Rabba says, "The jostling at lectures is due to them, weariness of the knees is due to their rubbing, the wearing out of the clothes of the Rabbis is due to their rubbing, tottering feet are due to them. Whosoever wishes to know them, let him take sifted ashes and strew them round his bed, and in the morning their traces will be seen as of the footprints of a cock. He who wishes to see them must take the after-birth of a first-born; let him burn it with fire, pound it up, and smear his eyes therewith; then he will see them. Let him cast them into an iron tube and seal them with an iron seal-ring, lest they steal away. Let him keep his mouth (perhaps the mouth of the tube) closed, lest he be injured. R. Bibi b. Abaye did this, but he suffered injury; so the Rabbis prayed for him, and he was cured."

This extract contains both the playful and the superstitious elements, but it is very hard to observe the distinction. It is also a matter of no small difficulty to determine how far the belief in demons was actual or superficial, or, if actual, whether good, innocuous, or definitely harmful. It is to be regarded as an evil thing for a man to regulate his conduct by his belief in spirits, but great objection cannot be raised to a bare acknowledgment of their existence. A child's life would be empty without fairy stories; even to-day the personification of the spirit of Christmas festivity receives good-natured toleration. Religious thinkers belonging to most heterogeneous schools of thought accept angelology and demonology as a necessary concomitant of religion. The presence of both is essential to that mystic element from which no religion is or should be entirely divorced. But the force of the imaginative faculty becomes baneful when it invades the sphere of reason and subverts reason itself. It is almost impossible to establish a hard and fast rule in these cases.

The demonology of the Qabbala, and also of the later Rabbinic writings, is extremely interesting. Many beautiful *Minhagim* of Jewish ceremonial are derived from Qabbala, which assumes a mystic connexion between things terrestrial and celestial, and symbolically identifies the form with the matter.

The prayer at the blowing of the ram's horn on New Year's day makes the notes of the *shofar* into angels ascending to the Divine Throne, while inability to blow the *shofar* is due to the *yeger ha-ra'* ('evil inclination, lust') which intercepts man's holy thoughts and robs him of *kavvanah* ('devotion') and ability to produce a note. So, too, on Friday night, when a man returns from the synagogue to his home, which is prepared to receive the Sabbath bride in peace and love, two good angels accompany him and bless him, while the evil angel is constrained to say Amen. But, if the man's thoughts are not properly attuned, and if the reception of the bride is neglected, the good angels sorrowfully depart and the evil angel prevails.

In such cases the spirits are to be explained as graphic representations of the frame of mind of the man, poetically expressed, and with these the *daimon* of Socrates may be compared; it is in such circumstances undoubtedly that the prophylactics suggested by the Rabbis were meant to apply. The recital of verses of Scripture, especially of the

Psalms, and the observance of *tephillin*, *m'zūzā*, and *shēth*, were intended to prove a balm to a troubled mind, and to divert distraught fancies, but not to have a therapeutic effect on the body.¹

Nevertheless, the belief among mediæval Rabbis as to the actuality of spirits seems to have been real. Maimonides and Ibn Ezra form very striking exceptions (cf. Ibn Ezra on Lv 17, and contrast Nahmanides quoted by Kohler, *loc. cit.*; cf. also Rashi on Dt 32²⁴ and Job 5¹⁷).

Summary.—(1) Belief in the existence of spirits cannot be denied, but (2) it was largely limited to Galilee and Babylonia. Palestine, on the whole, was free from it, and (3) in some cases other explanations must be sought: (a) natural phenomena, (b) absence of terms for abstract nouns, (c) the occasional root of social and other precepts in man's fondness for the supernatural, (d) playful spirits and fairy stories, and (e) the action of mysticism on the pious mind. (4) It is difficult to estimate the extent to which credence was given to the actuality of spirits and to which this belief influenced personal conduct.

Kohut, *Angelologie und Dämonologie in ihrer Abhängigkeit vom Paraismus* (1896), is the chief work. Talmudic references may be consulted in Rodkinson's tr. (New York, 1901), or preferably in L. Goldschmidt (text and tr., Berlin, 1897).

HERBERT LOEWE.

DEMONS AND SPIRITS (Muslim).—Besides the gods to whom they devoted a regular cult, the ancient Arabs recognized a series of inferior spirits, whom they conciliated or conjured by magical practices. In this matter, as in others, Muhammad preserved the ancient beliefs by adapting them to the new religion, in such a way that it is impossible to distinguish which elements in his teaching are sprung from his inward conviction and which are simply a concession to the doctrine of his compatriots. To these notions—Muhammad's inheritance, so to speak—are added outside elements, Jewish and Christian, themselves derived from Chaldaea and Parsism. It seems impossible to give a precise account of the doctrine of the Qur'an on the subject of spirits, for even the very earliest commentators are hedged around with innumerable traditions, which it is anything but easy to criticize. It may be said, however, that the Qur'an traces out all the main divisions of the system: angels, servants of Allah; Satan and his horde who animate the images of false gods; lastly, the *jinn*, some of whom are believers, some unbelievers. If it indicates the existence of several categories of angels, it nevertheless names only two, viz. Jibril and Mikail; for Hārūt and Mārūt are fallen angels with a Satanic rôle.

However, just as Judaism, under the influence of the Qabbala, multiplied its list of spirits, and Christianity set up in battle array its armies of angels and demons, Islām also found in this belief and in the magic struggle for the favour, or against the attacks, of spirits an element of reaction against the cold, aloof unity of Allah. From Judaism and Christianity Islām learned the names of spirits not known before, and it gave them definite forms, in descriptions which grew in bulk during the favourable stages of anthropomorphism and the *haushiya*, and then gained in coherence under the influence of Mu'tazilism. This doctrine we shall discuss in a few lines.

Islām recognizes three classes of living beings higher than man: angels (*malak*, plur. *malā'ika*); demons (*shayātīn*, plur. *shayāṭīn*); and *jinn*. The essential and common characteristic of these beings is that they are formed from one single substance,

instead of from a combination of substances like the human body.

Among these spirits, the front rank is occupied by the angels; they are Allah's bodyguard, and do his will and obey his word. According to Kazwini (i. 55), 'the angels are beings formed from a single substance, endowed with life, speech, and reason.' Authorities are not agreed as to the characteristics that distinguish them from demons and *jinn*; according to some, they differ in their very nature, just as one species of terrestrial animal differs from another; others are of opinion that the difference is only in contingencies, or relativities, such as are contained in the notions of complete and incomplete, good and bad, etc. The angels are essentially sacred, untouched by the guilt of passion or the stains of anger. They are in constant attendance upon the commands of Allah. Their food is *tasbīh* (the recitation of the formula 'Glory to Allah!'), and their drink is *tagdīs* ('Allah is holy!'). Their occupation is to repeat the name of Allah, and all their joy is in his worship. Allah created them and gave them diverse forms, that they might fulfil his commands and people the heavens. The prophet said: 'The heavens crack, and cannot but crack, for there is not a hand's-breadth of space to be found in them without an angel bending or prostrating himself before Allah.'

The Arabic word *malak*, the general word for angel, means 'sent,' and is a Jewish loan-word. It has lost its true form *mal'ak*, which survives, however, in the characteristic form of the plural *malā'ika*. The exact pronunciation was as in pre-Islamic Arabia, as we know from a verse of Abu Wajra, quoted in the *Lisān al-'Arab* (xii. 386), where it is necessary to the metre. But a certain number of angels had special names, which will be mentioned later on, partly derived from the Qur'an. It seems useless to quote all the verses of the Book where angels are mentioned; we shall therefore notice only the most interesting.

The greatest of the angels—those honoured by all the others as dearest to their Lord—are the four throne-bearers of Allah (*hamalat al-'arsh*), whose number will be doubled on the resurrection day. Their duty is, besides, to praise Allah and implore him on behalf of true believers. Muslim legend gives them the form of the four beings who passed into Christianity with the Apocalypse to symbolize the evangelists: man, bull, eagle, and lion. This legend defines further the relations established by their form between each of them and a class of living beings on earth: the first angel is humanity's intercessor before Allah; the second pleads for domestic animals; the third for birds; and the fourth for savage beasts.

The cherubim (*karūbiyūn*) are angels who are absolutely absorbed in the holiness of Allah; their function is to repeat the *tasbīh* ('Glory to Allah!') unflatteringly all day and all night. They seem to inhabit a secluded part of the sky, where they live in peace, far removed from the attacks of the devil, Iblis.

There are four angels who have a distinct personality and are each known by a separate name: Jibril (Gabriel), Mikail (Michael), 'Azrā'il, and 'Isrāfil. Authorities class these in a special group: these four archangels will be the last to die at the end of the world. Jibril (or Jabrā'il, Jibril, and sometimes Jibrin) is, above all, the angel of revelation (*'amin al-wahī*): he was the messenger sent by Allah to the prophets and particularly to Muhammad. His formidable appearance would overawe men, and so he has to appear in disguise to the prophets. Muhammad entreated him to reveal himself to him as he really was, and Jibril consented; but, when he appeared,

¹ Compare *Sanh.* x. 1, where incantations over wounds are forbidden. He who practises these has no share in the world to come, for he has doubted God's omnipotence.

immense, and covering the whole horizon with his wings, the Prophet fainted away. Even the inhabitants of the sky were alarmed by him. When Allah sent him to deliver the Word to a prophet, they heard a noise like the dragging of chains over rocks, and so terrible that they swooned. When Jibril approached them, they recovered their senses, and asked what the Lord had said to him: 'The Truth' (*al-Haqq*), replied the angel, and all repeated: '*Al-Haqq, al-Haqq!*' This function of Jibril is explained in Arabic by terms analogous to those mentioned above: he is the 'guardian of holiness' (*ḥāzin al-quds*), the 'faithful spirit' (*ar-rūḥ al-amin*), the 'holy spirit' (*ar-rūḥ al-quds*); in which terms we see a borrowing from Christianity. He is also the 'supreme confidant' (*an-nāmūs al-akbar*), and the 'peacock of the angels' (*ṭā'ūs al-malā'ika*). His rôle, however, is not restricted to the carrying of revelation.

A tradition says that, when the Prophet asked him to reveal all his power, Jibril answered: 'On my two wings I bore the country of the people of Loth, and carried it up into the air so high that its inhabitants could no longer hear their cocks crow; then I turned it upside down.'

It is also said that he has assistants who watch over the welfare of the world. Schwab (*Angelol. heb.*, 1897, p. 91) notices some characteristics of his various functions. The most simple descriptions give him six huge wings, each composed of a hundred little ones; he has also two other wings which he uses to destroy rebel cities. But later texts show Jibril provided with sixteen hundred wings, and covered with saffron hairs; a sun shines between his eyes, a moon and stars between every two hairs. He enters the Sea of Light (*Baḥr an-Nūr*) three hundred and sixty times every day; and every time he comes out of it a million drops fall from his wings, and form the angels called 'Spiritual' (*Rūḥāniya*), 'because they spread abroad spirit, peace, and perfumes' (*ar-rūḥ w'ar-raḥa w'ar-riḥān*). Jibril was created five hundred years after Mikā'il. He is named three times in the Qur'an (ii. 91, 92, lvi. 4); but he also appears under other names (ii. 81, 254, v. 109, where he is the annunciator to Mary; xvi. 104, xxvi. 193, liv. 5, etc.). In ii. 92, Mikā'il (in the form Mikāl) is mentioned after Jibril, to reply, the commentaries say, to the Jews, who regarded the former as their ally and the latter as their enemy, and gave this as a pretext for rejecting the revelation brought to Muhammad by Jibril (Ṭabari, *Tafsir*, i. 330).

Mikā'il (Michael) is the angel charged with providing food for the body, and knowledge and prudence for the mind. He is the supreme controller of all the forces of Nature. From each of his eyes there fall a thousand tears, from each of which Allah creates an angel with the same form as Michael. Singing praises to Allah until the day of judgment, they watch over the life of the world; these are the *karūbiyūn* (cherubim). Being Michael's assistants, they control the rain, plants, and fruits; every plant on the earth, every tree, every drop of water, is under the care of one of them. The earliest traditions locate Michael in the seventh heaven, on the borders of the Full Sea (*al-Baḥr al-Masjūr*), which is crowded with an innumerable array of angels; Allah alone knows his form and the number of his wings. Later on, however, the descriptions become more precise: his wings are of the colour of green emerald; he is covered with saffron hairs, and each of them contains a million faces and mouths, and as many tongues which, in a million dialects, implore the pardon of Allah; from a million eyes that weep over the sins of the faithful fall the tears from which Allah formed the cherubim. Michael was created five hundred years after 'Isrāfīl. The con-

ception that arises from the representation of the forces of Nature in the form of angels distributed throughout the world is decidedly pantheistic; it was developed in a most curious manner by late Arabic traditions which have been summarized by Kazwīnī (i. 62 f.). As we might have expected, a *ḥadīth* was the origin of this idea:

'Around each man appeared a hundred and sixty angels 'fitting round him, like flies around a pot of honey on a summer day'; these are the Agents of Beings (*Maukūlat al-Kā'inat*). They are the forces of nutrition, and endow the inert food introduced into the body of man with the power of becoming flesh, bone, and blood. They have to watch that the organism preserves what is necessary to it and gets rid of superfluous matter; that each organ plays its part and not the part of any other. The whole mysterious development of life is thus put into the light fingers of heavenly workmen.

To these we must add still another angel called the Spirit, or the Breath (*ar-Rūḥ*), which may well be only a new form of Jibril. To him and to his incarnations Allah entrusted the duty of bringing motion to the heavenly spheres and the stars, and of animating the sublunary bodies and living beings. Just as he can make the heavenly bodies perform their revolutions, he can also stop them in their course—with Allah's permission.

The third of the angels of definite personality is mentioned in the Qur'an (xxxii. 11) under the name of *malaku 'l-maut*; but tradition calls him 'Azrā'il.

After Allah created the angel of death, 'Azrā'il, he kept him hidden for a time from the other angels. When he showed him to them, they all fell into a faint which lasted a thousand years. This terrible being, who plays so important a part in the existence of the world, and who is everywhere at once, is only a passive agent of Allah's will; Allah holds death in his hands. Muslim writers insist on this fact; for it was possible to believe, on the other hand, that the terrible angel of death himself executed the decrees which Allah had inscribed upon the 'Well-guarded Tablet of Destiny' (*al-lah al-mahfūz*); but this is not the case. 'Azrā'il does nothing without the express command of Allah. He knows nothing but what Allah tells him. He receives from Allah the leaves upon which the names of those who are about to die are written. It is only in details that the traditions differ. According to some, the guardian angel comes and warns 'Azrā'il that the man under his care is approaching his last moments. The angel of death notes the name of the dying man in his register, with a white mark in the case of a believer, with a black mark in the case of others. But he waits until a leaf falls from the tree that is by the throne of Allah (*'arsh*) with the dying man's name inscribed on it. According to others, this leaf falls from the tree forty days before the death of the man, who is living upon the earth during this interval but dead in the sky. Still another account is that an angel sent by Allah brings to 'Azrā'il the list of men who are to die during the year: this message no doubt comes to him on the 'night of destiny' (*laylat al-qadar*), which is at the middle of the month Sha'bān, and during which the pious man, rapt in prayer, may see, across a hollow of the sky, the leaf on which his name is written falling from the tree.

All our authorities agree in believing that the angel of death is present wherever a man is ceasing from life, and this presence is anthropomorphized in stories the wide diffusion of which proves its popularity: the story, e.g., of the proud king and the beggar is world-wide (Ṭabari, Ghazālī, Mūstafef, etc.). Some explain this multiple presence by saying that the angel of death has assistants (*'awān*) who make the man's soul rise up to his throat, whence 'Azrā'il comes and takes it. Others represent the terrible angel in the form of a vague, formidable being, whose feet rest upon

the borders of the world; his head reaches the highest heaven, and his face looks towards the Tablet of Destiny. But this description did not seem satisfying, and writers accordingly gave him seventy thousand feet and four thousand wings, while his body is provided with as many eyes and tongues as there are men in the world. Every time a being dies, one of these eyes closes, and at the end of the world only eight eyes will be open, since there will be only eight beings alive—the four archangels and the four throne-bearers. Azrā'il has four faces, each of which is reserved for a special class of beings: the face on his head is for prophets and angels, that on his chest is for believers, that on his back for unbelievers, and that on his feet for the *jinn*.

The angel of death consigns the souls he has seized to the angels of compassion (*malā'ikat ar-rahma*) or to the angels of punishment (*malā'ikat al-adhāb*), according as they are believers or unbelievers; but certain authors say that it is the angels assisting 'Azrā'il who themselves carry off the soul with gentleness or roughly. It is also said that 'Azrā'il, with Allah's permission, calls the souls, and they come and place themselves between the two first fingers of his hand. Lastly, according to still others, 'Azrā'il gathers the believing souls together, with his right hand, in a white silk cloth perfumed with musk, and sends them to the farthest summits of heaven (*al-'alvyīn*), while the souls of unbelievers are crowded into a rag coated with tar-water and launched into the depths of hell (*as-sijīn*).

No man can escape 'Azrā'il; it is impossible to cheat him even by being instantly transported by magical means to the very ends of the earth: 'Azrā'il is there in an instant. This is seen in the story of Solomon and the young man who was carried to China by his *jinn*; this popular story is found everywhere (Tabari, Ghazālī, Wolff, *The 1001 Nights*, Mūstafef, etc.). The Qur'an commentators, however, insist on the amicable relations which Solomon vowed with 'Azrā'il, though he had started by fainting at the sight of the angel in his true shape.

'Isrā'īl is, according to the formula given by Kazwini, the angel who brings the orders of Allah to their proper destination, and who puts the soul into the body. He is the angel of whom the Qur'an speaks without naming him (vi. 73, lxxx. 33, etc.), and who is to sound the trumpet of the last judgment (*qūr*). 'The master of the trumpet (*gāhib al-garn*),' says a *ḥadīth*, 'puts the trumpet to his lips, and, with gaze fixed upon the throne, waits for the command to blow.' At the first blast, the blast of terror (*nafḥat al-faṣ'*), everything will perish in the heavens and on the earth, except what Allah wills, i.e., according to different opinions, except the eight angels mentioned above, or only the four archangels, who will perish in the following order: Jibrīl, Mikā'il, 'Isrā'īl, and, last of all, the angel of death. After forty years passed in *Barzakh*, 'Isrā'īl will be re-born and will sound the second blast, the blast of resurrection (*nafḥat al-bāth*): all the souls, gathered together in the bell of his trumpet, which is as vast as the heavens and the earth, will fly like a swarm of bees to the bodies they are about to animate. While this is the essential function of 'Isrā'īl, it is not his only function. When Allah wishes to give a command to men, he orders the Pen (*qalam*) to write upon the Tablet of Destiny (*lūh*). This he gives to 'Isrā'īl, who places it between his eyes, and transmits it to Mikā'il. Mikā'il gets the command performed by his assistants, who represent, as mentioned above, the forces of Nature. Authors describe 'Isrā'īl under a form borrowed from a *ḥadīth* of 'A'isha, repeating the words of Ka'b al-Aḥbar, i.e.

the Jewish tradition. 'Isrā'īl has four wings: with the first he closes up the East; with the second the West; with the third he covers the earth; and with the fourth he veils his face before the Almighty Power of Allah. His feet are under the seventh world, while his head reaches up to the foot of the throne. A late and strange story (Wolff, p. 14) shows him weeping so copiously at the sight of hell that Allah has to stop his tears because they threaten to renew the Flood of Noah.

After a dead man has been placed in the tomb, and his friends have left him, and he has heard the sound of their retreating steps, two formidable angels, Munkar and Nakir, come and sit by his side, and ask him: 'What say you of this man (i.e. Muhammad)?' The believer (*mu'min*) replies: 'I bear witness that he is the prophet of Allah and his servant.' Then the two angels show him the place which he might have occupied in hell, and, on the other hand, the place which he will gain in paradise. The false believer (*munāfiq*) and the unbeliever (*kāfir*) will reply to the same question: 'I do not know; I said what the others said.' Then the two angels will beat him with iron rods so that he will utter a cry which will be heard by men and *jinn*. According to other traditions, the questions will be asked by a special angel, called Rūmān, who, if necessary, will deliver the dead person over to the punishment of the two angels of the tomb. Others, again, say that the angel placed in charge of the departed will question him, and at the sound of his voice the tomb will contract, almost crushing the man dwelling within it, until the first Friday of Rajab. The believer who dies on a Friday is exempt from the questioning at the tomb. The name of these two angels is derived from a root *nakar*, 'to deny'; we here find the parallelism dear to Hebrew traditions, and the presence of the initial M in one of the names—two souvenirs of Parsiism and Ancient Persia.

Man is guarded night and day by the *hafaza* angels, 'who protect him from *jinn*, men, and Satans,' and who register all his actions. These angels are four in number, two during the day, and two during the night. Some writers admit the existence of a fifth angel, who remains beside men constantly. The two angels stand by the side of the man, one at his right hand and the other at his left, or one in front of him and the other behind; by night they take up their position one at his head and the other at his feet. The day-guardians change places with the night-guardians at the rising and the setting of the sun. These hours are dangerous in themselves, being the times when the *jinn* roam about, but they become much more dangerous to man because it is then that the change of the guard of the *hafaza* takes place. If the believer makes haste to begin the morning prayer (*ṣubḥ*), and the evening prayer (*maghrib*) at the very earliest opportunity, the angels who have to depart from him leave him safe from the *jinn*, against whom the sacred ceremonies protect him, and ascend to heaven, bearing witness to Allah of the faith of his worshipper. Before he has finished his prayer, the other two guardians come and stand by his sides. But it is not only to the machinations of the *jinn* that man is exposed: 'Iblis is on the watch for him by day, and his son during the night. This very simple arrangement has also been complicated by the traditionalists of later times. To the four guardians already known they added six others: one of them holds the man by the tuft of hair which Muslims wear on the top of their heads, and drags him one way or the other according as the man shows humility or pride. Another stays in front of his mouth to prevent the serpent from entering it. Two others protect his eyes; and the last two, placed on his lips,

listen only to the words which he pronounces in prayer.

On the *hafaza* devolves the duty of writing down the actions of men; the one on the right hand keeps an account of the good deeds, and the one on the left of the bad. These registers will be a witness on the judgment day. When the man performs a good deed, the angel on the right hand immediately writes it down; when he commits a sin, the same angel begs his companion not to write it down, but to give the sinner respite—six or seven hours, according to the writers—during which he has time to repent. Some commentators even allow that a compensation may be arranged, and that every good action effaces a bad one. Unbelievers also are said to have guardians (Qur'an, lxxxvi. 4).

When the *hafaza* see that the man over whom they had charge has died, they do not know what to do, and they pray to Allah, who tells them to go to the grave of the deceased and repeat the formulæ of adoration (*tasbiḥ*, *takbir*, *taqdīs*), which, on the judgment day, will be counted among the merits of the deceased.

These angels are mentioned several times in the Qur'an, into which they have been introduced by Christian tradition. In lxxvii. 11, they are called *kirām kâtibîn*, 'noble writers,' indicating their rôle as overseers of human actions; in vi. 61 they are called *hafaza*; but in xlii. 12 they are at the same time called *mu'aghibât*, 'those who relieve each other.' This last expression is puzzling in its form, and the commentators, trying to explain it, say that it is a perfectly logical double plural, and that the second verbal form *'aghaba* here stands for the third form *'agaba*. The Qur'an (i. 12) uses the word *raḡīb* to denote the guardian angel of men, and Tabari (*Tafsir*, xlii. 68, line 10) shows that Qur'an xlii. 12 was read by 'Ali ben-Ka'b with the following variants: 'he has in front of him *mu'aghibât*, and behind him a *raḡīb*.' There may be some connexion between these terms and those referring to the two stars which, during the course of the year, appear, one in the East and one in the West, at twilight and at dawn, and the observation of which serves as a foundation for a division of the year into twenty-eight *manāzil* or *'anwâ*—a division which is very fruitful in popular practices. The belief in guardian angels, then, over and above Christian traditions, might become connected with an astral cult.

In the crowd of angels who have no special character, certain authors distinguish the 'pious travellers' (*as-sayyāḥūn*) who scour the country with the intention of frequenting only the gatherings where the name of Allah is being repeated. They then ascend to Allah, who questions them, and, on their evidence, pardons his fervent worshippers the faults they may have committed. According to a passage in Ibn al-Athīr (*Lisān al-'Arab*, xii. 386), none of these angels could enter any place in which there was an image or a dog.

We cannot explain the circumstance that has drawn the names of Hārūt and Mārūt from the anonymous crowd of spirits into the broad daylight of the Holy Book (Qur'an, ii. 97). Traditions have developed rapidly to explain their history, and since the 9th cent. they have been copiously explained by commentators (Tabari, *Tafsir*, i. 3402).

Two angels having incurred the wrath of Allah have been thrown into a well in the town of Babylon, where, loaded with chains, they will teach mortals the art of magic until the end of the world. In order to punish them, Allah has commanded them to teach this accursed science; but they have to warn those who consult them that they are rebels, and to advise them not to imitate them. According to a *ḥadīth* of A'isha, a woman came to her when the prophet was away, and told her that, being uneasy about the absence of her husband, she had consulted a sorceress; carried away at a gallop by two black dogs (one of the ordinary disguises of 'Iblis), the two women had arrived at the edge of the Babylonian well, where the two fallen angels had put the inquirer in possession of magical powers, from which she was coming to ask the prophet to deliver her.

Who are these two angels, and what was their crime? This is not the place to study in detail the different versions which are prevalent in Arabic literature, or to show how, among the late writers, Kazwini, for example, the legend has, under Mu'tazilite influence, been contracted into an account of a more serious kind, but deprived of characteristic

details. We shall give here the chief traits of the most fully developed legend, which seems to be the most ancient.

The first men in the world soon gave themselves up to all kinds of debauchery and crime. The angels who looked on at these horrors from the heights of heaven were surprised at the gentleness of Allah. 'Be more tolerant,' he said to them; 'if you were exposed to the passions which agitate men, you would soon commit all their crimes.' The angels protested, and begged Allah to put them to the test; and he consented. They chose two of the most noble and pure among them, Hārūt and Mārūt, who descended to earth. Allah allowed them to live there in their own way, and prohibited them only from polytheism, theft, adultery, wine, and murder. All went well until one day, when a woman came before them; whether by chance or chosen as judges, they had to decide in a quarrel which had arisen between her and her husband. This woman was beautiful; she excited the desire of the two angels. Tradition gives us her name; 'she was called Zahāra in Arabic, Baidūp in Aramaic, and 'Anāhid in Persian' (i.e. Venus). She set conditions on her favours: according to some, she asked her lovers the word which enabled them to ascend to heaven every day, obtained it, made use of it, and remained attached to the firmament in the form of the planet Venus (Zahāra), while the two angels remained prisoners on earth for having misused the sacred word. According to other traditions, she commanded them to worship an idol, or she made them drink wine, the intoxication of which led them to murder a beggar who was passing. In any case, Allah called or recalled Venus to the sky, and punished the culprits. On the intercession of Solomon, Idris, or some other good personage, he let them choose between a terrestrial punishment and an everlasting chastisement. They chose the former, and were chained in the well of Babel, which, according to some, is Babylon of Chaldaea; according to others, a place in Demāvend, famous for its magical traditions. We may mention, as a strange variant of this story, the tradition that the two angels who brought magic to men were Mik'āl and Jābrīl.

This legend may have reached Muhammad through Rabbinic traditions, especially according to the version which shows the woman tempter ascending to heaven with the password of the two angels, and remaining there in the form of the planet Venus. Geiger (*Was hat Mohammed a. d. Judenthume aufgenommen?*² Leipz. 1902, p. 107 f.) mentions a tradition in which the two angels are called Shamhazī and Aza'el (Schwab, p. 209); the daughter of the earth who seduces them is referred to under the name of Aster (= 'star'; see Schwab on the word 'Biduk'). But we must seek the origin elsewhere; it is in connexion with the cult of Mithra and Anahita that we again come across the names of the two spirits, Haurvatāt and Ameretāt—not to mention the tradition on the Chaldaean origin of magic (cf. vol. i, p. 796*).

Paradise and hell are peopled with spirits whose exact description has not been given by any writer. At the entrance to paradise there is sometimes placed an angel called Ridwān, whose name is probably a rough interpretation of a passage in the Qur'an (iii. 13). We do not know in what class to place the *houris* (*ḥūr al-'ain*), who are said to share with other women the society of the blessed, and who, shining and pure, are exempt from physical suffering, like all the inhabitants of paradise (Qur'an, xlv. 54, lii. 20, lv. 56 f., lvi. 22, etc.).

The teaching is much clearer in regard to hell. It is guarded by a terrible angel Mālik, assisted by *shires* (*zabaniya*), who in their turn have guardians (*hafaza* or *ḥazanat jahannam*) at their command. These *shires* are nineteen in number, i.e. equal to the number of letters in *bismillāh* (*bismillāhi-r-raḥmāni-r-raḥimī*) = 'in the name of Allah, the Compassionate, the Merciful'. People escape from them by reciting this formula. Mālik stirs up the fire which burns the reprobates, and replies to their complaints with jokes; but he is milder in the case of believers guilty of mortal sins, who, according to the prevailing theory, will one day get free from hell by the intercession of Muhammad. He is mentioned in the Qur'an (xliii. 77).

We have already seen that 'Iblis was the wicked angel, who, assisted by his son, tempts mortals.

He was cursed for refusing to prostrate himself before Adam, created from clay, when he had been created from fire (Qur'ān, xxxviii. 77 f.). Allah cursed him, calling him 'stoned' (*rajin*). He has command of the unbelieving *jinn*, who are his agents with men.

The orthodox doctrine, as we have just seen, is very chary of hints as to the names of the spirits. But, in imitation of the Jewish Qabbala and under the influence of conjuration formule, the Muslim practice has developed this nomenclature in a peculiar way, as it had commented on the supreme name of Allah in his ninety-nine secondary names. Thus there is formed an interminable list of names of angels in 'Al, and of names of *jinn* in -ūs, which fill all the works on magic. Without entering into details, it may be useful to recount here a *hadith* which Kazwini mentions (i. 59), following 'Ibn 'Abbās:

Each of the seven heavens is inhabited by a group of angels, who are engaged in praising and worshipping Allah. 'Those who inhabit the lower heaven which encircles the earth have the form of owls, and are under the command of an angel called 'Isma'il; in the second heaven dwell eagles under the angel Miḥā'il; in the third, vultures under Sa'ādiyā'il; in the fourth, hawks under Šaḥā'il; in the fifth, *houre*s under Kalkā'il; in the sixth, young boys under Samā'hā'il; in the seventh, men under Rūḥā'il.' Lastly, beyond the veil which closes the heaven, angels, so numerous that they do not know each other, praise Allah in different languages which resound like crashing thunder.

In a word, the ancient beliefs of the pagan Arabs have been preserved by peopling the Muslim world with *jinn*, who, for the most part, are the servants of 'Iblis. See more fully under art. ARABS (ANCIENT), vol. i. p. 669 f. But, under the influence of Judaism and Christianity, the new religion has also acquired an army of angels and demons, whose history cannot be clearly given without touching on the critical study of the *hadiths*.

LITERATURE.—F. A. Klein, *The Religion of Islām*, London, 1903, pp. 64-67, 87; T. P. Hughes, *Dictionary of Islām*, London, 1896, *passim*; M. Wolff, *Muhammedanische Eschatologie*, Leipzig, 1872; Kazwini, *Kosmographie*, ed. Wüstenfeldt, 1849, i. 56-68. GAUDEROY-DEMOBYNES.

DEMONS AND SPIRITS (Persian).—Demonology plays a prominent part in the religion of Persia because of the pronounced dualistic tenets of Zoroastrianism. The opposing forces of evil and good are believed to be in constant warfare until the last millennial cycles of the world preceding the day of judgment, when perfected man shall, by the aid of the heavenly hosts, overcome the power of evil (*drug*) for ever, and righteousness (Av. *asa*) shall reign supreme.

The general designation for 'demon' in the Avesta is *daēva*, the same word as the later Persian *div*, 'devil,' and it is etymologically identical with Skr. *dēva*, 'deity,' Lat. *divus*, 'divine,' although diametrically opposed in meaning. This direct opposition between the Indian and the Persian terms is generally ascribed to a presumed religious schism in pre-historic times between the two branches of the Indo-Iranian community; but there is considerable uncertainty about the interpretation, and the solution of the problem has not been rendered easier by the fact mentioned below—that the names of two Hindu deities who appear as demons in the Zoroastrian system have recently been found in ancient inscriptions discovered in Asia Minor.

As the Avestan word *daēva* is masculine in gender, the demons in Zoroastrianism are commonly conceived to be of the male sex; but there is a large class of she-devils or female fiends, *drugēs*, derived in name from the feminine abstract *drug*, lit. 'deceit,' the essence of evil in the Avesta, a word comparable with the neuter *drauga*, 'falsehood,' 'lie,' in the Old Persian inscriptions. Besides these she-demons there are numerous other

feminine personifications that embody the elements of sin as much as do their masculine counterparts.

In numbers, according to the Avesta, the hosts of evil are legion (Yt. iv. 2). The Gāthās speak of the demons as 'the seed sprung from evil thought, deceit, and presumption' (Ys. xxxii. 3), and for that reason they are elsewhere described as being 'the seed of darkness' (Vend. viii. 80). Their creator was Ahriman, who brought them forth to wage war against heaven and earth, as is told in the Pahlavi *Bundahišn* (i. 10, xxviii. 1-46); and Plutarch (*de Is. et Osir.* xlvii.) rightly interpreted the spirit of Zoroastrian demonology when he described Ahriman as having caused a number of demons equal in activity to the Divine forces created by Ormazd to bore through (*diarphrares*) the world-egg in which Ormazd had placed his four-and-twenty 'gods' (*θεοί*). Zoroaster's mission was to banish these diabolical creatures from the world, and it is easy to understand why the Avesta should picture the entire body of fiends as taking flight in dismay before him (Ys. ix. 15).

The demons are naturally thought of as spirits or bodiless agents (Av. *mainyava daēva*, 'spiritual demons' [Yt. x. 69, 97; Vend. viii. 81, 80]), though sometimes they are conceived of as having human shape (Ys. ix. 15) in order to accomplish better their fiendish ends. Their purposes are best achieved under the cover of darkness, but their heinous deeds are checked by the rising of the sun (Yt. vi. 3 f.). Their favourite haunt is in proximity to whatever is vile or foul, and they lurk, especially as spooks or goblins, in the vicinity of *dakhmas*, or towers of silence. In certain regions they were believed to be more numerous than in others, the whole province of Mazandaran, south of the Caspian Sea, being supposed to be especially infected by their presence. This legendary association with that territory is as old as the Avesta, and it appears throughout the Pahlavi writings, as well as in the *Shāh Nāmah* of Firdausi (Av. *daēva Māzainya*, Pahl. *Māzantiān dēvān*, Pers. *divān-i Māzandarān*). The same tradition was perpetuated in Manichæism, as is proved by allusions to Mazanian demons in the Manichæan texts lately discovered in Eastern Turkestan (see F. W. K. Müller, 'Handschriftenreste aus Turfan,' ii. 18, 19, *ABAW*, Anhang, 1904). The baneful influence of all these ministers of evil could be averted in various ways, and one of the books of the Avesta, the *Vendidad* (*Vidaē-vadāta*, 'Law against Demons'), is devoted almost entirely to providing man with the means of ridding himself of their power.

As might be imagined, the multitudinous host of evil spirits lacks order and organization. It is, therefore, somewhat difficult to divide them into sharply defined bands, but a rough distinction between the masses may be recognized. At the head of the host stands Anra Mainyu, or Ahriman, 'the Enemy Spirit,' the prince of darkness personified. The chief characteristics of Anra Mainyu, or Angra Mainyu, as he is termed in the Gāthās, have been discussed in a separate article (see AHRIMAN), and need only to be designated here as maleficent in the extreme. Next in power to Ahriman stand six arch-fiends as eminent commanders of the legions of sin. Then follows a confused horde of wicked spirits framed to bring misery and distress into the world. These two bands in their broad grouping will be considered in turn.

The sixfold group of arch-fiends that are gathered as aides about the standard of Ahriman and form the council of hell (cf. Yt. xix. 96; *Dink.* ix. 21. 4; *Bd.* xxviii. 7 ff. and xxx. 29) are portrayed in Zoroastrian literature as endowed with various evil

qualities and as discharging multifarious diabolical functions. Their names are Aka Manah (Evil Thought), Indra, Sauru, Nāōhaithya (parallel with three Indian deities), Taurvi and Zairicha (personifications respectively of overpowering hunger and deadly thirst), and, lastly, Aēśma, the demon of fury, rapine, lust, and outrage. The fact that three of these demoniacal names are identical with gods in the Indian pantheon has been alluded to above, but their figures on the whole are not really sharply defined, though their malign characters are several times alluded to in the passages which enumerate them (*Vend.* x. 9 f., xix. 43; *Bund.* i. 27, xxviii. 7-12, xxx. 29; *Ep. Mān.* i. x. 9; cf. also *Dāt.* xciv. 2; *Dink.* ix. 34). Reference has likewise been made to the fact that in the inscriptions of the Hittite kings of the 14th cent. B.C., recently discovered by Winckler at Boghaz-keui in Asia Minor, the names Indra and Nāsātya—the latter noteworthy by its Indian form (with *s*) in contrast to the Iranian form Nāōhaithya (with *h*)—appear as divinities and not as demons. Until the full connexion of the passages in these inscriptions is made known by the discoverer, it appears premature to theorize in regard to the possible bearing of the allusions upon the mooted question of the presumed Indo-Iranian religious schism. The mention may be merely a direct reference to Indian deities without having any immediate connexion with Iran.

Of all the sixfold group of arch-fiends, the most clearly defined is the assaulting and outrageous demon *Aēśma*, whose name has been thought to be reflected as *Asmodeus* in the Book of Tobit (see F. Windischmann, *Zoroastr. Studien*, Berlin, 1863, p. 138; A. Kohut, *Jüd. Angelologie und Dämonologie*, Leipzig, 1866, p. 75; F. Spiegel, *Brān. Alterthumskunde*, Leipzig, 1877, ii. 132; E. Stave, *Einfluss des Parsismus auf das Judentum*, Haarlem, 1898, p. 263; J. H. Moulton, 'The Iranian Background of Tobit,' in *Expt* xi. [1900] 258; for the opposing view, see Ginzberg, in *JE* ii. 217-220).

By the side of these six arch-demons there are named in the Avesta and supplementary Zoroastrian texts more than fifty other demons, personifications of evil forces in the world (for the complete list, see Jackson, *op. cit. infra*, pp. 659-662). It will suffice to mention a few of these, such as *Tarōmaiti*, 'Arrogance'; *Mithaoxta*, 'False Speech'; *Azi*, 'Greed' (a demon that is preserved likewise in Manichæism [cf. Müller, *op. cit.* pp. 13, 14, 15, 18, 20, 22, 23, 53]); *Vizaresa*, or the fiend that drags the souls of the wicked to hell; *Būšyāstā*, a typification of inordinate sleep and sloth; *Astō-vidātu*, who divides the bones at death; *Apaōša*, 'drought'; *Zemaka*, 'winter'; and a score or more of personified malignant forces.

The special cohort of fiends (*drujes*), as already noted, is headed by the *Druj* paramount, or the feminine embodiment of deceit and falsehood, who draws in her train a ribald crew of followers, corporeal and incorporeal, entitled in the Avesta *dregvants*, or *drcvants*, 'the wicked.' Foremost among these agents in exercising pernicious activity is the *Druj Nasu* (cf. Gr. *nekus*), 'corpse-fiend,' the veritable incarnation of pollution and contagion arising from the decomposition of a dead body. Of a similar character in the Avesta is *Ithyēja Maršaona* (*Vend.* xix. 1, 43, xviii. 8; *Yt.* vi. 4, xiii. 130), the same as *Sēj* in the Pahlavi texts (*Bund.* xxviii. 26; *Dink.* ix. 21. 4, vii. 4. 37), a form of wasting decay and decrepitude that creeps on unseen. Peculiarly malign in her influence is another fiend, *Jahi*, 'harlot' (cf. *Yt.* iii. 9, 12, 16), who embodies the spirit of whoredom destructive to mankind; while little better are the seductive

Pairikās, 'enchantresses' (the late Persian *Periē*) and their male partners, *Yātus*, 'sorcerers.'

Among demoniacal monsters is *Azhi Dahāka*, 'the Serpent Dahāka,' a tyrant out of whose shoulders grew two snakes from a kiss imprinted between them by Ahriman. Throughout Zoroastrianism this hideous being is represented as the personification of the thousand years of oppressive rule over Iran by the Babylonian Empire in early days; and he appears equally in the derived demonology of Manichæism (cf. Müller, *op. cit.* pp. 19, 37), as well as in Armenia (above, vol. i. p. 800), while his name, with the signification of 'dragon,' is even found in Slavic (Berneker, *Slav. etymolog. Wörterb.*, Heidelberg, 1908 ff., p. 36). A dozen other execrable creatures in the diabolical list might be mentioned as agents of Ahriman in his warfare against the kingdom of Ormazd, but the list is already long enough to prove the important part which demonology played in Zoroastrianism.

It should, however, be noted that there were yet other demons in Zoroastrianism whose names are not found in the extant Iranian literature. Here belong Khrūra, the son of Ahriman (al-Birūnī, *Chron. of Ancient Nations*, tr. Sachau, London, 1879, pp. 108, 398), and Mahmi, whom Eznik (*Against the Sects*, tr. J. M. Schmid, Vienna, 1900, p. 109) describes as revealing to Ormazd the secret plans of Ahriman (for the place occupied by Iranian demons in pre-Christian Armenia see above, vol. i. p. 779 f.).

LITERATURE.—For fuller details and more extensive bibliographical material, see A. V. Williams Jackson, 'Die iran. Religion,' in Geiger-Kuhn's *GrP* ii. [Strassburg, 1901] 646-688. For material relating to the discovery in Asia Minor of inscriptions with the names of the Indian deities Indra and Nāsātya, who appear as demons in Zoroastrianism, see H. Winckler, in *Mitteilungen der deut. Orientalgesellschaft*, 1907, no. 35; and cf. the discussions by Ed. Meyer, in *Seetzenberger-Kuhn's Zeitschr. f. vergleich. Sprachwissenschaft*, xlii. [1908] 1-27; Jacoby, in *JRAS*, 1909, pp. 721-728, 1910, pp. 456-464; and Oldenberg, *ib.* 1910, pp. 846-854. The most recent material in regard to the occurrence of Zoroastrian demons in Manichean writings will be found in the discoveries made by the German Imperial Expedition at Turfan in Eastern Turkestan (see F. W. K. Müller, 'Handschriftenreste in Estrangelo-Schrift aus Turfan,' in *ABAW*, Anhang, 1904, and other later publications now being issued in the same series).

A. V. WILLIAMS JACKSON.

DEMONS AND SPIRITS (Roman).—The Romans and Latins, and the races of Italy who were nearest of kin to them, appear to have possessed but little in the nature of mythology or folklore before they passed under the spell of the Hellenic culture. The early Italic conception of the supernatural power had not much about it that was definite or personal. There was a vague consciousness of a Divine influence (*numen*) which worked in different spheres and with different manifestations; but the allotment of distinct departments to clearly conceived personages, more or less superhuman, and the gradation of these personages to form a hierarchy, were alien to primitive Italic thought and feeling. In the earliest form of belief, only two classes of beings were intermediate between the human and the Divine. These were the souls of the dead, and certain spirits who attended on the lives of individual human beings.

We shall first deal with these attendant spirits, who, when attached to men, bore the name *genius*, and, when they guarded women, had the title of *juno*. These creations are racy of the soil of Italy, and the faith in them was less affected by contact with the Greeks than any other article of indigenous Italic religion. It hardly needs to be said that the history of culture affords innumerable parallels to this notion of an invisible personality, separable from, yet closely attached to, the life of the visible man. The *fravashi* of the Persians and

the *ka* of the Egyptians were not unlike, and the Greeks viewed the *psyche* in a somewhat similar fashion. Even barbarous peoples often abstract from the individual some striking characteristic or characteristics which they contemplate as belonging to a more or less spiritual person distinct from the man himself. Such a concept is the *genius*, and the power which was at first isolated from the man himself by the Italic tribes, and treated by them as mysterious and in some sense supernatural, was the power of propagating the race. This appears clearly in the expression *lectus genialis*, applied to the marriage bed, which was originally always placed in the *atrium* of the old Roman house. The corresponding power in the case of the matron is her *juno*, and the later goddess Juno is merely a generalization and a glorification of the separate *junones*. That no parallel god emerged on the male side is an anomaly of a common kind. In the *genius* were also embodied all faculties of delight, so that phrases such as *indulgere genio*, 'to do one's *genius* a pleasure,' and *defraudare genium*, 'to cheat the *genius* of an enjoyment,' were common. But the intellectual qualities which we denote by the borrowed word '*genius*' never specially pertained to this ancient spirit, though *ingenium* lies very close to *genius* by its structure. The *genius* and the *juno* were at first imagined not only to come into existence along with the human beings to whom they were linked, but also to go out of existence with them. Yet they could exercise strong control not only over the fortunes, but over the temperaments of their companions. There was undoubtedly a sort of fatalism connected with the belief in spirits. The Greeks often conceived that a particular *tyche*, or 'fortune,' accompanied the lives of men in a similar manner, and therefore they usually represented *genius* by *τύχη*. But occasionally *δαίμων* is viewed exactly in the light of the Roman *genius*. In a well-known passage (*Ep.* II. ii. 188), Horace does not hesitate to call the *genius* a god, though he at the same time declares him to be subject to death. The snake was the common symbol of the *genius* and the *juno*; hence the pairs of snakes which are painted on the walls of many houses at Pompeii. It was not uncommon to keep a tame snake in the dwelling, and the superstitious believed that the *genius* was incorporated in it. Simple altars were erected to the spirit, and offerings were made to him.

In course of time the ideas attached to the *genius* were in many respects changed and expanded. By a sort of logical absurdity, *genii* of the great gods were invented, and shrines were erected to the *genius* of Juppiter and others, while any collection of human beings gathered together, in a city, for instance, or a gild (*collegium*), or a camp, might have its attendant spirit. Thus a *genius publicus* was worshipped at Rome. But the imagination that things or places not connected with men were thus companioned—an imagination involved in such phrases as *genius sacre annonæ* or *genius loci*—sprang up only in a late age. In the Imperial time, the severance between the Emperor's *genius* and his tangible personality had many notable consequences, and subserved some political purposes. Augustus was able to allow the veneration of his *genius* to become part of the public worship of Rome without flouting Roman prejudice, though he was compelled (officially) to confine the deification of his person to the provinces. When it became customary for oaths to be taken by the Emperor's *genius*, it was possible to introduce a secular punishment for perjury, which had previously been left to the Divine vengeance.

When Eastern religious influences spread over the Western part of the Roman Empire, and new

developments in philosophy aided these influences in transforming culture, old ideas concerning the *genius* underwent contamination. The *genius*, which had been supposed to die with the man, was now held to be identical with the soul which survived the body. Hence on the later tombstones this name sometimes describes the spirit of the deceased. Servius, the commentator on Virgil, tells us that the vulgar did not clearly distinguish between *genii*, *lares*, and *manes*. This confusion had been helped by learned speculation from the time of Varro onwards. We must, therefore, now consider Roman and Italic beliefs concerning the state of the dead.

That a cult of the departed existed from primitive times is clear from many indications. The earliest form of the Roman calendar notes several purificatory ceremonies for the appeasement of the ghostly world. The vanished spirits were not without an influence over the living which was to be dreaded. The month of February took its name from one of the deprecatory observances (*Februa*). Each family in the community had its special concern with the ritual. The ghosts were supposed to approach some openings in the earth, to which the name *mundus* was given. Such was the spot called *Terentum* or *Tarentum* in the Campus Martius, and another place in front of the temple of Apollo on the Palatine. The ceremony called *lustratio* ('purification'), which was performed for the newly-born child, for the army in the field in times of superstition and panic, and for the whole assemblage of past and present warriors every five years (when the censors were said *condere lustrum*), seems to have had its origin more in fear of the unregarded dead than in any sense of sin in face of the offended gods; and the ornament called *bullæ* worn by the Roman child appears to have contained charms originally intended to ward off ghostly anger, to which the young were specially exposed. Ancient scholars believed that the worship of the *lares*, or household spirits, was one form of the cult of the dead, and, till recently, they were followed by the moderns. There is, however, much evidence to show that the veneration of the *lares* began outside the house. The earliest mention of them is in the ancient hymn of the Arval Brothers, where they appear amongst the protecting divinities of the fields. Originally each house possessed only one *lar familiaris*, and the use of *lares* to mean 'a household' is not earlier than the late Republic. It is possible that the *lar familiaris* was at first the mythical founder of the separate family, just as each *gens* had its mythical ancestor. But the existence from early times of *lares* in every *comitum*, or quarter of the city, and of *lares permarini* and other *lares* connected with localities, points the other way. And the worship connected with them was joyous in character, not funereal. The scholars who identified the *lares* with the departed souls were influenced, perhaps, by a supposed but improbable connexion between *lar* and *larva* (which is the name for an unsatisfied and, therefore, dangerous ghost), and by the primitive custom of burying the dead within the house of the living. The phrase *di manes*, which is familiar to us on Roman tombstones, appears to have been the earliest applied to the general divinities who ruled the world of shades. Their appearance in Roman religion must have been comparatively late. The term *manes*, properly 'good' or 'kindly,' is euphemistic, like the name *Eumenides*, given to the Greek Furies. The application of *manes* to disembodied men is secondary, especially when the word indicates a single ghost. Yet, from an early time, the ancestors in the other world were deemed to be in a sense Divine, and were called

divi parentes. The *lemures* are the same as the *larvæ*, the spirits with whom, for whatever reason, the living find it hard to maintain a permanent peace. The name is connected with *Lemuria*, a purificatory ceremony held at Rome in the month of May.

When the West was invaded by the religions of the East, including the Christian, and when philosophy, especially in the hands of the Neo-Pythagorean and Neo-Platonic schools, developed much mystical doctrine about things Divine, the belief in beings who were more than men and less than gods became universal. The whole world now abounded in demons of limited power for good or evil. The testimony to this persuasion is scattered broadcast over later literature, from Apuleius onwards, and over the remains of Imperial art. The deified emperors were like the Greek *Apwes*, and to them the name *divi*, which had in earlier days not been distinguished from *dei*, was appropriated. Magic and astrology blended with the faith in demons, which, when Christianity prevailed, were regarded as wholly bad, and were identified with heathen divinities. The minds of men were laden with a burden of which they were not relieved till rationalism sprang out of the Reformation movement.

LITERATURE.—Information on the subject may be obtained from the articles on 'Inferni,' 'Genius,' 'Lares,' and 'Manes,' in Smith's *Dict. of Antiquities*, London, 1890-1; in the *Dict. des Antiquités* of Daremberg-Saglio, Paris, 1886 ff.; and in Roscher's *Lex. der Mythologie*, 1884 ff. The work of Wissowa on Roman Religion in Ivan Müller's *Handbuch der klass. Alterthumswissenschaft*, Munich, 1892 ff., is important. For the cults of the dead, Warde Fowler's *Roman Festivals*, London, 1899, and his Gifford Lectures, entitled *The Religious Experience of the Roman People*, London, 1911, may be consulted; and for the later belief in demons, Dill's *Roman Society from Nero to Marcus Aurelius*, London, 1904. Many illustrations are to be found in Frazer's *GB*², 1900. J. S. REID.

DEMONS AND SPIRITS (Slavic).—There is abundant evidence of the persistence of the belief in demons and spirits among the Slavic peoples even to the present day, especially in districts where primitive ideas and customs have not yielded to the advance of civilization. Popular imagination traces the agency of supernatural beings in every part of the surrounding world—house and home, field and forest—and sees in every nook and corner the possible hiding-place of an invisible spirit, which, however, may on occasion assume a visible form. In seeking to classify these beings under leading categories, it is often difficult to determine which of them are to be regarded as products of the animistic stage of thought, and which, on the other hand, should be described rather as demons, demanding the prayers, offerings, and worship of human beings. As to the various classes of demons themselves, such as dream-spirits and spirits of disease, domestic spirits and Nature-spirits, it is likewise no easy task to draw distinct lines of demarcation between them.

The origin of demonic beings is explained in a cosmogonic legend of dualistic character, which, it is true, belongs to a relatively late period, and is derived from a foreign source.

According to this story, which is widely known among the Slavs, the Evil principle existed from the first, and quite independently of the Good. As a result of the combined work of both—God and Satan—the world itself came into being. Satan, in the form of a water-fowl, made his way to the bottom of the primal ocean, and in his beak brought up rock and sand, with which materials God then framed the world. Satan, however, secretly retained in his mouth a portion of the sand, and made therewith all the rugged and inaccessible places—mountains, crags, morasses, straits, and barren lands. Satan then tried to drown God, who, fatigued with the effort of creation, was now asleep, and to this end he dug holes in the surface of the earth, and caused floods to gush forth therefrom: thus arose great waters and abysses, into which, however, Satan himself was at length thrust by the power of God. Moved by envy of the Deity, Satan also essayed the work of creation, and noxious plants and animals are the result of his efforts. Desiring to

form a retinue for his own service such as would correspond to the angelic hosts of God, he was advised by the latter to wash his hands, and to allow the water to drop from his fingers behind him. From these drops sprang an innumerable multitude of evil spirits, who own him as their head. It is believed in Russia that the same thing takes place whenever a person engaged in washing himself lets the water drip around him.

According to another form of the legend, good angels and demons were produced from a stone upon which blows were dealt by God and Satan respectively. Satan's arrogance and the growth of his retinue induced him at last to make an open revolt, with the result, however, that the archangel Michael hurled the wicked host from the celestial battlements. The ejected demons fell between heaven and earth; one remained in the air, another in the forest, a third in water, etc., while the rest sank down into the under world. This explains why demons have their secret habitations in all places—in the air, in woods, waters, and the like. It is a popular belief that the conflict between the Good and the Evil principle still endures, and manifests itself in thunder and lightning. The thunderstorm is brought about by the thunder-god—Elijah or Michael—who pursues the evil host with a bolt of fire. Every object injured, every person or animal killed, by the lightning-flash affords unmistakable evidence of the fact that some evil demon was feeling before his heavenly pursuer, and had sought shelter in the neighbourhood of the person or animal or object struck, and that, while the Divine missile destroyed the cowering demon, it did not spare the innocent object that chanced to be near. Thus arose the belief that a human being killed in a thunderstorm wins salvation, as also the notion that the wood of a tree shattered by lightning contains a powerful counter-active to the work of evil spirits.

The people of Little Russia explain the genesis of demons by another myth, which, however, is not nearly so widely known as that which we have just sketched. According to them, evil spirits are the children of Adam. Our first parents, it is related, had twelve pairs of children, but on one occasion, when God came to visit them, Adam tried to conceal half of his offspring from the Divine eye. The children who were thus hidden were transformed into demons.

Although many demons are destroyed in their warfare against God and good men, yet their numbers are not diminished. On the contrary, their ranks are always being reinforced, either by marriages amongst themselves, from which issue new generations, or by sexual intercourse with human beings. Further, their numbers may be recruited by the human children who become demons—a transformation which takes place when a child is cursed by its parents, or dies unbaptized, or when it is taken away by the demons and a changeling (*q.v.*) left in its place. The powers of evil also gain possession of all who die a violent death, such as suicides and children overlain in sleep; hence the idea that it is dangerous to try to save a person in the act of committing suicide, or one who is drowning, etc., as the devil will feel himself wronged in being balked of his expected victim, and may take vengeance upon the rescuer.

The demons are believed to come into touch with human life in various ways. They injure man by causing accident and disease, or they give him help and protection. A common idea is that a demon sits upon the left shoulder of every human being, ready to take possession of him at any moment of weakness, and it is therefore advisable that when a person yawns he should guard his mouth by making the sign of the cross, and so prevent the fiend from gaining an entrance into his body. But, if an individual makes a compact with the devil, signing over his soul in a document subscribed in his own blood, the devil undertakes on his part to serve the man in every possible way, and especially to make him rich. In the course of ages Satan has taught mankind many crafts. It was from him that people learned the arts of iron-working, brewing, and distilling, as also the use of tobacco. He was the discoverer of fire; he built the first mill and the first waggon. The arts of reading and writing were acquired from him. Moreover, when Satan is in a good humour, he finds amusement in plaguing human beings; he likes to beguile the belated traveller from the right way, to worry the driver by causing a breakdown in the middle of the road, or to play tricks upon a drunk man. He may appear under the disguise of a

friend or a lover, and it is even believed that he can serve his minions by taking their place in the ranks of the army. It is also said that, when he wishes to gratify his lust, he visits witches in the form of a flying fiery serpent; such, for example, are the *Letavitsa* of the Huzules and the Polish *Lataviec*, which sometimes assume the form of a man, sometimes that of a fascinating maiden.

It is with witches that the evil spirits and demons have their most active intercourse. At certain seasons, and especially on the principal feast days of the Church, the witches fly away to the meeting-places of the demons, where they drink, dance, and wallow in debauchery. The demons on their part are ready to abet the witches in carrying out those magical operations which, according to popular notions, require the support of supernatural agency. Such, for instance, are the machinations by which the sorcerer causes untimely births, incites love, sows dissension among friends—anything, in a word, which does mischief to mankind. The transactions are performed in the name of the evil spirit, and, when they are followed by an adjuration, this usually takes the form of an appeal 'to the host of unclean spirits conjointly with Satan,' praying that they will work harm to the person the sorcerer has in view. Such an adjuration of the infernal spirits implies, of course, that the sorcerer has by word and action taken the final step in his abandonment of the Christian faith and of all that the Church counts virtuous and laudable. He takes the cross from his neck and tramples upon it; he avoids the use of sacred words, and declares himself an apostate from Christ and His saints. A person who has thus given himself to Satan has something forbidding in his very appearance; it is believed that he no longer washes himself or combs his hair. In Little Russia, a woman who desires to become a witch goes at midnight to some river, whence the evil spirit comes forth to meet her. But she must previously have trodden a saint's image under foot, and removed the cross from her neck.

According to the popular superstition,—reflected also in the language of incantations,—the evil spirits dwell somewhere in the North or West, in a 'nocturnal' land, while the good angels are in possession of the realm lying to the East. The region peopled by demons is dark, shrouded in mist and cloud, and lies deep down in an abyss. Another belief, and one which is widely diffused, is that the hosts of Satan live in a subterranean region, whence they issue forth upon the world at the bidding of their prince; or in deep waters, unclean places, dense forests, and marshes, where the sun never shines. Bushes of elder and willow by the water-side are in some localities believed to be the favourite haunts of demons. They leave their lurking-place in the vicinity of water on the 6th of January, i.e. Epiphany, when the priest blesses the water; they then migrate to an abode in the meadows. In Passion-week, again, when the meadows are consecrated, they pass into trees and cornfields, and then, at the festival on the 1st of August, they leave the apple-tree—which is consecrated on that day—and return to their own element. Another favourite resort of demons is the cross-roads (q.v.), where evil spirits come together from all quarters of the world. The mill and the uninhabited house are also well adapted to supply a lodging for demons. They like to tarry in the neighbourhood of a spot where treasure is concealed. On Easter Eve and the Eve of St. John, when the bracken is supposed to flourish, the demons endeavour to prevent the blossoms, which possess extraordinary magical virtues, from falling into the hands of human beings. At the hour of noon they muster at their

favourite spots on the banks of lakes and rivers, and it is therefore dangerous to linger in the open at that time. There is, indeed, a special midday-demon, the *Bés poludennyj*. It is believed that the spirits retire from the earth and return to Hell in the middle of November, only, however, to resume their expeditions in spring, when Nature re-awakes from her winter sleep.

Hell, the nether lake of fire and smoke, is, in a special sense, the home of these evil spirits. Here *Lutsiper*, with his wife and attendants, swims and sails about, torturing the souls of the dead. The place of eternal fire is depicted as a bathroom or stove, in the heat of which the souls are tormented. The belief in hell-fire and the discovery of iron have conspired to foster another notion, viz. that the demons are smiths. In Russian incantations we find mention of three such demonic smiths, the three being brothers. The idea of a triad of fiends is also current in the folk-lore of other Slavic countries. The oldest demon of all, *Lutsiper*, is very frequently referred to as *Herod*—a name which probably denotes both the murderer of the innocents and the slayer of John the Baptist. Other names applied to the devil are 'the hetman' (of his hosts), Judas, Velzevul (i.e. Beelzebub), and Satan. According to the legends, the chief of the infernal forces is bound with a chain, which, however, in consequence of the sins of men, wears thin, and would long ere this have given way altogether, but for the fact that, in virtue of Christ's resurrection, 'it is restored at every Easter-tide to its original strength.'

In addition to the demons named above, we find here and there a large and powerful female being, whose figure, embellished with many a fantastic feature, plays a great part in Slavic legendary lore. This is the *Baba-jaga* (Russ.), *Jedza* (Pol.), or *Ježibaba* (Slovak), a hideous old beldam, whose children are the evil spirits, or who, as the 'devil's dam,' sends forth her subject spirits into the world. She is said to steal children for the purpose of gratifying her craving for human flesh; to fly in company with the spirit of death, who gives her the souls of the dead for food; and to stir up storm and tempest in her flight. The legends also tell that she has teeth and breasts of iron, with which she rends her victims, and that her home is in a far-distant forest.

Among other Slavic names applied to evil spirits may be mentioned the following: *čert* (Bohem.), *čort* (Russ.), *czart* (Pol.); *djavor* (Russ.), *djabel* (Bohem.); *bés*, *vrag* ('adversary'), *lukavij* ('the crafty'), *kutvoj* ('short-tail'), *nečistyj* ('the unclean'), *dedjo* ('grandfather'). The last-mentioned (Little Russian) epithet is applied to both the domestic spirit and the devil, and in this it resembles the Bohem. *děblik*, i.e. 'house-goblin' (cf. *děblik*=*diabolus*, as also the Bohem. *spiritus* [= Lat. *spiritus*], Slovak *pikúlik*, which corresponds to the O. Pruss. *pikúle*). This is one of the numerous facts which indicate that heathen demonology and the Christian conception of the devil coalesced in the idea of a single 'unclean power.' In order to avoid giving offence to the demon by uttering his name, the people refer to him simply in the third person, as 'he' or 'himself.'

The demons are represented also as capable of assuming human form, and as having the qualities and propensities of human nature. It is to be noted, however, that such anthropomorphic demons show in every case some peculiar feature which distinguishes them from mankind. Thus, the demon's body may be black, or covered with hair; or he may have a horn, or a tail. In many instances he is remarkably small. Occasionally he can be recognized by his red and fiery eyes, or by the absence of some prominent organ of the body, such as an eye or an ear; or, again, by the resemblance of his feet and ears to those of a domestic animal. A lame person, or one without eyelashes, is suspected of being a demon. The water-spirit often appears in human form, and his real nature is then recognizable only by the water that oozes

from his hair and clothes. The devil, again, has a special liking for music, and dances to it. He is likewise fond of drinking and card-playing. Demonic beings have strong erotic tendencies; one of their common manoeuvres is to waylay women and girls, or, again, to appear before a young man in the guise of a beautiful and alluring maiden. It may also be mentioned that some demons even demand food, but, as immaterial beings, may be put off with mere odours and fumes.

Demonic beings stand in awe of things connected with the Church, and consecrated objects generally; and these accordingly are the most potent amulets against their evil practices. Of such prophylactic articles the most important is the cross; and everything that bears that symbol shares its power. Other effective expedients are found in sacred tapers, incense, holy water, and the consecrated palm. A person who wishes to clear his house of evil spirits resorts with all confidence to prickly plants, as well as to the fern and garlic. In Servia, rubbing the breast with garlic is practised as a means of protection against a spirit that flies about by night. It is also believed that the demons have an aversion to wheat and flax, as the consecrated wafer is prepared from the former, and holy oil from the latter. The glowing firebrand is in all cases a powerful specific against demonic agency.

Those demons and demonic spirits which make their abode in human beings—the witch, the vampire, the demoniac—have also the power of assuming an almost endless variety of form. When pressed hard by a thunderstorm, they may change into a cat or a goat. Innumerable stories are told of their having been seen in the shape of a horse, a pig, a dog, a sheep, a mouse, a hare, a bird, a peacock, a hen, a magpie, a butterfly, a fiery serpent, or even a ball of yarn. The Servian sorceress, the *Vještitsa*, harbours a demonic spirit, which leaves her during sleep, and, flying among the houses in the shape of a bird or a butterfly, feeds upon the people—especially children—whom she finds asleep, tearing out and devouring their hearts. The *Jedogonja* of the Serbs, again, may remain invisible. The *Jedogonja*-spirits are said to fight with one another among the mountains, their missiles being huge boulders and uprooted trees. Upon their influence depends the state of the weather, and thus also the fruitfulness of the soil.

A special instance of demonic metamorphosis is found in the Slav *werewolf*—the *Vlkodlak* (Bohem.), *Vukodlak* (Lit. Russ.), *Vukodlak* (Serbo-Croat.), *Vlúkolak* (Bulg.). The werewolf is a man who can change himself into a wolf, or who has really become a wolf by the enchantment of a witch. The belief in such transformations has been widely current for centuries; as far back as the 13th cent., eclipses of the sun and moon were attributed to the werewolf. The werewolf figures largely in legend. A person who has the power of changing at will into a wolf always shows some point of difference—e.g. in his birth or in his appearance—from other people. It is believed that his father was a wolf, and that he himself was born into the world feet first. In the upper part of his body he resembles a human being, while the lower part suggests the wolf. He has also a wolf's teeth and heart. To become a werewolf is a matter of no great difficulty. One need only drink a little water taken from the footprints of a wolf, or turn over a fallen tree, and then put on a wolf's skin; on the night thereafter the werewolf appears, bringing terror to man and beast. In some districts of Bulgaria it is believed that the *Vlúkolak* is a spirit which has been formed from the blood of a murdered man, and that he haunts the scene of the murder, and causes the place to become arid.

Among all the Slavic peoples, and especially

among the Serbs, the werewolf is often confounded with the vampire or *upir* (Serv. *vampir*, Lit. Russ. *upyr*). The vampire is the soul of a dead man, which comes forth out of the grave for the purpose of working injury upon the living. The Serbs believe that impious people, and especially witches, become *Vukodlaks* after death, and drink the blood of sleeping persons. When an unusually large number of deaths take place in a village community, the calamity is attributed to the *Vukodlak*. Word passes from mouth to mouth that the ghostly evil-doer has been seen as he moved around with the mortcloth upon his shoulders. The people then go to the churchyard for the purpose of identifying his grave. They take with them a foal, and the grave upon which the foal stands still is opened, and the body taken out and impaled with a stake of blackthorn or hawthorn. In other districts similar measures are resorted to when the people seek to deliver their homes from the nocturnal visits of the vampire. In Russia, for instance, a stake of aspen or maple is thrust into the corpse, or else the grave, of the person upon whom suspicion has fallen. In some districts the corpse is burned, or the blood-vessels severed below the knees. Besides the vampire of the dead, however, who finds pleasure in tormenting sleeping persons by night, we hear also of a living vampire, viz. the witch, a being endowed with demonic power, who is able to kill people, to bring disease and misfortune, and to cause stormy weather. Moreover, all ungodly persons, and all who have been cursed by their fellow-men, or have died by violence, become vampires. We hear also of vampires who were originally children begotten of mankind by the devil, or children who died unbaptized. In point of fact, any ordinary individual is liable to the repulsive transformation after death; if an unclean animal or bird—dog, cat, magpie, cock—springs casually over his dead body, or if he is not buried according to the ordinary ritual of the Church, he thereby becomes a vampire. The vampire can be recognized in the grave by the fact that his corpse does not decay, but retains a ruddy colour in the face, and has the mouth smeared with blood. His limbs bear marks which show the gnawing of his own teeth. When at length he begins to drink human blood, he assumes the form of an animal, or, indeed, of an object of any kind. We may also note here that, according to a popular superstition in Little Russia, every witch is subject to an *upyr*, who was born with her and with whom she co-habits.

To the same class of tormenting spirits belong the *mora*, *mura*, or *mara* (Russ. and Pol.), *marucha* (Russ.), *kikimora* (Russ.), *morava* (Wend. and Bulg.); cf. the Germ. *Mahr* or *Mahre*, Eng. 'mare,' 'nightmare.' They might be described in almost the same terms as the vampire. They, too, are the souls of living men, which leave their bodies by night, and visit sleepers for the purpose of tormenting them. In Russia and Bulgaria, however, the *mora* is thought to be the soul of a child that has died unbaptized, or has been cursed by its parents; or it is a spirit which dwells in the cemetery and makes itself visible to people as a ghastly black spectre. Popular superstition invests it with certain features which distinguish it from ordinary human beings. The soles of its feet are flat, and its eyebrows meet. A child who at birth has visible teeth, or one who, having been taken from his mother, commences to suck again, eventually becomes a *mora*. A similar development is expected in the case of a child whose mother during pregnancy happens to go out of her room just as the clock strikes the hour of noon. Further, should anything that conflicts with the tradition of the Church take place during baptism, the child being

baptized is thereby doomed to become a *mora*. It is also believed that a witch can voluntarily make herself a *mora*. The characteristic pursuit of a *mora* is to plague her sleeping victims with bad dreams and oppression of the chest, while she is sucking blood from their breasts. During the visitation the sleeper is incapable of speech and motion. But the *mora* does not confine her evil practices to human beings; she likewise torments domestic animals, draining them of milk and blood. Nevertheless, it is not a difficult matter to rid oneself of the cruel attentions of the *mora*. All that is necessary is to offer her a gift of some eatable substance, such as bread, salt, or butter. An effective means of keeping her at bay is to place beside the sleeper some such object as a double triangle (the so-called '*mora's* foot'), a mirror, a broom, a steel article, etc.

The further we trace the *mora* or *kikimora* towards the East, the more does she shed her distinctive characteristics and become identified with the household spirit and the Nature-demon, to which are ascribed the traits which belonged originally to her. She has now become an inmate of the house, revealing her presence by her nocturnal movements; she converses with people, puts them into a state of terror and causes disquiet, raves the work of the sewer or spinner, sits spinning upon the stove, or busies herself with tasks that belong to the housewife. She is a little old woman, and lives behind the stove. When the inmates of the house wish to rid themselves of her presence, they sweep the stove and the corners of the room with a besom, and speak the words: 'Thou must go away from this place, else thou shalt be burned.' In some parts of Russia the *moras* are believed to be repulsive-looking dwarfs, who may be found as crying children among the fields. In Siberia the *kikimora* has become a forest-spirit.

Analogous to the *mora* is the nocturnal demon which is known among the Slovaks, Poles, Serbs, and Russians as the *nočnitsa* ('night-hag'). When a child suffers during the night from some unknown ailment, tossing about and crying, the trouble is set down to the *nočnitsa*, who torments the child by tickling it or sucking its blood, or disturbs its sleep by her mere touch. The liability to such disturbance is attributed to the mother's having neglected to bless her child the evening before. In external appearance the night-hag remains very indistinct; she is simply a female demon who wanders around in the darkness of night. In some localities the *nočnitsas* are supposed to form a group of twelve sisters. It should be noted, moreover, that a similar name, *polunočnitsa*, i.e. 'the midnight-woman,' is sometimes applied to the Virgin Mary. In the Government of Archangel people safeguard themselves from the *nočnitsa* by drawing a circle round the cradle with a knife, or placing the knife within the cradle, or by putting an axe, a doll, and a spindle beneath the floor, or by driving a piece of wood into the wall. The incantations accompanying these actions always contain an expression of the wish that the 'nocturnal *nočnitsa*' will no longer play pranks with the child, but seek to find amusement in the things thus offered her. Sometimes an oblation of bread and salt is made to her, part of it being rubbed upon the head of the fretful child, and the rest placed under the stove. The hag who torments children by night is also known in Russia by the names *krikey* (cf. *kerik*, 'scream') and *plaksy* (cf. *plakat*, 'cry'). In Bulgaria a corresponding part is played by a frightful wood-hag called *gorska malkva*, whose head somewhat resembles that of an ox. Among the White Russians the belief has been traced that the nocturnal spirit produces illness in

children from within, having first found his way into their bodies.

This superstition introduces us to the *demons of disease* strictly so called. Certain diseases are commonly believed to emanate from demonic beings who have found an entrance into the body of their victim, and thence proceed to torment him. This holds good in particular of fevers, epilepsy, insanity, and plague. Among the White Russians, when the nature of the malady cannot be determined, it is supposed that the patient is tormented by an 'unclean power.' In such cases the body of the afflicted person is rubbed with a piece of bread, which is then carried to a cross-way by night; here the *Dobrochot* (a pet-name for the demon, especially the domestic spirit) is entreated to accept the offering thus made, and to absolve the sick man. Those engaged on an errand of this kind must not cross themselves. Here we have a vestige of the cult of the dead; sometimes, indeed, it is said in so many words that the offering is intended for the dead. There are occasions upon which an individual may very easily fall into the power of the demon of disease. Such an occasion is birth, together with a certain period thereafter, lasting usually until the child is baptized. It is imagined that the unclean spirits swarm round the house of the mother, and resort to every possible means of working injury both to her and to her child.

The demon of fever is believed to be one of the three, seven, twelve, or seventy-seven so-called *Lichoradka*-sisters (*lichoradka*= 'fever'). In order to secure her good graces the people speak of her by such endearing epithets as 'god-mother' and 'aunt.' She wanders over the whole world, causing illness wherever she goes, and is represented either as an ugly, lean, naked, and hairy beldam, or as a young and beautiful nymph. Offerings are presented to her with a view to warding off her attacks. If the infection has come by way of the earth, an oblation of corn is made at the particular spot. But the gift is more frequently cast into the water. The fever-patient himself cuts an egg into seventy-seven pieces, which he then throws into a river as he utters the words: 'Ye are seventy-seven; here is a portion for each of you; eat, and meddle not with me.' When the festival commemorating the dead is celebrated in White Russia, the *Lichoradka* gets a share of the feast. Among other measures adopted in battling with the disease, the following is of special interest. An attempt is made to deceive the demon in such a way as will prevent her recognizing the sick person when she returns to attack him again. The patient's name is changed; his face is covered with a mask, and words are written on the door to say that he is not at home. Another expedient for scaring the demon is to fire a gun. The diseased person is made to eat bitter and fetid things, or he is fumigated with some evil-smelling substance, in order to render the demon's sojourn within the body as uncomfortable for herself as possible. The most reliable prophylactic of all, however, is a certain incantation in which occurs an interesting story about the origin of the *Lichoradka*-demons. According to this incantation, they are the daughters of Herod, and the oldest and most ferocious of all is the one on whose account John the Baptist was put to death. At the command of their father they issue forth from their subterranean home to plague the inhabitants of the earth.

A frequent disguise of the demon of pestilence is the figure of a woman—the 'black woman' of the Bulgarians (in Russia, the *Morovaja panna*, *čuma*, or *cholera*; in Servia, the *kuga*), but it may also take shape as a bird or an animal—a cat, horse, or cow. The *Morovaja panna*, clothed in white and

with dishevelled hair, travels by night from place to place, making her journeys either by waggon or upon the back of some one whom she compels to carry her. Her breath and her touch are fatal to human beings, and she feeds upon the bodies of those whom she slays. The most effective means of warding off her attacks is a furrow traced secretly and by night round the village, with a plough guided by women who are naked or clothed only in a shirt, as the pest-hag dare not cross such a furrow. In many districts the demons of pestilence are believed to be three sisters. A widely current notion is that the afflicted person has in some way given offence to the demon of disease, whose resentment finds vent in the disorder. In such a case it is incumbent upon the invalid to ask forgiveness of the demon. In Russia, for instance, one who is ill with smallpox is taken to another in like case, and makes obeisance to the latter, saying: 'I ask forgiveness, spirit of smallpox; absolve me, daughter of Athanasius, if I have behaved rudely towards thee.' The same purpose is served by speaking of the demon under endearing names, and thus regaining her favour.

Mental derangement, 'possession,' affords one of the clearest instances of the sojourn of a demon in a person's body. Such, for example, is the *škota* or *klikusestvo* malady prevalent in Russia—a state of supposed demoniacal frenzy which can be induced by the machinations of a witch. At her command the evil spirit takes up his abode within the body of his victim, and makes his presence known by giving vent to abnormal sounds, such as neighing, barking, and the like. The sufferer may be relieved by the use of consecrated objects or the adjurations sanctioned by the Church, or, again, by putting on harness, or by dipping in holy water at the feast of Epiphany. There is, however, another theory of the origin of lunacy: the disease is sometimes attributed to an evil spirit (forest demon, etc.), which of no set design simply flies past a person.

The truculent spirit of pestilence resembles in outward appearance the personified figure of Death—the Bohemian *Smrtná žena* or *Smrtnice*. The latter also is a woman, haggard and dressed in white, who walks beneath the windows of a house in which some one is dying. If she sits down at the head of the bed, the last hope of recovery is gone, but, if she places herself at the foot, the invalid may get well again. The people believe that they can drive away the demon by putting crosses or saints' images upon the bed; but they are ready, on the other hand, to admit that Death is deaf to prayer. In Little Russia and Moravia it is thought that Death lives under the earth, in a room lit by innumerable candles, some of which are just being lit, and others upon the point of going out. The candles stand for human lives, over which Death holds sway. This attribute of power over human life belongs both to the spirit of Death and to the goddess of Fate.

The whole course of a man's life, from its first hour to its last, is pre-ordained at his birth by the goddesses of Fate. This belief, inherited from Greek and Roman mythology, seems to have been prevalent among the Southern and Western Slavs. In the written documents of these peoples, as far back as the 12th cent. A.D., we find mention of these goddesses and of the sacrificial festivals instituted in their honour. Among the Eastern Slavs, on the other hand, the belief in three Fates who control the lives of all human beings does not appear ever to have had any outstanding vogue. Here, in fact, their function was taken over by the *Dolja* (the *Sreda* or 'Fortune' of the Serbs)—a personification of the good or evil fortune of the individual.

When a birth occurs, the newly-born child is visited in the night-time by the three Fates (Serb and Sloven. *Rodjenice*, *Sudnice*, *Sudjenice*; Bohem. *Sudičky*; Bulg. *Roždenici*, *Orisnici*)—beautiful, richly-attired, diaphanous maidens. They ordain the destiny of the child, and determine the manner of its death. It is generally believed that the decisive forecast is that pronounced by the one who speaks last. In order to induce the Fates to assign a favourable destiny to the child, gifts and offerings are presented to them. Among the Southern Slavs and Bohemians these presents are in the form of food—bread, salt, or wine—placed on the table, or, it may be, in hollows among the rocks, as it is believed by the Slovenians that the *Rodjenice* live in rocks and mountains. In Bulgaria, on the evening upon which the visit of the *Orisnici* is expected, it is customary to partake of a special supper, after which three pieces of bread are placed at the head of the newly-born infant, in the hope that they may prove an acceptable offering to the august visitors. It may be incidentally mentioned that the Virgin Mary is sometimes confounded with the goddess of destiny.

The *Dolja* is, so to speak, a family heirloom which descends to a person from his parents. It accompanies him throughout his whole life; it sleeps with him in the cradle, nor does it desert him when he moves to another locality. It resembles the domestic spirit in so far as it works on behalf of its protégé from morning till night; it takes care of his children, does its best to make his land fruitful, brings him corn from other people's fields, promotes his success in fishing, guards his cattle, and, in a word, secures his good fortune and prosperity in every way. On the other hand, the *Dolja* of an unfortunate man, which in Russia is also called *Béda*, 'distress,' *Gore*, 'misery,' or *Zlydni*, 'ill luck,' is a good-for-nothing creature, which dozes idly amongst moss, or tries in every possible way to mar whatever prosperity the man enjoys. In most cases a person's subjugation to the *Zlydni* is an indication that his present employment does not accord with his true vocation. It is sometimes stated that the attendant spirit advises its protégé to choose another pursuit, promising that, if he does so, good fortune will never desert him. The *Dolja* is generally supposed to have the form of a human being, but it should be noted that it need not be of the same sex as the person to whom it belongs. Occasionally, however, its figure is that of an animal—a dog or a cat. It lives under or behind the stove, as is usually the case also with the household spirit. A good *Dolja* may be persuaded by prayers and sacrificial gifts to attend faithfully upon a person. Thus a bride who is setting out for the marriage ceremony prays that the good *Dolja* will sit beside her in the carriage, and that the unfavourable *Dolja* may perish in water. In White Russia the bride says: 'Come out of the stove in the form of a flame and go with me, leaving the room by the chimney.' Young women who wish to be married make pottage, and ask the *Dolja* to take supper with them. A rarer form of the superstition is that there is but one all-embracing *Dolja*, on whom depends the prosperity of every human being. This universal *Dolja* is depicted as an old woman, and as living sometimes in a miserable hovel, and sometimes in a splendid palace. The lot of the newly-born child is determined by the character of the place in which the *Dolja* happens to be residing at the hour of birth.

We proceed next to treat the belief in domestic spirits, the *Domovojs* or *Domoviki*. Many elements in this form of superstition suggest that the being who is worshipped as a household god is really the spirit of the ancestor, or founder of the family, who.

though long dead, still attends to the interests of his descendants. Here and there we find a survival of the belief that all who die in any particular house become its domestic spirits. At the festivals held in commemoration of ancestors, honours are paid to the household spirit as well. In point of fact, the latter is often called *Ded*, or (in Galicia) *Dulko*, 'grandfather,' and those who have seen him describe him as a little old man with grey hair and a long beard, clad in old-fashioned garments and resembling in outward appearance the existing head of the family. With the last-mentioned characteristic is connected the designation of 'landlord,' Bohem. *hospodářek*, sometimes given him; cf. the idiomatic use of 'himself.' In certain localities he is referred to as 'the one who lives on the stove,' as the stove is his favourite resort. Although he is not a Christian, he does not like to be spoken of as a 'devil'—an appellation which may enrage him, and incite him to take revenge by visiting with a disease the person applying the term to him. Consequently people are careful not to offend him in this way, even avoiding the use of his right name. It is sufficient to refer to him as 'he' or 'himself.' When any one has fallen ill in consequence of having insulted the household spirit, prayer is made for him thus: 'Perhaps the invalid has uttered foolish words and slighted you, or kept the cattle-shed unclean: forgive him.'

Every house has its *Domovoj*, who has also a wife and even a family. He engages in such tasks as devolve upon the painstaking head of a house. He bestirs himself by night, and people have even seen him as he moves about the yard with a light in his hand, seeming always to have something to do. Strange noises, movements of doors, mysterious voices, etc., heard during the night, are all attributed to him. He is of a merry and facetious disposition, and many of his actions are but manifestations of his good humour. The cleanliness and good order of the establishment are his great aims. A strange *Domovoj*, on the other hand, causes nothing but mischief and inconvenience, and every effort is made to dislodge the intruder. People believe that, in guarding the house, the true *Domovoj* often comes into conflict with some alien household spirit; and it may also be mentioned that he protects the household against the violence of forest-spirits and witches.

When the domestic spirit finds anything about the house not to his liking, he manifests his displeasure in various ways. He indulges in all kinds of violence; throws utensils upon the floor, annoys people and animals in their sleep, and may even destroy the whole place by fire. Like the *mora*, he leaps upon the sleeper, pressing upon him and causing difficulty in breathing. A person with hairy hands who touches the *Domovoj* in the darkness may expect something good to befall him, but to touch him with a smooth or cold hand is a presage of ill-luck. It is believed generally that when something unusual is about to take place in the household, the *Domovoj* gives warning thereof by letting himself be seen, by his movements, or by his faint utterances. We may observe in passing that the Wends believe in a spirit whose special function it is to convey the message of death. This is the *Božaloshtsh*, 'God's plaint,' a little woman with long hair, who cries like a child beneath the window.

When a person moves into another house, or migrates to another district, he prays the household spirit to accompany him. An offering of bread and salt is placed somewhere for the spirit's acceptance, and the head of the house appeals to him with the petition: 'I bow before thee, my host and father, and beseech thee to enter our new dwelling; there shalt thou find a warm place, and

a morsel of provender which has been prepared for thee.' In some localities the housewife heats up the stove of the old house, then draws out the glowing brands, which are to be carried to the new residence, and finally, turning towards the recess at the back, utters the words 'Welcome, grandfather, to the new home!' Occasionally we come upon the belief that, if the old house falls into ruins, or is destroyed by fire, it is a sign that the domestic spirit has never left it. On other occasions likewise, the goodwill of the household spirit is usually secured by means of sacrificial gifts. A dyed egg or other portion of food is placed in the yard for his use, prayer being made at the same time for his friendship. Part of the evening meal is left upon the table in the belief that the *Domovoj* will come in the night and eat it. In the evening, again, broth is placed on the stove, and a meal of eggs on the roof, for the purpose of inducing him to take more interest in the fortunes of the house. Before Lent the head of the house invites the *Domovoj* to supper by going into the yard and bowing towards the four cardinal points, while the meal is allowed to remain on the table during the succeeding night.

In Russia the household spirit is known also by other names, which vary according to the place in which his activity seems to focus. When he lives in the cattle shed, he is called *Chlevnik*; in the yard, *Dvorovoj*; in the drying-kiln, *Ovinnik*; in the bathroom, *Bannik*. A vital condition of successful cattle-rearing is that the *Chlevnik* should have a liking for the cattle, so that he will not molest them by night. The breeder must accordingly try to discover, or else guess, the particular colour of cattle which his *Chlevnik* favours, or the particular place where he wishes the cattle-shed to stand. When an animal is purchased and brought home, it is thought advisable to present an offering of food to the spirit, with the prayer that he will give the new-comer a good reception, guard it from mishap, and provide it with abundant food. In many districts we find the *Domovoj* and the *Chlevnik* included in the group of ill-disposed spirits, and every effort is made to expel them from the homestead, either by striking the walls and corners and sprinkling them with holy water, or by placing upon the roof an overturned harrow or a magpie that has been killed. In the province of Archangel, when the women enter the cattle-shed in the morning, they entreat the *Chlevnik* to go out by the window. The *Bannik* lives in the bathroom, behind the stove or under the seat. It is dangerous for any one to go there alone in the evening or by night, as the spirit who presides there may work him harm. When the inmates of the house bathe, they leave a little water in the bath, and a little soap upon the bench, as it is believed that the *Bannik* and other domestic spirits will wish to bathe a little later. To ensure the prosperity of the bath-room, a black hen is buried under the threshold as a sacrifice. As regards the *Ovinnik*, again, the people beseech him to grant them a successful threshing. He is solicitous that the drying-kiln should not be heated on the great festival-days. Should this be done he may take revenge by destroying the building with fire. When the workers have completed some task in the drying-house, they thank him for his faithful service. Those who desire to be on amicable terms with him drop the blood of a cock round about the kiln.

What has been said above regarding the household spirit applies more particularly to Russia. Among the Western and Southern Slavs, however, a less important place is assigned to him. Here, in fact, he has acquired the attributes of a protective and ministrant spirit. The Galician *dičko*.

the Bohemian *šetek* ('old one'), *hospodářček*, and *skřítek*, the Wendic *kobud* ('goblin'), the Polish *skrzat*, and the Slovakian *skrat* are each of them ready to give their services on condition that the person requiring help will make a compact with them, or summon them by incantations, or present oblations of food to them. But there are other ways of securing the good offices of such demons. Thus, a man may give a written undertaking assigning to the demon his own soul, or one of his relatives, or some part of his body. The spirit is invoked either under the stove-pipe or at cross-roads. He may also be brought forth from an egg; the egg of a black hen is carried about in the left breast for seven days, after which period the demon comes visibly out of the egg. The spirit, who has the appearance either of a boy or of a little old man, bestows money and corn upon his protégé, protects his property, and foddors his cattle. The Polish *skrzatek* is a winged creature which supplies corn, and, when flying about in the vicinity of houses, steals children. Its Wendic counterpart is the *plon*, a dragon in the form of a fiery sphere; a common saying about a rich man is: 'He has a *plon*.' The *plon* may assume various shapes, and the proper place to confer with him is the cross-roads. The flying dragon *smok* appears in the folklore of all the Slavic peoples. Another widely prevalent idea is that every house has its own 'lucky serpent,' which has its habitat under the floor or the stove, and brings wealth to the house. Among the Bohemians and the Wends it is believed that the house has both a male and a female serpent, the former representing the head of the house, the latter his wife. The death of either of the serpents presages the death of the corresponding human individual. Similarly the Bulgarians have their *stihja* or *tolosom*, a household spirit in the form of a serpent. The *skrat* of Slovenian folklore dwells in woods and mountains—a belief which indicates that this demon was originally a forest-spirit: cf. the *Skrat*, or *Schrat*, of the Germans.

This brings us to the domain of *Nature-demons*, and here we have, first of all, the large group of *forest- and field-spirits*. In Russia the forest-spirit is named *Ljesyj*, or *Ljesovik*, 'wood-king,' in Bohemia, *Hejkal*, or 'the wild man.' In outward appearance he resembles a human being, but his skin and hairy body betray his real nature. The hair of his head is long and his beard is green. Other points that differentiate him from mankind are his solitary eye and his lack of eyebrows. He has the power of changing his size at will, showing himself sometimes as large as a tree and sometimes no taller than grass. He can also transform himself into an animal, his favourite disguise being the shape of a wolf. He is said to retire under the earth during winter. The beasts and birds of the forest are subject to him, and he frequently drives them in huge flocks from one wood to another. In guarding his own particular forest, he sometimes comes into conflict with the demons of other forests and with the water-demon, and the battles that ensue become manifest to man in the falling of trees and the shriek of the storm. The forest-spirit likes to lead people out of their way, enticing them to follow him, and taking them to some dangerous spot. He also kidnaps children, leaving changelings of his own family in their place. Should he happen merely to pass a person, the latter may sicken with disease; nay, one has only to tread upon his footprint and a like unfortunate result follows. The forest-spirit makes his presence known by all kinds of sounds: he laughs, claps his hands, and imitates the cries of various animals. When a person calls and an echo follows, the demon is supposed to be answering him.

One of his favourite amusements is swinging on trees.

The hunter and the herdsman depend for their success upon the good-will of the forest-spirit, and accordingly they offer sacrifices to him and beseech him to make them prosperous. For his acceptance the hunter sets bread and salt upon the trunk of a tree; the herdsman, in order to induce the spirit to keep the wild beasts from his cattle, promises him a cow. If a huntsman will pledge his soul to the demon, the latter will give in exchange success in the chase. The man who desires to make such a bargain turns towards the north, and prays the demon to enter into a covenant of friendship with him; the demon may then show himself favourable to the man's prayer. The White Russians speak of their forest-spirit as *Onufrius*, and in fact they frequently give saints' names to the spirits of the fields and the meadows. It should be noted here that the patron saint of the woods is St. George, and that all wild animals are subject to him.

Besides the male forest-spirit, there are also numerous female spirits of the woods—the Bohem. *Dívě ženy*, the Polish *Dziwożony* and *Mamony*, 'wild women.' They, too, resemble human beings in appearance, as also in their manner of life. They are represented as women of enormous stature, with long hair and large breasts. They have their abode in mountain caverns. They are very fond of taking human children in exchange for their own ugly, large-headed offspring, or they simply steal the children. The forest-nymphs, on the other hand, are fair and fascinating creatures, lightly garbed and covered with leaves. They like to dance, and will continue dancing with a man till he dies, unless he happen to know how to free himself from their toils, as, e.g., by turning his pocket inside out. It is believed that a person who accidentally intrudes upon their invisible dancing parties is doomed to die. It sometimes happens that a man marries a wood-nymph, but such a union is very easily dissolved, and, unless the man is all the more circumspect, his spirit-wife may vanish without leaving a trace behind. In certain localities it is supposed that these forest-maidens are human children whom some one has cursed, and that they can deliver themselves from the curse only by marriage with a human being.

The characteristics of the forest-spirits are almost without exception ascribed likewise to the Servian and Bulgarian *Vila* and the Russian *Rusalka*. With regard to the *Vilas* (Bulg. *Samovila*, *Juda-Samovila*, *Samodiva*) the belief still survives that they are the souls of deceased children or virgins. They are beautiful, white-robed, light-footed damsels, who dwell in woods, mountains, and lakes, and fly in the clouds. They too are noted for their dancing and exquisite singing. They have been observed washing their garments and drying them in the sun. They have a considerable amount of intercourse with mankind, and in popular legend they sometimes even intermarry with men. They are represented in folk-songs as the adopted sisters of popular heroes. Should a person excite their resentment, especially by intruding upon their *kolo*-dance, they take revenge by shooting the unfortunate man with their deadly arrows. It is believed among the Bulgarians that blindness, deafness, and apoplexy are the work of the *Samovilas*. The state of the weather depends to some extent on them, as they have the power of causing tempest and rain. In many districts the people offer sacrifices to the *Vilas* in the form of flowers, fruits, or garments, placed upon trees or stones.

What has been said of the *Vilas* holds good, for the most part, also of the Russian *Rusalkas*—deli-

cate female beings who live in forests, fields, and waters. These likewise are souls of the dead, mainly of unbaptized children, and women who have died by drowning. Among the Little Russians and the Slovenians they are sometimes called *Mavki*, *Mavje*, 'the dead.' They are said to solicit human beings for crosses, in the hope that these sacred objects may deliver them from the curse under which they lie. With their ravishing songs in the night they draw people irresistibly into their power, and then tickle them till they die. Another of their means of allurements is the *ignis fatuus*. The Wends, we may note in passing, think that the *Blud*, 'will-o'-the-wisp,' is itself the soul of an unbaptized child. When the crops begin to ripen, the *Rusalkas* find their favourite abode in the cornfields. They have it in their power to bless the earth with fruitfulness. It is also said that they take pleasure in spinning, and that they hang their clothes on trees. During Whitsun-week—a period which in many districts is dedicated to them and to the souls of the departed in general—they come to women in visible form, requesting gifts of shirts and clothes, and such garments are accordingly presented to them by being placed upon trees. The week after Pentecost was in ancient times called 'the week of the *Rusalkas*.' At that season is held 'the escort of the *Rusalkas*,' a procession in which a straw doll representing the *Rusalka* is carried out of the village, then torn to pieces and thrown into the water. This ceremony has been explained as symbolizing the expulsion of the *Rusalkas* from the place, in view of their propensity to inflict damage on the ripening grain. But in all probability the practice was originally connected with the Spring festival. The name *Rusalka*, and the conception of the *Rusalka* festival, had their origin in the Græco-Roman solemnity called 'Rosalia,' 'dies rosae,' observed in spring in memory of the dead. The design of commemorating the dead may still be traced in certain ideas associated with the *Rusalka* festival, as, e.g., in the belief that a person who does not take part in the memorial function for the dead, and does not offer sacrifice to them, thereby becomes liable to the vengeance of the *Rusalkas*. It should also be mentioned that, just as the name *Rusalka* is derived from 'Rosalia,' so the word *Vila* has been explained as a survival from another memorial festival for the dead observed among the Romans, viz. the 'dies violae.'

In some districts a distinction is drawn between forest *Rusalkas* and water *Rusalkas*. The latter have their abode in rivers and cascades; they disport themselves upon the surface of the water, and comb their long hair upon the banks. They also prowling after bathers, and bathing is therefore avoided during the *Rusalka* festival. Similar traits are popularly ascribed to the 'water-man' (Russ. *Vodjanoj*, *Morskoj tsar*; Sloven. *Povodnji*; Wend. *Vodny muž*, *Nyks*; Bohem. *Vodník*, *Hástrman*; Pol. *Topielec*, *Topnik*), and also to the 'water-people,' as it is believed that the water-man has a family—a wife, 'the water-woman,' and children—and even cattle. Every body of water has its presiding demon, who dwells in a magnificent palace far below. A water-spirit can make a new lake for himself, passing out of his old resort in the form of a brook. His favourite haunt is in the vicinity of mills, but, as mills and weirs block his way, he often destroys them in his rage. When any one is drowned, the water-man is the cause, and it is dangerous to rescue a drowning person, as one thereby provokes the animosity of the demon. The souls of those who have died by drowning are immured in his house. He is said to marry women who have been drowned and girls

who have been expatriated. He has, in fact, a special liking for inveigling women into his toils. He plays all sorts of pranks with people; he chases the traveller, or seats himself upon the cart of the belated waggoner; and the victims of his jocularly, fearing his resentment, generally submit without resistance. His power is at its height in the middle of the day, and it is at that time that the female water-wraith of the Wends comes forth from the water. In Bohemia people tell how he dances on clear moonlit nights. He sometimes indulges in strong drink, and, when drunk, makes an uproar and jumps about, thus disturbing the ordinary flow of the stream. It not seldom happens that the water-spirit and the forest-spirit have fierce encounters with each other. When the wife of the water-spirit requires the midwife, he applies for human help. He gives timely warning of coming floods to those with whom he is on friendly terms. Millers and fishermen seek to win his goodwill by sacrifices. For his use the miller casts fat, swine's flesh, or a horse into the water. In former times, when a mill was built, it was the custom to present a live offering—sometimes even a human being—to the water-man. The fisher tenders him salt, bread, tobacco, and the first fish of his catch. The bee-keeper tries to win his good graces by oblations of bees and honey. As the water-man is lord over all aquatic birds, the goose-herd undertakes to make him the offering of a goose in the autumn. We may here draw attention to the curious fact that among the White Russians those who desire success in fishing invoke the aid of Neptune. This classical name was no doubt introduced among the people from literary sources, such as chap-books. The water-man is thought to resemble a human being. Sometimes he is represented as an old man, with a green beard and with green clothing, sometimes as a mere stripling. But he may always be recognized by the water that flows from the border of his garments. He has other forms of disguise at command, however, and may assume the appearance of some known person, or of an animal, such as a dog, a horse, a fish, or a frog. We hear also of a peculiar class of water-spirits which in one half of their body are human, while in the other they resemble a fish or aquatic animal. Such are the Little Russian *Faraony* (the warriors of Pharaoh who were drowned in the Red Sea), *Boginky*, *Memoziny*, *Meljuziny*; the Slovenian *Morske dekleke*; and the Bulgarian *Stija*. The last-named are remarkable for their long hair, which they sometimes employ to choke those who fall into their power.

We have already mentioned that the middle of the day ranks in popular superstition as the most congenial time for the demons. In point of fact, imagination has fabricated a special figure to represent midday—the white-robed 'noon-wife,' who walks abroad among the cornfields, usually during the midday interval in which the people snatch a little repose. The *Pshesponitsa* of the Wends and the *Poludnitsa* of the Poles take care that no one shall be in the fields at that hour. They try to puzzle any one they meet with difficult questions and riddles; and, if he cannot answer them satisfactorily, they kill him, or infect him with disease. The 'noon-wife' keeps watch over the fields, protects the crops, especially the flax, against thieves, and threatens with her sickle children who pull up the corn. The sickle is also the symbol of another noon-tide fiend among the Wends, the *Serp* or *Serpyšyja*, who kills children when it when they steal the peas. At midday the Bohemian *Polednice* fly about in field and wood, and come into the neighbourhood of human dwellings. Their flights are accompanied by wind and

storm. Their practice is to steal little children whose mothers have negligently left them by themselves. The Russians likewise have a *Poludnitsa*, or *Zitna matka*, the protectress of the cornfield, who, especially at the season when the corn begins to shoot, perambulates the balks. She also molests children whom she finds idly strolling among the fields, and in Northern Russia parents warn their children against going amongst the rye lest the *Poludnitsa* burn them. In Bohemia the *Polednice* is supposed to be the spirit of the midday bell, and to live in the belfry. Of a somewhat similar character is the Moravian *Klekanitsa*, who stalks around after the evening chimes, and entraps the children whom she finds still out of doors.

In many parts of the Slavic world we find, besides the 'noon-wife,' a male 'midday spirit,' who in Bohemia is called *Poledníček*, and among the Wends *Serp*, while there is also a special field-spirit, the Russian *Polevoj*. The *Poledníček* is a little boy in a white shirt, who at midday passes from the forest into the fields, and punishes those whom he finds doing damage there. He calls to people by their names, and those who follow his call he leads to the far-off hills. The *Polevoj* or *Polevik*, on the other hand, is a personification of the tilled land, and his body is therefore black, like earth, while his hair is the colour of grass. The people think that the spirit of harvest, who is also known as *Ded*, resides in the last gathered sheaf, which is accordingly dressed to look like a doll, and is borne in festive procession to the landlord.

We come, finally, to the Nature-demons whose sphere of action is the air. In Bohemia there is a special spirit of the wind, *Větrnice* or *Meluzina*, 'the wind-mother,' a white, barefooted being. When the wind roars, the people say that the *Větrnice* is sobbing, and to comfort her they throw bread and salt into the air for her food. Her voice is believed to bear prophetic import. In Russia likewise we find the 'wind-mother,' and also the 'wind-father,' while the Wends speak of a 'wind-king.' The wind is thought to proceed from the demon's breathing or his movements. Then there is a group of 'wind-brethren'—sometimes four, sometimes twelve—who dwell at the ends of the earth, and who are constantly blowing against one another. With these wind-brethren have been confounded the four angels or evangelists borrowed from the sphere of Christian ideas, and supposed to live in the four quarters of the globe. In Russia we still find sporadically the belief that the wind, and especially the whirlwind, emanates from evil spirits, and that the devil is the chief commander. In the tempest and whirlwind it is believed that Satan himself or the soul of a witch is speeding along, and, if a knife be thrown into the gust, it will inflict a wound upon the hurrying spirit. When the demon is pursued by the thunderstorm, he may transform himself into an animal or a human being. An idea current among the Wends is that the whirlwind is really an invisible spirit, who may be seen, however, by pulling off one's shirt and looking through the sleeves. In certain Russian incantations the whirlwind is spoken of as the captain of the winds, who are personified as evil spirits, and he is styled 'Whirlwind, the son of Whirlwind.' His aid is implored by such as seek by magical means to arouse a responsive affection in the breasts of those they love. In Russia even frost is represented by a spirit. He is depicted as a grey-haired, white-bearded old man, wearing a snow-covered fur and shoes of ice. At Christmas he receives offerings of pottage, and is invited to partake of the Christmas fare, in the hope that he will not expose the grain to damage by frost.

Our discussion would remain incomplete without some reference, finally, to the fact that in the popular mind, more particularly in Russia, certain days of the week are personified. We have already had under consideration an analogous phenomenon, viz. the development of the 'Rosalia,' the memorial festival for the dead, into the personified *Rusalka*. In popular poetry, moreover, we find that the naive imagination has invested with human attributes certain important dates in the year, such as Christmas (*Rizdvo* or *Koljada*, from Lat. *calendæ*) and Christmas Eve (*Karatshun*, *Kratshun*; cf. Lat. *colatio*); in Russia, indeed, the latter term has for some reason or other come to signify the evil spirit. The days of the week similarly personified are Friday (*Pjät'nitsa*, which is also known by the Greek name *Paraskeva*) and Sunday (*St. Nedelja*). With dishevelled hair, and bodies covered with sores, these two spirits are said to travel from village to village—a fancy which implies that women who perform such work as sewing or spinning on Friday or Sunday really wound the day with the articles they use. The spirits punish those who thus injure them, while, on the other hand, to those who observe these days, they show favour by helping them in their household duties, promoting the growth of their flax, enhancing the fertility of their land, and, as the protectresses of women, rendering assistance to married people. It was a custom among Bulgarian women not so very long ago to make offerings of bread and eggs to Friday. It only remains to be said that the ideas relating to those female personifications of days have been greatly influenced by the worship of the Virgin Mary and other patron saints, and therefore really belong to a sphere of thought which lies outside the belief in spirits and demons in the stricter sense.

DEMONS AND SPIRITS (Teutonic).—The ancient Teutons, like almost all other primitive peoples, believed that the whole surrounding world of Nature was alive with demons and spirits. This belief has survived from one of the primitive stages of religious thought till the present time, or has in the course of ages given rise to new phantoms of the human mind. The operations and occurrences observed in the natural world were all attributed to these imaginary beings. The primitive mind did not represent such existences as having any definite shape; it was only in a later phase of reflexion that they were invested now with animal, now with human, forms. Even such forms, however, were not the purely natural ones; the spirits were figured sometimes as very small, sometimes as enormously large. The next step was to endow the imaginary beings with a new class of activities, borrowed from the human sphere, and in this way was at length evolved the myth. The spirits of wind, water, and air were supposed to hold sway in Nature, while the spirits of vegetation, disease, and fate interfered in human life. They were thought of at first as existing in multitudes, but in course of time single spirits were disengaged from the mass. With the rise of the belief in the soul, the demons were sometimes invested with a soul-like nature; the souls of the dead were believed to survive in them. This explains why it is difficult—often, indeed, impossible—to distinguish between spirits and beings of soul-like, or rather ghost-like, nature. Nowhere has the action of religious syncretism been more powerful than in the fusion of the belief in spirits and the belief in

souls. Thus, *e.g.*, the demons of the wind coalesced with the moving host of souls, and the worship once accorded to the latter was transferred to the former. Hence arises our uncertainty as to whether Wodan-Öðin was originally a wind-demon or a leader of the soul-host.

While demons or spirits had their origin in the surrounding world and the phenomena of Nature, the belief in the soul was suggested by occurrences in the sphere of human life. Animism, the belief in the soul as a separate entity, arose out of the world of dreams, while Manism, the belief in the continued existence of the soul and the worship of the dead based thereon, originated in the phenomena of death. Ideas regarding the dream-soul are found in endless variety among all the Teutonic tribes. Thus, the soul, equally with the body, was an independent entity, and might leave the body and wander about in the interval of sleep. It was supposed to have its seat in various parts of the body—the blood, the heart, the kidneys, the liver, or the head; but it might also reside in the breath or the shadow; a man without a shadow had sold his soul. The soul could readily assume various forms; it sometimes appeared as an animal (serpent, weasel, toad, etc.), sometimes as an *incubus* (goblin, mare, troll) or other noxious being. In this way arose the ideas of the werewolf, the *fylgja* (see below), or attendant spirit, and the witch. Among the Northern Teutons a person who allowed his soul to wander was called a *hamrammr*, 'one who can change his shape.' This vagrant soul sees what is hidden from the bodily eye; it can look into both the past and the future. It was this belief which in great measure gave rise to the Teutonic conception of prophecy. When the soul was out of the body, moreover, it was endowed with active powers of abnormal character; it could work injury or bring benefit to other men, and accordingly the powers of magic were transferred to it. Persons who could at will thus cause their souls to leave their bodies, whether in sleep or in a trance, were regarded as magicians.

The powers of the dream-soul, however, were as nothing compared with those ascribed to the soul of the dead. The Teutons thought of the latter as a grasping, maleficent being, which returns to its place, claims its former possessions, and takes vengeance upon any one who withholds them. It was the abject fear of the returning soul and its evil powers that prompted the numerous duties which, according to primitive Teutonic ideas, the survivors owed to the dead (see artt. ANCESTOR-WORSHIP [Teut.] and ARYAN RELIGION). These various duties arise out of the belief that, unless the dead are treated with due honour and respect, they will return and do harm to the living. This superstition was once universal, and is not yet finally eradicated from the mind of any of the Teutonic peoples. There is probably no district in the whole Teutonic area where the people are entirely free from the belief in ghosts and haunted places. Persons who in their lifetime were regarded as wizards, or who had died an unnatural death, would, it was believed, come back for the express purpose of injuring the living. When such injury showed itself, the bodies of the malevolent beings were exhumed and burned, or transfigured through breast and heart with a stake, so that they might be held fast in their graves. Throughout the Middle Ages impalement was still practised as an apotropaic penalty for such crimes as rape or the murder of a relative (cf. Brunner, *Ztschr. d. Savigny-stiftung für Rechtsgesch.* xxvi. [1905] 258 ff.).

The souls of the dead had their times of moving abroad, and courses by which they fared. It was a universal belief among the Teutons that wind and storm were the hurrying host of the dead.

What leaves the body at death is the breath, and the breath was therefore the soul or spirit. But wind—agitated air—is also breath. When the breath leaves the body, it unites with other souls, and joins the soul-host. It was a widely diffused idea that a wind arose when any one was hanged; the spirits were coming for their new associate. The departing soul goes to the 'wöden her, da die bösen geister ir wonung hân.' As early as the time of Tacitus (*Germ.* 43), the Harii, with their painted bodies and black shields, used to imitate by night the 'raging host.' Belief in this raging host—or, as it was variously called, the wild hunt, Holla's troop, Perchta's host, the Norse *gand Reid*, 'the spirits' ride,' *Aasgaardsreia*, 'Asgard's chase,' or *Hulderfolk*—is not even yet extinct. In certain places, and above all at cross-roads (*q.v.*), the spirit-host rouses itself to special activity, and at certain seasons it manifests itself. The principal time for this manifestation was the long winter night in the season of Epiphany, as, among the Teutons, the festival of Christmas had taken the place of the ancient heathen festival of the dead. It was believed that at such times the souls of the dead took part in the celebration and feasting. Special dishes and special cakes were dedicated to the souls of those who had died in the foregoing year. At no other season of the year were superstition and popular divination so rife. All manner of figures and masquerades were resorted to in personating the spirits. This was the feast of Yule (Goth. *jiuleis*, A.S. *giuli*, O.N. *jól*). The more vehement the rush of the spirit-host in the wind, the more bountiful would be the ensuing year, and accordingly offerings were made *til dærs*, 'for a good, fruitful year.' As regards locality, the spirit-host manifested itself most frequently over battlefields. The slain were believed to continue their strife in the air. This belief finds expression in the Hildensage, according to which she summons the fallen Vikings every morning to renewed warfare on the island of Høy in the Orkneys (Snorri Sturluson, *Edda*, i. 434). Popular belief also gave the spirit-host a leader—Wode or Wodan, a word which is a collective form for the 'raging host' (cf. Eng. *wood*, Scot. *wud*, 'mad'). In process of time Wodan was deified, and in some Teutonic countries came to be regarded as the supreme god.

Among the Teutons the belief in the soul gave rise to a great variety of demonic and legendary beings. From the superstition that the soul could leave the body in sleep or in the trance arose in particular the conception of *incubi*—souls that went forth to afflict and torment others in their sleep. The natural phenomenon at the root of this idea is the nightmare, which the physiologist traces to a congestion of the blood during sleep. The imaginary being to which this distressing condition was attributed is known by a great many different names, the most widely diffused of which is of the form *mare* (O.H.G., A.S., and Scand. *mara*; Germ. *Mahr* or *Mahre*; English 'nightmare'). In Central Germany the term *Alp* has come into use; in Upper Germany we find *Trude*, *Schrat*, *Ratz*, *Rätzle*, *Doggele*; in Western Germany, *Letzel*, *Trempe*; and in Oldenburg, *Walriderske*—all applied to the nightmare, and frequently used also to designate the witch. The *incubi* 'ride upon human beings,' and may actually torture them to death. In the Middle Ages persons who were suspected of injuring their fellow-men in this way were frequently prosecuted at law. Not only human beings, however, but also animals, and even trees, might be the victims of the *mare*. She afflicted people by squatting on the breast; she sucked the milk of women and cows; she wreaked such malice upon horses that

in the morning they were found bathed in sweat and with their hair all awry. She found her way into the sleeper's room by the keyhole, or through a crack, and these were also her only possible means of exit. If the sleeper awoke and held her in his grasp, all that he found was a straw, but, if he spoke the name of the person who had been thus tormenting him, he discovered a naked woman.

Among those who could cause their souls to pass out of their bodies and injure others was the *Hexe* of the Western Teutons (A.S. *hægtisse*, O.H.G. *hagazussa* = *strio*, *furia*), the Scandinavian *trolld*, the English 'witch.' These terms, however, had a wider application, and denoted also those who dealt in any way with magic, especially of a maleficent kind. It was really in virtue of their magical powers that the *Hexen* could disengage their souls from their bodies, and they were therefore also called *ecánriten* (M.H.G.), *túnriður*, 'hedge-riders,' or *kveldmyrkriður* (O.N.), 'night-riders.' In these excursions they could assume an endless variety of form: they might take shape as a whale, a bear, a raven, or a toad. Bad weather, thunder, and hail were generally attributed to them. According to the Old Icelandic sources, they used to bring themselves into the ecstatic condition by means of incantations, and then launch forth the storm. In later mediæval times they were frequently brought to trial for causing bad weather. But their power of working injury extended to many other things; they induced diseases, and especially lunacy, they killed people, they filled the land with vermin, and caused the cows to give red milk, or none at all. The belief in witchcraft found among all the Teutonic peoples was reinforced during the Middle Ages by the Oriental belief in the devil. The witch was now supposed to be in league with the Evil One; she was one who had sold her soul to him and received the gift of magic in exchange. Thus arose the belief in the witches' meetings on the so-called Brockelsbergs, where the hags abandoned themselves to love-making with the devil. From this again sprang the discreditable trials for witchcraft, which lasted till the 18th century. It was also commonly believed that witches continued their nefarious practices even after death, and, when indications of such activity appeared, their bodies were exhumed and either burned or impaled.

Closely related to the trolls and witches were the Norse *Völves* (O.N. *völur*). These likewise were sorceresses, but they used their magical powers as a means of intercourse with the dead, and in order to acquire knowledge regarding secret things and the future. To their peculiar trade belonged the magic wand, the magic chair, and other accessories; while they had a retinue of boys and girls to chant their magic songs and so induce the trance in which the souls of the *Völves* left their bodies. These human *Völves*—the 'wise women' of other Teutonic peoples—were held in great veneration; in the winter nights of the season, when the spirit-host swarms around, they travelled from steading to steading, and were everywhere received with ceremony. Women thus endowed with prophetic vision were supposed to exercise their powers even after death. The Eddas often tell of men and gods who visited the grave of a *Völva* for the purpose of obtaining knowledge of the future. Thus Óðin, for instance, rides to such a grave, awakes the *Völva* from the sleep of death, and receives from her the interpretation of Balder's dreams (*Baldersdraumar*).

A male counterpart to the witch is the *werewolf*, i.e. man-wolf. This was a superstition current among all the Teutonic peoples (O.H.G. *werewolf*, A.S. *werewolf*, O.N. *vargulfr* or *ulfhamn*), and is found far beyond the limits of Teutonic lands.

The werewolf was a human soul which roamed about in the shape of a wolf, and wreaked horrible cruelties upon other human beings. A person who chooses, or is forced, to wander about in wolf's form has the power of falling asleep at will. Then he passes into a wolf's skin, which he fastens with thick coils of gold, and in this disguise he kills every person and animal he meets. According to popular belief, in which the werewolf still plays a part, the creature was bullet-proof, but, when wounded by a shot or a severe blow, it reverted to human form. The enchantment could be dissolved also by pronouncing the name of the person who had assumed the disguise, or by throwing a piece of steel or iron over the creature. A supernatural being of similar maleficent powers—a second counterpart to the witch—was the *Bilwis*, whose season of special activity was Walpurgis Night. This was a creature of soul-like character, which flitted through the fields, and wrought havoc to the crops with the sickle upon its great toe. When the people found their corn laid, or the ears stripped, they blamed the *Bilwis*; such work was the 'Bilwis-reaping.' It had its abode in trees—the 'Bilwis-trees'—at which gifts of children's clothing were offered by way of disposing the *Bilwis* to protect the children against disease.

Besides the souls which wander forth in dreams and trances, however, the souls of the dead played a great part in Teutonic folklore, presenting an endless variety of form and action. Among the various Teutonic peoples these spirits bear different names, and the fear of the returning dead is often reflected in the very nomenclature. Thus the O.H.G. *gîrôc*, A.S. *gîdrôg*, O.N. *draugr* are connected with the root **dreugh*, 'to hurt'; other terms for such haunting spirits are Germ. *Gespens* (O.H.G. *spanan*, 'entice', 'deceive'), Dan. *gen-ganger* (Icel. *apturgaungur*, 'one who walks again'), Eng. 'ghost' (A.S. *ghæstan*, 'terrify'). This belief in the haunting presence of the dead survives to-day with a scarcely abated power of legend-making, and in modern spiritualism it would seem to have entered on a new lease of life. The ideas popularly held regarding the returning spirits are certainly somewhat vague. The ghost is sometimes thought of as invisible, and able to make its presence known only by voice or action; sometimes it is supposed to appear as a human being or an animal (e.g. the fiery dog, cat, horse, serpent, toad, and the like). In some districts it was considered wrong to kill certain animals, such as toads and snakes, since they were the living homes of hapless souls. But, on the other hand, animals thus possessed by souls might work injury to human beings, and this belief gave occasion to the common mediæval practice of subjecting animals to trial and punishment (cf. von Amira, *Tierstrafen u. Tierprozesse*, Innsbruck, 1891). The belief that the departed soul might survive in the body of an animal gave rise to the supposition that certain animals had the gift of prophecy, and, as it was assumed that they had also the faculty of speech, it was possible to converse with them—above all with birds—as with human beings. Souls might also survive in plants: thus the oak which sprang from the mouth of a king slain in battle, and the rose and lily which grew on the grave of lovers, were really the abodes of the departed souls. The belief that the dead pass into trees was very common; the guardian tree and the tree of life associated with individuals or families were the abodes of tutelary or ancestral spirits, and were thus often made the recipients of gifts and offerings, while the act of damaging trees was a crime demanding the severest penalties.

The belief in the soul gave birth to a large number of fabulous beings. One of these was the Norse

fylgja ('following spirit'), which attended a person either as his soul or as his guardian spirit. As a soul, it took the form of an animal; while, as a tutelary spirit, it was a female being who appeared, especially in dreams, to its protégé, and warned him of danger or urged him to action. The *fylgjas* sometimes come singly, sometimes in troops. After a person's death his attendant spirit passes to his heirs, and in this way occasionally becomes a family-*fylgja*. The Norse *valkyrs* differ so far from the *fylgjas* in that they are almost always found in groups, and especially in groups of nine. The battle-maidens of the ancient folklore, frequently mentioned both in the southern and in the northern sources (cf. Dio Cass. lxi. 3; Flav. Vopiscus, *Vita Aurelii*, 37; Paulus Diaconus, i. 15; Saxo Gram. i. 333 ff., 361, etc.) become *valkyrs* (A.S. *valcyrsa*, O.N. *valkyrja*) after their death. They are armed with helmet, shield, and lance; they ride through air and sea; the manes of their horses shed dew and hail upon the earth. Their appearance presages war and bloodshed. In Norse poetry they are closely associated with Óðin; they are his maids, his 'wish-maidens' who carry out his commands, who strike down in battle the heroes destined for Valhöll, and bear them thither, where at the banquets they foretaste the mead for the *einherjar*. The group of wish-maidens also included *Brynhildr-Sigrdrífa*, who disobeyed the commands of her lord by giving the victory to another king, and was in consequence pierced with the 'thorn of sleep' and surrounded by a flame until such time as Sigurðr should awake her and set her free. It is a moot point whether the *Norns*, the 'Fates' of Norse mythology, who have many features in common with the *valkyrs*, should be regarded as souls or as demons. A similar ambiguity attaches to the *elves*, who are sometimes represented as souls, sometimes as purely demonic beings. Both the name and the idea of these products of religious phantasy are common to all the Teutonic race; O.H.G. *der alp* (pl. *elbe*), or *das alp*, also *diu elbe*, A.S. *elf* (pl. *ylfe*), O.N. *álfr* (pl. *álfar*) are applied to both male and female beings living in the earth, the air, the sea, the hills, etc. They are often associated with the *Asir* (*asir ok álfar* is a favourite Norse expression, and Anglo-Saxon has a cognate phrase), and, like the latter, embrace the entire multitude of soul-like powers at work in Nature. In later, and especially English, forms of superstition, the elves possess a Proteus-like character, and show a preference for animal shapes. They are sometimes regarded as helpful to man, but sometimes also as capable of injuring him, and accordingly both good and bad elves are recognized among the Northern Teutons. Snorri Sturluson (*Edda*, i. 18) classifies them according to their domiciles as 'elves of light,' who are whiter than the sunbeam and live in the air, and 'elves of darkness,' who dwell in the earth, and are blacker than pitch. From the elves of light the sun takes his name of *álfröðull*, 'elf-ray.' Their head is the sun-god Freyr, whose abode is Alfheim, 'the realm of the elves.' The 'elves of darkness' are sometimes all but identified with the dwarfs, and this explains why the deit-handed smith Völundr (Wieland) is called 'lord of the elves.' In M.H.G. poetry the king of the elves is Alberich, who found his way to the West Franks as Oberon. In England, owing to the influence of the Irish belief in fairies, superstition dwelt mainly on the bright and beautiful elves, who thus became objects of popular favour. A similar development took place in Scandinavia, where, especially in Sweden, the elves were thought of as comely maidens, who live in hills and mountains, hold their dances on the green sward, and by their ravishing songs draw the traveller to

destruction. Further, the elves are sometimes *incubi*; and thus the Germ. word *Alp* has been used only in this sense from the 16th century. The *Elfen* of German poetry are really of English origin, having been introduced into Germany towards the end of the 18th century by the translation of Shakespeare.

The elves of ancient times are often identical with the *wights* (Goth. *vaihts*, fem., O.N. *vættir*, fem., O.H.G. *wiht*, neut.). The conception of the wight likewise developed on various lines according to locality. In Old Norse superstition *wights* were tutelary spirits who had their abode in groves, hills, and waterfalls, and were able to dispense fortune or misfortune to human beings. In German folklore they were vivacious spirit-like creatures who assisted men in their work, and demanded gifts in return. To the same class of soul-like, or demonic, beings must be assigned the *dwarfs* (O.H.G. *twerg*, A.S. *dveorh*, O.N. *dvergr*). Their abode, however, was confined to a particular place, and their field of activity was similarly circumscribed. Popular imagination depicted them as diminutive old men—sometimes deformed—with large heads and long white beards. They lived in mountains or under the earth, and were thus known as the 'Unterirdische,' 'hill-folk,' 'earth-dwellers.' They shunned the light of day, for the sun's rays would transform them to stone. Among their possessions is the tarn-cap or magic hood which enables them to become invisible at will, and endows them with supernatural powers. Their principal occupation is smith's work; their forge is situated within the hills, and accordingly dwarf-legend flourishes most profusely where there are ore-bearing mountains, and where mining is carried on. In the Norse poetical literature all weapons of a superior kind, especially swords, are the handiwork of dwarfs. But Thor's hammer, Frey's ship *Skíðbleðnir*, Óðin's ring *Draupnir*, Sif's golden hair, Freyja's necklace *Brisingamen*, and other articles of ornament are also products of their skill. Such arts, however, are not their only characteristic; they are distinguished also for craft and cunning. They are often thought of as united in a realm of their own, with a dwarf-king (Laurin, Heiling, Alberich) at their head. As lords of the mountains they are possessed of immense treasures, from which they draw to reward such persons as pledge themselves to their service. See, further, art. FAIRIES.

An elfish origin is to be assigned to the *household spirits*, who protect the home, and bring it good fortune and wealth. They were frequently regarded as having an animal form, especially that of a serpent or a toad, and they lived under the threshold, in the roof-beams, or on the hearth, at which places it was usual to present offerings of milk or other food in a dish. The household spirit is also met with as a mannikin with the figure of a dwarf, and in this form is known under many different names: thus the A.S. *cofgodarr*, 'house-gods,' survive as *Kobolds*, or goblins; the Germans have also the *Butze*, the *Hütchen*, while in England we have Puck (Scot. 'brownie'), and in Scandinavia the *Gardvör* ('house-guardian'), *Tomte* ('house-spirit'), and *Nisse*. In many places it is still believed that these household spirits are the souls of deceased ancestors or other relatives.

Superstition assigned a guardian spirit not only to the house, but to the *ship*, in which he was known as the *Klabautermann* (Germ.). He dwelt in the mast, and the sailors believed that he was a child's spirit which had come into the vessel in the felled tree of which the mast was made. The *Klabautermann* warned the sailors by certain noises of any imminent danger, assisted them in their work, and, like the domestic spirit, received

payment for his services in the form of gifts. If the ship went down, he flew away, but first bade farewell to the steersman. Miners likewise had their guardian spirit, the *Schachtmännli* ('shaft-mannie'), who assisted them in the workings, and showed them where the good ore was to be found.

Another form of superstition current among all the Teutonic peoples was the belief in the demonic beings which live in rivers, brooks, and wells, in forests, in the waving cornfields, in the moving air, and within and upon the mountains, and which in many cases are hardly distinguishable from the ghostly creatures already dealt with. Imagination represented them as of human or superhuman dimensions, and as of human or animal form, according to the magnitude of the natural facts associated with them. At an early period, however, popular imagination had detached these spirits from their original habitat, and, as in the case of the dwarfs, had invested them with all manner of fabulous features and incidents, so that the natural facts which suggested them cannot always be identified in detail, and only the general form remains. This is specially true of the *giants*, who, like the dwarfs, were favourite subjects of popular poetry. But, while the dwarfs were personifications of the bountiful powers of Nature, and are therefore thought of as well-disposed towards mankind, the giants represent Nature in her hostile aspects, and thus came to be regarded as the destroyers and devourers of men. That nearly all the more impressive phenomena of Nature were personified as colossal beings of this kind, is shown by the Norse genealogy of the giants (*Fornaldarsögur* ii. 3 ff.). To the family of *Fornjótr* ('the old giant') belong the following, as his children or children's children: *Hler*, the boisterous sea; *Logi*, the wild-fire; *Kari*, the tempest; *Jökull*, the glacier; *Frosti*, cold; *Snær*, snow; *Drífa*, the snow-drift, and other effects of a severe winter. Similar gigantic beings were with special frequency suggested by mountains. Almost every mountain peak and range was a petrified giant or a seat of giants: e.g. *Pilatus* in Switzerland; *Watzmann* in the Bavarian highlands; *Hütt*, the queen of the giants, in the Tyrol, etc. The Norwegian *Jötenfjeld*, 'giant-range,' was the home of the giants. Hence the giant was called *bergbúi* ('mountain-dweller'), or *bergjart* ('lord of the mountain'), and, in fact, the Germ. *Riese* had originally the same meaning (O.H.G. *riso*, A.S. *wrissil*, O.N. *risi*, all cognate with Gr. *ῥίος*, 'peak'). The strength of these mountain-giants is expressed in the O.H.G. *duris*, A.S. *ðyr*, O.N. *purs* (Skr. *turas*, 'strong', 'powerful'); their size in the O.H.G. *Hüne* (Celt. *kunos*, 'high'); their rapacity in the O.H.G. *etan*, A.S. *eotan*, O.N. *jötnunn*, 'the devourer.' See, further, art. GIANTS.

Certain other classes of demons, however, differ from those just referred to in that they are never dissociated from their original haunts. Among these are the *forest-spirits*, who are connected with the yearly renewal and decay of Nature, and thus, like the field-spirits (see below), become spirits of vegetation. These demons remain quiescent in the woods during winter, but awake to activity with the re-birth of Nature. In the spring the people used to carry home young trees and green shoots, in which the demons were supposed to live, and plant them near their houses, as it was believed that persons who came into contact with the branches absorbed the fresh energies of the re-awakened spirits. But the forest was likewise the abode of supernatural beings of a more independent type, and principally female in form—the 'feminae agrestes, quas silvaticas vocant' (Burchard of Worms, *Decreta*, Cologne, 1548, p. 198^b), who appear suddenly, yield themselves to their lovers, and then as suddenly vanish. These

are the 'wild maidens,' the German *Moos-, Hols-, and Buschweiber*, the *Fangen* and *Saligen*, the Swedish *skogsfråur* (wood-nymphs), and the Danish *askefruer* (ash-nymphs) of present-day superstition. Their bodies are usually covered with hair, their faces wrinkled; they have hanging breasts and dishevelled hair, and are often clad with moss. It is a common notion that they are chased by the storm-giant, the Wild Hunter, Wode, or the giant *Fasolt*, and that they seek refuge among men, liberally rewarding those who succour them. These wood-nymphs are also endowed with occult powers, especially the power of curing disease—a belief originally suggested by the medicinal properties of plants found in the woods. The forest-spirits, however, are sometimes males, mostly of gigantic size, and always of the same hideous appearance as the females.

There are many points of resemblance between the forest-spirits and the *field-spirits*. The latter likewise were originally spirits of vegetation, which popular imagination first of all detached from their native sphere, and then elaborated in detail. Field-spirits grow with the stalks of grain, and become visible when the wind blows across the cornfields. The long ridges or 'backs' of the tilled land suggested the animal shape ascribed to these spirits. They are known by many different names, as e.g. in Germany, *Kornwolf*, *Roggenhund* ('rye-dog'), *Haferbock* ('oat-goat'), *Rockensau* ('rye-sow'), *Bullkater* ('tom-cat'), in Sweden, *Gloso* ('glow-sow'), in Norway, *Herregudsbuk* ('the Lord's goat'), etc. Sometimes, again, the field-spirits were of a human type; hence the *Kornmutter* ('corn-mother'), the *Rockenmuhne* ('rye-aunt'), the *Roggenalte* (especially in Denmark), and, in male form, the *Alte* ('old one'), or the *Gerstenalte* ('barley-gaffer'). The 'grass-demon' lived in meadows, the 'clover-mannikin' in clover-fields. When the corn was cut, the spirit flitted from one swathe to another. The person who cut or bound the last sheaf caught the 'old one,' the 'corn-mother,' etc. That sheaf was formed into some kind of figure, and presented with due ceremony to the landlord; then a dance was held around it. The ears of the last sheaf were carefully stored in the barn until the next seed-time, and then used for the purpose of stimulating the spirit of vegetation to renewed activity. But that could be secured only by killing the old spirit, and this was done by binding up a cock with the last sheaf, and then letting it loose and chasing it through the fields, till at last it was overtaken and killed. As the spirit of vegetation was believed to be in the people who happened to pass by while this ceremony was being performed, they were seized and bound by the reapers, and had to buy themselves off with a gift.

A still greater fertility of invention is exhibited by the Teutonic belief in *water-spirits*. Almost every body of water—spring and river, pond and lake, marsh and cascade—was imagined to be the abode of a spirit. These spirits varied in size as dwarfs, men, or giants, according to the extent of the masses of water with which they were associated, while fancy lent them sometimes human, and sometimes animal, shapes. Here and there they were supposed to be the souls of the dead. Departed souls were associated very specially with fountains and wells, which accordingly were regarded as resorts of the leaders of the soul-hosts, such as Frau Holle and the Wild Hunter; hence, too, the widely prevalent belief 'that the souls of the newly-born came from such places. On similar grounds arose in primitive times the custom of treating fountains and wells as places of divination. The spirits who haunted such places were marked out from others by their prophetic gift and their

supernatural wisdom. One of the water-spirits thus endowed was the Norse *Mimir*, into whose waters Óðin had put his eye in pledge in order to gain wisdom, and to whose knowledge he resorted when he desired light upon the future. The demons who resided in rivers, streams, and seas were in the main hostile to mankind; they tried to seize men and drag them down into the watery kingdom, and were therefore propitiated with offerings, frequently, indeed, with human sacrifices. Such hostile spirits are known to the various Teutonic peoples by variants of the name *nix* (Germ. *Nix* [masc.] or *Nixe* [fem.], Eng. *nick*, also *nixie*, Norw. *nökk*, Swed. *näkk*). The *nix* was fish-like in the lower half; the upper part, or sometimes the head only, was of human shape. He wore a green garb, and his teeth were also green. He lived with his family at the bottom of rivers and lakes. The female *nixies* were noted for the beautiful singing by which they allured human beings into their toils. They sometimes intermarried with mankind. The male *nix* was occasionally armed with a hook, with which he dragged people under the water; he was accordingly also called *Hakenmann* ('hook-man'). In Denmark the water-spirit is known as *Havmand* ('sea-man,' cf. 'merman,' 'mermaid'); in Sweden as *Strömkarl* ('river-man'), in Norway, the land of waterfalls, we find the *Grim* or *Fossegrim*, as the spirit of waterfalls; in Iceland, the *Skrímsl* ('monster'), *Vatnskrafti* ('water-wraith'), and *Margýgr* ('sea-monster').

The Old Norse mythology gave great prominence to the water-demons *Ægir* and his wife *Rán*. *Ægir*, whose name is connected with Goth. *ahva*, 'water' and Gr. *ἄεας*, was the spirit of the calm still sea—one with whom the gods were on hospitable terms. His consort *Rán*—or *Sjóran*, as she is still designated in Swedish folklore—was of an entirely different nature. She was the man-stealing demon of the sea, a hag who had no heart in her body, and who lay in wait for sailors with her net, or tried to grasp the ship with her arms, and drag it down to the depths. Of similar character were her nine daughters—personifications of the surging billows—who during the storm offered their embraces to the seamen, and, like their mother, pursued the ship. The *Mílgårð-serpent*—the snake-shaped monster which coils itself round the earth—and the Fenris-wolf, which contends with Óðin at the annihilation of the world, as also Grendel and his mother, who lived in swamps by the sea, and at night stole men from the palace of the Danish king, *Hróðgar*, are also frequently included among the sea-demons.

Throughout the entire Teutonic race, as we have seen, there prevailed the belief that all the natural elements were ruled by spirits, and that the good and evil fortunes of human life proceeded from soul-like, or spirit-like, beings, friendly or hostile to man. Demons and spirits caused rain, tempest, and thunderstorm. Demons pursued the sun and the moon, and brought about solar and lunar eclipses. They promoted or hindered the growth of vegetation. Disease and pestilence were their evil work. They hovered around human beings on all the important occasions of life: at birth, when they sought to gain possession of the child; at marriage, when they were specially active in mischief-making; and at death, when they endeavoured to draw the living after the dead. Savage man sought to guard himself against their machinations by all manner of ritual devices, which have left their traces in the manners and customs of the present day. He shot at them, he lit fires, he hung up glittering objects, he uncovered certain parts of the body, he avoided stepping on the threshold under which they lived, and performed endless other actions for the purpose of protecting himself or driving them away. The ideas underlying such practices, thus brought down by the Teutons from the earliest ages, are found to correspond with ideas which prevail among the primitive races of the present day.

DEMONS AND SPIRITS (Tibetan).—The Tibetan lives in an atmosphere charged with malignant demons and spirits; and the great practical attraction of Buddhism for him is that it can protect him, so he is led to believe, against most of these supernatural enemies. Yet it should be remembered that in the higher Hindu civilization of India the ostensible object of the Brahmanical sacrifice was also to chain the demons.

The great majority of the Tibetan demons are of a non-Buddhist character. A considerable proportion of the aboriginal evil spirits have been adjusted by the Lamas to the type of somewhat analogous bloodthirsty demons in the later Tantrik Buddhism of India, and these are to be coerced or propitiated on the lines of the Indian ritual. But the larger number demand the rites of the pre-Buddhist religion to which they belong, namely, the Bon (see TIBET). These spirits are mainly personified natural forces and malignant ghosts, but several are animistic and fetishes, and all are saturated with sacrificial ideas.

The word for 'spirit,' namely *lha*, is that which is adopted for the gods of the Brahmanical and Indian Buddhist pantheon. It is applied generally to those aboriginal gods who are supposed to live in the sky, even though they be unfriendly to man. The demons, or *rDud* (pronounced *düt*), are always evil genii or fiends of an actively malignant type; *Māra* is considered one of them. These indigenous spirits may be broadly divided into the following eight classes:—

(1) Good spirits (*Lha*), mostly male, white in colour, and generally genial, though the war-god (*sGra-lha*) is as fierce and powerful as the greatest fiend. The countryside gods (*Yul-lha*) and the fairy guardians (*Srung-ma*) have been made defenders of Lamaism. (2) Ghosts and goblins (*Tsan*), all male, red in colour. These are usually the vindictive ghosts of discontented disembodied priests. They especially haunt the vicinity of temples. (3) Devils (*bDud*), mostly male, black in colour, and very malignant. The most malignant of all are *Dre* (or *Lha-dre*), male and female, or literally 'father' and 'mother'. They are persecutors of Lamaism, and cannot be properly appeased without the sacrifice of a pig. (4) Planet fiends (*gDon*), piebald in colour; producing diseases. Fifteen great ones are recognized. (5) Bloated fiends (*dMu*), dark purple in colour. (6) Ghouls and vampires (*Srin-po*), raw-flesh-coloured and bloodthirsty. (7) King-fiends (*rGyal-po*), the 'treasure-masters' (*dkor-bdag*), usually white in colour, the spirits of apotheosized heroes. (8) 'Mother' furies (*Ma-mo*), black-coloured she-devils. They are the disease-mistresses (*nad-bdag*), and are sometimes the spouses of certain of the above demons. The twelve *bStan-ma* (pronounced *Tanna*) especially inhabit the snowy ranges.

Many of the above are local genii, fixed to particular localities. Of these the most numerous are the 'earth-owners' (*Sa-bdag*), truly local spirits inhabiting the soil, springs, and lakes, like the *nāgas* of the Hindus. Others more malignant, called *gNan*, and believed to cause pestilential disease, infest certain trees, rocks, and springs, which are avoided in consequence or made into shrines for propitiatory offerings. They are believed by the present writer to represent the spirit of the gigantic wild sheep, the *gNan* or *Ovis ammon*, which, according to early Chinese accounts, was worshipped by the Tibetans, and the horns of which are offered on the cairns at the tops of the passes. At every temple or monastery the local spirit is represented as an idol or fresco within the outer gateway, usually to the right of the door, and worshipped with wine and occasionally with bloody sacrifice; and it is given a more or less honorific name. One of the fiercest of the country fiends is *Pe-kar* (not *Pe-har*, as spelt by some writers), who has been adopted as a special protector of monasteries by the Yellow-hat sect of Lamas. There are also the 'house-god', the ancestral gods, and the personal spirits or familiars, good and bad, of the individual.

The representations of these spirits at their shrines, or on altars, or in their masks at the sacred plays portray them in human form, though some of them may have the head of a beast or bird, and they are pictured by the Tibetan artists as clad in the costume of the country. The local spirits sometimes may be represented by mere sticks and stones.

Living sacrifice is not offered to these spirits nowadays, but the dough effigies of animals which are offered indicate, in the opinion of the present writer, the prevalence of animal sacrifice in pre-Buddhist days. The animals most commonly represented in this way are the dog, sheep, and yak. Actual blood and the brains and flesh of animals slain by butchers in the ordinary way are frequently offered in bowls made out of human skulls, as in Indian Śaivite rites.

Of the special implements used in Tibetan demon-worship an important one is the three-cornered dagger called *pür-pa* or *pür-bu*. This is used by the priests to stab and drive off the demons, or to impale them when it is stuck into the ground. What appears probably to be a Buddhistic variation of this worship is the feast offered in charity to the devils from time to time. The spirits are summoned by the blowing of human thigh-bone trumpets and the beating of skull drums and gongs, and are afterwards dismissed in an imperative way.

The evil spirits of Indian Buddhism bear the following names in Tibetan, the latter being usually the literal etymological translation of the Sanskrit names:

SANSKRIT.	TIBETAN.	SANSKRIT.	TIBETAN.
Preta	Yi-dvag.	Ummāda	sMyo-byed.
Kumbhāṇḍa	sGrul'-bum.	Skanda	sKyen-byed.
Piśācha	Sa-za.	Chhāyā	Grib-gnon.
Bhūta	'Byung-po.	Rākṣa	Srin-po.
Pūtana and	Srul-po (=	Revati-graha	Nam-grui
Katāpūtana	'rotten') and	and Sakuni-graha	gdon and
	Lus Srul-po.		Byai gdon

These, as well as the other deities of Indian Buddhism, are usually represented by Tibetan artists in conventional Indian dress, in contradistinction to the indigenous deities.

L. A. WADDELL.

DÉNÉS.—A most important aboriginal group of tribes north of Mexico. Owing to the great temperamental disparity of its component parts, it affords an excellent field for the study of psychic peculiarities and the gradual development in opposite directions of the mental faculties. Within the bosom of that great American family are to be found extremes in more ways than one. We have the fierce Apaches in the south, and the timid Hares in the north, while the industrious Navahos of Arizona are in as strong contrast to the indolent, unæsthetic Dog-Ribs and Slaves of the Canadian sub-arctic forests. All its tribes, however, are more or less remarkable for their pronounced sense of dependence on the powers of the invisible world. Religious feeling and its outward manifestations pervade their whole lives, though by some careless travellers they have been regarded as destitute of any religion.

The Dénés, also improperly called *Athapascans*, from Lake Athabasca, the habitat of one of their tribes, are divided into Northern, Southern, and Pacific Dénés. The Northern Dénés, whose ranks are now reduced to about 19,390 souls, people the wilds of Canada from the Churchill River, and almost from the Northern Saskatchewan, up to the territory of the Eskimos. In British Columbia, the immense coniferous forests and snow-capped mountains, extending from 51° 30' N. lat. to the northern confines of the Province, and beyond as far as the wastes claimed by the above-mentioned hyperborean aborigines, are also their patrimonial domain. Their best known tribes within that area are the Loucheux (5500 souls) in Alaska, the Yukon Territory, and the lower Mackenzie; the Hares (600), their neighbours in the east; the Slaves (1100), west of Great Slave Lake, from Fort Simpson to Fort Norman; the Dog-Ribs (same population), east of the latter, as far as Back River; the Yellow-Knives (500), a somewhat licentious tribe, to the north-east of Great Slave Lake; the Chipewas (4000) and Caribou-Eaters (1700), the first representatives of the stock in the north who ever came into contact with the whites; the Nahanaïs (1000), on the Stikine and, in the same latitude, east of the Rocky Mountains; and the Carriers (970), who, with the Babines (530) and the Chilcotins (450), constitute the South-western Dénés. The well-known Apaches (6068) and the numerous Navahos (27,365) form the Southern branch of the family (cf. APACHES and NAVAHOES). As to the Pacific Dénés, they consist of unimportant tribes, or remnants of tribes, scattered throughout N. California, Oregon, and Washington. Their present aggregate does not come to more than 900 souls.

When in their original state, the Dénés are eminently a nomadic race of hunters and fishermen. Nowhere, except in British Columbia, have they anything like villages or any elaborate social system. Father-right was primitively, and has remained to a great extent, the fundamental law of their society. The father of a family is con-

sidered its fountain-head, its natural chief, and the controller of the children, who, after marrying, stay with him, unless the mental superiority and better circumstances of another paternal relative claim them for his own followers. They soon form groups of kindred families, over which he presides as patriarch or head of the band. These aggregates are then the social unit, the family not being recognized as such. His power, however, is very limited: directing the movements of the band, giving orders for camping, and, occasionally, very gentle reproof are about the sum-total of his prerogatives. His influence, of course, depends greatly on the number of his suite, and their efficiency as hunters. Hence it is the Dénés' ambition to have as many children as possible, especially of the male sex. Polygamy was in honour among all the tribes. While some unimportant men had but one wife, the majority had two, and the lodges of the chiefs might contain from two to eight. D. W. Harmon ('A General Account of the Indians on the East Side of the Rocky Mountain,' in *Journal of Voyages*, N.Y. ed. 1903, p. 294) cites one who had eleven, with more than forty children, and W. H. Dall (*Travels on the Yukon and in the Yukon Territory*, p. 111) speaks of one who had 'at least eighteen wives.' A few cases of polyandry were also found among the Sékanais, a Rocky Mountain tribe.

Five methods of contracting marriage may be said to have obtained among the Northern Dénés. Marriage by mutual consent was exceedingly rare before the advent of the missionaries. Some such arrangement can, however, be placed to the credit of a few mountain tribes. 'Will you pack my beaver-snare?' the dusky youth would ask of the object of his choice. A hesitating 'Perhaps' would seal her fate, and, without further ado, the couple would thenceforth become man and wife. Wooing the bride's parents, that is, working for them and endeavouring by every possible good office to become acceptable to them, was proper to the South-western Dénés (cf. CARRIER-INDIANS). The most common gateway to sexual intercourse east of the Rockies was wrestling. Two young men would publicly wrestle for the possession of a maiden, and the same took place in connexion with any married woman as well. No husband could ever consider himself secure in the company of his wife, as he was liable to see her any day snatched away from him by a stronger man. So much so, indeed, that S. Hearne, the first author to give us any satisfactory account of the eastern tribes, asserts (*A Journey from Prince of Wales's Fort to the Northern Ocean*, p. 104) that 'a weak man . . . is seldom permitted to keep a wife that a stronger man thinks worth his notice.' He adds that some professional wrestlers 'make almost a livelihood by taking what they please from the weaker parties, without making them any return' (ib. 105). A fourth way of contracting marriage was even more suggestive of savagery. A man would simply seize by the hair and drag to his tent the object of his passion. Finally, occasions were not wanting when women were bought as so many chattels, and cases are also on record when the same object of traffic was later ravished by wrestling from her quondam purchaser, the unfortunate creature being thus a passive party to transactions whereby she was 'married' according to the two different methods obtaining in her tribe.

From this it will be inferred how exceedingly low was the position that the woman occupied in primitive society. She was merely a drudge, the factotum of the household, a slave to her husband, buffeted even by her own male children, fond of them though she invariably was. Her fate was more satisfactory among the Navahos; and, by reason of the rank to which she might occasion-

ally succeed, among the South-western Dénés, life was also accidentally made bearable for her, though in private life most of the menial work of the family still fell to her lot. It goes without saying that, with such loose systems governing the relations of the sexes, divorce followed in many cases as a matter of course, especially when the union had not been cemented by the birth of any children.

Indiscriminate as these matrimonial affairs apparently were, blood-relationship was always a bar thereto. But among the tribes who had adopted mother-right as their law controlling succession to rank and property, agnates were not recognized as relatives. A child hardly cared for his father, and took no notice whatever of his kindred through the male line. Hence first cousins on the father's side were considered strangers to one another, and as such very generally intermarried. On the other hand, even very distant relatives on the maternal side still call themselves brothers and sisters, as the case may be. This applies also to the members of the same clan, wherever this social organization prevails. Primatively, all marriages were strictly exogamous, the gentile tie being considered even more binding than blood-relationship. In the case of widows, the prescriptions of the levirate were scrupulously obeyed by all the tribes, and they had to marry the surviving brother of their late husband.

The dread which a woman in her catamenial periods, or immediately after parturition, inspired in a man can hardly be exaggerated. Such a creature was—indeed, continues to be—regarded as the very incarnation of evil. As soon as the first symptoms of that momentous change in the female organism appeared, the maiden was until a late date, and is still in many tribes, sequestered from the company of her fellow-Dénés. A little hut was built for her on the outskirts of the village, or some distance from the tepees of the migrating party, where she dwelt until her menses were well over, away from the gaze of the public, and visited only by some female relative, who brought her, in small birch bark vessels which nobody else could touch, the meagre fare of dried fish and water which custom prescribed for her, to the exclusion of any nourishing food, especially that derived from any large animal freshly killed. So portentous of evil was her condition deemed, that all contact, however indirect, with the living creation was denied her. Hence eating, while in her impure state, of the flesh of any game was reputed to entail a deliberate insult to all the representatives of the same species, which would infallibly take their revenge by keeping away from the traps or arrows of her relatives. She could not follow in the trail of her male companions for fear of incapacitating them for the chase; she must abstain from bathing or washing her feet in lakes or rivers, lest she should cause the death of the fish they contained. Hearne goes even so far as to say that in his time (1782) 'women in this situation are never permitted to walk on the ice of rivers or lakes, or near the part where the men are hunting beaver, or where a fish-net is set, for fear of averting their success' (*op. cit.* 315).

On her return from the hut of her first menstruation, the maiden wore, during the following three or four years, a kind of veil made of the strands of a long fringe ornamented with beads, passing over her face and resting on her breast. This Hearne supposed to be 'a mark of modesty' (p. 314). It served the same purposes as the *prætexta* of the Romans and the long outer garment of the Jewish virgins mentioned by Josephus (*Ant.* vii. viii. 1), being a badge of puberty and a sort of public notice that the wearer was marriageable. To this was added a bone tube to drink with and a two-

pronged comb to scratch her head, thereby avoiding immediate contact between her head and her fingers.

So deleterious were believed to be the emanations from the menstruating woman, that the tabu of which she was the object extended even to the contact with any weapon, or implement, designed for the capture of animals. Captain G. Back records the 'consternation' and hasty flight of a poor woman who had unwittingly trodden on her husband's gun—an offence which the explorer declares (*Narr. of the Arctic Land Expedition to the Mouth of the Great Fish River*, p. 124) did not usually meet with any lighter punishment than 'a slit nose or a bit cut off the ears.' The same legal uncleanness attached to a new mother, and a like sequestration followed, which was then protracted to a month or five weeks after child-birth. During that period the father would not, as a rule, see his child.

Speaking of legal uncleanness, we must not forget to mention that some such state was also supposed to be consequent on the shedding of human blood. Hearne relates that, after his Déné companions had massacred over twenty inoffensive Eskimos, all those immediately concerned in the affair considered themselves debarred from cooking either for themselves or for others. Before every meal they painted their upper lips and the greater part of the cheeks with red ochre. They would not drink out of any other dish or use any other pipe than their own, nor would those who had had no hand in the massacre touch the murderer's dish or pipe. This, as well as the abstaining from many parts of the game they ate, was regularly followed for an entire season, after which 'the men, without a female being present, made a fire at some distance from the tents, into which they threw all their ornaments, pipe-stems, and dishes, which were soon consumed to ashes; after which a feast was prepared, consisting of such articles as they had long been prohibited from eating; and, when all was over, each man was at liberty to eat, drink, and smoke as they pleased; and also to kiss their wives and children at discretion,' which they had previously been forbidden to do (*op. cit.* 206).

Much married as the Dénés usually were, they regarded continence as essential for success in certain undertakings. No hunter would ever dream of leaving for any important trapping expedition who had not first separated a *toro* from his wives for quite an extended period. Did he succeed in capturing a beaver or a bear, he would carefully see to it that no dog—an unclean animal—should be permitted to touch any of its bones. The skull and molars, especially, were reputed sacred, and were invariably stuck up on the branches of a tree or, more commonly, on the forked end of a tent-pole. The fear lest an unclean animal—dog, fox, or wolf—might profane the same by contact therewith was the reason prompting those precautions. Should such a dreadful contingency occur, the hunter immediately desisted from exerting himself in any way, being firmly persuaded that all his efforts towards trapping any game of the same species would prove futile.

To understand these superstitions and most of those relating to menstruating women, we must remember that, in the Déné cosmogony, all the present entities of Nature were originally endowed with human-like faculties. Even trees spoke and fought, and the fowls of the air and the animals of the earth were men like ourselves, though distinguished by potent faculties which we do not possess. These wonderful powers, though now somewhat attenuated, are supposed still to exist in the brute creation. A share of them possessed by a few privileged individuals constitutes what we call

magic. This is the connecting link between man and beast, and also the means whereby one may commune with the world of spirits, and by whose aid a person is enabled to succeed in his quest after happiness and the necessities of life. Hence the sympathy or antipathy which may exist between hunter and hunted, according to the way in which the former treats the latter. The language of the best Christianized Déné has retained to this day unequivocal traces of these zootheistic ideas. If unsuccessful in his hunt after game, the modern Déné will not say: 'I had bad luck with this or that animal,' but: 'Bears or beavers,' as the case may be, 'did not want me.' The spirits, which have their seats in the various parts of the universe and are co-existent with them, are good or bad, or rather noxious or friendly to man. The evil spirits, on the occasion of breaches of the moral law, or the neglect of the traditional observances, attack man and dwell in him, causing thereby madness, fits, and other nervous disorders, disease, and death. The kindly spirits manifest themselves to him during his sleep, or suddenly in the woods or elsewhere, under the shape of the particular entity—animal, sun, celestial phenomenon, etc.—with which they are so intimately connected that to the Indian mind mundane being and indwelling power are almost one and the same. This manifestation is a token of their wish to act towards him as protecting genii, in return for some consideration shown to their present concretized forms or symbols. These are the personal totems (*manitous*), the only ones known to the unadulterated Dénés (cf. TOTEMISM). The adopted party will thenceforth show his regard for his protector by not suffering the particular being in which it resides to be lightly treated or abused in any way; by exposing in his lodge its spoils (if an animal, or its symbol, if a heavenly orb, etc.), or carrying on his person a reminder of it in the shape of its tail, a feather flowing from his head-dress, etc. In times of need the Déné will secretly invoke the aid of his *manitou*, saying: 'May you do this or that to me!' Before an assault on his enemies, or previous to his hunt, he will daub its symbol in red ochre on his bow and arrows, or sing out in its honour a rude chant consisting of a single phrase repeated *ad infinitum*. Magic and song, in the mind of the American native, have a most intimate correlation, and few important attempts to influence the spirits one way or another are unaccompanied by loud chanting and the noisy beating of drums. Should his appeal for help be heard, he will give expression to his gratitude by burning, or throwing into the water, any piece of property on hand, goods or clothing, or in later times tobacco.

In the North this was the only kind of sacrifice known to the Dénés. At times it took a propitiatory or rogatory character, being intended to obtain favours or avert calamities. The personified elements, especially wind with the tribes dwelling on the banks of the large Northern lakes, were the most common beneficiaries of such offerings, unless we add thereto another class of spirits, which have some resemblance to the *genii locorum* of the Romans. These were believed to haunt places prominent for some natural peculiarity—the steepness of a hill, the magnitude or striking appearance of a rock, etc. It was usual for any wayfarer passing by such spots to offer a stone to the spirit or its materialized form. A custom similar to this can be traced to the wastes of Tartary (cf. *Huc Souvenirs d'un voyage dans la Tartarie*, Paris, 1850, i. 25 f.), and the Déné practice may even be compared with the prayer-machines set up on some mountain-tops in far-away Tibet.

Instead of quietly revealing itself in a dream or a vision, the *manitou* occasionally prostrated the

Déné to the extent of depriving him of his senses. In such accidents the bystanders would never recognize a mere cataleptic fit. They would insist that the mind of the smitten individual had been attracted by some powerful spirit, with which it was communing. To them any kind of fainting malady was much the same as epilepsy to the Romans. It was a *morbus sacer*, denoting mysterious influences. Swooning is still called by the Carriers *ne-kha-uthézet*, or the attack of a spirit. When loud chanting, enhanced by louder beating of drums, had succeeded in breaking the spell, the soul of the patient was supposed to return from the spirit world, and he was looked upon with a veneration bordering on awe. Henceforth he was regarded as possessed of the mysterious powers over Nature, and the spirits controlling it, which we call magic, and his ministrations were resorted to whenever it was a question of counteracting the influence of the evil spirits which cause disease and public calamities. In a word, he was a regular shaman, and the religious system of which he had become the chief representative was the shamanism of the north-eastern Asiatic races in almost all its purity (cf. SHAMANISM). Among the Navahos of the South this is still at the base of the religious edifice; but commiscegenation with alien stocks and the influence of environment have notably modified it by the addition of rites and elaborate ceremonies based on the remembrance of the many adventures of their culture heroes (cf. NAVAHO).

The functions of the shaman will be found fully explained in the article SHAMANISM. Suffice it to say here that they were seven-fold among the Northern Dénés. Shamanistic conjuring with that particular American race was curative, preventive, inquisitive, malefic, operative, prestidigitative, or prophetic. A rôle which was perhaps proper to the profession in the North was that of father-confessor. Auricular confession of personal delinquencies to him who might be represented as the nearest aboriginal equivalent of a priest—though he could not strictly be called by such a name for the lack of any regular sacrifice or cult—was one of the religious institutions of the primeval forests of northern Canada. Of the shaman among the Western Dénés, Harmon wrote as early as 1820:

'When the Carriers are very sick, they often think that they shall not recover unless they divulge to a priest or magician every crime which they may have committed, which has hitherto been kept secret. In such a case, they will make a full confession, and then they expect that their lives will be spared for a time longer. But should they keep back a single crime, they as fully believe that they shall suffer instant death' ('An Account of the Indians living West of the Rocky Mountain,' in *Journal of Voyages*, N.Y. ed. 1903, p. 256f.).

The present writer had recorded the same custom long before he saw the old trader's volume. On the other hand, in the course of his *Trad. ind. du Canada nord-ouest*, p. 418f., E. Petitot gives a Chippewa (Eastern) text furnished him in 1863 by an old shaman of Great Slave Lake, of which the following is a partial translation:

'The man who is sick as a consequence of his sins . . . sits by the shaman, to whom he confesses his misdeeds. The shaman asks him many a question, reprimands him in order to draw out the sins he conceals. . . . Finally, the patient having confessed everything, the shaman brings down on him the Far-off Spirit, his own familiar, which, entering into the sick man, takes away his sins, whereupon disease immediately leaves him.'

The greatest importance was attached to dreams. It was through the medium of dreams that most of their communications with the invisible world took place, and to this day the Dénés consider dreaming as a token of occult powers over Nature and man. For this reason they are loth to wake up any sleeping person, as he or she may just be enjoying a dream, that is, communing with the spirits. Anybody talking in his sleep is *solens volens* regarded as a great sorcerer or shaman.

Though the spirits are much more in evidence than any other hidden power in the Déné theogony, they were not without the notion of a Supreme Being governing the world and punishing the wicked. In the West, the nature of this ruling principle was not very clear, though it was generally recognized as the great controller of the celestial forces—wind, rain, and snow. Thunder they still firmly believe to be a gigantic bird of the eagle genus, the winking of whose eyelids produces lightning, while the detonations are due to the flapping of its wings. That this Deity was, indeed, paramount and personal in the estimation of those Indians is made evident by the usual formula of their oaths. *Yuttare setit' sá*: 'That-which-is-on-high hearth me,' and *Yuttare nakh adosni*: 'I say it in presence of That-which-is-on-high' (the Celestial Power), are forms used by the old Carriers to this day. The new generation has another name for the Supreme Being, based on more adequate knowledge due to the missionaries.

The majority of the North American Indians attribute the work of creation to a prodigious hero, of a human nature, but exceedingly powerful, generally more or less tricky and not too scrupulous, whose many deeds and miraculous adventures furnish the subject-matter of endless tales. This is the culture hero of the Americanists, the *Estas* of the Western Dénés, who borrowed his personality from the N. Pacific coast tribes, and the *Yimantüwñiyai*, 'the One who is lost across the ocean,' of the Hupas, the principal tribe of the Pacific group of Dénés. But the Eastern Dénés know of a God who is Creator as well as Ruler of the universe. He is, however, less spiritualized with them than the chief Deity of their Western kin, since they lend him human attributes. *Inkfuim-wetay*, 'He that sits on the zenith,' is the name by which the Hare Indians know him, and, according to Petitot, that tribe makes him trine: father, mother, and son. The father is in the zenith, the mother in the nadir, and the son travels incessantly from the one to the other. The father by his mere volition made the earth and all it contains, after which he lit the celestial orbs, the sun and the moon—most of the stars and constellations were originally inhabitants of our own globe—at the prayer of his son, who, having perceived the earth during one of his voyages, sang out: 'O my Father who sitest on high, do light the heavenly fire, for on that small island (the earth) my brothers-in-law (men) have been wretched for a long time' (Petitot, *Monographie des Déné-Dindjé*, p. xxiii).

Most of the tribes have also a tradition pointing to the extinction of mankind by water, with the exception of the Wise One, among the Eastern Dénés, or *Estas*, the chief legendary hero of the Western tribes. In the legends relating these events the musk-rat and the beaver, two animals famous for their nimbleness and skill, are said to have been instrumental in reconstructing the earth, after it had been destroyed through the submersion of its highest mountains.

The sacredness of the number seven among the Jews is a matter of common knowledge. That number is among the majority of the American aborigines replaced by four; but both seven and four yield in sacredness to the number two in the legends and traditions of the Western Déné tribes.

By the side of, and in opposition to, the Supreme Being of the nation is, according to Petitot, a counterpart of our devil in the theogony of the North-eastern tribes. If we are to believe that author, the knowledge of such an entity preceded the advent of the missionaries, and it was called 'the Bad One,' 'the Forsaken One,' 'He that passed through heaven,' etc., according to the

various localities. The older Carriers call him to-day by the first-mentioned name; but the present writer is inclined to believe that they owe this notion to intercourse with the whites.

No tribe worshipped the Deity in any way; no cult of any kind, sacred dances or public prayers, obtained in the North. The only dance whose object was not mere recreation took place in connexion with an eclipse (cf. *PRODIGES AND PORTENTS* [Amer.]). But in the South the Navahos have elaborate rites and know of public praying, though their requests are addressed more to the personified elements and their culture-heroes, or semi-deified ancestors, than to any Supreme Deity.

As to man, he is believed to be made up of a perishable body and a transformable, and therefore surviving, soul—if this be the proper word for an element which is perhaps as much the effect as the cause of life. The name given it by most tribes literally means in the West 'warmth.' Yet it is to-day used to designate the principle of life, while the Eastern Dénés have for the soul animating the body words varying according to the dialects, though almost all of them are the counterparts of the Lat. *spiritus*. Analogous terms serve in the West to express not the vital principle, but the outward sign of life, breath, and, by extension, life itself.

Besides this principle, or physical condition, there is *na-teen*, man's shadow, usually called 'second self.' This is a reflexion of the individual personality, invisible in time of good health, because then confined within its normal seat, the body, but which on the approach of sickness and death wanders out of its home, and roams about, seldom seen but often heard. Its absence from its proper corporeal seat, if too prolonged, infallibly results in death.

Finally, *na-sul* in the Déné psychology may be said to represent the soul or surviving principle after death. Strictly speaking, the word refers to the impalpable, dematerialized remnants of one's individuality, or a transformed self adapted to the conditions of the next world. That world is very generally believed to be situated underground, and watered by a large river, in which the shades catch small fry for their subsistence, visiting their nets in double canoes—a craft otherwise unknown in N. America. Their condition there seems to be unequal, inasmuch as those who have not received the last funeral rites according to the customs of their tribes are constantly wandering, fed on mice, toads, festuses, and squirrels, or even cast into the waters of the big river instead of being ferried across, while others are reported to be playing on the grass, or dancing to the tune of a song, the main burden of which is the words *thé'ga t'sethine*, 'we sleep separated from one another,' i.e. 'there is no more any matrimonial union between us.'

Metempsychosis was strongly believed in by the Eastern Dénés. Petitot writes in his *Monographie des Dénés-Dendjé*, p. xxx:

'I have been unable to eradicate from the mind of a certain girl the persuasion that, before her birth, she had lived under a name and with features unknown to me, nor could I prevent an old woman from claiming the child of her neighbour, under the pretext that she recognized in him the migrated soul of her own late son. I am personally acquainted with several such cases.'

The art. CARRIER INDIANS makes it clear that such notions were not confined to the East. Yet, we must add that the Western Dénés now seem to have entirely discarded them, while the beliefs connected with menstruating women, the spirits, and shamanism still lurk in the minds of many, and are openly professed by a few. With others they are at best obsolescent. This re-incarnation of the soul did not always result in a mere exchange of bodies of a similar kind. The author just quoted further says that he has known a poor mother who was lamenting because an old shaman had assured

her that she had seen her dead son walking by the shore of the lake under the form of a bear. He adds: 'It is seldom that we see any man of influence die without hearing soon after his former companions claim that they have seen him metamorphosed into a bipedal caribou, a bear, or an elk.'

The original mode of disposing of dead bodies in the North seems to have been by enclosing them within rough cratings made of small logs crossed at the ends, which were raised from 3 ft. to 7 ft. above ground on stout poles or posts. Any object which might have belonged to the deceased either accompanied him in his final retreat or was cast into the water, burnt, or hidden in the branches of trees. Sometimes the remains were concealed within trees hollowed out for the purpose, or naturally hollow through age and decay; but in the East it was much more usual simply to abandon them where they fell. They were never buried, except among the Chilcotins, a South-western tribe, while their neighbours, the Carriers and the Babines, cremated them, after the custom of the coast Indians.

Such were the Dénés when first met by the whites. The Apaches were the first representatives of the nation to make the acquaintance of the pale-faced strangers, in the persons of the Spaniards of Mexico. In the North, their first contact with our civilization occurred in the vicinity of Hudson Bay, where the Fur Trading Company named after that inland sea established posts, from one of which Arthur Dobbs wrote in 1744 the earliest printed reference to the race which has come to the present writer's knowledge. In 1771-72, Samuel Hearne, one of the traders, reached the Arctic Ocean in the company of a large band of Eastern Dénés, who then perpetrated the unprovoked massacre of Eskimos already mentioned. Then came Alex. Mackenzie, who, in 1789, descended the noble stream now known under his name, and in 1793 penetrated as far west as the Pacific Ocean, always accompanied by a few Northern Dénés, who did not succeed in securing him a peaceful reception at the hands of all the new Déné tribes. About 1811, the Yellow-Knives repeated on the poor Eskimos the exploit of Hearne's companions, killing some thirty of them near the mouth of the Coppermine River, and two years later a party of Rocky Mountains Dénés, acting under provocation, destroyed Fort Nelson, on the Liard River, and murdered its inmates. Ten years thereafter (1823), the Dog-Ribs and Hares, long oppressed by the Yellow-Knives, fell upon them unawares and cut off a large number of them. Then came the visits of the Arctic explorers, Sir John Franklin, Captain G. Back, and Dr. King, Thomas Simpson, Sir John Richardson, etc. The dates attached to their respective works in the following bibliography are safe indications of the epochs of their travels among the Dénés.

Finally, we have the missionaries. The Catholics reached Isle-à-la-Crosse in 1846, Lake Athabasca in 1847, Great Slave Lake in 1852, Peace River in 1858, and the Lower Mackenzie in 1859. Father Petitot, a prolific ethnographer, was the first minister of the gospel to visit Great Bear Lake, which he did for the first time in the course of 1866. The missionaries were almost everywhere well received, and readily made numerous proselytes: 1859 saw the establishment of the first Protestant mission at Fort Simpson, on the Mackenzie, after which outposts were started among the Loucheux Indians west of the Rocky Mountains. To-day, practically the entire nation in the North is Christian, about nine-tenths having adopted the Catholic faith, and the remainder the Protestant.

See HUPAS and NAVAHOES for Central and Southern Athapascans.

DEOGARH.—(Skr. *deva-gaḍa*, 'fort of the gods').—A town in the Santāl Parganas of Bengal, lat. 24° 30' N., long. 86° 42' E., containing the famous temple of Baidyanāth (Skr. *vaiḍya-nātha*, 'lord of physicians,' an epithet of Śiva). By a folk etymology the place is connected with one Baijū, a member of a Dravidian tribe, who by one account was a Gwālā, or cowherd, by caste. It is said that he was so disgusted with the laziness and indifference of the Brahman priests of the shrine, that he vowed that he would daily, as evidence of his contempt for them, strike the image of the god with his club. One day, as he perpetrated this insult, the idol spoke and blessed him because he, though not a worshipper, had resented the carelessness of his priests. When asked to claim a boon from the god, Baijū prayed that he might be known as Nātha, 'lord,' and that the temple should be called after his name. The request was granted, and the shrine has since been known as that of Baijānāth.

It has been suggested without any valid reason that the legend implies some connexion between the present cultus and the rites of the Dravidian tribes. According to the Hindu legend, the selection of the site was due to the demon Rāvapa, king of Laṅkā or Ceylon, who in the epic of the Rāmāyana is the ravisher of Sītā, wife of Rāma. It is said that he got possession of a famous *lingam* of Śiva to aid him in his fight with Rāma, and on his way south halted to purify himself at the site of Deogarh. Finding no water, he dashed his fist into the ground and formed the existing Śiva-gaṅgā lake. But, when the *lingam* was set down, seeing the place to be fair, it refused to move further with Rāvapa, and has been there ever since, known by the name of Mahādeva Rāvapa-devāra, 'lord Rāvapa.' The same story is told to account for the position of many other sacred images in India (Cunningham, *Archaeological Survey Reports*, viii. 143 ff.; Oppert, *Original Inhabitants of Bharatavarsa*, 1893, pp. 137, 375).

The early history of the shrine is obscure. When the British occupied the country, they tried, but with ill-success, to manage the endowments and collect the offerings of pilgrims. Finally it was made over to the present priests, who are known as *ojhā* (Skr. *upādhyāya*, 'teacher'). In front of the temple is a remarkable structure, consisting of two massive monoliths supporting a third stone of similar shape and size. It is known as the Swinging Platform (*ḍolā-māncā*), and was possibly originally used in the rite of swinging the idol. The chief temple is that of Śiva, and close by is a later shrine of his spouse, Gaurī, 'the yellow or brilliant one,' which is joined to that of her consort by festoons of gaudy-coloured cloth, thus typifying the union of the god and the goddess. At the back of the god's temple is a verandah in which supplicants for his favours—recovery from

disease, the blessing of children, and so on—make their vigils. With the usual catholicity of modern Hinduism, the chief shrines are surrounded by those of the lesser gods—Rāma and Lakṣmaṇa representing Viṣṇu in this Śaiva atmosphere; Śūraj Nārāyaṇ, the sun-god; Sarasvatī, goddess of learning; Manasā, the snake-goddess; Hanumān, the monkey-god; Kālā Bhairava, god of destruction; and Annapūrnā, 'she who gives wealth in grain.' But all these shrines bear marks of neglect. To illustrate the fusion of Islām with Hinduism, Gait (*Census Report Bengal*, 1901, i. 176) remarks that 'Muhammadans are often seen to carry sacred water to the shrine of Baidyanāth, and, as they may not enter the shrine, pour it as a libation on the outside verandah.'

DEONTOLOGY.—*Deontology* is the science of ethics. The term seems to have been used first by Jeremy Bentham. Apparently he wished to distinguish by it between duty and the principles of morals and legislation—which is the subject of an earlier work, dealing with the principles that men had to assume in their relations to each other. In deontology he evidently had in mind the principles of duty as distinct from those of prudence and interest. The work by this name, however, was posthumous, and was incomplete before his death. The term has not come into general usage. It serves, however, the purpose of distinguishing clearly between the science of mere custom and the science of obligation. The one studies actual practices; the other tries to ascertain the actions which ought to be performed as distinguished from those that may actually be done.

JAMES H. HYSLOP.

DEOPRAYĀG (Skr. *deva-prayāga*, 'the divine place of sacrifice').—A village in the Garhwāl District of the United Provinces of India, situated in lat. 30° 10' N., long. 78° 37' E., at the confluence of the rivers Alaknandā (q.v.) and Bhāgirathī. Below the village the streams now united take the name of Ganges (q.v.), and this is regarded as one of the five sacred places of pilgrimage on the way to the higher Himalāyan peaks. The principal temple is dedicated to Rāmāchandra. It is built of large blocks of cut stone piled on each other, bulging in the middle and decreasing rapidly towards the summit, which is surmounted by a white cupola. Over all is a square sloping roof, composed of plates of copper, crowned above with a golden ball and spire. The image of the god, about six feet high, carved in black stone, but painted red except the face, is seated opposite the door, and under the eastern portion of the cupola. Before the idol is a brazen image of Gaṇa, the mythical vulture, half man, half bird, on which Viṣṇu rides. The chief rite at this holy place is ablution, which takes place at the sacred confluence of the two rivers, in basins excavated in the rock at a level a little lower than the surface of the current, which is here so rapid as to sweep away any person daring to bathe in it.

LITERATURE.—Atkinson, *Himalayan Gazetteer*, iii. [1886] 190 ff. W. CROOKE.

DEPRAVITY.—See HOLINESS AND SIN.

DERVISH (*darwish*).—A Pers. word signifying 'mendicant' (corresponding with *bhikṣu*, the name borne by the Brahman in the fourth stage of his existence), applied, in Persian and Turkish and thence in European languages, to the ascetics of Islām, whose Arab. name is *zāhid*, which appears to mean originally 'satisfied with a little,' in ac-

sordance with the usage of this phrase in the Qur'ān (xii. 20). Its connotation does not appear to differ from that of *ṣūfī* (q.v.), 'wearer of wool,' a term applied by the early Islamic writer Jāhiz († A.H. 255 [= A.D. 868], *Ḥayawān*, i. 103) both to those Muslim ascetics and to Christian monks, who, in order to indulge their laziness, pretend to disapprove of labour and wage-earning, and make their mendicancy a means of obtaining the reverence of their fellows. Most Muslims, indeed, take a less cynical view of the ascetic, who is supposed to abandon his possessions before taking to the mendicant life, in the belief that they stand between him and the attainment of the higher life. And, though many dervishes are mendicants, this is by no means the case with all; the bulk of the members of Orders belong to the labouring and trading classes. In Arab. literature the name first occurs (in the form *daryūsh*) as the epithet of one Khālīd, who in the year A.H. 201 (= A.D. 816) endeavoured to organize the citizens of Baghdad for the suppression of anarchy. In Pers. literature of the 5th and 6th cents., and even later, the dervish is a holy man who has overcome the world; and in S. Arabia it is said to be used in the sense of *shaikh* as a term of dignity. In general, we may distinguish between *ṣūfī* and dervish as between theory and practice; the former holds a certain philosophical doctrine, the latter practises a particular form of life. The latter is called in some countries by the Arab. name *faḡīr*, 'poor man' (plur. *fuḡarā*); to those who are members of associations the name *khwān*, for *ikhwān* ('brethren'), is sometimes applied.

The practice of asceticism, and the wearing of wool in indication of it, are, of course, as early as the time of Muhammad, and far earlier; according to the most authentic accounts, the Prophet himself gave little encouragement to asceticism, which rarely suits the plans of statesmen and warriors. But the notion of religious exercises in addition to those prescribed by the ordinary ritual, culminating in ecstasy, meets us early in the history of Islam; and with this went theories of states and stages in the religious life which belong to the subject of Sūfism.

It is not till the 6th cent. of Islam that we hear of actual Orders of ascetics; attempts which are made to trace them further back are mythological. In the 6th cent., however, they commenced, and in the 7th they are familiar. The unity of an Order is constituted by a special form of devotion, whereby its members endeavour to induce what spiritualists call 'the superior condition'; it usually consists in the repetition of religious formulae, especially the first article of the Muslim creed, and each Order has its *dhikr*, as this process is called; other religious exercises of the same sort bear the titles *wird* and *hizb*.

The first founder of an Order is supposed to have been 'Abd al-Qādir (q.v.) of Jīlān, who died A.H. 561 (= A.D. 1166); but that founded by Aḥmad al-Rifā'i, who died A.H. 578 (= A.D. 1182), was nearly contemporaneous. Of both these persons we possess biographies, and, indeed, in the case of the former a series of works, chiefly homiletic in character. In general, the founders of Orders are historical personages; some have left works, and in other cases there are authoritative treatises, revealing the mysteries of the Order, though, perhaps, in most cases these can only be acquired through oral instruction, and by persons who have undergone probation.

The founding of Orders has gone on steadily since the 6th cent. of Islam; and their enumeration is no easy matter, since it is difficult to distinguish between independent and branch Orders. Von Hammer enumerated 36, of which 12 were

supposed to have existed before the rise of the Ottoman empire, and 24 to have sprung up after that event; the former number includes some that are mythical, whereas the latter is too small. The most interesting, in some ways, is the Bektashi Order, which appears to be a syncretism of Islam with Christianity, and which (according to G. Jacob, who has made a special study of it) retains many vestiges of Christian doctrines and rites. Next after this comes the Nakshabandi, which is wide-spread; the Maulawiyah, Rifā'iyyah, and 'Isawiyah also play important rôles, while some political importance is ascribed to the Malāmiyyah. In certain provinces of the Ottoman empire there is a shaikh *al-turuq*, or head of the Orders, who is responsible to the Government for their conduct.

The acts which enter into the life of the member of an Order are in part disciplinary, in part devotional. The devotional acts take the form of a service, called *ḥadrah*, which with certain communities is daily, with others weekly; probably the form which it most commonly takes is that of the repetition of formulae, especially *la ilāha illa 'llahu*, a vast number of times with various differences of intonation, occasionally to the sound of music; elaborate rules are given in some of the books belonging to the Orders, regulating the bodily motions which should accompany the production of each syllable. *Ḥadrahs* familiar to visitors to the Nearer East are those of the Maulawī dervishes in Pera, who move in circles to the accompaniment of music; of the Rifā'i dervishes in Scutari, who, first sitting, and then standing on their right and left feet alternately, and bending sideways, repeat the formula of the Unity. The same may be seen in Cairo. At the service of the Jahriyyah dervishes in Tashkent, visited by Schuyler (*Turkistan*, New York, 1876, i. 158-161), the repetition of the formulae was accompanied by a violent movement of the head over the left shoulder towards the heart, then back, then to the right shoulder, then down, as if directing all movements to the heart. Indeed, the directions in the books of the sects imply the use of the heart in pronouncing the formula of the Unity, though the process seems scarcely intelligible. In most of the performances the motions gradually accelerate as they proceed, and different forms of ecstasy have a tendency to be produced.

Besides these services, various forms of discipline are prescribed to neophytes in many of the Orders. One of these is 'solitude,' *khalwah*, a discipline of the Khalwatīs, who are called thereafter, and who are ordered to recite long prayers in complete solitude, for which cells are provided in the monasteries (called *takiyyah*, or *zāwiyah*). With the Maulawīs the aspirant has, it is said, to serve 1001 days in the kitchen of the Order. With some other Orders the discipline consists, like the devotion, in trials of the power to recite the formula of the Unity a vast number of times with the least expenditure of breath, and promotion is made dependent on the attainment of a certain standard in this matter.

The members of the Orders are also distinguished by certain peculiarities in their attire, whether in shape, substance, or colour. Great importance is attached to the head-gear, and the number of *tark*, or gores, of which it is composed. This word in Arabic signifies 'abandoning,' and the number is said to symbolize the number of worldly vanities abandoned by the dervish. Some Orders wear gaiters; some carry stones in their belts, said to signify hunger; the Maulawīs are distinguished by a wide skirt (worn at their services) called *tannūr*, 'oven,' indicative of the oven of misfortune whence the head has been withdrawn.

'The sheikhs of the Orders wear robes of green or white cloth; and any of those who in winter line them with fur use that kind

called *petit gris* and *zibeline marten*. Few dervishes use cloth for their dress. Black or white felt called *abâ*, such as is made in some of the cities of Anatolia, is most usual. . . . Generally all the dervishes allow their beards and mustachios to grow. Some of the Orders still wear long hair' (J. P. Brown, *The Dervishes*, p. 214).

On the tombs of some of them are mystic signs.

In general, the dervishes are credited with mystic powers, and as early as the 7th cent. of Islam we are informed of various wonders which the Rifâ'is could perform: they could eat living serpents and go into burning furnaces, of which they extinguished the fire. Some of their wonders seem to have puzzled Lane, the author of *Modern Egyptians* (London, 1846). Oman, in his work on the Muslims of India (*Brahmans, Theists, and Muslims of India*, London, 1907, p. 323 ff.), describes a fire-bath undergone by a Sayyid, trusting to the power of Husain; he had apparently taken care to drench his feet with water before walking over the coals, but those who attempted to do it, not knowing how, were severely burned. Other travellers who have witnessed these miracles can often give an explanation: the serpents with which the Isawis play have their venom removed; similarly, in the ceremony of the *Doseh*, practised by the Egyptian Sa'dis, whose shaikh rode over the backs of the devotees, it appears that the horse had been carefully trained, and it was arranged that he should step nowhere where serious injury could result. It is, of course, possible that in some of these cases there is no conscious imposture, and hypnotism accounts for anything that is wonderful; but in many places the holy man appears to be a low form of conjurer. The biographies of the founders of the Orders have a tendency to embody many manifestations of supernatural power; but it is probable that, like those admitted into the lives of Christian saints, they are thought to be edifying rather than historical.

The Orders of dervishes seem at an early period to have acquired a definite form of organization, of which the nucleus is the *zâwiyah*, or 'retreat'; such a place is usually built by or for the founder of the Order, and is inherited by his successors, who in most cases are his actual heirs. As the Order spreads, other *zâwiyahs* are erected, which, however, maintain a filial relation to the parent institution; i.e. the presidents of the former are appointed from the latter. The name *shaikh* is properly applied exclusively to the founder of the Order; his successors are *khalîfs*, i.e. 'substitutes'; it was on this principle that the successor of the Sudanese Mahdi was known in Europe as the Khalif. The non-official members of the Order are called 'disciples' (*ṭalabâh* or *murîdîn*). The head of a dependent *zâwiyah* is called *mûqaddam*; the revenues are in charge of a trustee, or *wakîl*.

Membership of an Order does not necessarily interfere with the normal duties of life; the dervishes of Egypt are said to belong mainly to the class of small shopkeepers. The performances are thought, however, by some observers to have a tendency to produce insanity, or, at any rate, nervous affections. Begging is in theory forbidden by some Orders, but is usually permitted, and certain dervishes carry a bowl or wallet for the purpose.

French writers hold that the underlying idea of most of the Orders is the reclamation of the Islamic world, and the eventual expulsion of Europeans at least from Asia and Africa; whereas another suggestion, which is perhaps nearer the truth, is that they are all in origin revivalist, not so much with the object of injuring Europeans as with that of increasing the faith of Muslims. Some systematic classifications of the Orders we owe to a number of French writers, partly employed by the French Government to investigate this important element in their African possessions.

DESCARTES.—1. Life and writings.—René Descartes was born on 31st March 1596. It seems to be well established, in spite of rival claims, that the place of his birth was La Haye, in Touraine, not far from Poitiers. At eight years of age he was sent to the famous College of La Flèche, recently established by the Jesuit fathers and endowed by King Henry IV. The eight years passed at La Flèche had a profound influence on Descartes' future life, and he always spoke of his instructors with the deepest gratitude. After leaving school, young Descartes, who was provided with a moderate competency from his father, proceeded to travel, though he first of all spent some time in Paris, where he found his lifelong friend Père Mersenne, who had been seven years his senior at La Flèche. On the commencement of the Thirty Years' War, Descartes volunteered for service with Prince Maurice of Nassau, then in Holland. But, while serving as an unpaid soldier, he did not lay aside his studies, and, indeed, at this time wrote certain fragmentary works, most of which are lost, such as *Reflexions* entitled *Cogitationes Private*—discovered comparatively lately in the Library at Hanover. Amongst these early works may also be mentioned the *Compendium Musicae*, which was not intended for publication, but was brought to light after its author's death. Of those enumerated in an inventory found after Descartes' death are: (1) *Some Considerations on the Sciences*; (2) a paper on *Algebra*; (3) reflexions called *Democritica*; (4) observations entitled *Experimenta*; (5) a treatise begun under the name of *Præambula: Initium sapientiæ timor Domini*; and (6) another called *Olympica*. Descartes' biographer, Baillet, who wrote very soon after his death, mentions yet another work entitled *Studium Bonæ Mentis*, which was addressed to a friend,—very probably Mersenne,—and which was largely biographical. In the *Cogitationes* he tells of his 'conversion' in the year 1619, when with the army in its winter quarters at Neuberg, on the Danube. Smitten with remorse for sins committed, he resolved to follow after the ways of Truth, and also to make a pilgrimage to the shrine of Our Lady of Loretto.

Descartes, on quitting Maurice's army, volunteered to serve with Maximilian, Duke of Bavaria, and chief of the great Catholic League, in his warfare with Frederick, the Elector Palatine, who had been crowned at Prague in 1619. But, as far as we can judge, the young soldier was much more occupied with his speculations than with the profession which he had taken up. Indeed, it seems very doubtful whether he actually fought at the battle of Prague, which decided the Elector Frederick's fortunes. With the Elector his children fled, and, curiously enough, one of them was Elizabeth, just four years old, Descartes' future correspondent and friend. During these exciting years the events took place which are so well described in the biographical portion of the *Method*, where Descartes tells of the mental struggle through which he passed in making up his mind as to the course he was to pursue in his future life. It was at this time that he decided to sweep away the opinions which up to that time he had embraced, so that he

'might afterwards be in a position to admit either others more correct, or even perhaps the same when they had undergone the scrutiny of Reason.' 'I firmly believed,' he said, 'that in this way I should much better succeed in the conduct of my life, than if I built only upon old foundations, and leant upon principles which in my youth I had taken on trust.'

After the battle of Prague, Descartes joined the Bavarian army once more; but it was not long before he gave up military service and started upon his travels. After nine years' absence he returned to Paris, where he was accused of favouring the secret society known as the Rosicrucians. Descartes' father put him in possession of the property to which he was entitled, and he found himself in consequence in easy circumstances. He started off on further travels almost at once, and made his way to Switzerland and then to Italy, where he redeemed his promise of making a pilgrimage to Loretto. On his return journey he made scientific investigations in regard to the height of Mont Cenis. Once more he returned to Paris; and he is said to have set aside a former inclination for the gaming table, and applied himself to serious reflection. Finally, he decided to settle in Holland, where he believed peace and quiet as well as liberty of conscience were to be had.

In 1636, Descartes determined at last to publish, and the book known as *The Method of rightly conducting the Reason and seeking Truth in the Sciences* appeared, along with the *Dioptric, Meteors, and Geometry*, termed 'Essays in this Method.' It was written in French, unlike many others of his recent treatises, in order that it might be read by any of his countrymen who chose to do so. Its conclusions had long been cogitated, and they express the mature result arrived at by one who desired to know not only *what*, but also *why*, he believed. It is a simple and sincere record of personal experience, a 'Pilgrim's Progress' of the human soul. It was not the first important book written by Descartes. Of extant treatises we have the *Regulæ ad directionem ingenii*, written almost certainly during his earlier life, but left incomplete, and also a treatise called *Le Monde*, which was never published; but the *Method* has a place possessed by no other of Descartes' works in the estimation of posterity.

Descartes' next work was almost equally famous, *Meditations on the First Philosophy*. The *Meditations* is a study of Truth in its highest aspect. It is not, like the *Method*, a charming biography and philosophy of life: it is a more profound study of the facts of existence, and an exposition of Descartes' system in all its fullness. In this book he deals with the great question of Philosophic Doubt that was always in his mind, and discusses its relationship to true Knowledge. He asked for criticism, and found plenty of opposition to his views. There were in all seven formal 'Objections' collected from men distinguished in their several lines, and these 'Objections' were dealt with *seriatim* by the author.

The first 'Objection' was by Caterus, a Dutch theologian and an appreciative reader, who represented the standpoint of the Church; the second and sixth were collected from various sources, and represent the point of view of 'common sense'; the third is by Hobbes. By him, as by Gassendi, the fifth objector, we have the materialistic or 'sensational' standpoint clearly set forth, and in his reply Descartes gives an interesting exposition of the Cartesian idealism, which he opposes to that doctrine. Arnold, the fourth author of 'Objections,' on the other hand, is by no means so hostile as Hobbes and Gassendi, and to him Descartes replies with snavity and consideration. He is simply concerned about the application of Cartesian principles to the doctrines of theology and morality. His sympathies are with St. Augustine, and he holds that we must believe what we cannot know. The last 'Objections,' by the Jesuit father Bourdin, are too elaborate for us in these days to follow with interest. The 'Objections and Replies' are, however, deserving of perusal, since they present very clearly the difficulties that occur in accepting Descartes' doctrine, and the arguments that may be used in their defence.

The next treatise written by Descartes was the *Principles of Philosophy*, published in Latin in the year 1644. In this book its author enunciates the same doctrines that he set forth in the *Method* and the *Meditations*. He praises his mistress Philosophy in no stinted terms. 'Philosophy is like a

tree of which Metaphysics is the root, Physics the trunk, and all the other sciences the branches that grow out of the trunk.' But, having once more established his ground-work, he goes on to deal with the general principles of Physics, with the nature of body, the laws of motion, the phenomena of the heavens, and all pertaining thereto. He sets forth his theory of vortices, discusses the Ptolemaic and Copernican systems, and that other which he more or less favoured, the system of Tycho Brahe. He also discusses the nature of springs, tides, etc., and believes that the principles of geometry and mechanics are shown to be capable of supplying a satisfactory key to all the phenomena of Nature, and that no other principles can take their place. Descartes' theory of vortices is especially interesting. He represents the whole of the planetary system as being carried round the sun in a sort of vortex, while the various satellites of other planets move in lesser vortices within this vortex; the earth is in a sense at rest, as a man might be at rest who is in a boat. But, while expounding this possible doctrine, the writer shows the extremest caution, and guards himself against the suspicion of unorthodoxy by pointing out that he is merely describing what might be termed a 'working theory' of the world.

It must not, however, be thought that Descartes was merely a theorizer, to the neglect of practical experiments. In Amsterdam he frequently visited the butchers' shops to find material for his investigations in anatomy, and physical experiments were constantly being made by him. One notable example of the latter is to be found in the famous experiments made upon the barometric principle, on the mountain Puy-de-Dôme in Auvergne, which were carried out by Pascal and his brother-in-law Perier, but which, it seems clear, had been suggested by Descartes.

Descartes had many controversies during his residence in Holland, most of them with Protestant divines. In Utrecht, Voetius, Rector of the University, was a keen antagonist, and Regius, or Le Roy, was first of all a supporter and then an opponent. Descartes was ever ready to enter upon these controversies, but his quarrels sometimes ended happily. 'There is nothing in life sweeter than peace,' he is reported to have said; 'hatred can be useful to none; I should not refuse the friendship even of Voetius if I believed it to be offered in good faith.' A dispute with Fermat, the mathematician, was a famous one, and it was carried on by his followers after Descartes' death.

There was little romance in the philosopher's life. He was never married, though he had a child to whom he was devoted, and who died young. He had, however, a great friendship, which lasted from the year 1640, with the Princess Elizabeth, known as the 'Queen of Hearts,' daughter of Frederick, Elector Palatine, and Elizabeth, daughter of James II. of England. Princess Elizabeth was then living at The Hague, where her parents held a miniature exile court with their lively family of boys and girls. Descartes' letters to the young Princess are serious in tone, and nearly all are on philosophic questions, to which Elizabeth applied her mind with the greatest strenuousness, and to good effect, for her questions are put and her criticisms are made with great discrimination and understanding. The correspondence is very interesting to students of Cartesianism.

Another friendship formed by Descartes in later life was with Queen Christina of Sweden, the daughter of the great Gustavus; and it was she who caused him to travel to Sweden, where he met his death. In 1648, Descartes had visited his native land for the last time. He was pressed to go, but when he arrived he found Paris wholly occupied with the political agitation of the Fronde; and all he could say of those who invited him was that he 'would regard them as friends who had bidden him to dine with them, and when he arrived he found their kitchen in disorder and their saucapans upset.' When Queen Christina's invitation to Sweden arrived through the French Ambassador Chanut, Descartes' inclination was to refuse it, lest misfortune should befall him in this expedition also. However, Queen Christina was very pressing, and Descartes' admiration for her was unbounded, so that at length he consented to take the long journey. First of all, however, he had to see that his latest book, the *Passions of the Soul*, which was written to prove that all the

various psychological manifestations may be rationally explained by purely mechanical causes, was safely placed for publication in Elzevir's hands. Then he left the 'dear solitude of Egmont' for his new home. But his days in Stockholm were destined to be short. The exigent young Queen was not only occupied in endeavouring to establish an Academy of which she intended to make Descartes director, but she also desired to be instructed in philosophy at five o'clock in the morning, and Descartes was in the habit of meditating in bed until late in the day. The result was what might have been anticipated in a bitterly cold climate. He fell ill of an inflammation of the lungs after nursing his friend Chanut through the same illness, and he died on 11th February 1650, at the age of fifty-four. He was buried at Stockholm, but later on, in 1666, his body was removed with considerable difficulty to Paris and laid in the church of Ste. Geneviève du Mont. In 1819 the remains were removed to the church of St. Germain-des-Près, where they now are. Descartes died in the faith of his forefathers, but it was not long before serious suspicion fell upon his teaching, and his works were placed upon the Index. Cler-seller, his friend and one of the translators of his works, who after Descartes' death wrote a panegyric on his virtues, records that amongst his last words were these: 'My soul, thou hast long been held captive; the hour has now come for thee to quit thy prison, to leave the trammels of this body; suffer then this separation with joy and courage.'

In addition to the works mentioned above, there was published after his death an unfinished work entitled *La Recherche de la vérité par la lumière de la nature*, an interesting dialogue upon Cartesian principles between three friends in a country house. Another very short work is his *Notæ in Programma*, which was written in refutation of his opponent Regius (Le Roy).

2. *System of philosophy.*—It is true in more than a traditional sense that Descartes is the father of Modern Philosophy, for in him the modern spirit came into existence. His was an age when men were confronted with the new conception of Nature and of man, and were led to new methods of investigation. The great upheaval which we call the Reformation brought about a form of individualism which ended in a reaction against the new standards—judged to be as arbitrary as the old. But the real work of the Reformation had already been brought about in Protestant and in Roman Catholic alike. Man learned to be himself, and was no longer restrained by artificial bonds. The spirit of investigation was everywhere, all phenomena of Nature were of interest, and all men tried to obtain exact knowledge, and thereby to strengthen their powers of originality and self-reliance. The 17th century—the century in which Descartes lived—was the period in which science became a reality, and in which the scientific spirit became the spirit of the land. Historically, too, it was a time of turmoil and change. A career of bloodshed on the part of the House of Valois had been ended by the assassination of Henry III., and on the accession of Henry IV. religious warfare was brought to a conclusion: his death was an inexpressible loss to the French nation.

Descartes' work in the midst of this time of unrest and ferment was that of a great systematizer. He took all those new ideas that had come into being and endeavoured to bring them into a definite, concrete, and comprehensible system. In rejecting the old dogmas of the Schools, the New Learning came to provide something better able to satisfy the inquiring mind; it brought with it certainty of its own results. The world had become of infinite importance and interest, and it was necessary that the knowledge of it, and also the knowledge of man, should be certain and definite. The problem, then, that Descartes had to deal with was how to work out a system which should reconcile two sides, now come into prominence—the spiritual and the physical, the soul and the body, the point of view of orthodoxy and the point of view of science; and it is because this is a modern question which is before us even in the present day that the Cartesian philosophy is a modern philosophy. Descartes' attempt to bring about this reconciliation was the first of many on

similar lines. His object was to arrive at certainty—a certainty which he believed could be reached only by following definite rules laid down by his *Method*, and by beginning with the Doubt which is the absolute essential before any successful quest after Truth is made—'de omnibus dubitandum est,' as he expresses it. This doubt must be applied to all those inherited traditions and beliefs which form, to his mind, a mass of incongruous opinions; we must ruthlessly reject what cannot be justified to ourselves as truth; we must free ourselves from all prejudice and uncertainty. And yet this philosophic doubt is in nowise scepticism, but the doubt that precedes true knowledge.

Descartes' system of philosophy was thus, above all, a method, and the interesting thing about this method is that it presented itself to him as his life-history might. The order of his experiences was simply the order of his method writ large. This is what makes the immortal little book called by the name of the *Method* a masterpiece of spiritual biography, as an account of moral and mental development, as it is also a masterpiece of direct and simple style. It was in his quiet room, in that cold winter with the army on the Danube, that Descartes first awoke to the fact that man is not to seek happiness here or there, for it is only to be found within him. The world and he, the spirit and the body, mind and matter, are really one. Traditions, hypotheses, assumptions of all kinds should go, and we must build again from the foundation. This may sound easy, but nothing is more difficult, and in Descartes' opinion there are only a few who should undertake the task, and those who do so must be modest and ready to accept with humility what is given them. He then states certain rules to be followed—rules which simply make for accuracy and thoroughness of thought: 'Do not accept what is not clearly known, divide your difficulties into parts so far as possible, work your way up from the easy to the more complicated—above all, omit nothing.' Such rules would seem to be rules of common sense, but they mean an accuracy of method such as no immediately preceding philosophic thinkers had dreamed of as necessary.

Knowing at last what his method of science must be, Descartes boldly attacks the great question of the foundation on which thought is based. On what does all this reasoning rest? It rests on the knowledge of self. One proposition alone cannot be doubted by man, and that is that he exists, inferred from the fact that he possesses consciousness—*Cogito ergo sum*, as he puts it in his immortal phrase. Descartes saw clearly that in order to think he must exist. His philosophy turned on the fact of his personal existence. The senses may indeed mislead us, and we cannot place absolute confidence in what has even sometimes deceived us; but, however much I may have been deceived, the fact remains that I am—I as a thinking being.

'I had the persuasion that there was absolutely nothing in the world, that there was no sky, no earth, neither minds, nor bodies; was I not, therefore, at the same time persuaded that I did not exist? Far from it; I assuredly existed, since I was persuaded. But there is I know not what being, who is possessed at once of the highest power and the deepest cunning, who is constantly employing all his ingenuity in deceiving me. Doubtless, then, I exist, since I am deceived, and let him deceive me as he may, he can never bring it about that I am nothing, so long as I shall be conscious that I am something.'

This is clearly a great step forward; it signifies that a new phase in philosophy has been entered on, a change of front as great as the Kantian transformation of a later date, which in a measure it foreshadows. 'I think' is present in all our ideas and even in doubt itself. We are brought back from the external and unrelated facts of consciousness to the basis of Truth on which all

other truth is founded. We have arrived at the conception of thought as the groundwork of all knowledge. Further on in the *Meditations* he says that in thought is found that which properly belongs to the self.

'This is alone inseparable from me. I am—I exist; this is certain; but how often? As often as I think; for perhaps it would even happen, if I should wholly cease to think, that I should at the same time cease to be. I now admit nothing that is not necessarily true; I am, therefore, precisely speaking, only a thinking being, that is, a mind understanding a reason—terms whose signification was before unknown to me.'

In this we have a firm foundation on which we can build, setting aside the old disputations of the Schools as to 'substances' and 'qualities.' Understanding or reason is for the first time made the basis in a philosophic comprehension of the world as it presents itself to us. Descartes says that the outside world is not perceived in its true signification by the senses or imagination, but by the mind alone.

'They [outside things] are not perceived,' he says, 'because they are seen and touched, but only because they are understood,' that is, rightly comprehended by thought. 'I readily discover,' he goes on, 'that there is nothing more clearly apprehended than my own mind.'

Having got so far, he goes on to apply his method; he shows how, when the mind is cleared of all preconceived notions and prejudices, what is known must be known clearly and distinctly. This signifies that we must now apply ourselves to making our knowledge absolutely certain, so that we may be sure that we are ascertaining what is truth.

'I am certain that I am a thinking thing, but do I not therefore know what is required to render me certain of a truth? In the first knowledge there is nothing that gives me assurance of its truth except the clear and distinct perception of what I affirm, which would not indeed be sufficient to give me assurance that what I say is true, if it could ever happen that anything I thus clearly and distinctly perceived should prove false, and, accordingly, it seems to me that I may now take as a general rule, that all that is very clearly and distinctly apprehended is true.'

With the attitude of doubt the so-called secondary qualities, dependent as they are on the relations of one object to another and to the sentient subject, are naturally first brought under the ban of criticism. These qualities do not appear to be fixed in any object. What remains secure is, however, what possesses the two attributes of extension and capacity of motion; and hence Descartes appeals to the truths of the mathematical sciences. Even they, however, might be false; some malevolent being may be all the while deceiving us in what we accept as truth. Hence we must reject even these apparent truths and fall back upon our own minds. Here again we find modes of consciousness in feeling, willing, imagining, etc., 'so that I must also abstract from these and concentrate upon myself as I am, without borrowing in any way from elsewhere.' In this way we reach Descartes' thinking substance, which, as he points out, is present and is affirmed, even as it denies or doubts; and on the other hand we have the external object as extension.

Descartes maintains that amongst the ideas that are clear and distinct we must recognize that of God as a Perfect Being of whom we have a clear and distinct conception. The idea of God cannot, he says, be derived from our limited existence; its origin must be in one who contains all in Himself. From the idea of perfection he infers the existence of it in God as its originator. The idea of perfection involves existence; and this is the so-called ontological argument which is so frequently brought forward by later philosophers. But, if such a God exists, we have a guarantee that we cannot be deceived, for such a perfect Being could not deceive us, and therefore we may accept the teaching of our consciousness. The errors of the atheists—no small class at the time, if Mersenne is to be believed—are by Descartes said to be due to their

anthropological ways of looking at God, and to their forgetting the fact that, while men's minds are finite, God is infinite.

It is thus evident that Descartes considered that in his essence man is a thinking and unextended being who has a clear and distinct idea of body as an extended and unthinking thing, and thus that man as mind is absolutely distinct from body, and may exist without it. It is this dualistic conception of mind and body that constitutes the difficulty in forming any adequate conception of the universe according to Cartesian principles. The question arises as to how we can possibly reconcile the two sides—the outside world, or extension, as Descartes called it, on the one hand, and intelligence, or Thought, on the other—for the qualities of the object are reduced to bare extension, and those of the subject to bare thought. As a matter of fact, Descartes introduced this new view of the outside world as extended, that is, as that which occupies space and has length, breadth, and depth; and it was to this extension that he applied the mathematical reasoning for which his name is famous. And confronting it we have the Intelligence, Thought, or Reason which apprehends this external matter. This is also a profound philosophic conception. But the difficulty comes when we try to explain how the one side acts upon the other. We have before us two entities, one of which is passive and inert, and yet is acted on by a unifying intelligence endowing it with those relationships which make it comprehensible by us; while, on the other hand, we have the mind, which is wholly immaterial and spiritual. How is the transference effected from the natural to the spiritual? How does the physical action convey anything to the perceiving mind? Doubtless there was in Descartes' mind a solution of the difficulty. He would have considered that there is a unity to be found in thought; but, if this is so, the idea is by no means clearly worked out. Indeed we have but intimations of it which are only comprehended in the light of later developments in thought. The mind is conscious of the infinite as having in it more reality than the finite substance.

'Our consciousness of God is prior to our consciousness of self. For how could we doubt or desire, how could we be conscious that anything is wanting to us, and that we are not altogether perfect, if we had not in ourselves the idea of a Perfect Being in comparison with whom we recognize the defects of our nature?'

Though there is no doubt that Descartes' system was a dualistic one, the progress made by him in his search after truth was immense. He took knowledge as the one great and important fact, and sought out its elements as best he could. He played a notable part in the great discovery which meant so much in his age, that the world is governed by law. It has been said of him that 'he established liberty of mind and sovereignty of reason.' In his writings he brought the whole of Nature within the reign of law, and showed how both the starry heavens and the earth beneath are governed by the same inevitable physical law. He showed also how such views are consistent with a philosophic outlook. Perhaps one of his greatest claims to our gratitude rests on his work in Mathematics (see below), that is to say, not in his well-known discoveries in Geometry and in the development of the application of Algebra to the solution of Geometrical problems, important as these might be, but, in the large sense of the term, in his scientific work; for Mathematics in those days included all the immense amount of work done in the direction of Physics, Astronomy, Optics, Physiology, and the other branches of science. Descartes was not an investigator of the type of the present day—a patient observer of a mass of phenomena from whose careful examination

some results might be deduced. He had his theories well defined before he began his work, and laid them down in what we should consider a dogmatic fashion. But, this granted, he applied himself to examine man in all his aspects. In Physiology, for instance, he forms his theory, and then enunciates it, explaining how the human body might be and might act. A great deal—indeed most—of what he tells us about the physiology of the body, though very interesting and in a degree enlightening, is not correct in the view of later investigation. But then Descartes has the credit of maintaining the theory of the body as a machine, a very complicated machine of course, but one which acts as a machine. He narrated what he knew to be true about the machine, and also what he considered was probably true, and formed the whole into a system which was perfectly clear and intelligible to those who had only the facts presented before them. In our view, many of these 'facts,' both physical and physiological, are to the last degree absurd, but still it was better to have a comprehensible theory such as he gives than nothing at all. That is to say, it was better to have a principle capable of verification or subsequent alteration than to remain in the confusion of the theories of the day. He pictured a physical world in which everything was explained—springs, rivers, mines, metals, seas—sometimes explaining facts that were not facts at all. He also pictured, in his works *de Homine* and *La Formation du fœtus*, a wonderful machine-man carrying on all the processes of digestion, circulation, growth, sleep, etc., and endowed with sense-perception and ideas, memories and passions, just as though it were a complicated clock. To him to know the beginning of things, and the laws that govern action, was to know the whole, for the operation of physical law, once set in motion, can clearly explain the rest. This same principle is to be found in the most advanced theories of the day, as Huxley, in writing on the automatism of animals, tells us. Huxley declares that Descartes' physiology, like the modern physiology of which it anticipates the spirit, leads straight to materialism. On the other hand, by the fact that it is based on conscious thought, it is as true to say that it leads us directly to the idealism of Berkeley and Kant. As a matter of fact, we see, by the way in which the Cartesian philosophy developed, that, if in the one direction it made for a materialistic system, in the other it brought about the conclusion that all the knowledge we can have is a knowledge of our states of consciousness. But the first step taken was that represented by the pantheism of Spinoza. The Infinite alone is affirmative, the finite only is in so far as it is not; and so we are led on to the denial of the finite, and then the absolute unity swallows up all difference in itself.

In his last published treatise, the *Passions de l'âme*, Descartes shows how the various psychological manifestations may be explained by purely mechanical means. He sets forth there the differences between soul and body; thought pertains to soul, and heat to body. The soul cannot give heat to the body, or we should not have death: a dead man, in Descartes' view, is just a broken watch. After explaining how this wonderful machine, when wound up, acts, he considers the thought pertaining to the soul, i.e. the actions of our will which directly proceed from and depend on it, and the passions which are the various kinds of perception found in us. 'The soul from its seat in the gland in the middle of the brain spreads abroad throughout the body by means of the spirits, nerves, and even blood, which, fast, participating in the impressions of the spirits, can carry them by the arteries into all the members.'

If the image which is unified in the gland inspires fear, and has relation to what has formerly been hurtful to the body, the passion of fear is aroused, and then the passions of courage and the reverse, according to the temperament of the body, or strength of the soul. Passions are thus caused by the movement of the 'spirits,' and bring with them certain movements of the body. The will, however, unlike the passions, is always free; the action or will of the soul can only be indirectly affected by the body, while the passions depend absolutely on the actions which bring them about, and are only indirectly affected by the soul, excepting when it is itself their cause. The soul, however feeble, may indeed obtain absolute power over the passions, although with difficulty. The reason may give us a just appreciation of the value of good and evil, and our good judgment regarding them enables us to resist the influence of our passions. 'If we clearly saw that what we are doing is wrong,' he says in the same book, 'it would be impossible for us to sin, so long as we saw it in that light.' Will and intellect must be united in the perfect man, as they are united in God. Here also we are met with the unexplained difficulty as to the action of mind on matter. How the movement of the passions can be altered by reason is a question which is not answered.

[3. Services to Mathematics.—From the time of the Greeks until that of Descartes, practically no new results had been obtained in Geometry, though Algebra had been greatly advanced, notably by Cardan and Vieta. Descartes made great progress in Algebra, and gave new life to Geometry by the introduction of the powerful analytical method.

Descartes was not the first to realize that a curve might be defined as the locus of a point whose distances from two given straight lines are connected by some known law, but he was the first to see that the points in a plane are completely determined by their co-ordinates and conversely. This was largely due to the introduction of negative co-ordinates. As a necessary consequence, he saw that several curves might be drawn with the same axes, and their intersection found algebraically. After this, their tangents were easily determined, though Descartes' own method was indirect, and applicable only to curves with an axis of symmetry. On this axis he found the centre of a circle touching the curve at any given point, and then found the tangent to the circle at the point of contact. He defines the tangent as the limiting position of the secant.

Descartes classifies curves according to the relation of the velocities of the lines moving parallel to the axes, by whose intersection he conceives the curves as generated. If these velocities are 'commensurable' (i.e. if y is an algebraical function of x as in conics), the curve is 'geometrical'; if not (as in the cycloid), it is 'mechanical.' This is roughly equivalent to the Newtonian division into algebraic and transcendental curves. In order further to classify the 'geometrical' curves he discusses a problem, due to Pappus, which may roughly be enunciated as follows: 'To find the locus of a point the product of whose perpendiculars on m straight lines is proportional to that on n others.' Where $m=n-1$ we have a straight line, where $m=3$, $n=1$, a parabola. This was known to the ancients, who had also conjectured that $m=n-2$ gave a conic. Descartes classed curves where neither m nor n exceeds 2 as of the first genre; where neither exceeds 4, as of the second genre, and so on. Thus one genre corresponds to two of our degrees. He also discussed curves which are the loci of a point whose distances from the fixed points are interdependent, in particular the Cartesian ovals, where the product of the distances is constant.

The foregoing work is found in the first two books of the *Geométrie*; the third book is algebraic. It is important as introducing our modern index-notation, and the use of the last letters of the alphabet for variables (Vieta had used the vowels), and the first for constants. Descartes also used negative quantities and indeterminate co-efficients freely, and was the first to realize the advantage of taking all the terms of an equation to one side. The book is mainly occupied with the theory of equations. It shows how to construct an equation with given roots, to determine from the signs of the co-efficient a limit to the number of positive and negative roots, to increase or multiply the roots of a given equation by a given quantity, to eliminate its second term, and so on. It is proved that the number of roots of an equation is equal to its degree. Solutions of cubic and quartic equations are given, and Descartes believed that his method could be extended to those of higher degrees.

Descartes' Mechanics is largely inaccurate, but very suggestive, being the first systematic account of the universe on mathematical principles. Of his ten Laws of Motion the first

two correspond to Newton's first Law, while the other eight are incorrect. But, by his recognition of the mutual independence of the resolved velocities of a moving particle, he rendered invaluable service to Dynamics.

His work is throughout characterized by great originality and boldness of thought. It is generally in a condensed form, and meant rather to be suggestive than rigidly logical, but it is none the less important as the foundation of all modern Mathematics.—J. B. S. HALDANE.]

LITERATURE.—The tercentenary of Descartes' birth was celebrated at the Sorbonne on 31st March 1896, and in the beginning of the following year arrangements were made for issuing a new edition of his works under the direction of Charles Adam and Paul Tannery (Léopold Cerf). This admirable work is now completed, though not in the lifetime of Tannery. In it we have, as far as possible, a complete edition of Descartes' works in the form in which they were written, and with his invaluable correspondence carefully edited and arranged. The final volume is a biography by M. Adam, *Descartes, sa vie et ses œuvres*, 1910. The early editions of the collected works were two Latin texts—one by Elzevir in 9 vols., Amsterdam, 1713, another published in 7 vols. at Frankfurt, 1697. Then there is Cousin's Fr. ed. in 11 vols., Paris, 1824-26. This includes the correspondence. The main source of our information about Descartes' life comes from the *Vie de Descartes*, written by Baillet in 1691 in two large vols.; of this a short abridgment was made, and issued in English in 1692. A modern life of Descartes (*Descartes, his Life and Times*) was published, London, 1905, by Elizabeth S. Haldane. Foucher de Careil published various manuscripts which he discovered in the Library at Hanover. The *Method, Meditations*, and part of the *Principles* were translated into English by J. Veitch, London, 1879, and an Eng. ed. of Descartes' Philosophical Works by E. S. Haldane and G. R. T. Ross has been issued (1911) by the Cambridge University Press.

The literature on Descartes and Cartesianism is enormous; the following works may be mentioned: J. Millet, *Hist. de Descartes avant 1637*, and *depuis 1637*, Paris, 1867-1870; F. Bouillier, *Hist. de la philos. cartés.*, Paris, 1864; A. Foucher de Careil, *Descartes et la princesse Palatine*, Paris, 1862; also *Descartes, la princesse Elisabeth et la reine Christine*, Paris, 1879; J. P. Mahaffy, *Descartes*, in Blackwood's Philosophical Classics, 1880; N. Smith, *Studies in Cartesian Philosophy*, London, 1903; Alfred Fouillée, *Descartes*, Paris, 1903; Louis Liard, *Descartes*, Paris, 1882; see also the various *Histories of Philosophy*, such as that of Kuno Fischer (Eng. tr., London, 1887); E. Caird, art. 'Cartesianism,' in *EBR*; J. Iverach, *Descartes, Spinoza, and the New Philosophy*, Edin. 1904; Huxley deals with Descartes' teaching in his *Lay Sermons*, London, 1877, and elsewhere. E. S. HALDANE.

DESCENT TO HADES (Ethnic).—1. Introductory.—Myths or legends of visits paid by mortals or immortals to the under world for some definite purpose are of common occurrence, and some are of remote origin. They are intimately connected with primitive and savage man's ideas of death and of the dead, joined to his affection for those who have been severed from him by death.

Before a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man saw—in dreams, in trances, or in hallucinations—the dead, and believed that they had come to him, or that his spirit had gone forth to join them for a time. So, when a separate land of the dead became an article of primitive belief, men believed that they visited that land in dreams or trances, or those who had been given up for dead but had revived told how they had been to the Other-world and had been permitted to return and resume their earthly life. Preconceived notions of the nature and scenery of that world coloured such dreams, but these in turn gave support or added to current ideas regarding it. There was nothing improbable in such dream or trance visits, since the nature of death is never really comprehended by savages, and the division between life and death is slight, universal folk-belief telling of the restoration to life of the dead or dismembered (see *CF*, chs. iii. iv.).¹

But, in considering the origin of mythic descents to Hades, primitive and savage affection for the dead must also be taken into account. Generally the savage fears the dead or their spirits, but in individual cases affection often overcomes fear,

¹ Cf. also the myths of Attis, Zagreus, Osiris, etc.

and gives rise to the wish to see and commune with them. Hence it also influences the dreams of the living. And, the division between life and death being slight to the primitive mind, while it was also believed that the soul of the dying or recently dead could be recalled, affection would easily suggest that, if men could go in dreams to the Other-world, they might go there in their waking state to rescue the dead. From possibility to fact, from the 'might be' to the 'had been,' was an easy step to the primitive mind. Thus accounts of visions of the Other-world easily passed into tales of visits there, because in dreams the savage believes not merely that he is a passive witness, but that his soul is projected from his body and actually goes to the place of which he has a vision. Stories of actual journeys to Hades to bring back a dead wife, lover, or friend were perfectly credible, because generally the entrance to it was well known or had a local situation, though the road was often difficult and dangerous.

Examples of such ways or entrances are copious in Polynesian and Melanesian belief, and there are also W. African, Eskimo, and Ainu instances. In Italy and Greece there were many local entrances to Hades—some of them the scene of mythical descents. Medieval Christianity also knew several entrances to purgatory or hell, e.g. volcanoes like Etna (cf. *Tert. de Penit.* 12); the cave in an island of Lough Dearg in Ireland, known as St. Patrick's Purgatory; the 'vale perilous' in the kingdom of Prester John, etc.; and the belief is found in Brittany, where it is thought that hell can be reached by a journey (Le Braz, *Légende de la mort*, Paris, 1902, i. pp. xxx, xxxix). Cf. also local entrances to a subterranean fairy-land.

Dream or trance visits were probably the first subjects of story or myth,¹ but they must soon have been succeeded by tales of actual descent. Other motives besides the rescuing of, or speaking to, the dead (doubtless suggested by these) are found—to seek a boon, or to satisfy curiosity—while in some of the higher religions the object occasionally is to enlighten the dead or to free them from torment. In early times, as in actual savage life, there must have been many stories of visits to Hades by named, but more frequently by unnamed, heroes or heroines. But, with the advance of religious ideas, the stories were usually told of semi-divine heroes or divinities, as many examples show (see below). All such stories and myths of descent are paralleled by similar tales of ascent to a heavenly region (see BLEST, *ABODE OF THE [Primitive and Savage]*, § 8; Hartland, *Science of Fairy Tales*, 1891, p. 224 f.; Scott, *Demon. and Witchcraft*, ed. 1898, p. 29; Görres, *Die christl. Mystik*, 1842, bk. v. ch. 5).

Tylor (li. 43) maintains that descent to Hades was suggested to 'the ancient myth-maker, who watched the sun descend to the dark under world, and return at dawn to the land of living men.' But, though this natural phenomenon may have coloured later myths, it was rather man's dream experiences which suggested the tales. Some writers connect the myths of *Lilith* and *Tammuz*, of *Dionysos* and *Semele*, of *Orpheus* and *Eurydice*, with the myth and ritual of the death and revival of a divinity of vegetation, fertility, etc., and find their origin in these. J. E. Harrison (*Prolegomena to Study of Greek Religion*, Camb. 1903, p. 603) says: 'Anyone who realizes Orpheus [whom she regards as a historical personage] at all would feel that the intrusion of desperate emotion puts him out of key. Semele, the green earth, comes up from below, year by year; with her comes her son Dionysos, and by a certain instinct of chivalry men said he had gone to fetch her. The mantle of Dionysos descends on Orpheus' (cf. also *CGS* li. 861; Tiele, *Actes du VIII^e Congrès intern. des Orient.* li. 1. 495). This is to reverse the order of things. Precisely similar tales are told elsewhere of personages in no way connected with vegetation, while *Eurydice*, unlike *Semele*, does not rise again. Such tales doubtless existed in Babylonia and Greece, and they would easily become part of, and give precise form to, the myths of vegetation-divinities who were thought to die and come to life again. But it is certain that the latter belief did not originate the tales themselves. For another theory connecting them with supposed death and renewal in rites of initiation, see Van Gennep, *Les Rites de passage*, Paris, 1909, p. 131.

2. Dream or trance visits.—Cataplexy and trance are hardly distinguishable by the savage from death. Hence those who revive from them are

¹ In Jewish and Christian legend both Hades and Heaven are often visited or seen in vision.

thought to have died and come to life again; and, in many cases, their minds being haunted by the current ideas of Hades, they relate as actual visits of the soul there what has been experienced in dream (Tylor, ii. 43). Such trance visits of the apparently dead are also known at higher levels, where detailed stories of the visit—all greatly alike—are told (Plato, *Rep.* x.; Pliny, *HN* vii. 52; Aston, *Shinto*, 1905, p. 181; Scherman, *Gesch. der ind. Visionslitt.*, Leipzig, 1892, p. 91 ff.; Aug. de *Cura pro mortuis*, 12; Greg. the Great, *Dial.* iv. 36). Or the dream experiences may occur in ordinary sleep, or accompany the hallucinations of illness. In some cases they have assumed the stereotyped form of a folk-tale. A Maori woman told, on returning to consciousness, how her spirit descended to *Reinga*, the place of the dead, exactly like this world. Her father's spirit commanded her to return and look after her child, and to beware of eating the food of *Reinga*. She was pursued, on leaving, by two spirits, but escaped them by throwing down a root which they stayed to eat. Then her spirit rejoined her body (Shortland, *Trad. and Sup. of the N. Zealanders*, 1856, p. 150; for another tale see his *Maori Rel. and Myth.*, 1882, p. 45). In a story from the Hervey Islands the spirit of a man apparently dead descends to Hades, but by a stratagem he escapes being eaten by the hag Miru, its ruler, who bids him return to earth (Gill, *Myths and Songs of the S. Pacific*, 1876, p. 172). In a Japanese story Ono-no-Kimi died and went to Hades, but was sent back by its ruler because his allotted time was not exhausted (Hearn, *Unfamiliar Japan*, 1894, i. 68). Many stories of dream visits to the land of the dead are found among the American Indians, with elaborate descriptions of that land, based on current beliefs, and telling of the dangers of the way, the narrow bridge spanning the river of death, and the life of the spirits (Schoolcraft, *Ind. Tribes*, Philad. 1853-6, iii. 233; Tanner, *Captivity and Adventures*, N.Y. 1830, p. 290, etc.).

Savage medicine-men very commonly claim the power of sending their spirits during a trance into the under world. Thus the Eskimo *angekok* is securely bound and, during a dark séance, visits the *torngak*, or spirit, in Hades. He then appears unbound and gives an account of his visit (Crantz, *Hist. of Greenland*, 1820, p. 269). In Melanesia a wizard sent his soul during a trance to *Panoi* (Hades), where it spoke with the dead about whom their friends were anxious, and professed to be able to bring them back to earth. This is a common belief in all the islands of the group. Burlesque parodies of these and other tales of descent exist (Codrington, *The Melanesians*, Oxford, 1891, p. 277). Sorcerers in Borneo who have visited the under world will show a piece of wood or stone given them by the spirits there (*L'Anthrop.*, Paris, x. [1899] 728; cf. ANCESTOR-WORSHIP, vol. i. p. 429*). Among the Karens, necromancers claim the power of going into the unseen world to bring back the *la*, or soul, of a sick man when it has wandered away (Mason, *JASBe* xxxiv. 201). In Siberia the shaman is supposed to conduct the souls of the dead to the lower world and there secure for them a favourable welcome by gifts of brandy (Radloff, *Aus Sibirien*, Leipzig, 1884, ii. 52 f.). For a Chinook instance of the souls of shamans visiting Hades to recover the soul of a sick man, see CHINOOKS, vol. iii. p. 562.

Visions of Hades were doubtless known to the ancient world, and they may have suggested an artificial introduction of them for religious or other ends. Thus, at the sanctuary and cave of Trophonius in Lebadeia, the inquirer, after a due ritual, descended to an underground region, where he was perhaps shown scenic representations of

Hades, or, under the influence of mephitic vapours or narcotics, fell into a trance and experienced in dream what he deemed to be realities. These experiences, to judge from the vision of Timarchos, were visions of the Other-world, of Tartarus and Elysium (Plutarch, *de Gen. Socr.* 21 ff.; Paus. ix. 39. 5 ff.). But a literary use was also made of tales of such dream experiences, and there are many accounts of descents to Hades or visions of the Other-world, e.g. the visit of Odysseus, Plutarch's stories of Thespesius and Antyllus (*de Tard. Just. Div.*; Euseb. *Præp. Evang.* xi. 36), the visit of Aeneas, Lucian's story of Cleodemus (*Philops.* 25), as well as burlesque accounts of descents to Hades—that of Dionysos in the *Frogs* of Aristophanes, and that of Menippus told by Lucian (see also Rohde, *Peyche*, Freiburg, 1894, p. 289). The scenes of Hades, as described in Homer, were reproduced by Polygnotus on the walls of the Lesche at Delphi (Paus. x. 28. 4).

A late Egyptian demotic papyrus of the 1st cent. A.D., but probably representing a story of far earlier date, tells how the high priest of Memphis, Setne Khamas (c. 1250 B.C.), descended, under the guidance of his son, Si-Osiri, to the *Tl* or *Duat*, where he saw the judgment of souls and the various halls of Amenti, or Hades, and the state of the dead there (Griffith, *Stories of the High Priests of Memphis*, Oxford, 1900, p. 45 ff.). In Hinduism and Buddhism there are many stories of visions of hell or of visits paid there, perhaps based on actual visions induced by meditation and asceticism, and shaped in accordance with the current dogmatic beliefs. They served to buttress the latter, and were perhaps regarded as reminiscences of actual experiences in a previous existence. In other instances they are told of people who fell into a trance, or whose souls were summoned too soon to the Other-world and were then permitted to return to the body (Scherman, 91 ff.). In later Parsiism the *Book of Ardā Wirāf* (ed. Haug and West, Bombay, 1872) relates how this pious Parsi priest was selected by lot to take a narcotic, so that his soul might go, while he was still alive, from this world to the next and bring back a report of the fate of souls. The bliss of the righteous and the tortures of the wicked are described in detail, and the book is still read and firmly believed in by all classes of the Zoroastrian community. Several editions of it exist in both prose and verse. In later Judaism the authors of such works as the *Book of Enoch* (ed. Charles, Oxford, 1893) and the *Book of the Secrets of Enoch* (do. 1896) describe visits to Sheol and to the various heavens, with their different divisions for the righteous and the wicked. There can be no doubt that most of these narratives, especially where they describe the punishments of sinners and the bliss of the righteous, served the purpose of teaching a dogmatic eschatology and of urging men to live righteously.

The same phenomena are met with in the history of Christianity. There are records of genuine visions of the Other-world such as have been experienced by the devout or imaginative in all ages, and based on recollection of what had been heard or read, as Tertullian shows of a female visionary known to him (*de Anima*, 9). Of such a class are the visions of SS. Perpetua and Saturus, with their reminiscences of passages in canonical or apocryphal Scriptures (Robinson, *Passion of S. Perp.* [TS, Cambridge, 1892, i. pt. 2]). But there are also innumerable literary versions of visionary or actual visits to hell, purgatory, and paradise, perhaps based on these, but in many cases borrowing from pagan or Jewish sources. This is most marked in the description of the various divisions of Hades (found in Egyptian, Oriental, and Jewish instances), and in the frequent mention

of the narrow and dangerous bridge of the under world, an early instance of which occurs in the *Dialogues* of Gregory the Great (iv. 36; see also art. BRIDGE). The prototype of all these visions, to which Dante gave immortal form, is found in the *Apocalypse of Peter* (c. A.D. 100-150), on which many later visions are based. These stories (which, with wearisome iteration, tell how the seer or visitor or, in some cases, the soul of the dead person raised to life by an apostle or saint¹ was led through the regions of torment, of purgatory, or of paradise) were highly popular in the Middle Ages, when there existed a passionate desire for exact details of the Other-world, and they were used to enforce dogmatic teaching. But they were burlesqued as early as the 11th cent., and also in later times in the *fabliaux*, by the troubadours, and by Rabelais, who helped to discredit them (Wright, *S. Patrick's Purgatory*, 1844, p. 47; Lecky, *Hist. of Europ. Morals*, 1890, ii. 232; Rabelais, bk. ii. ch. 30). Their scenes were also reproduced by art, e.g. on the walls of ancient Greek churches, just as Dante's poem affected Italian painting from the time of Oragna onwards (see Heuzey, 'Les Supplices de l'Enfer d'après les peintures byzantines', *Ann. de l'assoc. pour l'encourag. des études grecques*, Paris, 1871, p. 114 ff.). The cave of Trophonius had also its double in the Irish St. Patrick's purgatory, exploited from at least the 12th or 13th century. After ritual preparation, the pilgrim was allowed to enter, and, in the windings of the cavern, under the influence of its hot vapours, he fell asleep. In most cases his dreams took the form of preconceived notions of purgatory, but this was not always the case, and sometimes the pilgrim perished in the cavern (Wright, 139, 153, 135). Possibly some scenic representations may have been used, and there seems to have been actual bodily experience of pains and torments which remitted some of the future penalties. Several literary accounts of visits and visions at this famous spot, beginning with that of the descent of Owain in 1153 by Henry of Sawtre (of which English and French versions exist [D. Laing, *Owain Miles*, Edin. 1837; Marie de France, *Poésies*, ed. Roquefort, Paris, 1820, vol. ii.]), had a great vogue in Europe.

In the Norse Elder Edda the 11th or 12th cent. *Sólarlódh*, ascribed to Sæmundr, describes a son's vision of his dead father, who tells him of his death, and how he at last reached the place of torment, and saw the tortures inflicted there on various classes of sinners. Then he describes the joys of heaven. Pagan and Christian ideas are curiously intermingled, as if the poet had held the two faiths at once, or was a heathen with glimpses of Christianity (Vigfusson-Powell, *Corp. Poet. Boreale*, Oxford, 1883, i. 202 ff.).

3. Descent to rescue a dead relative.—This series of stories is one of the most pathetic in all mythology, showing man's instinctive belief that love is stronger than death, while the savage examples are quite as touching as those from higher levels. Of the savage legends, the most numerous versions occur among the Amer. Indians, Polynesians, and Melanesians.

A Wyandot story tells of a brother who went to the land of souls to recover his sister. He met an old man, who gave him a calabash in which to put her spirit. After some failures he captured her, and hastened back to earth. There he summoned his friends to witness the revival of the dead body, but a woman opened the calabash, and the spirit flew back to the land of souls (Schoolcraft, i. 236). There are numerous variants of this tale, and generally, through curiosity or the breaking of a tabu, the soul escapes (see Dorman, *Prim. Superst.*, Philad. 1881, p. 43; Laftau, *Mœurs des Sauv. amér.*, 1724, i. 402; Charencey, *Le Folklore dans les deux mondes*, Paris, 1894, p. 286 ff.; *N.R.* iii. 580 t.; Buxton, *ABODE OF THE (Prim. and Savage)*, vol. ii. p. 685^b). In

some cases a woman's spirit is allowed to return to her husband without his visiting the land of souls, but again he loses her, or he himself dies through breaking a tabu (*REBEW* [1883] 103; *N.R.* iii. 531).² Tales of the latter class are analogous to those of the Dead Mother or Wife cycle (*CE*, p. 42 f.; Sandys' tr. of Ovid's *Metam.*, Oxford, 1632, p. 364; cf. the Maori tale, § 2 above). In a Polynesian tale a woman fell into *Avaiki*, or Hades, and her husband descended to release her from the captivity of the spirits. He heard her crying in the hut where she was imprisoned, and, going to her, bade her escape. He remained, imitating her voice, and then died. The spirits pursued, but he, catching his wife in his arms at the chasm which led up to earth, escaped with her just in time (Gill, 221 ff.). A beautiful Maori story tells of Pané, who died of love for Hutu. Hutu prayed to the gods, who showed him the way to *Reinga*, telling him not to touch the food offered him there. He amused the spirits by making them sit on the top of a tree fastened by a rope to the ground. When the rope was let go, they were shot up into the air. Finally, Pané appeared, and took her place by Hutu's side on the tree. When the rope was freed, it caught in the creepers far above, up which Hutu escaped with her to earth (Clarke, *Maori Tales*, 1896, p. 1 ff.; cf. p. 126 for a story of a chief who went to *Reinga* to recover his dead wife). In Melanesia such stories are common. A woman descended to *Pamotu* to her dead brother, dragging a basket of 'death-like-smell'. She was supposed to be a ghost, and conversed with her brother, who bade her touch be no food there lest she should be permanently detained. Again, a wizard, descending in the spirit, took with him a man who wished to recover his wife. He begged her to return, but she said it was impossible, and gave him an amulet for remembrance. He seized her hand, and tried to drag her away, but it came off and her body fell asunder, for in *Pamotu* ghosts have a substantial form (Codrington, pp. 227 f., 286). For other S. Pacific tales, see Bastian, *Alteit aus Volks- und Menschenkunde*, i. 8, 111 ff.

At higher levels these tales are told of gods, and have become myths. In early Japanese mythology the goddess called 'the Female-who-invites' died and went to *Yomi*, or Hades. Her brother-husband, the Male-who-invites, followed her there and invited her to come back. She told him he had come too late, as she had eaten of the food of Hades, but that she would consult its deities. Meanwhile he was not to look at her. Impatient at her absence, he lit one of the teeth of his comb and found her rotting. He thus put her to shame, and she sent the Ugly Female of Hades to pursue him; but he stayed her by casting articles behind him which changed to food, which she stopped to eat.² She then sent the Thunder Deities and warriors in pursuit, but he smote them. Finally, she pursued him herself, but he blocked the way with a great rock. The goddess is now the Great Deity of Hades (*Kojiki*, tr. Chamberlain, Suppl. to *TASJ* x. [1883] 34 ff.).

In Babylonia, the poem describing the Descent of Istar into *Aralû*, or Hades, contains elements of ancient origin, and presents several problems for solution. Istar demands entrance to 'the land whence there is no return.' She has come to weep over heroes who have left wives, over wives taken from husbands, and over the only son (Tammuz) taken away before his time. By order of Allatu, she is stripped of her dress and ornaments at each of the seven gates, and then struck with disease. There is now desolation on earth, life dies away, and the gods lament her disappearance. Ea creates *Ud-dushu-namir*, and sends him to *Aralû* to demand the Water of Life as a preliminary to the release of Istar. Allatu is compelled to cause Istar to be sprinkled with it. She is led back, and at each gate her clothing and ornaments are restored to her. The story, as connected with Tammuz, must have described his restoration by means of the life-giving water at the instance of Istar, come in quest of him—an incident enacted in the Tammuz ritual. But this is not set forth in the poem, though there is an obscure reference to Tammuz at the end, in the form of ritual directions to mourners, to whom the poem appears to have been addressed. Pure water is to be poured out for Tammuz. The poem as it stands may have been derived from two myths, one telling how Istar rescued Tammuz from the dead (since his restoration was annually

¹ See 'Acts of Thomas,' 'Hist. of John,' in Wright, *Apoc. Acts*, 1871, i. 23, 149; Budge, *Gods of the Egyptians*, 1904, i. 268; 'Preaching of Andrew,' 'Story of John,' in Lewis, *Myth. Acts of Apostles*, 1904, pp. 7, 163.

² Cf. the Greek myth of Protesilaus and Laomædia.

³ This is the *Märchen* formula of the Transformation Flight, already met with in a Maori instance, § 2.

celebrated), the other telling of the rescue of Ištar from Hades at the intervention of the gods. The present poem bears more abundant traces of the latter myth than of the former, though it also hints at a descent for purposes of rescue; Ištar descends violently, and threatens to break down the gates (see Talbot, *TSBA* iii. 118 ff.; Sayce, *Rel. of the Ancient Bab.*, 1887, p. 221 ff.; Jastrow, *Rel. of Bab. and Assyria*, Boston, 1898, pp. 563 ff., 583 f.; see *ERE* ii. 315^b). The recovery of Tammuz by Ištar is also suggested by the fact that there was a Greek myth telling how Aphrodite (Ištar) went down to Hades to redeem Adonis (Tammuz) from Persephone (*Apol. of Aristides*, § 11). At the sanctuary of the Syrian Aphrodite sexual relations with the priestesses representing her were believed to ransom one from Hades, as Adonis had been freed from it (Euseb. *Vita Const.* iii. 55; Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907, p. 72).

The so-called prayer of a Navaho shaman has a certain likeness to the Ištar myth. It is a kind of prayer-spell, describing the action of the gods as the shaman desires them to act. He fears his soul may be detained by sorcery in the under world. The war-gods are therefore to descend and rescue it from the 'underground witch.' They pass gate after gate, sentinel after sentinel, of the lower world, by magical means, and there find the suppliant's soul. Returning through chamber after chamber, they bring it back to him, so that 'the world before me is restored in beauty' (Matthews, *Amer. Anthrop.*, 1888, i.).

The Greeks had several descent-myths, that of Orpheus being the best known, thanks to Vergil's version. After the death of Eurydice her image haunted him, until he determined to seek her in Hades. He descended there, and the sweet notes of his lyre enchanted its denizens. Pluto and Persephone were moved to pity. Eurydice would be restored on one condition—that Orpheus should precede her and not look back till they arrived on earth. Just before reaching the fatal limit, his love overcame him. He looked round and lost her for ever (Verg. *Georg.* iv.; Paus. ix. 30. 4-6; Apollodorus, i. 3. 2).

The Orphic poem *Karðbaais eis 'Aidov* has not survived, but it may have had for subject the descent of Orpheus. Foucart thinks it was a ritual poem containing instructions for the dead in Hades, like the Orphic tablets engraved on sheets of gold, and the Egyptian *Book of the Dead* (*Recherches sur l'origine et la nature des mystères d'Eleusis*, Paris, 1896, p. 7; cf. also Dieterich, *Nekyia*, Leipzig, 1893, p. 123 ff.).

Dionysos, as certain myths taught, was also said to have descended to Hades to bring back Semele, and, according to local Argive tradition, he descended through the Alcyonian lake, Polymnus having shown him the way. His return from Hades was annually celebrated there, and in all probability the myth had become fused with that of his resurrection (Paus. ii. 31. 2, 37. 5; Apollod. iii. 5. 3). Another myth told how Alcestis, the wife of Admetus, having willingly died in his stead, was delivered by Herakles, who, seeing the grief of her husband and people, descended to Hades to rescue her from death. In a variant of the myth, Persephone was her rescuer (Apollod. i. 9. 15; Hyginus, *Fab.* 50; Eurip. *Alkestis*). Another myth—the subject of a lost poem of Hesiod—related that Theseus agreed to assist Pirithoos in carrying off Persephone from Hades. They descended there, but, according to one version, were outwitted; for, expecting to receive gifts, they sat down on the chair of Forgetfulness, to which they were held fast by coils of serpents. Herakles caused the release of one or both when he descended to fetch Cerberus (Paus. ix. 31. 5, x. 29. 2; and for a euhemerized version, see i. 17. 4, and Plut. *Thes.* 31, 35; *Epit. Vat. ex Apollod. Bibl.*, ed. Wagner, Leipzig, 1891, pp. 58, 155 ff.). Cf. also the myth of Castor and Pollux. For the Pythagorean descent, see Rohde, 456; Dieterich, 129.

In Scandinavian mythology descent-myths are connected with Balder's death. Hermodr offered to

descend to Hel to recover Balder. Taking Odin's horse, he travelled for nine days through dark valleys till he reached the river Gjöll, crossed by a bridge covered with gold and guarded by Modgudr. After some delay she permitted him to cross, and at last he reached the place of the dead and saw Balder. He begged Hela to permit Balder's return, but she made his release conditional upon all things mourning his loss. Hermodr obtained Balder's ring as a token of remembrance, and returned to the gods. All things were begged to mourn, and all did so save the witch Thok (= Loke), who said she would weep with dry eyes and Hela would keep her prey (Dasent, *Prose or Younger Edda*, Stockholm, 1842; see also § 4).

In Hindu mythology a descent-myth is told of Kṛṣṇa, who went to the kingdom of Yama and demanded the dead son of his pupil Sāndipani. After having conquered Yama in fight, he accomplished his purpose (*Harivamśa*, v. 4913 ff., in Scherman, p. 64). Not quite parallel, but showing the possibility of rescuing a dead person from Hades, is the story of Yama's marriage to Vijaya. He cautioned her not to go near the southern part of his domain; but curiosity tempted her, and there she saw the wicked, including her mother, in torments. She told Yama she would leave him unless he consented to release her mother, but this took place only after the due performance of certain ceremonies (Wilkins, *Hindu Myth.*,² Calcutta, 1900, p. 83 f.). In a Tibetan Buddhist legend, Maudgalyāyana learns from his father that his mother is in hell. At once he sets out, and descends deeper and deeper. The doors open before him, and none of the demons opposes him. When he finally discovers her, he offers to take her place; but this is refused. Finally, Buddha is appealed to, and he visits hell, with the result that all the sorrowing beings are re-born in heaven. The mother is still subjected, for her sins, to certain torments; but, at the exhortation of her son, she feels shame, and advances by re-birth till she reaches the god-region where her husband is (Scherman, 80 ff.; and for a Chinese parallel, Edkins, *Chinese Buddhism*, 1880, p. 225 ff.). In a Chinese tale the Buddhist Lo Pah, on passing into paradise at death, realized that his mother was in hell. He at once descended there, and by his virtues and intercessions succeeded in rescuing her (*Asiat. Journal*, xxxi. [1840] 211).

4. Descent to obtain a boon, etc.—Some examples from the lower culture may be cited first. In an Eskimo tale a man, to obtain luck, is advised by his mother to raise a stone and descend through the opening to the under world, where he will receive a piece of sealskin which will ensure good luck (Rink, *Tales and Trad. of the Eskimo*, 1875, p. 461). In an Ainu story a youth defrauded of his heritage went to Hades to get his father's help. He arrived at a village and saw his father, but (in accordance with Ainu belief) could not make himself heard by the spirit until he entered another spirit and spoke through him. His father told him he had left him a share, and with this information he returned to earth, and his brother assigned a portion to him (Bathelot, *Ainu of Japan*, 1892, p. 228). The Estonian epic relates how its hero found, in the cave leading to Hades, three girls who enabled him by magic to overcome Sarvik, its lord. Later he penetrated farther and reached the gates of Porgu (Hades), where its hosts advanced to meet him at a river of pitch crossed by a bridge. He defeated them, conquered Sarvik once more, and returned to earth with his treasures (Kirby, *Hero of Esthonia*, 1895, i. 100, 124). In the Finnish *Kalevala* its hero Väinämöinen, after long travel through a forest, induced the maiden who acts the part of Charon to ferry him over to *Tuonela* (Hades), where he desired to

learn certain magic words from its wise lord. By avoiding the beer of *Tuonela* he was able to return and describe on earth the horrors he had seen (Schiefner, *Kalevala*, Helsingfors, 1852, rune 16). A Japanese myth tells how the deity Oho-na-mochi went to Hades to seek counsel of its lord, whose daughter he married. The lord of Hades tried to compass his death by setting him tasks, but, after help from his wife and a friendly mouse, he finally escaped with the treasures of the god, and forced him to give the advice he sought (Aston, 106; *Ko-ji-ki*, 71 ff.). This myth of descent includes some common Märchen formulæ. Herodotus (ii. 122) relates an Egyptian story of Rhampsinitus (Ramses III.) to the effect that he descended to Hades and played at dice with Demeter (Isis), sometimes winning, sometimes losing, and that he ascended, bringing with him as a gift from her a napkin of gold.

This tale is not corroborated from the monuments or texts. Possibly it is a distorted form of the myth of Thoth's winning the five days of the epoch from the moon at a game of dice (Plut. *de Isid.* 15). Sayce suggests that the myth may have been affixed to the name of Ramses in consequence of a representation on his temple of him playing at dice with a woman (*Ancient Emp. of the East*, 1883, p. 92). The dead played at a game with counters, and the story of Setne tells how, having descended into the tomb of Neneferkaptah in order to obtain his magical book, he played a game at draughts with him and was beaten, but eventually escaped with it by magical means (Griffith, 13 ff.).

A Hindu myth in the Katha-Upanishad tells how Nachiketas, delivered by his father to death, remained without food in the kingdom of Yama, who granted him fulfilment of three wishes. Nachiketas then desired his restoration to life and reconciliation to his father, the knowledge of the sacrificial fire, and the knowledge of the nature of death. Yama offered him gifts if he would forego the last wish, but he was insistent and it was granted to him (Oldenberg, *Buddha*, London, 1882, p. 55). The visit of Odysseus to the shades to inquire of the ghost of Tiresias (*Od.* xi.), and the descent of Æneas to speak with his father Anchises (*Æn.* vi.), are well-known poetic examples of seeking a boon from the world of the dead. The myth of Psyche, related by Apuleius in his *Metamorphoses*, tells how, among the tasks exacted of her before she recovered Eros, was that of going down to Hades to bring back from Persephone a box of beauty. Through innumerable perils, and sustained by the love of Eros, she succeeded and returned to earth, where she opened the box, to find, not beauty, but a deadly sleep. The myth of the descent of Herakles to bring the dog Cerberus from Hades (one of the labours exacted by Eurystheus) is mentioned by Homer, who says that Hermes and Athene escorted him (*Od.* xi. 628, *Il.* viii. 367). But the myth was later amplified, and we learn how he descended by the entrance near Cape Tenarum. After many exploits, including the liberation of Theseus, he demanded permission from Pluto to carry off the hound. This was granted provided he did it without weapons. On the shore of Acheron he met Cerberus, and, seizing him by the throat, ascended with him to earth, showed him to Eurystheus, and then returned with him to Hades (Apollod. ii. 5. 12).

Those who have seen a parallel between the labours of Herakles and the adventures of the Bab. Gilgamesh, and a possible derivation of the former from the latter, point to the likeness between the journey of Herakles to Hades and that of Gilgamesh beyond the limits of the world, through dangers and darkness, across the ocean and the Waters of Death (probably connected with the River of Death in *Aratta*, or Hades), to the paradise of Utnapistim, that he might learn from him the secret of immortality (Sayce, *Rel. of Anc. Egypt and Bab.*, 1902, pp. 436 ff., 446; *ERE* ii. 316*;

Jastrow, 516). In another Bab. myth, the purpose of which may have been to show how a god superseded the ancient goddess of Hades, a conflict having arisen between the gods and Eresh-kigal, goddess of Hades, Nergal was chosen to descend to the under world. He arrived there, passed through gate after gate (fourteen in all), dragged the goddess from her throne, and would have slain her. But she begged for mercy, and offered to become his wife and to give him dominion in Hades, which he accepted (Winckler-Abel, *Der Thontafelfund von El-Amarna*, Berlin, 1891, iii. 164; Sayce, 238, 428).¹

In Scandinavian myth, Odin, in order to discover the cause of Balder's evil dreams, rode down to Nifhel, till he reached the hall where mead was standing brewed for Balder. He roused the Sibyl from her barrow by spells, and learned from her the tidings of Balder's fate (Vigfusson-Powell, i. 181 ff.). For Celtic myths of visits to the under world (or to Elysium) to obtain the gifts of civilization, see BLEST, ABODE OF THE (Celtic), § 7. Mandeian mythology presents an interesting myth of the descent of Hibil Ziwa, before the creation of the world, to the lower realms, in order to forestall the revolt of their rulers against the powers of light. He descends in the night of the great Raza (an embodiment of the mysterious Name) to the seven worlds of darkness (not, of course, the regions of the dead).

In each world to which he descends he remains for many thousands of years, unknown to and unseen by its lord. Finally he reaches the seventh and lowest world, and speaks to its lord, the giant Krin. Krin partially swallows him, but Hibil cuts his inwards to pieces and is disgorged, and obtains from him a pass and seal-ring by which the might of the opposing demon will be brought to nought. Then he ascends, sealing the doors of each world so that none can pass through. In the fourth world he takes the form of its ruler and obtains by craft the Memra and Gemra, the strength of the world of darkness. By a similar change of form he learns the secrets of the third world, and obtains its magic mirror. Then he leaves it, taking with him Ruhā, daughter of its lord, pregnant with Ur, the demon who is to oppose the worlds of light. Finally, after sealing all the doors of the worlds, he returns to the light kingdom, and is hailed with joy. The remainder of the myth describes his repeated unseen visits to the imprisoned Ruhā and Ur, his robbing Ur of his magical talismans, and his final overpowering of him (Brandt, *Mand. Schriften*, Göttingen, 1893, p. 138 ff.). The story is full of well-known folk-tale formulæ, and, while the descent through seven worlds recalls that of Istar, the main incident is based on that of Marduk's strife with the dragon of chaos, Tiamat (cf. Brandt, *Mand. Rel.*, Leipzig, 1889, p. 132). Another myth relates how Māndā d'Hayyē descends to the lower worlds and conquers Ruhā and Ur. Afterwards Ruhā and her sons assemble on Mt. Carmel and plan a revolution against the powers of light. Māndā appears among them in their own form, whereupon they desire to make him their ruler. He agrees on condition that they reveal to him the secrets of their mysteries. When they have done this, he manifests himself in his true form and overpowers them (Brandt, *Mand. Rel.* 34, 88; Norberg, *Codex Nasareus*, 1815-6, i. 223).

For a Buriat instance of descent to seek a boon, see *ERE* iii. 9*, and for a Quiché myth of two heroes descending and overcoming the lords of the under world, *ib.* 308*.

5. Descent out of curiosity.—This motive is occasionally met with. In an Ainu example a youth, learning that a certain cave led to Hades, entered it, and, after passing through darkness, found himself in a beautiful land where he saw many of his friends and relatives. On his return he met a spirit descending, which proved to be that of a dear friend who had just died (Batchelor, 226; cf. a variant in Chamberlain, *Ainu Folk-tales*, 1888, p. 42, where the visitor is ignominiously treated and never wishes to see Hades again). Several Norse tales, reminiscent of earlier pagan beliefs, describe the adventures of mortals who set out to seek the Land of Living Men, part of the older under world (for these see BLEST, ABODE OF THE [Teutonic], § 4; and for Amer. Ind. instance, *ERE* iii. 230*).

¹ Jastrow (586) thinks that it may originally have been told of Nergal that, like Tammuz, he was carried off into Hades.

6. Descent to free the damned.—The freeing of a soul in pain in Hades has already been found in Hindu instances. This idea, as well as that of the general release of the damned or the amelioration of their tortures, is a natural outgrowth of existing legends of rescue from Hades, but it occurs mainly in Eastern instances. Several myths of this kind are found in Hindu and Buddhist mythology.

In the *Rāmāyana* (vii. 21.), Ravana enters hell, and, as he enters, the darkness flies away, and the damned, whom he desires to free, experience an unexpected happiness. He encounters Yama in fight, and would have been worsted but for the help of Brahmā, to whose will Yama bows and leaves Ravana victor. In the *Mahābhārata* (xvii. 8-xviii. 4.) Yudhishthira is subjected to a last test by the gods. When he reaches heaven, he learns that his relations are in hell, and beseeches the gods to let him share their dwelling. 'What is heaven without them? Only where they are is my heaven.' He is conducted thither, and, on his coming, a cool wind arises and the torments cease. He refuses to leave hell, since his presence makes its denizens happy. Now the gods appear, and he learns that all he has undergone is but a trial of his faith. For a descent of Vignu with similar results to the damned, see Dubois, *Hindu Manners*, Oxford, 1897, p. 706. In other cases, those who have transgressed slightly and are sent to hell suffer only formally because of their virtues, and are given an opportunity to free the damned, e.g. Janaka in the *Padmā Purāṇa* (Wilson, *JHAS* v. 286).

In the *Lotita Viṭāra*, at several moments of Buddha's existence—when he descends from heaven, on his journey to Bodhimapṇa, and at Benares—a marvellous light is said to have been projected from his body which lit up by its splendour the 3000 worlds, caused all evil, suffering, and fear to cease, and filled all beings with joy. This extended even to the hell Avichi, the region of the *pretas*, and the kingdom of Yama. Darkness was dissipated, and all beings there suffering from thirst and hunger, or other torment, found themselves free from pain and were filled with great joy. At Buddha's birth he prophesies that, in order to destroy the fires of hell, he will cause the rain from the great cloud of the law to fall, and all beings there will be glad. At that moment the sufferings of all in Avichi and the kingdom of Yama were appeased (*Lot. Viṭ.* 51, 240, 257, 341, 79, 80, in *AMG*, vol. vi., Paris, 1884). The North Buddhist legend of Avalokiteśvara, 'he who shows the damned the way to Nirvāṇa,' furnishes a striking instance of this group of descent-stories. It was said in the *Saddharma-Puṇḍarīka* (c. 24) that he would bring all misery to an end, including the torments of Yama's kingdom. To effect this, he visits the hell Avichi as a glorious prince clad in light, and frees the victims from their pains. Mild air takes the place of flames, the cauldron of boiling water in which men suffer bursts, and the sea of fire becomes a pool with lotus flowers. Hell becomes a place of joy, and Yama shows him reverence. The saving work is pursued in the city of the *pretas*, where Avalokiteśvara frees its denizens from torments and, granting the gift of right knowledge to the damned, leads them as Bodhisattvas to the Sukhavāsi world (Cowell, *JPA* vi. [1873] 222 ff.; for a Tibetan legend of a similar kind, see Rockhill, *Land of the Lamas*, 1891, p. 331 ff.). In a Chinese Buddhist myth, the soul of the goddess Kwan-yin visits hell in trance, and by her invocation of Amitābha a rain of flowers falls, the implements of torments break, hell is changed to Paradise, and the damned return to earth. The lords of hell desire to hear this mighty prayer, and their wish is granted on the stipulation that all souls attain to redemption. At this point she awakes from her trance (Eitel, *Three Lect. on Bud.*, 1871, p. 31; de Groot, *AMG* xi. [1888] 188 ff.). In a Tibetan myth, as soon as a new Tathāgata descends to the under world and sounds the muffled trumpet (= proclamation of the sacred doctrine), all who hear its sound are saved and go to the heaven Tuṣita (Scherman, 66, note 2).

In other instances the belief in metempsychosis is utilized to show the experiences of the narrator in a former state. While in hell, a Brahman experiences a sudden cessation of torture and a joy as of paradise. This is caused by the arrival of a king, Vipashch, who has committed a small fault. Having expiated it, he is bidden to go to heaven; but the damned beg him to remain as his presence relieves their miseries. Yama and Indra beg him to go, but he demands that his virtues may ransom sinners from hell. He is raised to a higher state, and the narrator and others in hell attain a new existence free from torture (*Jārkandeya Purāṇa*, xiii ff., in Scherman, 38 ff.).

In later Judaism similar ideas were current, sometimes in connexion with the Messiah. Thus in *Bereshith Rabba*, regarding the appearance of Messiah at the gates of Gehinnom, it is said:

'But, when they that are bound, they that are in Gehinnom, saw the light of the Messiah, they rejoiced to receive him, saying, He will lead us forth from this darkness, as it is said (Hos 13:4), "I will redeem them from hell, from death I will set them free," and so says Isaiah (35:10) "The ransomed of the Lord will return and come to Zion." By "Zion" is to be understood Paradise; and in another passage, "This is that which stands written, We shall rejoice and exult in Thee. When? When the captives climb up out of hell, with the Shechinah at their head"' (Weber², 358; Bertholdt, *Christologia Judaearum*, Erlangen, 1811, p. 170 ff.).

In *Yalkut Shim'on* the goddesses are rescued from

hell by the righteous dead and pass to eternal life, while in the *Zohar* the righteous or the patriarchs are said to descend to hell to rescue sinners from the place of torment (Gröner, *Jahrhundert des Heils*, Stuttgart, 1838, ii. 77, 184; Weber², 343).

Later Muhammadan theology describes how the righteous souls intercede for their brethren detained on the bridge which passes through hell to Paradise. They are sent to hell to see if any there have faith, and finding such they bring them out. These are then washed in the Water of Life and admitted to Paradise (*JThSt* vi. [1904] 35).

In Gnosticism (save in the case of Marcion [*Iren. adv. Haer.* i. 27. 3]) the descent of Christ to Hades (see next art.) is transfigured, and shows the influence of pagan myths of a deliverer. The Divine Eon descends not to Hades, but to the dark earthly world to conquer the world rulers and to spoil them of spiritual souls imprisoned in bodies. As He passes through the spheres of the heavens He is invisible, or takes the form of these rulers, and so deceives them or robs them of their might (*Iren.* i. 23. 3, i. 30. 12; Hippolyt, viii. 10; cf. *Ascension of Isaiah*, 10²-11⁹). Through Gnosticism the later form of the orthodox descent idea, especially in the tradition of the binding of Satan, may have received a pagan colouring. Gnosticism knew also of a descent of the Divine Eon out of the Pleroma to rescue the fallen Sophia (*Iren.* i. 4. 11.), and, in the teaching of the Valentinian Theodotus, He, on his return from earth, transfers the souls of the righteous in the 'place of rest' to a higher region, the place of Sophia (Clem. Alex. *Excerpt. c. Theod.* c. 18).

In various Christian documents the idea of the transference of souls from the place of punishment to a place of bliss, at the prayer of saints on earth, is found, e.g. *Acts of Paul and Thecla*, § 23; *Passio Perpetuae*, § 7; and *Test. of Abraham*, § 14. In the *Apocalypses of Paul* and of the *Virgin*, in which they visit hell, they and the angels and saints pray for remission of tortures to the lost. Christ descends and announces that on the Lord's day or on the day of Pentecost this will be granted.

7. In many European folk-tales a visit is paid by a mortal (1) to a subterranean fairy-land to rescue a stolen person, to capture a treasure, etc., or (2) to a land below the earth or the sea ruled by a mysterious personage. The subterranean land is doubtless a reminiscence of the old pagan under world, and the submarine region the old mythic world of sea-divinities (*CF* 44; Scott, *Minstrelsy*, 1839, p. 195 ff.; Wright, 85, 87). Folk-tales also recount visits to the Christian hell, where the visitor usually outwits the devil (Le Braz, ii. 337; Dottin, *Contes et légendes d'Irlande*, 1901, p. 164; Larmine, *W. Irish Folk Tales*, 1893, p. 188).

8. The tabu regarding not eating the food of Hades has been found in several of the tales and myths cited, and it also occurs in stories of visits to fairy-land, as well as in many other myths and eschatological beliefs.

Pluto secretly makes Persephone eat seven seeds of a pomegranate, and she is then bound to him in Hades (*Hom. Hymn to Dem.* 399). In Egyptian belief the dead who ate and drank the food and water offered them by a goddess could not return without special permission (Maspero, *Études de myth. ég.*, Paris, 1893, ii. 226). On the Orphic tablets buried with the dead, they are bidden to avoid a certain well in Hades (Dieterich, 86). Those who visit Yama's kingdom as guests are bidden not to eat his food (Muir, *Orig. Skr. Texts*, 1858-72, v. 320). For Teutonic instances, see *ERE* ii. 709; and for a Chinook example, iii. 662^b. The same tabu applies to the visitor to Fairy-land, the classic example being found in the ballad of *Thomas of Ercildoune*. See also Tylor, ii. 47 ff. Scott, in 'Wandering Willie's Tale,' *Redgauntlet*, ch. 12, speaks of the visitor to hell refusing 'the devil's aries, for such was the offer of meat and drink.'

The result of breaking the tabu—detention in Hades, etc.—is derived from primitive and savage notions regarding food. To eat the food of a strange tribe establishes kinship with them (see COVENANT). Hence to eat the food of gods, ghosts, or fairies makes the eater one with them, and he must remain with them (cf. the Bab. myth. of Adapa [Jastrow, 550]; the 'Navajo Mountain Chant' [Mathews, 5 *REBW*, 1887, in which the hero is forbidden to eat animals' food lest he become an animal]; Parker, *More Austr. Legendary Tales*, 1898, p. xi, where the native belief is noted that for a child to touch fungus growing on trees is to make him liable to be spirited away by ghosts).

The tabu imposed on Orpheus—not to look back

—is frequently found both in ritual and magic, especially in under-world rites (see CROSS-ROADS), and may be explained by the idea that man may not gaze with impunity on what pertains to a supernatural plane, lest it harm him or force him to join the under-world ghosts.

DESCENT TO HADES (Christ's).—I. Summary.—The *Descensus Christi ad inferos* is an article in the doctrinal tradition of the entire Christian Church, but the several main divisions of the Church, viz. the Eastern or 'Orthodox' (§ 2), the Roman Catholic (§ 3), the Lutheran (§ 4), and the Reformed Churches (§ 5), differ greatly from one another in their Confessional interpretations of the doctrine. Moreover, while in Protestantism generally the older views have in modern times been abandoned, yet not a few theologians have essayed to interpret the doctrine on fresh lines (§ 6). These attempts at reconstruction, it is true, fail to find justification either in Scripture (§ 7) or in early Church tradition (§ 8). Nevertheless, the idea of the *Descensus* is well worthy of our interest, as its original meaning, which is not identical with any of the Confessional views (§ 9), is bound up with certain fundamental conceptions in the primitive Christian interpretation of Christianity, and probably asserts itself here and there in the NT as a presupposition in the minds of the writers (§ 10). The endeavour to trace the idea to influences from non-Christian religions is thus quite unwarranted (§ 11). The *Descensus* belongs in fact to a group of primitive Christian conceptions which are inseparable from views then current but now abandoned, and which accordingly can now be appraised only in a historical sense, i.e. as expressions of Christian beliefs which, while adequate enough for their time, have at length become obsolete (§ 12).

2. The doctrine in the Greek Church.—In the Greek, or rather the Eastern or 'Orthodox' Churches the two wrongly so-called Ecumenical Creeds which contain the clause 'descendit ad inferos', viz. the *Symbolum Apostolicum* and the *Symbolum Athanasianum*, are not recognized, while their own Creed, the so-called *Niceno-Constantinopolitanum*—the third of the 'Ecumenical' Symbols—makes no mention of the *Descensus*. This explains why even the more elaborate catechetical manuals emanating from these Churches sometimes ignore the doctrine altogether (e.g. Konstantinos, *Katechizos*, Athens, 1868, p. 46f.). None the less, however, is the *Descensus* an element in the Eastern tradition. Even discounting the testimony of the *Confessio orthodoxa* of Petrus Mogilas (i. 49 [Kimmel, *Libri symbolici ecclesiae orientalis*, Jena, 1843, p. 118f.]), and the wholly unauthorized *Confessio Metrophanis Critopuli* (Kimmel, *Appendix libror. symbol. etc.*, Jena, 1850, pp. 73-76), which both show a leavening of Western thought, and whose statements regarding the *Descensus*, therefore, may have been framed under that influence, we have the less questionable evidence of genuinely Eastern Church catechisms of the present day, as also of recent expositions of the Eastern theology.¹

¹ Cf. Philaret, *Longer Catechism*, quest. 213-216, in *Bibliotheca symbolica*, ed. P. Schaft, II. (New York, 1890) 477f.; Bernardakis, *Ἡρά κατήχησις*, Constantinople, 1872, p. 122; Kalliphron, *Ὁπδόθεος ἡρά κατήχησις*, Constantinople, 1880, p. 68; Macaire (Makarios), *Théologie dogmatique orthodoxe*;

In the 'Orthodox' tradition the *Descensus*, ἡ εἰς Ἀδὸν κάθοδος (Androutsos, p. 211), is universally regarded as an act of the soul of Jesus, occurring during the interval in which His body rested in the tomb, and belonging to the *munus regium*—His soul, however, still maintaining its unity with the Godhead or Logos. Other elements universally recognized are the triumph of Christ 'over Hades,' or 'over death,' which ensued as a result of His *Descensus*, His preaching of salvation in Hades, and His deliverance of certain spirits held captive there. Moreover, it is only in appearance that there is some dubiety as to the persons to whom Christ preached and brought deliverance (cf. Androutsos); for such dubiety arises purely from consideration of the difficult passage in 1 Peter, which, together with Ac 2²⁷, Eph 4², and other texts, is usually cited as the Scripture authority for the doctrine; and it is agreed by all—even by Metrophanes Critopulos (cf. p. 75: εἰς αὐτὸν ᾗδην πιστεύουσιν)—that the tradition limits the deliverance effected by Christ to the OT saints who believed in the Messiah. Nay, Makarios duly rejects as unwarranted every attempt to widen this limit, and Androutsos, in whose judgment the 'most probable' hypothesis is that the deliverance was restricted to the OT saints, states explicitly: καθόλου δὲ ἡ δόξα, ἐπὶ ὑπάρχει καὶ μετὰ θάνατον ἐπιστροφῆς καὶ σωτηρίας, προσκρούει πρὸς τὰς θεμελιώδεις τοῦ Χριστιανισμοῦ ἀληθείας (p. 211).

It must, nevertheless, be admitted that the 'Orthodox' tradition shows here some ambiguity and inconsistency. This arises from the prevailing views regarding the destiny of the soul after death. As regards the state of the soul in the period between the particular judgment which follows immediately upon death and the universal judgment at the Last Day, the theology of the Eastern Church, when not dealing with the *Descensus*, recognizes two alternatives: the souls of the dead either enter a provisional state of salvation, viz. Paradise (Lk 23⁴³), Abraham's bosom (Lk 16²²), or the Kingdom of Heaven (Mt 25²³, Lk 13³⁰, 2 Ti 4¹⁸, 2 P 1¹¹); or they go to the provisional place of punishment, i.e. Hades (Lk 16²³), Gehenna (Mt 5^{22, 29c}), or 'the furnace of fire' (Mt 13^{42, 50}), from which there is a possible transition to Paradise before the Last Day. But, when the *Descensus* is expressly in question, Hades is manifestly regarded as the habitation of all departed spirits (cf. Kalliphron, p. 68: εἰς τὸν Ἀδὸν ἡτοι τὸ κατωκλήθειον ἀνάντων τῶν ἀπ' αἰῶνος τελευτήτων). Now, if Paradise be simply one of the sections of Hades, existing as such before Christ's descent into the lower world, one fails to see what advantage or deliverance His action wrought for the OT saints. But, if it was the deliverance from Hades which first secured the entrance of the saints of old into Paradise, then the 'Abraham's bosom' of Lk 16²² cannot be identical with the 'Paradise' of Lk 23⁴³, and we ask in vain what it really is. Finally, the union in Paradise mentioned in Lk 23⁴³ is assuredly not to be thought of as transient merely, for it is impossible to think of the glorified Christ as remaining permanently in the provisional state of salvation.

3. Roman Catholic doctrine.—These obscurities are avoided by the Roman Catholic doctrine (cf. Wetzter-Welte, *Kirchenlex.*, Freiburg, 1882-1903, vi. 124-139, and the literature given there). The *dogma declaratum*, it is true, is simply that Christ—as is affirmed by the *Apostolicum* and the *Athanasianum*—'descendit ad inferos' in the interval between His burial and His resurrection, and that in this *Descensus* His soul 'per se, non per potentiam tantum descendit' (*Conc. Senon., trad. par un Russe*, Paris, 1859-60, II. 196 ff.; Androutsos, *Δογματική*, Athens, 1907, pp. 211-214).

anni 1140; Denzinger, *Enchiridion symbolorum*¹⁰, Freiburg, 1908, no. 385). The Symbol of the fourth Synod of Toledo (633) certainly supplements the stereotyped Article with a clause expressing the purpose of the Descent, viz. 'ut sanctos, qui ibidem tenebantur, erueret' (Hahn, *Bibliothek d. Symbole*¹¹, Breslau, 1897, p. 236), but that Symbol cannot be regarded as doctrinally binding upon the Catholic Church as a whole, while the *Catechismus Romanus*, which deals very fully with the *Descensus* (i. 6, quæst. 1-6), has only a 'high dogmatic, but no primary symbolic authority' (*Kirchenlex.*¹², xi. 1055). There is, nevertheless, no manner of doubt that every Article in which the modern catechisms agree with the *Catechismus Romanus* is to be claimed as Catholic doctrine in the sense of *dogma formale* (ib. iii. 1884). Hence the official Catholic doctrine of the *Descensus* is as follows.¹

The scene of the Descent is laid in the place 'in quo animæ sanctorum ante Christi domini adventum exsistebant' (*Cat. Rom.* i. 6. 3), i.e. the forecourt of Hell (Deharbe, qu. 231, etc.), the *limbus patrum* (Simar, i. 538; *Compendio*, p. 79), or the *sinus Abrahamæ* (Lk 16²², *Cat. Rom.*, loc. cit.). For 'antequam Christus moreretur et resurgeret, coeli portæ nemini unquam patuerunt' (cf. He 9⁸⁻⁹; *Cat. Rom.*, loc. cit. qu. 6). It was into this *limbus patrum*, accordingly, that Christ in His Spirit—not 'per potentiam tantum,' but 're et præsentia' (*Cat. Rom.*, loc. cit. qu. 4)—descended, in order to manifest His power and glory even in the under world (Deharbe, qu. 233. 2; *Cat. Rom.*, loc. cit. qu. 6: 'ereptis daemonum spoliis') and to comfort and deliver the souls of the just held captive there, i.e. to take them to Heaven (*Cat. Rom.*, loc. cit. qu. 3 and 6; Deharbe, qu. 233. 1, and 241). All this is probably clear enough to the laity; but the theologians of the Roman Catholic Church encounter difficulties in regard to Christ's repose in the sepulchre, and the passages Lk 23⁴³, Ac 1⁹, and 1 P 3^{10c}. All Catholic theologians solve the first difficulty in the same way as the *Cat. Rom.* with the help of Scholastic logic solves it:

'Christo jam mortuo, ejus anima ad Inferos descendit ibique tamdiu mansit, quamdiu ejus corpus in sepulchro fuit; eadem Christi persona eo tempore et apud inferos fuit et in sepulchro jacuit, propterea quod, quamvis anima a corpore discesserit, nunquam tamen divinitas vel ab anima vel a corpore separata est' (qu. 1).

A second difficulty arises from the fact that in Lk 23⁴³ the place in which Christ tarried after His death and on the day of His burial is given as 'Paradise.' Now, clear as is the distinction drawn by many theologians, in harmony with the *Cat. Rom.*, between *Limbus* (which involves no 'poena damni' but only the 'carentia visionis Dei' [cf. Loofs, *Symbolik*, Tüb. 1902, i. 270] and in which, according to the *Cat. Rom.* [loc. cit. qu. 3], the fathers 'sine ullo doloris sensu, beata redemptionis spe sustentati, quieta habitatione fruebantur') and the *Gehenna damnatorum*, the former is nevertheless a part of the *inferi*, of Hell. Is it permissible then to locate 'Paradise' in Hell (cf. *Kirchenlex.*¹², vi. 130)? Many theologians have done so without misgiving (cf. Martin, ii. 93: 'forecourt of Hell,' *sinus Abrahamæ* or *limbus patrum*, also simply called 'Paradise'); but sometimes a distinction is made

¹ Besides the *Cat. Rom.*, cf. G. Barelle, *Le Catechisme romain, ou l'enseignement de la doctrine chrétienne*, Montréal, 1907 ff., II. 386-403; J. Deharbe, *Grosser Katechismus*, Regensburg, New York, and Cincinnati, 1896; *Grosser Kat. für sämtliche Bischöfe Bayerns*, Regensburg, 1904; *Kath. Kat. f. d. Diocese Triest*, Trèves, 1888; *Kath. Kat. f. d. Bistum Mainz*, Mainz, 1886; *Kath. Kat. f. d. Bistum Paderborn*, Paderborn, 1892; *Kat. d. kath. Religion, herausg. auf Befehl d. hochwürdigsten Herrn Dr. K. J. v. Hefele, Bischofs v. Rottenburg*, Freiburg, 1889; *Cat. du diocèse de Paris*, Paris, 1897; *Compendio della dottrina cristiana ad uso dell' arcidiocesi di Torino*, Turin, 1893; cf. Th. Hub. Simar († as archbp. of Cologne, 1902), *Lehrb. der Dogmatik*¹⁴, 2 vols., Freiburg, 1899, I. 538-541; K. Martin († as bishop of Paderborn), *Lehrb. d. kath. Religion*¹⁵, 2 pts., Mainz, 1873, II. 92 f.

between *paradisus inferior* and *paradisus superior* (= Heaven). The *Cat. Rom.*, whose interpretation is adopted by *Kirchenlex.*¹² vi. 135 and Simar (*Dogmatik*, i. 538), expounds the matter more felicitously thus:

'Christi aspectus clarissimam lucem captivis attulit, eorumque animas immensa lætitia gaudique implevit; quibus etiam optatissimam beatitudinem, quam in Dei visione consistit, impertivit. Quod factum id comprobatur est, quod latroni promiserat illis verbis Luc. 23. 43.'

Here, accordingly, the *limbus patrum*, which after the liberation of the fathers is left absolutely empty, has, in virtue of Christ's presence, become Paradise even before their departure—has been 'transformed, so to speak, into a heaven' (*Kirchenlex.*¹² vi. 135).

With this particular point, however, is connected a third difficulty. Christ did not ascend to Heaven till forty days after His departure from *Limbus*, and only then 'did He take with Him to Heaven' the souls of the just whom He 'had liberated' from that place (Deharbe, qu. 241). Where, then, were the souls of the fathers during these forty days? For attempts to answer this question the curious may be referred to *Kirchenlex.*¹² (vi. 136).

The greatest difficulty of all is presented by 1 P 3^{10c} (cf. 4⁹). This is not one of the passages traditionally cited in support of the *Descensus*; the usual *facta probantia* are Ac 2²⁴, 27, 31, Eph 4⁹, Ro 10⁷, Mt 12⁴⁰, Hos 13¹⁴ (cf. 1 Co 15⁵⁴), Sir 24⁴⁵ ('Penetrabo omnes inferiores partes terræ, et inspiciam omnes dormientes, et illuminabo omnes sperantes in Domino'), Zec 9¹¹ ('Tu quoque in sanguine testamenti tui emisisti vinctos tuos de lacu, in quo non est aqua'). Augustine, indeed, in a celebrated letter (*ad Evodum*, Ep. clxiv., al. xcix.; Migne, PL xxxiii. 709-718), which in many passages reads like a modern treatise on the *Descensus*, emphatically denies that the two Petrine passages bear upon the subject at all (op. cit. 5. 15, p. 715, and 7. 21, p. 717). He explains 1 P 3^{10c} as referring to a preaching of the pre-existent Christ to the contemporaries of Noah who were overwhelmed in their sins (loc. cit. 6. 17, p. 716), and applies 4⁹ to a preaching of the gospel in this life to the spiritually dead (7. 21, p. 717 f.). And this, or a similar, explanation is adopted, with approval, by many mediæval theologians, including Thomas Aquinas, who writes (*Summa*, 3. 52, 2 ad 3):

'His qui in carcere conclusi erant viventes, scilicet in corpore mortali, quod est quasi quidam carcer anime, spiritu sue divinitatis venens prædicavit per internas inspirationes et etiam externas admonitiones per ora justorum' (cf. ib.: 'Qui increduli fuerunt Noe prædicanti').

At present, however, the exegesis which—largely under the influence of Hundhausen (*Das erste Pontificalschreiben des Apostelfürsten Petrus*, Mainz, 1873)—finds most favour is that which makes the earlier passage (3^{10a}) refer to the *Descensus*. The unbelieving contemporaries of Noah, accordingly, are supposed to be mentioned only by way of example, and the statement that Christ's preaching in the under world was vouchsafed even to such *unrepentant* souls in the place of *perdition* is narrowed down to mean that His preaching was made known to the condemned without a special *Descensus* to them at all, or, in other words, that the effects of the *Descensus* extended also to the lost (Simar, i. 539 ff., following Hundhausen, p. 350). Now this modification of the sense of 1 P 3^{10c} brings it into harmony with a view which Aquinas (*Summa*, 3. 52, 2c) had advanced without reference to that passage:

'per suum effectum (not: per suam essentiam) Christus in quolibet inferorum descendit; in infernum damnatorum habuit hunc effectum, quod descendens ad inferos eos de sua incredulitate et malitia confutavit.'

Certain catechisms, again, come to terms with 1 P 3^{10c} in a very simple fashion, by amending

the language of Scripture to make it suit Catholic dogma. Thus, after expounding the doctrine of the Descent to the *limbus patrum*, they cite the passage in question in the following form: 'He was put to death according to the flesh, but in soul He went to the spirits who were in prison, and preached, i.e. proclaimed redemption to them' (*Grosser Katechismus f. d. Bistümer Bayerns*, p. 75; *Paderborner Kat.* p. 93; similarly, though not quite so crudely, Deharbe, qu. 231, and *Trierer Kat.*, p. 26). It is a singular fact that Aquinas (*Summa*, 3. 52, 2c) speaks also of an 'effectus' of the *Descensus* upon the souls in Purgatory: 'illis qui detinebantur in purgatorio spem glorie consequendae dedit'; and in a special *questio* (3. 52, 8) he even discusses the problem whether Christ, in virtue of His *Descensus*, delivered souls also from Purgatory, and solves it as follows:

'Si qui inventi sunt tales, quales etiam nunc virtute passionis Christi a purgatorio liberantur, tales nihil prohibet per descensum Christi ad inferos a purgatorio esse liberatos.'

The strange thing is that Aquinas should think of souls as being in Purgatory at the time of the *Descensus*; for the Catholic doctrine is that all who have died in original sin (which could not be absolved before the death of Christ) are in *Hell*. Even the *sancti patres* who believed in the Messiah, and who, according to Aquinas (3. 49, 5 *ad* 1), had cancelled their actual sins by their faith and works, must be regarded as having been in *Hell*, or, at least, in the 'fore-court' thereof, by reason of their original sin; and it is believed even to-day that, when the children of Christian parents die unbaptized, and thus have not been cleansed of original sin, they go to *Hell*—to a region, it is true, resembling that in which the *patres* dwelt, viz. the *limbus infantium* (Loofs, *Symbolik*, i. 269). Unless, therefore, there have been exceptions to this rule of doctrine (the Innocents whose festival occurs on the 28th of December need not be regarded as forming an exception, since their baptism of blood would avail instead of baptism by water, and they could accordingly go to the *limbus patrum*), or unless a great migration from *Hell* to Purgatory took place at the instant of Christ's death—a theory likewise not easy to accept—we must believe that Purgatory was as empty before the death of Christ as the *limbus patrum* was after His Descent.

4. Lutheran doctrine.—The doctrine of the *Descensus* set forth in the Formula of Concord, and thus regarded by orthodox Lutherans as bearing the seal of their Church, is of a peculiar character. It cannot be understood without a retrospective glance at Luther himself. We must, however, distinguish between his real theological view and his presentation of the subject in his popular discourses. As a theologian Luther of course (a) adhered at first to the Catholic tradition (*Psalmenvorlesung* of 1513–15, Weimar ed. iii. 103, 20; 317, 37). But (b) he could not continue to hold this view after asserting that the faith of the 'fathers' is identical with our own (cf. *Predigten über 1 Mosis*, 1527, Weimar ed., 100, 4: 'vides Adamum Christianum fuisse ut nos'; Erlangen ed. [German], 33, 99). He had come to believe (cf. J. Köstlin, *Luthers Theologie*², Stuttgart, 1901, ii. 341)—even (see below) before 1522 (at Amsdorf, 13 Jan. 1522; Enders, *Briefwechsel Luthers*, Calw and Stuttgart, 1903, iii. 269–271)—that the 'fathers,' like departed believers in Christ, continue until the resurrection in a perfectly happy sleep of the soul, since they are, so to speak, enclosed and safeguarded in the belief in God's word as in a bosom ('Abraham's bosom,' Lk 16²²; *Kirchenpostille*, Erl. ed.², 12f.). Similarly, he thought that the souls of the wicked in the state

of death are tormented by their unbelieving evil conscience until they are cast into *Hell* at the Last Day; and with reference to the 'Hell' of Lk 16²³ he writes:

'The hell mentioned here cannot be the true Hell, which will come into being at the Last Day. . . . But it must be a place where the soul can live, and where it has no rest: therefore it cannot be a real locality. We judge, therefore, that this hell is the evil conscience—without faith and the word of God—in which the soul is buried and confined until the Last Day, when the person, body and soul together, will be cast into the real bodily Hell.'

A view of the *Descensus* corresponding to these ideas regarding the sleep of the soul had already been set forth by Luther in the *Operationes in Psalmos* of 1519–21:

'Anima Christi secundum substantiam descendit ad inferos . . . dolores mortis et inferni pro eodem ego habeo. Infernus enim est pavor mortis, id est sensus mortis, quo horrent mortem et tamen non effugiunt damnati, nam mors contempta non sentitur estque velut somnus. . . . Christus sicut uno summo dolore mortuus est, ita videtur et dolores post mortem in inferno sustinuisse, . . . ita . . . ut caro quidem ejus requieverit in spe, sed anima ejus infernum gustaverit' (Weim. ed. v. 463, 18ff.; Erl. ed. *Opp. exeg.* xv. 15, 378f.).

Luther still adhered to this theory in 1530 (*Enarr. in ps. 10*, Erl. ed. *Opp. exeg.* xvii. 125 f., cf. 124; [Germ.] xxxviii. 145 f., cf. 144); and, in fact, if we would set forth his own distinctive view of the subject, we must keep these thoughts before our minds. There is nothing to suggest that he ever abandoned the belief that the true *Hell* has no existence until the Last Day; he seems to have remained constant to the opinion to which he gave utterance in 1526:

'That there exists a special place in which the souls of the condemned now reside—as artists paint and belly-gods preach it—I regard as mere delusion, for even the devils are not yet in *Hell*' (*Expos. of Jonah*, Weim. ed. xix. 225; Erl. ed. [Germ.] xii. 378).

But he was not quite certain that the conception of the *Descensus* corresponding to this idea was final and exhaustive, and, accordingly, (c) while he had in 1523 sought to expound the Petrine passages on impossible lines, and in a sense which ignored the *Descensus* (*Auslegung d. 1 Petrusbriefes*, Weim. ed. xii. 367 f., 375 f., Erl. ed. [Germ.] li. 453 ff. 467; in a second form, Erl. ed. lii. 152 f. 162), we find that subsequently, in his lectures on *Genesis* (c. 1537)—which, it is true, do not survive in a verbally authentic form—he takes account of the hypothesis that the verses may throw light on the Article 'descendit ad inferos' (Erl. ed. *Opp. exeg.* ii. 222). He deems it possible that Peter was thinking of a preaching of the *mortuus Christus* to *mortui* of the time of the Deluge, but believes that this was restricted entirely to 'infantes et alios quos simplicitas sua impedit, ne possent credere' (*loc. cit.*). (d) A little later Luther seems to have made a further advance. In 1543, according to Melancthon's statement (*Corp. Ref.* v. 58), he was disposed to think—with Melancthon himself—that Christ's preaching in Hades, as referred to in 1 Peter, might have effected the salvation of the nobler heathen; while in an edition of his lecture on *Hosea*, issued with his own consent by Veit Dietrich in 1545 (Letter of 16th Oct. 1545 [de Wette, *Luthers Briefe*, Berlin, 1825–56, v. 761]), he gives—if, that is to say, he ever read this edition of his lecture—his sanction to a similar exegesis (Erl. ed. *Opp. exeg.* xxiv. 330), which, however, is not found in the transcriptions of the lecture of 1524 (Weim. ed. xiii. 27) revised by Dietrich in his edition. In any case, Luther was far from certain that the views of the *Descensus* which went beyond the position stated above (in b) were correct. Hence, in 1544—and here we have his last utterance on the subject, though again not authentic in its verbal transmission—(e) he pronounced a 'non liquet' upon all conjectures that would add to the simple fact of the sojourn of Christ's spirit in *inferno*:

'Quid anima fecerit in inferno, multi multa disputant, an spoliaverit interos et liberaverit euos qui ante ipsum in sinum Abrahamae congregati fuerant, nihil attinet querere et rimari curiosius' (in *Gen.* [Erl. ed., *Opp. exep.* x. 218]).

In his popular discourses Luther joins hands with the artists, whose pictures of the *Descensus* portray Christ—in the only way in which He can be portrayed, *i.e.* in the body—as going down 'with a banner in His hand, appearing before Hell, dislodging Satan, taking Hell by storm, and carrying away those who are His (cf. Erl. ed. [Germ.] xix.² 41). Thus, in order that 'children and simple folk' might attain to a clear idea of Christ's triumph over Hell and Satan—a fact which must become part of their receptive faith—Luther did not hesitate repeatedly (cf. even the short form of the Ten Commandments, 1520 [Weim. ed. vii. 217 = Erl. ed. [Germ.] xxii. 8], and elsewhere, *e.g.* in the *Hauspostille* [Erl. ed. [Germ.] v.² 1-17]), and notably in an Easter sermon preached at Torgau on the 13th of April 1533 (Erl. ed. [Germ.] xix.³ 40-54), to speak of the *Descensus* as if 'the Lord Christ—the entire person, God and man, with body and soul, undivided—had journeyed to Hell, and had in person demolished Hell and bound the Devil' (cf. Erl. ed. [Germ.] xix.² 44 f.). But these expositions are obviously clothed in the language of popular metaphor, and there is not the slightest doubt that Luther was aware of their exoteric character. He makes this quite clear in the exordium of his Torgau discourse:

'And it pleases me well that, for the simple, it [the Descent] should be painted, played, sung, or spoken in this manner (*i.e.* as represented by the artists), and I shall be quite content if people do not vex themselves greatly with high and subtle thoughts as to how it was carried out; for it did not take place in the body at all, as He remained in the grave for three days' (Erl. ed. [Germ.] xix.² 41).

It is instructive to note, as bearing in the same direction, what Luther adds to the words quoted above regarding the Descent of the whole person: 'Please God, the banner, doors, gate, and chains were of wood, or of iron, or did not exist at all' (*op. cit.* p. 45). Yet these utterances in the Torgau discourse, notwithstanding their unmistakably exoteric and metaphorical cast, came at length to be formulated as dogma. Owing, in some unexplained way, to local controversies regarding the Descent (F. H. R. Frank, *Theol. der Concordienformel*, iii., Erlangen, 1863, p. 418 ff.), the framers of the Formula of Concord (and even of its forerunner, the so-called Book of Torgau) deemed it necessary to insert a special Article (ix.) 'de Descensu Christi.' Their ostensible purpose in so doing was merely 'simplicitatem fidei in symbolo apostolico comprehensam retinere' (J. T. Müller, *Die symbol. Bücher d. evang.-luth. Kirche*, stereotype ed., Gütersloh, 1882, p. 696. 1). But when, in Art. ix., with a reference to Luther's Torgau discourse, they declare: 'Simpliciter ergo credimus quod *tota persona*, Deus et homo, post sepulcrum ad inferos descenderit, Satanam devicerit, potestatem inferorum everterit, et diabolo omnem vim et potentiam eripuerit' (*ib.* 696. 2), it is clear that the statement has behind it the whole argumentation of Art. viii. on the 'Communicatio idiomatum' (*ib.* 697. 3).

Lutheran orthodoxy, in maintaining (in opposition to the Reformed theology: see § 5 below), as an element of the true doctrine, that the *Descensus* was an act which, occurring after the *ἡγούμενη* and immediately before the Resurrection, involved the *entire* person of Christ, and belonged to the *status exaltationis*, was simply proceeding upon the lines laid down by the Formula of Concord. But, in seeking to establish these positions, it appealed to the Petrine passage (1 P 3¹⁹) which was not cited by that Formula, asserting that the preaching of Christ was a 'praedicatio (verbalis!) elenctica,' and therefore a 'triumphum agere'

(Hollaz, in H. Schmid, *Die Dogmatik d. evang. luth. Kirche*, Frankfort, 1858, § 38, note 21). In so doing, however, it also makes a complete surrender of the '*simplicitas fidei*,' as its Christology compelled it to qualify the 'descendit' by the phrase '*secundum humanam naturam*,' for '*secundum divinam naturam* jam ante in inferno per dominium omnia replens erat' (Quenstedt, in Schmid, *op. cit.* § 38, note 23). On a closer view, in fact, the 'descendit' becomes more attenuated still, since, according to the doctrine of Christ's omnipresence, His humanity is—after His exaltation, at all events—wherever His Divinity is. The '*supernaturalis motus non localis*' (Hollaz, in *loc. cit.* note 22) is thus merely the first phase of the non-local *ubiquitas corporis*. According to the Tübingen school, indeed, the humanity of Christ was not to be separated from His non-local omnipresent Divinity, even at the beginning of His rest in the grave, or at any time, in fact, after His *conceptio* (Dorner, *Gesch. d. prot. Theol.*, Munich, 1867, ii. 788 ff.).

5. Reformed doctrine.—If the Lutheran doctrine may be regarded as a modification of the Catholic—and it can be explained only by reference to the latter—the view of the Reformed Churches, so far as a single generic view of the question may be attributed to them, is characterized by a complete abandonment of the Roman dogma. It is true that Zwingli, in his first discourse at Berne (*Werke*, ed. Schuler und Schulthess, Zürich, 1828-1842, ii. 1. p. 211), kept close to the Catholic interpretation, asserting that the pious who lived before Christ and believed in the coming Messiah were delivered from Hades; and that later (*Fidei expositio* 7 [Werke, iv. 49]), while of opinion that the 'descendit' of the *Apostolicum* signifies only that Christ really died ('inferis enim connumerari ex humanis abisisse est'), he still clung to that view, which rests upon a peculiar exegesis of 1 P 3¹⁹. Leo Jud, again, in his Catechism of 1534, finds no more in the 'descendit' than '*vere mortuus est*': 'He died and was buried—went to Hell indeed, *i.e.* He really died' (A. Schweizer, *Die Glaubenslehre der evang.-ref. Kirche*, ii., Zürich, 1847, p. 349). Then Calvin, while deeming it an error to take the 'descendit' as equivalent to '*sepultus est*' (*Inst.* 1536 [Opp. i. 70: '*haec particula de descensu . . . minime superflua*']; emphatic repudiation in *Inst.* 1539-54 [Opp. i. 529] and 1559 [Opp. ii. 375]), nevertheless characterizes the Roman view as a '*fabula*' not only in *Inst.* 1536 (i. 69 f.) but also later (*Inst.* 1539-54, 7. 27 [i. 529 f.]; 1559, 2. 16, 9 [ii. 375 f.]); the idea that the souls of the dead are confined in a prison he regards as simply 'childish' (1559, 2. 16, 9 [ii. 376]). From 1536 to 1559 the only meaning which he drew from the Petrine passages—without applying them to the *Descensus* at all—was as follows:

'virtutem redemptionis per Christum partae exhibitam et plane manifestatam esse eorum spiritibus qui ante id tempus defuncti fuerant.' 'Fideles,' he believes, 'tunc plane et praesenti aspectu perspexerunt ejus visitationem; contra reprobi . . . nullam sibi spem residuam tunc planius agnoverunt' (*Inst.* 1539-54, 7. 27, p. 580; cf. 1538, p. 70, and 1559, 2. 16, 9, p. 376).

To Calvin's mind the true sense of the article 'descendit ad inferos' was this:

'Christum afflictum a Deo fuisse ac divini iudicii horrorem et severitatem sensisse, ut irae Dei intercederet ac ejus iustitiae nostro nomine satisfaceret' (*Inst.* 1536, p. 60; cf. 1559, 2. 16, 10, ii. 376: 'Nihil actum erat, si corpora tantum morte defunctis fuisset Christus, sed operae simul pretium erat, ut divinae ultionis severitatem sentiret, quo et irae ipsius intercederet et satisfaceret justo iudicio; unde etiam sum oportuit cum inferorum coplis aeternaeque mortis horrore quasi consensit manibus luctari').

Calvin is thinking here, not of the experiences through which Jesus passed after His death, but of the agonies of soul which preceded it. To challenge this interpretation on the ground that

if conflicts with the sequence of the Symbolical causes, he regards as frivolous:

'Ubi enim quae in hominum conspectu passus est Christus posita fuerunt, oportune subicitur invisibile illud et incomprehensibile iudicium quod coram Deo sustinuit' (*Inst.* 869, 2. 16, 10, p. 376 f.).

In the Reformed Churches of the succeeding period, as is shown by F. Wendelin (*Systema*, 1656, p. 719, in Schweizer, ii. 350), the views of Leo Jud and Calvin took precedence of all others, though in varying measure:

'Per descensum nihil aliud significari nisi sepulturam, pl^u loci viri nonnulli approbant; plerique orthodoxorum intelligunt dolores infernales quos in anima sua Christus sensit' (F. Wendelin, *oc. cit.*).

With regard to the latter point the Reformed theologians often differ from Calvin in not restricting Christ's endurance of the *dolores infernales* to His earthly life. In both statements it is of course implied—in opposition to the Lutheran theory—that the *Descensus* belongs to the *status exinanitionis* or *humiliationis* (*Westminster Larger Catechism*, qu. 46, 49, 50). Among the formularies which adopt the distinctively Calvinistic view are the Geneva Catechism (E. F. K. Müller, *Bekennnisschriften d. ref. Kirche*, Leipzig, 1903, p. 122 f.: 'horribiles angustias intelligo quibus Christi anima constricta fuit') and the Heidelberg Catechism (qu. 44 [Müller, p. 694: 'unspeakable distress, agony, and horror, which He suffered in His soul, and previously']). The *Westminster Larger Catechism* sets forth the Calvinistic view—without mention of the 'Descent' however—in qu. 49, while in qu. 50 it supplements this by speaking of Christ 'as after His death . . . continuing in the state of the dead, and under the power of death,' and expressly adds that this 'hath been otherwise expressed in these words,—He descended into hell.' But most of the Reformed Confessions give no explanation of the *Descensus* at all. The Anglican XXXIX Articles of 1563 likewise discard that portion of Art. iii. (Müller, p. 506: 'nam corpus usque ad resurrectionem in sepulchro jacuit; spiritus, ab illo emissus, cum spiritibus qui in carcere sive in inferno detinebantur fuit, illisque praedicavit, quemadmodum testatur Petri locus') which in the XLII Articles of 1552 followed the statement 'Christus est credendus ad inferos descendisse.'

6. Modern interpretation and re-statement.—In the Greek and Roman Churches the formulated doctrines of the *Descensus* dealt with above (§§ 2 and 3) have maintained an all but absolute predominance since mediæval times; of the few divergent tendencies the more important are mentioned by Dietelmaier (*Hist. dogmatis de Descensu*², Altorf, 1762, pp. 128–139, 144–153, 179). Within the pale of Lutheranism, again, a great variety of views gained a footing at the very outset. Luther himself advocated more than one interpretation (cf. § 4); Johannes Agricola, in his *Christliche Kinderleut*, propounded views similar to those afterwards maintained by Calvin (cf. G. Kawerau, *Joh. Agricola*, Berlin, 1881, p. 72), and with these views, again, Joh. Aepinus of Hamburg († 1553) incorporated the theory that the *Descensus* was really a vicarious descent of the Spirit of Jesus into that *infernum* in which sinners deserve to suffer until the Final Judgment and the inception of Gehenna fire (F. H. R. Frank, *Die Theologie der Concordienformel*, 4 vols., Erlangen, 1858–65, iii. 397–415); many others have approximated to the position of Aepinus (Frank, p. 415 f.), while Joh. Brenz († 1570), in the interests of the *ubiquitas corporis Christi* and the non-local character of 'Heaven' and the *infernum*, was inclined to favour a spiritual theory of the *Descensus*—an interpretation which amounted to little more than the notion that the crucified Christ is *supposed by human*

beings to have gone down to Hell and to have utterly perished (Frank, pp. 418–420; for other theologians, cf. Frank, pp. 416 f., 420–424, and for Urbanus Rhegius and Matthesius, Dietelmaier, p. 179 f.). From the issue of the Formula of Concord till after the middle of the 18th cent., however, the view formulated in that document prevailed generally within the Lutheran communion (cf. Dietelmaier, pp. 170, 180, 204–209). In the Reformed Churches neither of the Confessional views referred to in § 5 ever gained a position of absolute supremacy. As a matter of fact, it was in this section of the Church—in which the serious study of historical questions was entered upon earlier than among the Lutherans—that the certitude of the Confessional interpretations was first shattered. Besides the great theologian G. J. Vossius († 1649), two renowned English scholars, John Lightfoot († 1675) and John Pearson († 1686), succeeded in undermining the confidence hitherto placed in the formulated views, and for these thinkers the *Descensus* meant no more than the sojourn of the Spirit of Jesus in the realm of death. Then in the period of the Illumination the dogma largely lost its earlier signification, nor did the theology of post-Illumination times restore it.

But a fresh theory of the *Descensus* was advanced, and found favour in many quarters. The distinctive feature of the new interpretation was that it associated the preaching of Christ in Hades with a possible offer of salvation after death to all who had been denied the opportunity in this life. The *κρησσεύω* of 1 P 3¹⁰ was regarded as a preaching of the gospel; the contemporaries of Noah (v.²⁰) were supposed to be referred to only as examples, or as abnormally depraved, and it was thus inferred, *a maiore ad minus*, that, if salvation was proffered to such as these, a similar invitation must be granted to all who have not been called, or called effectually, in this life. To a certain extent recourse was had also to a hypothesis with which Augustine was acquainted (*Ep.* clxiv. 4. 13; Migne, *PL* xxxiii. 714), viz. that a knowledge of the salvation wrought by Christ must have remained in the realm of death ever since His preaching there. The present writer is unable, so far as regards the countries outside Germany, to trace the rise of this now widely diffused idea; considerable information on the subject is given by C. Clemen, '*Niedergefahren zu den Toten*,' Giessen, 1900, p. 215 ff. In Germany certain theologians—above all, J. L. König (*Die Lehre von Christi Höllenfahrt*, Frankfurt a.M., 1842), E. Güder (*Die Lehre von der Erscheinung Jesu Christi unter d. Toten*, Berne, 1853), and Clemen (*op. cit.*)—have given their support to this re-statement of the *Descensus* doctrine, or at least (thus Clemen) of what is supposed to be its religious bearing. These new ideas have found their way even into the precincts of Lutheran orthodoxy, and have become incorporated in a peculiar manner with other modifications of orthodox (=Lutheran) tradition (cf. e.g. Alex. von Ottingen, *Lutherische Dogmatik*, ii. 2, Munich, 1902, pp. 140–148). The theory which would affirm the possibility of an offer of salvation after death must, in our judgment, be conceded, and indeed many modern writers of the most diverse theological tendencies give it their approval (cf. König, p. 204 ff., Clemen, p. 212 ff.); but whether the theory can be legitimately combined with the *Descensus* as presented in Scripture (see below, § 7) or in the tradition of the Church (§ 8) is another question.

7. Re-statement compared with Scripture.—Of the various passages of Scripture which have at one time or another been appealed to in support of the *Descensus* those drawn from the OT need not be discussed here, as it is only by an obsolete

exegesis that references to Jesus Christ could be found in them. Nor do the NT passages—Mt 12⁴⁰, Ac 2²⁷, Ro 10⁷ and Eph 4⁸⁻¹⁰—speak of a *Descensus* of the nature implied by the 'Orthodox,' Catholic, Lutheran, Calvinistic, or 'modern' interpretations; these passages, or some of them, point at most to a sojourn of Jesus, or of His soul (Ac 2²⁷), in 'Hades.' We shall have an opportunity below (see § 10) of gauging the significance of this datum. The only passages which need be considered here are 1 P 3¹⁸ and 4⁶, which are very generally regarded as the *loci classici* for the *Descensus*, though, as we have already seen, Augustine and Aquinas (cf. § 3), Calvin (§ 5) and—for many years at least—Luther as well (§ 4), denied that the verses in question refer to the subject at all.

1 P 4⁶ must certainly be surrendered. For, while Augustine's idea that the *νεκροί* is equivalent to *infideles* (Ep. clxiv. 7. 21 [PL xxxiii. 718])—an exegesis adopted by Luther (Epist. *S. Petr. ausgelegt*, 1523 [Erl. ed. [Germ.] li. 468])—is undoubtedly wrong, Luther is as certainly right in saying (*loc. cit.* p. 467): 'He (St. Peter) adds further that they (the *νεκροί*) are judged according to man in the flesh. But they are not in the flesh; hence it can be understood only as applied to living persons.' If this reasoning be conclusive, and the application of the passage to the *Descensus* thus shown to be wrong, other points of difference among expositors may be left out of consideration here. The only correct explanation, in the present writer's opinion, is that which takes the *νεκροί* to signify those who were dead when the Epistle was written, but who in their lifetime had—as the *εὐαγγελιστὴς* shows—a knowledge of the gospel: just because they have died, and have not remained alive until the Parousia, they are 'judged in the flesh,' *ipsa morte carnis* (Augustine, Ep. clxiv. 7. 21 [PL xxxiii. 718]), but they live to God *πνεύματι*. This agrees with the whole train of thought which sets out from 3¹⁷ and reaches its middle point in 4⁶; for the emphasis is laid upon the idea that the dead, though it has been their lot *κρῖναι σαρκί*, nevertheless *ζῶσι κατὰ θεὸν πνεύματι*.

The case of 1 P 3¹⁸ cannot be so easily disposed of. Of the various interpretations applied to this passage, not a few find no reference to the *Descensus* in it either.

We have one example of this when the clause *ἐν ᾧ* (*sc. πνεύματι*) *προφθεῖν ἐκίρυσεν* is assumed to refer to the pre-existent Christ (I.). Such is the interpretation of Augustine (cf. § 3), J. C. K. v. Hofmann (*Die heilige Schrift d. N. T.* vii., Nordlingen, 1876, p. 134-134), and A. Schweizer (*Hinabgefahren zur Hölle*, etc., Zürich, 1868), who thinks that (1.a) the *πνεύματα* to whom Christ preached were the people of Noah's time, and that these are spoken of as *πνεύματα ἐν φυλακῇ* because they 'in ignorantia tenebris clauderantur' (Aug. Ep. clxiv. 5, 16 [PL xxxiii. 716]), or because they were *ἐν φυλακῇ* when the Epistle was written (v. Hofmann, *et al.*). Another form of this interpretation is that of F. Spitta (*Christi Predigt an die Geister*, Göttingen, 1890), that (1.b) the *ἐν φυλακῇ πνεύματα* are the angels whose fall (Gn 6²) was a theme of such profound interest in the Jewish apocalyptic literature and in certain Christian circles of the early centuries (cf. 2 P 2⁴). Similarly, the idea of the *Descensus* is surrendered by the interpretation which refers the clause *προφθεῖν ἐκίρυσεν* to the period after the Resurrection (II.). This exegesis is certainly untenable in the form represented by Luther, viz. that (II.a) Christ after His Ascension comes in the Spirit (i.e. in preaching) to the spirits (i.e. spirits or hearts of men), who are as disobedient as the contemporaries of Noah (Erl. ed. [Germ.] li. 458-460); but in the form given to it by F. O. Baur (*Vorlesungen u. d. neutest. Theologie*, Leipzig, 1864, p. 291)—that (II.b) those to whom Christ preached were the fallen angels (cf. 1 Ti 2¹⁸: *ὁὐδὲν ἀγγέλους*)—it still finds adherents (M. Lauterburg, *PRE3* viii. 201, l. 21 ff.). But a new interest gathers around the passage when the *προφθεῖν ἐκίρυσεν* is understood to indicate an event which occurred in the interval between Christ's death and His resurrection (III.). The theories based on this exegesis fall into two main classes, corresponding to a twofold explanation of *ἐκίρυσεν*. If the word be taken to mean a preaching of salvation (III.a), then the verse asserts that during the interval in question Christ proclaimed salvation to the generation destroyed by the Deluge. But, if *ἐκίρυσεν* be interpreted as implying only an 'elencthic proclamation' (III.b), we have a view which seems to approximate to the position of Lutheran Orthodoxy (cf. § 4).

Which of the above five exegetical theories still advocated to-day (I.a, b, II.b, III.a, b) is the most probable is a question which each must decide for himself; to seek to prove that any single one is exclusively correct were a hopeless task. The present writer has a considerable preference for the first form of explanation (I.), and especially for that of Spitta (I.b), though he hardly shares the confidence with which the latter scholar refers the *ἐκίρυσεν* to the commination uttered, according to the Book of Enoch (xii. 4, ed. Fleming and Radermacher, Leipzig, 1901, p. 34 ff.), over the fallen angels by Enoch: so many ideas of like nature must have been current in Apostolic times. But, even if either of the interpretations specified in III. is the right one, i.e. if we are to postulate a preaching of Christ in the interval between His death and His resurrection, yet 1 P 3¹⁸ gives as little warrant for the 'modern' conception of the *Descensus* as for that of the Lutheran Orthodoxy. Both theories, in fact, alike the Orthodox Lutheran, which does not harmonize with the *ἐν ᾧ* (= *ἐν πνεύματι*), and the modern, are in conflict with the indisputable fact that the only people mentioned in v.²⁰ as those to whom Christ preached are the contemporaries of Noah. To assume that the latter are mentioned only by way of example, and that the preaching of salvation, or of judgment, was heard by all *ἀπεσθίσαντες ποτε*, is certainly unwarranted. As regards the whole passage, in fact, only one thing is certain, viz. that, if it speaks of the *Descensus* at all, whether in the sense of interpretation III.a or in that of III.b, it presents an altogether unique conception of the event—unique not only with respect to the Confessional interpretations (§§ 2-5) and the 'modern' theories, but also with respect to the traditions of the early Church. The conception of the *Descensus* current in the early Church proceeded on entirely different lines (see § 8) and arose independently of 1 P 3¹⁸. Prior to the time of Clement of Alexandria (*Strom.* vi. 6. 45, ed. O. Stählin, Leipzig, 1906, p. 454, 14 ff.) and Origen (*in Joann.* vi. 35, ed. E. Preuschen, Leipzig, 1903, p. 144, 15 ff.), this passage, so far as we know, was never referred to in connexion with the *Descensus*; while Irenæus, who often speaks of the *Descensus*, and brings many Biblical passages to bear upon it (cf. *adv. Hær.* v. 31. 1, Massuet [ed. Harvey, Cambridge, 1877, ii. 411]), and who, moreover, was acquainted with 1 Peter and regarded it as authentic (*op. cit.* iv. 9. 2 [ii. 170]), never quotes the passage at all, nor, in dealing specially with the *Descensus*, does he even allude to it.

8. Re-statement compared with early Church tradition.—It is absolutely certain that the early Church tradition regarding the *Descensus* moves in an orbit quite apart from the 'modern' treatment of the conception. As regards the Western Baptistical Confession, it is well known that the 'descendit ad inferos,' which does not occur in the early Roman Symbol (Hahn, *Bibliothek d. Symbole*, Breslau, 1897, p. 22 ff.), makes its first appearance in the Symbol of Aquileia by Rufinus (Hahn, p. 42, cf. note 63; Caspari, *Quellen*, ii. [Christiania, 1869] 46, note 133; also F. Kattenbusch, *Das apostol. Symbol*, ii. [Leipzig, 1900] 895 ff.). In the Eastern Confessions (not, however, in the Baptistical formulæ) the clause appears somewhat earlier, viz. in the Fourth Sirmian formula of 359 (Hahn, § 163: *καὶ εἰς τὰ καταχθόνια κατέλθοντα*), the kindred formula of Nice of the same year (Hahn, § 164), and the Constantinopolitan formula of 380 (Hahn, § 167). But, long before these Confessions saw the light, the *Descensus* was already part of the Church tradition, alike in the East and in the West. This appears, to begin with, from the circumstance that among the things 'quæ testatissima veritate de Christo conscripta sunt' Augustine places the fact

'quod apud inferos fuit' (*Ep.* clxiv. 5. 14; cf. *ib.* 4. 12; 'Christo ad inferos descendente,' and 2. 3 '[Christum] . . . venisse in infernum satis constat, . . . quis ergo nisi infidelis negaverit fuisse apud inferos Christum?'); but in point of fact the idea of the *Descensus* can be clearly traced through Clement of Alexandria (cf. § 7), Tertullian (*de Anima*, 7 and 55, ed. Reifferscheid, Vienna, 1890, p. 308, 14 and 387 ff.), and Irenæus (*adv. Hær.* iii. 20. 4, Massuet [ed. Harvey, ii. 108]; iv. 22. 1 [ii. 228]; iv. 33. 1 [ii. 256]; iv. 33. 12 [ii. 267]; v. 31. 1 [ii. 411], and *Ἀποδείξεις*, *TU* xxx. 1. p. 42), to Justin (*Dial.* 72, ed. Otto, 1876-81, ii. 260) and one of the 'presbyters' of Irenæus (cf. *adv. Hær.* iv. 27. 2 [ii. 241]). Now, what significance did these Fathers attach to the idea? In answering this question it will be well to begin with the popular account of the *Descensus* given in the second part (i.e. the so-called *Descensus*) of the *Gospel of Nicodemus*, which probably belongs to the 4th cent. A.D. (*Evangelia apocrypha*³, ed. Tischendorf, Leipzig, 1876, pp. 322 ff. and 389 ff.). Here it is told in most dramatic style how Christ after His death came to Hades, set free the OT saints, and took them to Heaven, while He cast Satan, who desired to detain Him in Hades, into Tartarus (Gr. text, cap. vi. p. 329; Lat. text B, cap. viii. p. 429; but somewhat differently Lat. text A, cap. vi. p. 400: 'tradidit eum inferi potestati'). According to this account, therefore, there are two elements in the *Descensus*, viz. Christ's deliverance of the OT fathers from Hades, and His victory over Satan. The latter is not found in the earlier sources, being a mythological expansion—traceable as far back as Origen (*in Gen.* hom. 17. 5, ed. Lommatzsch, Berlin, 1831-48, viii. 290)—of the NT conception of Christ's victory over Satan combined with Ac 2⁷; the former—the deliverance of the saints—corresponds to the tradition which can be traced back to Justin's time. And that this conception of the *Descensus* may be regarded as distinctively that of the early Church is corroborated by the following facts. (1) Irenæus (in all the passages quoted above) and Justin (*loc. cit.*) give Scripture proofs of the view in question, and they also cite an OT (apocryphal) passage as follows: 'Commemoratus est Dominus, sanctus Israel, mortuorum suorum qui dormiant in terra sepulchris, et descendit ad eos evangelizare salutem, quae est ab eo, ut salvaret eos' (*Iren.* iii. 20. 4 [ii. 108]; cf. A. Resch, 'Ausserkanon. Paralleltexte zu d. Evangelien,' *TU* x. 1 and 2, p. 372 ff.). (2) It is evident that Celsus, the pagan adversary of Christianity, was acquainted with this view; according to Origen (*c. Celsum*, H. 43 [ed. Koetschau, Leipzig, 1899, i. 166]), he speaks of Christ thus: *μη πείσας τοὺς ὄντες ὅντας ἐστέλλετο εἰς ἄδου πείσων τοὺς ἐκεί.* (3) Marcion's conception of the *Descensus* is obviously a characteristic travesty of that recognized by the Church; thus, according to Irenæus (*adv. Hær.* i. 27. 3 [i. 218 f.]), Marcion taught:

³ Cain et eos qui similes sunt ei, et Sodomitis et Aegyptiis et similes eis et omnes omnino gentes quae in omni permixtione malignitatis ambulaverunt, salvatas esse a Domino, cum descendisset ad inferos, . . . Abel autem et Enoch et Noe et reliquos justos et eos qui sunt erga Abraham patriarchas, cum omnibus prophetis et his qui placerunt Deo, non participasse salutem. . . . Quoniam enim sciebant, inquit, Deum suum semper tentantem eos, et tunc tentare eum suspicati, non accurrerunt Jesu neque crediderunt annuntiationi ejus; et propterea remansisse animas ipsorum apud inferos dixit.

Moreover, we cannot appeal to Rufinus as a witness against the theory that the conception of the *Descensus* thus travestied by Marcion was the accredited doctrine of the Church. It may well be that Rufinus did not know what to make of the 'descendit ad inferos' in his own Symbol. His first remark regarding it is: 'vis verbi eadem videtur esse in eo, quod sepultus dicitur,' while, further on, along with other passages of Scripture, he incidentally refers to 1 P 3⁴, which, as he thinks,

tells us 'quid operis [Christus] in inferno egerit' (*Comm. in Symbol.* cap. 18 and 28 [Migne, *PL* xxi. 356 and 364]). After all, it is quite true that the Article 'descendit ad inferos' bears essentially the same meaning as the people of that day found in the Article 'sepultus est.' Christ went to Hades, according to the beliefs of the age, precisely because He died and was buried: 'Christus Deus,' says Tertullian, 'quia et homo, mortuus secundum scripturas, et sepultus secundum eandem, huic quoque legi satisfecit, forma humanae mortis apud inferos functus' (*de Anima*, 55 [ed. Reifferscheid, i. 388, 1-3]). We must not forget that Jews as well as Greeks regarded the grave and Hades as identical; the *Didaskalia Apostolorum* contains a passage—one, moreover, of quasi-Symbolical character—which brings Christ's liberation of the OT saints into immediate connexion with His death:

'qui crucifixus est sub Pontio Pilato et dormivit, ut evangelizaret Abraham et Isaac et Jakob et sanctis suis universis tam finem saeculi quam resurrectionem quae erit mortuorum' (vi. 6, 23. 8; ed. Funk, *Didaskalia et Constitutiones Apostolorum*, Paderborn, 1905, i. 382).

9. Original signification of the doctrine.—We proceed to ask whether the conception of the *Descensus* thus recognized by the early Church—the conception which has been preserved most faithfully in the Orthodox Eastern Church, and still looms through the Roman Catholic doctrine, but which differs radically from the formulated views of the Protestant Churches, as also from the 'modern' interpretation of the *Descensus* as a preaching to unbelievers—was the original. But this really leads to the antecedent question whether the view shown to have been held by Tertullian, Irenæus, and Justin can be traced still further back. In Hermas (*Simil.* ix. 16. 5) we find the theologoumenon: *οἱ ἀπόστολοι καὶ οἱ διδάσκαλοι οἱ κηρύξαντες τὸ ὄνομα τοῦ υἱοῦ τοῦ θεοῦ κοιμηθέντες . . . ἐκήρυξαν καὶ τοὺς προκεκοιμημένους.* Clearly, therefore, Hermas knew nothing of a 'Descensus Christi ad inferos' in the sense ascribed to it by Tertullian, Irenæus, and Justin. The present writer is, nevertheless, convinced—with J. B. Lightfoot and other scholars—that an idea of the *Descensus* very similar to that held by these Fathers can be traced even in Ignatius. Speaking of the prophets, the latter says that they had hoped and waited for Jesus Christ, *ἐν ᾧ (sc. Ἰησοῦ Χριστῷ) καὶ πιστεύσαντες ἐσώθησαν . . . ὑπὸ Ἰησοῦ Χριστοῦ . . . συννηθημένοι ἐν τῷ εὐαγγελίῳ τῆς κοινῆς ἐλπίδος* (*Philad.* v. 2, ed. Lightfoot, Lond. 1889, ii. 262 f.), while the same thought is found in *Magn.* ix. 2 (ii. 131), which speaks of Christ and the prophets thus: *ὅν δικαίως ἀνέμενον, παρὼν ἤγειρεν αὐτοὺς ἐκ νεκρῶν.* Nor does the present writer doubt that these ideas of the *Descensus* likewise underlie the thought of Ignatius when he speaks of Jesus Christ as the *θῦρα τοῦ πατρὸς, δι' ἧς εἰσέρχονται Ἀβραὰμ καὶ Ἰσαὰκ καὶ Ἰακώβ καὶ οἱ προφῆται καὶ οἱ ἀπόστολοι καὶ ἡ ἐκκλησία* (*Philad.* ix. 1; Lightfoot, ii. 274). Are we to assume, then, that the ideas of Ignatius regarding the deliverance of the OT saints from Hades were identical with those of Tertullian and Irenæus? The present writer is of opinion that they were not quite identical. In order to become convinced of this we must first examine the eschatological beliefs of Irenæus and Tertullian. Here Tertullian is the clearer of the two. He says, quite unmistakably, that 'no one enters Heaven before the end of the world': 'nulli patet coelum, terra adhuc salva, ne dixerim clausa, cum transactione enim mundi reserabuntur regna coelorum' (*de Anima*, 55 [ed. Reifferscheid, i. 388, 17 ff.]). Until the Last Day, therefore, the dead are in an intermediate state; the universal law is that all the dead, Christians included, pass after death into Hades: 'omnis ergo anima penes inferos,

inquis? Velis ac nolis, et supplicia jam illic et refrigeria. Habes pauperem et divitem' (*ib.* 58; i. 394. 9-11). The allusion to Lk 16¹⁰⁷ shows that Tertullian located 'Abraham's bosom' (v. 22¹), likewise 'apud inferos.' But he was also aware that the souls of martyrs pass immediately into 'Paradise': 'nemo enim peregrinatus a corpore statim immoratur penes Dominum nisi ex martyrii prerogativa, paradiso scilicet, non inferis diversurus' (*de Res. Carn.* 43, ed. Oehler, Leipzig, 1851-53, p. 973; cf. *de Anima*, 55 [Reifferscheid, i. 389. 3]: 'tota paradisi clavis tuus sanguis'). Nor does Tertullian appear to deny that even the patriarchs saved by Christ—the 'appendices dominicae resurrectionis'—tarry in Paradise till the 'transactio mundi' (*de Anima*, 55 [Reifferscheid, i. 388. 21 ff.]). What then is Paradise? A 'locus divinae amenitatis recipiendis sanctorum spiritibus destinatus' (*Apol.* 47 [Oehler, p. 145]), to be distinguished from that Hades which contains the souls of most of the dead, as an 'aliud et privatum hospitium' (*de Anima*, 55 [Reifferscheid, i. 388. 29]), yet in the last resort clearly a section of the 'inferi,' identical with the 'sinus Abrahae,' where 'expectandae resurrectionis solacium capitur' (*ib.*). Irenæus, who, it must be confessed, appears not to have fully mastered the heterogeneous mass of traditions before him, held a view essentially the same (cf. L. Atzberger, *Gesch. d. christl. Eschatol. innerhalb d. voricdn. Zeit*, Freiburg in B., 1896, p. 238 ff.). But he seems to think of the *πνευμαφόροι* (i.e. truly spiritual Christians, martyrs, and other specially mature believers) who enjoy in Paradise a foretaste of *ἀθάνατος* (*adv. Hær.* v. 5. 1 [ii. 331]) not merely—with Tertullian—as 'spiritus,' but also, perhaps on the authority of 1 Co 5⁴ (a passage which he often cites [cf. Harvey, ii. 521])—as endowed with what we may call provisional bodies (cf. what is said, *op. cit.* p. 330, about Enoch and Elijah). Now, we see at once that, with respect to the views of Irenæus and Tertullian, the same questions urge themselves upon us as arose in connexion with the recognized doctrine of the Eastern Church (see above, end of § 2). According to the beliefs of the two Fathers regarding Paradise, all that Christ could accomplish on the occasion of His *Descensus* was—to put it somewhat crudely—to place the OT saints in a better region of Hades. Did Ignatius too share this view? And is this the original idea of the *Descensus*? The former question—little as Ignatius says of the matter—may, as we think, be answered in the negative. What Christ did for the prophets, according to Ignatius (*Magn.* ix. 2), was: *ἤγειρεν αὐτοὺς ἐκ νεκρῶν*. Was Ignatius thinking here of a bodily resurrection, and of what is narrated in Mt 27⁵²? T. Zahn (*Ign. v. Antiochien*, Gotha, 1873, p. 598 f.) believes that he was. But the hypothesis is belied by the first of the Ignatian passages already quoted (*Philad.* v. 2), according to which the prophets are *συντηρημένοι ἐν τῷ εὐαγγελίῳ τῆς κοινῆς ἐκπαίδας*, i.e. they look forward, exactly like the Christians, to the *ἀνδραγαθία σωτῆρος*. It is certainly possible that Ignatius agreed with Irenæus in believing that prophets and patriarchs had acquired provisional bodies. But the true sense of the Ignatian references, as the present writer thinks, leaves us free either to accept this theory or to assume that, like Tertullian, he was thinking only of the 'spiritus' of the prophets. Perhaps his cogitations had never brought him face to face with the alternative; for it is obvious that in his eyes the essence of the matter was that Christ had vouchsafed to the OT saints the same salvation as Christians had obtained. What then, according to Ignatius, is the position of Christians with respect to death? So far as he himself was concerned, he does not look forward to a sojourn in Hades; he hopes, at his approaching decease, to

win God (*Θεὸν ἐκρυχαίν*, *Rom.* i. 2, fi. 1, etc.), to go to the Father (*ib.* vii. 2), to be united to Christ (*ib.* vii. 3; cf. E. von der Goltz, *Ign. als Theologe*, Leipzig, 1894, p. 38). Do these words imply that Ignatius, as one about to become a martyr, longed for the 'prerogative' (cf. Tertullian's phrase quoted in *preced. col.*) of 'statim penes dominum esse'? Such an interpretation seems quite at variance with the manner in which he speaks of himself elsewhere. He must have supposed, accordingly, that, although Christians will not attain the resurrection of the body until the Last Day, yet they do not fall under the bondage of death, i.e. Hades, but pass through the gate of death to eternal life. It is clear that, according to Ignatius, that which Christians experience immediately after death was imparted, in virtue of Christ's descent, also to the OT saints. That these reflexions of Ignatius are of a more primitive character than those of Irenæus and Tertullian appears probable from the fact that they exhibit a higher degree of self-consistency, and are in perfect accord with ideas suggested by Jn 8⁵¹ and 11²⁵⁷ (cf. 11²⁴). But this priority is also capable of proof. First of all, it is worthy of note that the phrase *ἤγειρεν αὐτοὺς ἐκ νεκρῶν* used by Ignatius is found in later statements regarding the *Descensus* which are unquestionably independent of him. In the *Acta Thaddaei*, written c. A.D. 250, Christ is referred to in these terms: *ἐστραυρώθη, καὶ κατέβη εἰς τὸν ᾗδην, καὶ διέσχισε φραγμὸν τὸν ἐξ αἰῶνος μὴ σχισθέντα, καὶ ἀνῆγειρεν νεκρούς* καὶ κατέβη μόνος, ἀνέβη δὲ μετὰ πολλοῦ ὄχλου πρὸς τὸν πατέρα αὐτοῦ (*Euseb. HE* i. 13. 20, ed. E. Schwartz, Leipzig, 1907, i. 96). The *ἤγειρεν*, indeed, is still found in the *Gospel of Nicodemus* (viii., p. 330). Another important point is that Tertullian and Irenæus expressly oppose the theory that Christians do not go to Hades (cf. Kattenbusch, *op. cit.* ii. 902 ff.). Of his opponents on this point Tertullian says: 'qui satis superbe non putant animas fidelium inferis dignas' (*de Anima*, 55 [Reiff. i. 388. 7]); 'In hoc, inquit, Christus inferos adit, ne nos adiremus; ceterum quod discrimen ethnicorum et christianorum, si carcer mortuis idem?' (*ib.* 55 [Reiff. i. 388. 10 ff.]). Irenæus, again, censures those within the Church (cf. *adv. Hær.* v. 31. 1: 'qui putantur recte credidisse') who believe 'interiorem hominem ipsorum derelinquentem hic corpus, in supercoelestem ascendere locum' (*adv. Hær.* v. 31. 2 [ii. 412]). Now, the real innovators here are not those who were thus assailed by Irenæus and Tertullian, and whose views, it may be added, were still at work in the time of Pelagius (cf. Loofs, *Dogmengesch.*, Halle, 1907, p. 421), but these Fathers themselves. Finally, the older view still asserts itself in the thought of Irenæus: 'Ecclesia . . . multitudinem martyrum . . . praemittit ad patrem' (*adv. Hær.* iv. 33. 9 [ii. 263]), and, in fact, the belief that the martyrs and saints are even now with Christ long survived throughout the Western Church, as also—though with manifold inconsistencies—in the East.

Thus the most primitive, or, at least, the earliest traceable, element in the conception of the *Descensus* would seem to be the belief that Christ, having descended into the under world after His death, delivered the OT saints from that necessity of being confined in Hades which was thenceforward abrogated in the case of believers, and conveyed them to the Heaven which all believers have hereafter the right to enter.

10. Relation of doctrine to primitive Christian ideas.—That in this most primitive, i.e. earliest traceable, view we have reached the primordial element of the doctrine is rendered probable by the fact that the view in question is closely connected with certain important and, indeed, central ideas in primitive Christianity. Reference can be

made here only to a few points. (1) This earliest phase of the conception shows not the slightest influence of that high esteem accorded, from the days of the Apologists, to the pious heathen who lived before Christ; it numbers with the Church of God only the *saints of the Old Covenant*. (2) It does justice to the primitive Christian conviction that Christ was the *πρωτόκοκς ἐκ νεκρῶν* (Col 1¹⁸, 1 Co 15²⁰), the One who brought life (Paul, John, 1 P 1³, Heb., Ac 4² 13^{32a}, 17³¹). (3) It ignores the distinction between the Resurrection and the Ascension of Christ, and, indeed, with not a few primitive Christian documents (cf. *Barnab.* xv. 9, ed. Harnack², Leipzig, 1878, p. 66, and Harnack's note), treats the two as one. We may well wonder, indeed, that the opponents of the bodily resurrection of Jesus have never appealed to this conception of the *Descensus*, i.e. the *ἐγερθῆναι ἐκ νεκρῶν* of the patriarchs and their entrance into Heaven with Christ—though there are, of course, arguments which would tell against such a procedure. Even the relatively late *Gospel of Nicodemus* allows no time at all for the bodily resurrection of Christ, and that event is made known to the world, not by His appearance, but by the preaching of those who have come with Him from Hades (xi. 332; Lat. text A, 406 f.; B, 431).

Another link of evidence for the antiquity of the conception set forth in § 9 is that traces of it are found in the NT. Not certainly in 1 Peter; for, as will be seen from all that has been said, if the much-canvassed passages in that work refer to the *Descensus* at all, they would indicate a view which is quite unique and finds no support in the tradition of the early Church. The Pauline Epistles, again, in spite of Ro 10⁷ and Eph 4⁹, have in our opinion as little to say of the *Descensus* as Ac 2^{27, 31}; all that these passages imply is the sojourn of Christ in Hades which, in the minds of the writers, was necessarily involved in His death. It is possible, however, that the belief in the *Descensus* is presupposed in Rev 1¹⁸ (*ἔγω τὰς κλείς τοῦ θανάτου καὶ τοῦ ᾄδου*); while Jn 8⁵⁶ (*Ἀβραὰμ ὁ πατήρ ὡν ἡγαλλίασας ἵνα ἴδῃ τὴν ἡμέραν τὴν ἐμὴν καὶ εἰδὲ καὶ χάραγ*)—a passage which, as we think, still awaits a satisfactory exegesis—becomes intelligible when it is taken to refer to Christ's presence in Hades. It is true that the saying, as put into the mouth of Jesus, would thus involve a violent anachronism. But is an adequate exposition of, e.g., Jn 6 possible except on the hypothesis of similar anachronisms?

We are on surer ground in saying that the idea of the *Descensus* was known to the author of Hebrews. Thus, of the OT saints whom he cites in ch. 11 as witnesses of faith he says expressly: οἱτοὶ πάντες . . . οὐκ ἐκομίσαντο τὴν ἐπαγγελίαν, τοῦ Θεοῦ περὶ ἧν κρείττον τι προβλεψάμενον, ἵνα μὴ χωρὶς ἡμῶν τελειωθῶσιν (11^{39a}); then in ch. 12 he assumes that even now the heavenly Jerusalem contains not only the *ἐκκλησία πρωτοτόκων* (Apostles and other believers of the first generation), but also the *πνεύματα δικαίων τετελειωμένων* (12^{21a}). Now these *δικαίω τετελειωμένοι* must also include the heroes of faith mentioned in ch. 11. Until Christ came, however, the way into the holy place was not open to them (cf. 9⁸: τοῦτο δηλοῦντος τοῦ Πνεύματος τοῦ Ἁγίου, μήπως πεφανερῶσθαι τὴν τῶν ἁγίων ὁδὸν ἐν τῇ πρώτης σκηνῆς χεούσης στάσις). Christ alone, who τελειωθείς ἐγένετο πᾶσι τοῖς ὑπακούουσιν αὐτῷ αἰτίος σωτηρίας αἰωνίου (5⁹), can have opened to them the holy place; through His death οὗ προδρόμος (6²⁰) entered the holy place, εἰς αὐτὸν τὸν οὐρανόν (9²⁴); ἐνεκαίνισεν ἡμῖν ὁδὸν πρόσφατον καὶ ζῶσαν, διὰ τοῦ καταπετάσματος, τοῦτ' ἐστὶ τῆς σαρκὸς αὐτοῦ (10²⁰). In all these passages, no doubt, the writer is thinking primarily of Christ's *sacificial* death, but do his words not gain in clearness when we assume that he had also the *Descensus* in his mind?

Finally, it seems to the writer to be beyond question that the idea of the *Descensus* underlies Mt 27⁵¹⁻⁵³. It has been aptly observed by Resch ('*Ausserkanon Paralleltexzte z. d. Evangelien*,' *TU* x. 1 and 2, 1893-94, p. 362) that the *Gospel of Nicodemus* indicates the sense in which the opening of the graves and the resurrection of saints narrated in these verses was understood, since it is hardly possible to doubt that the writer of the First Gospel favoured a similar view. We might even ask, indeed, whether the rending of the *καταπέτασμα* in Mt 27⁵¹ is not simply a mythical representation of the thought expressed in He 10²⁰, viz. that Christ set open the way into the holy place διὰ τοῦ καταπετάσματος.

11. Hybrid origin of doctrine excluded.—The Johannine writings, the Ep. to the Hebrews, and Mt 27⁵¹⁻⁵³ belong, however, to the latest stratum of the NT. That the conception of the *Descensus*, as set forth in § 9, was current in the earlier Apostolic period must, in view of the fact that the Pauline Epp. are silent regarding it, and that there is no trace of it in Hermas (cf. p. 660^b), be regarded as improbable. But from what was said in the foregoing paragraph we must recognize the presence of the idea in the later Apostolic period. This fact, and, still more, the fact that the idea of the *Descensus* is connected with primitive Christian-Jewish views of Hades and eternal life (cf. also § 10), are sufficient, as we think, to negative the theory that the belief was in part generated by non-Jewish and non-Christian influences—ideas from alien religions. Such a mixed origin has been ascribed to it by not a few modern scholars (cf. Clemen, *Religionsgesch. Erklärung d. NT.*, Giessen, 1909, pp. 153-156; H. Zimmern, *KAT*³, pp. 388, 563; H. Gunkel, *Zum religionsgesch. Verständnis d. NT.*, Göttingen, 1903, p. 72; O. Pfeiderer, *Das Urchristentum*³, Berlin, 1902, ii. 288, also *Das Christusbild des urchristl. Glaubens in religionsgesch. Beleuchtung*, Berlin, 1903, pp. 65-71; A. Meyer, *Die Auferstehung Christi*, Tübingen, 1905, pp. 10 and 80; W. Bousset, *Hauptprobleme d. Gnosis*, Göttingen, 1907, pp. 255-260; Percy Gardner, *Exploratio Evangelica*³, London, 1907, pp. 263-74; and others). But the many and various parallels that have been pointed out are—as parallels—anything but convincing; the similarities are nothing like so many as the differences, and the hypothesis that these exotic ideas exerted an influence upon the genesis of the *Descensus*-idea not only remains unproved, but is in the highest degree improbable.

12. Specifically early Christian character of doctrine.—The conception of the *Descensus*, as defined above (§ 9), must accordingly be recognized as a specifically Christian idea which goes back to the later decades of the primitive Church, and as such it has a strong claim upon our interest. The conception, in fact, holds a quite peculiar position, for it is the sole vestige of primitive Christian thought which, independently of the Bible—with marked modifications and variations, indeed,—still retains a place in the tradition of all the main divisions of the Christian Church. Even so, however, the modern mind cannot bring to it more than interest; we cannot now accept it as part of our faith. The Jewish-Christian beliefs regarding Hades and the sojourn of the soul therein, as also those regarding Heaven, which underlie the idea of the *Descensus*, belong to a cosmology which even the most determined *laudator temporis acti* cannot now accept. The conception, moreover, is really inseparable from these underlying beliefs, and, when the latter crumble away, nothing of the former remains. We can appraise the doctrine of the *Descensus* only in a historical sense, i.e. as a conception which brings into strong relief the primitive Christian conviction

that the resurrection of Jesus Christ was something altogether *new*, and which with its naive imagery graphically expresses not only the connexion between the Old and New Testaments, but also the original element in the new covenant. In fact, the *Descensus*-idea embodies in its own manner the very same thought as is expressed in the words of Ignatius, *Philad.* ix. 2: *ἐξέρχοντι ἐκεῖ τὸ εὐαγγέλιον, τὴν παρουσίαν τοῦ σωτῆρος, κυρίου ἡμῶν Ἰησοῦ Χριστοῦ, τὸ πάθος αὐτοῦ καὶ τὴν ἀνάστασιν*—οἱ γὰρ ἀγαπῶντες προφήτῃ κατήγγελλον εἰς αὐτὸν, τὸ δὲ εὐαγγέλιον ἀπάρτισμα ἐστὶν ἀφάρσιος. But precisely this manner of expression is one of the most antiquated and assailable elements with which the tradition of the Christian Churches is still encumbered. It were fitting, therefore, that the Churches distinguished as Evangelical should omit the Article 'descendit ad inferos' from their programmes of instruction in Christian doctrine and worship.

FRIEDRICH LOOFS.

DESCENT OF MAN.—See EVOLUTION.

DESIGN.—See TELEOLOGY.

DESIRE.—The inner nature and outer scope of human desire are such as to raise important questions concerning man's relation to the world and his estimate of his own life therein. In both a theoretical and a practical manner, desire proposes certain questions for philosophy: on the one side, it is asked whether man can desire aught but the pleasurable; on the other, it is questioned whether his attitude toward desire should be one of acceptance or rejection. Just as perception establishes a theoretical connexion between the mind and the world, so desire elaborates a volitional relation between the soul and Nature, so that man is led to wonder whether, like the animal, he could silently take his life for granted or, self-conscious and self-propelled as he is, should question the authority of natural desire over him. Owing to the problematic nature of desire, it becomes necessary to inquire concerning the exact psychological type and ethical worth of this human function; to this constructive work must be added critical considerations drawn from æsthetics and religion. Thus we must investigate what desire really is, and in what way, and to what extent, it is supposed to exercise sway over the human soul.

I. Psychology of desire.—The nature of desire is such as to place it between instinct and volition; it is superior to instinct inasmuch as it is a definite and conscious form of activity, while it is inferior to volition because it is not propelled by a disinterested, impersonal idea. Belonging to the emotional process, desire has the nature of active

feeling; all feeling tends to arouse activity in either mind or body, so that desire may be regarded as feeling plus activity—a process according to which a painful want is satisfied or a pleasurable experience retained. Nevertheless, desire is related to both cognition and volition; but, where pure intellection and pure conation work directly in relating the ego to its object as idea or act, desire follows an indirect path, which involves instinctive and personal considerations. In a certain sense, the position of desire in consciousness is exceptional, for the reason that acts are usually performed directly, while ideas are entertained in a purely mental manner not coloured by desire; in contrast to these more staid forms of cognitive and conative activity, desire expresses a condition of intensified human interest.

(a) The volitional factor in desire occasions a problem whose nature is expressed by the question, Does one always desire pleasure? If desire were purely affectional, it could easily be pointed out that desire is ever related to the pleasurable, aversion to the painful; but the presence of conation spoils the simplicity of this hedonic arrangement, and makes necessary one that is more extensive and complicated. Perceiving the influence of the will's activity, Aristotle was led to say: 'There are many things, so to speak, which we should choose on account of something else than pleasure' (*πάντα γὰρ ὡς εἰπεῖν ἐτέρον ἕνεκα αἰσθηθέντα πλὴν τῆς εὐδαιμονίας* [*Éth. Nic.* x. 6]). In contrast to Aristotle's eudæmonism, J. S. Mill urged a hedonism on the basis of which he insisted upon identifying desire with a sense of pleasure:

'I believe that desiring a thing and finding it pleasant, aversion to it and thinking of it as painful, are phenomena entirely inseparable, or rather two parts of the same phenomenon; in strictness of language, two different modes of naming the same psychological fact: that to think of an object as desirable (unless for the sake of its consequences), and to think of it as pleasant, are one and the same thing; and that to desire anything, except in proportion as the idea of it is pleasant, is a physical and metaphysical absurdity' (*Utilitarianism*¹⁰, 1888, p. 56).

This dogmatism on Mill's part may be explained by observing that, where desire is viewed in independence of pleasure, the invalidity of the hedonic argument is at once demonstrated; for the ability of the ego to transcend pleasure and pain as determinants of action is a preliminary proof of idealism. On the psychological side, it is apparent that, where desiring an object indicates a volitional decision in favour of it, as worth while, still this does not mean emotional delight in it as something pleasurable. The later hedonism of Sidgwick admits this, and its author, in his anxiety to escape the egoistic implications of the older hedonism, declares:

'What I am concerned to maintain is that men do not *now* normally desire pleasure alone, but to an important extent other things also' (*Methods of Ethics*⁹, London, 1901, I. ch. iv. § 4). In identifying the pleasurable and desirable, the hedonist has confused desire in its active condition with the passive experience of delight, but the human mind is so constituted that it can choose other than delightful experiences. From the evolutionary standpoint, desire is related to pleasure, aversion to pain, upon the basis of the hedonic law which declares that the pleasurable is indicative of the beneficial in the organism, the painful of the harmful.

'Every pleasure,' says Herbert Spencer, 'increases vitality; every pain decreases vitality. Every pleasure raises the tide of life; every pain lowers the tide of life' (*Data of Ethics*, New York, 1893, § 36).

But the claim that the pleasure-giving is equivalent to the life-increasing, the pain-giving to the life-decreasing, is based upon purely biological considerations, and is discussed by Spencer in the chapter entitled 'The Biological View'; when he advances to 'The Psychological View,' as this is involved in the evolutionary plan, he repudiates the original hedonic scheme, by claiming that

man submits to guidance, not by simple, but by representative, feelings, whose ends are far removed from the sense of bodily benefit or injury (*ib.* § 42). The evolutionary conception of conduct is thus called upon to admit the presence of something like a disinterested play of consciousness, whereby man, emancipated from purely biological principles, chooses either pain or pleasure according to his idea of what has worth for the will.

(b) The cognitive factor in desire appears first of all in the presence of a presentative element which involves the idea of an object or end, so that cognition as well as conation tends to separate desire from the realm of purely instinctive feeling. As Sully says, 'where there is no knowledge, there can be no desire' (*The Human Mind*, ii. 196). Such knowledge consists in the memory of former pleasurable experiences which we would have repeated, or the idea of similar feelings which we could realize. The perceptible appreciable result to be obtained by activity in the direction of the desired object distinguishes desire from instinct, which functions immediately without the idea of an end. As Bergson has expressed it, 'there are things instinct alone finds, but it never seeks them' (*L'Evolution créatrice*, 1910, p. 164). On the cognitive side, desire consists in knowledge of an object rather than merely some pleasurable experience with its qualities, where one reads a book or listens to an opera, not merely for the attendant pleasure of the perusal or the performance, but for the sake of having read such a book or having heard such an opera. Desire is satisfied, not merely by pleasure, but by means of a conscious experience with an object, such as a foreign country which one visits. With its broad interests, the intellect transcends immediate pleasures, and advances to the idea of thrill which is afforded by contact with reality. In this way, art, which necessarily demands the disinterested, may mean more to the mind than actual life, just as tragic art, with its constant suggestion of pain and defeat, may be more entertaining than the comic, with its ideas of happiness and success. Through his desire for intellectual excitement, man has demonstrated his ability to rise above pleasure, just as he has shown that to perform acts peculiar to his will is of more value to him than to entertain pleasurable emotions. Desire thus involves an ideal as well as a purely cognitive element, for by its very nature it contrasts the actual condition of the ego with an ideal state of mind; the present as given, with the future as the not yet attained. This reference to the future is indicative of the difference between desire and pleasure; for, where pleasure is necessarily contemporaneous, desire is ever anticipatory, so that, as pleasure enters, desire departs. One desires pleasure when he does not possess it, but, when pleasure comes, the delight in it dispels the mere desire for it. In this way arises the larger question concerning happiness, which is sometimes conceived of as the possession of the good, sometimes as the pursuit of it.

(c) In addition to the conative and cognitive in desire, there is a third element, without recognition of which the problem of desire cannot be sufficiently presented; this is the *egoistic*. Desire indicates a form of activity streaming forth from the ego, while it is aimed at a form of experience calculated to affect the ego's condition. In themselves, both action and thought possess an impersonal character, since they relate to causal and substantial forms of reality found in the outer world; desire, however, makes use of these fundamental forms of mental reality only so far as they are of personal interest to the ego which desires to direct its faculties of conation and cognition in some particular channel. Desire is so identified with

personal interest that æsthetical and religious systems which counsel man to avoid desire do not fail to advise him to neglect self. As to the relation of man to the world about him, desire makes use of an egoistic form of expression whereby instinct becomes conscious and voluntary. The fatality that may attach to such a personal exhibition of instinctive traits was portrayed by Balzac in his philosophic story, 'The Magic Skin,' which, as a token, had power to confer any desire, but which itself dwindled with the gratification of the wish until at last it destroyed the possessor—a suggestion that one must desire even though the desiderative life will eventually destroy itself.

2. Ethics of desire.—Where the psychology of desire ends, the ethics of desire begins—in the idea of value. With its egoistic and emotional limitations, desire cannot serve as an ethical norm, for it has already been shown to be incapable of accounting for impersonal volition and ideation. Nevertheless, desire may become a determinant of value, because, where one does not necessarily desire the pleasurable, he does desire what he deems valuable. 'Man,' said Nietzsche, 'is the valuing animal as such' (*Genealogy of Morals*, tr. Hausemann, 1897, ii. § 8), and the valuational in him may be attributed to the desiderative element in his nature. In this way, value becomes subjective; instead of adhering to a thing as one of its properties, instead of belonging to the moral principle as one of its attributes, value is relative to human desire. From this subjective point, Chr. v. Ehrenfels has declared:

'We do not desire things because we recognize a mystical, unintelligible essence of value in them; but we attribute value to them because we desire them' (*Syst. der Wertheorie*, vol. I § 1).

Basing value upon desire, Ehrenfels follows Brentano in asserting that 'one can feel pleasure and pain without desiring; and, second, one can desire without feeling pleasure or pain' (*ib.* § 5). Having made value to consist of something subjective, he seeks to show how, in valuing a thing because of its desirability, we are not exchanging absolutism for egoism, for we are able to erect the idea of an absolute concept of value upon a psychic and subjective basis (*ib.* § 16). Value thus stands for a relation between an object and a subject, according to which the subject actually desires the object, or would desire it were it not convinced that the object existed for it (*ib.* § 21). The empiricism and eudæmonism of this view have been criticized by F. Krueger, who substitutes for the idea of actual desire that of a relatively constant desire (*Der Begriff des absolut Wertvollen*, ch. iii. 1). As Ehrenfels had clung to realism in desire, Krueger seeks to advance towards idealism. It is possible, however, to advance a stage beyond the point of view which regards value as the relatively constant desire of the subject. Desire contains not only the egoistic element, but the impersonal factors of cognition and conation whereby the moralist may secure a conception of the supreme good conceived neither eudæmonistically nor rigoristically, but in a valuational manner.

The attempt to idealize desire, that it may be elevated to the plane of the valuable, is quite in keeping with the inner nature of desire, with its perpetual contrast between the real and the ideal, the present and the future. At the same time, the mingling of pain and pleasure in desire—pain as to the given condition, pleasure with regard to a conceivable one—is only another phase of the idealizing tendency in all desire. At first view, desire seems to be but a natural principle, at one with the will to live and the struggle for existence, its inner nature consisting apparently in the conscious voluntary choice of the fundamental striving of all life. Thus viewed, human values are only human

desires directed towards an end. But in the moral consciousness of man the actual desire cannot be accepted as an ethical norm, whence arose idealism in conduct; and yet it is suggested that, were man truly man, the intelligible rather than the empirical ego, then the spontaneous desires of the human heart would represent genuine values of spiritual life. Man as a *valeur* lives according to idealized desires, so that, where Nature originates through organic striving and instinctive activity, reason continues this preliminary work by creating subjective values, whose essence consists in that which would be desired by man in his moral perfection. Inasmuch as ethics must begin with man as he is, it finds it necessary to express this idea of value by means of rectitude and duty. As a result, ethics, like psychology, cannot advance beyond the limits of mediocrity in man, who through desire is put in a condition of sufficiency, wherein interests take the place of ideals, and man transcends Nature only to the degree of elaborating the idea of the human species, and not that of internal spiritual life. This defect in the psychologico-ethical view of man is made up by the aesthetico-religious one, according to which desire is reeducated.

3. *Aesthetics of desire.*—In the artistic world, human desire is not accepted in its immediacy, but is subjected to spiritual scrutiny. Where the constructive mood of aesthetics prevails, desire is increased by the perception of beauty, which Stendhal (1783-1842) defined as 'a promise of happiness' (Nietzsche, *op. cit.* iii. § 6); where the critical mood is uppermost, beauty is regarded as the dwindling of desire in the form of disinterested contemplation. One is aphrodisiac, the other anti-aphrodisiac, in its effect upon desire. Even among the Greeks there was no lack of antipathy towards the desiderative in aesthetics, and it was in this spirit that Plato condemned the poet, not only because his imitative art yielded an inferior degree of truth, but because the excitement he aroused expressed an inferior part of the soul—the passionate rather than the reflective. This criticism he applied to the drama especially (*Rep.* 604-5). Aristotle conceived of art as having the function of cleansing the soul from such desires as cause distress by virtue of their occupancy in and sway over the soul; accordingly, he defines tragedy as the imitation of an action where the effect is produced by men acting and through pity and fear effecting a purification of such passions (*δὲ ἐλεῶν καὶ φόβου περαινόντα τὴν τῶν τοιούτων παθημάτων κάθαρσιν* [*Poet.* ch. vi. 2]). Modern aesthetics has met the problem of desire upon a basis more psychological, while it has been less rigorous than was Hellenism in its judgment of the desirable in beauty. The general effect has been to place the disinterested in the position of the desiderative, which idea was first formulated by Kant, although Burke's *The Sublime and the Beautiful* (1756) and Baumgarten's *Aesthetics* (1750-58) showed him where beauty might be found. Kant seeks to indicate the possibility of a feeling-judgment, or taste; the latter he describes by saying:

'Taste is the faculty of judging of an object by an entirely disinterested satisfaction or dissatisfaction' (*Critique of Judgment*, tr. Bernard, 1892, § 5).

In Kant's mind, desire is fatal to beauty, as to virtue also; hence his insistence upon the disinterested in aesthetic feeling.

Schopenhauer was more voluntaristic, more pessimistic; hence, his doctrine of desire is more severe.

'All willing springs from want, hence from need, hence from suffering. The satisfaction of a wish may end it, but for every one that is satisfied there remain at least ten which are denied; further, desire lasts long, while its demands are infinite; the satisfaction is short and scantily meted out. . . . Therefore, so long as our consciousness is filled with will, so long as we are

thronged by desires, with their perpetual hopes and fears, so long as we are the subject of willing, there can be no lasting happiness or peace for us. . . . Thus the subject of willing is ever stretched upon the revolving wheel of Ixion, pours water into the sieve of the Danaids, is the ever fruitlessly pining Tantalus' (*Welt als Wille und Vorstellung*, § 38).

This constant condition due to human desire is relieved from time to time by aesthetic contemplation, in whose ecstatic moments the subject, raised above the desiderative, enjoys the stillness of the will to live:

'It is the painless condition which Epicturus prized as the highest good, as also the condition of the gods; for we are for the moment delivered from the shameful striving of the will, we celebrate the Sabbath of the forced servitude of willing, while the wheel of Ixion stands still' (*ib.*).

Wagner follows Schopenhauer in postulating renunciation of desire as the most perfect aesthetic condition, although he finds it hard to explain how the particular art of music, which involves the highest excitation of the will, can consist with the state of stillness demanded by the aesthetic ideal (cf. Beethoven, *Schriften u. Dichtungen*, Leipzig, 1898, v. 9, p. 72). In the *Ring des Nibelungen*, Wagner indicates a double doctrine of desirelessness: first, in Siegfried, whose superabundance of power raises him above want; secondly, in Wotan, who learns to relinquish the gold of baneful desiring (cf. *Siegfried*, Act ii.; *Rheingold*, Sc. iv.). In contrast to these aesthetic attacks upon desire, based upon a dread of the will to live, other Schopenhauerians consider beauty as consisting in an excess of the natural function of willing. Nietzsche thus criticizes Schopenhauer and Wagner, and returns to the views set forth by Stendhal, as also by Flaubert.

'Stendhal,' says he, 'a not less sensual but more happily constituted nature than Schopenhauer, lays stress on a different effect of beauty: beauty promises happiness. With him the very stimulation of will (interest) by beauty seems to be the fact' (*op. cit.* iii. § 6).

In this positive treatment of desire, Nietzsche is followed by Sudermann, whose literary art constantly repudiates all restraint. With Sudermann, this affirmation of desire is carried out consciously and with apparent sincerity, and, instead of following the animal instinctiveness of Maupassant, he uses the sensual with the aim of inculcating an egoistic ethical doctrine. Much the same may be said of George Moore in distinction from Oscar Wilde, because Moore employs the sensual for the purpose of developing a trans-traditional morality (*J. Huneker, Overtones*, New York, 1906, iv. 2). This contradiction between the two views of desire is due to a difference in interpretation of the ego and its position in the world-whole. Those who believe in the reality of spiritual life are inclined to eliminate desire by removing the ego from the field of activity, while those who are aware of no beyond know no reason why man should do aught but further the native tendencies towards self-realization. But, even where the ego's desires appear to be the most obvious things in experience, the artistic consciousness distrusts desire as something tending to delude the mind which appeals to the stillness of the inner life. This occasional elevation in art is the rule in religion.

4. *Desire and religion.*—Since spiritual religion consists in a detachment from the world of impressions and a repudiation of immediate impulses, it is necessary to consider its relation to desire. With various religions, the attitude towards desire is determined in accordance with their general attitude towards the world. Thus Taoism, which regards reality as something empty of content and wanting in attributes, upholds the repression of desire; Buddhism, with its cosmic tendency, urges its complete extirpation; Christianity, while not wanting in this critical attitude towards the natural in both man and the world, advises one to train the desires.

The leading principle in Taoism is that of emptiness and inactivity, wherein the dialectical superiority of the Tao consists (*Tao Teh King*, tr. Legge, 1891, chs. 11, 37). Accordingly the man of Tao seeks by the repression of desire to reduce himself to this kenotic condition; hence the sage seeks to withdraw the mind from external impressions like colours, tones, flavours, and the like (*ib.* ch. 12). This course of repression is further called 'returning to the root'—a teaching which calls attention to the tendency on the part of all forms of vegetable life to return from their full-flowering to their original condition. 'This returning to their root is what we call the state of stillness,' says Lao-tze, who counsels the disciple to produce this state to the utmost degree (*ib.* ch. 16). The man of Tao is considered 'different from ordinary men, in that he has so repressed his desires as to have become infant-like and primeval. "I am like an infant, which has not yet smiled," says he. The mind is that of a stupid man; I am in a state of chaos' (*ib.* ch. 20, cf. chs. 23, 28). Inasmuch as 'the Tao does nothing for the sake of doing it,' the Taoist is without desire, inactive, and simple (*ib.* ch. 37).

Buddhism treats desire in its major rather than its minor premiss, by discussing it in 'The Noble Truth Concerning Suffering' (in the *Mahāvagga*, tr. Davids and Oldenberg, Oxford, 1881, i. 1). This truth is fourfold. It is based upon the individual's attachment to life, to his desire for continued existence and happiness; the resulting suffering is removed by detachment from desire, the way of which lies along the eightfold path wherein is found the destruction of sorrow (cf. 'Dhamma Kakka,' tr. Davids, *SBE* xi. [1900], §§ 5-8). With Buddhism, desire is repudiated because it leads to delusion, and he who would find reality must detach himself from objects of sense. See, further, the next article.

Where Hellenism indulged the idea of desire in the enjoyment of life and the elaboration of the beautiful, it did not fail to express some sense of regret for life in the world of sense. Like the Cynics before them, the Stoics set themselves against desire and extolled a rigorous course of conduct, the spirit of which was *ἀράθεια*, or cultivated indifference. Such in general was the attitude of the opposite school of Epicurus, who praised *ἀπάθεια*, or passive pleasure, as the highest moral condition (Diog. Laert. i. 136). Where Erdmann (*Hist. Philos.* tr. Hough, 1898, § 97, 4) seeks to identify these ideals, Windelband (*Hist. Philos.* tr. Cushman, New York, 1906, § 47) believes the likeness to be but superficial. The former is the virtue of ethical indifference to all passions; the latter is passionlessness which is based upon the perfect satisfaction of all desire. On this account, it was looked upon, by both Epicureans and Cynics, as acquired only through a limitation of desire (*ib.*). It was in this spirit that Horace wrote his famous epistle beginning 'Nil admirari prope res est una' (*Ep.* i. vi.), while Seneca expressed the same apathetic sentiment in his 'sine admiratione' (*de Vita Beata*, iii. 3). In dealing with desire and aversion, Epictetus adopts the same attitude, counselling man to cease desiring things beyond his power (iii. 24). Marcus Aurelius rehabilitates Horace's 'nil admirari' with his own *δῶταμαστρον*, whereby, like Maximus his master, he ceased to wonder at anything (i. 15). See also the 'Greek' article, below.

While Christianity does not attack desire upon the same cosmological grounds as Taoism, Buddhism, and Stoicism, it does not fail to relate the function of desire, which it condemns, to the world, which it repudiates. In the great value-judgment of the Gospels, 'What doth it profit a man, to gain the whole world, and forfeit his life?' (Mk 8³⁶), the

principle at work is that of detachment from the world. On the psychological side, this is expressed in terms of will, where it is declared, 'Whosoever would save his life shall lose it' (*ὁς γὰρ ἐὰν θέλῃ τὴν ἑαυτοῦ ψυχὴν σῶσαι ἀπολέσει αὐτήν* [Mk 8³⁶]). But, with more direct reference to desire, *ἐπιθυμία*, it may be said that, when the NT writers assume an attitude towards it, this is always a deprecating one, for it is looked upon as equivalent to lust. This was the view of Christ in His comment upon the Seventh Commandment—*πᾶς ὁ βλέπων γυναῖκα πρὸς τὸ ἐπιθυμῆσαι* (Mt 5²⁸). St. Paul connects desire with passion, and likens the desiring mood to the habits of the Gentiles, *πάθος ἐπιθυμίας* (1 Th 4⁵); St. Peter speaks of the believer as one who has escaped the corruption in the world through desire—*ἐν τῷ κόσμῳ ἐν ἐπιθυμίᾳ* (2 P 1⁴); and St. James speaks of the tempted man as one who is drawn away by his own desire—*ὑπὸ τῆς ἰδίας ἐπιθυμίας* (Ja 1¹⁴). St. John relates these forms of the mind to the world, and thus tends to give a dialectic of desire. In this way, the content of the world is likened to desire in both a sensuous and an intellectual form: *πάν τὸ ἐν τῷ κόσμῳ, ἡ ἐπιθυμία τῆς σαρκὸς καὶ ἡ ἐπιθυμία τῶν ὀφθαλμῶν* (1 Jn 2¹⁶); the lust of the flesh and the eyes is thus repudiated by Christianity, which aims at detaching the ego from the immediate world, that it may find its true place in the world of spiritual life. This doctrine of detachment from life is now under discussion in religious circles where Mysticism prevails.

While current thought accepts desire as a fact of experience and develops it according to ethics, religion, like art, refuses to take it for granted and tends to repudiate it altogether. Such a tendency appears in Wagner's view of religion (cf. above); in Tolstoi's conception of Christianity, as developed in *My Religion* (tr. H. Smith, New York, 1885), where asceticism mingles with sympathism; in Villiers de L'Isle-Adam, whose *Àxel* (Paris, 1890) involves 'the rejection of life at the moment when life becomes ideal' (J. Huneker, *Iconoclasts*, New York, 1908, p. 357); and in Ernest Hello, who attacks desire under its armour of the pride of life (cf. *L'Homme*³, Paris, 1894, *Le Siècle*, do. 1896). More after the Russian manner, J. K. Huysmans, who passed from the sensual to the spiritual, has revealed an august world-withdrawal whose path is indicated in *En Route* (Paris, 1896), while its result is elaborated in *La Cathédrale* (Paris, 1898), where Durtal, the hero, cloistered at Chartres, glorifies the inner life, 'la vie contemplative,' which he contrasts with 'la vie active' (*op. cit.* 28, ch. v. p. 125, ch. xi. p. 330). Huysmans, who mentions Hello (*ib.* ch. vi. p. 138), reveals the same combination of Catholicism and Mysticism that guided the former to his striking attitude towards human desire. The economic interest, which to-day predominates, tends to forbid the artistic disinterestedness and religious renunciation which seek to neutralize desire, so that the present age might well be called the age of desire.

LITERATURE.—J. M. Baldwin, *Handbook of Psychology*², New York, 1894, ch. xiv. 2, 'Feeling and Will'; Fr. Brentano, *Psychol. vom empir. Standpunkt*, Leipzig, 1874; Chr. v. Ehrenfels, *Syst. der Wertheorie*, i. 'Psychol. des Begehrens', do. 1897; F. Krueger, *Der Begriff des absolut. Wertvollen*, do. 1898; G. T. Ladd, *Psychol. Descriptive and Explanatory*², New York, 1903; A. Meinong, *Psychol.-eth. Untersuchungen zur Werthe-Theorie*, Graz, 1894; J. Sully, *The Human Mind*, London, 1892, ch. xvii.; J. Iwerach, art. 'Desire,' in *DCG*.

CHARLES GRAY SHAW.

DESIRE (Buddhist).—There is no more intimate, more radical self-expression of the conscious individual than that which is conveyed by the term 'desire.' It is the one genuine subjective register of character. A man is known by his works, but he knows himself by his desires. When these emerge, if they do emerge, in action, external limitations

of environment and opportunity permit only a distorted output of the ideal act, which had taken shape in the creative flame of desire. Religion and ethics are therefore deeply concerned with desire. *A fortiori*, whether Buddhism is considered to be religion, or ethics, or both, desire should bulk very largely in its doctrines, and the attitude of those doctrines towards it should be held crucial in our judgments respecting them. Buddhism faces the phenomenon of desire as frankly and as critically as other systems, and perhaps even more so; and this is because it is essentially psychological, and does not start from the external universe and its first or final cause, but with the heart of man.

Discounting the remoter and immaterial planes of existence (*rūpa-loka* and *arūpa-loka*), the world of earth, with its purgatories and its nearer heavens, is, by Buddhism, conceived and named in terms of desire. It is *kāma-vachara*, the sphere of *kāma*, i.e. desire understood simply as wishing for what is pleasant; and *kāma-loka*, 'world of desire'—*kāma*, according to the commentators, includes both desiring (*kāmetitī kāmo*) and that which is desired (*kāmyatitī kāmo*). Now, as might be expected, in Buddhist philosophical treatises the universality of desire is dealt with as a natural phenomenon, and is neither praised nor condemned, while, with respect to the life of laymen, *kāma*, that is, natural desires and the enjoyment thereof, is not, as such, condemned. In the oldest narrative of the birth of the Buddha (*Digha-Nikāya*, ii. 13; *Majjhima-Nikāya*, iii. 121), it is written that his mother, a lady of pure and virtuous life, was living before his birth in the enjoyment of the five modes of sense-desire (*pañcha kāmagaṇā*, i.e. of sights, sounds, odours, tastes, and contacts). Again, in the *Singālovāda-suttanta* (*Digha*, iii. 180ff., called by R. Childers 'The Whole Duty of the Buddhist Layman'), the Buddha does not warn the young layman off a single form of natural desire or enjoyment, but only against vicious or wanton desires. For those who had left the world and devoted their lives to holiness and missionary work, the case was different. The *kāmas* were for them constant sources of danger, and were likened to burning coals, knives, snakes, dry bones, dreams, and other perils and disappointing objects ('Psalms of the Sisters' [*Therīgāthā*], London, 1909, p. 144 f.). They belonged to the pursuit of sensuous pleasures and the life of the world. An abdicating king might say: 'I have enjoyed human *kāmas*; it is time to seek after celestial *kāmas*' (*Digha*, iii. 60). But, for one who was aiming at the highest goal, there was really nothing to choose between either human or celestial desires and objects of desire. The word *kāma* was dropped from his vocabulary. But he did not therefore cease to desire, for, though his *quo vadis* was different, he aspired to a goal none the less, and, if he obeyed the injunctions of his Order preserved in its scriptures, he pursued this end with greater ardour and singleness of purpose than he had ever felt over worldly objects.

If, in the earliest version of those scriptures surviving, viz. the Pāli *Pitakas*, natural desire and its objects—in a word, the *kāmas*—are usually mentioned in terms of depreciation, it must be remembered (1) that the *Pitakas* were compiled by *religieux*, and that the greater part of the *Suttas* are discourses addressed to *religieux*; and (2) that Buddhism started as an evangel of protest, reform, and regeneration against worldliness and superstition, and evangelos do not compromise. But it is characteristic of this gospel that it does not seek to quench earthly desires (*manussaka kāmā*) by heavenly desires (*dibba kāmā*).

In the first place, the *summum bonum* of arhat-

ship, of complete emancipation of heart and mind, could be won only in this earthly region of the *kāma-loka*, with the single exception of the remotest sphere of the *arūpa-loka*, where it was believed that some mortals attained *parinibbāna*, i.e. completion of perfected life and final death, who here, on their way to perfection, had not lived to touch the highest 'Path and Fruit' (e.g. *Digha*, ii. 200; *Samyutta*, v. 346, etc.); yet this *parinibbāna* is never recorded as a climax and glorious consummation, but rather as an epilogue to the life here below of those who, in a 'world of desire,' and in virtue of unworldly desire, had attained to the assurance of victory in spiritual evolution (*nibbāna*).

Secondly, whereas the Buddhist *Dhamma* is essentially a method for diverting and transforming the natural phenomenon of desire, it held up, before those whose quest was for the highest, no supramundane place as the proper object of desire, nor before any one did it hold up a superhuman being or person in that light. It is true that re-birth in 'heaven' is frequently proclaimed as the natural inevitable result of virtue in this life—this to laymen and to those of the Order who were spiritually babes. But it is virtue and goodness that are shown as desirable, rather than promotion hereafter, in the reconstituted life. Those who were judged as ripening to perfect emancipation aimed only at an impersonal goal, having no relation to time or space (*Milinda*, ii. 105, 186), but regarded, positively, as a blissful consciousness of salvation, liberty, mastery, insight, and peace (C. A. F. Rhys Davids, *Psalms of the Early Buddhists*, vol. i. p. xxxvii).

At the opposite extreme of these aspirations, which might be called the *vis a fronte*, Buddhism places, as the driving power *a tergo*, the world's great burden of ill, as fed by the constant working of unregenerate and uncontrolled desire, called 'thirst' or 'craving' (*taṇhā*, Skr. *trṣṇā*). This religio-philosophical term is another illustration of the immense significance of the vital phenomenon of desire in the Buddhist consciousness; and its scope embraces the whole of human desires, in so far as these are attracted by life itself, or by the idea of its extinction. There are three modes or channels of *taṇhā*: *kāma-taṇhā*, desire for what is sensuously pleasant; *bhava-taṇhā*, desire for becoming or life hereafter; and *vibhava-taṇhā*, desire for the extinction of becoming. *Taṇhā* in general is defined as 'concerned with repeated becoming' (lit. 're-birth-ic, *punobbhavikā*'), 'associated with pleasure and passion' (*nandi-rāga-sahagatā*), and 'delighting in various objects' (*tatra-tatrābhinandini* [*Vibh.* 101, 365; *Samyutta*, iii. 26]). It was only when set on 'the Paths, the Fruits, *Nibbāna*,' that the desire, which had been called *taṇhā*, became the aspiration and the purpose called *samma-saṅkappa* and *dhamma-chanda*. 'For, as there is no inducement,' writes the commentator (*Attha-sālinī*, 347), 'to a mosquito to alight on a ball of iron heated in the sun, so these [goals] by their radiant glory do not attract *taṇhā*.'

The person of the Buddha, however, as an object of desire, lent warmth and colour to aspirations after impersonal goals. Not once only in the world's history, but from time to time through cycles of involution and evolution, do Buddhists hold that mankind may hope for a day when 'the desire of all nations shall come,' who will in love and wisdom satisfy their yearnings. The conditions and order of his advent are considered by the canonical books in the light of a natural law. Buddha-epochs were not equidistant in time, but they happened when, amid an ignorant and erring majority, there were some who would understand the message of salvation.

'As on a crag, on crest of mountain standing,
A man might watch the people far below,
E'en so do Thou, O Wisdom fair, ascending,
O Seer of all, the terraced heights of truth,
Look down, from grief released, upon the nations
Sunken in grief, oppressed with birth and age.
Arise, thou hero! Conqueror in the battle!
Thou freed from debt! Lord of the pilgrim-band,
Walk the world o'er, sublime and blessed Teacher!
Teach us the Truth—there are who'll understand.'
(*Dialogues*, II. 82; *Vin. Texts*, I. 86 f.)

The faith and devotion evoked by the person of the Buddha and by the nature of his doctrine are also usually described in terms of satisfied desire, namely, *pasāda*, *pasanna*, the passages being too numerous to quote (but cf. *Samyutta*, v. 381, with *Buddhist Psychological Ethics*, 174 n.). Nevertheless, the desire itself for a Buddha, and for the salvation he should bring, is expressed in terms of altruistic desire for the good and happiness of all men. It is 'out of compassion for all creatures, for the advantage and the welfare and the happiness of gods and men,' that a Buddha arises,

'Who from all ill and sorrow has released
Me and so many many stricken folk'

(*Therīgāthā*, 157; cf. *Dialogues*, II. 111; *JRAS*, 1906, p. 241). Mediately therefore, in the desire for the Buddha, the impersonal desire for universal good, as well as the desire for personal salvation, finds expression.

For those who, as converts, were sufficiently won by the *Dhamma* to devote their lives to it, a career of mental and moral training was prescribed, which, judging by the terms employed, called into exercise the emotional and volitional, no less than the intellectual, faculties. The exercises might be in the expansion of a concept or sentiment—effusion, irradiation (*pharaṇā*), they called it—or in concentration of attention and will (*samādhi*, *jhāna*, etc.), or in control of consciousness, recollection, self-collectedness (*sati-sampajañña*), and so on. In no case, however, was the training to be carried on with cool impassivity, except in certain advanced stages. The sincere student is constantly described as being aglow or ardent (*ātāpi*), strenuous or earnest (*appamatta*), full of energy and endeavour (*virīya*, *vāyāma*, *ussolhi*), and filled with eager active desire (*tibbakhanda*); but the emotional side of consciousness is not encouraged, except in intimate connexion with the conative or volitional. The term *chhanda*, for instance, which is as unmoral as our own 'desire,' but which, like 'desire,' is sometimes used with a sensual or passionall import, is more allied to will than *kāma* is, and is explained by commentaries as meaning *kattu-kamyatā*, 'desire-to-do.' Few subjects, indeed, are of greater interest in Buddhist culture than this evolution of *chhanda*. For instance, *dukkha*, the generic term for 'ill,' 'misery,' or 'pain,' is said to be 'rooted' in *chhanda* (*Samyutta*, iv. 328), as, indeed, are 'all states of consciousness' (*Ānguttara*, iv. 339). On one occasion the end of the Buddha's system of holy living is called the removal of desire (*chhanda-pahāna* [*Samyutta*, v. 272]). Yet this is stated to be accomplished by certain exercises in which *chhanda* is called into play. 'What then,' is an inquirer's comment, 'would you put away desire by desire?' And the Thera replies to the Brahman: 'Was there not desire, effort, thought, deliberation in your mind, when you set out to find me in this garden? And now that you have found me, is not all that abated?' Again, a homely simile of the ass who does not make himself into a valued cow by walking after the herd saying 'I, too, can bellow,' serves to show that the criterion of a genuine student is his displaying eager active desire (*tibbakhanda*) for the highest virtues and the most advanced mental development (*Ānguttara*, i. 229). Finally, the Buddha is represented in the *Akaṅkheyya-Sutta* as showing how seventeen pious ways in which a *bhikkhu* 'might desire' (*ākāṅkheyya*)

may severally be satisfied ('Buddhist Suttas,' *SBE* xi. 210 ff.).

Hence in Buddhist ethics, desire is, as such, not only not immoral, but an indispensable instrument for attaining higher (no less than meaner) ends; it becomes a source of danger only when the object of desire is such as to give no lasting satisfaction to desire when it is attained.

And hence it is strictly in accordance with the spirit of the older writings, if with an added tinge of intense emotion, when the author of the *Milinda Questions* declares that *Nibbāna* is to be realized, not by quiescent meditation, or in hypnotic trance, much less by mortification of desire, but by rational discontent, strong anguish, and longing, followed by a forward leap of the mind into peace and calm, then again by a vibrating zeal, in which the aspirant 'strives with might and main along the path,' and so on.

It had been the fate of Buddhism, before the authorities quoted above became accessible, to become for the general English reader synonymous not only with pessimism but with the 'extinction of desire.' And the error still persists. This is largely due to the fact that the earliest translators of the canonical works of Buddhism were not English, or, if English, were lacking in psychological training. The anthologies of the *Dhamma* and *Sutta-Nipāta* were rendered into English prose by those veteran Indologists, Max Müller and Fausbøll, and between them they render no fewer than sixteen Pāli words, which really mean sensuous, or vicious, or unregulated desire, by the one unqualified word 'desire.' St. Hilaire, Burnouf, and Foucaux do much the same disservice with the one over-worked word *desir*. Warren (*Buddhism in Translations*, Camb. Mass., 1896) is no better; yet see his Index, s.v. 'Desire' ('desire = lust'). This slovenly usage partly justifies writers of more general and comparative treatises in arriving at sweeping but erroneous conclusions (e.g. Crozier in *Hist. of Intellectual Development*, London, 1897-1901). But it was undesirable to impoverish our ethical and religious concepts by making over to such terms as *tanhā* all the moral as well as the immoral implications in desire. After all, it was in response to a desire, a yearning, an impulse, a resolution, that the founder of Buddhism is represented as having renounced the world and dedicated his life to the service of his fellow-men. See also art. LOVE (Buddhist).

LITERATURE.—C. A. F. Rhys Davids, 'On the Will in Buddhism,' *JRAS*, Jan. 1898, and *Buddhist Psychological Ethics* London, 1900; C. A. F. Rhys Davids and S. Z. Aung, *Compendium of Philosophy*, 1910, p. 244, n. 2; T. W. Rhys Davids, 'Buddhist Suttas,' *SBE* xi. [1900], 210 ff., and 'Questions of King Milinda,' *ib.* xxxvi. [1894], 199 ff. The *Nikāyas* are all published by the Pāli Text Society, London; references are to volume and page. The *Digha* and *Majjhima-Nikāyas* are in process of being translated as *Dialogues of the Buddha* (London), by T. W. and C. A. F. Rhys Davids, and the evolution of desire among Buddhist saints may be studied in the latter's *Palms of the Early Buddhists*, London, 1909, 1912.

C. A. F. RHYDS DAVIDS.

DESIRE (Greek).—I. Socrates and the pre-Socratics.—The beginning of ethical investigation in ancient Greece is usually assigned to Socrates. And, no doubt, Socrates did in a special manner direct men's attention to ethical principles and concepts, and give the impulse to the further study and elaboration of the philosophy of morals. He it was also who, by his rigorous insistence on self-control (*ἐγκράτεια*) as the supreme virtue, gave special prominence to the twofold nature of man—a higher and a lower nature, with the tendency on the part of the lower (the desires) to usurp the mastery; thereby initiating a point of view that was to dominate Greek philosophy henceforth, definitely formulated for all time by Plato. Moreover, he himself could 'scorn delights and live

laborious days' better than any man of his time, so that he could not only teach robust ethical doctrine by precept, but show it also by example. But, long before the time of Socrates, the subject of desire had thrust itself upon men's notice, and from of old precepts had been enunciated for the practical regulation of life, even though it were only from the prudential standpoint of Hesiod (see his *Works and Days*), the Gnostic poets, and the Seven Wise Men. This explains the existence of Orphism and Pythagoreanism, which—religious more than philosophical—had the highest welfare of the individual at heart, and organized a system, distinctly mystical, for the purification of the soul and the cultivation of the higher life. This was avowedly ethical in its character, and, being cathartic, had the subjugation of the desires and the development of the spiritual nature as the basal principle. But, apart altogether from the poets and the moralists and the mystics, the pre-Socratic philosophers, who are usually represented simply as devotees of physics and physical speculation, were, many of them, also ethicists; and the ethical teaching of Heraclitus of Ephesus, in particular, and of Democritus of Abdera, forms an interesting side of their philosophy. Sir Alexander Grant does them less than justice when he says:

'The moral doctrines of these early philosophers . . . seem to belong rather to the personal character of the men than to the result of their systems' (*Ethics of Aristotle*, i. 108).

Nevertheless, the great impulse to ethical analysis and ethical thinking came from Socrates: an epoch in Greek philosophy was marked when, under the sanction of the god at Delphi, he insisted in the way that he did on the principle 'Know thyself' (*γνῶθι σεαυτόν*); and the question of desire found its first impressive handling in his greatest disciple Plato, in the true Socratic spirit.

2. Plato.—(1) In his psychological analysis of human nature, Plato regarded the soul of man as consisting of three parts—the rational (*τὸ λογιστικόν*), the fiery or spirited (*τὸ θυμοειδές*), and the appetitive (*τὸ ἐπιθυμητικόν*).

There is a great temptation to interpret this as an anticipation or foreshadowing of the modern psychological threefold division of mental processes into intellection, feeling, and conation or volition. But, when we remember that each soul, according to Plato, had its own distinct habitation in the body—the rational soul being situated in the head or cranium, the spirited soul in the breast or thorax, and the appetitive soul in the belly, below the diaphragm—and when we remember, further, that the three souls are represented as having their counterparts in the Ideal Republic—the first being embodied in the philosophical guardians of the State, the second in the soldiers, and the third in the artisans and husbandmen—we see that the Platonic psychology is a good way removed from anything to be found in the psychologies of the present day.

Between the three souls, or three parts of the soul, there is a distinction of native authority or value. The rational soul, being immortal, is naturally supreme, placed where it is in the body (*viz.* in the commanding position of the head) in order to guide and control the others. The spirited or courageous soul is the seat of ambition, honour, and the like, and is indispensable for high achievement in any sphere, and is by nature ancillary to reason, though, on occasion, it may require restraint. But the third soul is that which needs careful watching and curbing—*viz.* the appetitive or lustful soul, the seat of desire, of inordinate passion, and, therefore, pre-eminently of lawlessness and insubordination. This is the 'black' horse of the allegory of the Charioteer in the *Phaedrus*, which requires to be kept in by bit and bridle, and to which the whip has to be unsparingly applied until it is subdued and tamed. It is also the 'many-headed monster' of *Republic*, 588 C. From the place that the appetitive soul occupies in the body (below the diaphragm), it is in close proximity to the liver, which (according to Plato) is the organ of imagination, issuing oracles in dreams and acting

as a mirror registering the wishes, commands, and reprobations of the rational soul, thereby encouraging, warning, and, if need be, terrifying the recalcitrant transgressor, with the design of checking him in his wayward course.

This doctrine of desire is clearly of an ethical character, and is specially suited to ethical purpose. It is not so much a complete logical analysis of the notion, or even a systematic psychological exposition of the subject, as a suggestive statement of the hierarchy of principles in human nature (for the different souls, though separated locally by Plato, may be interpreted in that way), with an appreciation of their various functions and a grading of them according to worth. It is, above all, an enforcement of the truth that, for the highest health and welfare of the individual, the desires must be strictly and rationally controlled; it is of their very nature to tend to transgress limits, to usurp authority; and this, if unchecked, means moral shipwreck and disaster (see APPETITE).

In *Philebus*, however, a psychological analysis of desire in one of its aspects is essayed—*viz.* when it is declared to presuppose a bodily want that has been gratified and the memory of the gratification comes in to arouse expectation of future gratification. In this, two salient points in the phenomenon are clearly noted: (a) that, until a want is gratified, we experience only uneasiness, not desire; and (b) that desire depends upon memory or recollection.

(2) But Plato's doctrine of desire goes deeper than this: it penetrates to the very centre of man's being, to what may be specifically designated his natural spiritual wants. The highest form of desire is represented as philosophical Love or Eros, which is inseparably connected with the Platonic theory of Ideas and the doctrine of Reminiscence (*ἀνάμνησις*). The object of this kind of desire is set forth in the *Phaedrus* as the Beautiful, as Beauty Absolute, the super-celestial Divine essence, which is reached by the individual here through the mediation of the perception of beauty in objects of sense, especially in the beauty of bodily form, as seen in beautiful youths; and, in the *Symposium* (211 C), the mode of ascent is declared by Diotima to be as follows:

'To begin from the beauties of earth and mount upwards for the sake of that other beauty, using these as steps only, and from one going on to two, and from two to all fair forms, and from fair forms to fair practices, and from fair practices to fair notions, until from fair notions he arrives at the notion of absolute beauty, and at last knows what the essence of beauty is. This, my dear Socrates, said the stranger of Mantinea, is that life above all others which man should live, in the contemplation of beauty absolute.'

In the *Republic* it is set forth as the Good, which is the supreme transcendent Idea, permeating being, and giving meaning to intelligibles and opinables alike in the realm of Knowledge. In the *Timæus*, the Good is identified with God; and, as 'likeness to God' (*ὁμοιωσις θεῷ*) is the chief end of man, according to *Theætetus*, the ultimate object of man's highest desire is the Deity. Nor is 'the Deity' a mere abstract term to Plato; it expresses the ideal of holiness, as well as of knowledge or contemplation; so that, in the assimilation of the Divine by man, character no less than intellect is involved. But, in order to become conformed to the great Ideal, the soul needs to be purified, and purification is a thing of degrees, so that *kátharsis* becomes the leading note, and *kátharsis* effected by personal effort in a Cosmos governed by God—a doctrine which is, as J. A. Stewart expresses it (*The Myths of Plato*, p. 352), 'the great contribution made by Plato to the religious thought and practice of Europe.' Hence, in *Protagoras* (349, 359 A), 'holiness' (*δεδότῃς*) is added to the four cardinal virtues; Socrates in Xenophon called it 'piety' (*εὐσέβεια*). With this is specially to be

associated the Platonic eschatology (for purification does not cease at a man's death), where the soul is represented as finally purified through a series of metempsychoses—as seen, for instance, in the *Republic*, in the myth of Er, the son of Armenius, and in the doctrine of Eros, with its essentially elevating and purificatory character, as described in the *Phaedrus* myth.

(3) In line with this is Plato's proof of the immortality of the soul (see *Phædo* and *Symposium*), drawn from men's universal longing or desire for continued existence and for the everlasting possession of the Good—a proof that became popular in Western Christendom through St. Augustine's acceptance of it, and which finds its poetical expression in English in Addison's 'Cato' and in Tennyson's 'The Two Voices.' The argument here is that the soul continues to live hereafter because men everywhere cling to life 'together with good' and shrink from death; the presupposition being that whatever crops up as a general craving among mankind indicates a natural want of man and has its truth thereby established. With this may be joined an attractive Platonic thought regarding the future life and men's desire of knowledge and of virtue. In *Cratylus* (403, 404) the dead are represented as continuing in willing subjection to Hades, the god of Death, because of their thirst for knowledge and their desire of being made better. They find that with Hades is true Wisdom—he has experience and is the great Philosopher; and, as his wisdom charms them, and as association with himself betters them, they cling to him as disciples to a master. Thus desire is seen to be a stronger bond than necessity: necessity coerces, desire constrains.

3. Aristotle.—(1) In the analysis of desire as given in *de Anima*, Aristotle uses the term 'desire' (*δρεψις*) generically, including in it, as species, spiritedness or passion (*θυμός*), appetitive desire (*ἐπιθυμία*), and wish (*βούλησις*). Of these three, wish (*βούλησις*) attaches to the rational part of man, and the other two to the irrational (iii. 9. 432b, 5). When, again, he enumerates and arranges in due order the functions or faculties of the soul (vegetative, sentient, conative, noetic—passive and active), there is one function that he specifies as the orectic or conative faculty (*ὁ δρεκτικόν*), which sometimes he brackets along with the sensitive faculty (*ὁ αἰσθητικόν*), and sometimes gives an independent position subsequent to it (ii. 3. 414a, 31); but, either way, he bases desire on sensation. With regard to all the faculties or functions, however, it is to be remembered that the independence ascribed to any one of them is only relative: each has its place in a graded system arranged in the order of implication, the higher presupposing the lower (though not reversely)—the earlier form always exists potentially in the later' (*de An.* ii. 3. 414b, 29). Aristotle is very insistent on the unity of the soul; so that the faculties are not absolutely separate, as if each were self-contained.

But it is in the *Ethics*, in connexion with will, that we have Aristotle's fullest handling of desire; and, putting the two accounts together, we obtain the following summary.

Will is the desire (*δρεψις*) of something regarded as a good, i.e. as bringing satisfaction or pleasure to the person desiring it—which is what Aristotle designates *βούλησις*. But, obviously, if there is an object towards which desire is directed and upon which it is set, this implies an ideal or conceptual element in the process—some notion of what the object desirable and desired is: in other words, it involves imagination or representation (*φαντασία*). Further, inasmuch as between desire as a psychical state and the attainment of its object there is an

interval of time interposed, this indicates that there is need of means for the realization of the desired object, and, consequently, need of deliberation with a view to choice—especially when more than one set of means appear competent to effect the end. This process of deliberation in connexion with means, and having reference to 'things that are within our own power' (*τὰ ἐφ' ἡμῶν*), Aristotle calls *βούλησις*. When deliberation is completed, choice or determination ensues. This is *προαίρεσις*, which is regarded by Aristotle as distinctive of man, marking him off from the lower animals. In choice after deliberation *δρεψις* again appears; for the individual identifies himself not only with the end, but with the means necessary to effect the end. Hence, deliberate choice is inseparably conjoined with desire, and is termed *βουλευτική δρεψις*.

From this brief analysis it is evident that Aristotle connects desire very intimately with will; maintaining, indeed, practically, that there can be no will without desire. Desire is the moving power in the whole conative process, indispensable alike to its origination and to the keeping up or the interest in the end until it is realized. This active or movent character of desire marks it off from emotion, which is a species of feeling and is subjective, although emotion may very readily ally itself with desire, and thereby give an added intensity or vigour to it.

(2) It is evident, further, that, according to Aristotle, in the determination of right conduct (and here comes in the ethical bearing of the psychological doctrine) desire and reason act together—neither is sufficient by itself. Hence, *προαίρεσις*, or choice, may equally well be described as reason moved by desire (*νοῦς δρεκτικός*), or as desire guided by understanding (*δρεψις διανοητική*, *Eth. Nic.* vi. 2). The doctrine of 'the practical syllogism' brings this out distinctly.

This syllogism is denominated 'practical' for two reasons: first, because it deals with men's actions (*πράξεις*), not with their mere thinking or reasoning as logically correct; and, secondly, because it attaches to the practical or moral, not to the theoretical, reason. Being a 'syllogism,' however, it has a specific formal character—it is expressible as conclusion, and necessary conclusion, from premisses, although it is not maintained that moral actions, in the case of 'the plain man,' are always consciously thus formulated by him. If there is an unconscious spontaneous logical reasoning of the plain man, there is equally an unconscious spontaneous moral reasoning; but, when analyzed by the philosopher, both reasonings may be found to be only the unsophisticated form of what may be philosophically generalized and expressed in scholastic phraseology and assimilated each to the other.

In the 'practical syllogism,' we are dealing with end and motive—with the generalized expression of the object of desire and of the means by which it may be attained. The procedure whereby we accept an end and work towards it through desire and intellection is clearly of the nature of syllogistic reasoning, though the conclusion of the procedure is not a definite theoretical consequence satisfactory to the logical reason, but an action, or series of actions, necessitated by the principle that we adopt. It is a matter of 'principles,' of living moral principles, not of abstract propositions; and hence the conclusion is not abstract but practical, and embodied in human conduct.

And so, in the practical syllogism, Aristotle aims at giving syllogistic form to action—at analyzing the process that underlies moral conduct, so as to bring out its rational character. In making choice with a view to action, one proceeds upon a general principle—the principle, namely, that a man ought to do or not to do a certain kind of thing. That is the major premiss of the resultant action. The minor premiss is the perception that such and such a particular action is or is not of the kind in question. Then follows, as natural consequence, the doing or not doing of that particular action. The great implication in the practical syllogism is that, if one accepts a principle as a guide of life, one is bound to accept whatever action or course of action that principle dictates. For example, if I allow that I ought to pursue my own highest good, then I commit myself to accepting whatever conduces to the furtherance of that end, and to behaving accordingly. On what ground, however, the principles that I accept as competent to guide me in life rest, Aristotle does not always determine in the same way. Sometimes he says that they are intuitive—I perceive them to be self-evident and, therefore, beyond the need of proof. At other times he bases them on experience; and, still again, on moral character. The last of these is clearly not fundamental. Moreover, intuition and experience are not contradictory.

Whether or not the 'practical syllogism' is fully expressive of what exactly takes place in moral action (action of a voluntary agent, responsible for his choice, and, therefore, for his conduct), it serves admirably to emphasize the fact that intellection and desire enter into deliberative volition and choice, and that we cannot explain the phenomenon without taking account of both, and of both acting in unison, 'like the ball and the socket in the organic union of the joint' (*ὡς τὸ γὰρ γλῦκος* [*de An.* iii. 10. 433b, 22]).

(3) Over and above this psychology of desire, with its application in ethics, Aristotle also recognizes desire as a movent power in the higher reaches of ontology and cosmology. For God to him is, first and chiefly, the Prime Mover of the universe, the Source of all motion in the world, 'Himself unmoved the while.' He is the object of desire (*ἡμετέριον*) as well as of intellection (*νοητόν*) to the universe. As otherwise expressed, God, as the unmoved eternal active principle, moves the heavens as the beloved one moves the lover: He is the attractive force, the final end, of all existence — 'the final cause, then, produces motion by being loved, and, by that which it moves, it moves all other things' (*Met.* xii. 7. 1072b, 4).

This, though metaphorically expressed, is no myth, as Stewart (*Myths of Plato*, p. 855) would make it out to be: it is the measured and subdued enunciation of the grand ontological conception that God necessarily is and is good, and that the cosmos, which, in Aristotle's view, exists from all eternity as a cosmos (and not as mere 'matter'), is not self-centred and absolutely independent, but is eternally dependent on and derived from the Deity; it exists because it is turned over towards the Divine; it has no being apart from Him. It is thus emphatically asserted that the world is not fully explicable on merely mechanical principles: Mind is the ruling factor, and so the explanation of existence, to be satisfactory, must be teleological.

4. **Stoics and Epicureans.**—(1) We get back to a purely ethical and practical consideration of desire when we turn to the Stoics. Desire was a topic of supreme consideration with them; indeed, their doctrine of desire may almost be said to have constituted their philosophy. According to them, it is man's great characteristic that he was made to be virtuous. He is a being endowed with rational insight into the true values of things, and with power over his own inclinations and impulses. He can despise pleasure, he can scorn wealth, he can sit absolutely loose to everything that is not under control of his own will,—to fortune and to fame, even to death itself,—and can find his freedom only in his love of virtue and his abnegation of the desires. A man should have only one great desire, and that is the desire of virtue, of a noble life, of pure and upright character; all else is 'indifferent,' and, if surrendered to, would sap his moral vigour and degrade his nature. 'In the world, but not of it,' should be his motto; and to be master of his own soul, supreme in the realm of his motives and intentions, is the only end that is worth pursuing. The principle underlying this was precisely that which Kant reproduced in modern times when he said: 'There is nothing in the world which can be termed absolutely and altogether good, a good will alone excepted' (opening of the *Grundleg. zur Metaph. d. Sitten*). To submit to any other desire but that of virtue seemed to the Stoics to be elevating what is contingent and beyond one's power—extraneous, therefore, to one's will (which alone is in one's power)—to a place which it has no right to occupy, and which, if allowed to it, can only spell ruin. Consequently, everything that is not love of virtue is, to the Stoic, to be resisted. The desires are, one and all of them, perturbing; and it is characteristic of the wise man that he is calm, unperturbed, emotionless—he is self-sufficient (*αὐτάρκης*), independent of and above every non-rational spring of action: 'The view taken is everything; and

that rests with yourself. Disown the view, at will; and, behold, the headland rounded, there are calm, still waters, and a waveless bay' (Marc. Aurel. *Med.* xii. 22). The desires are not simply weaknesses, they are 'contrary to nature'; they should be not merely controlled, but eradicated.

The ideal man, then, to the Stoics was a very impassive being—the embodiment of stern virtue, shorn of emotion and desire. The same might be said of the ideal man of the Cynics (*g.w.*), from which the Stoic conception was originally drawn: only, in Cynicism the mastery of the desires was accompanied with a contempt for social conventions and for mental culture that was abhorrent to the Stoic.

(2) It was different with the ideal man of the Epicureans, whose *summum bonum* was pleasure. And yet the Epicureans were keenly alive to the ethical danger that lurked in the desires. For, although pleasure was to them the ultimate end of action, and so the object of desire, they quite clearly recognized the tendency of the desires to outrun discretion and, if uncontrolled, to deprive a man of that calm and peaceful state of mind (*ἀταραξία*) which was his goal. Consequently, they could counsel, and Epicurus himself did counsel: 'If you wish to make Pythocles happy, add not to his riches, but diminish his desires.' But in this they differed from the Stoics, that, whereas the Stoics counselled the impossible task of eradicating the desires, the Epicureans, like Plato and Aristotle, counselled moderating and directing them. The desires, they saw, are a part of human nature, and, therefore, legitimate springs of action, but only if they are kept under rational control. Some of them, they said, are natural and necessary; others are natural, but not necessary; and others still are neither natural nor necessary. And they recognized a distinction of worth amongst them, the goods of the mind being to them of greater value than those of the body. Hence, their Hedonism could assume a robust character.

'Says Epicurus: "When I was sick, I did not converse about my bodily ailments, or discuss such matters with my visitors; but continued to dwell upon the principles of natural philosophy, and more particularly how the understanding, while participating in such disturbances of the flesh, yet remains in unperturbed possession of its proper good. And I would not," he adds, "give the doctors a chance of blustering and making ado, but let life go on cheerily and well"' (Marc. Aurel. *Med.* ix. 41).

5. **The Neo-Platonists.**—'Back to Plato' was the cry of the Neo-Platonists; but not back to Plato through disowning Aristotle or refusing to be influenced by him. On the contrary, Plotinus himself owed much to Aristotle, and some of the greatest of the Neo-Platonic teachers (*e.g.* Porphyry) were among the most eminent of the expositors of Aristotle. The Neo-Platonists were essentially religious philosophers and mystics, and the purification of the soul and its gradual deliverance from sense and matter was their supreme aim. Hence, they laid special stress on that part of the teaching of Plato which dealt with *κάθαρσις*, and, taking into their system Orphism and Pythagoreanism also, in so far as they served their purpose, they advocated a mode of living which, if consistently pursued, would lead to the abnegation of the world and the absorption of the individual in the Divine. The great end of all was to get away from the trammels of the body, which was regarded as by nature vile, as both a clog and a prison-house to the soul, and the source of sin and ugliness. 'True waking,' said Plotinus (*Enneads*, iii. 6. 6), 'is a true rising up from the body, not with a body.' There was a dualism here which was never fully overcome in the Plotinian or Neo-Platonic monism. To be united to a body at all was regarded as a descent for the soul, a degradation, a fall—it is a separation, though not

absolutely complete, from its original source, the Universal Soul or *Anima Mundi*, and has to be made good by an ascent or return. The steps by which this is done are the various virtues, which, according to Porphyry and the later Platonists, form four degrees in the path of perfection and self-accomplishment.

And first there is the career of honesty and worldly prudence, which makes the duty of the citizen [Civic or Political virtue]. Secondly, there is the progress in purity which casts earthly things behind, and reaches the angelic height of passionless serenity [Cathartic virtue]. And the third step is the Divine life, which by intellectual energy is turned to behold the truth of things [Theoretic virtue]. Lastly, in the fourth grade, the mind, free and sublime in self-sustaining wisdom, makes itself an "exemplar" of virtue, and is even a "father of gods" [Paradigmatic virtue] (W. Wallace, *Hegel's Philosophy of Mind*, Oxford, 1894, p. xx).

Not yet, however, has the soul, in its efforts to get free from matter and the thrall of the desires, reached its highest aim. That aim is union with the Absolute, undisturbed contemplation of the One, the Ineffable Being, when subject and object are identical. This is obtained, not through practical virtue or through intellectual cognition (though these prepare for it), but by non-rational ecstasy, or spiritual trance,

'by the suspension,' says Porphyry (*Sententia*, 26), 'of all the intellectual faculties, by repose and the annihilation of thought. As the soul learns to know sleep when alighting, so it is in ecstasy, or the annihilation of all the faculties of her being, that she knows that which is above existence and above truth.'

Thus are the desires effectually vanquished by mysticism: in absolute union with God (*θεωσις*), desire is not.

LITERATURE.—A. GENERAL.—Any of the leading Histories of Philosophy: e.g. Zeller, *Schwabes*, Ritter, Ueberweg, Windelband, Gomperz, Alfred W. Benn (*Die Gr. Philosophen*, London, 1888), Janet-Saillies.—B. SPECIAL.—I. SOCRATES AND THE PER-SOCRATICS: Hesiod, *Works and Days* (Eng. tr. by A. W. Mair, Oxford, 1908); Xenophon, *Memorabilia and Symposium*; Aristotle, *Met. I.*; J. F. Ferrier, *Lectures on Gr. Philos.*, vol. I., Edinburgh, 1896; H. Diels, *Doxographi Graeci*, Berlin, 1879; J. Burnet, *Early Gr. Philosophers*, London, 1908; James Adam, *The Religious Teachers of Greece*, Edinburgh, 1909.—II. PLATO: *Dialogues*, esp. *Republic* (ed. J. Adam, Cambridge, 1902), *Phaedrus*, *Gorgias*, *Phaedo*, *Cratylus*, *Symposium*, and *Timaeus* (the whole in that English classic, Jowett's tr., Oxford, 1892); G. Grote, *Plato and the Other Companions of Sokrates*, London, 1876; W. Archer Butler, *Lectures on the Hist. of Anc. Philos.*, vol. II., Cambridge, 1886; J. A. DEUTSCH-KATHOLICISMUS.—I. Character of the movement.—*Deutsch-Katholici-*

mus is the name given to a movement of reform that sprang up within the Catholic Church in Germany about the middle of the 19th century. The object of the movement was to establish a type of Catholicism which should be in harmony with modern thought, leaving the individual in perfect freedom in matters of doctrine and in the expression of his religious views, and so far take account of the patriotic sentiments of the Roman Catholics of Germany as to permit the use of their mother tongue in the services of the Church. These aims were in some respects similar to those of Febronianism in the 18th cent., which strove to make the Catholic Church in Germany independent of the Roman curia by putting an end to the sponsorship exercised over it by the latter. The 'German-Catholic' movement, however, took a course different from that of the Febronians, inasmuch as it neglected the politico-ecclesiastical factor, which had eventually proved the decisive factor in the conflicts regarding the resolutions of the Ems Congress (1786); and this difference between the two reforming enterprises finds outward expression in the circumstance that, whereas the movement which disturbed the closing years of the 18th cent. found its leaders in the German archbishops, the schism of the so-called 'German Catholics' had not a single active supporter in the higher ranks of the clergy.

One of the vital elements in the situation which gave rise to 'German Catholicism' was contributed by the rise of Ultramontanism, i.e. of that movement in the Roman Catholic Church which, after the frightful disasters experienced by that Church during the French Revolution, looked to the Jesuits for its rehabilitation, made common cause with that Order, and sought to disseminate the type of religion characteristic thereof. In the period following upon the restoration of the Jesuit Order in 1814, Ultramontanism had made headway in Germany as in other countries, but it had also aroused opposition in a corresponding degree. Although the immediate occasion of the rise of 'German Catholicism' was given by the protest made against the proceedings of an individual bishop, yet this protest really sprang from the broader grounds of a fundamental contrast with the Ultramontane form of religion; and it was to this difference that the schismatic movement owed all the vigour which—for no long time indeed—it was capable of putting forth.

Another potent influence in the rise and development of 'German Catholicism' was contributed by the progressive tendencies of the day. The reactionary policy pursued by the various governments of Europe after the Napoleonic wars was incompetent to quell the wide-spread liberal movement instigated by the great Revolution. On the contrary, the disposition to break away from the bonds of authority and the leading-strings of patronage, and the striving after liberty to mould life and conduct on lines independent of hoary convention, asserted themselves and gained ground in every department of human experience—in politics, in social relationships, and even in the province of scientific research. As the Roman Catholic Church, however, is inherently conservative, and was not merely antipathetic to such longings, but was inclined rather, under the influence of the recently revived Jesuit Order, to seek the path of deliverance from the prevailing welter of things in a return to the principles of the Middle Ages, it could not fail to come into conflict with the liberal spirit that was making itself felt even within its own pale.

'German Catholicism' appeared first of all as simply the criticism of an incident in practical religious policy, viz. the exhibition of a relic as

an object of devotion. Very soon, however, it drew the whole course of ecclesiastical procedure and religious doctrine within the range of its strictures. Eventually it took the decisive step of organizing its adherents in communities, thus placing them in the position of schismatics. That the whole course of this development was traversed within the term of a few weeks was due to the fact that those who identified themselves with the movement were already alienated from the Church of Rome, and that the bishops who had to deal with the rising lost no time in lengthy deliberations, but proceeded at once to administer penalties of such severity as to drive the refractory elements into open rupture.

2. Origin and development.—The immediate occasion of the schism was the exhibition of the seamless robe of Christ which belonged to the Cathedral Church of Trèves. The 'Holy Coat' was regarded by that Church as its supreme treasure, and had been exhibited previously at special seasons as an object of reverence. When Bishop Arnoldi of Trèves, ignoring the doubts cast upon the genuineness of the relic, repeated the solemnity in 1844, a most extraordinary sensation was aroused. He certainly scored a great triumph in bringing vast multitudes of pilgrims to the city, and so far the affair formed an effective demonstration of the power of Catholicism. But, on the other hand, such a method of strengthening Christian belief gave great umbrage to many. Those within the Roman fold who took objection to the bishop's action found a champion in a priest named Ronge, who, in an open letter to Arnoldi, first published in the *Sächsische Vaterlandsblätter*, urged a vigorous protest against what he called a *Götzenfest*, an idolatrous celebration.

Johannes Ronge was born on the 16th of October 1813, at Bischofswerda in Silesia, and was trained and eventually ordained as a priest at Breslau. He served for a time as chaplain at Grottkau, but had been suspended on account of certain publications, and was now a teacher at Laurahütte in Upper Silesia. Having neither inclination nor aptitude for the clerical office, he had become utterly alienated in spirit from the Catholic Church, and, as he refused to retract his letter when called upon to do so, he was sentenced to degradation and excommunication by his superior, the bishop of Breslau, on the 4th of December 1844. This act of censure, however, failed to reduce him to submission; its actual effect, indeed, was to stimulate his refractory disposition to its full manifestation. He challenged the claims of the Roman hierarchy in numerous pamphlets and articles, and what was at first a criticism of the proceedings at Trèves became at length an all-round attack upon the authority of the Catholic Church and its leading institutions.

About the same time a Catholic priest named Czerski had arrived at conclusions similar to those of Ronge, though quite independently. Johann Czerski was born on the 12th of May 1813, in Western Prussia. While attending the Seminary at Posen, he passed through severe mental conflicts, but at length took office in the Cathedral Church of that town. While in this position he made a profound study of the Scriptures, with the result that he became quite unsettled regarding the fundamental institutions of the Roman Catholic Church—the primacy of the Pope, the hierarchy, auricular confession, the sacrifice of the Mass, etc. With such doubts in his heart he was transferred to the position of vicar at Schneidemühl, where, as a matter of fact, the congregation was no less critically disposed towards Catholicism than he was. It was, however, a purely personal matter which at length brought him into direct conflict with ecclesiastical authority; he was suspended from office in consequence of his relations with a young woman. But his congregation remained loyal to him, and when, renouncing his office, he abandoned the Roman Catholic Church altogether, they followed his example (16th October 1844). A few months later, sentence of degradation and excommunication was passed upon him.

Ronge's challenge found considerable support throughout large sections of Catholicism in Germany. He travelled widely as an agitator, exerting himself to maintain the movement and organize his followers. The first congregation of the new sect was constituted at Breslau. But even in the operations preliminary to this step the seceders felt themselves faced by the difficulty of finding a common basis for the heterogeneous elements in the 'Universal Christian Church,' as its adherents

called it at first. Nor was this embarrassment one of a merely incidental and transitory character; on the contrary, it indicated a real and inherent weakness of the whole movement, asserting itself whenever an attempt was made to unite the communities which sprang up in large numbers throughout the country. For the purpose of effecting such a union, a Conference, attended by 31 delegates from 15 congregations, was held at Leipzig, from the 23rd to the 26th of March 1845. The proceedings of this Conference are given in the official report, *Die erste allgemeine Kirchenversammlung der deutsch-katholischen Kirche* (Leipzig, 1845), edited by R. Blum and F. Wigard. It was here decided that the name of the new cause should be *Deutsch-Katholicismus*, with the Bible as its doctrinal basis; a short Confession was also adopted. It was made a proviso, however, that neither Scripture nor this Confession was to rank as an external authority, but that they were to be regarded as standards only in so far as they harmonized with rational thought. The verification of Christianity in a life of Christian love was set forth as the prime duty of the members. It was resolved to retain the sacraments of Baptism and the Lord's Supper (under both kinds), but to have done with the Papacy, the hierarchy, auricular confession, the celibacy of priests, the adoration of saints, relics, and images, indulgences, pilgrimages, etc.—in a word, to effect a thoroughgoing separation from the Roman Church and its distinctive institutions. In the order for public worship, the liturgy of the Mass and the use of the Latin language were discarded. The constitution of the new church was to be Presbyterian, and General Assemblies were to be regularly called.

Such was the ground-plan for a new religious body, but the plan presently met with opposition within the community itself. The abandonment of the Apostolic Confession gave umbrage to the 'German Catholics' at Berlin, and led to a separation there. Czerski himself was dissatisfied with the resolutions of the Conference, as he had been thwarted in his endeavour to obtain Confessional recognition of the Divinity of Christ, Ronge's influence on the other side proving too strong. This difference, however, did not lead to a breach, as Czerski gave way and simply claimed the right to adhere to his own position. But, while imminent disintegration was thus avoided, no genuine inward harmony was attained, and the movement became even more revolutionary. The adherents of Ronge, in fact, drawn together as they were by the most diverse motives and interests, formed an aggregate so heterogeneous that every attempt to secure a basis of union came to nought. It was maintained that even the Leipzig Confession was not to be held as binding, and there was a general desire to discard everything of the nature of dogma; but, of course, no real progress towards unity could be made on such negative lines, and it still remained impossible to define the scope and aim of the new church, as the visible embodiment of that religion of liberty which had lain so long under the tyranny of dogma. The outcome of this vagueness and indecision was that many Roman Catholics, who, while favourably disposed to a broader conception of Christianity, were by no means ready to relinquish Christianity itself turned away from 'German Catholicism,' and that some who desired to have no further dealings with Christianity allied themselves with the new movement. Ronge's incapacity to grapple with this critical state of affairs soon became evident to all, and, as there was no leading spirit to step into his place, the cause soon lost all its attractive power. After 1847, indeed, Ronge was a spent force in public life. He died at Vienna in 1887; Czerski, in 1893.

3. The 'Friends of Light' (*Lichtfreunde*).—The subsequent development of 'German Catholicism' reached its final stages in close connexion with the history of the 'Friends of Light'—a parallel movement among Protestants which had sprung up in 1841. In that year certain Evangelical clergy in the Prussian province of Saxony instituted a society which claimed for its members the right of unrestricted scientific investigation and of complete freedom in personal development. They called themselves *Protestant Friends*, but were popularly known as *Lichtfreunde*, which became their accepted designation. Their meetings were thronged; the number of divines resorting to them constantly increased; teachers also began to attend, and soon the laity followed. As the leaders of the movement were clergymen of the National Church, collision with the ecclesiastical authorities was inevitable. In 1840 the consistorium of Magdeburg reprimanded a minister named Sintenis for having spoken of prayer to Christ as a superstition. Sentence of deposition was passed upon G. A. Wislicenus of Halle and J. Rupp of Königsberg, while others, such as W. E. Baltzer and A. T. Wislicenus, anticipated formal dismissal by voluntarily abandoning their office. In all these cases the point at issue was essentially the same, viz. whether and how far an incumbent might be permitted to take an independent attitude towards the doctrine and the order of public worship recognized as statutory in the National Church. The claim of liberty was obviously against the law as commonly interpreted. These conflicts, however, were a matter of profound significance for the whole Evangelical Church of Germany, as the clergymen in question did not stand alone, but were supported by larger or smaller groups of members. The process of subjecting the clerical offenders to ecclesiastical discipline was followed by secessions from the Established Church, and dissident congregations were formed in Königsberg, Halle, Magdeburg, Nordhausen, Halberstadt, Hamburg, and other places.

4. Relations between the 'Friends of Light' and the 'German Catholics' down to 1858.—These two bodies soon developed intimate mutual relations. The fact that the one originated within Protestantism and the other within Catholicism did not constitute a ground of difference, as it lay in the very nature of both movements to attenuate all the peculiar elements of the creed, and to deprive them of the value generally assigned to them. Both were at one in their demand for freedom and progress, and in both the more radical section, which aimed at disengaging religion from the prevailing ecclesiastical conditions, gained the upper hand. Between the two, accordingly, there existed an essential affinity, and it was due to something more than tactical considerations that they showed a tendency to come together. The growth of this tendency was greatly hastened by the circumstance that both bodies suffered alike from the coercive measures of the public authorities; it was, in fact, persecution from the side of the various governments which brought about their union.

The governments of the different States regarded 'Free Protestants' and 'German Catholics' alike with suspicion, seeing in both an embodiment of the revolutionary spirit which made itself felt throughout Germany in the early forties of the 19th century. The practical expression of this antipathy took many forms, and every method of repression permitted by the legal systems of the several States was resorted to. In some cases the new sects were treated as illicit religious associations, while in others the designation 'religious associations' was denied them; in many districts they were simply

let alone; in others they were proceeded against with all the rigours of the law. The Revolution of 1848 put an end to this state of affairs, and gave complete liberty of action to the 'Friends of Light' and the 'German Catholics' alike. The immediate effect of the change, in the case of the former at least, was a notable increase in the number of their congregations. This was more particularly the case in Middle and North Germany, and here it became evident that the dissident cause found its most fruitful soil in urban populations. Another characteristic phenomenon was that the membership of the various congregations was subject to frequent and sudden fluctuations, while the lines of demarcation between 'Free Protestants' and 'German Catholics' became more and more unsettled. These facts render it difficult to obtain accurate statistics regarding the numerical strength of the movements. We must restrict ourselves to the statement that, according to the most reliable authorities, the combined membership of the two bodies during the period of their greatest vogue, i.e. about the middle of the 19th cent., may be reckoned approximately at 150,000. The closeness of the relations between the two may be gauged by the fact that the third 'German Catholic' Council and the third 'Free Protestant' Conference met in the same house in Leipzig on the same day of May, 1850. It was at this session also that the governments began to revert to their policy of persecution. When the agitation aroused by the Revolution of 1848 had died down, the legislatures of the various German States made it their express aim to suppress all liberal tendencies in State and Church, thus inaugurating the 'period of reaction.' As both the 'Friends of Light' and the 'German Catholics' lay under suspicion, and were regarded as illegal societies and as sources of danger to the State, the governments resorted to every available means to render impossible the continued existence of these bodies. The first blow in the revived policy of repression was struck on the occasion of the double Convention at Leipzig in 1850. Just as the proceedings were about to begin, the police appeared upon the scene and broke up the meetings, and within the next few years all the States of Germany adopted measures for which this incident provided an example. The ruthless procedure of the Prussian government in particular provoked the indignation of its victims. Even the religious services of the Free Congregations were interrupted by soldiers. Such of the official acts of their ministers as had an important bearing upon civil life were not recognized by the legislature, so that, for instance, marriages performed by them were treated as mere illicit unions. They were forbidden to celebrate the Lord's Supper, to prepare candidates for confirmation, or to officiate at funerals. This policy of persecution, however, was finally abandoned when Prince Wilhelm of Prussia (afterwards Emperor Wilhelm I.), in consequence of the illness of his brother, Friedrich Wilhelm IV., assumed the regency in 1858. Thereafter the 'Friends of Light' and the 'German Catholics' were able to maintain and develop their position without let or hindrance from the authorities.

5. 'German Catholics' and Free Congregations after 1858.—In 1859 the majority of the two bodies brought the friendly relations long subsisting between them to a focus in a corporate union, thus forming the 'Association of Free Religious Communities' (*Bund freier religiöser Gemeinden*). A biennial Conference of representatives from the various congregations was instituted; but the resolutions of this Conference have the validity of 'counsels' merely, and apply only to questions of organization. The individual congregation accordingly has absolute freedom in the management of

its own affairs, as is meanwhile guaranteed by the constitution of the society, which provides that 'freedom to act in all religious matters according to one's own increasing knowledge' shall be one of its own accepted principles. The object of the society is set forth as 'the promotion of a practical religion independent of dogma.' In 1899 the Union embraced 24 congregations with an aggregate of 17,000 members. Twenty-four congregations with some 5000 members remained outside the Union. The majority of the original 'German Catholic' communities joined the *Bund*, and many of these keep alive the memory of their origin by continuing to use the old name, either by itself or in conjunction with the designation *frei-religiös*. Amongst other appellations still in use are 'Christian Catholic,' 'Free Christian,' and even 'Free Evangelical-Catholic Church.' It is no longer possible, therefore, to draw a sharp distinction between 'German Catholicism' and the Free Religious Communities. It is only in the kingdom of Saxony that the former has chosen to maintain its independence in an organized form. 'The German Catholic Church in the Kingdom of Saxony' has a membership of about 2000, and is represented in Dresden, Leipzig, and Chemnitz by fairly large congregations.

We learn from these figures that the movement which originated in the early forties of the 19th cent. embraces at the present day a very insignificant portion of German Protestantism. The new society soon lost its better educated adherents, and it now appears to find its main support amongst working people who have left the State Churches. The Free Religious Communities form the residual elements of an initially powerful movement, and now to their cost find themselves upon the horns of a practical dilemma. On the one hand, they must renounce all definite formulation of doctrine, in order to avoid falling back into the dogmatic Christianity which they condemn in other Churches; while, on the other hand, for the work of instruction, of preaching, and of gaining new members, they cannot well do without distinct principles expressive of their actual religious beliefs. In consequence of this embarrassment, the Free Religious Communities show great diversity in practice. Some still make use of the Scriptures in religious instruction; some still maintain their adherence at least to Christian ethics; but there are others who have abandoned all connexion with Christianity whatever, and take their stand upon a basis of naturalism and atheism. The one point of uniformity amongst these communities is that they all alike repudiate the existing Christian Churches, whether Evangelical or Roman Catholic. Great diversity likewise prevails in their ceremonial. They still to some extent celebrate the Christian festivals, but always with a change from their original significance. The Lord's Supper continues to be observed in many congregations, but Baptism has been set aside. The course of religious instruction is brought to a close by a sort of confirmation, or 'initiation of the young' (*Jugendweihe*), which forms the gateway to full membership in the community. In this ordinance the candidates for confirmation give a pledge that they will seek truth, do right, and strive after perfection. Thus the Christian element still persisting in these communities is no longer the vital factor for them, and their past history goes to show that in course of time they will eliminate it altogether.

C. MIRBT.

DEVADATTA.—A Śākya noble, probably a cousin of the Buddha, who joined the Order in the 20th year of the movement, but held opinions of his own, both in doctrine and in discipline, at variance with those inculcated by the Master. He received a certain amount of support, both within the Order and from laymen, but seems to have remained quiet till about ten years before the death of the Buddha. At that date he asked the latter to retire in his favour, and, being refused, started a new Order of his own. It is curious that these dissensions, and this final rupture, which must have had so important an influence on the early history of the Buddhist community (we find traces of them a thousand years afterwards), should receive so slight a notice in the earliest documents relating to Buddhist doctrine. Devadatta is not even mentioned in the *Sutta Nipāta*, or in the collection of longer Dialogues (the *Digha Nikāya*). In the other three collections of Suttas he is a few times barely referred to, in the discussion of some ethical proposition, as an example. In the minds of the editors of these collections the doctrine itself loomed so much more largely than any personal or historical matter, that Devadatta and his schism are all but ignored; but in the oldest collection of the rules of the Order (in the Pāli *Vinaya*), under the head of 'Schism,' a chapter is devoted to the final episode in Devadatta's life. Our discussion of the matter will therefore be most conveniently divided into: (1) the *Vinaya* account, (2) the isolated passages in the early books of doctrine, and (3) the later notices.

I. The *Vinaya* account.—This is in the 18th *khandhaka* (chapter) of the *Sutta Vibhāṅga*, relating to dissensions in the Order.¹ It commences with an account of the circumstances under which six young men of the Śākya clan, one of whom was Devadatta, entered the Order together.

This must have been in the 20th year of the Buddha's ministry, as is shown by a comparison of *Theragāthā*, 1039, with *Vin.* ii. 286. The latter passage tells us that Ananda (one of the six) attained *arhat*-ship in the year of the Buddha's death; the former states that he had been 25 years in the Order before he did so. Twenty-five years before the Buddha's death brings us to the 20th year of his ministry.

Throughout the passage in question the details given concern the others. At the end it is stated that, whereas each of the other five soon attained to some particular stage of the religious life, Devadatta attained to that magic power and charm which a worldly man may have.² There follows another episode having no relation to Devadatta, and then a third.

As usual, no intimation is given as to whether we are to suppose any interval of time between these episodes, but the very absence of continuity in the narrative would seem to imply that the editors supposed that there was.

The third episode introduces Devadatta considering whom he could win over so as to acquire gain and honour. He decides on Ajātasattu, the Crown Prince of Magadha, and accordingly goes there and practises his magic arts upon the Prince. These are quite successful; and Devadatta, dazed with prosperity, aspires to lead the Order. This is revealed by a spirit to Moggallāna, who informs the Buddha; but the latter, in reply, merely discusses the character of an ideal teacher. He then proceeds to Rājagaha, where the brethren inform him of Devadatta's prosperity. In reply, the Buddha discourses on the text that pride goeth before a fall, and concludes with a verse on honour ruining the mean man.³

In the next episode Devadatta asks the Buddha in the presence of the king, to give up to him the

¹ *Vin.* ii. 180 ff., tr. T. W. Rhys Davids and H. Oldenberg, in *Vinaya Texts*, iii. 224 ff. (*SBH* ix. [1885]).

² *Pothujjanika* i. 224 ff. On the exact meaning of this technical phrase, see the passages collected and discussed by the present writer in *Dialogues of the Buddha*, i. 88, 273; ii. 6.

³ *Vin.* ii. 188; recurs at *Anguttara*, ii. 78; *Samyutta*, i. 164, ii. 241; *Mūlinda*, 166; *Netti*, 181.

leadership of the Order, on the ground that the Buddha is now an old man. He is refused, and a formal act of the Chapter of the Order decrees that in future, whatever he may do, Devadatta shall be considered by the people as acting or speaking, not as a member of the Order, but for himself alone. Then Devadatta incites the Crown Prince to kill his father, and to help him (Devadatta) to kill the Buddha. The various attempts, all of which are unsuccessful, are described in detail.

There follows an episode in which Devadatta, with four adherents, whose names are given, lays before the Buddha five points to be incorporated in the rules of the Order. They are: (1) that the *bhikkhus* should dwell in the woods, (2) that they should live entirely by begging, (3) that their clothing should be exclusively made of cast-off rags, (4) that they should sleep under trees, and (5) that they should not eat fish or meat.

The existing rules were more elastic. It will be sufficient here to state roughly that: (1) *bhikkhus* were not to dwell in the woods during the rainy season—it was considered unhealthy; at other seasons they might wander about, or dwell in hermitages in hills or forests, or in huts put up for them in parks, or the like; the only restriction was that they should not dwell in the houses of the laity; (2) they might beg, or accept invitations, or live on food provided at the residences for *bhikkhus*; (3) they might receive presents of clothing, made either personally to one *bhikkhu* or generally to the Order; (4) they might sleep anywhere except in houses of the laity, and even there they might stay for a limited period, if on a journey; (5) they might accept any food given, but not fish or flesh if specially caught or killed for the purpose of the meal. The five points recur at *Vin.* iii. 171, and are therefore probably correct.

The five points were rejected. Devadatta rejoiced, and told the people that, whereas Gautama and his *bhikkhus* were luxurious and lived in the enjoyment of abundance, he and his would abide by the strict rules of the five points. Five hundred of the younger *bhikkhus* accepted tickets that he issued, and joined his party. The success of the schism seemed assured.

The following and final episode introduces Devadatta, surrounded by a great number of adherents, discoursing on his doctrine. Śāriputta and Moggallāna, the principal disciples of Gautama, are seen approaching. On seeing them, Devadatta exults, and, in spite of a warning from Kōkālīka, he bids them welcome, and they take their seats. Devadatta continues his conversational discourse till far on into the night. Then, feeling tired, he asks Śāriputta to lead the assembly while he rests. Devadatta falls asleep. Śāriputta leads the talk on the subject of preaching, and then Moggallāna leads it on the subject of *idhhi*. Next Śāriputta suggests that those who approve should return to the Buddha, and most of the assembly do so. Kōkālīka awakes Devadatta, points out what has happened, and says, 'I warned you.' Then hot blood comes forth from Devadatta's mouth. Śāriputta, on his return, proposes that the renegades who had come back should be readmitted to the Order. This Gautama declares unnecessary, and the chapter closes with edifying discourse. First, we have a parable of elephants who ate dirt and lost their beauty and died. Just so will Devadatta die. Then the eight qualifications of one worthy to be an emissary are pointed out. Next, the eight qualifications of Devadatta, which doom him to remain for an aeon (*kappa*) in states of suffering and woe, are given. Finally, another paragraph gives three reasons for the same result.

It is probable, from the details, that the eight have been elaborated out of the three, no doubt to make Devadatta's qualifications parallel in number with those of Śāriputta, the ideal emissary.

2. Isolated passages.—In *Majjhima*, i. 192 a Suttanta is dated as having been delivered shortly after Devadatta went away. Not a word is said about him; but the discourse discusses the object of religion, which, it is said, should be cultivated, not for the sake of gain or honour, not for the sake

of virtue, not for the sake of mystic concentration, not for the sake of knowledge, 'but has its meaning, its essence, its ideal in emancipation of mind.' The objects here rejected are precisely those for which, in the *Vinaya* passages, Devadatta is said to have striven. At *Majjhima*, i. 392, a Jain is urged to put Gautama on the following two-horned dilemma (*ubhato-kotikam pañham*): 'Do you say that one ought to speak words pleasant to others? If so, did you make the statement about the inevitable fate about to befall Devadatta?' The puzzle is easily solved, and on general grounds (without any reference at all to Devadatta). This passage is important, because it shows that, before the time when the Dialogues were composed, and *a fortiori* before the time when the *Vinaya* account arose, the episode about the future fate of Devadatta was already in existence, and was widely known in the community, and even outside of it.

The *Mūlinda* (p. 107 ff.) has a greatly altered and expanded version of this 'double-horned dilemma'; and it is probable that the whole of the dilemma portion of that interesting work is based on the scheme of the dilemma in this Suttanta.

The *Samyutta* (at ii. 240-242) has the episode of honour bringing ruin to the mean man, in the same words as *Vin.* ii. 188, but divided into two stories; and at i. 153 it puts the concluding verse of that episode into the mouth of the god Brahmā. At ii. 156 Devadatta and his followers are called 'men of evil desire.' In four passages¹ the *Anguttara* has, word for word, episodes occurring in the *Vinaya* account. Besides those, it discusses at iii. 402 the statement about the fate that will inevitably befall Devadatta; and at iv. 402 ff. it discloses a view held by Devadatta that it was concentration of mind (and not the ethical training of the 'Aryan Path') that made a man an *arhat*. This is the only one of these isolated passages in the oldest books which really adds anything to our knowledge of Devadatta. In the later books of the Canon there are two or three more references to him. Thus the episode at *Vin.* ii. 198 recurs at *Udāna*, v. 8, and that at *Vin.* ii. 203 at *Iti-vuttaka*, no. 89, and at *Udāna*, i. 5, Devadatta's name is included in a list of eleven leaders in the Order who are called *buddha*, 'awakened.' This is the only passage in the Canon which speaks of Devadatta with approval; and it doubtless refers to a period before the schism. Lastly, in *Vin.* i. 115 it is said that Devadatta, before the rule to the contrary had been promulgated, allowed the local chapter of the Order, when the *Pātimokkha* was being recited, to be attended by laymen.

H. Oldenberg has shown, in the Introduction to his edition of the *Vinaya*, that the work, as we now have it, is composed of material belonging to three periods, the oldest of which goes back nearly, if not quite, to the time of the Buddha. The chapter analyzed above belongs to the latest of those periods. The episodes found also in other parts of the Canon belong to the earliest period. The summary at the beginning of this article is based exclusively on such episodes.

3. The later notices.—In books later than the Canon, the above story of Devadatta is often told or referred to, and with embellishments which purport to add details not found in the earlier version. Such additional details must be regarded with suspicion; many are insignificant, some are evidently added merely to heighten the edification of the narrative, all are some centuries later than the alleged facts they, for the first time, record. It will be sufficient to mention a few of the most striking.

The *Mahāvastu*, iii. 178, and the *Mahāvamsa*, ii. 21, give contradictory accounts of Devadatta's parentage. Had these two traditions (the one handed down in the Ganges valley, the other in Ceylon) agreed, the evidence might have been accepted. The *Mūlinda* (at p. 101) states that Devadatta was swallowed up by the earth; and

¹ *Ad.* ii. 75 = *Sam.* ii. 241 = *Vin.* ii. 188; *Ad.* iii. 128 = *Vin.* ii. 185; *Ad.* iv. 160; and again 164 = *Vin.* ii. 202.

(at p. 111) that, at the moment of his death, he took refuge in the Buddha. Both traditions were accepted in Ceylon in the 5th cent. A.D. (see the commentary on the *Dhammapada*, i. 147). A statement of Fa Hien (Legge's tr., p. 60) shows that the first of these traditions was still current in India at the end of the 4th cent. A.D. The same authority (p. 62) tells us that there were still, at that time, followers of Devadatta who paid honour to the three previous Buddhas, but not to Gautama. This is possibly confirmed by Yuan Chwāng, more than two centuries later, and in another locality; but Watters (ii. 191) thinks that the pilgrim himself may have supplied the name Devadatta. Yuan Chwāng elsewhere (Watters, i. 339) credits Devadatta with the murder of the nun Uppala-vannā; but we have no confirmation of this unlikely story, and it depends probably on a Chinese misunderstanding of some Indian text. We have two 5th cent. biographies of Uppala-vannā, and it occurs in neither.

RHYS DAVIDS.

DEVAYĀNA.—This term in ancient Vedic thought and speculation denoted the path or paths leading to the gods, elsewhere the road which the gods themselves were wont to traverse in their descent or ascent between heaven and earth. In the earliest literature of India it formed part of the recognized terminology of the priests and poets; and it passed through a long course of development and refinement, during which it gained clearness of definition, and was brought into relation with other movements of religious thought. In a lower, more literal, and mechanical sense, *devayāna* was also the car or vehicle (*yāna*) of a god; but no special significance or importance seems to have attached to this use of the word. The correlative to *devayāna*, 'the way of the gods,' was *pitṛyāna*, 'the way of the fathers'—a term which assumed importance only in the later speculation, and perhaps was consciously invented on the analogy of the former word, to express an inferior path or progress, at a time when *devayāna* became specialized and appropriated to the conception of a higher or the highest degree of bliss.

Hence in origin at least both terms belong to a lower stratum or form of religious belief, and are conceived in a material or semi-material sense. The term *pitṛyāna* especially answered to the primitive and wide-spread conception of the life after death, which pictures it as a meagre continuation of the present, reproducing the conditions and occupations of a worldly existence, where the ancestors dwell in weal or woe according to their deserts, but where all is more or less unreal and speculative, and the prospect exerts no determining influence on the actions or conduct of the present. In India, however, almost from the very beginning, the term *devayāna*, so soon as it was interpreted in the human sphere of the fortunes and destinies of men, was conceived apparently in a higher and more ethical sense, and for the most part connoted Divine escort, companionship, or guardian care, on a road which had its termination

in a paradise of blessedness and good; the elements and conditions of which conception were necessarily contributed by earthly experiences, and the pleasures enjoyed were those of earth, renewed, however, in a more or less etherealized and exalted form in fellowship with beneficent and righteous gods. The travellers by the *pitṛyāna* attained only a lower goal, where the superhuman associates were at the best the gods of the lower world, but where the company was for the most part those mortal men who had preceded them on the path. These all shared the same colourless and temporary existence, from which they eventually returned to tread the same cycle of renewed birth, life, and death, in this world. Thus finally, with the growth of speculation with regard to the future, and of the consciousness of merit and demerit attaching to conduct and involving reward or penalty, the ways of the gods and of the fathers were brought into association with the great Indian doctrines of *samsāra*, 'transmigration,' and inevitable *karma*; and were incorporated into the rich store of Indian beliefs that had reference to the life beyond the grave.

The earliest conception of a 'path of the gods' is to be found in the hymns of the *Rigveda*. There apparently it is always associated with Agni, the divine priest and intermediary between gods and men. Agni—both the sacrificer and the sacrificial flame—bears the offerings to the gods, and conducts the gods to receive the offerings which are prepared for them. He knows the path that leads to the gods, and is the messenger and guide thereon:

'Knowing the ways by which the gods go, thou (Agni) hast become the unwearied messenger, the bearer of oblations.'¹

The path trodden by the gods, and on which the sacrifices were borne to the heavenly world, became later the road by which the sacrificer himself ascended to the company of the gods. This extension or development of the thought of the *devayāna* was early made, probably in connexion with the practice of burning the dead. The soul, released from the body, which was consumed by the fire and returned to its earthly elements, was carried on high in the smoke and flame, on a fiery path whereon was consummated that purification from earthly taint which the fires of the funeral pyre had begun.

Sat. Brāhm. i. 9. 3. 2: 'That same path² leads either to the gods or to the fathers. On both sides two flames are ever burning: they scorch him who deserves to be scorched, and allow him to pass who deserves to pass.'

The way was thus prepared for the philosophical development which the doctrine received in the *Upaniṣads* and later systems of Indian thought and teaching. The purification which the soul underwent to fit it for the communion and company of the gods was conceived as a process not completed in one act or at one time, but carried on through a series of graduated stages or degrees; and it was only at its close that the emancipated soul was admitted to the fullness of bliss.

The earliest enumeration of the 'stations' on the two paths is found in the *Chhândogya Upaniṣad* (v. 10. 1):

'Those who know this (i.e. the so-called doctrine of the five fires, and the fate of men after death, with regard to which Śvetaketu Āruṇeya has been obliged to confess ignorance [v. 3. 1-5]), and those who in the forest follow faith and austerities (*vānaprastha*) enter into the flame, from the flame to the day, from the day to the bright half of the month, from the bright half of the month to the six months of the sun's northward movement, from the six months to the year, from the year to the sun, from the sun to the moon, from the moon to the lightning.'

Thence they are led to Brahman; and it is further

¹ *Rigv.* i. 72. 7, cf. ii. 2. 4 f., *at.* Atharv. iii. 15. 2, etc.; and, for the paths between heaven and earth, which Agni knows (*Rigv.* vi. 16. 3, x. 98. 11, etc.), see Macdonell, *Vedic Mythology*, Strassburg, 1897, p. 88 ff.

² i.e. the funeral fire; see *SBE* xii. 267 and note; and cf. *Sat. Brāhm.* xiii. 8. 4.

explained that this is the way of the gods, from which there is no return (cf. iv. 15. 5):

'But they who living in a village (*grhastha*) practise sacrifices and almsgiving, enter into the smoke, from the smoke to the night, from the night to the dark half of the month, from the dark half of the month to the six months of the sun's southward movement. But they do not reach the year. From the months they go to the world of the fathers, from the world of the fathers to the ether, from the ether to the moon. . . . Having dwelt there as long as a remnant (of good works) yet exists (*yadāt sampādam*, 'till their good works are consumed' (Müller)), they return again, by that way by which they came, to the ether, from the ether to the wind. Having become wind, the sacrificer becomes smoke; having become smoke, he becomes mist; having become mist, he becomes cloud; having become cloud, he rains down. Then is he born as rice and corn, herbs and trees, sesamum and beans. Thence the escape is beset with most difficulties. . . . Those whose conduct has been good will quickly attain some good birth, the birth of a Brāhman, or a Ksatriya, or a Vaiśya; but those whose conduct has been evil will quickly attain an evil birth, the birth of a dog or a hog or a *Chauḡāla*' (v. 10. 3-7).

The same description, with minor variations and in a somewhat briefer form, recurs in *Bṛhad. Up.* vi. 2. 15 f. For the year, however, on the *devayāna* is substituted the Devaloka, 'the world of the gods.' In the stations of the *pitṛyāna* the ether is omitted, and progress is made direct from the world of the fathers to the moon. The omission, however, is apparently merely accidental; for, when the merit of their good works is exhausted, they are said to return again to the ether, from the ether to the air, from the air to the rain, from the rain to the earth.

'And when they have reached the earth they become food, they are offered again in the fire of man, and thence are born in the fire of woman. Thus they rise up towards the worlds, and go the same round as before.'

It is not easy to determine which of these two versions is the earlier. They are probably to be traced back to a common original, which has been slightly modified in the course of transmission in different schools of Vedic learning. The form of the *Bṛhadāranyaka* most closely and formally identifies itself with the doctrine of transmigration and the theory of a satisfaction rendered upon earth for all past deeds, after which a new career is entered upon. There underlies both, however, the ancient Vedic conception of retribution or felicity after death, in another world, from which there was no necessary return to an existence upon earth—a conception which was more or less definitely combined with and accommodated to the teaching with regard to a new life upon earth. The latter, in its origin at least, was probably derived from external sources, but was adopted into the Brāhmanical system and elaborated in the philosophical schools (see artt. TRANSMIGRATION, UPANISHADS).

In the later literature also reference is frequently made to the two paths, and the essential difference between them is emphasized, viz. that of a permanent or a merely temporary deliverance from the conditions of an earthly life, e.g. *Bhāg.-Gītā*, viii. 23-26:

'I will declare the time, O descendant of Bharata, at which devotees (*yogin*) departing from this world go never to return or to return. The fire, the flame, the day, the bright fortnight, the six months of the sun's northern movement, departing in these, those who know the Brahman go to the Brahman. Smoke, night, the dark fortnight, the six months of the sun's southern movement, departing in these, the devotee attains the lunar light and returns. These two paths, the bright and the dark, are deemed to be eternal in this world. By the one a man goes never to return, by the other he returns again.' Cf. *Praśna Up.* i. 9, 10, where the paths are termed southern and northern; *Mund. Up.* i. 2. 10, 11, iii. 1. 6; *Anug.* 20 (*SBE* viii. 314, 316), etc.

It is evident that the stations themselves are artificial, and are made artificially to correspond, those of the *devayāna* indicating regions of progressive knowledge and light, those of the *pitṛyāna* successive regions of darkness and decay. Occasionally, in passages which are probably later and prompted by individual speculation or fancy, other stations are added or substituted for those of the *Bṛhad.* or *Chhând.*; e.g. in *Kaus. Up.* i. 3, from the fire, the world of Agni, the path of the gods leads through

the world of Vāyu (wind, air) to the world of Varuṇa, and thence through the worlds of Indra and Prajāpati to the world of Brahman.

The same Upaniṣad essays an explanation of the fact that the moon appears as a station on both paths. On the *devayāna* it occupies a place beyond the sun, intermediary between that and the lighting, but is in no way distinguished from the other stations. On the *pitṛyāna*, however, it is the final resting-place, or place of sojourn, from which the return to earth begins. The author of the *Kaus. Up.* appears to regard the moon as a testing-place or opportunity of trial, the future being determined by the degree of knowledge which the disembodied soul is proved to possess. The wise find a permanent home; the ignorant are dismissed to a new earthly existence which is graduated according to their deserts.¹ That all souls after death are received into the moon is an ancient and widely accepted view, and probably accounts for the position which the moon occupies as a station common to the two paths.

Provision is also made for those who are ignorant of the ways, i.e. for out-castes who have no knowledge of the gods and no capacity or right to study the scriptures. Elsewhere, however, this 'third place' appears to be conceived as a lot of punishment or degradation reserved for the wicked. To the philosophical thought of India the two conceptions are not incompatible, and the latter, indeed, is almost necessarily an accompaniment of the former.

'Those who know neither of these paths become worms, birds, and biting things.'²

A further question much discussed had reference to the qualifications necessary for those who on the higher path attain to light and immortality. The primary qualification was universally admitted to be knowledge, i.e. knowledge of the supreme or Brahman. Difference of opinion, however, appears to have existed on the one question as to the degree of knowledge the possession of which would admit to the *devayāna*. With regard to those who have lived in the two last *āśramas* as *vānaprasthas* or *sannyāsins*, there is no doubt: they tread the path of the gods. In the case of *grhasthas* the *Chhând. Up.* appears to draw a distinction between those who know the secret doctrine of the five fires, and those whose life proceeds in the routine of ordinary sacrifices. The former after death go to the flame, etc., and finally reach Brahman. The latter are destined for the *pitṛyāna* and a return to earth. The *brahmachārin*, in a state of pupilage, to whom the knowledge of the Brahman had not yet been communicated, was naturally excluded from the highest path. A later representation, perhaps more liberally inspired, or to which the conception of the sphere of the *brahmachārin's* life had become definitely widened, conceded this also, and, entirely in harmony with later developments of thought, laid the emphasis not on status, but on behaviour and a life of meditation and devotion.³

¹ *Kaus. I. 2.* The passage is difficult, and perhaps corrupt. Max Müller renders: 'All who depart from this world go to the moon. In the former (the bright) half, the moon delights in their spirits; in the other (the dark) half, the moon sends them on to be born again. Verily, the moon is the door of the Svarga (heavenly) world. Now, if a man objects to the moon (if not satisfied with life there), the moon sets him free. But, if a man does not object, then the moon sends him down as rain upon this earth,' etc. (*SBE* i. 278 f.; cf. Deussen, *Sechzig Upanishads*, Leipzig, 1897, p. 24).

² *Bṛhad. Up.* vi. 2. 16, cf. *Chând.* v. 10. 7 f., Śaṅkara on *Ved. Sūt.* iii. 1. 13, who explains that, in the case of those who are destined for the 'third place,' the appropriate sacrifices have not been offered, and therefore they return to life in new bodies which are constituted from inferior ingredients (*SBE* xxviii. 123-25, cf. 121 f.).

³ *Anug.* 31. 7 f.: 'a Brahmachārin . . . who is thus devoted, who is concentrated in mind and continent, conquers heaven, and reaching the highest seat does not return to birth'; cf. Rāmānuja on *Ved. Sūt.* iii. 8. 32, who declares that all those who practise meditation proceed on the path of the gods, without

The same question of qualifications for the higher path, the path that led to Brahman without return, was considered in relation to the doctrine of the *yoga* (q.v.). *Bhāg.-Gītā*, viii. 24 f. appears to suggest that the immediate destiny of the *yogin*, or ascetic, depends upon the time of death, whether in the light or dark half of the year, the northern or southern progress of the sun (*SBE* viii. 80 f.). Rāmānuja, however, rejects this inference, and asserts that the text enjoins on all *yogins* the duty of daily meditation on the two paths, quoting in proof of his contention the words that follow: 'no *yogin* who knows these two paths is deluded' (*ib.* viii. 27). The text, therefore, has no reference to the time or season of the year at which death takes place (*SBE* xlviii. 472 f.).

A further and final development of doctrine took place in harmony with the teaching of the Vedānta, and the importance attached to knowledge of the highest Brahman, the supreme knowledge (*parā vidyā*), as the one avenue of escape from attachment to the world and the possibilities of re-birth. Those, on the other hand, who were possessed only of the lower degree of knowledge (*aparā vidyā*), the knowledge of the Brahman *saṁyā* ('endowed with qualities'), were still entangled in the snares of delusion, and liable after death to a return to earth. It became, then, necessary to find a link of connexion between the new metaphysics which exalted the secret esoteric wisdom, and the older authoritative teaching of the two ways. It was not possible, however, to deny that those who possessed a knowledge of Brahman even in an inferior degree departed on the *devayāna*, the path of the gods, or to consign them to a lower destiny; for all such the scripture declared that there was no return. A solution of the difficulty was found in the doctrine of the *kramamukti*, 'emancipation by steps or stages.' The question is discussed by Śaṅkara on *Ved. Sū.* iii. 3. 29 (*SBE* xxxviii. 231-235; cf. *ib.* 124 f.), where he explains that a twofold meaning underlies the phrase 'going on the path of the gods.' In the case of those possessed of the highest knowledge, the knowledge of the unqualified Brahman (*nirguṇa*), it is a mere phrase; for they are already in union with Brahman, and have no need to move on any path to reach that end. But all who have only the knowledge of the qualified Brahman (*saṁyā*) advance on that road. And, since it is said that they attain to Brahman and do not return, it must be that in union with the (*saṁyā*) Brahman they eventually win perfect enlightenment and gain the highest knowledge. During this period of probation and imperfect knowledge the soul is in possession of complete bliss and unrestrained capacities of will power, etc. (*aiśvarya*). As it approaches the highest light, it finds itself, assumes a 'new form,' and is truly and finally set free. This is the doctrine of the *kramamukti*. And it is further explained that all thus enter into absolute and final emancipation at the end of the world-cycle.¹

A variety of the teaching concerning the paths, which is merely an elaboration of the doctrine of the two roads, and remained without further significance or development, postulated four paths from earth to the gods, which were explained as corresponding to four forms of sacrifice. Both the

reference and the interpretation are given by Baudhāyana:

'Some teach a fourfold division of these sacred duties. The text, however, "Four paths," etc. (*Taitt. Saṁh.* v. 7. 2. 5) refers to sacrificial rites, *istis*, animal and Soma sacrifices, and *darśiṇomas* (offerings made with a *darśi*, or sacred ladle). The following declares that "Four paths, leading to the world of the gods, go severally from the earth to heaven" (*Baudhāy.* ii. 6. 9 f., cf. 20; *Āpast.* ii. 9. 23. 5).

The context suggests that the conception of the four paths is not unconnected with the doctrine of the four *āśramas*.

An isolated passage in the *Brhad. Up.* (iv. 4. 9) describes the path to the Svargaloka as marked out in varied colours:

'On that path (to the Svargaloka) they say that there is white or blue or yellow or green or red; that path was found by Brahman, and on it goes whoever knows Brahman, and who has done good, and obtained splendour.'

The colours are the same as those of the veins (*hitā*; *ib.* iv. 3. 20), and the conception has therefore in all probability a physiological basis. Neither in this instance, however, nor in that of the four paths of the *Taitt. Saṁh.* and Baudhāyana was any inference drawn or further development sought. And it remains doubtful how far any connexion is to be traced between the ideas underlying these texts and the formal doctrine of the *devayāna*.

Parallels to the latter doctrine of roads traced out between earth and heaven by which the dead souls pass and repass are to be found in many of the religions of the nearer and further East. They are present in the eschatological teaching especially of Babylon and Egypt.¹ Similar conceptions are presupposed in the dream of Jacob (*Gn* 23¹² ff.).²

LITERATURE.—This is indicated in the article.

A. S. GEDEN.

DEVELOPMENT (Biological).—Development is the 'becoming' of the individual organism, the attainment of a specific form and structure, and of the not less characteristic associated faculties. The starting-point is usually a fertilized egg-cell—a new unity formed from the intimate and orderly combination of paternal and maternal inheritances. The fertilized ovum divides and re-divides, the daughter-cells or blastomeres are arranged in germinal layers, differentiation sets in, and an embryo is built up. This is embryonic development. At a certain stage, differing greatly in the different types, the egg is 'hatched,' and the embryo emerges from the egg-envelope—sometimes like a miniature of the adult, as in the case of a chicken; sometimes very unlike the adult and adapted to a different kind of life, as in the case of caterpillar and tadpole. Thus there may be a larval development. The embryo is the quiescent stage within the egg-membrane; the larva is free-living and able to feed for itself. As long as the realization or expression of the inheritance goes on, as long as differentiation and integration continue, we may speak of development, but mere increase in size is not development, and it is very difficult to decide where to put in the stop. Thus some would say that development includes all the normal changes of form and structure that occur throughout life, and that the breaking-down in old age is as much part of development as the building-up in youth. Others put in the stop when the limit of growth is reached, but the brain may go on developing long after that, though in mammals there seems to be no increase in the number of brain-cells after birth. Moreover, there are many fishes and reptiles that show no limit of growth. Others, again, put in the stop when the specific characters begin to be well defined, but that would exclude much that can be fairly called development, e.g. the changes associ-

restriction (*SBE* xlviii. 650-652); also on *HL* i. 17 f., iv. 3. 1 ff., where the two paths are discussed, and are said to be dependent respectively on knowledge and works (*SBE* xlviii. 694 f., 744 ff.); see also Śaṅkara, *loc. cit.*

¹ Cf. also Rāmānuja on *Ved. Sū.* iv. 4. 1. 1 (*SBE* xlviii. 755 ff.); Deussen, *Alg. Gesch. d. Phil.*, Leipzig, 1908, i. 3. p. 608 ff. The *Svetāśvatara Upaniṣad* contains a suggestion or pre-imitation of the same theory: 'When that god is known, all fetters fall off, sufferings are destroyed, and birth and death cease. From meditating on him there arises, on the dissolution of the body, the third state, that of universal lordship (*aiśvarya*); but he only who is alone is satisfied' (*Svet. Up.* i. 11).

² See, e.g., F. Cumont, *Les Religions orientales*, 1906, p. 152 f., and the references there given; E. A. Wallis Budge, *Egyptian Heaven and Hell*, London, 1905, *passim*, etc.

³ Cf. A. Jeremias, *Das AT im Lichte des alten Orients*, Leipzig, 1906, p. 372 ff.

ated with sexual maturity. The fact is that, in studying development, we are considering the living creature in its time-relations, and definition is a matter of convenience. In the present article we propose to restrict ourselves for the most part to the problems of embryonic development.

Let us state very briefly some of the outstanding facts of development. We know that the germ-cells, and their nuclei in particular, form the physical basis of inheritance—the means, at least, of development; that a genetic continuity is kept up from generation to generation by a lineage of unspecialized germ-cells, which do not share in body-making; that this accounts for like tending to beget like; that fertilization implies an intimate and orderly union of two individualities, condensed and integrated for the time being in the ovum and the spermatozoon; that the spermatozoon, besides being the bearer of the paternal half of the inheritance, acts as a liberating stimulus to the ovum, and introduces into the ovum a peculiar little body, the centrosome, which plays an important part in the subsequent division of the fertilized egg-cell. We know that the mode of all development is by the division of nuclei and the segregation of the living matter into unit-areas or cells, each presided over by a nucleus; that differentiation comes about very gradually, the obviously complex slowly arising out of the apparently simple; that paternal and maternal characteristics—so far as the nuclei of the germ-cells bear these—are distributed in exact equality by the nuclear or cellular divisions, and that the paternal and maternal contributions thus form the warp and woof of the web which we call the organism, though the expression or realization of the bi-parental heritage varies greatly in individual cases. In many cases the parental contributions seem to include ancestral items which may find expression in development or may lie latent. We know that development is a regular sequence of events which requires, stage by stage, an appropriate external environment; that there are continual interactions between the developing organism and its environment; and that there are continual mutual adjustments of the different constituents of the developing organism. In certain aspects the development appears like the building-up of a mosaic out of many independently heritable and independently developable parts; in other aspects it appears as the expression of an integrated unity, with subtle correlations between the parts, and with remarkable regulative processes working towards an unconsciously predetermined end. We know also that in a general way the individual development of organs often progresses from stage to stage in a manner which suggests a recapitulation of the steps in the presumed racial evolution.

It may be said that the data for the study of development are threefold, viz. (a) embryologists have worked out the sequence of stages in the development of a large number of types; (b) experimentalists have shown in a variety of instances that particular changes in the external conditions are followed by particular changes in the developing organism; and (c) students of heredity have distinguished various modes of inheritance which obtain, such as 'blended' and 'Mendelian.' The facts known in regard to development are many and various, as we have briefly indicated, and they are continuously increasing in precision and penetration; yet it seems doubtful whether we have got much nearer an understanding of development since the days of Aristotle, to whom facts were so few. It seems as if his *de Generatione* remained the most important contribution to the subject. How little light we

have that he had not in regard to the deep problems of development, such as those suggested by the following questions; How are the heritable characteristics of the race summed up potentially within the minute germ-cells? How do they gradually find expression in the individual development, so that what we call differentiation results? What is the nature of the compelling necessity that mints and coins the chick out of a drop of living matter? What is the regulative principle of the ordered progress which, by intricate and often strangely circuitous paths, leads to the fully-formed organism?

From reflexion on these general questions the scientific mind always turns, sometimes too quickly, to concrete investigation, it may be of the humblest sort, with the results of which the theory of development must be consistent. Thus there are numerous inquiries into the external factors of development, such as light, temperature, oxygen, osmotic pressure, and the chemical composition of the medium. Experiments are devised which alter or remove one factor at a time, and the significance of the factor is inferred from the resulting changes, transient or permanent, in the developing organism. It appears that each germ is adapted to develop in an appropriate environment, that changes in this environment may occur without permanent prejudicial effects on the organism, but that the latitude of endurable change varies greatly for different types, some being much less plastic than others. It appears that some of the environmental factors, like oxygen and water, are analogous to nutrition; that others, like the osmotic pressure or the presence of calcium salts in the water, are conditions of embryonic coherence; that others, like light and heat, are accelerants and inhibitors; and that particular combinations of factors are required as the 'liberating stimuli' of particular characters in the developing organism. It does not appear, however, that we can speak of the environmental factors as being in any other sense directive.

A second kind of inquiry asks, What in point of fact goes on in the development of the fertilized egg-cell? We know that there is an expression of the inheritance: that is just another spelling of the word development; but what processes are known to occur? This is an inquiry into the physiology of development, which is still a very young department of science, too young for safe generalization. It is also difficult to disentangle the physiology of growth from that of development, yet every one is agreed that mere growth is not development. What processes are known to occur? (a) We know of various sets of chemical changes significant in different ways. Thus, to cite three different cases, the fermentative changes in seeds make the legacy of nutritive reserves available; the anabolic formation of nucleic-substances seems to bring about cell-division; the diffusion of the products of internal secretion certainly affords the liberating stimulus to certain previously unexpressed parts of the inheritance, for instance in adolescence. (b) We know also of a continuous succession of cell-divisions. That, indeed, is how all development goes on. The original idea of Roux, that there is qualitative nuclear division, shuffling the pack of inherited qualities, has been given up in favour of a more plausible view suggested below. (c) We also know a little of even subtler processes—of protoplasmic movements within the developing germ, and of apparent attractions towards specific parts. (d) There are also phenomena of surface-tension and capillarity, etc., which seem to be rather parts of the vital machinery of growing than implicated in the essential secret of progressive differentiation.

A third line of investigation concerns the initial structure of the germ, and one result stands out—that in many cases the egg-cell contains pre-formed, sometimes pre-localized, organ-forming substances, whose removal involves the absence of a corresponding structure, should development proceed. Thus, the old view of the ovum as homogeneous and isotropic has given way before experimental proof of heterogeneity. It may be that, in the heterogeneous, anisotropic cytoplasm of the egg, there is the foundation of the progressive differentiation that follows, and it may be, as Driesch and Boveri suggest, that the dividing nuclei—each a microcosm—are differently stimulated to expression in different areas of the cytoplasm, and that they thus call forth new differentiations in these, in ever-increasing complexity of action and reaction.

Another line of investigation inquires into the mutual influences of the parts of the developing organism. An egg divides into a ball of cells (or blastomeres), and it seems reasonable to suppose—what experiment confirms—that the prospective value of a particular blastomere depends on its position in the whole. In the development of a colony of polymorphic Hydroids, such as *Hydractinia*, it is probable that the prospective value of any young polyp—whether it is to become nutritive, reproductive, or sensory—depends, in part at least, on its position in the whole. Similarly, in the development of an embryo, it is probable that there are subtler than spatial correlations between the developing cells or groups of cells. Driesch has especially emphasized this idea of the mutual stimulation of developing parts, but further research is necessary before we can securely estimate the action of parts upon one another. This, indeed, brings us right up against one of the distinctive riddles of development—that there is, on the one hand, so much inter-dependence of parts, and yet, on the other hand, so much power of self-differentiation.

In regard to the question so often asked, whether we can understand development in terms of chemistry and physics, the scientific answer must be that we cannot at present in the very least describe embryonic development—that wonderful individual unpacking of a racial treasure-box—in terms of chemistry and physics. There are chemical and physical processes going on, of course, which reward study, but a knowledge of them does not help us greatly to understand the result. There is nothing known in regard to development that is at variance with the conclusions of chemistry and physics, but we cannot give a physico-chemical rendering of the observed facts. Nowhere is the autonomy of Biology clearer than here. Driesch in particular has done great service in showing that mechanistic formulæ will not suffice when we come to deal with organic development, notably when we consider the localization of the various successive steps of differentiation. But many who are at one with him on that point are unable to follow him in his constructive hypothesis of an entelechy which exerts a directive influence on the transformations of energy that go on in development.

J. ARTHUR THOMSON.

DEVELOPMENT (Mental).—I. Introduction. —During and after the period of bodily growth and development, from infancy to adult life, the

individual gradually acquires and completes his mental powers. The study of mental development has as its aim to determine the conditions which govern this gradual process, and its successive stages both for the mind in general and for the special functions or capacities. It has been remarked that, while some of the lowest animals are born 'grown up,' being able from the first to secure food for themselves and otherwise to live a life similar to that of their parents, the higher we ascend the scale of animal life the longer is the period of immaturity, infancy, or development which the individual undergoes. This is not a mere accident: the length of infancy has a direct relation to the height achieved by the animal's species in the evolutionary scale, in other words, to the complexity of its structure and functions, the variety of its adaptation to environment, and especially the degree of plasticity, or power of modifying behaviour, which it possesses. The argument applies equally to the physical and the mental aspects of evolution.

Comparative tables show that the ratio of the period of immaturity to that of length of life, which in man is 25:75, or 1:3, is an increasingly small fraction as we descend the scale: thus elephant, 1:4; horse, lion, 1:6; dog, 1:8; cattle, 1:9; cat, 1:10; rabbit, 1:11; guinea-pig, 1:12 (A. F. Chamberlain [after Hollis and Bell], *The Child*, ch. 4). The same differences may be observed within the human race itself: the young savage, or barbarian, Papuan, Fuegian, Bushman, Eskimo, is adult, and begins to take a man's or woman's part in the tribal work, at from 10 to 12 or 13 years; while, within civilization, the date of perfect maturity has been progressively advancing to 21, 25, and even to 30 years for complete mental development. It must be supposed that the ordinary forces making for evolution have determined this increasing length of infancy and immaturity; it has the following advantages: (1) Completed growth means rigidity; the more firmly a structure is organized, the more completely a habit is fixed by the organic mechanism, the more difficult is it for either structure or habit to be modified to suit new conditions; hence longer infancy means more gradual and therefore more effective adaptation to the general environment. (2) Completed development means completed adaptation to a number of special forces in the environment; the period of development is that during which selection occurs among the forces to which adaptation is to be made; thus longer infancy means ultimately more specialized adaptation to, and greater control over, the environment. (3) The main value of mental as contrasted with physical development is to give the individual a mastery of the means of economizing behaviour—by selective attention, by language, by technical skill, by thinking, abstraction, and reason—the mastery of those varied means of summarizing experience which the race has in its evolution perfected: such powers cannot be transmitted by physical heredity, but must be re-acquired by each individual by imitation or education: the longer development corresponds, therefore, to the greater refinement of the race in these products of experience. (4) In regard to physical structures as well as to mental achievements, the individual must by exercise and activity acquire even those functions for which it has a congenital disposition: the simple structure does not become the complex organization, without effort on the individual's part. This is true whether or not the individual is supposed to pass through the same stages of growth as those by which its ancestral line has come down from simpler life-forms (recapitulation theory). Hence, the higher the evolution of the race, the longer must be the period occupied by the individual in reaching its race-type (K. Groos, *Play of Animals*, ch. 2, Eng. tr., London, 1898; Chamberlain, *op. cit.*; E. Claparède, *Psychol. de l'enfant*, chs. 2 and 4).

2. Relation of development to evolution.—The recapitulation theory, once accepted as almost a truism, has recently met with much criticism. It has been applied to mental development most frankly and fully by Stanley Hall and his school. According to these writers, there are three ways in which the individual reveals the story of his race. (1) There is the actually observed correspondence between the stages and order of development and those of race-evolution ('recapitulation'). (2) There is the occasional appearance, even in adult normal life, of mental forms which are echoes of primitive mental stages; these occur more especially in states of mental weakness, fatigue, exhaustion, illness, the drug-psychoses, sleep, hypnosis ('reverberations'; 'reminiscences'). Our souls, like our bodies, represent the organized experiences of past ancestors: fears,

affections, thoughts, which appear even in quite healthy states, may be 'rudimentary spectres' (Stanley Hall) due to survivals from distant ages of man. (3) A given individual may show arrest of mental (as well as of physical) development, stopping short at a stage which the race in general has long since passed; in such a case we have a 'reversion,' or an atavism (*q.v.*), in which the characteristics of remote ancestors dominate, in the child's development, those derived from his parents or near ancestors. The mind, like the body, thus consists of segmentary divisions or strata derived from different periods of evolution: the older strata are naturally those which are most fixed and uniform throughout a race (*e.g.* the primitive instincts); the more recent strata are more variable in the different individuals (*e.g.* the forms of intellectual development); again, the older strata represent the foundation from which the more recent have been derived, and on which, therefore, the latter must be built up by the individual: hence not only does the individual, as a matter of fact, tend to develop along racial lines, but also parents and teachers *ought* to encourage and strengthen this tendency, in order to secure adequate and proportional development of all the different powers ('culture-epoch theory').¹

The recapitulation theory has been defended (1) in the stages at which the different senses mature; (2) in the stages at which accurate discrimination of the different qualities within the same sensory group appears; (3) in the appearance of the different instinctive activities; (4) in the play activities of children; (5) in the successive objects of imitation which children select for themselves; (6) in the stages of intelligent behaviour, and in the development of abstract thought; (7) in the development of emotion; (8) in language. The principle has been greatly over-driven by its supporters, and probably the correspondence in question is limited to the broad general lines of development and evolution respectively. Special objections apply to the culture-epoch theory both as an interpretation of the facts of observation and as a basis of educational reform, but in the course of its discussion many valuable suggestions have been made. The child is not mentally, any more than physically, a mere miniature adult; its powers do not differ merely in quantity from those of the adult; they differ also in proportion and in kind.

Nature and nurture.—The question is still very far from settled as to the respective influence in development of factors which are present in the individual at birth, and of factors which come from the environment and operate from without. The arguments for the former, in the case of mental development, are: the tendency of the individual to reach the type or standard of his race, mentally as physically; the remarkably close resemblances which the adult individual shows to his parents and nearer ancestors, in character as in body—a resemblance which is still greater, it is said, between parent and child when both are considered at the stage of infancy or childhood; and the phenomena of atavism, so far as they are certified. Such facts suggest that, as the bodily germ-cell contains elements, or at least conditions, by which the future growth of the individual bodily organism is determined along definite lines, with definite limits, and definite proportions between the parts, so the mind, or perhaps we should say the brain as the basis of mind, also has its development pre-determined

from the first. In support of this the statistical observations of Galton, Pearson, Heymans, and others have been adduced on the resemblances and correlations between the mental capacities of individuals and those of their parents or other members of their family.

The result of Galton's observations on the prevalence of eminence and genius in different families may be placed in this form: that the chances of an eminent man having an eminent relative are as 1 to 4, while the chances that an ordinary man, or a man chosen at random without reference to eminence, will have an eminent relative are as 1 to 250. That this is not due to opportunity or to social influences he argues by a comparison between the adopted sons of Popes and the real sons of gifted men. Again, if both parents are artistic, the probability of a child being artistic is 2 to 1; while, if neither parent is artistic, the probability of the child being so is 1 to 4. Another and later statement shows that, while 85 families, of a certain relatively high degree of eminence or capacity in the fathers, will contain at least 6 sons of the same capacity, as many as 5000 families of average or mediocre ability in the fathers will be required to furnish the same number of sons of that higher degree of eminence (F. Galton, *Hereditary Genius*, London, 1869, *Natural Inheritance*, London, 1889. For further references, see J. Arthur Thomson, *Heredity*, London, 1908).

Again, Karl Pearson dealt with families statistically in regard to such characteristics as intelligence, vivacity, conscientiousness, popularity, temper; he had previously compared them in regard to such physical characters as the colour of hair, size and capacity of skull, stature, etc. The application of the correlation-formula may be simply explained in this way, that if every two brothers had always the same stature, or the same colour of hair, then the correlation-index would be 1.00; if there were no law whatever, so that in one case the two brothers might be equally tall, in another the one tall and the other moderate, in a third the one tall and the other short, then the index would be 0.00; while, conversely, if there were such a law that in every case of two brothers one was tall and the other short (of course in exact proportion), then the index would be -1.00. The index Karl Pearson found for the colour of the hair was 0.54, for the skull 0.49, for the stature 0.61; while for the mental characters the average correlation was 0.52, in other words, practically the same as the physical index. These are comparatively high degrees of correlation, and suggest that the same cause has been operative in both classes of cases considered in the statistical measurement. Now, it is quite obvious that post-natal conditions have nothing to do with the colour of the hair or with the size of the skull; hence it is equally unlikely, he argues, that the environment has anything to do with the intelligence, or vivacity, or temper of the individual. Later, more particular and accurate tests gave similar results, although the correlations were not quite so high; in any case, the brother of a bright child is much more likely to be bright than the brother of a dull child; brightness or dullness of intelligence is derived from the parents and is not due to education or environment, and not only is it the general mental character that is inherited in this way, but even quite special characteristics (K. Pearson, *Nature*, lxx. [1901] 118, also Huxley Lect. for 1903 in the *Trans. Anthr. Inst.* p. 179 ff., and *Biometrika*, ii. [1903] 357, and iii. [1904] 181; Heymans, *Zschr. f. angew. Psych.* i. [1907]. On the whole question, see E. L. Thorndike, *Educational Psychology* New York, 1903, ch. 6).

On the other side, Loeb and his school are able to produce an increasing mass of evidence showing that the development of the bodily organism, since it can be enormously modified by changes in the environment, is to a large extent directly due to the action of external forces. Hence the mental development may be a product of environment and opportunity rather than of innate factors. Thus, the conclusions of Galton and Pearson, for example, are insecure so long as we do not and cannot exclude the environmental influence: just as children of healthy parents tend to have healthy bodies because of the sufficient and proper food which their parents (*because of their healthiness*) are able to provide them, so the children of mentally gifted parents tend also to be mentally gifted, because of the immensely greater stimulation which they receive from the conversation, the life, the surroundings of their parents, and their parents' friends; it is a question not of innate, but of external, conditioning. See, further, art. HEREDITY.

3. Relation of mental to physical development: periods of development.—It has been shown (see BODY AND MIND, BRAIN AND MIND) that the development of the mental powers is in intimate

¹ See the Herbartian Ziller's *Allg. Pädag.*, Leipzig, 1884, p. 215 ff., and *Grundlegung zur Lehre vom erziehl. Unter.*, do. 1884, and the criticisms of K. Lange, *Apperzeption*, do. 1906, p. 142 f.

relation with that of the bodily organs, and especially the brain.

The term 'development' is here used in a wide sense to cover both growth and development proper; strictly it is preferable to confine the term 'growth' to the increase in size or amount, while 'development' is reserved for increase in organization and connexion of parts; but these processes occur simultaneously in physical development, and it is extremely difficult to draw any line between them in mental expansion.

The stages of physical growth and maturity have been used to delimit the periods of childhood generally; broadly, we may take four periods of seven years each: (1) *childhood*, from birth to 7 years (about the time of the completion of the second dentition); (2) *the period of girlhood or boyhood*, from the 7th to the 14th year; (3) *the period of adolescence or youth*, from the 14th to the 21st year; and (4) from the 21st to the 28th year, by which time the mental development, as well as the skeletal growth, is approximately completed. The first period is also divided into *infancy* (the first two years, to completion of first dentition) and *childhood proper* (to the 7th year).

(1) Characteristic of the first period are the development of the senses, which at first are extremely imperfect; rapid body and brain growth; the acquirement of the fundamental motor co-ordinations—walking, grasping, climbing, etc.—and the acquirement of speech; emotions are readily excited, but are of short duration; the prominent instincts are the self-preservative ones, 'experimentation play,' and imitation. (2) The second period is marked by a slower bodily growth; the brain is relatively fixed in its size and weight before the middle of this period, but undergoes rapid development or organization during the latter part of it; the important physiological changes that occur towards the middle of the period are accompanied by susceptibility to emotional excitement; the individual is easily fatigued; bodily and mental habits are being formed and fixed; the beginnings of abstract thought and of self-consciousness present themselves: action is co-ordinated with reflective intelligence and thought. (3) In the third stage there is, again, at the beginning, a rapid advance in bodily growth followed by another period of slow growth to its completion at about 21; there is a strengthening of the social consciousness; greater interest is shown in adults and their work; it is also the period of idealism, of romance, and generally of great emotional and social development—'storm and stress'; the mental powers begin to be definitely fixed and proportioned; even play takes a more serious form—in tests of endurance, self-control, skill, and ability. (On this important period, see Stanley Hall's *Adolescence*, and art. ADOLESCENCE, vol. i. p. 101). (4) The last period referred to is that in which the general mental character is finally hardened or set. (On the periods of childhood, see the historical summary in Chamberlain, ch. 4, and Claparède, ch. 4, par. 1). The development of the brain is peculiar in this respect, that at birth it bears a higher proportion relatively to the rest of the body, and to its adult value, than any other organ. While the weight of body of the newly born infant is to that of the adult as 1 to 20, the corresponding ratio in the case of the brain alone is 1 to 3·8 (see the tables given in H. H. Donaldson, *Growth of the Brain*, London, 1895, chs. 2 and 5). Nearly the full weight of the brain, however, and therefore its completed 'growth,' is reached between the 7th and the 10th year, whereas the full stature is not attained until about the 21st year, and the body may go on increasing in weight till the 50th year or later. On the other hand, the brain after the 7th year undergoes changes of great importance in its organization; growth is

replaced by development, in the proper sense of the word, although there has also been some degree of development during the earlier stages.

According to Flechsig's discoveries, the *sensory areas of the brain* are the first to show functional maturity, that is, they are the first whose connecting fibres acquire the medullary sheath (*Localisation der geistigen Vorgänge*, Leipzig, 1896). The earliest fibres to be functionally perfect are those which lead from and to the large region of the brain, which he calls the area for 'body sensation,' including under this broad term both the internal sensations, conveyed from the viscera, muscles, etc., and the external, conveyed from the skin (organic, kinesthetic, pain, touch, and temperature sensations, sensations of position); these connexions begin before birth, and are completed in the first few months after birth. Within this region it is the fibres connected with the internal organs, and with the extremities, that are first completed; then follow those connected with the trunk, and with the special muscles that are afterwards used for speech. They convey the great masses of sensation with which the feelings and emotions, and also the sense of self, are directly correlated (H. Beaunis, *Les Sensations internes*, Paris, 1889). It may be concluded that these impressions are the earliest which the child is capable of receiving, and the first to be connected into systematic perceptions. Next in order of development are the fibres connected with the smell-centre, and probably those of the taste-centre; third are those which lead to and from the sight area, which do not begin to show the medullary sheath until after birth; while those of hearing come last. Outside the more or less sharply defined areas of the brain, from which these fibres derive, are those which Flechsig, after Meynert, names the *association areas*, the two chief areas being the large occipital zone, and the pre-frontal zone. It is noticeable that these are all much later in completing their connexions than the sensory zones, and that their connexions are almost entirely of the intra-cerebral type; that is to say, they pass between the different parts of the cortex within a hemisphere or from one hemisphere to the other; these are hardly present at all in the third month of life, but continue to form for several years afterwards.

Flechsig holds, from a comparison between his anatomical researches and the results of clinical and pathological observation, that the sensory zones 'mediate' not only sensations proper, but also those mental forms which are based upon groups or combinations of similar sensations; for example, factual space-perceptions, and perceptions of auditive series such as those involved in the appreciation of spoken words. With the large association-area in the hind part of the brain are correlated such perceptions as involve combinations of heterogeneous sensations, associations, and memories; in other words, ideas of external objects, of the *meaning* of words, and all forms of higher knowledge. Injury to, or destruction of, these regions leads to an entire loss both of visual and of auditory memory, and the state which has sometimes been called *apraxia*, or *agnosis*, that is, an apparent inability not only to name familiar objects or to recognize them when seen, but even to use them when placed in the hand; yet at the same time power of sensation appears to be intact. The general term 'intelligence' might fitly be used to cover the mental faculties which are lost in such a case. On the other hand, the pre-frontal region, standing in the closest relation with the area for the factual, kinesthetic, and organic sensations, is that which runs parallel with the development of the will, character, and self-consciousness; the one certain fact about injury to it is that there is a loss of interest, spontaneity, power of concentrating the attention, in short, a general depreciation of the character.

The close relation between normal development of the brain and normal mental capacity, between abnormal development or one-sided development and genius, between defective development and imbecility, etc., have been referred to elsewhere (BRAIN AND MIND); modern appeals for improved hygiene in schools, medical inspection of children, feeding of necessitous children, special classes for defective children, and the avoidance of over-strain, have their ground or justification in the intimate correlation between the development of the body and that of the mind; and, needless to say, in the case of the child, even more than in that of the adult, the health of the mind is mainly dependent upon that of the body.

4. The conditions of development.—It has already been pointed out that it is difficult to say how far development proceeds from internal, and how far from external factors. It may be urged that, just as a child will reach a certain pre-determined height, provided that it obtains adequate food and exercise and is protected from injury, and as no amount of extra feeding or exercise will enable it to go beyond this height, while under-feeding, under-exercise, and injury will make it fall below

it, so it is in the case of the mind. The child is born with the possibility of so much mental capacity, so much 'intelligence,' or retentive memory, so acute a sense of sight or hearing, etc.; care and practice will enable it to reach these fixed limits, but not to pass beyond them, while neglect and want of exercise may keep it far short of them. The conclusion is that the function of the teacher or parent is limited to the providing of the necessary material for development, that the amount and the direction of the development are, however, determined already by the nature which the child has received at birth. It is probable that the two most important factors in the question are, on the one hand, the *activity* of the child, which is partly a matter of congenital faculty, and partly a matter of healthy nutrition; and, on the other hand, *opportunity* of exercise and practice. The child who is constantly moving about not only improves his health in general, but also puts himself within reach of varied stimuli by which his mental powers are evoked, and in the course of time developed; while the sluggish child does not come so much within reach of stimulation, and therefore has a relatively slower development. Opportunity includes both the ordinary social and educational advantages or disadvantages, and especially those factors which depend on the health, culture, and economic position of the parents. Nature determines that the fundamental instincts shall appear in a certain order, and each contribute its share to the complete development; but, if stimulation and exercise are not provided, any instinct, when it appears, will remain undeveloped, and therefore the whole mental growth will suffer a certain amount of distortion.

Play and imitation.—The principal internal conditions of development are the two 'instincts,' if they may be so called—play and imitation. Play in the wide sense includes all activities or tendencies which do not contribute to the immediate needs of the organism, which are spontaneously carried out, and which give pleasure in their operation apart from any result derived from them. The natural view of play is such as is expressed in Spencer's surplus energy theory, viz. that play is the outcome of the excessive amount of stored nervous energy in the young, the exercise of which is not required for the organic needs, or of the tendency or faculty of imitation, according to which the child in its play imitates adult activities (*Principles of Psychology*, 1872, vol. ii. pt. 8, ch. 9). The theory with which Groos (*Play of Animals and Play of Man* [Eng. tr., London, 1910]), Baldwin (Pref. to Groos' *Play of Animals*), and others seek to replace this is that play has a biological function, viz. that of preparing the immature individual for the activities of adult life, without exposing it to danger such as would be implied if it had to acquire the same experience apart from the parent's protection. There is in each of the mental powers (or in each of the relative centres of the brain) a tendency to expression or exercise, and, long before there is real need for such powers, this exercise is obtained through play; thus the plays of children follow roughly the stages of the race evolution, as Hugh Miller suggested (*My Schools and Schoolmasters*). The corresponding instincts and interests develop successively in the child's mind; as they develop in their order, each in turn seeks, as it were, for self-expansion or expression, and this takes the form of play. A specially important feature of play is that it prepares the way for intelligence, or, rather, it is the means by which intelligence gradually comes to replace instinct, both in the race and in the individual; the more fixed and limited the environment of an organism is, the more rigid are its instincts,

the less developed is its nervous system, and the less is its power to adapt itself to changes in the environment; on the other hand, the more varied the environment, the less rigid, although perhaps more numerous, the instinctive tendencies are, and the greater the ultimate development of the intelligence; play enables the instincts to be sufficiently exercised without dominating the development as a whole. In general, then, play is a preparation for the adult life; hence, the higher the physical and also the mental development ultimately achieved, the longer, as a rule, is the period of play; this, according to Groos, is the object, the biological function, of youth; animals do not play because they are young, but they have a period of youth in order to play. This play includes the *simple experimentation* of the child, as that of the infant when exercising its muscles and its senses upon the objects around it; thus it obtains experience of the qualities of objects, and at the same time strengthens and develops its own active powers. Nature has provided ample means for this experimentation-play in the pleasure which the child manifestly obtains from it, and which is, here as elsewhere, the correlative and index of action which is for the benefit of the organism. Next follow those plays by which the organism as a whole is strengthened physically, and by which the memory is organized and experience consolidated; finally, plays in which the higher mental powers, as well as the wider social instincts, are brought out and exercised. The following is Groos' classification of the plays of the child (*Play of Man*) :—

Examples.

- | | |
|---|--|
| I. Playful experimentation : | |
| (a) With the sensory apparatus. | Experimentation with noises, tones, tastes, colours, forms, etc. |
| (b) With the motor apparatus. | Movement of its own body, moving plays, destructive and constructive plays, throwing plays. |
| (c) Playful use of the higher mental powers. | |
| 1. Experimentation with the mental powers, memory, imagination. | Illusion and recognition plays; imaginary tales, etc. |
| 2. Experimentation with the feelings (physical pain, mental suffering, surprise, fear). | Games involving tests of endurance, pain; tales involving surprises and perils, dangerous situations, etc. |
| 3. Experimentation with the will. | Experimentation or play involving control of reflex actions or of habits. |
| II. Playful exercise of impulses of the second or sociogenic order ; | |
| (a) fighting plays (physical and mental tests, rivalry, teasing, hunting plays, etc.); (b) love plays; (c) imitative play (imitation of movements, dramatic imitation, constructive imitation, and inner or artistic imitation); (d) social play. | |

As to *imitation*, it also, like play, is a universal tendency in normal childhood,¹ and indeed in all young animal life; both imitation and play differ, as Groos points out (*op. cit.* p. 2), from ordinary instincts, in the fact that they have not a specific stimulus, or a specific reaction, but are called out by any kind of stimulus, and involve a reaction which varies with the stimulus calling them out. The essential conditions of imitation are (1) some sort of interest (*rapprochement*), by which the attention of the young animal is caught and held by an older animal; (2) the perception of some movement in the older animal; (3) the experience of some reflex or inborn tendency towards the same movement in the young. Thus imitation is always based partly on innate powers, partly on the social conditions, and partly also on the development of the senses and powers of perception. There is a gradual change in childhood (a) in the type of objects or persons whom the child seeks to imitate, in the interest which it feels for different personalities,

¹ Idiot children, as a rule, neither play nor imitate (Sollier *Psychol. de l'idiot et de l'imbecile* 2, Paris, 1901, ch. 6).

and the attraction of its attention by them; (b) in the complexity of the actions imitated; (c) in the fidelity of the imitation, the earlier actions being more limited and more faithful copies, the later being more spontaneous, original, and dramatic in their form (cf. the development of children's ideals with age in Earl Barnes, *Studies in Education*, ii. [1902], and a recent study by Varendonck, in *Arch. de psych.*, no. xxviii., July 1908). The biological function of imitation is, like that of play, to prepare the individual for adult life, while he is being protected from the dangers that might otherwise lie in acquiring such experience. The child, imitating its parents, its teachers, or its friends, acquires the habits of expression and of action which they already have, and also—a more important matter—acquires their habits of emotion, their mental attitudes. Imitation thus becomes a form of heredity, replacing physical heredity, bringing the same advantages more rapidly, and at less cost. The child tends through it to resemble its parents, not only physically but also mentally (Baldwin, *Mental Development*, p. 332 ff.).

5. *The original activities.*—The child is born with a complex nervous structure, by which adequate response is provided to a large number of stimuli from the environment, in the form of reflex, automatic, and instinctive actions. Some of these actions are carried out before consciousness, and therefore, presumably, before mind is present, or at least active; and even in later development we still find that a large part of the work of the body is carried on reflexly or automatically, and without the intervention of consciousness. The question arises as to the relation between consciousness on the one hand, and reflex activity on the other, in development. It is still sometimes argued that consciousness has no biological function, and that the whole mental development is simply a result of, and therefore sequent to, the bodily and cerebral development itself, which in its turn is determined by purely physiological and physical forces. H. Ziegler, A. Bethe, J. Loeb, J. P. Nuel, and other 'modernists' in Comparative Psychology would entirely exclude the use of consciousness (not merely the word, but the thing) from biology. On the other side, it is held that consciousness is, or exercises, a controlling power by which the reflexes present, or provided for, at birth are organized into higher combinations, and modified on the ground of experience (Lloyd Morgan, *Introd. to Comp. Psychol.*, ch. 11, London, 1894; *Animal Behaviour*, London, 1900); and, again, that the reflex actions themselves are a product of conscious effort in the ancestors of the individual (Wundt, *Physiol. Psychol.*, Leipzig, 1903, iii. 278 ff.). Thus consciousness or mind is now and has been in the past the main force making not merely for mental, but also for physical development and evolution. There is a law of economy by which every action, as it is repeated, becomes less and less of a conscious action, until in the end it may be purely automatic; the value of this is that the energy of consciousness, or the physical energy underlying consciousness, is thereby set free for other activities; wherever an action is resisted, or is prevented by any cause from issuing in its ordinary way, there consciousness is immediately present; wherever a new circumstance arises which requires a different reaction from any provided by the reflex or automatic systems, there again consciousness arises; on the other hand, the less resistance there is the smoother the action, the more familiar the situation the less is consciousness directed towards it. Consciousness thus represents the 'growing point' of the organism; correlated with it are changes in the central nervous system, and in the body as a whole, which

ultimately become the basis of organized intelligence and will (cf. J. Jastrow, *The Subconscious*, London, 1906, pt. 2).

The special activities and powers involved in the process of mental development may be classified as follows: (1) the physiological reflex actions; (2) the sense-organs, sensations, and sensory reflexes; (3) perception, in relation to the primary attention-reflexes; (4) instinctive behaviour; (5) feelings and emotions; (6) will; (7) memory, its conditions and varieties; (8) imagery and imagery types; (9) language and abstract thought.

(1) *Physiological reflexes* are those connected with the circulation of the blood, the respiration, the digestion, and other processes of bodily metabolism; of these it is not necessary to treat in this connexion, since they are entirely removed from the control of the child's consciousness, except so far as they are liable to modification by emotion, to which reference will be made later. These processes take place at a much more rapid rate in the infant than in the adult.

'The metabolic activities of the infant are more pronounced than those of the adult, for the sake, not so much of energies which are spent on the world without, as of energies which are for a while buried in the rapidly increasing mass of flesh.' It is 'a metabolism directed largely to constructive ends' (M. Foster, *Text-book of Physiology*, 1891, p. 1544).

(2) *Sensations.*—The normal child is provided at birth with the external apparatus for all classes of sensation, and these are connected, through nerve fibres, with the central organs in the brain; but, as has been remarked above, this connexion is not functionally complete for a considerable time after birth. The child at first is deaf, is 'light-shy,' is insensitive to odours, and to a large extent to taste, so that the sense of touch and perhaps the muscular sense are the only ones which at birth show certain indications of activity. According to the tests which have been made, the sensitiveness in general increases very rapidly in the first few years, reaching its maximum development probably about the 10th year, after which there is a decline in sensitiveness proper, although the power of discrimination remains capable of great improvement thereafter (J. A. Gilbert, *Studies from Yale Psychol. Lab.*, 1893, 1894; E. Meumann, i. 102 ff.). The sensorial reaction-time also improves in rate during the first 10 or 12 years of life, after which there is, apart from special training, a gradual dulling. The different qualities of each sense become capable of discrimination in a regular succession, which, according to some observers, follows that of their supposed evolution in the race.

The development of visual sensation may be taken as an illustration of the problem and of the obstacles to its solution. There is very great difficulty in determining whether a child has or has not a power to perceive and distinguish different colours. Even where speech is appealed to, the results are by no means conclusive. The earliest attempt to determine the order in which the different visual sensations are arrived at was that of Preyer in 1882 (*op. cit. infra*, ch. 1). The tests were begun in the third quarter of the second year of life, and continued to the fourth year. He found that the colours yellow and red were those which were most constantly and accurately named, or picked out when the names were given, while green and blue came last; by the beginning of the 4th year the child could name all but the very dark or light shades correctly. With a similar method Miss Shinn (*op. cit. infra*) found that her subject (a little girl) was successfully trained to name all the colours correctly, before the end of the second year. By a special method, appealing to the preference of the child, as shown by its selection of one from a pair of colours, Baldwin (*Mental Development*, pp. 50, 50) concluded that a child of 9 months can distinguish all the colours, and has a distinct preference for blue. The above were individual studies. From a thorough collective test on children, boys and girls, from birth to 7 years, by a 'matching' method, Garbini (*Arch. per l'antrop.* xxiv., Florence, 1894) concluded that a child begins to develop the power of discrimination between light and dark during the first month of life; and to distinguish different objects by their shade or brightness in the second month; it is not till the middle of the second year that he has any perception of colour, and then it is red which is first marked out; green begins to be added about the end of the second year, and yellow in the

course of the third year, while it is not till the fourth that he can distinguish such colours as orange, blue, violet, etc. In the fifth year the different shades of the same colour become easily distinguished, but the colour vision is still relatively imperfect until the end of the sixth year. Thus the order of development is red, green, yellow; then orange, blue, and violet. With regard to the power of naming, he found that 2 per cent of the children in their sixth year cannot name any colour, and that only 35 per cent can name the six main colours given above; the power to name a colour accurately seems to follow, in about a year's space, the power to distinguish the colour in question. Ziegler, in 1905 (*Inaugural Dissertation*, Zürich, n.d., but c. 1905), tried, with more accurate methods, to determine the degree of colour sensibility in 200 children, one half boys and one half girls, at the age of beginning school life in the Munich schools. The 'matching' method gave a distinct preference in accuracy of matching to orange, violet, blue, and yellow in that order, red, grey, and green being relatively less accurately matched. Black and white were invariably correctly placed. It does not, of course, follow that the order of correctness in matching corresponds to the order of development; on the contrary, it may be concluded that the colours were preferred on account of their aesthetic value, their novelty, etc. In the naming method (the child giving the name) the order of correctness was black, white, red, blue, green, yellow, with violet and orange last; the darker shades of colour on the whole were better named than the lighter, presumably because they were more familiar to the children; none of the boys could name orange, and only 6 per cent of the girls. Every one of the tests employed brought out the fact, already suggested by other observers, that girls have a much more accurate sense of colour than boys. Neither Garbini nor Ziegler found that any one of the children they examined was colour-blind (in a total of 750); in adults, as is well known, colour-blindness occurs much more frequently among men than among women; in the former case the frequency is variously given as from 1 to 5 per cent. It is probable that by properly devised means of training, the colour sense of children might be greatly developed, and thereby their general mental capacity greatly improved.

(3) The development of perception from sensation takes place through the exercise of the sensory reflexes, which play a large part in the process of attention. Thus a child does not at first see objects either as clearly, as distinctly, or as proportionately as the adult. In the earlier months it sees no colours, but only light and shade; it has no means of determining the distance at which any seen object is; it is unable to fix an object so as to obtain a clear image of its outlines and details; it is unable to determine, and indeed has no conception of, the third dimension; objects are probably seen as blotches of light and shade merely; it has no power of distinguishing a real from a reflected or imaged object; in short, it can hardly be said to have any perceptual or object-consciousness at all, through sight (Preyer, *op. cit.* ch. 1). All these powers are gradually acquired through exercise and the resulting co-ordination of the movements of the eyes with the visual sensations. The three sets of muscles in question are those of accommodation, by which the object is clearly focused; of fixation, by which the object is brought into the centre of the retina—the part of the eye which is most sensitive to form as well as to colour; and of convergence, by which binocular vision is determined, and the two eyes are guided so as to obtain single vision of solid objects. These co-ordinations are only acquired, as has been said, through exercise; and it is therefore extremely important that a child should be given all possible opportunities of exercising its ocular muscles from the very first. It is interest—*instinctive* interest in the first place—that calls forth movements; and, where objects of interest are not presented, the exercise fails to take place. This is an illustration of the importance of environment in deciding development.

The following gives some idea of the dates at which these powers are finally achieved, according to Preyer and others (cf. Kirkpatrick, *op. cit. infra*, ch. 4). The protective reflex closing of the eyes when bright light falls upon them is present almost immediately after birth; also the pupillary reflex (adaptation to increase or decrease of light); the blinking reflex, when an object is brought close to the eye, is not immediately present, but occurs after a few weeks; atypic or independent movements of the two eyes and the eyelids (e.g. one eye remaining fixed while the other moves, or the eyes being turned downwards while the eyelids remain fixed) occur occasionally until the beginning of the second month; voluntary fixation is

not complete until about the end of the first quarter year; voluntary and accurate convergence according to the distance of objects is not perfect even before the end of the second year; the interpretation of visual impressions and their co-ordination with bodily movements are not established till much later.

This history really describes the origin of the visual perceptions of space in the child; the question whether the idea of space is innate or acquired is impossible to answer, because it is wrongly put. The child is not born with a ready-made idea of space which it merely applies to experiences derived from the senses (Kant), but neither is its idea of space a product of sensations and of associations formed between the images derived from the sensations: it is a result of inter-action between sensations, feelings and desires, impulses and movements, to which in each case the 'disposition' is congenital, but which are only realized and combined through the acquired experience of the child (cf. Wundt's 'psycho synthesis', and Stumpf's 'synergy'). The evidence from the born-blind, who have been enabled, by an operation, to see in later life, is conflicting. It does not prove that they at first see only colours and brightness, not things or objects, as Preyer argues. It is true, however, that they are entirely unable to appreciate distance (see B. Bourdon, *La Perception visuelle de l'espace*, Paris, 1902, ch. 13, for a complete account of these observations, up to that date). A similar 'synergy' of sensations, feelings, and attention-reflexes goes to form the tactual perceptions (extent, hardness and softness, sharpness and bluntness, etc.) and the auditory perceptions (rhythm, tone-interval, melody, speech, etc.).

(4) An *instinctive action* is a response evoked in direct relation to a perception of some kind, while a reflex action is called out by a simple sensation or by a purely physiological stimulus. The difference is mainly one of degree, although there is undoubtedly a much greater power of control, and liability to modification on the ground of experience, in the instinctive than in the reflex action (see discussion on 'Instinct and Intelligence' in *Brit. Journ. of Psychol.* iii. pt. 3 [1910] by Myers, Lloyd Morgan, Carr, Stout, and Macdonough). The following is a classification of the instincts shown by the child, modified from that given by E. A. Kirkpatrick (ch. 4): (1) individual instincts; (2) social, including (a) the gregarious instinct, the instinct to be with others, (b) the co-operative instinct, to act with others, (c) play, (d) imitation, (e) expression and communication, and (f) more complex instincts such as the collective, destructive, and creative instincts. Such an instinct implies three things: a need on the part of the child (organic sensation, feeling, impulse), an object capable of satisfying this need, and some consciousness on the part of the child of the meaning of the object in relation to the want or need. It is the want or the interest which determines the direction of the attention towards the object. Thus the child's whole interest is absorbed at first by the needs of food and of rest; its grasping and food-taking instincts are the first to express themselves; the giver of food, and articles used in connexion with its food, are the first objects which it learns to distinguish and recognize; later the needs of its sense-development cause interest in objects for the mere sensations they give, bright lights and colours, loud noises and musical tones, etc. At this stage the instinct of play appears, especially of experimentation play and of movement play. In its early years the child is naturally self-centred; it is biologically of advantage to the race that the individualist instincts should be strong at this time. Accordingly, its wants are strongly expressed and vigorously insisted upon. Yet there is no conscious idea of the self, as opposed to interest to other persons, until from the fourth or fifth year, when selfishness in the strict sense of the word begins to appear, controlled, however, by the equally instinctive desire for social approval. The constant desire of the normal child to be with others, especially other children, his shyness towards strange elders, but ready acceptance as playmates of other children, about his own age, seen for the first time; his eagerness to accompany the adults of his family in all their goings and in all their activities; his constant repetition of the

actions of adults in his play; his treatment of animal pets, younger children, dolls, etc.—are illustrations of the force of the social instincts and of their part in the development of the social consciousness. Later, the individualist and social instincts combine in (i.) the impulse of self-display, adornment, etc.; (ii.) the impulse to co-operate with others for common ends, in games, or in school and household or farm work; (iii.) the impulse of competition and rivalry, which tends to the rapid development of the physical and mental powers; (iv.) with expanding imagination, the sympathetic feelings arise, and the impulse to help, to defend, to support others, which reaches its height in the unselfish idealism of adolescence. The progressive appearance of these instincts, as also those of play, imitation, emotional expression and speech, determines a gradual change in the interests of the child, and this in its turn reacts upon its intelligence and character. (On the development of *instinct*, and its relation to *interest*, etc., see Kirkpatrick and E. Claparède, *opp. cit.*)

(5) *Feelings and emotions*.—It has been recognized that the affective life of the child is proportionally much more extensive than that of the adult; as judged at any rate by his expressions, the child's feelings are both more vivid and less enduring than those of the adult; impressions when they reach consciousness at all are felt more keenly and are responded to more actively and strongly. This is true both of pleasures and of pains. On the other hand, the feelings are not so permanent; the child passes rapidly from one mood of feeling to its opposite—from laughter to tears, from anger to pity. It may be questioned, however, whether the actual feelings are as strong as they appear.

Preyer has argued that the child's life is one of intense feeling, and that in it pain predominates over pleasure, being in fact the necessary stimulus to development; against this it may be urged: (a) that the feelings are not in general intense, but that their apparent expression is really an instinctive or reflex act, which is not accompanied by so many internal changes as occur in adult life, and hence is not reflected in the conscious life to the same extent as in the adult; (b) that, owing to the short duration of the feelings and other factors, pleasure predominates largely over pain even in the youngest child, with normal health; and (c) that pleasure is a stronger driving force than pain in development, as in evolution. The general happiness of healthy children, their constant play and activity, their capacity for deep and prolonged sleep, are all indications that this is the truer view of the case. Many signs also—their easy recovery from wounds, rapid forgetfulness of injury, etc.—prove that the young child has a much lower degree of sensibility to physical pain than the adult.

A full description of the expressions of the different feelings and emotions, as observed in the child from birth onwards, is to be found in Preyer, *ch. 6*. The classical account, for animals and man alike, is Darwin's *Expression of the Emotions* (London, 1872). That even so complex expressions as laughter and blushing are congenital, and not acquired by imitation, is shown in Sir A. Mitchell's *About Dreaming, Laughing, and Blushing* (Edin. and London, 1906). Such facts do not, however, solve the question whether the 'expression' is called out by an actual feeling, or whether the feeling is the reverberation in consciousness of the expression, which it thus succeeds in time, and which is directly evoked by the perception of the situation (Lange-James theory). The latter, at least, is probably true poetically.

An interesting question is as to whether the child has *innate* fears or dislikes of particular objects; for example, fear of the dark, of wind and storms, of animals, etc.; or whether these fears can be reduced to the simpler ones, viz. those of intense stimuli, of novel stimuli, or the like; or whether they are due to adult suggestion. Stanley Hall attributes such fears to reminiscences, emerging in the child, of the experience of its ancestors at far distant dates, by whom, for example, dark was feared because of the animals and enemies attacking in it; so, wind and storms were feared during the tree-life of man's ancestry, while wild animals in the same way must have been to primitive man, as to the still more remote ancestors, objects of terror. It must be said, however, that the evidence for such instinctive fears of definite objects or classes of objects is by no means convincing (cf. Stanley Hall, *Adolescence*, vol. ii. *ch. 10*, which contains a general statement of the author's position; the detailed evidence in regard to child-emotions is collected in numerous reports, by himself and his collaborators, published in the *Pedagogical Seminary* and in *AJPe*).

(6) *Development of the will*.—The outward life of

the child begins, as we have seen, in reflex, instinctive, and automatic activity undetermined by conscious motives, although in many of the more complex forms an accompanying or controlling consciousness must be supposed to exist. The term 'impulse' may be used for those phases of the mind by which such actions are preceded, or which they accompany; such an impulse does not involve any idea of the nature of the action to be done, or of more than the immediate means by which it is to be brought about. Thus the impulse to expel an unpleasant food, or any food when the child is satiated, does not involve any idea of the advantage to the organism which the expulsion brings, or of the muscular actions by which it is carried out; but there probably is some consciousness of the position of the food in the mouth, and the parts of the tongue touched by it, etc., and it is by this sensation that the action is definitely initiated; it is probably only at a later stage that the muscular sensations themselves become conscious. The impulse, then, is simply the motor aspect of a sensation which is toned with feeling, positive or negative, the action itself lying as a whole outside consciousness. Such impulses may be supposed to accompany all those actions by which the organism is in early life protected from dangerous stimulation, and by which objects of advantage to it are brought towards the body, into the mouth, etc.; thus these impulses are always in connexion with some need of the organism, either prolonged as in the case of hunger, or momentary as in the case of physical pain. A second stage of development is arrived at when (a) the individual begins to select stimuli or sensations on the basis of personal interest, built up by experiences; (b) when memory occurs of the movements by which these sensations have been automatically or reflexly responded to; and (c) when, under the influence of the subjective combination and synthesis of sensations in perception, the movements also begin to be co-ordinated and controlled. This is the stage at which impulse begins to be replaced by motivated action, that is to say, by *will* in some at least of its lower forms.

(a) The selection of sensations is at first provided for by the needs of the organism, as has been indicated above, and in this sense *will*, as Höfding suggests (e.g. *Problems of Philosophy*, Eng. tr., N. Y. 1905, p. 55, *Outlines of Psychol.*, Eng. tr., London, 1891, sect. 4), is the fundamental fact in mental life, and is present from the very beginning; later, however, and very early in life, the selection begins to be determined on the ground of previous experience; that is to say, the child begins to seek out those impressions which have previously given it pleasure, and not merely to react upon impressions that have arrived of themselves. Correlatively with this, it begins to avoid consciously those impressions which have been already experienced as painful, and also to neglect or inhibit impressions which have proved indifferent to it, not being accompanied by any positive or negative feeling tone. In this development *perception* gradually arises through the combination of sensations of the same or different classes with each other, or with sub-conscious memory images; in this way one impression gradually becomes a sign or symbol of a number of others, and especially the visual impressions come to represent or stand for the tactual impressions to which they had ordinarily led, and which may be reproduced to some slight extent in memory, on the arrival of the visual impressions themselves.¹ The pleasure or pain originally attached to the *direct* impression is now

¹ On this, see W. James, *Principles of Psychology*, 1891, vol. ii. chs. 17 on 'Sensation,' 19 on 'The Perception of Things,' and esp. 20 on 'The Perception of Space.'

transferred to the *indirect*, as when the child shows pleasure at the sight of a rattle, after experience of the agreeable noise which the rattle gives in its hands, or shows pleasure at the sight of its food, before the actual tasting of it. It is unnecessary that conscious memory of the former experience should arise, and in the vast majority of cases such memory probably does not arise; there is simply a transfer of feeling, and in consequence a transfer of action from a direct impression to a more indirect one uniformly connected with the former. It is in the case of these indirect impressions that interest gradually develops, and that conscious and individual selection begins to take place.

(b) The movements themselves enter consciousness partly as muscular and tactual experiences,¹ partly also as visual experiences—in the case of those movements which the child can see itself carrying out. As soon as the memory begins to be able to 'fixate' such consciousness, the child learns to modify its actions, or to choose between various possible actions, in response to sensations, through remembering the success or failure of the previous reactions.

(c) In the co-ordination of movements there are two steps—the inhibition of unessential movements, and the reinforcement and connecting together of series of necessary movements. Reflex action is excessive, uneconomical, and generally contains a large number of movements not required for the removal of the particular stimulus (H. Ebbinghaus, *Grundzüge der Psychol.*, pt. I., Leipzig, 1897, p. 124); for example, the movements of a young child when irritated by a pin in its clothing. With the development of perception, the movements become more limited, are brought more under the control of consciousness, until in a particular case the necessary act is carried out in the shortest time, and with the minimum of effort. It must be supposed that in this case the *impulse* has come to be associated with the special action, which has been constantly repeated in every experience of the kind; while those actions which were unessential, and therefore were not repeated, or not always repeated, are less firmly connected with the impulse, and become finally detached from it. Corresponding with this limitation in simpler cases, there is the forming of chain actions, or series of actions, in more complex cases—for example, in learning to walk; the several movements necessary have come, through exercise and through conscious effort, to be gradually cemented to each other, so that later, without conscious effort, the one tends to follow the other in the same order as that in which they were acquired (see Preyer, ch. 11). Consciousness still retains a grasp, as it were, of the whole group of movements, as is shown when any resistance is met, or any error occurs; but it does so only in a general way, covering a larger and larger span in its grasp, as skill and practice increase (J. Jastrow, *op. cit.*, chs. 3 and 4).

The terms 'habit' and 'practice' refer to the forming and cementing of such co-ordinations. When out of several possible ways of doing a thing, or of acting, one has actually been adopted, then, if the situation is repeated, the former action *tends* to be adopted again, merely from the fact of its earlier occurrence. The same is true of a connexion or series of actions. The greater the number of times the action has been done, the stronger the tendency to repeat it. This is *habit*, the primary and universal condition of all mental development. Since will consists, as we have seen, in selective activity, it is formally opposed to

habit; but, in reality, neither it nor any other higher mental power is possible except on the basis of habit. Walking, running, listening, looking, smelling, tasting, dressing, speaking, and hundreds of other skilled actions, which form elementary parts of more complex, voluntary, and deliberate actions, are in us habitual acts become unconscious and mechanical through repetition. Adults and children differ widely in the rapidity with which a habit is formed, in the tenacity with which it is retained, and in the promptness with which it is exercised. With age the power to form new habits slowly declines, and also the power to resist or overcome habits when formed. To some extent this is due to the decreasing vitality of the nervous system, but mainly to the fact that habit corresponds to the organizing of connexions between different parts of the cerebral system: the greater the number of these, and the greater their strength or firmness through repetition, the less the likelihood of a new associative connexion being formed or old ones broken up (see James, *op. cit.*, ch. 4; Ebbinghaus, *Grundzüge der Psychol.*, pt. ii., Leipzig, 1902, p. 672). The development of the will is also conditioned by the general changes both in the intensity of feelings and in the objects to which they attach. At first, as we have seen, the child's feelings are entirely determined by its organic needs; later, repetition and instinctive experimentation and play bring new experiences of pleasure and of pain, not so directly connected with the requirements of the organism; the objects of such feelings are retained in memory, and the thought of them, or the perception of them, forms new motives of action; the actions are governed by ideal rather than by direct sensory motives. (On the development and influence of feeling, see T. Ziegler, *Das Gefühl*, Stuttgart, 1893.)

The most direct indication of the nature of an individual's will is to be found in the characteristics of his *attention* (*q.v.*). Neither will nor attention, however, is to be regarded as a *general* power, which can be directed indifferently upon this or that impression or action, or can be moved from one to the other. They are simply general names for a class of particular phenomena, which possess certain features in common. The characteristic of acts of attention is that a part of the field of consciousness is selected from the rest, becoming clear and distinct, persisting longer than it otherwise would, and thereby becoming more adequately known, and tending to realize itself more effectively in action. The means by which this change is effected are either *external*, as when the senses are focused upon the impression, irrelevant movements inhibited, and the like; or *internal*, as when convergent associate ideas are called up from past experience. The underlying conditions are the intensity of the impression or idea itself, the strength of the interest to which it corresponds, the feeling aroused, and the development of the muscular system by which the focusing or 'fixating' and controlling of impressions is effected. In all these respects the child undergoes a gradual development. A distinction is familiarly drawn between *spontaneous* or *natural*, and *voluntary* or *acquired*, attention; the former is supposed to be characteristic of the child, the latter a product of education.¹ These are not, however, differences in attention itself; they are differences only in the interests which lie behind the act of attention.

Thus interests are either *primary*—those provided by the innate instincts of the child—or *secondary*—those due to the acquired experience and reflexion which life and education call out.

¹ On the whole question of the nature of our consciousness of movement, and its function in mental development, see Wundt, *op. cit.* ii. 474 f., 686 f., iii. 807 f.

¹ Th. Bibot, *Psychol. of Attention*, Eng. tr., N.Y. 1899 (Chicago. 1896).

It is, therefore, natural that voluntary attention to objects which are primarily without interest in themselves should succeed the more elementary expressions of attention in child life. It is clear that, where an individual is incapable of prolonged primary attention, he will be incapable of the education which voluntary attention presupposes. This occurs, for example, both in idiot and in imbecile children, and to a certain extent causes typical differences between normal individuals also. Wherever, owing to the weakness or disease of the brain or nervous system, sensation is less vivid, or movement less rapid and less vigorous, or instincts and feelings less strong, there the attention will be correspondingly difficult to catch or to hold, with resulting defect in mental development. Ability to work for continuous spells, and ability to profit by discipline, to appreciate rewards and punishments, depend mainly upon the power to focus and retain impressions long enough to associate them with one another, and to compare them with similar experiences in the past.¹

A second typical difference in attention is that between *concentration* and *distribution*; the term 'concentration' refers to the effect which attention usually has of narrowing or limiting consciousness, or at least effective consciousness, to some small portion of a real or ideal situation; the mind is absorbed by some particular interest, and impressions or ideas that would otherwise have stimulated feeling and action are kept on the verge of consciousness, or entirely repressed. The familiar illustrations of absence of mind on the part of men of genius will readily occur as an instance. Concentration or specialization is thus a condition of effective mental progress. 'Distribution' of attention, on the other hand, refers to the power to appreciate and attend to a number of *diverse* impressions or ideas simultaneously; it is in many respects a valuable power, as, for example, in the teacher, who must, while his main attention is given to his subject, also have regard to the positions and actions of the different children in the class; the conductor of a choir, the director of an orchestra, and the organizer generally, are other instances of the same ability. It is immaterial, for our present purpose, whether there is any real division of attention in a given moment, or whether distribution depends rather on rapid alternations of the attention from one fact to another. In the normal individual, concentration and distribution are inverse to one another; the greater the one, the less the other. But concentration does not necessarily mean intensity, nor does distribution necessarily mean that the different impressions attended to at the moment are ineffectively appreciated. It obviously depends upon education and training to what extent distribution can be carried. Children, and animals also, show great concentration where the primary instincts are involved, but defective concentration in the case of secondary interests; one of the chief problems of the teacher is to increase the concentration-value of the latter. Some children are never able to acquire this power to the normal extent, and in consequence remain all their lives an easy prey to distraction.

A third typical difference is in the *steadiness* or *fluctuation* of the attention. Meumann uses the term 'fixating attention' for the former of these types; it is that which is able to keep away side impressions and ideas, and to take in only the impressions that are directly before it; in this way it represents an *objective*, observing, recording type of mind: thus a picture, a sentence, any group of materials, when attended to, is appreciated as *it is*.

¹ Sollier, *loc. cit.*

The 'fluctuating' type, on the other hand, is liable to be caught both by sensory impressions and by memories or ideas which are not directly connected with the object presented; hence it tends to transform the material given to it, taking a superficial outline view, passing rapidly from the object to its meaning or associations: it is a *subjective* or *imaginative* type. In childhood the latter is much more frequent, and, in fact, may be regarded as a characteristic child form of attention; the power to see or hear things as they are is one which has to be acquired by education (Meumann, i. 499 ff.).

(7) *Memory*.—In memory, three phases or functions must be distinguished—immediate memory (as illustrated by 'learning by heart'), retention, and reproduction or recognition; these three phases are subject to different conditions, and vary independently of each other in different individuals, and at different stages of mental development. *Immediate memory* has been shown to improve steadily with age (as tested, for example, by the number of syllables or words which can be reproduced after a single exposure, or by the length of time required to learn a given number of syllables or words by heart), and Meumann has found that even into late adult life this capacity is capable of great improvement through practice.¹ The method of memorizing also changes with age, the young child depending entirely on mechanical association between the different members of the series tested, the adult depending more and more upon associations of meaning, upon rhythm and other forms of grouping. On the other hand, *retentiveness*, as measured by the rate of forgetting, or the amount forgotten after a given interval, reaches its maximum about the 10th or 12th year of life, and decreases slowly but steadily from that time onwards (E. Meumann, *Exper. Pädagogik*, i. 170f., and esp. p. 192). That is to say, young children have greater difficulty in *learning* than older children; with practice an individual may improve in this faculty almost, if not quite, up to middle age; at the same time, children *retain* what they have learned for a longer time and more accurately than the adult under the same conditions. The fact that memories which go back to early childhood (earlier than the 5th year) are relatively rare, the fact that children who have become deaf before the 5th year tend to lose the power of speech they may already have acquired (from the lapse of the auditory memories, and inability to acquire new auditory impressions), that children who have become blind before the 5th year, and even to some extent up to the 7th year, rapidly lose their visual memories, and rarely, if ever, in after life have visual dreams, and the corresponding phenomena in the case of amputated limbs (J. Jastrow, W. James [see M. de Manacéine, *Sleep*, London, 1897, ch. 4])—all these facts correspond accurately with the incomplete development of the cerebral connexions before the end of the 5th year. Finally, *reproduction*, that is, the rate, accuracy, and fertility of association and of voluntary memory, in which there are strong individual differences, tends to improve with age and with practice continuously up to about the 50th year.

A much-debated question is how far training or practice in one field of memory is transferable to another—a question closely connected with that as to whether memory is a general power or faculty, or simply a combination of particular experiences which are somehow stored in the brain of the individual. In the latter case it is obvious that memorizing any particular material, while it in-

¹ In the general improvement there are occasional retardations, e.g. at the age of 10 to 12 (girls) and 12 to 14 (boys). Girls are in advance of boys till about 16, when the latter overtake and pass them. It is said that the young profit less than adults from practice, but that any gain is more permanent.

creases the amount we are able to recall, and through association of ideas makes it easier to learn *similar* material, still does not add to our stock in any other field, or help us to acquire such more easily. Exercising the visual memory improves that memory itself, but does not improve the auditive memory, without special practice in it also. The greater number of observers decide against such transfer of improvement, or the possibility or value of 'formal training'; on the other hand, some recent studies (Meumann, Winch, etc.) seem to show that a very substantial gain can actually be transferred, whatever the interpretation of it may be. The interpretation to which most of the facts point is a training of the *attention*, that is, of the nerve-centres and muscles which are involved in the accurate and ready uptake of an impression, and its retention in the field of observation; and those muscles also by which the control or suppression of distracting impressions, and the reinforcement of associative impressions, are carried out. Such capacities can undoubtedly be transferred—for example, from one kind of *visual* material to any other—and, as the experiments show that the transfer is greatest with a material similar to that in which the improvement has been actually acquired, this entirely harmonizes with the above suggestion. The practical conclusions are: (a) that much of what a child learns at school and afterwards forgets is not necessarily pure loss—the exercise in learning is to a great extent at least transferable to later occupations; (b) the use of purely mechanical and meaningless materials, for the formal exercise of the senses, and especially of the memory, seems to be 'indicated' as a pedagogical method by the experimental results.

(8) *Imagery and imagery types*.—Fechner, Galton, Charcot, and other more recent observers have given ample evidence that individuals in adult life differ widely, and in certain typical forms, as regards the sensorial material in which their 'thinking' is carried on; the *visualist* dealing mainly in images derived from optical experiences; the *auditive* in images of sound derived from acoustic experiences; and the *kinesthetic* or *motor* type in images, memories, or even 'nascent sensations' repeating the tactual and muscular experiences of the past. 'Thinking,' however, has two broadly different senses, according as it means *picture-thinking*, as in reverie, or *word-thinking*, as in abstract reasoning or scientific work. Much of our important thinking is done by means of words as signs or representatives of experiences, without employing the actual memory pictures of the experiences themselves. The majority of individuals are probably of a mixed type, both for picture and even perhaps for verbal thinking; but the enormous predominance of visual experiences in our lives compels all of us to use visual memories to a large extent, while the methods of school teaching, and the necessary use of the ears and vocal muscles in speech, render most of us of an acoustic-motile type in word-thinking. Again, the majority of individuals are probably unable to give to their favourite field of imagination such an exclusive exercise or training as is necessary to develop purity of type; a boy who is artied to an architect, and who is by nature an auditive, must cultivate visualizing or fail in his profession. It seems to be proved that in children, perhaps owing to the method of education, auditive imagery predominates in the early years, but is more and more displaced in importance by visual imagery as age increases; again, that even in the case of visual imagery the vividness and 'warmth' of imagery decrease with age; thus, according to one report (Miss Calkins) at least 9 per cent of

students have very little or no colour imagery; while in the average scientist, according to Galton, the power of visualizing appears to have been entirely lost; abstract thought tends to weaken imagery—in other words, verbal tends to replace picture- or object-thinking. The following are some of the indications by which the type of a given individual can be determined with some degree of accuracy; at the same time they illustrate the functioning of the different characteristics.

(1) The object-type can be determined by observing to what extent the descriptions of visual scenes in literature are realized by the individual, or dialogues and conversations in plays and novels (auditive), or the extent to which deeds and feats of skill reverberate, so to speak, in the individual's organism in reading accounts of them; and how far organic sensations and memories accompany the reading or the hearing of affecting or emotional passages in literature, etc.; also by the trade or occupation which is preferred by an individual, his hobbies, the kind of games, physical and mental, in which he indulges, his tastes in art or in literature, and especially his creative powers in these fields.

(2) The verbal type is indicated: (a) by the way in which an individual sets about learning by heart a poem or passage in a book; whether he does so by frequently repeating the passage over, loud or half aloud (*kinesthetic*), or whether he translates the printed words into inner speech (*auditive*), or learns it by steadily fixing the eyes upon it and reading it over (*visualist*); in the last case the subject is usually able accurately to refer to the page in the book, when recalling the passage, seeing it printed up before his mental vision; he can readily find the passage in a book where he has left off reading, and can refer for any desired passage to the page on which it occurs. (b) The various slips that are made in speaking or writing are good indications of whether the subject is thinking in auditive or in visual words, the former confusing words with a similar sound, the latter confusing words with a similar appearance. (c) In syllables or meaningless material, the *visualist* retains the consonants more accurately, the *auditive* the vowels; and again the *visualist's* errors tend to be those of omission, while the *auditive's* tend to be errors of order or of position. (d) The *visualist* can with great ease read backwards a series of impressions laid to heart, since they are, as it were, printed up before his mind, while the *auditive* or *kinesthetic* has great, or at least greater, difficulty in doing the same; the one takes a short, the other a long time to accomplish the feat, if it is possible at all. (e) Segal (*Arch. f. d. gesamte Psychol.* xii, [1908]) adds the following signs: the *visualist* frequently shuts his eyes and covers them when recalling a memory; his recall is slower than that of the *auditive*; usually the latter remembers the material in groups, while the *visualist* remembers parts singly and separately. But *visualists* retain poetry or prose more accurately than others, and do not repeat parts already given, while *auditives* and *kinesthetics* reproduce more rapidly, but in less quantity, and often with unconscious repetitions. When he does not repeat the material in its proper order, it is with the last few words or syllables that the *auditive* begins; and when the task is accomplished, the material as a rule disappears at once out of his memory, unless he re-learns it frequently.

In regard to the importance of these differences for mental development, it should be remembered that the question is never one of an exclusive use of a single class of imagery; it is merely a question of the predominance of one over others; but occasionally there occur cases in which one or other form of imagery is completely lacking. Normally, however, every one is both an object-thinker and a word-thinker, at different times, and uses in the former case alike visual, auditive, and motor imagery. Nevertheless, it is true that in children object-thinking predominates greatly over verbal thinking until about the age of 14, when, in civilized life, word-thinking begins to occupy a larger space; thus, when a child under 14 is reading or listening to speech, it tends to fill out the meaning of the words, to 'body' them out concretely in its mind, to a much greater extent than the adult does. It has been pointed out that, while the majority of adults are *visualists* in object-thinking, the majority are also acoustic-motile in word-thinking. Children probably use a greater variety of kinds of imagery than adults. Nevertheless, it will be found that in mental work one of the classes or forms predominates over the others. Since education appeals increasingly to visual perception, it follows that a child whose natural type is the auditive one has little opportunity of perfecting this type till after school-life is over; hence in general the type is uncertain until the age of 16

or so. There is throughout a higher prevalence of pure visualists among girls than among boys. It is of course clear that a child will learn more easily, more quickly, and retain for a longer time material learned through his special and dominating form of imagery; and conversely, that the teacher will naturally teach, and will best teach, by the use of his special form. Hence a certain amount of consideration is necessary in school work, both to the type of the child and to the type of the teacher. On the other hand, as has been remarked, the average child is of a mixed type, and the average teacher also; while under modern conditions familiarity with different media is essential for all. The conclusion is that the teachers should try to convey knowledge of any subject by as many senses as possible, and that care should always be taken to determine whether apparent incapacity in a child to learn a particular subject (e.g. geography) is not due rather to a deficiency in the imagery to which appeal is made than to dullness or inattention. (A full account of recent work on this subject is to be found in E. Meumann, *Exper. Pädagogik*, I., esp. p. 435 f.)

It is a matter of dispute how the power of abstraction, and thinking in general, are related to imagery; there can be no doubt that, genetically, the concrete image precedes the abstract, or symbolic, thought, and that in general a training of the imagination is of great value in preparation for scientific thought and practical reasoning (see A. Binet, *L'Intelligence*, Paris, 1903; E. Meumann, *Intelligenz und Wille*, Leipzig, 1908). On the general subject of the psychological nature of thought and its relation to imagery, see the discussion by Titchener of the work of Ach, Binet, Bühler, Messer, and Watt, in his *Experimental Psychology of the Thought Process*, N.Y. 1909.

(9) *Language and abstract thought.*—Many lines of evidence both from race psychology and from individual psychology go to prove that the language of its parents is in no sense whatever innate in the child, and that none even of the conditions which have led to the differentiation of its parents' language from other languages is innate. (On this question, see L. W. Stern, *Helen Keller*, Berlin, 1905.) What is really innate is the instinct of expression, and the various special forms which this instinct takes—facial, vocal, gesture, etc. As it is certainly on these that language has, racially, been built up, so in the child they precede all knowledge of language. As illustration of the former point, experience shows that any child can learn any language whatsoever, provided it is brought up among a people speaking that language; and that no child has any special difficulty even in learning the language which is most remote in its sounds, signs, or grammar from the language of its parents. Again, it is known that the most complex thoughts and emotions are equally well expressible in any mode of language whatsoever, including under this not merely speech and ordinary gesture languages, but even such highly artificial languages as those taught to deaf-mutes, etc. The stages at which a child acquires the language of its environment may be stated as follows:¹ (1) the reflex and instinctive expressions of emotion on the child's own part; (2) the imitation of the sounds made by its parents and others in their speech; (3) the frequent repetition of signs and sounds—complexes found pleasant to itself; on the receptive side: (4) the gradual discrimination of the sounds heard in the speech of its parents; (5) the association between a particular sound and the object to

which it is referred by the parents; (6) the formation of an idea of the meaning or connotation of the words, derived from these associations (apperception); and (7) the gradual correction of such ideas by experience. The conditions of development are keen auditive perception on the part of the child, opportunity of hearing varied speech in its environment, and freedom to exercise its linguistic powers, in play or otherwise, as it seems inclined.¹

The relation of writing to speech may be touched upon here. Evidence shows that the child is ear-minded before it is eye-minded, and that it is able to learn by ear much more rapidly and more tenaciously than by sight; people among whom there is a large percentage of illiterates are frequently, as Borrow noticed among the Portuguese (*Bible in Spain*, ch. i.), brilliant and correct speakers; the probability is that the child would profit if in this respect its development were assimilated to the evolution of the race, so that (for example) writing and reading were not taught until it had reached about its 10th year. By this time it might have acquired two or more languages by the ear alone, and would probably for the future have a much more easy command of its speech than children ordinarily acquire under our present system (Chamberlain, ch. 5).

6. *Abnormalities of development.*—*Defective children.*—Where there is an actual loss of one or more of the senses, whether through injury or defect of the sense-organ, or from lesion of the central organ in the brain, the resulting defects are due rather to lack of material (e.g. deaf-mutism) than to any defect in the mental powers themselves, and can be compensated by adequate training, as the celebrated cases of Laura Bridgman and Helen Keller show. Apart from these cases, defective children may be grouped in the following classes: backward children, the feeble-minded, imbeciles, idiots, and the demented. The last are those who, through injury in childhood to the central nervous system, or through a disease of that system both congenital and progressive, gradually lose any acquired mental faculty they may possess, and therefore not only fail to develop further, but actually regress, perhaps to a purely instinctive or even reflex and automatic or vegetative level. *Idiocy*, on the other hand, springs from a lesion or defect of the cerebrum, either congenital or occurring in early childhood, carrying as its consequence a lowered general vitality, and especially a lowered sensitiveness and power of movement, as a consequence of which the individual is almost or entirely unable to acquire the education which is regarded as the standard in his country and position. In this there may be all degrees, depending upon the extent of the injury, and the period of life at which it occurs. In *imbecility*, there is not, as a rule, any marked physical or

¹ The following is Stern's classification of the stages in the development of language from the point of view of the forms and structure of speech: (1) the beginning of the development of speech by means of *articulate sounds* (end of the 1st year); (2) 2nd year (1st quarter), *substantive stage*: the child uses substantives only as names for concrete persons and things; (3) *stage of action*: verbs appear for the designation of concrete activity in the present and in the immediate future (2nd quarter of this year); (4) *first questioning stage*: questions about the names of objects (3rd quarter); (5) *first sentences* (synthetic): conjunctives; negative sentences (end of the 3rd quarter of year); (6) *relation and quality stage*: adjectives and adverbs (4th quarter of the year); (7) sentences with an object (end of the 4th quarter year); (8) use of numbers, inflexions, past tense (4th to the 5th quarter year); (9) *second questioning stage*: questions as to the where, how, and whither (3rd year); (10) pronouns become numerous (2nd quarter of 3rd year); and (11) *questions as to why* (in the 3rd year). Stern points to a very remarkable parallelism between the stages by which the normal child acquires its language, and the stages by which Helen Keller, beginning at the end of her 7th year, acquired precisely the same form of development through the finger-alphabet which Miss Sullivan began to teach her at that age (*op. cit.* p. 34 ff.).

¹ On the development of language in the child, see Sully, ch. 5; Preyer, ch. 16 ff.; W. Ament, *Die Entwicklung von Sprechen und Denken beim Kinde*, Leipzig, 1899, p. 218; Chamberlain, ch. 5; and Ament, 'Fortschritte in Kinderseelenkunde,' in *Arch. f. d. gesamte Psychol.* II. (1904).

even cerebral defect; on the contrary, imbeciles are frequently of great vitality, and of full physical development; nevertheless the existence of some functional defect of the brain is proved by the peculiar instability of their mental character, and, as a result, the difficulty which there is in extending their education, mental and moral, up to the standard of the time. These classes may be grouped together as abnormal; their differences from their fellows are so great, and in their outcome unfit them to so great an extent for participation in social life, that no one would seek to rank them with either normal children or normal adults. On the other hand, the *feeble-minded* and the *backward* represent a class which is, as it were, on the lower edge of the normal group; they are simple variations, on the negative side, from the average, corresponding to the specially talented and gifted on the positive side. The backward child is one who is much slower in development than his neighbours, and in consequence falls below the standard of his years; at school he is placed along with children three or four years younger than himself. The feeble-minded, or simple defective, again, is not only slow, but unable at any time, or under any conditions, to overtake the average child in education; he can, however, be taught a simple trade, and by special methods can be brought to a level of intelligence and of morality by which he is enabled to take a place among his fellows.

Various suggestions have been made as to the most prominent symptom by which the degree of defectiveness can be estimated: ability to acquire the power of speech (Esquirol, who divided idiots and imbeciles into five classes, according to degree of facility which they were able to acquire in this respect); the presence or absence of primary and secondary instincts (Dubois, etc.). Almost certainly the most valuable of these is that on which Sollier lays chief stress—the power of attention. The inability of the idiot or imbecile child to learn (whether language, industrial work, or moral habits) depends primarily on the two characteristics of his attention—its low intensity, or strength, or degree of concentration, and its instability, or liability to distraction and dissipation. The spontaneous attention (still less the voluntary attention) of the idiot cannot be caught, except for a few objects associated with its most fundamental physical needs: (1) because, owing to the disease of the brain, its sensations are excessively blunted or dulled, and (2) because for the same reason its organs of movement, on which the possibility of attending depends, are also imperfect in the highest degree. In the lowest degree of idiocy there is no possibility of attention; in the second degree (simple idiocy), the attention is with difficulty and occasionally held by a few objects; in the latter case, by efforts which strengthen the sensitiveness, or which build up associations between the few objects that are apprehended and the corresponding actions, some degree of education may be accomplished; in the former none is possible. On the other hand, in the case of the imbecile, it is not so much the intensity of the attention as its stability that is at fault; it is flighty, intermittent, unable to be retained for any length of time by a single object; hence memory is weak, impressions do not remain long enough before the mind to be retained; associations are not formed between separate sense-qualities or between perceptions and actions; sustained action and serial thought are alike impossible. The lower instincts, however, are usually sufficiently strong to give the sensations and perceptions which appeal to the imbecile considerable attention-value; hence education is possible to a relatively

high degree, through the direction and control of this attention by the teacher. Imbeciles may learn to speak, although they rarely learn to write or read; and the ability to speak does not with them carry the power of concentrated and deliberate thought or reflexion. On the moral side, Sollier divides these defectives by the terms *extra-social*, which he applies to the idiots, and *anti-social* which he applies to the imbeciles. The former, as the term implies, is essentially a solitary, unable to come into relation with, or to understand any of the purposes of, his fellows; he neither imitates nor plays with others, and, while entirely incapable of appreciating moral standards, nevertheless remains for the most part passive, inert, and therefore harmless. The imbecile, on the other hand, having the lower instincts strongly, and the higher weakly (or not at all), developed, is governed almost entirely by selfish motives, without being able to appreciate either the feelings of others, their duties, or their rights; he has intelligence enough to pick up and appreciate the evil, but not the good, around him, and for the most part is on that account a constant danger both to his fellows and to himself. In the case of the backward and simple or weak-minded child, the attention is also defective; the reaction time is slower, the span or width of a single act of attention is narrower, the stability is for the most part less than in the average child. In the case of the idiot, the defect is primarily due to an organic lesion of the brain, and in the imbecile to a functional defect (see art. DEGENERATION), but in the backward child the defect may ordinarily be found in some somatic physical weakness, in the digestive or other internal system, by which the brain is relatively poorly nourished, and in consequence both functions more feebly and develops more slowly than in the average child. The evil can to some extent be remedied by physical regimen, and the great danger in such cases is that of intensifying the disease by over-pressure in school work. There can be no doubt that, where it is possible, such children ought to be treated separately from others—in separate classes, or still better in separate institutions. Binet, Decroly and Degand, and de Sanctis have worked out series of standard mental tests by which the degree of defectiveness in a child of a given age can be diagnosed in a simple and rapid, but adequate, way. It is natural that some difficulty should be experienced at first in arriving at such a series, appealing to the different mental powers in the order of their development, which shall be agreed upon by a sufficiently representative number of observers; but, when it is successfully accomplished, it will form a most useful basis of reference, both in the initial determination of the grade of a child and in estimating the degree of progress which may be attained under any particular system of training and education (see A. Binet and T. Simon, *Année psychologique*, xi. [1905], xiv. [1908], xv. [1909]; O. Decroly and J. Degand, *Arch. de psychol.* ix. [1910]; de Sanctis, *Année psychologique*, xii. [1906]). These tests are also discussed in Meumann, i. 387 ff., and are illustrated in G. M. Whipple, *Manual of Mental and Physical Tests*, 1910).

LITERATURE.—Works referring to special parts of the subject have been mentioned in the text; among more general works are the following: J. M. Baldwin, *Mental Development in the Child and the Race*, N.Y. and Lond. 1896, and *Social and Ethical Interpretation*, N.Y. and Lond. 1897; A. Binet, *Suggestibilité*, Paris, 1900; A. F. Chamberlain, *The Child, a Study in the Evolution of Man* (with Bibliography), London, 1906; E. Claparède, *Psychol. de l'enfant*, Geneva, 1909 (Eng. tr., Lond. 1911); G. Compayré, *L'Evol. intellect. et morale de l'enfant*, Paris, 1893 (Eng. tr., N.Y. 1896); W. B. DEVIL, DEVIL-WORSHIP.—See DEMONS AND SPIRITS.

DEVIL'S ADVOCATE.—See ADVOCATE.

DEVĪ PĀTAN (*Devī-pattana*, 'city of the goddess Devī').—An ancient village in the Gondā District of Oudh, supposed to be one of the oldest seats of the Śaiva cultus in Northern India. Legend connects the establishment of the cult in this place with Karpā, the hero of the *Mahābhārata* epic; but it is more probable that the existing remains belong to the time of Chandragupta II., of the Imperial Gupta dynasty, who restored the old sacred places at Ayodhya, and perhaps did the same service for the petty shrine of the goddess of the pre-Aryan races, who had been adopted into Hinduism. A temple is said to have been erected in the beginning of the 15th cent. by Ratannāth, the third in descent from the famous Gorakhnāth, the deified saint, whose worship has spread all over the Nepāl valley and many other parts of India. Its importance was sufficient to attract the attention of the iconoclast Aurangzib, who partially destroyed it. This temple seems to have been dedicated to Śiva, and when repaired was converted into the present building, where the service of the Mother-goddess in the form of Pārvatī or Durgā is conducted. The religious fair in connexion with the shrine takes place early in the spring, and is largely attended by pilgrims from the Plains and the lower slopes of the Himalaya. Bennett, describing the fair in 1871, writes: 'Some 20 buffaloes, 250 goats, and 250 pigs were sacrificed daily at the temple. Under the altar a large hole was dug and filled with sand, which was changed twice a day, and the old sand buried; all the blood was thus absorbed. There was no filth lying about, and no stench.'

W. CROOKE.

DEVOTION AND DEVOTIONAL LITERATURE.—*Introductory.*—In a general sense, devotion has frequently been regarded as co-extensive with, or at least as embracing, the entire field of facts relevant to religion. Sometimes the attitude of the human will towards the Divine (howsoever conceived), which is a common feature of all religions, and the dominant characteristic in every religion of the spirit, has been illegitimately isolated and its true function distorted; consequently 'devotion' and 'religion' have often been used as synonymous terms. Aquinas writes: 'Devotio nihil aliud esse videtur quam voluntas quaedam prompte tradendi se ad ea quae pertinent ad Dei famulatum' (*Summa*, II.² lxxiii. 1). But surely this definition is too wide in scope. Even where devotion has not been confused with religion, it has commonly been cited as a synonym for worship—'whatsoever men worship for religion's sake' (Tomson's marg. note [*NT*, 1576]). But, while

devotion suffuses all genuine religion, and will find expression normally in a form of worship directed towards an object or objects conceived as spiritual, unseen, or Divine, it certainly ought not to be defined as 'an object of religious worship.'

The idea of devotion is expressed in a concrete manner by the devotee—one set apart for a unique purpose, dedicated by a vow to the service of a deity; and perhaps we may best define devotion as the inner, intimate, essential side of worship. It is the attitude of the worshipping soul towards God; or, more widely viewed, the self-dedication 'to a deity, or to any one invested in thought for a time with some of the qualities or claims of a deity.' In its higher reaches it calls into play the entire forces and resources of man's personality.

Devotion, then, involves the deliberate movement of the will towards the object of worship.

'Devotion signifies a life given, or devoted, to God. He therefore is the devout man who lives no longer to his own will, or the way and spirit of the world, but to the sole will of God, who considers God in everything, who serves God in everything, who makes all the parts of his common life parts of piety, by doing everything in the name of God, and under such rules as are conformable to His glory' (Law, *Serious Call*, Lond. 1898, ch. i.).

In the theistic religions, especially in Christianity, where the bloom and fragrance of devotion are incomparably rich, the definite and full determination of the will towards Deity is the first step in the direction of a devout life. The higher experiences of the consecrated life are unattainable apart from the initial and insistent self-dedictory act. The will of the individual is wholly determined towards the being or beings conceived as Divine, and, apart from this ardent attachment, devotion, strictly speaking, cannot exist. It is thus marked off from religion narrowly defined as 'a propitiation or conciliation of powers superior to man' (J. G. Frazer, *GB*², 1900, i. 63) by this spontaneous self-committal.

'True devotion springs from the will; it is the choice and the love of the highest good manifested to the soul, and, wherever the will of man is found choosing, and adhering to, the highest known ideal of good, there you have the true child of God' (C. Bodington, *Books of Devotion*, London, 1903, ch. ii.). Or, as Thomas à Kempis expresses it, great devotion consists 'in giving up thyself with all thy heart to the Divine Will, not seeking the things which are thine own, either in small or in great, either in time or in eternity' (*Imitation of Christ*, bk. iii. ch. xxv.).

In this self-determination of the soul both intellectual and emotional appetites are present in varying degree; no movement would be possible apart from desire; the intellect by itself, as Aristotle pointed out, moves nothing. Some conception of the end of devotion is necessary before the heart and the affections are yielded in free spontaneity to their Divine objective. Thus, in all religions which create and foster the devotional spirit—notably in the Christian religion—the soul intensely, sincerely, and lovingly desires, and moves in faith, reverence, and purity of intention towards, communion with God. Even the pagan Mysteries and the most ancient sacrificial feasts bear witness to this fact.

I. This approach of the soul towards the Divine, with its definite, conscious experience of the Divine presence, is seen in the distinctive exercises and practices of devotion. These are infinite in variety, but primacy must be given to prayer.

'Devotion,' writes William Law, 'is neither private nor public prayer, but prayers, whether private or public, are particular parts or instances of devotion' (*Serious Call*, ch. 1.).

Without attempting any survey of the various forms prayer has assumed in the history of religions, we may mark its unfailing and universal characteristics throughout the devotional life of the varied races and generations of mankind. Remembering the true saying of Kierkegaard—that a heathen who heartily and ardently prays to an idol prays in reality to the true God, but he who outwardly and impersonally prays to the true God

in reality prays to an idol—we see that the value of the external observance depends on the internal disposition of the suppliant. Prayer must be pure and ingenuous, for the devout life must be free from any element of sophistication. Where prayer is viewed so largely and so generally, sometimes so exclusively, under the aspect of petition or request, it is obvious that its possible perils are very great. Material wants and mundane considerations obtrude themselves, while the spiritual needs are crowded out, forgotten, ignored—sometimes even unrecognized. But, though not without its dangers, the act of asking a boon of the Unseen, if it be the sincere expression of the spiritually enlightened, is an act which not only describes the fervent longing of the human soul, but also suggests the intimacy of a genuine spiritual communion. It is an aspect of the great passion to establish communication with the Divine or with God, which expresses itself in an outgoing of the human spirit towards the object worshipped and adored. As such, it is an infallible mark of the devout soul wheresoever placed, in crude and elementary religious environment as truly, though not as fruitfully, as in realms of high spiritual culture and attainment. In its more advanced phases, it becomes not merely a spiritual intercession, but passes in a sublime elevation of soul from soliloquy to silence, from spiritual striving to contemplative calm. The higher reaches of the devotional life are sacred to the prayer of 'quiet' and the prayer of 'union' which Madame Guyon describes in her *Autobiography* (Eng. tr., London, 1897) as 'emptied of all form, species, and images.'

2. Allied to and often commingled with prayer is the act or exercise of praise—the tribute of homage which the human renders to the Divine. The relation between prayer and praise is so intimate that, in experience, it is found that instinctively and imperceptibly the one is constantly passing over into the other. This is as notable in the hymns of the Veda, which embody 'some of the earliest religious conceptions of the Hindus' (M. Williams, *Hinduism*, London, 1901, ch. ii.), as it is in the Jewish Psalms or in the spiritual songs of the Christian Church; and, although perhaps these are all primarily adapted to worship in an institutional ceremonial sense, they yet express with true poetical passion the personal devotional life of their particular age. The outward dissimilarities are undoubtedly great; the Vedic hymns were 'addressed to certain deifications of the forces of Nature' (M. Williams, *op. cit.* p. 23); a post-exilic theology is implicit in the Psalter; but under all the outward forms of 'temple festivities, processions, and ceremonial' there is present and discernible the thrill of the individual soul, as, in reverence and thanksgiving, homage and gratitude, it prostrates itself before the Divine.

We may certainly affirm that beneath all external expressions, which, of course, reflect the particular sentiments (sometimes, it may be said, immature, and even repugnant, to a developed moral sense) of a people, age, or religion, the elements we have noted are all present in the act of praise. They differ, it is true, in emphasis and in the degree of intensity by which they are sustained; but it may be doubted if any one of them is ever entirely absent. From the manner in which they are present and the mode in which they are combined, the exercise of praise as a personal outburst in East and West does appear ultimately to result in a qualitative distinction, *i.e.* to be different in kind. It may, indeed, be regarded as an established fact that the place of praise in the devotional life is seen most clearly and recorded most completely in religions where the subduing and overwhelming sense of Divine holiness, love, and beneficent energy pre-

vails, and in which the soul's searching sense of guilt is finally submerged—not merely in mercy, but in victorious grace.

In illustration of this, we may note the contrast presented between the attitude of the devout Buddhist, who embalms his lord Gautama 'in the richest and sweetest mythology known to man' (A. M. Fairbairn, *Philos. of Chr. Rel.*, London, 1902, p. 243 f.), and the attitude of the devout Jew towards God, as expressed in the superb and richly varied praise of the Synagogue liturgy (cf. T. K. Cheyne, *Book of Psalms*, London, 1888, p. 118). This contrast is further heightened by a consideration of Christian hymnody, in which, from the *ψαλμοί, ὕμνοι, ᾠδαὶ πνευματικαὶ* (Eph 5¹⁸) of the early Christians to the sacred lyric or hymn of the Church to-day, the holiness and grace of God are conspicuously honoured and celebrated as much in private devotion as in public worship.

3. The act of adoration, the prostration of the soul in profound reverence, utmost affection, highest love, is usually associated with the outburst of gratitude or thanksgiving addressed to a deity. As one ascends in the scale of religions, the ethical and spiritual meaning of the adoring soul becomes more significant, and gleams and glows like sunshine. Where worship was addressed directly to elemental forces of Nature (as in the hymns of the Veda), or where the objects of worship were characterized by a dull, dry formalism (as in Roman religion to a considerable extent), or where a 'brilliant gaiety,' passing often into hilarity and levity (as among the Greeks), was subtly united with sacred offices and exercises (cf. F. Granger, *The Worship of the Romans*, London, 1895, p. 271), it is clear that the outward semblance of adoration could not conceivably denote the rich and profound spiritual significance which is so manifest a content of the reverent honour given by the devout Christian to the sacred and adorable Trinity.

The sentiment of adoration is seen at its highest only where the idea of God is marked by supreme moral and ethical excellence. Thus, in China, even where there prevails a persistent worship of ancestors which aims at the maintenance of friendly relations with the spirits of the dead, or a devotion to Shang-ti and popular divinities, adoration occupies no high place in the desire of the worshippers. In Christianity, on the other hand, devotion seems impossible apart from adoration, and manifests itself as markedly, and perhaps more truly, in the awe and austerity of the Puritan conception of the relation of the soul to God as in the Roman Catholic devotion to saints and images, the Eucharistic elements, the Cross, and the Sacred Heart—the latter cult, indeed, possibly taking its rise from *The Heart of Christ in Heaven towards Sinners upon Earth* (1645), a writing of the great Puritan theologian, Dr. Thomas Goodwin.

4. All the classics of devotion announce the cultivation of the meditative mood as indispensable to the devout life. And, although there is a great gulf between the *Meditations* of the saintly Roman Emperor Marcus Aurelius, or the Indian mystic for whom contemplation (*dhyanā*) takes the place of prayer, and the devout Christian for whom meditation is the 'eye of the soul' which enables him to see 'the light that never changes' (Aug. *Confess.* bk. vii. ch. x.), in all alike there is the recognition that 'the most sublime object of thought' demands the deliberate and definite concentration of man's whole soul in a 'current of contemplative feeling.'

Recollection is the act which is the precursor of pure spiritual contemplation; and this drawing together of the forces of the inner life, 'each man's conversation with himself,' to use the expression of Lacordaire (*Lettres à des jeunes gens*, Paris, 1862,

p. 204 ff.), is the prelude to meditation proper, which Ruysbroeck defines as 'a concentration of all the interior and exterior forces in the unity of the spirit and in the bonds of love' (*L'Ornement des noces spirituelles*, tr. M. Maeterlinck, Brussels, 1900, bk. ii. ch. iv.).

Meditation or active contemplation is then 'a long process of internal quietude, of abstraction from sense, and of absorption in reason,' by which the human soul is attuned to the Divine; and the soul exercised thereby has, among other spiritual possessions, 'the power of seeing into eternity' (*Theologia Germanica*, 14th cent.). By this interior process of meditation the whole personality is raised to a higher level, for the act of contemplation sounds 'the abysmal deeps of personality,' and releases mysterious spiritual forces otherwise hidden and unknown. Of this, William Law writes in 'The Spirit of Prayer':

'There is a root or depth in these from whence all these faculties come forth as lines from a centre, or as branches from the body of a tree. This depth is called the centre, the fund, or bottom, of the soul, for it is so infinite that nothing can satisfy it or give it any rest, but the infinity of God' (*The Liberal and Mystical Writings of W. Law*, ed. W. Scott Palmer, London, 1908, p. 14).

Only the spiritually strenuous and purposeful can accomplish this, for it is not merely 'the yielding to an instinct, the indulgence of a natural taste for reverie.'

'All the scattered interests of the self have here to be collected; there must be a deliberate and unnatural act of attention, a deliberate expelling of all discordant images from the consciousness—a hard and ungrateful task' (E. Underhill, *Mysticism*, London, 1911, p. 374).

Spiritual meditation is, indeed, a difficult thing. St. Teresa, who finally achieved so much in this respect, confessed that, when she first made the attempt, she felt the impossibility of collecting her thoughts and fixing her attention; and it was not until more than fourteen years had passed that she was able to practise meditation without the aid of a book.

Boehme, in his *Dialogues on the Super-sensual Life* (ed. Bernard Holland, London, 1901, p. 56), describes the process of meditation as the cessation of individual activity, and urges the direct and steadfast fixing of the eye upon one point:

'For this end, gather in all thy thoughts, and by faith press into the Centre, laying hold upon the Word of God, which is infallible, and which hath called thee. Be thou obedient to this call, and be silent before the Lord, sitting alone with Him in thy inmost and most hidden cell, thy mind being centrally united in itself, and attending His will in the patience of hope.'

This is a blessed foretaste of the supernal satisfaction—of the *vita contemplativa*.

5. Again, devotion is expressed, not only in the loving fulfilment of all those duties commonly named 'religious,' but more particularly and appropriately in definite spiritual exercises. In that great devotional classic, *The Spiritual Exercises of St. Ignatius* (Eng. tr., London, 1880), the spiritual development of the individual is shown to be dependent upon the rigorous training to which the powers of the mind, heart, and will are subjected. After retirement into solitude and a season of quiet contemplation, in which the soul listens only to the 'whispering silence,' the exercised spirit passes on, in absorbed intensity, to the various methods and rules by which the desired goal is to be attained. The value of the rules and exercises lies in the fact that, when followed in docility and fidelity with whole-hearted abandonment, the soul is led to the end for which it was ordained by God. They are rules which become 'more and more authoritative by constant obedience.'

'The number, length, and nature of the exercises are to be adapted to the age, capacity, and inclination of the person in retreat, so that no one may be overburdened, and all may find what is suitable to their wants' (Bodington, *op. cit.* 130).

All forms of spiritual exercise, whether such as are involved in the 'ladder' of mystic states and

perfections of Neo-Platonic mysticism, the method of Persian Sufism, or the way of Christian mysticism, are aspects of self-discipline—of the *vita purgativa*. Self-discipline, strenuous and prolonged, has always been deemed an essential factor in devotion; and the devout of all ages have insisted upon the renunciation of self. Whether it is the Christian mystic who speaks of self-surrender, or the Indian mystic who teaches that the illusion of the finite can be overcome only by entering into the universal life, or the Sufi who practises detachment from all that is not God that the heart may give itself for its only work—meditation upon the Divine Being—a deliberate self-abandonment is demanded by each alike, though the nature of that abandonment is variously interpreted and differently enforced. Perhaps the asceticism of our Lord (Clem. Alex. *Strom.* iii. 6) supplies us with the key to a true understanding of the place and power of self-discipline. It does not appear that poverty, as such, is a necessary inevitable mark of self-renunciation (Jerome, c. *Vigilant*, 14), though it is true that the life of Jesus was lived under conditions of poverty. But poverty may, in specific instances, be the *sine qua non* of a genuine self-oblation; and assuredly *almsgiving* has very generally been regarded as an indispensable exercise of the devout. In this connexion it should be noted, however, that by modern thought greater possibilities of a positive character, tending towards an energetic social devotion, are being disclosed to the devout soul who sees, with vision preternaturally sharpened, the passionate and heroic service of man in wider ways than formerly, as no mean expression or exemplification alike of self-sacrifice and of the worship and service of God.

Supremely essential is a sincere and utter detachment from earthly things, apart from which there can be no true self-abnegation, and no high spirit of devotion. This ideal has perennially cast its spell over the minds of devoted men; many attempts have been made to realize it, not the least significant—despite the inevitable limitations of their conception—being that of the 'Brethren of the Common Life' (*q.v.*), under the inspiration of Gerard Groot and Florentinus. The importance of the ideal has never been questioned by the devout. According to St. Francis of Assisi, poverty is

'a treasure so high exelling and so divine that we be not wrothe to lay it up in our vile vessels; since this is that celestial virtue whereby all earthly things and fleeting are trodden underfoot, and whereby all hindrances are lifted from the soul so that freely she may join herself to God Eternal' (Fioretti, ch. xiii.).

The essence of self-discipline has been said to be 'self-simplification'; this can be attained only by the soul viewing with sacred indifference the superfluous, deceptive, or vain things of earth. Thus, it comes to be seen that inward not outward poverty is the indispensable thing; the goal of the devout soul is, like the Kingdom of Heaven, attainable only by 'the poor in spirit.' It is in such essential vital detachment, according to St. John of the Cross, that

'the spirit finds quiet and repose, for, coveting nothing, nothing wears it by elation; and nothing oppresses it by dejection, because it stands in the centre of its own humility: for, as soon as it covets anything, it is immediately fatigued thereby' (*Ascent of Mount Carmel*, tr. David Lewis, London, 1906, bk. I. ch. xiii.).

Fasting, 'a piece of devotion whereby the primitive believers effected very great things' (Anthony Horneck, *The Crucified Jesus*, London, 1835, ch. iv.), has been persistently taught, encouraged, and practised as a form of self-renunciation and a method of self-discipline. Fasting may be partial or complete. As practised among the Oriental peoples, it usually took the form of total abstinence from both food and drink; and, according

to Robertson Smith (*Rel. Sem.*, London, 1894, p. 434), it is almost certain that such fasting was designed especially with a view to the partaking sacramentally of holy flesh. We may well believe this to be the fact, inasmuch as the sacrificial rites of all nations express in their devotional aspect the surrendered self of the creature to the Creator. It does not seem open to doubt that all ancient sacrifices were related to the basal belief in the possibility of communion with the Deity; and the discipline of fasting as a preparation to the partaking of a sacrifice which involved some kind of Divine fellowship was the prescribed method of the Oriental peoples. If it is true, as has been affirmed, that 'both the idea of sacramental worship and the forms under which it is performed by the Christian Church are the almost universal heritage of mankind' (W. R. Inge's *Essay in Contentio Veritatis*, London, 1902, p. 279), it will not be regarded as a singular thing or strange survival that the concurrent act of fasting should appear with perennial persistence. And further, if a vital communion with the Unseen is conditioned by a transparent sincerity of will and intention, fasting may well have approved itself as a sign of, as well as a means towards, such self-discipline of the soul. Especially might this be expected in the Christian Church, where the avowed aim of the faithful is to be 'one with the Lord and He with us,' and the devout person seeks to present himself a reasonable, holy, and living sacrifice to God (Ro 12). The custom of fasting before communion certainly finds its explanation, if not its justification, not so much in 'the practice of the universal Church' as in the acknowledged need of self-disciplinary exercise for those who would worthily and reverently prepare themselves for the receiving of the Lord's Supper.

'Let us,' says Jeremy Taylor, 'receive the consecrated elements with all devotion and humility of body and spirit; and do this honour to it, that it be the first food we eat and the first beverage we drink that day, unless it be in case of sickness or other great necessity; and that your body and soul both be prepared to its reception with abstinence from secular pleasures' (*Holy Living*, London, 1649, ch. iv. sect. x.).

It is admitted that such fasting 'is not a duty commanded by God,' but it is undeniably a custom which has commended itself to many of the most devout. In the more general sense, fasting has been endured by the devout almost universally; and by many saints it has been ardently embraced as a valuable means towards the discipline and conquest of self—urged often by an inner necessity of the spirit. It cannot be denied that, as a spiritual exercise, evoking, training, and shaping the mysterious potentialities of the soul, fasting under its various forms does effect in many instances most fruitful spiritual developments, and justifies itself as a 'gymnastic of eternity.'

6. In this connexion we note that spiritual raptures and ecstatic experiences of peculiar significance follow, though not invariably, the self-disciplinary exercises of the devout. Catherine of Siena and Catherine of Genoa may be cited as types of devout souls who constantly resorted to the discipline of fasting, and experienced the enrichment of life which ecstatic states confer. The saints, however, do not adopt fasting or any other spiritual exercise as a means of artificially producing or inducing 'ecstasy.' This spiritual state and 'dazzling obscurity,' while it has affinities with the 'ecstasy' of philosophic communion and exaltation,—the crown of the mystical teaching of the Neo-Platonists,—must be carefully distinguished from all those extraordinary forms of ecstasy which at different periods have been sought for successfully by barbarous orgiastic worship or by rude and crude rites of initiation. Jacob Boehme, describing the hard battle he

waged against the desires that belong to the flesh and blood, and his attempt to enter wholly into the Love of God, says:

'Now, while I was wrestling and battling, being aided by God, a wonderful light arose within my soul. It was a light entirely foreign to my unruly nature, but in it I recognized the true nature of God and man, and the relation existing between them, a thing which heretofore I had never understood, and for which I would never have sought' (F. Hartmann, *The Life and Doctrines of Jacob Boehme*, London, 1891, p. 50).

Here, obviously, the 'ecstasy' was of an illuminative character; this constituted its inner grace and spiritual value. But 'ecstasy,' according to Richard Rolle, may take the form of 'being ravished out of fleshly feeling,' 'and on this manner saints sometimes are ravished to their profit and other men's learning; as Paul ravished to the third heaven' (*The Fire of Love*, ed. Lond. 1896, bk. ii. ch. vii.). The essential mark, however, of this spiritual ecstasy would seem to be a supreme and overwhelming joy in the possession of a new knowledge gained not as the prize of toiling thought, but 'in the upper school of the Holy Ghost.' Certainly such 'ecstasy' is no more the product of human sagacity than it is the fruit of an assumed or pretended sanctity.

7. This leads to a consideration of the fact previously stated, that, as devotion springs primarily from the movement of the individual will towards the Divine, such movement being expressed in the various activities already noted, the supreme phase of devotion passes from the service of God, expressed in manifold ways, into those solemn elements of religious feeling which distinguish by their intensity and seriousness communion with God. 'I sought,' says Jacob Boehme, 'only for the heart of God, therein to hide myself' ('Aurora,' *Works of Jacob Boehme*, Eng. tr., London, 1764, p. 237). This is no mere 'morbid condition of mental emotion,' but the end desired with an incorruptible sincerity by all devout persons at all times. Among the Greeks, for example, one secret of the attractiveness of the Eleusinian Mysteries lay in the fact that the esoteric symbolism employed therein ministered, not to a sickly dreaming, but to a magnificent desire for an intimate spiritual communion with Deity. Similarly the Christian mystics, in their spiritual exercises and disciplined employments, sought, with all their fiery strength, the path which afforded close, indeed immediate, access to God—through Christ to God. This 'subjective intensity' of the mystic, though not without its dangers, witnesses to the zeal with which they pursued their quest. Thus, if the communion of man with God is to be attained, the devout soul, whether inside or outside the Christian Church, has always seen that the Divine life, potential or actual, within him must be tended with 'an intense solemnity and energy.' To the Christian, devotion is based on the certainty of communion between God and man through Christ. It springs from a faith in Christ (or, to use Luther's word, a 'right trust') which involves ultimately, if it does not embody presently, a moral union with Christ; and there is no devotion comparable for a moment with the devotion of utter penitential humility which is offered up by the soul that has found the new life in Christ and is entrenched in that reality of regeneration which is the certainty of its so great salvation. As Christ is the perfect means whereby the soul of man may realize itself in full and unclouded communion with its Creator, so the practice of devotion has gathered and drawn from the human life of the Lord—that consummate achievement of stainless communion—not only its supreme ideal and heroic standard, but its rarest and most precious power. 'Non comprehenditur Deus per investigationem sed per imitationem.'

We must, in our devotion, as Thomas à Kempis urges, copy the life and conduct of our Lord, 'if we wish to be truly enlightened, and to be delivered from all blindness of heart' (*Imitation of Christ*, bk. i. ch. i.). Neither must the call to fellowship with the Saviour's sufferings be evaded or disobeyed, nor the eyes closed to the imperative demand for 'mediatorial ministries.' The passivity of Quietism can never be the ideal of the devotional life.

'With Him the corner-stone,
The living stones conjoin;
Christ and His Church are one,
One Body and one Vine'
(Wesley, *Hymns on the Lord's Supper*, no. 129).

In sacrificial service, not less than in sacramental worship, the devout soul shares in the joyous travail of the spiritual Kingdom, sustained by the effectual irresistible energies of the Holy Spirit of God.

8. Devotional literature is the outcome, the record, or the expression of a vital devotion. Devotion may exist and manifest its presence without any attempt to express itself in literary form; but every true book of devotion involves the pre-existence of a true devotion. Spurious devotional works and morbid or maudlin books on devotion, whether marked by grandiloquent language or spiritual insipidity, may generally be detected by their atmosphere of moral enervation, or an accompanying suggestion of mental paralysis. The genuinely devout man is unconscious of his devotion; and all the great devotional classics, even those most intimately personal, are marked by the absence of anything approaching, in sinister guise, either a baleful self-consciousness or the hesitating sentiment of the feeble or the dull. They are in the highest degree self-revealing, often introspective, but they show no traces of self-posturing. The Bible is undoubtedly the greatest and most influential book of devotion in the world; it not only bears all the infallible marks of a deep and developing devotion, but it possesses, in a pre-eminent degree, the power of awakening and sustaining the devotional life of all who read and use it aright. But, outside the Holy Scriptures, all the great spiritual books of devotion owe their position and power to their possession of the characteristic marks already mentioned. The incomparable *Imitatio Christi*, *The Pilgrim's Progress*, Augustine's *Confessions*, with their power to 'stimulate the heart and mind of man to approach unto God,' Anselm's *Meditations*, Andrewes' *Private Prayers*, breathing indeed a 'pure and primitive devotion,' Francis de Sales' *Spiritual Letters*, and Baxter's *Saints' Everlasting Rest*, are among the most spiritually moving books in the world. The great books of devotion elude our attempts to classify them, though we may trace affinities and mark divergencies. They all owe their existence to the spirit of conspicuous devotion which marked the lives of their authors; and, although respectively they exhibit the fashions of a particular age and reflect pre-eminently the spiritual needs and satisfactions of their own special time, they owe their persistent power to the presence in them of an unconscious self-revelation of spiritual insight, and the faculty of inducing and begetting a deeper devotional life in those who wisely read them. They unlock the door to the rich inheritance of the saints; they unveil inconceivable spiritual mysteries, as they lead the wondering soul to the Christ in whom are hid all the treasures of wisdom and knowledge. Where may the growth, development, and perfection of the life that is hid with Christ in God be found more surely or sweetly expounded than in Jeremy Taylor's *Golden Grove*, his *Holy Living and Holy Dying*; Law's *Serious Call*, *Spirit of Prayer*, and *Christian Perfection*; Samuel Ruther-

ford's *Letters*; *The Spiritual Guide* of Miguel de Molinos; or Walter Marshall's *Gospel Mystery of Sanctification*—a book too little known and read? The devotional life of thousands has been established and enriched by books so widely divergent in many respects as the *Sermons* of Bernard of Clairvaux, where the 'illuminative way' is described with searching insight as the rising to the love of God with heart, mind, and soul; Tauler's *Sermons*; the *Theologia Germanica*; A. Baker's *Holy Wisdom*; Louis of Granada's *Sinners' Guide*; Scupoli's *Spiritual Combat*, in which, despite obscurities and perversities, there burns steadily 'the lamp of fire within the earthen pitcher'; Pascal's *Thoughts*; the *Journal* of George Fox; and the mystical *Devotional Works* of John Norris. Perreyve's *Journée du malade*, Gratry's *Meditations*, with their striking and suggestive sincerities of thought, Scougal's *Life of God in the Soul of Man*, and Milman's *Love of the Atonement* all unite to disclose to the expectant soul some of the august possibilities of faith, prayer, and sacrifice. The work of Alphonsus Rodriguez, *On Spiritual and Religious Perfection*, in which 'our greatest, or rather, our only business,' the union of our souls with God by love, is set forth with arresting ardour and spiritual knowledge; the *Poems* of George Herbert and his *Priest to the Temple*, burning with the sacred passion for holiness; *Hymns on the Lord's Supper* by John and Charles Wesley, in which, assuming discretion and discrimination on the part of the reader, the fervour of an intense rapture fills the soul with unalloyed joy; and the *Christian Year* of John Keble—must be named as occupying distinct and honoured places in the impressive library of devotional literature, although, of course, they do not 'unite all great attributes in an equal degree.'

In the realm of devotion, doubtless, new heights wait to be scaled, untrodden territories allure the intrepid spiritual explorer, and vast spiritual tracts are yet to be surveyed; thus, while we hold steadfastly to the precious devotional gains of the past, we believe that greater works than these may be achieved by the soul following the Supreme Spiritual Director who guides into all truth.

LITERATURE.—In addition to the authors and works referred to, the various writings of the great mystics—especially their supreme spiritual classics—should be consulted. Also the following: J. Adam, *The Religious Teachers of Greece*, Edin. 1908, p. 92; J. P. Arthur, *The Founders of the New Devotion*, Eng. tr., London, 1906; F. Atterbury, *Sermons*, London, 1766, iv. 213; T. K. Cheyne, *Aids to the Devout Study of Criticism*, London, 1892, pt. ii.; R. W. Dale, *Fellowship with Christ*, London, 1896, ch. i.; C. A. F. Rhys Davids, *Psalms of the Early Buddhists*, i. (PTS), 1909; E. von Dobschütz, *Christian Life in the Prim. Church*, Eng. tr. 1904; L. Duchesne, *Christian Worship*, Eng. tr., London, 1903-4, ch. xli.; J. O. Dykes, *Manifesto of the King*, London, 1887, pp. 127-144; Dora Greenwell, *Essays*, London, 1876, and *Poems*, London, 1848; W. Hermann, *Communion with God*, Eng. tr. 1895, pp. 49-133; E. E. Holmes, *Prayer and Action*, London, 1911; R. F. Horton, *The Open Secret*, London, 1904; F. von Hügel, *The Mystical Element of Religion*, 2 vols., London, 1908; J. R. Illingworth, *Christian Character*, London, 1904; W. R. Inge, *Christian Mysticism*, London, 1899; W. James, *Varieties of Religious Experience*, London, 1902; F. B. Jevons, *Introd. Hist. Rel.*, London, 1896, pp. 54, 106; Rufus M. Jones, *Studies in Mystical Religion*, London, 1909; J. Julian, *Dict. of Hymnology*, London, 1892; A. Lang, *Magic and Religion*, London, 1901; J. W. MAJOR SCOTT.

DEW.—The cooling of the ground causes, during clear nights, a deposit of some of the atmospheric moisture held in suspension during the day. It was not till 1814 that the main facts of the process of the formation of dew were established. Mention of Wells' famous theory—a perfect example of the inductive method—is in point, since primitive speculation upon the origin of dew has joined with observation of its value to plant-life in attaching to it various ideas of spiritual mystery and various uses in ritual.

In the OT the origin of dew is one of the mysteries of creation;¹ the deposition of dew is gentle, sudden, and invisible;² its evaporation in the sun is a metaphor for speedy departure or disappearance.³ Early observation, of course, distinguished dew from rain, but noted their connexion.⁴ Both drop from the clouds 'by the knowledge' of Jahweh.⁵ The closer connexion of dew with mist and fog naturally involved some confusion in both language and observation. This is of some importance in the Biblical and post-Biblical literatures.

'The spirit of the dew has its dwelling at the ends of the heaven and is connected with the chambers of the rain, and its course is in winter and summer; and its clouds and the clouds of the mist are connected, and the one passes over into the other.'⁶

The old Jewish literature is enthusiastic on the subject of dew. It is a constant symbol for invigoration and vivification, fertility, blessing, prosperity, richness, and resurrection.⁷ Jahweh promises that He will be 'as the dew unto Israel.'⁸ The youthful warriors of the royal Messiah are compared, for numbers and freshness, and perhaps brilliance (see also below), to the dewdrops from 'the womb of the morning.'⁹ The simile was borrowed by Milton (*Par. Lost*, v. 746 f.) for his description of the angelic hosts. The withholding of dew is a dire calamity, and one of the most terrible of curses.¹⁰ We have here, in fact, the best illustration extant in folklore or literature of the pastoral and agricultural importance of the dew-fall. That importance is greatest in Eastern countries which have no irrigation to supplement an insufficient water-supply, and where every drop of moisture counts. But in Palestine the genuine dew of spring and winter is of far less importance than the night-mist of summer. This is not dew, but moisture condensed in the air before it reaches the ground. It is brought from the sea by the west winds, and for abundance and consistency may be compared to a Scotch mist. Cheyne, following Neil,¹¹ who analyzed the phenomenon, is of opinion that the *ṭal* ('sprinkled moisture' of the OT; EV 'dew') signifies in the majority of cases not dew proper, but this characteristic night-mist.¹² Such misters from the sea have an extraordinary influence on vegetation,¹³ more in accordance with the OT descriptions than that of dew.¹⁴ But the same term is employed, and the two phenomena were hardly differentiated.

From the two facts that it is ground-moisture, and that it bears upon life and growth, early thought developed various ideas. In connexion with the belief that growth in plants is dependent on the influence of the moon, Frazer notes that, since dew falls most thickly on cloudless nights,

¹ Job 38²⁸. ² 2 S 17¹², Dt 32². ³ Hos 6⁴ 13⁸.

¹¹ *Palestine Explored*, pp. 129-151. ¹² *EBI*, s.v. 'Dew.'

¹³ Cf. the *ḥōrōs* *noir* of Greece (*ἑρῶς* = 'shower' as well as 'dew'). For Syrian countries, see E. W. Lane, *Arabic Lexicon*, s.v. 'Ṭallā'; *Qur'an*, li. 267. J. G. Frazer (*Totemism and Exogamy*, 1910, i. 168 f.) describes their importance for the coast lands of Australia.

¹⁴ 'The drops of dew,' Job 38²⁸; the saturation of Gideon's fleece, Jg 6³⁷; the traveller's head soaked with 'dew,' Ca 5³; 'showers on the grass,' Mic 6⁷.

the inference that such deposit in particular and all moisture in general were caused by the moon was a clear result of primitive observation. Aleman says that Dew is a daughter of Zeus and the Moon. Greek and Latin folklore regarded the moon as the great source of moisture, and the sun as the great source of heat.

'As the humid power of the moon was assumed to be greater when the planet was waxing than when it was waning, they thought that timber cut during the increase of the luminary would be saturated with moisture, whereas timber cut in the wane would be comparatively dry. Hence we are told that in antiquity carpenters would reject timber felled when the moon was growing or full, because they believed that such timber teemed with sap; and in the Vosges at the present day people allege that wood cut at the new moon does not dry. In the Hebrides, peasants give the same reason for cutting their peats when the moon is on the wane; "for they observe that if they are cut in the increase, they continue still moist and never burn clear, nor are they without smoke, but the contrary is daily observed of peats cut in the decrease."¹

It is possible that the fact of plants growing more during the night than during the day was known at an early date. The contrast between the light of the moon and the torrid force of the sun is obvious. Plutarch observes that 'the moon, with her humid and generative light, is favourable to the propagation of animals and the growth of plants; while the sun, with his fierce fire, scorches and burns up all growing things.'²

Equally natural is the inference that things grow with the waxing, and decrease with the waning, of the moon. The deposition of dew on plants corroborates such observations, and introduces another line of thought. The connexion of moisture with life and growth is most strikingly proved by vegetable phenomena. Hydrostatic turgor is the essential condition of growth. Pliny's remark shows the extension of the principle to animal processes:

'Even the blood of men grows and diminishes with the light of the moon.'³

Thus, primitive philosophy views the moon

'as the great cause of vegetable growth, first, because the planet seems itself to grow, and second, because it is supposed to be the source of dew and moisture.'⁴

A contributory inference is the connexion of the changes of the moon with the monthly periodicity of women.⁵ The Ahts and Greenlanders, like the majority of primitive peoples, regard the moon as male. The latter people believe that the moon is able to impregnate women. Girls are afraid to look long at it; no woman will sleep on her back, without first spitting on her fingers and rubbing the spittle on her stomach.⁶

The symbolism of the last-cited practice may be compared with several scattered facts. The cosmology of the Hindus, in its theory of the marriage of heaven and earth, employed the very obvious symbolism of rain as the impregnating fluid; and the soul, as the male and life-giving principle, *puruṣa*, descends in the form of rain and re-issues from men as the germ.⁷ This notion of the philosophers of the Upaniṣads is but a crystallization of the general connexion of moisture with life.⁸ Such ideas are in flux, and constantly passing into each other; but a tendency is clearly observable to regard dew as a sort of heavenly seed, fertilizing earth and its products, and stimulating growth.

The union of sky and earth, which results in the propagation of plant-life, is a world-wide theory; and sympathetic ritual is extensively employed to

ensure and expedite it. It is, however, probable that some of the agricultural customs included in the general practice by which individuals or couples 'roll' over the fields¹ are not survivals of a ritual of sympathetic intercourse, but simply express the intention of rubbing the fertilizing dew into the ground. In Russia, for instance, the spiritual person of the priest is rolled over the sprouting crop.² In Holland there is still practised a custom of 'fertilizing' the crops by actual sexual intercourse. It takes place at Whitsuntide and is significantly called *dauwtropfen*, 'dew-treading'.³ Here there is perhaps a combination, natural enough, of the two methods. Rolling in the dew may be practised for various reasons.

In Spain the custom still exists among country folk of rolling naked in the dew of the meadows on Midsummer Day. It is regarded as being preventive of skin-diseases. The same custom, with the same reason, is found in Normandy, Périgord, and the Abruzzo.⁴ The vivifying power of a liquid generated under conditions of mystery is a sufficient reason for its use in medicinal and other magic. Attached to this use is a natural ascription of purifying power. It is worth noting that a good deal of the dew referred to in folklore and by poets is not dew, but water evaporated from leaves, and that this water is peculiarly pure. The people of Java are fond of washing the hair in dew to prevent greyness.⁵ The custom of washing the face with dew on May morning for the promoting of beauty is still common in Europe. In Nias, dew is employed medicinally, especially by the 'priests.' A 'spiritual' power is ascribed to it.⁶ In the Moluccas, various medicines are prescribed to be taken not in water but in dew.⁷ Among the Thompson Indians, part of the course of training undergone by boys at puberty, by way of acquiring a guardian spirit, is rolling naked in the dew, or washing the body with branches covered with dew.⁸

Kruijt is of opinion that in East Indian belief dew is regarded as the sweat of the earth, and that its magical powers may be thus explained. Certainly the Peco word for 'dew' also connotes 'sweat'; but the general considerations referred to above and the special connexion of impregnatory power are more probable reasons, though sweat in folk-belief and custom possesses magical properties of invigoration.

In connexion with vegetation, the idea of dew is crossed with ideas of magical bloom, and even of magical food, no less than of seed. The very ethereal quality of the liquid state of dew seems to invite such focusing of analogies. Thus, in the old English custom of gathering 'May,' the blossom of the hawthorn, and the dew from the grass, and bringing them home with music,⁹ the dew may be regarded as the spiritual analogue of the blossom. In the German May Day processions of the peasant youth, the dew is swept off the grass with a 'May-bush.'¹⁰ The miraculous bloom or seed of the fern which appears on Midsummer Eve, according to European folklore, is liable, when being gathered, to vanish 'like dew on sand' or mist in the air.¹¹ This is not a merely descriptive, but an effective, analogy.

The dew, in other words, is the concrete concomitant of the spiritual substance. It may be conjectured that the miraculous power, conferred by fern-seed, of discovering hidden treasure is derived from the jewel-like scintillations of dew-drops.

A good illustration of such homologies between the concrete and the spiritual is to be seen in the OT account of manna and its deposition. Like fern-seed, it came with mystery, and, like fern-seed, it was to be gathered according to rule. Its invariable antecedent was the dew, and, in the same way as it apparently crystallized out of the dew in the wilderness, so we may imagine the idea and the story of it to have crystallized out of the fluid notions concerning dew.

'At even,' says Jahweh, 'ye shall eat flesh, and in the morning ye shall be filled with bread. . . . And it came to pass at even, that the quails came up, and covered the camp: and in the morning the dew lay round about the camp. And when the dew that lay was gone up, behold, upon the face of the wilderness there lay a small round thing, as small as the hoar frost on the ground. And when the children of Israel saw it, they said one to another, 'It is manna (What is this?); for they wist not what it was.' When the sun waxed hot, it melted. It was 'like coriander seed, white,'¹ or the colour of bdellium.² The connexion with dew is more precisely noted in the second account: 'And when the dew fell upon the camp in the night, the manna fell upon it.'³ After eating the corn of the promised land, the Israelites found that the manna automatically ceased.⁴ It was 'the corn of heaven'; 'angels' food' (RV 'the bread of the mighty'), and from heaven it was 'rained down.'⁵ As was the case with the quails, and the water, and with the preservation of clothes, manna was a magical detail of a magically supported existence in the wilderness. The writer of Deuteronomy actually rationalizes it into moral instruction—'manna, which thou knewest not, neither did thy fathers know; that he might make thee know that man doth not live by bread only, but by every thing that proceedeth out of the mouth of the Lord doth man live.'⁶ Significantly enough, the people found it unsatisfying, and they murmured: 'We remember the fish, which we did eat in Egypt for nought; the cucumbers, and the melons, and the leeks, and the onions, and the garlick; but now our soul is dried away; there is nothing at all: we have nought save this manna to look to: 'there is no bread, and there is no water; and our soul loatheth this light bread.'⁷

The whole account, with its significant analogies, is important as illustrating the psychological process by which a concrete idea may take shape from visual perception aided by imagination. Fern-seed, which sparkles like fire, and vanishes like dew, is, we suggest, an imaginative product of dew, as elusive as its source; manna, we suggest also, is equally an imaginative product of dew, developed along another line—that of the ideas of food stimulated by starvation. Coming after or upon the dew, an ethereal light food from heaven, the food of angels, easily passing into intellectual pabulum, it is as elusive as dew in its behaviour and as unsatisfying in its results. But it supports life miraculously for those who are in a state of supernaturalism. Most certainly it is erroneous to base the story of manna upon such actual phenomena as the secretions of the *Tamarix mannifera* or other plants.⁸ The comparison with coriander seed amounts merely to its standing for the essence of bread.⁹

These ideas may be more closely illustrated. The people of Halmahera hold that dew is the food of spirits.¹⁰ In Minahassa it is said that the first man fed on dew.¹¹ Further, an essentially spiritual connexion is claimed for dew. The people last cited believe that the final end of the soul a man is to be merged in dew. The Balinese hold that the soul returns to earth, after being dissipated into the air by the cremation of the body, in the form of dew.¹² The Toradja belief is that the soul dies eight or nine deaths before it finally changes into water and disappears in mist.¹³ The

following beliefs are particularly significant. The Sea Dayaks report that souls die seven times after the death of the body.

'After having become degenerated by these successive dyings, they become practically annihilated by absorption into air and fog, or by a final dissolution into various jungle plants not recognized by any name.'¹

The Olo-Ngadju and other peoples of the East Indian Islands speak of the souls of the dead as passing into plants. The Mualang Daraks say that the soul after a time dies, and then descends upon the rice in the form of dew. The more souls there are to descend upon it, the richer is the rice-harvest.² In reference to manna, it may be noted that the East Indians believe that, if the soul of the rice be absent, the grain has no nutritive property; a man may eat it but will never be satisfied.³ The soul of the Lushai turns into water, and evaporates as dew. If dew falls on a man, his child will be a re-incarnation of the dead.⁴

Here the ideas of moisture in relation to life, and of unindividualized haze or mist, out of which individual forms are precipitated, meet again in dew. Thus, while the Hill Toradjas believe the soul to pass into a cloud, the Samoans believe it to be 'the daughter' of 'vapour of the land' which forms clouds; and the Tracey Islanders say that the first man was created out of vapour.⁵ Thus the descent of the soul to earth and its ascent, after the death of the body, to heaven have been, in the evolution of religious thought, not only compared to, but identified with, the rise and fall of the dew. The identification has served the complex purpose of explaining the process of dew-formation and that of the nutritive physiology of plants, and incidentally the origin and end of the soul of man. The Gorontalese of Celebes apply an instructive analogy to the relations of the four souls of man. The greatest of these resides in the brain, and is 'like the sea.' Part of it is separated in the form of moisture and produces dew. The ascending dew is *rahmani*; this is the second soul, *njawa rahmani*, residing above the heart. The dew which ascends to the sky is *rohani*, the third soul, 'lustre of breath,' residing in the heart; the dew which descends as rain is *djasmani*, the fourth soul, 'soul of the body,' residing in the whole body.⁶ This account illustrates the spiritual potentiality of the idea of dew.

There was a special development of the ideas of dew in both the Athenian and the Hebrew religions.

(1) In Athenian mythology, Herse (Dew) and Pandrosos (All-dewy) are daughters of Cecrops and Agraulos. A rite, termed Ἀρρηφορία or Ἐρσηφορία, was performed in honour of Athene. Little is known either of Herse or the rite which seems to bear her name, or of Pandrosos.⁷ The statement of Moeris, that the ἀρρηφόροι 'carried dew to Herse' in the *Arrhephoria* is uncorroborated.⁸ But the *arrhephoroi*, or *hersephoroi*, are verified as 'maidens trained in the service of Athene, and living near the temple of Athena Polias.'⁹ In the *Arrhephoria* they 'brought a mysterious offering by an underground passage from the temple of Aphrodite ἐν Κήποις,' not to Herse, or to Pandrosos, but to Athene. Farnell concludes that

'the fruits of the earth appear to have been in some way consecrated' to Athene. 'It is also evident that at Athens she

came into some contact with the earth-goddess. . . . To reconcile her cult with Athena's, it may well have happened that the latter goddess was given two of her titles,' namely, Pandrosos and Herse.

Pandrosos is thus no individual spirit, nor originally an epithet of Athene, but an epithet of the Earth Goddess, in reference to her dewy covering and its connexion with the growth of the crops. The ceremony embodying this connexion was transferred to the centralized deity of Attica—Athene. The dew-carriers are mentioned in inscriptions,¹ but there is no such verification of the existence of Herse. She is apparently a mere name, developed from the terms Ἐρσηφόροι and Ἐρσηφορία.² But it is a question what these terms themselves imply.

The story of Erichthonios being given to the three sisters, Herse, Pandrosos, and Agraulos, to nurse, Pandrosos alone being faithful to her trust, is explained by Miss Harrison as an aetiological myth, invented to account for the rite of Ἀρρηφορία or Hersephoria. The scholiast on Aristoph. *Lysistrata*, 64, observes: 'Some say, on account of the α, it is ἄρρηφορία, because maidens carry "nameless things" (ἀρρητα); others, on account of the ε, ἔρσηφορία, because maidens walk in procession in honour of Herse, daughter of Cecrops.' The terms δρόσος and ἔρση are also used for the young of animals, such as lambs and sucking pigs.³ A remarkable feature of the *Thesmophoria*, another ritual performed by women alone, and also in connexion with the fertility of the crops, was the casting of pigs into μέγαλα or δώματα, underground chasms, and the bringing out of the rotten flesh, presumably the following year. These services were performed by the *thesmophoroi*, and the flesh was used, as in many agricultural customs, as a magical fertilizer of the fields. Miss Harrison suggests that the ἔρσαι or δρόσαι 'carried' by the *hersephoroi* were young animals, and that they were used in a manner and for a purpose similar to those of the *Thesmophoria*.⁴ The *Arrhephoria* is certainly associated with the *Thesmophoria* and *Skirphoria*, and it is in accordance with the principles of myth-formation that, as she suggests, both the name Herse and the story of Erichthonios should have been invented to explain a rite that had become mysterious.

Frøller, on the other hand, had regarded Herse as a Dew Goddess, a personification of the Dew.⁵ Later German scholars regard her as a nymph of the same class as Auxo and Thallo—personifications of the 'growth' of the crops.⁶ No reliance is to be placed on the scholiast's reference to ἄρρητα. Any 'mysterious,' that is, ritual, object—even a branch laden with dew—might be styled ἄρρητον, just as much as a young animal or its flesh. And the word ἔρση has the forms ἔρση and ἔρση, hence ἄρρηφορία and ἔρρηφορία. ἔρση as a 'young thing' is a metaphor, *a priori* later in origin than a primitive agricultural ritual, and therefore unlikely to be the original meaning of the name of the ceremony. The scholiast on Aristophanes says: 'Maidens walk in procession in honour of Herse'; there is here no mention of dew, but he may have known that the maidens carried branches laden with dew, and omitted to mention the fact, branch-carrying being a regular detail of processions.

Ottfried Müller suggested that the *arrhephoroi* carried simply leafy branches wet with dew, symbolical of a petition for a supply of dew during the heat of summer.⁷

Thus we have a ceremony similar to the wide-spread European custom of carrying May boughs dipped in dew.⁸ In these and in the Athenian custom there may have been a magical demand for dew rather than a prayer for it, but the branch is the important object, the focus of the demand for growth and fruitfulness of the crops; and the dew may be merely an accessory. This explanation, on the whole, seems the most probable. Herse may be unreal as a deity, but the fact remains that the Athenian mythologists, if not the Athenian priests, actually personified the Dew, while the *hersephoroi* certainly carried something in procession. Though unverified, Moeris' statement may have hit the truth, and what they carried may have been dew. Here it is possibly significant that the *arrhephoroi* carried their offering from the temple of Aphrodite ἐν Κήποις. The dew-laden branches may have grown in the gardens of the goddess of procreation, and possibly the generative symbolism

of dew was a factor in the ritual (see above). The dew would thus serve to impregnate the fields.

In the case of Apollo *Hersos* at Vari, the epithet seems to be of the same character as *Pandrosos*.

(2) The post-Biblical literature and ritual of the Hebrews show an interesting development of the ideas of the OT concerning dew. The Book of Enoch, after describing the dwelling of the spirit of the dew, and the connexion between its clouds and the clouds of the mist,¹ speaks of 'winds coming from the middle of the twelve portals'; these bring 'beneficial dew of prosperity'; from other portals, 'hurtful dew' emerges, accompanied by locusts and other calamities.² So the Rabbinical writings state that 'in the sixth heaven, Makon, there are treasures of hurtful dews and of beneficial dewdrops.'³ A prayer is offered between *Pesah* and *Shābū'ōth* that God may preserve the people from the hurtful dews.⁴ The two loaves of bread 'waved' on *Shābū'ōth* are a symbolic petition to the Ruler of heaven and earth and the four winds, to withhold the unpropitious winds and dews.⁵ As for the dew of blessing, thus fluctuating between the material and the moral, it is said that, since the destruction of the Temple, no dew of unmixed blessing falls⁶—apparently on account of the cessation of the tithes and the heave-offering.⁷ Dew falls as a heavenly gift, and by the merit of no man.⁸ Yet only on account of Israel does dew come as a blessing upon the world; on account of Jacob or of Job.⁹ God promised Abraham under an oath never to let dew cease to bless his descendants, and therefore the words of Elijah could not stop its fall.¹⁰

The Dew of the Resurrection is a remarkable concentration of these ideas, originating chiefly from a passage of Isaiah: 'Awake and sing, ye that dwell in the dust: for thy dew is as the dew of herbs, and the earth shall cast forth the dead.'¹¹ The passage, 'Thou, O God, didst send a plentiful rain, thou didst confirm thine inheritance, when it was weary,'¹² was interpreted to refer to an incident at the giving of the Law:

'When God appeared amidst the trembling of the earth on Sinai, life fled from the people of Israel and from all the living people in the land of Israel; and the angels said: "Dost Thou desire to give Thy Law unto the dead or unto the living?" Then God dropped the dew of Resurrection upon all, and they revived.'¹³

This Dew of the Resurrection is stored up in 'Arabot, the highest heaven;¹⁴ and by it the dead are revived.¹⁵

In the modern Hebrew liturgies *Geshem*, 'rain,' and *Tal*, 'dew,' have an important place, though the prayers for them are 'regarded rather as an affirmation of the Divine control of the seasons.'¹⁶ On the first day of Passover, *Tal* is substituted for *Geshem*. On this and other occasions for *Tal*, the reader of *Musaf* puts on the white shroud and cap, as on the Day of Atonement. The Talmudists decided that the actual prayer for rain—'Give dew and rain for a blessing upon the face of the earth'—should be introduced only at the inception of the rainy season. The melodies accompanying *Geshem* and *Tal* are various throughout Europe, and are distinguished by a quaint charm.¹⁷

DHAMMAPĀLA.—This epithet means 'Defender of the Faith'; it has been chosen as an honorary title by Buddhist kings, and as their name in religion by members of the Buddhist Order, but laymen do not use it. As a royal title it has been traced only in N. India and Burma (*Buddhaghosuppatti*, 11, 21); as a name for *bhikkhus* it has been fairly prevalent in India and Ceylon from the 6th cent. B.C. down to the present day. A Dhammapāla is included among the *theras* ('elders') contemporary with the Buddha, to whom are ascribed the poems preserved in the *Therīgāthā*; and several others are mentioned as the authors of minor works of later date. The only one who played an important part in the history of the religion is distinguished from the others by the special title of *Āchariya*, 'the Teacher.'

In the colophons to those of his works that have so far been edited we find two statements: (1) that he claimed to have followed the traditional interpretation of his texts as handed down in the Great Minster at Anurādhapura in Ceylon; and (2) that his life was spent at the Badara Titha-Vihāra. And from the *Sāsana-vamsa* (p. 33) we learn that this place was in the Tamil country, not far from Ceylon. It would seem, therefore, that Dhammapāla was educated at the same university as Buddhaghosa, and that he was a Tamil by birth and lived and wrote in South India.

The first of these conclusions is confirmed by the published works of the two writers. They have very similar views, they appeal to the same authorities, they have the same method of exegesis, they have reached the same stage in philological and etymological science (a stage far beyond that reached at that time in Europe), they have the same lack of any knowledge of the simplest rules of the higher criticism. So far as we can at present judge, they must have been trained in the same school.

As to the second point—the birth and life of Dhammapāla in South India—we have a curious confirmation from outside. Yüan Chwāng visited Kāñchīpura, the capital of the Tamil country, in A.D. 640. The brethren there told him that Dhammapāla had been born there.

'He was a boy of good natural parts which received great development as he grew up. When he came of age, a daughter of the king was assigned to him as wife. But on the night before the ceremony of marriage was to be performed, being greatly distressed in mind, he prayed earnestly before an image of the Buddha. In answer to his prayer a god bore him away to a mountain monastery some hundreds of li from the capital. When the brethren there heard his story, they complied with his request and gave him ordination.'¹

It is true that the English translators of Yüan Chwāng use the Sanskritized form of the name (Dharmapāla). This would not necessarily show that the Chinese pilgrim applied the story to a person different from our Dhammapāla; for both he and his translators frequently give the Sanskritized form (which they imagine to be more correct) for Pāli names of persons and places. But Yüan Chwāng adds the title *Phusa* (that is, *Bodhisattva*). This shows that he applied the story to the teacher of his own teacher, a Dharmapāla who had been a famous dignitary of the university of Nālandā in North India, and who must have flourished at the end of the 6th century. To him he would naturally and properly apply this title, which was used among the Mahāyāna Buddhists in a sense about equivalent to our honorary degree of D.D.

But it is much more probable that the Kāñchīpura *bhikkhus* told the story of their own distinguished

¹ Watters, *Yüan Chwāng*, II. 226.

colleague, and that the pilgrim, who knew nothing of him, misapplied it.¹ In any case the two scholars are quite distinct. Their views differed as widely as those of a Calvinist and a Catholic; one wrote in Pāli, the other in Sanskrit; one was trained at Anurādhapura, the other at Nālandā; and the Pāli scholar was about a century older than the Sanskrit one, the one having flourished in the last quarter of the 5th cent., the other in the last quarter of the 6th.

The *Gandha-vamsa*, a very late librarian's catalogue, enumerates (p. 60) 14 works ascribed to Dhammapāla. Even the bare names are full of interest. Whereas Buddhaghosa commented on the five principal prose works in the Canon, seven of Dhammapāla's works are commentaries on the principal books of poetry preserved in the Canon, two others are sub-commentaries on Buddhaghosa's works, and two more are sub-commentaries on commentaries not written by Buddhaghosa. This shows the importance attached, at that period in the history of the orthodox Buddhists, to the work of re-writing in Pāli the commentaries hitherto handed down in the local dialects, such as Sinhalese and Tamil.

In his own commentaries, Dhammapāla follows a regular scheme. First comes an Introduction to the whole collection of poems, giving the traditional account of how it came to be put together. Then each poem is taken separately. After explaining how, when, and by whom it was composed, each clause in the poem is quoted and explained philologically and exegetically. These explanations are indispensable for a right understanding of the difficult texts with which he deals. The remaining three works are two commentaries on the *Netti*, the oldest Pāli work not included in the Canon, and a psychological treatise.

Of these 14 works by Dhammapāla, three (the commentaries on the *Therīgāthā* and on the *Peta*- and *Vimāna-vatthu*) have been published in full by the Pāli Text Society; and an edition of a fourth, his comment on the *Therīgāthā*, is being prepared. Hardy and Windisch, in their editions of the texts, have also given extracts from his comments on the *Netti* and the *Iti-vuttaka*.

It is evident, from Yüan Chwāng's account of his stay in the Tamil country, that in Dhammapāla's time it was preponderantly Buddhist, and that of the non-Buddhists the majority were Jains. It is now all but exclusively Hindu. We have only the vaguest hints as to when and how this remarkable change was brought about.

T. W. RHYE DAVIDS.

DHARMA.—Sacred law and duty, justice, religious merit. This is one of the most comprehensive and important terms in the whole range of Sanskrit literature. Indian commentators have explained it as denoting an act which produces the quality of the soul called *apūrvā*, the cause of heavenly bliss and of final liberation. In ordinary usage, however, it has a far wider meaning than this, and may denote established practice or custom of any caste or community. One of the six systems of philosophy, the *Pūrvamīmāṃsā*, expressly professes to teach *dharma*. The special manuals of the sacred law, of which the Code of Manu is the most familiar example, are called *dharmaśāstra*, 'lawbooks,' or *smṛti*, 'records of tradition.' *Dharma* personified is the god of justice and judge of the dead. *Adharma*, the god of injustice, is his adversary. The ordeal of *Dharma* and *Adharma* consists in drawing lots from an earthen vessel.

This question is discussed at length by E. Hardy in *EDMG* II. (1895) 100-127.

One lot contains a white figure of *Dharma*, and the other a black figure of *Adharma*. In Buddhism, *Dharma* is one of the three members of the trinity (*triratna*, 'the three jewels'): Buddha, the law, and the priesthood. The worship of *Dharma*, which is largely prevalent in Western Bengal at the present day, appears to be a remnant of Buddhism. See *Census of India*, 1901, vol. vi. p. 204; cf. LAW AND LAWBOOKS (Hindu). J. JOLLY.

DHINODHAR.—A sacred hill in Western India situated in the State of Cutch. A ridiculous legend explains the name to mean 'the patiently bearing,' because the saint Dharmnāth, weighed down by the load of his sins, determined to mortify the flesh by standing on his head upon some sacred hill. Two hills burst asunder under the weight of his iniquities; but Dhinodhar stood the test, and thus gained its name. The saint founded a monastery here and established the order of the Kanphatā, or 'ear-pierced' Jogis. The stone on which the saint is reported to have done penance is smeared with vermilion and venerated, and the head of the community when he comes to worship is received with adoration by the people of the neighbourhood and by pilgrims who flock to the holy place.

W. CROOKE.

DHYĀNA (Pāli *jhāna*).—1. Meditation, or *dhyāna*, in Sanskrit.—This is a religious practice which presupposes a life in retirement, and concentration of mind upon a single thought. In the Rīgvedic period we find penance (*tapas*) or bodily mortification,¹ but in the Upaniṣad or post-Upaniṣad religious schools the idea was transferred from body to mind, until it took the form of *dhyāna*, which began with a meditation on the sacred syllable *Om*. The object, method, and other details of meditation vary in different schools, but we may safely say that it has been and is the universal method of the mental culture of all Indian religious schools. The use of the word *dhyāna*, too, is not very definite even in the Upaniṣads themselves. Sometimes it is different from *yoga* (concentration), which is a general term for such practices, or synonymous with it, or sometimes it is a part of the *yoga* practice. See art. YOGA. We shall here limit ourselves to the idea of *dhyāna* in Buddhism.

2. *Dhyāna* and *śamādhi*.—In Buddhism *dhyāna* forms an important factor in religious practice. First of all, we must clearly distinguish *dhyāna* (meditation) from *śamādhi* (absorption), for a confusion of the two terms often leads to hopeless misunderstanding. Generally speaking, meditation on an object becomes absorption when subject and object, the meditator and the meditated, are so completely blended into one that the consciousness of the separate subject altogether disappears. To attain Arhat-ship is to reach the tranquil state of *śamādhi* without being affected at all by outward environment and inward sinful thought. An Arhat is accordingly called the *Samāhīta* ('tranquil'). *Samādhi* forms the fourth factor of the Five Forces (*bala*) and the Five Faculties (*indriya*); the sixth of the Seven Constituents of Bodhi (*bo-dhyaṅga*); and the eighth of the Noble Eightfold Path (*mārga*).² To attain *śamādhi* is therefore the sole object of Buddhists, and *dhyāna* is one of the most important means leading to that end. The common classification of *dhyāna* into four degrees (see below) probably prevailed already in the pre-Buddhist period. At any rate the mention of the fourfold *dhyāna* in the *Mahābhārata* (XII. cxv. 1), the counting among heretics of

¹ e.g. Rīg. x. 109. 4, 154. 2, etc.

² See *Mahāvīyapatti*, §§ 41-44; and Childers, *Pāli Dict.* 1875, s.v. 'Bala,' 'Indriya,' 'Bojjhaṅga,' and 'Maggā,' and of art. SAMĀDHI.

those who regard each of the four *dhyānas* as the state of Nirvāṇa in the *Brahma-jāla-sutta*, and the reference to a Rṣi, senior to the Buddha, practising the eight *śamāpattis* (four *dhyānas* and four *arūpyas*) in the *Jātaka*, seem to point to the fact that the practice of the four *dhyānas* was common to both Brahmins and Buddhists. It was the Buddha's part to adapt it by adding some further steps to the four *dhyānas*.¹

3. Religious practices preliminary to *dhyāna*.—*Dhyāna*, as stated above, is divided into four degrees in Buddhism. Even the first and lowest of the four *dhyānas* corresponds in its quality to a state higher than the sixth of the eight constituents of *yoga* (*yoga-aṅga*). To reach the first *dhyāna* several preliminary practices are needed. These correspond to the first five constituents of *yoga*. First of all one has to keep precepts and rules (*śīla*) laid down by the Buddha (*yama* of the *yoga-aṅgas*); secondly, to keep one's body and mind pure and serene, living in solitary retirement away from the people, in a forest or a cave (*niyama*), and sitting cross-legged, always thinking on a religious subject (*āśana*). There are several methods of preparatory meditation, according to the ability of the meditator. We shall give a few examples. A quick-tempered novice should practise the meditation on love (Pāli *mettā-karūṇā-bhāvanā*), in which he is to regard all sentient beings as his parents or brothers, desiring their happiness and welfare, as all the good he would seek for himself. A novice who needs concentration of attention should practise at first the method of counting the number of his inspirations and expirations (Pāli *ānāpāna-sati*, corresponding to the *prāṇāyāma* of the *yoga-aṅga*). Another novice whose impure desire is hard to suppress should meditate on the impurity and impermanence of the human body (Pāli *asubhā-bhāvanā*). Another novice whose mind is stupid should practise self-culture by meditating on the Twelve Chains of Causation. In this way a Buddhist should give himself to some kind of meditation at the outset. Ten *kaṣīnas*,² ten *anusati*,³ four or six *anussati-ttānas*,⁴ in fact, the processes of the so-called *kamma-ttānas* (analytic meditation), are all preparatory to the practice of the right *dhyānas*.

4. Details of the four meditations.—When one gets accustomed to a concentration of mind amounting to a suppressing of the senses, one gradually attains the state of ecstasy, which is often compared with the feelings of a debt being paid off or of a prisoner being released (e.g. *Sāmañña-sutta*). Roughly speaking, this state of ecstasy is *dhyāna*, yet in it we have still four successive states. (a) The first *dhyāna* is a state of joy and gladness born of seclusion, full of reflexion and investigation, the meditator having separated himself from all sensuality and sin. (b) The second *dhyāna* is a state of joy and gladness born of deep tranquillity, without reflexion and investigation, these being suppressed; it is the tranquillizing of thought, the predominance of intuition. (c) In the third *dhyāna* the meditator is patient through gladness and the destruction of passion, joyful and conscious, aware in his body of that delight which the Arhats announce, patient, recollecting, glad. (d) The fourth *dhyāna* is purity of equanimity and recollection, without sorrow and without joy, by the destruction of previous glad-

ness and grief, by the rejection of joy and the rejection of sorrow.¹

Childers (p. 160) explains the four states with reference to the process of meditation:—'He concentrates his mind upon a single thought. Gradually his soul becomes filled with a supernatural ecstasy and serenity, while his mind still reasons upon and investigates the subject chosen for contemplation; this is the first *jhāna*. Still fixing his thoughts upon the same subject, he then frees his mind from reasoning and investigation, while the ecstasy and serenity remain, and this is the second *jhāna*. Next, his thoughts still fixed as before, he divests himself of ecstasy, and attains the third *jhāna*, which is a state of tranquil serenity. Lastly, he passes to the fourth *jhāna*, in which the mind, exalted and purified, is indifferent to all emotion, alike of pleasure and of pain.'

This has been very conveniently summed up by Pāli commentators as follows:—'The first *jhāna* is accompanied by reflexion (*vitakka*), investigation (*vicāra*), joy (*pīṭi*), gladness (*sukha*), and attention (*chittakaggatā*); the second *jhāna* is accompanied by joy, gladness, and attention; the third *jhāna* is accompanied by gladness and attention; the fourth *jhāna* is accompanied by indifference (*upekha*).'

The four thus form progressive steps of meditation in which we can go up step by step. Each of the first three is further divided into three orders—initial (*paritta*), medial (*majjhima*), and final (*pariṇā*); the fourth *dhyāna* alone is the immovable state, free from all the eight troubles—inspiration, respiration, reflexion, investigation, sorrow, pleasure, pain, and joy.

The Buddhist cosmological arrangement of *Rūpa-loka* (world with form), divided into sixteen heavens, is made to suit those who have attained the four *dhyānas*, and who can freely enjoy the heavenly life either before or after death. The state of *saṃācchi* resulting from each of the four *dhyānas* determines one's position in the heavens, which are generally assigned as follows:—

Rūpa-loka-heavens.²

1. Brahma-pārisajjā devā	First Dhyāna heavens.
2. Brahma-purohitā	
3. Mahābrahmā	
4. Paritābhā	Second Dhyāna heavens.
5. Appamānābhā	
6. Ābhassarā	
7. Paritta-subhā	Third Dhyāna heavens.
8. Appamāna-subhā	
9. Subha-kinnā	
10. Vehapphalā	Fourth Dhyāna heavens.
11. Asañña-sattā	
12. Avihā	
13. Atappā	
14. Sudassā	
15. Sudassī	
16. Akanitthā	

5. The effect of meditation.—The aim of meditation is the attainment of Arhat-ship, perfect enlightenment, which possesses the following merits.

(a) Extinction of desire (*tanhā*). The fickle thought and indulgence of physical power produce sin and illusion, which are the chief obstacles to the acquisition of Arhat-ship. The complete annihilation of sinful thought, i.e. the state of the fourth meditation, will lead to perfect enlightenment, the highest aim of the Buddhist. The first three *dhyānas* therefore belong to *sekho* (the first seven grades of the Holy Paths), while the fourth belongs only to an *asekho*, i.e. an Arhat.

(b) Consolidation of knowledge (*ñāna-dassana*). The practice of *dhyāna* will naturally lead to the easy concentration of the mental faculties on a certain thought, and strengthen special functions proper to the consciousness. The right understanding of the Four Noble Truths (*ariya-sacca*), the cultivation of the four *appamāññā*,³ etc., can

¹ *Digha-nikāya*, I. 20-28, 45-46; *Zaḷita-viṭṭara*, ed. Mitrā, p. 147.

² Childers, s.v. It is a mystic meditation in which one reduces the universe to any of the ten predominant ideas, viz. earth, water, fire, air, ether, blue, yellow, red, white, black.

³ Childers, s.v. 'Kammaṃphāna.' It is a remembrance of Buddha, *dharma*, *saṅgha*, precepts, gifts, gods, breaths, body, death, and nirvāṇa.

⁴ Childers, s.v. It embraces recollections of Buddha, *saṅgha*, *dharma*, precepts, gifts, and gods.

¹ Rhys Davids, *Buddhism*, London, 1899, pp. 175-176.

² Buddhist cosmology assumes the existence of three heavenly worlds: (1) *Kāma-loka* (world of love), consisting of six grades; (2) *Rūpa-loka* (world of form), in sixteen grades; and (3) *Arūpa-loka* (world without form), in four grades. The last can be enjoyed only by one who has reached Arhat-ship. See, further, art. COSMOLOGY AND COSMOLOGY (Buddhist).

³ *Appamāññā* is the unlimited exercise of the qualities of friendliness (*mettā*), compassion (*karuṇā*), goodwill (*moditā*), equanimity (*upekha*).

be attained only by the practice of *dhyaṇa*. Especially the all-important *appamaññā*, which is common to Buddhism and the *yoga* philosophy, can be exercised only by the medium of *dhyaṇas*. In short, the attainment of knowledge cannot be perfectly accomplished, according to the Buddhist theory, without practice of meditation.

(c) Acquisition of superhuman faculties (*iddhi*). There are six supernatural powers (*abhiññā*), viz. various magical powers (*iddhividhā*), divine ear (*dibbasota*), divine eye (*dibbachakhu*), knowledge of the thought of others (*paracittaviññāna*), knowledge of the former existences (*pubbenivāsānussatiññāna*), and knowledge which causes the destruction of human passion (*āsavakkhaya-kara-ññāna*). These may be perfected by meditation. The *Yogins*, too, expect *vibhūti* (superhuman faculties) by means of meditation.

(d) Enjoyment of the peace of *dhyaṇa*. Meditation gives the tranquillity of rest. The dying Buddha is said to have sunk in meditation and passed all its steps forward and backward, till at last he reposed at the fourth meditation, and then went into the Great Decease (*Parinibbāna*).¹ *Dhyaṇa* is practised by one with the purpose of cultivating oneself, but at the same time with the aim of reposing oneself in peace, utilizing the result of it. Therefore it is sometimes called the 'practice of great enjoyment' (cf. *Brahmavihāra*).

6. Development of the idea of meditation.—*Dhyaṇa* in primitive Buddhism is a means of attaining *samādhi*. In the Mahāyāna school its scope has been very much widened. The *dhyaṇa-pāramitā*, the fifth of the six *pāramitās* (perfections) is only the way for the Bodhisattvas or Mahāyānists, but not for an Arhat or Hinayānist. One of Nāgārjuna's works² enumerates sixteen kinds of *dhyaṇa* confined to Bodhisattvas. Asaṅga's *Yogācārabhūmi* mentions nine *dhyaṇas*, and again subdivides them into thirty-nine.³ Further, in the *Laṅkāvatāra sūtra* (ch. 2), *dhyaṇa* is divided into four: (1) *bālāpichārika*, 'practised by ordinary persons'; (2) *arthapra-vichaya*, 'contemplating of objects'; (3) *tathatālambana*, 'meditating on Truth'; (4) *tathāgata*, 'meditation of Buddha.' The four *dhyaṇas* of primitive Buddhism as well as those of the *Yogins* are all included in the first category, the remaining three being a development in the Mahāyāna schools.

The ideal of early Buddhism is the equilibrium of morals (*śīla*), meditation (*dhyaṇa*), and knowledge (*prajñā*); but in later Buddhism the balance was not supposed to be an important feature for a Buddhist, and meditation came to have more weight than the other two factors, until in China and Japan there arose a sect, the Zen (Japanese for *dhyaṇa*), in which it is the most essential part of the entire teaching. This sect has been gaining ground more and more, especially among the upper classes. See art. ZEN.

LITERATURE.—The literature has been indicated throughout the article.

M. ANESAKI and J. TAKAKUSU.

DIGAMBARAS.—The Digambaras, also called Digvasanas, form one of the two branches of the Jains. The name, lit. = 'clothed in the quarters of the sky,' designates them as naked monks, in contradistinction to the monks of the other branch of the Jains, the Śvetāmbaras, who wear white clothes. There is very little difference between these two branches as regards the creed; indeed, one of the most authoritative books of the Digambaras, the *Tattvārthadhigama Sūtra* by Umāsvāti, is also one of the standard books of the Śvetāmbaras, and its author most probably was a Śvetāmbara.

The peculiar tenets of the Digambaras are the following. (1) Perfect saints (*kevalins*), such as the Tirthakaras, live without food. (2) The embryo of Mahāvira, the last Tirthakara, was not removed from the womb of Devānandā to that of Trisālā, as the Śvetāmbaras contend. (3) A monk who owns any property, e.g. wears clothes, cannot reach Nirvāṇa. (4) No woman can reach Nirvāṇa. Though, therefore, the difference in matters of belief between the two sects is, from our point of view, rather trifling, still the division between them is very marked. The following points deserve to be specially noticed. The Digambaras disown the canonical books of the Śvetāmbaras, and contend that they have gradually been lost during the first centuries after the Nirvāṇa of Mahāvira; accordingly they have no canonical books of their own. In consequence of their having, in early times, separated from the other sect and developed independently of it, the Digambaras have an ecclesiastical as well as a literary history of their own, and have religious ceremonies, especially with regard to the laity, which differ from those of their rivals.

As regards the origin of the Digambara sect, it is ascribed by the Śvetāmbaras to Sivabhūti, who started the heretical sect of the 'Botikas' in 609 after the Nirvāṇa, or A.D. 83. This report is denied by the Digambaras; they maintain that they have preserved the original practices, but that, under the eighth successor of Mahāvira, Bhadrabāhu, a sect with laxer principles arose; and that this sect, which was called that of the Ardhaphālakas, developed 136 years after Vikrama, or A.D. 80, into the present sect of Śvetāmbaras (*ZDMG* xxxviii. [1884] 7 ff.).

The Digambaras are most numerous in Southern India, where they must have held an important position in the early centuries of our era; for in the literature of the Dravidian people the influence of Jainism is admitted by the specialists. It may be mentioned that the Digambaras have an extensive literature of their own, chiefly in Sanskrit, which goes back to a greater antiquity than that of the Śvetāmbaras, if we except the canonical books of the latter. For further details, the reader is referred to the art. JAINISM.

H. JACOBI.

DINKA.—I. Geographical distribution and organization.—The Dinka are a congeries of independent tribes spread over a vast area, stretching from Renk in the north (scarcely 300 miles south of Khartum) to within 100 miles of Gondokoro, and reaching many miles to the west in the Bahr el-Ghazal Province. All these tribes call themselves *Jieng* or *Jenge*, corrupted by the Arabs into *Dinka*; but no Dinka nation has arisen, for the tribes have never recognized a supreme chief, as do their neighbours the Shilluk, nor have they ever been united under a military despot, as the Zulus were united under Chaka. They differ in manners and customs and even in physique, and are often at war with one another. One of the most obvious distinctions in habits is between the relatively powerful cattle-owning Dinka and the small and comparatively poor tribes who have no cattle and scarcely cultivate the ground, but live in the marshes in the neighbourhood of the Sudd, and depend largely for their sustenance on fishing and hippopotamus-hunting. Their villages, generally dirty and evil-smelling, are built on ground which rises but little above the reed-covered surface of the country. The members of these poor tribes call themselves Moin Tain, i.e. 'Tain people,' *tain* meaning a piece of dry ground in the midst of the marshes; and, although many quite distinct tribes live in the marshes and lead the life this habitat entails, their cattle-owning neighbours

¹ Cf. Warren, *Buddhism*, Camb., Mass., 1896, p. 109 f.

² Nanjio, no. 1181.

³ *Ib.*, no. 1170, ch. 42.

speak of them all as Moin Tain, just as they speak of themselves by their tribal names, e.g. Agar, Bor, Aliab, and Shish.¹

As there has been room for considerable modification in the development of those common ideas which lie at the root of the social organization and religious beliefs of all Dinka, the writer of the present article indicates the source from which his information was obtained, whenever there is any probability that a custom is not universal among them. The information is derived principally from members of the following tribes: (1) the Shish, living near Shambe in the region of the Sudd; and (2) the Bor Dinka and the Chiro and Ngong Nyang tribes of the Moin Tain, living some 20 to 30 miles to the south of the Sudd. He has also had the opportunity of discussing various matters with some very intelligent Niel Dinka from the neighbourhood of the Khor Adar, near Melut, north of Kodok; with the Nok Dinka of the neighbourhood of Lake No; and with some Agar Dinka from the Bahr el-Ghazal Province serving in the 5th Sudanese Battalion.

Each community is largely autonomous, under the leadership of a chief or headman (*bain*), who, though primarily a spiritual ruler, controls the village with the help of the elders. The actual authority exerted by the *bain* varies enormously; in many communities he is little more than the local magician, but in one community in each tribe he is the hereditary rain-maker, the most important man in the tribe, who is consulted and deferred to on every occasion, and whose wish is law. Except among the Tain tribes, cattle form the economic basis of Dinka society; they are the currency in which bride-price and blood-fines are paid; and the desire to acquire a neighbour's herds is the common cause of those inter-tribal raids which constitute Dinka warfare.

2. Totemism.—The Dinka tribes are divided into a number of exogamous clans which the Bor Dinka call *ut*, the Tain and Aliab *gol*, and the Shish *deb*. The meanings of these words cannot be discussed here, though it is significant that among the cattle-owning tribes these same terms are also used for the cattle kraals of their clans. The Dinka are totemistic, and the large majority of their clans speak of certain animals as their 'ancestors', *kwar* being the word used by the Tain tribes. Usually the *kwar* has nothing to do with a man's personal name (one man whose name signified hyena had a crocodile as his *kwar*), but, in the words of one of the writer's Tain informants, it is the 'animal who is the spirit (*jok*) of the clan (*gol*).² Further, *ruai*, the ordinary word meaning 'related', is used when speaking of the bond between a man and his *kwar*, i.e. they are *ruai*, 'relatives.' No man injures his *kwar* animal, but all respect it in various ways. Sometimes the *kwar* is a plant, as among some Agar and Shish clans, who treat the totem plant with much the same reverence as is commonly shown to the totem animal. Besides these fairly typical totem ancestors, there are clans whose totems (*kwar*) do not belong to the animal kingdom; thus the Mai clan of the Bor Dinka have fire as their totem, and in this case there is no story of direct descent from fire. Certain clans have as *kwar* heroes to whom more than human wisdom is attributed, or who came among them under circumstances that betoken that they are superhuman. The clans are usually designated by the name of their (reputed) first human ancestor; comparatively few are spoken of by the name of their animal, though there is a Niel (snake) clan, and even a Niel tribe, in the neighbourhood of the Khor Adar Dinka.

¹ The writer takes this opportunity of expressing his thanks to the Rev. Archibald Shaw, in charge of the C.M.S. station at Malek, for his invaluable help among the Tain and Bor Dinka, whose language he speaks fluently; to him he is indebted for the translation of the majority of the Dinka words and phrases in this article. No attempt has been made to do more than to reproduce very roughly the sound of the Dinka words. In pronouncing *c* and *j* a Dinka presses the tip of his tongue into the gap left by the removal of his lower incisor teeth, and it seems doubtful whether there is a true *s* sound in Dinka, so that 'Shish' might be written (probably with a nearer approach to accuracy) 'Chich' or 'Twich.'

VOL. IV.—45

Most of the Dinka clans whose *kwar* is an animal derive their origin from a man born as one of twins, his fellow-twin being an animal of the species which is the totem of the clan. Sometimes the association is not quite so close, in which case the totem animal usually lays certain commands upon one of the members of the clan, offering in return certain privileges. Commands and privileges alike show the close relationship existing between the animal and the man to whom he speaks, who is traditionally looked upon as the ancestor of the clan. Although children take their father's totem, they respect their mother's totem animal or plant, and an animal may be avoided for several generations for this reason. Thus, a man whose paternal grandmother had the poisonous snake *among* as totem said that, if he saw any one kill a snake of this species, he would bury it, because it was the *jok* of his father's mother. Further, it is customary for men and women to avoid eating their spouses' totem animal.

The following information concerning the origin of their totems was obtained from men of the Ngong Nyang tribe. It will be noted that the clans are not called by the name of their totem animal, but by that of their legendary human founder.

Gol s Mariak.—This clan has as totem the snake (*niel*). Long ago a snake came into the hut of a man named Mariak, and there gave birth to its young. The snake spoke to Mariak, telling him not to hurt it or its children: 'If you see a man hurt one of my children, tie the mourning band of palm-leaf round your head.' Another informant who belongs to this clan said that his snake would come into his hut at night and talk to him. He declared that this did not occur in a dream, but that the snake really entered his hut, and he offered it boiled fish or hippopotamus meat, turning this out on the floor of the hut for the snake to eat. He said that he occasionally sacrificed a goat to his snake and made offerings of goats' milk. Another Ngong Nyang man gave the following account of his conduct towards snakes of the *aro* species, his mother's totem animal. If he saw one of these snakes in the forest, he would sprinkle dust on its back, for otherwise the snake might upbraid him for lack of friendliness. If the snake were angry and tried to bite him, dust sprinkled on its back would propitiate it; but, if he could not appease it and it bit him, he and the snake would both die. If the snake bit a man of a strange clan, the man would die, but not the snake, for the snake and the folk of foreign clans are not related (*ruai*). His children show the same reverence for this snake as he does, and so also do all descendants of one Nyal, with whom the snake first met. Nyal was sleeping in his hut when a snake (*aro*) crept in, and, seeing him sleeping, slipped in between his body and the ground for warmth. Nyal woke up, but the snake did him no harm. Then Nyal took some fat and put it upon the snake's tongue, which so pleased it that it stayed in the hut many days. Nyal fetched a *tiet* (on whom see below, § 4), and the snake went into the throat of the *tiet*, and said: 'I do not desire any evil; do you give me fat like this, and I shall be well pleased.'

Gol Akon Chang Jurkwai.—Akon Chang Jurkwai was the name of the boy born to one Nyana-jok Alérjok as one of twins, his fellow-twin being an elephant. The boy was brought up in the village in the usual way, but the elephant was turned loose in the jungle.

Gol s Luel has the crocodile for totem. Long ago Luel found the eggs of a crocodile; he put them in his canoe, and, when he reached home, buried them under the floor of his hut. One night, as the eggs were on the point of hatching, the old crocodile came and scratched them up, and then led the young to the river. Before leaving the hut, the crocodile said to Luel: 'Do not hurt us, and we will not hurt you. Wear mourning on your head and stomach for the crocodile, if any of you see another man kill one.' A man of this clan will not hesitate to swim in the river even at night, for the crocodiles will not hurt him.

Gol s Yukwai s Lukab s Lerkwé has the hippopotamus as totem.

Gol s Fichol has the lion as totem, the founder of this clan having been the twin-brother of a lion. One Choh, a man who lives in Yekakori village, belongs to this clan. When others have to barricade themselves in their houses, he can sleep out in the open. When a lion kills game, it calls to Choh at night, who goes out next morning and finds the meat; and, when he kills a hippopotamus, he leaves some of the meat in the forest for the lions. If Choh were not of the party, no one would touch a lion's kill, for to do this would offend the lion, who would then attack them; but, if Choh were with them, no one would hesitate to take the meat. If a lion suffered from a splinter of bone or portion of gristle becoming wedged between its teeth, it would roar round the hut in which Choh lay, until he came out and removed the source of its discomfort.

Similar beliefs occur among other Dinka tribes. The Rama clan of the Niel tribe derives its name from that of an ancestor

who was born as one of twins, his fellow being a snake called *Gor*. *Gor* was placed in a large pot of water, but he soon died; so a bullock was killed, and the body of *Gor* was prepared for burial by being smeared with dung and wrapped in the skin of the sacrifice. This was at Anako, where there is still a shrine to which sick people go in order to sacrifice. A Shish man having as totem the poisonous snake among said that, though this snake might bite him, the wound would give him little trouble, and he would certainly not die, as would men of other clans.

The Niel Dinka have a number of stories concerning animal ancestors which refer to a time when animals and men who had long been associated together in groups began to separate. When each class began to go its own way, it was thought well that men should know which animals had been their particular friends.

One of these stories relates that once, long ago, a woman lay sleeping, when a hyena ran up and leapt over her. Some of her people wanted to kill the animal, but others restrained them, saying that it was there for some wise purpose. When her child—a boy—was born, he jumped like a hyena, so he was named *Den*, which is one of the names of the hyena, and his descendants have the hyena as their totem animal.

According to the Niel, all Dinka recognize two kinds of lions, viz. man-eaters, which are not considered relations even by men of the lion totem; and a cattle-eating variety, which the lion men believe to be of one blood with themselves. The lion people occasionally feed the cattle-killing lions. They kill a sheep and cut it into joints, which are placed upon an old bullock skin, taken a little distance from the village, and left there. The clansmen pray that the lions may come and eat; but, if the food has not been taken after a few hours, it is eaten by the men themselves. Man-eaters are killed without scruple, when opportunity occurs. Fox men feed their totem animal, throwing down fragments of meat on the outskirts of the village; and hyena men treat hyenas in the same way. It is said that formerly it was a common practice to expose pieces of meat where the totem animals could find them, and that sacrifices were offered to them; these customs, however, seem to be observed no longer, though it is alleged that they might still be performed in times of great difficulty and danger.

The writer has no record of plant totems among the Tain Dinka, but there is a tree called *ruat*, bearing fruit supposed to resemble a woman's breast (the Sudanese Arabs call it *Abu shutūr* for this reason). Among the Agar and Shish Dinka this tree is considered an ancestor, and is treated with the respect shown to other totems. Two Agar men, whose mothers had *ruat* as their totem, would neither come into any contact with the tree nor use its fruit as a ball, as other clans would do. If they disregarded this prohibition, their eyes would become inflamed. Among the Shish Dinka there is a clan, or perhaps a family, which claims descent from a girl who was twin to a gourd plant. Its members do not care to drink from a newly made gourd-vessel, and apparently do not grow gourds, or, if they grow them at all, do so sparingly.

The account given above, of the reciprocal favours conferred by lions and by Chol of the lion clan, raises the question whether all folk of this clan possess the powers exercised by Chol and enjoy the same privileges. The writer was not able to investigate this matter among the Tain Dinka, but some Niel Dinka gave the fullest details of how they would leave flesh in the jungle for their carnivorous totem animals, without receiving any corresponding favours from the latter. This suggests that Chol was regarded as possessing certain powers not shared by all his clansmen, an idea which is strengthened by information given by some Agar Dinka from the Bahr el-Ghazal, one of whom said that his totem (which he called an ancestor) was a small bird, *amur*, which damages the corn crop. No doubt *amur* is one of the small birds called *dura*-birds in the Sudan, thousands of which infest the corn fields, where they do much damage. When these birds become dangerous to the unripe crop, the informant's grandfather would take a head of *dura*, some porridge made from the old crop, and two sheep, one black, the other white. The white sheep was killed and the meat given to the men of other clans; the black sheep was thrown into the river with the porridge and the unripe head of *dura*. Although the sheep was not tied up, it was said to sink

immediately, for the 'river people'¹ took it. The man who makes the porridge does not taste it, nor does he eat of the flesh of the sheep given to the other clans. This ceremony prevents the birds from injuring the crop. It is performed by one man only, who is head of the clan, and who would teach the procedure to one of his sons, or perhaps to a brother.

Among the Dinka living in the neighbourhood of the Khor Adar there are certain clans which do not trace their descent to an animal, but to a human being possessed of super-human or non-human qualities.

Long ago, men and women of the 'river people' would sometimes come out of the river, marry, and settle down in the neighbouring villages. The description of the coming to land of one of the 'river people' is curiously like the birth of a child; the river becomes agitated, and the waters rise up around a human being whose umbilicus is joined by a cord to a flat object beneath the water. The cord is cut, and bullocks are killed and thrown whole into the river; then the river man or woman is brought, with more sacrifices, to the village. Their descendants should sacrifice on the bank, throwing a live cow into the river after giving it a pot of milk to drink, into which the old and important men of the clan have spat. At the present day the men of the Faiyer clan of the Denjol tribe, who trace their descent from a river man, do no more than throw the head and bowels of a bullock into the river, cooking the meat and eating it themselves.

The Boweng clan of the Niel Dinka appear to have the river for their totem.

Long ago a party coming to the river saw a beautiful girl called Alek borne up by the water and carried on to the bank. She accompanied them to the village, but, when they tried to touch her, she became liquid as water, so, taking bullocks and cows, the villagers escorted her back to the river, where they sacrificed the cattle. As they did this, the girl disappeared into the river, taking a calf with her. At the end of the rains, the Boweng clan still take a cow and her calf and a bullock, and kill the latter on the river bank, while the cow and calf are thrown alive into the river, which takes them away, so that they are never seen again.

There is some evidence that, when a clan is particularly strong in a given locality, its members tend to forget that their totem is but one among many, so that they may show annoyance if other folk do not treat it with respect.

The Shish in the neighbourhood of Shambe said that the first people to settle there were snake men, and that for some time they formed the majority. After a time the crocodile clan became powerful, and, because its members killed and ate snakes, the men of the now weakened snake clan left the country and went to live among a group of Aliab Dinka, where they were free from the horrible odour of cooked snake's flesh. More recently a Shish family, belonging to a clan that does not eat the fish *shur*, left their own tribe and went to live at a place called Dot, among a group of Bor Dinka who also respect this fish.

Besides these clans with more or less typical animal ancestors (totems), certain groups of people, often larger than a clan, revere particular objects which they also speak of as their 'ancestor.' A stone called Madwich, which the Tain say fell from the sky within the past twenty years, is an example of this. The group that reveres Madwich is smaller than a clan, for its cult appears to be limited to members of a part of the Pariak clan (of one of the Tain tribes), whose totem is the snake (*niel*).

A youth of about twenty, who was named Madwich after the meteorite, said that his father sacrificed many oxen when the stone fell, though the rest of the village did not concern themselves so deeply, and that at the present time his family alone pay constant attention to Madwich. The stone, which is now at Pariak village, fell before his birth, but after that of his elder brother. When it fell, 'every one,' including his parents and even the dogs, except his elder brother, became *muol*. This word is applied to the possession of a *tiet* by a spirit; perhaps it has a slightly different meaning in this instance; at any rate, the fact that the informant's elder brother did not become *muol* was taken to show that he was 'a child of the stone.' When the stone fell, a few men and many cattle died of a disease called *abul pao* (lit. 'swelling of the heart'), which was considered to be due to the *jok*, and sacrifices were offered in the usual way. The coming of the meteorite Madwich is said to have been prophesied by a *tiet* called Jalang, who was killed during an Arab raid; and the stone itself was thought to have the powers and attributes of an animal ancestor. Thus it might make men ill in order that a sacrifice might be offered, and it would communicate its wishes through a *tiet* in the usual way, asking that a bullock should be killed.

Another meteorite, said to have been found near the Tain village of Agno, is called Dek, and is regarded as the 'ancestor' of the two clans Jakchir and Chulhi living in the village, whence have sprung settlements which in turn have given rise to other

¹ On the river people, see, further, pp. 719^b, 711^a.

villages, the inhabitants of which together constitute the Chiro tribe. All the Chiro clan revere Dek, though their members have animal totems of the usual Dinka type.

Some of the Bor Dinka speak of Lerpiu as their *kwar*; but this is an example which is very far from typical, for Lerpiu is both a spear which fell from the sky six generations ago, and a spirit immanent in every rain-maker of the Bor tribe, and is one of the most powerful of their *jok* (see below, § 4). It is clear that Lerpiu is not homologous with the ordinary Dinka totems; in his spear form he corresponds with the meteorite Madwich. His adherents, the family in whose succeeding generations he is immanent, have the elephant as their totem.

Finally, there is evidence that, apart from meteorites and other unusual *kwar*, some of the clans of the Tain Dinka have, or had, more than one totem.

The members of the Chiro, Ngong Nyang, and Pariak tribes consider the fish *rechol* an ancestor, telling the usual story that their ancestor was born as a twin of the fish, the latter being taken to the river, where he instructed mankind that, in spite of the relationship existing between them, they might catch and eat his descendants. There can be no doubt that the relationship still acknowledged as existing between the fish and the members of these tribes is but the shadow of the normal totemic relationship that formerly existed; nevertheless the rings that Apot threw into the river (see below) indicate that, shadowy as the relationship is, it is not utterly ignored in practice.

It will be noted that all these examples of unusual 'ancestors' are said to have fallen from the skies. The absence of stone in the Dinka country (perhaps this applies only to those tribes living near the Nile) would easily lead the Dinka to seek a supernatural origin for any fragments they might find, while the importance of rain and the reverence they pay to Dengdit who is above, as well as the striking appearance of a falling star, could scarcely fail to suggest to them that so strange an object had come from the skies. Once this view is entertained, it is but natural that the marvellous objects should be spoken of by the most holy term known, namely that applied to the revered animal ancestors of the tribe.

3. The worship of Dengdit.—The Dinka are a deeply religious people. They worship a high god, Dengdit, lit. 'Great Rain,' sometimes called Nyalich, and a host of ancestral spirits called *jok*. The name Nyalich is the locative of a word meaning 'above,' and, literally translated, signifies 'in the above.' It is not used, however, except as a synonym for Dengdit, and the common beginning of the prayers of the Tain and Bor Dinka is *Nyalich ko kwar*, 'God and our ancestors.' This phrase indicates the two main elements of their religious faith and their relative importance, for there is no doubt that Dengdit (Nyalich) is greater than the *jok*. It was he who created the world, and established the order of things, and it is he who sends the rain from the 'rain-place' above, which is especially his home. Nevertheless, in the ordinary affairs of life the *jok* are appealed to far more than Dengdit, and in some cases in which the appeal is nominally made to Dengdit, its form seems to imply that he has been confused with the *jok*. Among the Tain tribes there is a word *ram* or *aram* which is called out to the new moon, and seems to be an expression of greeting or praise, or perhaps is used to deprecate anger.

It will be convenient to consider the worship of Dengdit and the cult of the *jok* separately, though it must be realized that they constantly touch, and even overlap, each other. The Southern Dinka (to whom the following specially refers) do not appear to use set forms of prayer, but seem to ask in ordinary simple sentences that their immediate want may be granted. They also have a number of hymns which are sung when an ox is slaughtered to avert drought or sickness; but, as Mr. Shaw informed the writer, men sing them when doing light work, and

lately during a severe thunderstorm every one joined in lustily to appease the elements. They also burst into one of these songs when bidding farewell to the Sirdar who visited them recently. The following songs collected and translated by Mr. Shaw were composed by the *tiet* Wal of Bang village, who asserts that his spirit is Deng, i.e. Dengdit (see below, § 4). It must be noted that in Dinka hymns Dengdit habitually speaks of men as ants (*aichuk*).

Deng Wa ka loin te lar ror
Deng Wa ka loin te lar ror
Bainh achi a talech
Muka Wa apuoth a muk we tienkwa
Muka Deng apuoth a muk we tienkwa.
'Father Rain falls into a solitary place.
Father Rain falls into a solitary place.
The Lord was in untrodden ground.
Hold the Father well, He holds our few souls.
Hold the Rain well, He holds our few souls.'

In a variant of this hymn 'Creator' is substituted for 'Rain' in the second and fourth lines. In the next two hymns it is clearly the Creator who speaks.

Aichungdia gau gut ko thain ye thar
Aichungdia gau gut ko thain ye thar
Cha guobdia ye ran
Cha guobdia yen e nhyor e gau-o.
'My ant hoes the marsh grass and rests hand on hip
My ant hoes the marsh grass and rests hand on hip
Have I not given of my substance to man?
Have I not given of my substance to the spikes of the
marsh grass, alas!'

Ye yenga bi dol!
Y'aichung e wang K'aichung e rie
Yenga bi nong bai!
Man aichung nhom
Ye yenga bi dol!
Y'aichung e wang K'aichung e rie
Aichuk a lo ne Deng nhom
Ko bainh e rec aken tuol
Chamku yai
Bainhkan e rab aken tuol
Chamku yai.
'Who will laugh?
The cattle-ant and the ant of the boat (i.e. the Cattie
Dinka and the Tain Dinka).
Who will possess a homestead?
Unite the ants to a head.
Who will laugh?
The cattle-ant and the ant of the boat.
The ants have gone to Rain (as their head)
And the Fish-lord has not appeared.
Let us worship.
Our Dura-lord has not appeared.
Let us worship.'

The majority of Dinka have no legends of the origin of Dengdit, but they say that long ago he became angry with his wife Abuk, and in his wrath sent the bird *atoich* to sever the path between heaven and earth which had existed till then. In this account, as well as in one obtained by Major S. Lyle Cummins from the Nok Dinka of the Bahr el-Ghazal Province (*JAI* xxiv. [1904] 157-158), Dengdit figures as a god, without beginning and with no expected end; but among the Niel Dinka he appears as a less remote being who at one time ruled his tribe in human guise, and so approximates to the superhuman ancestors described in the section on totemism (above, § 2). The Adero clan of the Niel Dinka have the rain (*deng*) as their totem, the reason being given as follows:

The first ancestor of the clan appeared from the sky as a young woman pregnant with her first child. The people reverentially formed a circle round her, killed bullocks, and then rubbed her from head to foot with the belly fat. Next they built a hut for her, but were so frightened that it was not like other *tuk*, for the door was omitted, or in some other way it was made difficult for her to leave it. In about a month her child was born, yet no one came to help her. Then she called to the people, who brought one white cow, one spotted cow, and one bullock: she told them to sacrifice these and then to come back to her. They found her nursing a marvellous babe with teeth like an adult, and whose tears were blood. Then the mother said to them: 'This is your *bain*, look after him well, for I can stay with you no longer.' As she spoke, the rain came down in torrents, and therefore the boy was called Deng (Rain) or Dengdit (Great Rain). He ruled them for a long time, and, when he was very old, disappeared in a great storm.

Offerings are made to Dengdit at certain shrines—perhaps they might be called temples—which seem to be scattered all over the Dinka territory. Most Dinka tribes have one shrine in their territory, and this is certainly the case among the Shish and Agar. Probably these differ little in appearance from the shrine of Lerpin served by Biyordit (see below, § 5). It is true that neither Shish nor Agar made any mention of the existence of an *akoi* bush near the shrine, but perhaps too much stress should not be laid on this negative evidence, and a photograph of the great shrine at Luang Deng shows that this consists of three ordinary looking *tukl*. According to the Agar informants, one *bain* at Luong Ajok near Rumbek is in charge of a hut bigger than an ordinary *tukl* which is surrounded by a fence. This is called *luak* (not to be confused with a cattle *luak*); it is not a tomb, nor has any one been buried near it. The door is always shut, and may not be opened even by the *bain* (the high priest of the shrine and the rain-maker of the tribe) unless a sacrifice is made and milk is spilt in front of the door. In the shrine at Luong Ajok there are stools of copper and brass, shields, spears, sticks of rhinoceros horn, and a number of clay pots. All these things belong to Dengdit, who long ago came to earth bringing them with him. One morning the people found the *luak* built, and the stools and other things inside it, and decided that Dengdit alone could have done this, and that it was his place. Dengdit still lives in this shrine. The Shish say that there is a hut called *luak* sacred to Dengdit at Lau, within which are certain sacred spears and an iron rod, and a pot full of oil hangs from the roof; Dengdit is always there. The great ancestral rain-making ceremony of each tribe takes place at one of these shrines, as does the harvest ceremony held after the cutting of the *dura*; here, too, the Agar install their new rain-maker.

The shrine at Luang Deng¹ is one of the holiest existing among the Dinka, who visit it in large numbers. One of the three *tukl* is the house of Dengdit. The door is always kept shut, its guardians being certain men (and women?) who are regarded as being especially the servants of Dengdit. Only they may enter the shrine, but a man desirous of offspring may take cattle and offer them to Dengdit, asking that the desire of his heart may be granted. The door of the shrine is opened when one of the animals brought for Dengdit is slaughtered, and, looking in through the doorway, the worshipper sees in the darkness of the shrine, in spirit form, shifting shapes of men and animals and even of abstract qualities—happiness, hunger, satisfaction, cattle-sickness—and among them he may see the eyes and umbilicus of a man. No sacrifice is made until Dengdit has sent a dream to the keeper of the shrine instructing him to accept the offering, so that worshippers are nearly always kept waiting for a few days. It is very rare for a sacrifice to be refused; but, if a man be dismissed without being allowed to sacrifice, he will soon die, or disease will attack his people. As the worshipper approaches, he is accompanied by two servants of the shrine, one on either side. A spear specially kept for the purpose is used for killing the victim, and the spirit of the animal goes to join the other spirits in the shrine.² Before the worshipper leaves the shrine, one of the servants of Dengdit takes dust from the holy precincts, and, mixing it with oil, rubs it over the body of the worshipper. Sometimes a material object such as a spear may be given to the man as a sign of favour and a guarantee that he will obtain his wish. Offerings such as pieces of tobacco may be thrown upon a low mound of ashes which has arisen in front of the shrine from the cooking of many sacrifices. The contents of the large intestine of the victim are scattered about and over this mound, and near it the worshippers thrust the branch of a tree called *akoch* into the ground. It did not appear that any attention was paid to the fate of this branch, though it was said that it might take root and grow.

Among the Shish, certain men who lived long ago were spoken of as 'the sons of Dengdit,' though this expression must not be considered to imply any physical relationship; it seems that the

Shish considered these 'sons' as spirits who came from above to possess certain men who became known by their names—Walkerijok, Majush, Mabor, and Malan. Each of them is regarded as the ancestor of one of the Shish clans and has become a powerful *jok* of the usual type (for worship at their graves, see § 4).

4. The worship of the dead.—Every human being has within him two souls. The *atiep*, which leaves the body in sleep and whose wanderings are the common source of dreams, resembles, or perhaps may take the form of, the shadow. The second 'soul' is by no means so well defined as the *atiep*; it is sometimes called *rol*, and sometimes *wa*. The writer could not learn anything definite about the *rol* during life; it may be connected with the vegetative functions of the body, but after death it remains with the body in the grave. In this article it is the *atiep* that is meant whenever the word 'spirit' is used to refer to the spirit of a dead man. The *atiep* of a father, mother, or ancestor may at any time ask for food in a dream. A man will then take *dura* flour and mix it with fat in a little pot which he places in a corner of his hut, where it is left until the evening, when he may eat it or even share it with any one belonging to his clan, but with no one else (Tain). If food were not provided, the *atiep* might, and probably would, make the dreamer or his wife and children ill. It was stated everywhere that the customs observed after a death, especially the death feasts, were held to propitiate the *atiep* of the deceased and to prevent it from sending sickness or misfortune on the survivors. Sometimes the spirit of a person recently dead is spoken of as *jok*, but this term is generally reserved for the spirits of long dead and powerful ancestors. Thus the spirit of the founder of any clan is a *jok*, and the spirit of the animal ancestor is a specially powerful *jok*. The matter was summed up by a Tain man as follows: 'The *atiep* of my animal [ancestor] is a *jok*, the *atiep* of my mother is a human spirit (*atiep*); [the spirit of] my mother is also a *jok*, but [the spirit of] my animal [ancestor] is a *jomdit* (a very great *jok*), and would be angry if food for it and my mother's *jok* were put together.' Although the *jok* may send sickness, death, and misfortune, when annoyed or neglected, they are the guardian spirits of the house and the clan, taking constant interest in the doings of their descendants, and being ever ready to help them. From this point of view there is a certain amount of confusion between the *atiep* of the recent dead and the *jok* of long dead and powerful ancestors. It seems that, although the former are not specially invoked for aid in difficulties, they are considered to take an active interest in their descendants, and probably all that is said concerning the lovingkindness and power of the *jok* applies in a lesser degree to the *atiep*.

The *jok* know when a child is born, and protect it from the very beginning, though a man does not tell his child about the *jok* until it is well grown, perhaps not till about the age of ten. The *jok* on both sides of the family protect the child, coming to its assistance in any sudden danger. In adult life, when invoking the *jok* at a time of stress, a man calls upon the *jok* of his ancestors, regardless whether the appeal be to the spirits of his own or his mother's clan. Thus, when harpooning a hippopotamus, the word usually spoken is *jongawa*, 'O *jok* of my ancestors!' The *jok* hear the invocation and come to their descendant's assistance, entering his body and giving strength to his arms, and leaving him only when the spear has been flung and danger is over, for a man's *jok* are ever near him in enterprise or peril. Sometimes the appeal is made specially to the *jok* in *anima* form. Thus Bol, a man of the Mariak clan of the Ngong Nyang

¹ According to prevailing views, this shrine is situated in Nuer territory, though it was formerly held by Dinka, and there are Dinka priests at the shrine. The writer believes the distinction drawn between Dinka and Nuer to be erroneous, and that the Nuer are simply a tribe of Dinka differing no more from other admittedly Dinka tribes than these do among themselves.

² In answer to a question it was said that, if a man died near a shrine, his spirit would go there, but not if he died far off.

tribe, when about to cast his harpoon at a hippopotamus, would say: *Ayub lil ajong ē gol Mariak ē jongdiena niel abworde*, 'Strike, O spirit of my clan, my spirit the snake!'

Men and women who are able to see and to communicate with the spirits (*atiep* and *jok*) are called *tiet*. Their power is attributed to a spirit, always, we believe, an ancestral spirit, that is immanent in the *tiet*; and, as the spirit on the death of the *tiet* will generally take up its residence in the body of a near relative, the office tends to become hereditary. Often a *tiet* will explain to a relative that, after his or her death, the spirit will come to him; and a change of manner, trembling fits, and periods of unconsciousness are regarded as signs that the spirit has taken up its new abode. The powers of the *tiet* are most commonly directed to discover what should be done in cases of sickness, i.e. he indicates what *jok* is responsible for the illness, and what must be done in order that the patient may get well; but he also gives advice concerning lost cattle and other accidents of daily life. The amount of influence exerted by the *tiet* varies enormously.

The *tiet* of a Malek village was an old woman of whom it was openly said that she was little good. On the other hand, Wal, an Aliab Dinka living in the village of Bang, exercises enormous influence not limited to his fellow-tribesmen; for, although his spirit only came to him in 1907, Bari and Nuer alike come to consult him and pay the strictest attention to his commands. Wal is a man of about fifty, differing in no obvious external character from his fellows, though deference is shown him in that, however dense the crowd round him, he is never jostled. Wal says that his spirit is Deng, which appears in one aspect at least to be identical with Dengdit, and at the present time he is certainly the most important factor in the spiritual life of the Aliab and neighbouring tribes. Some men of the Ohro tribe said that, if another some like Madwich (see above, § 2) were to fall from the sky, it would be called Deng, because the spirit Deng had come to the *tiet* Wal in Bang village. Wal is most anxious to make clear his adhesion to the Government, and even goes so far as to state that his spirit is 'red' (as Europeans are) and came from Khartoum, which all the black tribes regard as the home of the white man. He is certainly opposed to bloodshed, and has lately condemned the participants in a quite insignificant brawl, in which but little blood flowed, to an elaborate ceremony of atonement, the essential part of which is that two goats are killed, the flesh of one being eaten, while the other is cast into the bush. Wal asserts that this is not a revival of an old custom, but a new form of sacrifice dictated by his spirit; and this was certainly the opinion of those with whom the writer discussed the subject.

Although Mitternützer (*Die Dinka-Sprache in Central-Africa*, Brixen, 1886) accepts the view adopted by the early missionaries, that the word *jok* can be adequately rendered by 'Satan' or '*der Teufel*' (op. cit. esp. p. 57), this is incorrect, and the relation of the *jok* to sickness and death is in outline somewhat as follows. The spirits of the old and mighty dead (*jok*) and of the recent dead (*atiep*) exist in and around the villages in which their descendants live. *Jok* are more powerful and energetic than *atiep*, and sometimes have special shrines built for them. They are also thought to have their habitat in the earth in the immediate neighbourhood of these shrines. *Atiep* are at their strongest immediately after death, and, although funeral feasts are held for no other reason than to propitiate them lest they should cause sickness and death, they become gradually weaker, and in a very few generations may safely be forgotten. *Jok*, on the other hand, retain their strength and energy, and require to be freely propitiated by sacrifices. Nor are the sacrifices offered to them on stated occasions sufficient. They accept these, but also make known their wants by appearing to their descendants in dreams, and demanding that a bullock or other animal shall be killed; or they may appear to a *tiet* and command him to deliver their message. If their demands are disregarded, they send sickness or bad luck, and matters can be remedied only by sacrifice. There may be no preliminary dream or vision before the *jok* sends sickness; in fact, the routine treatment of all sickness is to make offerings to the *jok*

(or Dengdit, when he and the *jok* are confused) in the hope that they will remove the sickness for which they are held responsible. So, when the illness runs a fatal course, it is the *jok* who are considered responsible for the death. The following account given by the Shish shows how the sacrifice to the *jok* is conducted:—

When a man is ill, a bullock or one or more sheep or goats are killed as a sacrifice to the *jok*. The animal or animals should be provided by a near relative, and should be killed by a married man with children, preferably the father of a large family. Some of the meat is left over night in the house of the sick man, for the *jok*. In the morning it is brought out and eaten by the clansfolk, but the fat is collected in a pot, and again left in the house, for one night, for the *jok*. Next day this is cooked by the old women, who eat it with the old men. The blood of the sacrifice is left to dry on the ground, and is afterwards buried in front of the house near the place where the animal was killed.

Even childlessness may be attributed to the displeasure of the *jok*, and in those cases in which the husband does not attribute this to his own impotence a *tiet* may be consulted. The *tiet* often says: 'Give more cows to your father-in-law,' the idea being that this will appease the *jok* of the wife's family, who, the *tiet* can see, are angry. Or the *tiet* may prescribe an offering to the *jok* to be made by the other side of the family, for the *jok* of the husband's family may be angry if the woman's brothers have been sneering at her husband for not begetting children. Incest angers the *jok* and thus causes barrenness; and a girl guilty of this offence will have no children, even should she marry, until she has owned her sin, when her lover will be forced to provide a bullock to be sacrificed in atonement. The youth's father kills the bullock, and the girl's father takes some of the contents of the large intestine and smears it on his daughter's abdomen and that of her partner, thus removing the taint of sin and rendering her capable of bearing children.

Shrines raised to ancestral spirits fall into two classes: (1) grave shrines, and (2) shrines erected by order of a spirit (*jok* or *atiep*), or on account of the appearance of a spirit in a dream, or built to provide a new home for a spirit. Grave shrines do not appear to be common, though the writer has records of the graves of the founders of four of the Shish clans that have become shrines. These are the graves of the so-called 'sons of Dengdit' already referred to. These four men are to some extent regarded as culture heroes, for they taught men how to grow *dura* and to fish. It is said that formerly huts were built over their graves; these have decayed, but even now a ceremony is held at each grave after the *dura* is cut. In every case, only the people descended from the founder take part in this, though their wives, who of necessity belong to other clans, accompany them. There is no resident guardian at any of the shrines, but at the yearly sacrifice one man, in whom the ancestral spirit is immanent, kills a sheep or a bull, and smears its blood and the contents of the large intestine upon the grave, before the assembled descendants of the hero. The flesh is boiled, all eat thereof, and great care is taken not to break the bones, which are thrown into the river. Shrines of the second class appear to be found in all Dinka villages. The worship at one of them in the Shilluk village of Tonga near the Shilluk-Dinka boundary is especially interesting, because it clearly indicates the hereditary nature of the priesthood that these shrines call into existence, and also because it shows that the *jok* on the maternal side are regarded with the same awe and affection as those of a man's own clan. The shrine is within the yard of an ordinary Shilluk homestead. It consists of a few long, roughly trimmed sticks thrust into the ground, from which are hung a number of beads, small gourds, snuff-boxes, and fragments of sheep bones. On the ground is a heap of ashes, the remains of the fires at which sacrifices have been cooked, and frag-

ments of the skulls of sheep killed at the shrine. By the side of the ashes there is a faggot of sticks placed upright, supporting a gourd in which food had once been placed.

The shrine is served by one Agwer, whose grandmother, a Dinka, was made ill by an ancestral spirit, Deng,¹ in order that offerings should be made to him. As the offerings accumulated, a shrine came into existence; in fact, a *tiet* seems to have ascertained that Deng wished his descendants to make repeated sacrifices to him at Tonga. At the present day offerings are made frequently by sick folk, descendants of Deng, and a ceremony is said to be held at the beginning of every rainy season.

Another shrine, existing at the Chiro village of Malek, consists of the trunk of a small tree thrust into the ground; the main branches have been broken off short, and part of the vertebral column and horns of a goat have been attached to them. There are also several pieces of rope, of the kind attached to hippopotamus harpoons, and several small gourds, while a number of fragments of hippopotamus bones lie at the foot of the post. The origin of this shrine is as follows.

About three years ago the children of Apnot, the *bain* of the village, sickened, but it was not until they had been ill for about four months that the *jok* of Balit, the ancestor who sent the sickness, appeared to the *tiet* in a dream and demanded that a goat should be given him. The *tiet* told Apnot to raise up a post and to kill a fat he-goat. The post was prepared, a hole was dug, the goat's throat was cut, and the blood and contents of the gut were collected and buried in the hole. Then the post was thrust into the centre of the hole, and earth was thrown in and pressed down. The meat was cut into pieces, boiled, and eaten. The bones were not broken, but were placed on the ground round the post and left there for a month, after which all were thrown into the river, except the skull and backbone, which were put upon the post. The *tiet* was given the skin. At the time of the sacrifice Apnot threw four small pieces of meat in four directions, apparently towards the cardinal points, and then placed them on the ground round the stick, saying: 'O my grandfather, I have made a sacrifice for you, do not let my children be sick any more.' Apnot himself carried the bones to the river, and at the same time threw into the water a small iron bracelet which he took from the arm of one of the sick children. These things were cast into the river because Ran, the father of Balit, was twin with the fish *rechol*, for whom the things were intended. The hippopotamus bones at the foot of the post were placed there by a brother of Apnot, after he had spared one of these animals. He did this in order that the spirit of his ancestor might help him to kill other hippopotami. The ground round and under this post is in a special sense the habitation of the *jok*, and, even if the sickness had not occurred, it would still have been necessary to prepare a habitation for the *jok*, where men might come to invoke their assistance before going fishing or hippopotamus-hunting, or before starting on a journey. In the last event the traveller puts his right hand flat on the ground near the post, and says: 'Grandfather, I am going away, take care of me, do not let me be sick.' Before going fishing or hippopotamus-hunting, a man takes his harpoons to the wife of the *bain*, who rubs them with oil made from hippopotamus fat, and pours some of the oil on the ground at the foot of the post.

Another form of shrine, called *bûor*, is found in the Tain villages near Bor. The construction of the *bûor* is very simple. No chamber is made; a hole about a foot deep is dug and filled up with mud, in which the horns are fixed, for only the horns, and not the skull, are used.

One of these shrines was raised by Der in his new village of Arek for the *atiep* of his father Anet, to live in 'just as a house,' for the spirit knows of the wanderings of its people and moves with them. This was done at the instance of a *tiet*, who said that, if these were neglected, Der and his children would sicken, and perhaps die. The shrine itself consists of a mound of mud, at one end of which are fixed the horns of a bullock, while in front of this there is one of the pickets to which cattle are commonly tethered.² The bullock providing the horns was sacrificed by Der, who explained aloud that he was making a place for the *atiep* of his father Anet. The bullock was killed by having a spear plunged into its heart, and small pieces of all the organs and parts of the animal were scattered on the ground for the spirits of the dead. At each new moon some *dura*, a

few drops of new milk, and a little butter, are placed upon the shrine at sunset. The shrine is repaired whenever necessary, without sacrifice or any ceremony.

Bûor are found in all the Tain and in some, at least, of the Bor villages, but usually they do not resemble the back of a bullock, the mud being built into a more or less circular mound flattened above. A stick or young sapling, 6 or 8 ft. tall, is thrust into the ground near the horns, and a cattle-rope is hung from this. Among the Tain Dinka the sons of a dead man will procure a bullock and build a *bûor* whenever possible, the widow making the mud mound, in which the sons plant the horns of the bullock. This is done not only to propitiate the spirit of the dead, but as a resting-place for his spirit (*atiep*). There is often the greatest confusion as to whether these *bûor* are built for Dengdit or for the *jok*; in fact, the two are often spoken of and treated as if they were identical. As an example of this confusion, reference may be made to a *bûor* at Arek village meant to secure the help of the *jok* in fishing and in harpooning hippopotami. When a fishing or hunting party is about to start, they take some *dura*, dip the grains in a bowl of water, roast them, and, when cold, scatter them upon and around the *bûor*. In spite of this, the *bûor* is often said to belong to Dengdit, and the usual explanation is given of the cattle rope, namely, that Dengdit will see the empty halter and know that an animal has been sacrificed.

Besides the numerous offerings to the *jok* already mentioned, certain annual sacrifices are made to them, of which the following are examples.

The Bor Dinka sacrifice one or more young goats at the beginning of each wet season, in order that the *jok* may not injure the cattle in the *tuak*, the horns and legs with the dried skin adhering to them being hung up within the entrance to the *tuak*. The Shish make an annual sacrifice to the *jok* and also to the 'river people,' who, as already indicated, must be considered as a special form of *jok*. This sacrifice is made by every householder, for, if any omitted to perform it, his *dura* crop would be poor, and his cattle would sicken or die. Each householder kills a sheep and allows the blood to soak into the ground; the flesh, which is boiled in front of the house, is eaten, care being taken not to break the bones, which are collected and thrown into the river. As he kills the animal, the householder says: 'Jok! this is your right.' Pieces from different parts of the sacrifice are boiled in a pot and left outside the hut during the night; in the morning the contents are scattered round the house, when the dogs and birds soon dispose of them.

The sacrifice to the 'river people' takes place after the rains, when the people leave their inland settlements to come down to their dry-season abodes on the river bank, and before they build any houses or cattle kraals. The members of each clan kill a sheep soon after they reach the river, cutting its throat before sunrise, on the bank, so that the blood flows into the river, into which the sheep is thrown as soon as it is dead. This sacrifice is held in order that the 'river people' may not send sickness to men or cattle, and it is also said to please Dengdit.

Belief in the guiding and protecting influence of the *jok* is perhaps the only part of their eschatology which is common to all Dinka, and is so well defined that it can be definitely formulated; the examples already given of the action of the *jok* and the sacrifices offered to them make their action and power reasonably plain as far as they relate to humanity. In other words, while the relation of the *atiep* to the living is tolerably well known, the very opposite is the case in regard to the *rol* or *we*, for its condition excites none of the interest which is felt in the *atiep*. The generally accepted view with regard to the *atiep* of the old and mighty dead (*jok*) has been indicated already. The *atiep* of the recently dead are usually thought to frequent the villages and houses of their descendants, taking an interest in their doings and moving about with them. Certain of the burial customs, which provide for the welfare of the dead, are modified in the case of old influential men, increasingly lavish funeral feasts being provided for important men such as *bain*, the avowed purpose of all funeral ceremonies being to propitiate the dead man, lest he should send sickness and misfortune on the

¹ Deng is a common Dinka name, and must not be confused with Deng, the spirit of the *tiet* Wal (above, p. 709a), or with Dengdit.

² The whole structure presents a certain resemblance to a bullock sunk in the earth, so that only the back projects; but the writer could not learn that this resemblance was intentional, though a Dinka whom he met at Omdurman, where he had lived for a long time, said that in his country mud representations of cattle were erected over the graves of powerful men.

living. Apart from the funeral and mourning feasts, *atiep* are not given sacrifices unless they appear to their descendants or to the *tiet* in dreams and ask for them.

Side by side with this doctrine of the *atiep* and its corollary that the spirits of the dead everywhere surround and mix with the living, there is another, which, if it were accepted and applied logically, would be incompatible with the first. According to this belief, the *atiep* leaves the neighbourhood of the body at the time of its burial, and passes above to the place of Dengdit. The spirits that reach Dengdit do not lose their power of returning to the earth, for it is a common belief that *jok* may pass to and from this earth to Dengdit, while one of the commonest Dinka beliefs is that the *jok* come to the dying to take their *atiep*. Among the Niel Dinka the *jok* come in the (spiritual) form of the animal ancestors (totem animals) of each man at his death and take his spirit to Kok, the place of Dengdit between earth and sky, whence comes the rain. The men who gave this information were perfectly convinced that every Dinka had some animal relative which would come to him at death, and they stated that some men had seen them as they lay dying.

It is possible to obtain a hint of another phase of Dinka eschatology by considering their habit of pouring a little water or *merissa* (native beer) on the ground before drinking. According to some Nok Dinka who did this after a long and thirsty march, the water poured out was for the dead. The Shish denied that *merissa*, purposely spilt on the ground, was for the benefit of the dead, but said that, when a man died, he would find in his grave all the *merissa* he had poured out and the food he had thrown on the ground. It is, however, possible that this belief may be due to Arab influence.

According to the Shish, the 'river-people' are also *jok*, and they can be seen by *tiet*, for 'land and river *jok* have the same origin,' and 'some *jok* are in the river, some on land.' It must, however, be admitted that many Dinka seem to look upon the 'river people' as distinctly mysterious beings, whom they do not regard as *jok* in the ordinary sense of the word.

5. Rain-makers and rain-making.—The rain-makers of the Dinka tribe are called *bain*, but it seems that not every *bain* is a practising rain-maker, though, in theory at least, all are potential rain-makers. The men commonly spoken of as the 'chiefs' or 'shaihs' of the Dinka tribes are actual or potential *bain*, but there does not appear to be any tendency for village chiefs to attempt to emulate the rain-maker, or for quack practitioners to appear, for the successful rain-maker has within him the spirit of the great rain-makers of the past, and all recognize the futility of competing with him. Further, the existence of a powerful and successful rain-maker naturally leads those who live within his sphere of influence to leave all such matters to him. Thus a successful rain-maker attains to very great power, and would be consulted about all important affairs, for the spirit of a great ancestor that has come down to him through a succession of rain-makers ensures that he is far-seeing, and wiser than common men. A *bain* should not drink *merissa*, lest he get angry and quarrel with the men of his village. Although the authority of a *bain* is great, it is not absolute, for one *bain* foretold the defeat of his people at the hands of the Government, and entreated them not to fight; yet his people fought and were defeated.

The Shish said that the name of the spirit immanent in their rain-maker (who lived at Lau) was Mabor. This, as has been stated in § 3, is the name of one of the four 'sons of Dengdit.' It was

obvious that to the Shish of Shambe (some miles from Lau) the personality of the rain-maker was entirely submerged in that of the spirit immanent in him, so that, when they spoke of Mabor, the dominant idea in their mind was that of the ancestral spirit of this name working through the body of the man in whom it was immanent.

The Shish do not specially protect their rain-maker from a violent death, and he may even take part in warfare; for no doubt is felt that, if he be killed, the ancestral spirit will pass to a suitable successor. But an important rain-maker is not allowed to die of old age or as the result of chronic lingering illness; for, if this occurred, sickness would attack the tribe; there would be famine, and the herds would not yield their increase. When a rain-maker feels that he is getting old and infirm, he tells his children that he wishes to die.

Among the Agar Dinka a large grave is dug, and an *angareb* is placed in it, upon which the rain-maker lies on his right side, with a skin under his head. He is surrounded by his friends and relatives, including his younger children, but his elder children are not allowed near the grave, at any rate towards the end, lest in their despair they should injure themselves. The *bain* lies upon the *angareb* without food or drink for many hours, generally for more than a day. From time to time he speaks to his people, recalling the past history of the tribe, how he has ruled and advised them, and instructing them how to act in the future. During this time he takes no food. At last he tells them he has finished, and bids them cover him up; earth is thrown into the grave, and he is soon suffocated. Although the above information was obtained from a number of Agar Dinka, there is little doubt that with minor variations it applies to all the Dinka tribes.

The Niel Dinka said that they strangled their *bain* in his own house, having first prepared his grave. They would then wash the corpse and kill a bullock in front of the house, skinning it immediately and making an *angareb* of the skin. This is placed in the grave, and the body is laid upon it, a cell being built over the *angareb* so that the earth does not come into contact with the body. Even if the *bain* were quite young, he would be killed if it was thought that he was dangerously ill. The Niel take every care to guard the *bain* from accidental death, for, even if he should die suddenly as the result of accident, some sickness would surely occur, though his son or a near blood relation would immediately succeed him. It would be a far more serious matter if the *bain* were to die of illness, but this had never happened; indeed, the writer's informant (whose father and paternal uncle had both been killed in the appropriate manner) pointed out that this would prevent any of his sons (i.e. presumably any relative) from becoming *bain* in his turn. The writer believes that all tribes sprinkle milk on the grave, while some bury a bullock, or even a cow, with their *bain*, and it is probable that all place some property in the grave.

The following information was given by Biyordit, an old but still active man, the rain-maker of the Bor tribe, who [1911] has the greatest influence over all the Bor and Tain Dinka:

In each of the eight rain-makers who preceded Biyordit there was immanent a great and powerful spirit called Lerpiu, now immanent in Biyordit, who says quite simply that at his death Lerpiu will pass into his son. Near a hut belonging to Biyordit there is another hut, constituting a shrine, in which the *jok* of Lerpiu is thought to reside more or less constantly. Within this hut is kept a very sacred spear, also called Lerpiu, and before it stands a post called *rit*, to which are attached the horns of many bullocks sacrificed to Lerpiu. Behind the hut there is a bush of the kind called *akoi*, which must not be cut or damaged in any way, but which strangers are allowed to

approach without the least ceremony. The *akoi* bush is clearly the least sacred part of the shrine, yet its presence is essential, for the *jok* leaves the hut to come to the *akoi* during the great rain-making ceremony, and the slight sanctity of the *akoi* at other times is well explained by the absence of the *jok*.

The rain ceremony consists of a sacrifice to Lerpiu, to induce him to move Dengdit to send rain. It is held in the spring (about April), when the new moon is a few days old. In the morning two bullocks are led twice round the shrine, and are tied to the *rit* by Biyordit; then the people beat drums; and men and women, boys and girls, all dance round the shrine. Nothing further is done until the bullocks urinate, when every one who can get near the beasts rubs his body with the urine. After this all except the old people go away. Presently the bullocks are killed by Biyordit, who spears them and cuts their throats. While the sacrifice is being prepared, the people chant: 'Lerpiu, our ancestor, we have brought you a sacrifice: be pleased to cause rain to fall.' The blood is collected in a gourd, transferred to a pot, put on the fire, and eaten by the old and important people of the clan. Some of the flesh of one bullock is put into two pots and cooked with much fat; this is left near the *akoi* for many (perhaps ten) months, yet it is said not to smell unpleasantly, and is ultimately eaten by people who have no cattle of their own. The food in the pots near the *akoi* is said to be for the *jok*, but the meat from the other bullock is eaten on the same day. The bones of the sacrifice are thrown away, but the horns are added to those already attached to the *rit*.

Besides the great rain-making ceremony performed at a central shrine, some tribes offer a sacrifice for rain in each settlement. Among the Shish this takes place before, or at the beginning of, the rainy season.

The old men of the settlement (*bai*) kill a sheep, thanking and praising Dengdit; the animal is bisected longitudinally, and that half which is away from the ground is cut into fragments and cast into the air as an offering to Dengdit. As they fall upon the ground, so they are left, and are soon eaten by dogs and birds. The blood of the sacrifice is allowed to soak into the ground, but the remainder of the meat is boiled and eaten, the bones, which must not be broken, being buried in the skin for seven days, and afterwards thrown into the river. Some *dura* is boiled, and this is thrown into the air and left lying upon the ground in the same way as the flesh of the sacrifice was left.

6. Sacred spears.—Mention has already been made of certain spears kept in the shrines of Dengdit. One of the spears in the Shish shrine at Lau is of the form named *bit yat* by the Dinka, and is called *bit yat*. Another spear with the usual leaf-shaped blade is called *ton yat*, and the iron rod is named *len yat*. These spears and the iron rod are described as playing an important part in the great rain-making ceremony held in the *luak* at Lau, and when the time comes to replace them an elaborate ceremony is performed. Long ago Dengdit ordered the *bain* Mabor to get the finest spear he could, and to put it in his shrine at Lau. This command was said to apply not only to the *ton yat*, but also to the *bit yat* and *len yat*, and all these are renewed periodically, by order of Dengdit, who, in a dream, indicates that the spears are getting old and that new ones must be provided. It seems that a new *ton yat* is brought to the *luak* about every tenth year, a white sheep being killed with the new spear by the *bain* as an act of consecration. Some of the blood is left on the blade for three days, after which it is washed and oiled. Certain old men and women, near relatives of the *bain*, boil and eat the flesh of this sacrifice in the courtyard of the *luak*, after which they wash their hands and throw the bones, none of which has been broken, into the river. The sacredness of the old spear appears to be transmitted to the new by thrusting the former into the earth by the side of the sacrifice, after which it is given to a son or other near relative of the *bain*.

7. Oaths.—In small matters the Shish affirm 'by Nyalich.' To swear a binding oath a man goes to the blacksmith and licks his hammer; then, putting it on the ground, he says: 'If I have done this thing, may I die!' Any one swearing falsely would certainly die within a couple of days. An Agar Dinka will swear by licking his iron bracelet and saying what he has done or not done, and that he is prepared to die if he is not speaking the truth. Another oath is to

place a spear or stick on the ground and jump over it, saying: 'By Dengdit, I have not done this thing; if I have, may my spear be speedily put on my grave!' This refers to the Agar custom of putting a man's spear, bracelets, and shield upon his grave for seven days. The most terrific oath of all is to go to the shrine (*luak*) of Dengdit and swear by it.

8. Blessings and curses: the evil eye.—The Dinka firmly believe in the efficacy of both blessings and curses, and that people and cattle can be 'overlooked.' The following information was obtained from Tain Dinka living south of the Sudd, but it probably holds good over a much wider area. The blessings and curses of strangers are of little effect (it must be assumed that this does not apply to great and powerful men), but the words of kinsfolk are powerful for good or evil. There is a special word *lou* meaning 'to speak bad words about a man's body'; and a father, by saying his son shall be ill, can cause him to sicken. So, too, a man's relatives may curse him if he does not give them the bullock which is their due when he builds a cattle-shed soon after his marriage. A parent's blessing is held to be so efficacious that it may cure illness, the power for good being the will (*atiep*) of the loving father or mother. When a boy is to be blessed, he squats on the ground; and his father, standing by him, carries first his right thigh and then his left over his son's head. Then he spits on his scalp and blows into his ears and nose; next he spits on his own hands and rubs them over the boy's scalp, and, again spitting on them, smears spittle on the boy's chest and the nape of his neck. Finally, he picks up dust, and rubs some on the boy's chest and back, throwing away the remainder into the air. When a man is about to bless an ailing daughter, her mother brings a gourd of water, into which the man, his wife, and the girl's brothers and sisters and paternal aunts all spit, and her father sprinkles the water over the girl's body. Nothing further is done for eight days, but on the ninth day a male goat or sheep is tied up; when it urinates, the girl's breasts and back are anointed with the urine, while the relatives who spat into the bowl pray that she may be cured. Her brothers take the goat, throw it on the ground, cut its throat, and leave the body lying for people of other clans to eat. Any one can 'overlook' (Tain *kwan*) another who is not a very close blood relation, at any time when his victim is not looking him straight in the face. To *kwan* any one is always a voluntary action, and, though a thin or poor man may *kwan* a well-conditioned or rich man, this is not necessarily due to covetousness. A great man can make people ill without seeing them, by desiring it in his heart, and for sickness produced in this way there is no cure.

9. Magic.—Magic appears to play a comparatively small part in the spiritual life of the Dinka; probably this is to be attributed to the dominating influence of the cult of the *jok*, which constitutes the working belief of the people. In spite of this, auxiliary magical processes may be used in order to increase the efficacy of a sacrifice. Thus, it is not uncommon for a goat to be killed as a direct appeal to the *jok* before hippopotamus-hunting. The Tain Dinka of Malek village select a 'red' he-goat or sheep because the hippopotamus is 'red,' and take it to the Sudd in a canoe, where they cut its throat with a spear, because the animal they are hunting can be killed only with a spear. (The usual method of killing a sheep or goat is by a blow on the head.) Its blood is allowed to run into the river, while some is smeared on the blades of the harpoons. As soon as it is dead, it is thrust under the Sudd where the hippopotami are, its mouth being tied up so that it

may not do any damage with its teeth. The man with the harpoon prays to his *jok* as he approaches the animal, and the ceremony after its death is simply an offering of part of the flesh to the *jok*. Any one may provide the goat, but only three men—Aput the *bain*, and two others—may cut its throat; if any other were to officiate, his action would be absolutely without effect.

DISCIPLES OF CHRIST.—A religious body located chiefly in the central and western portions of the United States. The originator of the movement was Thomas Campbell, a minister of the Seceder Presbyterian Church in the north of Ireland, who came to America in 1807, and was assigned to ministerial work in the Presbytery of Chartiers, in Western Pennsylvania. Keenly sensitive to the evil results of sectarian divisions, he used his efforts to unite the scattered groups of Presbyterians in such common work and worship as should allay in some measure the strife of rival factions. But so little were the churches of the period prepared for the practice of comity that he was censured by the Presbytery for his conduct, and, although upon appeal the Synod declined to affirm the judgment of the Presbytery, he found it desirable to sever his connexion with the Church of his fathers. But his earnest labours in behalf of unity led to the formation of a group called the 'Christian Association of Washington' (Pa.), and, soon after, he published a document called the 'Declaration and Address,' in which he pleaded with his brethren of all Christian bodies to abandon whatever religious doctrines and practices were unscriptural and divisive, and to seek the peace of the Church by the realization of the Lord's prayer (Jn 17^{11, 21ff.}) for the oneness of His people. He was afterwards joined by his son Alexander, who had been trained for the ministry in Ireland and at Glasgow.

In studying the problem of Christian unity these men determined that they would propose to their religious neighbours the elimination of human additions to the primitive and simple gospel. This seemed to them a sufficient platform for a united Church. Their purpose was the restoration of the early Christian society as the means of realizing Christian oneness. They included in their programme all the essential elements of the Apostolic faith, spirit, and service. They held strongly to the great evangelical beliefs of the historic Church. They sought to make the teachings of the NT authoritative in their procedure. In compliance with this ideal they decided that the practice of infant baptism and of affusion must be abandoned. The movement grew, and soon the first congregation was established at Brush Run, Pa. (4th May 1811).

The Reformers, as they called themselves, were active in the dissemination of their views. Such leaders as the Campbells, Barton W. Stone, and Walter Scott were effective advocates of the new message. The adoption of immersion in the interest, as they believed, of Christian unity brought them into sympathetic relations with the Baptists, and in 1823 Alexander Campbell began the publication of a monthly called *The Christian Baptist*. For a time it seemed probable that the union of the two bodies would be effected. The Reformers were actually received into the fellowship of the Redstone Baptist Association, and later into that of the Mahoning Association, official organizations of the Baptists in Western Pennsylvania and Ohio. But the union was never complete. Each of the groups suspected the other and

at times made counter-charges of unsoundness of views. Separation took place, and gradually the Reformers, or Disciples, as they usually called themselves, went their way as a separate body. At Bethany, W. Va., in 1840 Campbell founded Bethany College, the first of many schools organized by the Disciples. The movement grew rapidly in the States of West Virginia, Ohio, Pennsylvania, and Kentucky. Campbell travelled widely, preaching and holding debates on such themes as related to the Primitive Church and the necessity of its restoration. The formative influences of his early training, the Lockian philosophy, the Covenant theology of Holland, the reformatory preaching of the Haldanes in Scotland and Ireland, and a profound sense of the scandal and disaster of divisions in the Church, were made evident in all his utterances. His power was widely felt, both among his own brethren and in other communions, and outside the Church. As a result, a large company of vigorous and aggressive preachers and teachers became identified with the enterprise, and its progress was rapid.

With the growth of churches the first interest in the idea of Christian unity gave way somewhat to the seemingly more definite and practical effort towards the restoration of early Christian usages. The weekly observance of the Lord's Supper, the immersion of adults as the only method of baptism, the organization of churches after the congregational order, with elders or bishops, and deacons, the rejection of all speculative discussion of the work of the Holy Spirit, and the emphasis upon the importance of the Scriptures in conversion were outstanding features of the new message. Close communion was never practised, but it was understood that only the immersed should be admitted to the churches.

In the development of so vigorous a body it was inevitable that controversy should have a pronounced part. Both with their religious neighbours and among themselves the Disciples have held earnest and prolonged controversy. Tendencies to literalism and legalism have not been wanting, but they have yielded slowly to the spirit of inquiry and progress. The creation of new educational foundations, the maintenance of an aggressive journalism, the organization of missionary and philanthropic agencies, and the encouragement of an effective evangelism in the churches have increased the numbers, intelligence, and consecration of the Disciples, until at the present time they are fifth among the great evangelical bodies of America; have a considerable constituency in England and Australia; have important missionary interests in China, India, Japan, Africa, the Philippines, Mexico, and the West Indies; and maintain efficient State and District organizations in nearly all sections of the United States and Canada.

The Disciples have desired from the first to be known only by NT names. They speak of their churches as 'Christian Churches,' or 'Churches of Christ.' These names they hold in common with all believers, and claim no exclusive title to them. Their worship has always been marked by simplicity, though there is an increasing effort to impart dignity to the services.

On the themes of advancing Christian thought,—the value and results of the historical method of Bible study, the contributions of modern scientific and philosophical labours to the religious life, the awakening of the social and civic conscience, the extension of missionary effort, and the adoption of higher educational standards—the Disciples have passed through the usual throes and differences of opinion incident to the development of most sections of the modern Church. But the progress has been

steady, and the future is promising. Particularly are the Disciples awakening to the realization of their historic task—the earnest effort to promote both by testimony and practical labours the unity of the people of God.

DISCIPLINE (Buddhist).—This subject may best be discussed under four different heads: (1) discipline of the laity by the clergy; (2) discipline of the novices by members of the Order; (3) discipline as carried out by the Order, in Chapter assembled, against individual members of it; and (4) self-discipline.

1. **Discipline of the laity.**—The Buddhist doctrine did not recognize either a deity who can punish or a soul to be punished, and denied to the members of the Order (the *bhikkhus*) any priestly powers by which penalties in the next life could be mitigated or increased. Any disciplinary proceedings against the laity, therefore, were necessarily of a simple character. There are words in Pali for 'instruction,' 'discussion,' 'training,' and 'self-restraint'; but there is no word covering the same ground as 'discipline.' The ideas of confessional or father-confessor, of absolution, inquisition, and church-membership are wanting. The word 'Buddhist' was not invented till many centuries after the rise of what we call Buddhism. By approving wholly or in part the doctrines of the new movement, a layman did not join any new organization or sever himself from any other. When Siha, the Licchavi general, an adherent of the Jains, became converted by the Buddha, he was expressly enjoined by the Buddha himself to continue his support of the Jain community (*Vinaya Texts*, ii. 115). The only action of a disciplinary kind adopted by the early Buddhists towards laymen is described in *Vinaya Texts*, iii. 118 ff. It is called 'the turning down of the bowl' (*pattassa nikkujjana*). In case a layman, in any one of five ways,¹ endeavours to do harm to the Order, or speaks in disparagement of the Buddha, the Doctrine, or the Order, then it is permitted to the *bhikkhus* 'to turn down the bowl' in respect of that layman—that is, to refuse to accept a gift of food from him. If in any of the same five ways a *bhikkhu* should endeavour to do harm to a layman, a Chapter should compel him to beg pardon of that layman (*ib.* ii. 355 f.). The layman could have the ban removed by a Chapter by confessing his error and asking for forgiveness (*ib.* iii. 124). No mention of this ceremony of turning down the bowl has been found except in the earliest period, and it is now quite obsolete. Of any formal discipline of laymen in knowledge of the faith we hear nothing; and there was no custom corresponding to the *Arcani Disciplina* (q.v.) of the early Catholics. The *bhikkhus* are described as willing to talk over with laymen in an informal way any points of doctrine they wished to discuss. A large number of cases of this informal teaching are given in the books.

2. **Discipline of novices.**—One of the main objects of the founders of the various Orders that existed in India in the Buddha's time was to provide, by the establishment of the Order, for the preservation and propagation of the founder's teaching. There were then no books and no pub-

lishers. The novices and the younger members of the Order learnt the statements of the doctrine (the *Suttas*) by heart, and the older members expounded and discussed them, and cross-questioned the novices on their knowledge. It was necessary for such an Order to have rules. These the novices learnt, and the elders discussed. Among the early Buddhist literature, thus handed down to us, there are manuals used for the discipline of the novices in the Doctrine, in the Poetry, in the psychological Ethics, and in the Canon Law. The majority of the Abhidhamma books are of this nature. The *Parivāra* ('Supplement') to the *Vinaya*, which occupies the fifth volume of Oldenberg's edition of the text, consists entirely of a number of questions on the Canon Law, and was evidently used in the teaching of novices. The *Khudda- and Mula-sikkhā* ('Short and Advanced Manuals') are somewhat later examples of the same thing. These studies and the personal attendance on his teacher occupied most of the time of the novice. If a novice tried to prevent the elder *bhikkhus* from receiving alms, if he devised mischief against them, if he prevented their finding a lodging-place, if he abused them, or if he caused division among them, then his teacher might interdict him from entering certain parts of the common residence, explained as meaning the bedroom or the sitting-room he has frequented [*Vinaya*, i. 84]. In ten cases of grievous misconduct, a novice may be expelled by his teacher (*ib.* i. 85). No other disciplinary proceedings are mentioned.

3. **Discipline in the Order.**—The Buddhist Order was a democracy. There was no vow of obedience and no hierarchy. The administration of the business of the Order was carried out locally by a Chapter on which each member of the Order (each *bhikkhu*) resident in the locality had a seat. The senior member presided as *primus inter pares*, and decisions were made by vote of the majority of those present. Should any member of the Order have committed, in the opinion of any other member, any breach of one of the regulations, the latter could bring forward, at the next meeting of the Chapter, a resolution on the subject. If the resolution was carried, the offending member remained for a fixed period under suspension. The suspension could be removed by a similar resolution when the offender had acknowledged his offence. In four cases of grave moral delinquency—murder, theft, impurity, and a false claim to extraordinary spiritual pre-eminence—the penalty was expulsion from the Order. The lawbooks give numerous cases which throw light on the question whether some particular act does or does not amount to a breach of any one of the 227 main rules of the Order, or of any one of the explanatory by-laws subsidiary to those rules. But they afford no evidence as to how frequently recourse was actually had, in the early years of the movement, to such disciplinary proceedings by a Chapter. Meetings of the Chapter are still held in Siam, Burma, and Ceylon for business purposes, for the recitation of the Rules,

¹ The details of these five ways are given below in the section on 'Discipline of novices.'

for admission of new members, etc. Whether disciplinary proceedings are still used, and, if so, how frequently, is not known. In other countries the ancient rules have fallen altogether out of use, and we have no information as to any disciplinary proceedings that may have been substituted for the formal acts of the Chapter (see, further, art. CRIMES AND PUNISHMENTS [Buddhist]).

4. **Self-discipline.**—There were three codes of ethics in early Buddhism—one for the lay adherent, another for a member of the Order, and a third for those, whether laymen or mendicants, who had entered upon the Path to *arahat*-ship. People joined the Order for a variety of reasons—to earn a livelihood, for a life of literary peace, to escape the troubles of the world, from dislike of authority, or even (as Nāgasena says to King Milinda) out of fear of kings.¹ Some were converted men before they joined the Order; the majority were not. They were expected, in addition to their literary studies, to devote themselves to an elaborate system of self-discipline in ethics and psychology, leading up to what were regarded as the highest truths—those constituting the *samādhi*, the insight of the higher stages of the Path.² The existence of this system is the most characteristic feature of Buddhist discipline (see art. HINAYĀNA).

LITERATURE.—The *Vinaya Piṭakam*, ed. H. Oldenberg (5 vols., London, 1879–1888); H. Oldenberg and Rhys Davids, *Vinaya Texts* (Oxford, 1881–1885, being tr. of vols. i. and ii. of the last-named work); *Digha Nikāya*, ed. Rhys Davids and J. E. Carpenter (PTS, 1890–1910); Rhys Davids, *Dialogues of the Buddha* (Oxford, 1899–1910), also *Questions of King Milinda* (Oxford, 1890–1894); *Khudda-Sikkhā and Mūla-Sikkhā*, ed. H. Müller (JPTS, 1883). T. W. RHYDS DAVIDS.

DISCIPLINE (Christian).—I. **Definition and aim.**—Church discipline is that body of measures which have been employed in the Christian Church to secure its own purity and the spiritual well-being of its members by the punishment of offenders against its constitution and teachings. The authority for such procedure is based (1) upon the very nature of the Church as a select body with a code of its own; (2) upon express commands of Christ; (3) upon Apostolic precepts and examples afforded in the history of the Apostolic Church. The Church, as an institution endowed with the quality of holiness and entrusted with the deposit of revealed truth, is bound to keep itself free from corrupting elements which might taint its purity and thwart its activity in training its members and in bearing witness to the world. As it concerns the offender, discipline is intended (1) to reclaim him from error of doctrine or impurity of life, so that, if possible, his soul may be saved; or (2) to cut him off, as a withered branch, from the body of Christ and all participation in its benefits. In the development of the Canon Law, such punishments were termed either medicinal (*pœnæ medicinales*) or strictly penal (*pœnæ vindicativæ*). The former are corrective and reformatory; the latter, while, according to canonists, they do not wholly exclude this idea, are mainly concerned with the vindication of the majesty of the law and the removal of all danger to the Church from contagion.

After the Apostolic age and from the close of the 2nd cent., Church discipline found expression in the unformulated system of Penance. To this were added, from the 4th cent., the Canons of Councils, local and ecumenical; from the 7th the Penitential Books; and later the collections of Canon Law culminating in the Decretals of Gratian, about 1150. Beginning with Constantine's reign, severe civil penalties were executed upon dissenters from the Church's formulated standard of doctrine. The Arians, who refused obedience to the Nicene

statement, were banished, and their books burnt. Although such penalties were inflicted by the civil ruler, they received the approbation of the Church. The legislation concerning the discipline and punishment of dissenters reached its culmination, so far as the Church was concerned, in the tribunals of the Papal and Spanish Inquisitions (1215, 1478). This body of legislation was extended to include witchcraft and all kinds of *maleficium*, especially after the bull of Innocent VIII., *Summis desiderantes* (1484).

The Reformers continued to insist upon ecclesiastical discipline, and, in their hands, it found its most strenuous application in the codes of Geneva and the disciplinary books of the Elizabethan Puritans of Scotland and the Westminster Assembly. As to the seat of authority for the exercise of Church discipline, the theory has been, and is, that the Church exercises discipline over her own members and within her own sphere. To use the expression current in the Middle Ages, she wields the spiritual sword (*gladium spirituale*), or, to quote a Protestant symbol (the Scottish *First Book of Discipline*, ch. ix.), she 'draws the sword which of God she hath received.' But, in fact, not only has the distinction between the Church and the State as agents to punish ecclesiastical offences (*delicta*) not always been clearly defined, but the Church has not restricted herself to her sphere, and, indeed, has expected the State to aid her in the maintenance of her discipline. From 325 onwards the Universal Church gradually came to approve civil penalties for ecclesiastical offences. The Latin Church, through the Inquisition, the culminating procedure in her disciplinary activity, not only pronounced suspects guilty of heresy, but imprisoned them, ordered their houses to be burnt and their goods confiscated, and turned them over to the civil authorities, knowing that their punishment would be death. In the Protestant Churches of Zürich and Geneva, among the Protestants of England and Scotland, and during the Colonial period in the United States, the same confusion prevailed, although in its application the legislation was much less destructive than during the Middle Ages. It has remained for more recent times to make the line separating the ecclesiastical and civil realms more distinct, even to the complete separation of Church and State, in some Protestant lands.

2. **Discipline in the Apostolic Church.**—Pure as is the operation of the Holy Spirit, and spotless as is the ideal Church, the bride of Christ, it was predicted by Christ that offences would arise (Mt 18⁷). Such offences were manifested in the earliest days of the Church's history. The Apostles themselves remained conscious of weaknesses and faults. Peter denied Christ (Mt 26^{69a}), and was condemned by Paul at Antioch (Gal 2^{12a}). Paul says, 'I buffet my body' (1 Co 9²⁷), calls upon the Christians to whom he wrote 'to mortify their members' (Col 3⁵), and in Ro 7 indicates that a constant war goes on in the Christian between the appetencies of the flesh and the will of the Spirit. 'In a great house there are not only vessels of gold and of silver, but also of wood and of earth; and some unto honour, and some unto dishonour' (2 Ti 2²⁰). Here the Apostle has in mind persons 'reprobate concerning the faith,' whom he compares to Jannes and Jambres (3⁸).

The Church's right to exercise discipline was definitely conferred when Christ empowered His Apostles to bind and loose (Mt 18¹⁸). He also indicated the measures to be resorted to when an offence became known. If a brother was found guilty of a fault, he was to be privately admonished by a single person; then, if necessary, by several in company; and finally, if reproof was still

¹ *Milinda*, i. 50.

² Rhys Davids, *Dialogues of the Buddha*, i. 190–192.

ineffectual, the offender was to be publicly rebuked before the congregation. In case he was still obdurate, he was to be treated 'as the Gentile and the publican' (vv. 16-17).

After the Resurrection, the Apostles exercised the function of discipline, and warranted it by precepts. The duty of feeding the flock and ruling in the Church (Ac 20²⁸, He 13⁷ etc.) implied this function. Special rules of practice were issued by the council of Jerusalem (Ac 15). The offences condemned were both errors of doctrine and faults of conduct against the pure laws of Christian living.

The first cases of discipline—the appalling deaths of Ananias and Sapphira (Ac 5)—are so extraordinary that no one but an extreme advocate of Church prerogative would find in them a precedent for the Church to follow, although they are referred to as examples of just punishment, not only in the Middle Ages, but by Calvin. It is true that, in the case of Sapphira, Peter announced her death; but the punishments must be looked upon as the unusual act of God, designed to make a lasting impression upon the Church. To another category belong the cases which occur in the writings of Paul and John. John (2 Jn 10¹⁰) took the position that heresy was a sufficient ground for refusing companionship with the offenders. Paul combined the two categories when he called upon the Thessalonian Christians to withdraw themselves 'from every brother that walketh disorderly, and not after the tradition which they received of us' (2 Th 3⁶). Heresy he pronounced a gangrene (2 Ti 2¹⁷, cf. Tit 3¹⁰), and he admonished the Corinthians to exclude from their companionship brethren who were extortioners, fornicators, revilers, idolaters, drunkards, and covetous (1 Co 5¹³). He excommunicated the member of the Corinthian congregation who had committed incest with his mother-in-law (1 Co 5, 2 Co 7), and 'delivered unto Satan' Alexander and Hymeneus (1 Ti 1²⁰). He also invoked the anathema against 'any man that loveth not the Lord,' and against the Judaizing teachers who might preach another gospel than that he preached (1 Co 16²², Gal 1⁸). In the case of the Corinthian offender, Paul states that his purpose was that his 'spirit may be saved in the day of the Lord Jesus,' and, in the case of Alexander and Hymeneus, that they 'might be taught not to blaspheme.'

It is evident that it is possible, from these statements of the NT, for a Church hierarchy, if it be so disposed, to justify the resort to the most rigorous methods of disciplinary constraint, and to reduce Church government to a mere contrivance to exact implicit mechanical obedience to a system of ecclesiastical enactments, forgetting that the Church is a training school to exercise discipline in the spirit of love and for the education and correction of the weak and offending.

3. The ante-Nicene practice (A.D. 100-313, the date of Constantine's edict of toleration).—In this period a strict system of discipline was practised, but the punishments were prescribed and executed by the spiritual authorities, and had nothing to do with civil constraints. There was no precise code, and the practice differed in different parts of the Church, for example, as between N. Africa and Rome. The two marked features are the development of the system of penance and the issue of disciplinary canons by councils. The distinction which came to be made between venial and mortal sins also had an important bearing upon the exercise of discipline.

In his *de Pudic.* ch. 19 ('Ante-Nic. Fathers,' Amer. ed., iv. 97), Tertullian enumerates seven mortal offences for which, if committed after baptism, there can be no restoration in this world or hope in the world to come—murder, idolatry, theft, apostasy, blasphemy, fornication, adultery. For these Christ will not act as pleader (*horum ultra exorator non erit Christus*). Those who commit such offences cease to be sons of God. For other sins committed after baptism, certain penances or compensations were prescribed, such as fasting, prayer, and almsgiving. Origen (as quoted by Friedberg, p. 208) states that only for manifest sins (*peccata evidenter*) were offenders cast out from the Church—giving as the reason, lest the wheat be plucked up with the tares. Towards the end of the period, the penitential system came to recognize four classes of penitents—weepers, hearers, kneelers, and standers (*flentes, audientes, genuflectentes, consistentes*). These were within the pale of the Church (*intra ecclesiam*) as opposed to the excommunicate. They were forbidden certain forms of pleasure, ornaments of dress, conjugal intercourse, etc., and they were especially required to devote themselves to prayer, almsgiving, fasting, etc. The usual duration of this period of penance was three or four years, though it might be abbreviated at the will of the Church authorities.

The schisms which broke out in the Church, such as those of

Novatian, Miletus, and the Donatists, were a revolt against a tendency to relax the rigours of discipline, and arose for the most part over the question of the restoration of the lapsed. The N. African Church, led by Tertullian, refused restoration to those who had denied the faith in times of persecution; Cyprian at first took the same ground, but later receded from it in view of the great number who had given way in the Decian-Valerian persecution, and granted to the penitent the communion in the hour of death. The Roman Church was lenient with this class of offenders.

The Synods which were held at the close of this period—Elvira, Arles, and Ancyra—passed severe disciplinary canons. The Spanish Synod of Elvira (see A. W. W. Dale, *The Syn. of Elvira*, Lond. 1882) in 81 canons punished with anathematization the denial of the communion, and lesser penalties. Murder, idolatry, and especially unchastity have a large place given to them. For example, a wife guilty of adultery, without precedent provocation given by the husband, is denied communion even in the hour of death. Those guilty of extravagance in dress may after three years be restored to the communion, and gamblers after one year. The worship of idols by a baptized adult is pronounced a *crimen capitale*, and the offender is excluded permanently from the communion.

4. From 313 to 1215 (from Constantine's edict of toleration to the establishment of the Inquisition).—With the alliance of the Church with the State, a new practice was developed in regard to the treatment of ecclesiastical offences. The State itself passed disciplinary regulations for certain of them, and executed punishments. Worldly penalties, such as confiscation of goods, banishment, mulcts of money, death, and later the loss of individual freedom, came to be approved by the Church as penalties for offences within the realm of religion (see Hinschius, iv. 803-814; Friedberg, 210; Hergenröther, 546 ff.). Carrying over to the new order the ideas which the office of Pontifex Maximus implied, Constantine claimed authority, as universal bishop, over the external affairs of the Church. He and his Imperial successors exercised the right not only of proceeding against heretics, but, as in the case of Theodosius, of designating who they were. The Theodosian code counted as a public crime every offence against religion, on the ground that such offences brought injury to all (*in omnium fertur injuria* [quoted by Friedberg, 209]). The following are the chief steps in the history of Church discipline in this period of 1000 years:

(1) As worldliness crept into the Church after Constantine's identification with it, offences of moral conduct were given less prominence, and offences were emphasized which were committed against the Church as a corporation and against its doctrinal code as formulated by the Councils, and held by the common opinion of the Church.

(2) Constantine punished departures from the Nicene statement by burning the books of the Arians and banishing Arius himself. His sons at one time punished Athanasius and his followers, at another favoured them.

(3) The Ecumenical Councils, beginning with the Nicene (325), passed, in addition to their doctrinal decrees, canons providing rules of administration and discipline. The Athanasian Creed pronounced anathema upon those refusing its precise definitions of the doctrine of the Trinity, and excluded them from the possibility of salvation.

(4) While the Emperors, from Gratian and Theodosius to Justinian, were proscribing paganism by penalties increasing to the penalty of death, Imperial rescripts were placing Christian heretics under the civil ban. Theodosius the Great, at the close of the 4th cent., pronounced those who held to the Nicene statement Catholic Christians, and all others heretics. In 15 different enactments he deprived the latter of all right to the exercise of religious usages, excluded them from civil office, and threatened them with fines, banishment, confiscation of goods, and—as in the case of the Manichæans, Audians, and Quartodecimans—with death.

(5) The code of Justinian not only regulated all

kinds of ecclesiastical affairs, but in certain cases gave even criminal jurisdiction to the bishops (see Pfannmüller, *Die kirchliche Gesetzgebung Justinians*, Berlin, 1902, p. 82 ff.).

(6) The penalty of death was executed for the first time for ecclesiastical offences at Trèves in 385, when the Spanish bishop Priscillian and six others, including a noble matron of Bordeaux, were put to death. All the bishops present except Theognistes approved the sentence. Ambrose and Martin of Tours disapproved of it, the former, however, being opposed to the death sentence altogether. Leo I. (440-461) definitely advocated the death penalty for heretics. Henceforth the only parties to oppose it were the dissenting sects, such as the Donatists.

(7) Notable cases of discipline are not wanting in the administration of high ecclesiastics. Chrysostom was deposed for rebuking the extravagance and vices of the Imperial court of Constantinople (404). Ambrose excluded Theodosius from the church of Milan till he had made expiation for the wholesale execution in Thessalonica (390). Synesius excommunicated the governor of Pentapolis for his merciless oppressions (409).

(8) The most important influence on the discipline of dissenters exercised by any churchman was that of Augustine. At first inclined to restrict discipline to spiritual measures, he changed front during the controversy with the Donatists. Quoting our Lord's words in the parable, 'Compel them to come in,' he expounded them to include physical measures. He did not go as far as distinctly to advocate the penalty of death, but his exposition became the chief authority for the Schoolmen, including Thomas Aquinas, in favour of the death penalty for heretics.

(9) During the 7th and 8th centuries, penitential codes came into use, prescribing penalties for all sorts of offences against religion and the Church, beginning with those of Columban († 615), and Theodore of Tarsus († 690). A forerunner of these writers was John Scholasticus († 578), whose *Synagma* with its 68 canons was confirmed by the Trullan Synod of 692. An idea of the penances prescribed by Theodore of Tarsus may be formed from one example. A priest who drank to excess and vomiting had to do penance for 30 days, a layman for 15 days. False canonical codes were referred to by the Paris Synod (829).

(10) The Isidorian Decretals, dating from the middle of the 9th cent., authorized the Church to take cognizance in her discipline not only of specifically ecclesiastical offences (*delicta mere ecclesiastica*), but also of offences of a mixed character (*delicta mixta*). For certain Church dignitaries the decisions of the Church tribunal were final.

(11) Special legislation was enacted for clerical offences. Among the more notable acts was the so-called Canonical Rule (see Hatch, *Growth of Ch. Institutions*, London, 1887, ch. ix.). The ministry had become not only a profession, but a lucrative profession. The clergy hawked and hunted, were extravagant in their retinues, drank, and committed other excesses. One of Charlemagne's capitularies (802) called upon the clergy to live 'according to the canon.' Later a semi-cloistral mode of life was introduced among them, one reason given being that the clergy thereby 'might avoid the company of women,' as at the Roman Council of 853.

(12) The Canon Law was definitely incorporated in the collections of Regino († 915), Burchard of Worms († 1025), Anselm of Lucca († 1086), Cardinal Deusdedit (c. 1087), and Ivo of Chartres († 1116). These imperfect works gave way to the monumental production of the Camaldulensian monk, Gratian,

who taught canon law in the convent of St. Felix, Bologna, in the middle of the 12th century. His work, whose original title was *Concordantia canonum discordantium*, became the manual in its department, as the *Sentences* of Peter the Lombard became the manual in the department of theology. It was greatly augmented with the supplements added by the Orders of Gregory IX., Boniface VIII., Clement V., and John XXII. Although full of forgeries and errors, as has been shown by Döllinger-Friedrich (*Das Papstthum*, Munich, 1892), it remained the undisputed code in Western Christendom till the Reformation, regulating life from the cradle to the grave. Its decrees have in part been superseded by the canons and decrees of the Council of Trent.

(13) As vicar of Christ and undisputed head of Latin Christendom, the Pope became, as the Middle Ages advanced, the supreme disciplinarian, and his decisions kept Christendom, especially England, in a constant ferment.

(14) The greater punishments which came into general use in the Church were the anathema and the interdict, to which is to be added suspension from the priesthood. Two forms of anathema, the minor and the major, are distinguished by Wetzeler-Welte, quoting Gregory IX., but they differ only in the degrees of solemnity with which they are pronounced. The anathema excludes from the communion and all public services of the Church except preaching, and from all the public suffrages of the Church, but not necessarily from private intercessions. If the sentence still rests upon the offender at death, it excludes from burial in consecrated ground. Martin V. in his *Ad evitanda* (1418) made a distinction between *excommunicati tolerati* and *excommunicati vitandi*. From the latter all religious intercourse whatever is to be withheld, and, as far as feasible, all commercial dealing (see Hergenröther, 568 ff.). Perhaps no excommunications surpass in execration that pronounced by Clement VI. (1346) against Louis the Bavarian:

'Let him be damned in his going out and his coming in! The Lord strike him with madness and blindness and mental insanity! May the heavens empty upon him their thunderbolts, and the wrath of the Omnipotent burn itself into him in the present and the future world! May the universe fight against him, and the earth open to swallow him up alive!' (Mibt, *Quellen d. Papstthums*, Tübingen, 1901, p. 153).

The interdict was extended to a community of persons or territory. There are different degrees of punishment involved in the sentence, but in general it involves the denial of the sacraments of the Eucharist, Ordination, and Extreme Unction, public services of the Church, and the rite of burial in sacred ground. Among the notable cases were the interdicts fulminated over Scotland (1180), England (1208), the sacred cities of Rome by Adrian IV. (1155), and Jerusalem (1229) on the occasion of the crusade of the excommunicated Emperor, Frederick II.

5. From 1215 (the Fourth Lateran Council) to the Council of Trent.—There are three important points which stand out in the further history of discipline before the Reformation. (1) The doctrine of Penance underwent a radical change (see K. Müller, *Der Umschwung in der Lehre von der Busse während d. 12ten Jahrh.*, Freib. 1892; Schaaf, *Ch. Hist.*, vol. v. pt. i. p. 729 ff.). Confession to the priest and satisfaction by doing the penances prescribed by him were made necessary for absolution. The acts of satisfaction are penal acts which serve like medicines for spiritual wounds, and also as a compensation to God for offences. So Alexander of Hales and Thomas Aquinas taught. The priest is the judge of what the act of satisfaction shall be. Among the more notable cases of public penance were those of Henry II. after Becket's death, and Raymund of Toulouse. This

system of discipline under the direction of the priest became obligatory for every Christian in the world. The crusades offered a vast opportunity for the exercise of Church discipline and penance.

(2) The tribunal of the Inquisition, established by Innocent III. at the 12th Ecumenical Council (1215), was intended to meet the peril of heresy and to extirpate it. With Gregory the Great (+ 604) heresy ceased to be known in Western Europe for four centuries. At the end of the 11th cent. slight traces of it appear at Goslar, Mainz, Cologne, Strassburg, and other places. They as quickly disappeared, but suddenly in the 12th cent. heresy sprang up in different parts of Europe, from Milan to Antwerp, and from the Pyrenees to Bremen. In his Laws of 1238, Frederick II. gives a list of 19 different heretical sects. The chief of these were the Cathari and the Waldenses. In 1163 a Synod of Toulouse compared heretics to serpents concealing themselves in the grass. Innocent III.'s predecessor, Lucius III., at the Council of Verona (1184) joined with Frederick Barbarossa in a public demonstration in the Cathedral, that they would make it their common cause to extirpate heretical depravity. Princes were ordered to take an oath to support the Church in punishing offenders, upon pain of forfeiting their dignities. The Synod of Toulouse (1163) had called upon princes to imprison heretics and confiscate their goods. The Third Lateran (1179) extended the punishments to defenders of heretics. By the third canon of the Fourth Lateran (1215) all princes were again enjoined to swear to protect the orthodox faith, on pain of losing their lands; and to all taking part 'in the extermination of heretics' was offered the indulgence extended to the Crusaders in the Holy Land. All who in any way supported heretics were to be excommunicated and excluded from receiving their natural inheritance. This portentous organization was further perfected at the Council of Toulouse (1229), and by Innocent IV. in his bull *Ad extirpanda* (1252), which prescribed torture as a means of extorting confession of crime. No heretic was to be punished till convicted by the ecclesiastical tribunal, but, once convicted, the secular arm was under obligation to punish the offender by destroying his domicile and refuge, even though it were underground, by confiscating his goods, and by putting him to death. Innocent III. declared that, as treason was punished, so much more should punishments be meted out to those who committed the greater crime of blasphemy against God and His Son. Secular princes were to draw the sword against them (see quotation in Schaff, *Ch. Hist.*, vol. v. pt. ii. p. 518, together with Hurter's exposition of Innocent's views). Innocent summoned Christendom to a crusade against the heretics in Southern France, promising 'those who fought for the soul and for God' the same rewards as he promised to those who ventured their lives to rescue the Holy Sepulchre.

In vain is the plea made that the Church did not execute heretics or immediately pronounce the decree of execution. It immured them for life, and it threatened with exclusion from the sacrament and from heaven princes and magistrates who refused to execute the death penalty upon them. The Catholic apologist, Vacandard, is compelled to say that at times the sacred tribunal actually passed sentence of death. It is strange, in view of the words of Popes and councils, that Catholic writers, like Ph. Hergenröther (*Kathol. Kirchenrecht*, 64), should assert not only that it is not within the Church's province to execute the death penalty, but that it cannot call upon the State to execute it. An inquisitor like Bernard Guy represented the temper of his time when he said in his famous manual that heresy could be exterminated only as heretics were burnt.

To this extreme form of Church discipline the Schoolmen gave full theological justification. Thomas Aquinas, resting upon the authority of Augustine, asserted that 'heretics were not only to be separated from the Church by excommunication,

but from the world by death' (*Summa*, ii. pt. 2. 11 [ed. Migne, iii. 109]). 'As falsifiers of coin are to be put to death, much more should they be put to death who are guilty of the more wicked act of corrupting the faith. The heretic the Church delivers over to the secular tribunal to be put out of the world.'

The Spanish Inquisition, formally sanctioned by Sixtus IV. (1478) and accepted by his successors in its essential features, is even more noted in history for its ingenious devices and severity in disciplining heretics than the papal tribunal established in 1215. Pastor and Funk both agree, as against Hefele, that it was primarily not a State institution, but the creation of the Pope (Schaff, *Ch. Hist.*, vol. v. pt. ii. p. 539 ff.).

(3) The third important chapter in the history of Church discipline in this period was the famous assertion of Boniface VIII., in the bull *Unam sanctam* (1302), that both swords are in the hands of the Pope, and that it is altogether necessary to salvation to be obedient to the Roman pontiff. This assertion, confirmed by Leo X. on the very eve of the Protestant Reformation, sufficiently justifies the Church in the use of any means whatsoever that it may select to carry on its work and maintain its authority. Down to the 14th cent., the theory had been that the Church's jurisdiction stops with those who are baptized by its ritual. But papal pamphleteers, after the death of Boniface VIII., like Augustinus Triumphus (+ 1328), extended it to the whole heathen world. A voice as if proclaiming a new era, Marsilius of Padua, in his *Defensor pacis* (1324), argued that the disciplinary prerogative of the Church was only suasive, not penal. But the Church did not listen to him, and the Council of Constance (1415) re-affirmed the doctrine that heretics should be burnt ('puniendi usque ad ignem'), and carried out the affirmation in the sentences against Hus and Jerome of Prague and the bones of Wyclif. The papal crusades against the Cathari were repeated against the Hussites, and Savonarola was burnt with the approbation of Pope Alexander VI. One of the charges made by Leo X. against Luther was that he asserted that it was against the will of the Holy Spirit that heretics should be burnt.

The Council of Trent nowhere mentions the penalty of death for heretics, but neither it nor any Pope since has expressly rejected the severe disciplinary policy exercised by the Church for centuries. The disciplinary element in penance was re-affirmed by the Council of Trent, even to the use of indulgences.

6. The Reformers and the Protestant Churches. —Three things, made prominent by the Reformers, were adapted to reduce the value of Church discipline and to limit the application of a disciplinary code: (1) the principle emphasizing the immediate responsibility of the Christian to God; (2) the authority of Scripture as the supreme rule of life; (3) the insistence upon preaching as the chief element in the power of the keys—a view which passed into the Augsburg (Schaff, *Creeds*, iii. 59) and other Protestant Confessions. Instruction and persuasion through the sermon were destined, to a considerable extent, to take the place of punitive discipline. Another consideration adapted to limit the application of discipline was the abolition of the confessional, and the substitution of repentance of heart for penance with its system of outward satisfactions imposed by the priest. There was a wide divergence between the Lutheran and the Calvinistic Reformations in the prominence given to discipline, growing out of the attitude of Luther and Calvin respectively. Luther had no genius for administration, and felt little confidence in discipline. Calvin was a born administrator, and in theory advanced discipline to almost as high a place as it had held in the

medieval Church, but with a wide difference in practice.

(1) *The Lutheran Church*.—Luther was inclined to be satisfied with preaching, Christian instruction, and the dispensation of the two sacraments as the means for preserving the purity of the Church and extending her influence. He had little to say about discipline as a system, and never set forth a clear theory of the relation of Church and State. He was violent enough in his judgments against the Anabaptists, Münster, and the Protestant anarchists, and against the Swiss, but he never worked out a system of discipline. The *Augsburg Confession* (pt. II. art. vii.) condemns the 'violent excommunications' of pontiffs, and their attempt to take from Emperors their prerogatives and transfer them to themselves. It insists that the two powers are not to be confounded, and at the same time that the Church in her own sphere is sovereign. The exercise of her rightful power no more interferes with civil government than the art of singing does. The *Schmalckald Articles* (iii. 9) reject the major excommunication, but retain the minor, which is to be used against manifest sinners, excluding them from the Lord's Table till they give proof of amendment. This power of excommunication inheres in the body of the Church. Later in the 16th cent. it was left to the Lutheran consistories, the pastor having only the prerogative of announcing the sentence. In the 17th cent. there was a movement to establish or re-establish a system of discipline by J. V. Andreae, who had been in Geneva, the younger Quistorp of Rostock, and others, by the appointment of a body of elders for each congregation. Spener also wrote of discipline as a possible means of reviving piety. These suggestions came to nothing. At the present time the State exercises so large an authority in appointing ministers and enforcing baptism that discipline is almost a lost art in the German Lutheran Churches.

(2) *The Reformed Churches*.—(a) Zwingli and Ecclampadius left the right of excommunication to the State. In Zürich the Reformation was carried out by the magistrates; and heretics and Anabaptists were executed. Zwingli, so far as we know, did not protest against this punishment. The *First Helvetic Confession* provides for excommunication and for reinstatement in case of repentance; but, without making a clear distinction between the two realms, puts the authority to pass sentence in the hands of those 'who are appointed thereto by the servants of the Word and the Christian magistracy.' The State is to take positive measures to root out blasphemy and punish blasphemers, and to promote the spread of the principles preached in the pulpit. The *Second Helvetic Confession* (xxx. [Schaff, *Credo*s, iii. 305 f.]) makes it the duty of the civil magistrate 'to defend the Church of God and the preaching of the truth, to cut out all impiety, superstition, and idolatry, to draw the sword against all malefices and blasphemers, and to coerce all heretics who are heretics indeed.'

(b) The practice of the large body of the Reformed Churches was determined by Calvin's treatment in his *Institutes* (bk. iv. ch. 12) and by the Genevan code, the *Ecclesiastical Ordinances*, which were largely the work of Calvin's hand. It must not be overlooked that in minor particulars the execution of the Genevan legislation differs from Calvin's theory as laid down in his *Institutes*. Calvin's carefully arranged form of Church government involved a rigid discipline. He proceeded on the principle that 'no house can be preserved in proper condition without discipline.' Otherwise Christians would live like rats in the straw.

Discipline is the only remedy against a dreadful desolation in the Church. Its purpose is threefold—to keep the Church in a sound condition, to protect its members against taint, and to bring the offender, if possible, to repentance. Following closely on Mt 18¹⁸, admonition precedes excommunication, which is the last resort of the ecclesiastical power. Calvin declared that, as sound teaching is the soul of the Church, so discipline is its sinews (*disciplina pro nervis est*). The elders, twelve in number, appointed from the Little Council, were expected to live in different parts of Geneva, in order that they might the better perform their functions as overseers. It was their duty to watch over the moral and religious fidelity of the people, and to make at least once a year a visitation of every household. With the pastors they constituted the consistory, which met once a week and sat upon complaints made against high and low. They fixed penalties for offenders, such as payments of money for non-attendance at Church. Greater offenders were turned over to the civil power for punishment. Watchmen were appointed to report persons who failed to go to Church. This system has been likened by Catholic historians (e.g. Funk, *Kirchen-gesch.*, 1902, p. 438) to the tribunal of the Inquisition. Calvin's theory of the relation of State and Church cannot be discussed here. It is evident, however, that, in abandoning the medieval mistake whereby the Church arrogated to itself authority over the State, he went too far in the other direction to suit our modern ideas. He was right in declaring that ministers must confine themselves to the spiritual sword, which is the word of God (*Inst.* iv. ii. 4). The State he treated as a Christian institution established to defend the Church, and to punish religious as well as political and moral offences. Thus not only sedition and adultery were punished by death in Geneva, but also blasphemy, heresy, and idolatry, the justification for such punishments being derived from the Old and New Testaments. The most notable of the many condemnations was the burning of Servetus upon the two charges of blasphemy against the doctrine of the Trinity, and insulting reprobation of infant baptism. Calvin himself acted as prosecutor. The Reformer, however, seems to have had some idea of the co-ordinate relation of the two realms, and insisted, at the risk of his life, upon excommunication as the sole prerogative of the Church. In the famous case of the excommunicated Berthelier (1553), who had been reinstated by the civil authority in the church, Calvin declared that he would die rather than acknowledge the principle of State interference.

(c) The Protestant Church of France, adapting itself to its position in the State, adopted Calvin's discipline in a modified form, but also declared that the magistrates are appointed of God to suppress crimes against the first as well as against the second table of the Decalogue (*Gallican Conf.* xxxix.).

(d) The Anglican *Thirty-Nine Articles* commanded excommunication (xxxiii.), but are not clear in defining the tribunal before which a person should come before being received back into the communion of the Church, the words running 'received into the Church by a judge that hath authority thereunto.' By virtue of the supreme headship of the Church in England inhering in the sovereign, discipline for Church offences was exercised by the civil authority. This principle was not combated by the Puritan party in Elizabeth's reign, but only the application of it whereby they suffered for disobedience to the Act of Uniformity.

(e) In Scotland and among the Puritan churches

the rigorous discipline of Geneva found its most genial soil, so that Puritanism and Presbyterianism are synonymous in the popular mind not only with severity of Christian living, but with severity of censure upon those who depart in faith or ethical practice from the accepted standard. The Scottish symbols, and the Westminster standards which took their place after 1648, alike enunciate the close relation between Church and State whereby the State punishes a certain class of religious offences, and also lay great stress upon strict supervision over the lives of Church members and a rigorous system of censure. The *Book of Common Order* and the *First Book of Discipline*, as well as the *Form of Government and Directory of Worship* of the Westminster Assembly, state at length the rules of judicature and of trial. To these is to be added the *Order of Excommunication and of Public Repentance*, commanded to be printed by the Scottish Assembly in 1569 (see Dunlop, ii. 701-745). Knox, the faithful disciple of Calvin, laid down in the *Scottish Confession* of 1560 the principle of the relation of Church and State, when he declared that to civil rulers 'chiefly and most principally the conservation and purgation of religion appertains,' and that they are appointed for the maintenance of the true religion and for suppressing idolatry. This principle was fully embodied in the *Westminster Confession* (xxiii.), which declares it to be the duty of the civil magistrate to 'take order that unity and peace be preserved in the Church.' He 'hath power to call synods and to provide that whatsoever is transacted in them be according to the Word of God.' This principle was carried out in the relation which the Assembly sustained to Parliament. One of the main complaints of the Millenary Petition in 1603 concerned Church discipline. The petitioners begged 'that men be not excommunicated for trifles and twelve-penny matters' (see Gee and Hardy, *Documents*, London, 1896, p. 509 ff.).

To the subject of the Church's exercise of discipline by its own tribunal, the *Westminster Confession* devotes a whole chapter (xxx.), and prescribes three forms of punishment—admonition, suspension from the Lord's Supper for a time, and excommunication from the Church. The reasons for the exercise of discipline are given in a more quaint and attractive form by Knox in the *Book of Common Order* (ch. vii.), and in the *Order of Excommunication* (ch. iii.). In the latter it is stated 'that, as it would be a work both uncharitable and cruel to join together in one bed persons infected with pestilent and other contagious and infective sores, with tender children or such as were sound, so it is no less cruelty to suffer amongst the flock of Christ such obstinate rebels . . . , for a little leaven corrupteth the whole mass.'

Offences coming before the Church court for censure are enumerated in the *Scottish Book of Discipline* (ch. ix.), and include 'accursed papistrie,' which exposed those who were infected with it to excommunication. This is reasserted in the *Order of Excommunication* (Dunlop, 709). The Kirk-session, consisting of the minister and elders, meeting once a week, had as one of its functions to determine and judge causes and administer admonition to licentious livers, for 'by the gravity of the seniors, the light and unbridled life of the licentious must be corrected and bridled' (*First Bk. of Disc.* x.). The sentence of excommunication was to be announced by the minister in the public audience of the people in the words:

'We having place in the ministry . . . draw the sword granted by God to His Church, that is, to excommunicate from the society of Christ Jesus, from His body the Church, from participation of sacraments and prayer with the same, the said N.'

(f) In America, during the Colonial period, the discipline within the Churches of Puritan and Presbyterian lineage was strict, and throughout the colonies, even in New Amsterdam under Peter Stuyvesant, the magistrate joined in exercising oversight over strictly ecclesiastical affairs. The notable exception was Rhode Island, founded by Roger Williams, who before his banishment denied the right of the civil authority to punish offences against the first table, and who in his exile gave memorable expression to the principle of religious liberty. In the New England colonies, especially Massachusetts, the close alliance of Church and State involved not only such acts as the calling of synods by the legislature and the collecting of taxes for the support of the Established Church, but acts of Church discipline culminating in the banishments of Anne Hutchinson (1638) and Roger Williams (1636), the public execution of four Quakers (1659-61) in Boston, and the execution of nineteen persons accused of witchcraft in 1692. With the adoption of the American Constitution, the Churches, including the American Presbyterian Assembly (1789), adopted modifications of their constitutions, making them conform to the principle of the complete separation of Church and State. The Assembly of that year altered in a fundamental way ch. xxx. of the *Westminster Confession*. For similar modifications by British Presbyterian Churches, see art. CONFESSIONS, in vol. iii. p. 878*.

In recent times the tendency among Churches using the English tongue is to forego as far as possible the right of discipline, preferring to trust almost wholly to the effect of the public exposition of the truth from the pulpit and to the conscience of the church-member. There is also a tendency to avoid the exercise of discipline upon ministers of the gospel in the matter of doctrinal belief. The recent trials of Professor William Robertson Smith in Scotland (1877-81) and Professors Charles Briggs and Henry Preserved Smith in the United States (1892-94), and their exclusion for supposed heretical views, awakened wide-spread attention, and have raised the serious question how far liberty of opinion should be tolerated in a minister when it is accompanied by devotion to Christ and the interests of His Church.

DAVID S. SCHAFF.

DISCIPLINE (Jewish).—The State under the Mosaic system being a theocracy, every offence was necessarily ecclesiastical, and its punishment a disciplinary measure. Besides the compulsory sin-offering (Lv 4¹²), the penalties imposed by the Pentateuch are fines, loss of property, flagellation, 'excision' (Gn 17¹⁴, etc.), and death. But, among the offences of which Mosaism takes cognizance, some are ecclesiastical in the stricter sense. They are, chiefly, idolatry, sacrilege, the appropriation of holy things, and the ministration of a priest when in a state of Levitical impurity. A priest's

daughter, moreover, who gave herself to prostitution was regarded as 'profaning her father,' and was to be burnt to death (Lv 21^b). The unintentional trespasser in the matter of holy things had to make full restitution to the sanctuary, and to pay an additional fifth of the value (Lv 5^{14a}). Death was the penalty for sacrilege (Nu 15¹, etc.); and the defiled priest had to wait until the evening, and then bathe, before resuming the duties of his office (Lv 22^a). Those who disobeyed imperilled their lives (*ib.*). A notable instance of sacrilege being thus punished is that of Nadab and Abihu (Lv 10^{10a}). The Israelite who ate leavened bread at the Passover, or consulted wizards, was punished with 'excision' (Ex 12^b, Lv 20^a); the Sabbath-breaker was stoned (Nu 15^{32a}); the worshipper of Molech was liable both to 'excision' and to the death penalty (Lv 20^{2a}).

A totally different kind of discipline was the self-imposed austerity of the Nazirite, who, in virtue of his vow, abstained from wine and strong drink, remained unshaven, and conformed to the laws of Levitical purity in all their rigour (Nu 6^{1a}).

For the purpose of stamping out idolatry the theory of the ban was brought into use. A person, animal, or thing, set apart or devoted to God, was known as *ḥērem*, i.e. banned, or tabu, and could not be sold or redeemed (Lv 27^{28a}). Idolatrous emblems and the cities of the seven Canaanite nations, with their inhabitants and contents, were *ḥērem*, and were to be destroyed (Dt 20¹ 3⁶ 7^a, Jos 6¹⁷). He who appropriated 'devoted things' was, so to speak, infected, and became *ḥērem* in his turn; he incurred the death penalty (Dt 7²⁶, Jos 7²⁵). A like doom overtook the idolatrous Israelite (Dt 13^{9a}). Idolatrous Israelitish cities, with their spoil, were to be burnt, and the cities to remain an everlasting ruin (Dt 13^{25a}).

By the time of Ezra disciplinary practice had become much less severe. Ezra invokes a general assembly of the Jews in order that they may purge themselves from the evil of intermarriage with their idolatrous neighbours; the property of those who refuse to attend is to be 'devoted,' and they themselves 'separated from the congregation' (Ezr 10^{7a}). There is no question here of a death penalty, and the use of the comparatively mild term 'separated' indicates a mitigation of disciplinary rigour. Ezra's action, however, seems to be a connecting link between the Pentateuchal procedure and the system of excommunication of the Talmudic régime. Under that system the term *ḥērem* changes its meaning, and now signifies the ban, not the thing banned. It is the technical term for excommunication, the most formidable weapon of the Jewish Church.

Excommunication, however, though the chief, was not the only disciplinary measure in use among the Jews. The voluntary asceticism of the Nazirite had its counterparts in post-Biblical times. Thus a man would take a vow, even registering it in a deed, to abstain, for a term or for life, from certain forms of self-indulgence. Gambling was a favourite subject of such a vow. The penalty for violation of the vow was often severe, extending even to bodily mutilation. Another self-imposed penance was fasting. A man would bind himself to fast on certain days of the week either for a definite period or for life. Further, the mediæval community or congregation would make enactments (*ṭ'kānōth*) against various offences, disobedience to which was punished by fines, exclusion from synagogal office, or refusal of the privilege of reading from the scroll of the Pentateuch during service, or of participation in some other religious rite. The imposition of a fine on the elder D'Israeli by the Spanish and Portuguese congregation in London was the immediate cause of his withdrawal

from the synagogue. Disobedience to a *ṭ'kānā* might also be visited with imprisonment (the Jews often had their own prisons in the Middle Ages). An offender might be denied Jewish burial, or his body consigned to a special section of the cemetery set apart for notorious evil-doers. Sentence of death was also passed upon flagrant transgressors, more particularly upon informers. The execution of the sentence in such cases necessarily required the consent of the Government, by whose officials it was carried into effect. Another disciplinary expedient was public denunciation in the synagogue, recourse to which was sometimes had in the case of the most venial offences—for extravagance in dress, for example, on the part of women. Nevertheless excommunication continued to be the most effective disciplinary agent of the synagogue for 2000 years.

The ban of the Synagogue falls under three categories, known respectively as *n'zifā*, *niddūi*, and *ḥērem*. The first lasted seven, the second thirty days. In Babylonia the periods were one day and seven days respectively. *N'zifā* was the penalty for slight offences, especially insult to the religious authorities. As regards *niddūi*, the ban was removed at the termination of the prescribed period if the offender made due submission, the formula being: 'Thou art absolved; thou art forgiven.' If he was recalcitrant, the punishment was renewed for a second and a third period. If he was still contumacious, excommunication in the third degree (*ḥērem*) was pronounced, which continued for an indefinite period, but might be revoked at the will of the authorities. Before sentence was pronounced, the culprit was thrice publicly exhorted to submission and repentance in the synagogue, on Monday and on the following Thursday and Monday, those being the days when the Law was read and the congregation was numerous. When this exhortation proved unavailing, the ban was pronounced in the offender's presence with the words: 'N.N. is excommunicated'; or, in his absence, with the words: 'Let N.N. be excommunicated' (cf. the expression 'anathema maranatha' in 1 Co 16²², the second word of which is perhaps a corrupt reading for *mākrām'attā*, 'thou art excommunicated'). Those on whom *n'zifā* was pronounced were compulsorily confined to their houses, and forbidden to engage in business or pleasure. Those under *niddūi* were forbidden all social intercourse save with their wives and children. They could not make up the quorum for public worship (*minyān*), but they might attend the synagogue for prayer and listen to religious discourses. They had to wear mourning, and were forbidden to bathe, to cut their hair, or to wear shoes. It is said that there was a special entrance into the Temple reserved for excommunicated persons, and men greeted them as mourners. If *ḥērem* were pronounced, the offender might not teach; nor might he be supplied with food beyond what was required for bare sustenance. His wife might be excluded from public worship and his children from school. If his offence was heresy, and he died impenitent, no funeral rites might be performed for him, and a stone was placed on his coffin.

The offences punishable by *niddūi* are drawn from every department of the religious and ethical domain. Maimonides (*Hilkoth Talmud Torah*, 6.14) enumerates twenty-four examples drawn from the Talmud; but his list is obviously not exhaustive. A few typical examples may be given: desecrating the second day of the festival (though it is a purely Rabbinical institution); unnecessary use of the Divine Name; ill-treatment of children by the parent, so that they are made to break the command 'Thou shalt honour thy father and thy mother':

the neglect by a slaughterer of cattle (*shôhēt*) to show his knife to his Rabbi so that it may be declared fit for its purpose on ritual and humanitarian grounds; business partnership between a divorced couple; selling to a Gentile land immediately adjoining the property of another Jew without indemnifying the latter for consequent injury.

Probably owing to the example of the Church, excommunication among the Jews became more drastic and more far-reaching in the Middle Ages. The catalogue of offences visited with the penalty was enlarged, the disabilities it imposed increased in number, and the right of pronouncing it extended from the Rabbinical authority to the congregation (*kāhāl*). Synods met at various times to formulate new ecclesiastical rules, all of which were enforced by the threat of excommunication. Thus the famous Synod of Worms, convoked in the 11th cent. by R. Gershon of Mayence, declared polygamy forbidden, and placed under the ban those who disobeyed this decision. On the other hand, the offences denounced by the congregation were often trivial, and resort to excommunication in their case was less justifiable. Thus the penalty became a terrible engine of oppression in the hands of ill-instructed men, who were free to give effect to their own ideas of right and wrong, unrestrained by the moderating influence of trained and educated minds. The decrees of excommunication pronounced by the congregation operated within the entire district over which it exercised jurisdiction, and, until formally repealed, through all generations. They followed the offenders even after they had severed themselves from the congregation and had removed to another district.

In some of its features the Jewish ritual of excommunication in the mediæval period bore a close likeness to that adopted by the Church. The excommunicated person, if his case was a bad one, was literally banned 'with bell, book, and candle.' Led into the synagogue, he was placed beside the reader, who stood at the ark, the most sacred part of the building, with a scroll of the Pentateuch in his arms. Inflated bladders were placed on a bier, candles were lighted, and sackcloth and ashes strewn at the offender's feet. Then the horn (*shôphâr*) was sounded, the candles were extinguished, and the bladders burst—all to strike terror into the culprit's heart. Finally came the pronouncement of the excommunication: 'In the name of God, of the tribunal of Heaven and of earth, we solemnly ban and excommunicate the sinner N.N. May all the curses of the Law rest upon his head, and this excommunication cling to the 248 members of his body!' Whereupon all present, including the culprit, answered 'Amen.'

The history of excommunication in the Jewish Church is chiefly a catalogue of more or less distinguished persons banned for heresy, or some cognate offence against authority. Breaches of the religious law were frequently visited with the penalty; but we hear less of them in this connexion than of contumacy and unorthodox teaching. That excommunication was employed to fight Christianity at its inception is to be gathered from Lk 6²² and 9²², and from other passages in the New Testament. The first undoubted instance of the imposition of the ban given in the Talmud, though we read of possibly earlier threats of it, is that of the sage Akabya ben Mahalalel (a contemporary of Jesus (?)), whose sin consisted in persisting in a view of the ritual law opposed to that of the majority of the Sanhedrin. At this period the President of the Sanhedrin was invested with the power of excommunication, and a famous President at the beginning of the 2nd cent. was Gamaliel II., a man of sterling but imperious character. A

notable victim of his overbearing temper was his own brother-in-law Eliezer ben Hyrcanus, a Rabbi of great learning and influence, upon whom Gamaliel imposed lifelong excommunication for an offence similar to that of Akabya. Gamaliel calls Heaven to witness that his severity has for its motive not a lust of power, but zeal for the Divine glory; and there is no question that his protest is sincere. But it is of such stuff that Torquemadas are made, and from such zeal that the evils they produce are wrought. Certainly this truth did not escape the attention of the Talmudic doctors; and when, in the same century, Judah the Holy threatened to place R. Meir under the ban, a resolute spirit—Bar Kappara—himself a member of the Sanhedrin, strenuously protested. It would seem, indeed, that excommunication became increasingly rare in Palestine from this time forward, flagellation being substituted for it in the case of insubordinate Rabbis. In Babylonia, however, to which the centre of gravity of Jewish life was now being shifted, the old disciplinary system was maintained, at least in principle. How often it was put into practice it is impossible to say. Only three cases are recorded, so that its mere terrors possibly sufficed to keep the rebellious in order. There were certainly Rabbis who prided themselves upon never having pronounced sentence of excommunication upon a colleague; the very act of pronouncing it was punishable with the ban. It is even recorded that a Rabbi would first put himself under the ban before imposing it upon others, so that he might remember to release them when he set himself free. But this considerate temper was by no means general, and the consequences were sometimes grotesque. Two Rabbis would excommunicate each other, and the difficulty was to know which of the two sentences was the valid one. The absurdity of such proceedings and the evil consequences generally of excommunication moved Maimonides (12th cent.) to utter a warning note.

'The Rabbi,' he said, 'has the undoubted right to punish insults to his office by excommunication; but it does not consort with his dignity to exercise this right frequently. Better that he should let the insults of coarse men go unnoticed, as the wise Solomon has said, "Take not heed unto all words that are spoken; lest thou hear thy servant curse thee"' (*op. cit.* end).

Maimonides himself was the innocent cause of increased resort to the ban. Opposition to his theological teachings broke out into active violence after his death, and the anathema was pronounced against all and sundry who should read his *Guide* or the Introduction to his *Yad*. The Rabbis of the opposing school followed suit, and excommunicated those who denounced the Master. The quarrel not only grew fiercer as time went on, but widened in scope. The ban was now directed against preachers who interpreted the Scriptures allegorically, and against all persons under 25 who engaged in the study of Greek philosophy, or of any natural science except medicine.

In Amsterdam, in the 17th cent., Uriel Acosta, having made his submission to the Synagogue after excommunication for heresy, was placed under the ban a second time on repeating his offence. Again recanting, he was again absolved; but his conflict with the authorities had unhinged his mind, and, after an attempt upon the life of his denouncer, he died by his own hand. A more illustrious heretic, Spinoza, paid with excommunication for his philosophical speculations in the same century and in the same city. He made no attempt at recantation or submission; the decree which drove him out from the Jewish community secured additional effectiveness from his self-imposed banishment and alienation. Cf. artt. ACOSTA, SPINOZA.

Nor was philosophy the only heresy. The mystical doctrine of the Kabbālā, which represented the other pole of Jewish thought, was equally anathema. Shabbathai Sebi, the pseudo-Messiah, also of the 17th cent., was put under the ban as much for his Kabbalistic teachings as for his Messianic pretensions. His followers long outlived him.

—they still survive in Turkey; and the sentence pronounced against their founder was renewed for their punishment at intervals for a century and a half. Dabbling in the Kabbalā brought not merely impostors, but also great teachers, under the ban. Indeed, the more eminent the Rabbi, the more surely does he seem to have been marked out as a fit subject for excommunication; and, on the other hand, the more obscure the Rabbi, the more ready he was to excommunicate. 'The sword and shield of ignorance and deceit'—thus a Jewish writer characterized the ban. Even to show brotherly feeling for the Karaites was an offence visited with disciplinary measures, as the famous Nachman Krochmal of Lemberg was to learn, less than a century ago. Naturally, the sect of the *Hasidim*, who exalted mysticism above conformity with the Rabbinic Law, were banned as heretics. Heresy, moreover, meant anything that was new, however innocent or positively advantageous to the Jewish cause. Thus the Synagogue, or rather its representatives in certain places, declared some of its best friends anathema—a Dr. Frankl, for example, who fifty years ago desired to found in Jerusalem an asylum for children on modern lines, and, a little later, even Sir Moses Montefiore, who advocated the teaching of European languages in the schools of the Holy City. Nor has such disciplinary procedure been quite unknown in England in recent times.

A species of excommunication was launched by the orthodox Rabbinate in 1842 against the West London Synagogue, which had just been established on principles antagonistic to the Talmudic theory of the divinity of the Oral Law. The faithful were warned against using the Prayer Book of the new congregation, and against communion with them in 'any religious rite or sacred act.' Members of the congregation were denied Jewish burial. After protracted negotiations, the ban was removed seven years later.

At the present time excommunication is virtually extinct among Jews in civilized countries. More than a century ago the famous Paris Sanhedrin, convoked by Napoleon I., anticipated matters by virtually declaring the rite of excommunication obsolete. It is significant that a note to the chapter on the ban in the latest editions of the *Shulhan Arukh*—the authoritative text-book of orthodox Judaism—declares that the prescriptions set forth in that chapter have no longer any validity (*Yorē Deah*, sect. 334). Even the most devoted adherent of the Rabbinic Law is forced to admit that these severe disciplinary measures are at once superfluous and contrary to the spirit of the age. Self-preservation is obtainable by milder and more rational means in these days of emancipation and equality. Moreover, the Jew imbued with the modern spirit recognizes, as fully as does his Gentile brother, that severity, when exercised by a religious body, defeats its own purpose by hardening the offender in his offence and confirming him in his heresy. It is a glaring self-contradiction, seeing that a Church, which necessarily claims to

be the Divine representative, should have, as its first characteristic, the Divine qualities of mildness and leniency. Thus the ban has again and again served the cause of irreligion, instead of militating against it. Moses Mendelssohn (18th cent.), the protagonist of the modern Jewish temper, has well expressed this view:

'Excommunication and proscription,' he says in the introductory pages of his *Jerusalem*, 'are directly contrary to the spirit of Religion. What!—shut out a brother who would share in my edification and lift his heart with mine to God! If Religion permits itself no arbitrary punishments, least of all can it use this spiritual torment which, alas, only they can feel who are truly religious. . . . Every society, it is urged, has the right to exclude; why not a religious society? My answer is that this is just where a religious society forms an exception. Subject to a higher law, no society can exercise a right which is directly opposed to its fundamental aims. To excommunicate a dissenter, to expel him from the Church, is like forbidding a sick man the dispensary. It is to repulse the patient whose need of medicine is all the greater because he is not conscious of his need, but deems himself in good health.'

In fairness, however, to the Synagogue, a distinction must be drawn between the needs of modern times and those of the past. There were occasions when the duty of safeguarding the existence of the community, and even of the religion, seemed to justify resort to excommunication. It possessed terrors which every other disciplinary expedient lacked. It seemed to be the only means of enforcing respect for authority and obedience to its injunctions. It supplied an effective weapon for preserving morality, personal and public, and it often averted ill-will and persecution at the hands of the general population, by preventing internal disputes from obtaining the publicity of the secular courts. Under threat of excommunication, Jewish litigants would bring their quarrels for adjustment to the *Bēth Din* (the Ecclesiastical Court) or to the *Kāhāl* (the Congregation), instead of taking them for settlement to the magistrates. But these considerations do not excuse the action of certain Rabbis, of the mediæval period more particularly, who resorted to excommunication as an easy means of crushing their personal opponents. Nor, in the case of heresy, do they avail against the objection raised by I. H. Weiss (*Dor Dor*, v.), that excommunication, even when actuated by the purest motives, did more harm than good by rendering Jewry in twain at a time when concord and union were its greatest need. Moreover, as he adds, instead of extirpating the evils at which it aimed, it often rooted them deeper. The heretic, who might have been won back by lenity and forbearance, was strengthened in his heresy, and still further estranged, by severe methods.

DISEASE AND MEDICINE (Introductory and Primitive).—Of the two methods, the 'direct' and the 'interpretative,' by which we can study the beliefs of different peoples as regards the methods of communication, diagnosis, and treatment of disease, each has its difficulties. To

'interpret' the beliefs of a people from observation of their practices is always a dangerous procedure. The same practices may exist among widely distant peoples; yet we can never safely conclude that they are the expression of precisely the same beliefs, or that apparently identical be-

liefs have the same meaning and have been reached by the same lines of development. Take as an example certain conceptions of the cause of toothache.

In the Banks Islands, says Codrington (*The Melanesians*, Oxford, 1891, p. 198), there was 'a young woman of my acquaintance' who 'had a reputation for power of healing toothache by a charm which had been taught her by an aged relative deceased. She would lay a certain leaf, rolled up with certain muttered words, upon the part inflamed; and, when in course of time the pain subsided, she would take out and unfold the leaf, and show within it the little white maggot that was the cause of the trouble.' We turn now to the Ainu of Japan. 'For toothache a nail is heated to white heat and held on the affected tooth for a few seconds. This is said to kill the insects which are supposed to be the origin of the malady' (J. Batchelor, *The Ainu and their Folklore*, London, 1901, p. 293). Lastly, in ancient Assyria and among the modern Arabs of Mesopotamia, toothache is attributed to a worm.

It would be tempting to suppose that the notion of worms or insects being the cause of toothache has had the same origin in Melanesia, Japan, and Asia Minor; but all modern anthropological research points to the danger of drawing such a conclusion from a single thread of evidence. We can hope to arrive at the relationship between individual beliefs only by carefully comparing the entire cultures among which they are found; we can hope to arrive at the ultimate meaning and origin of a belief only by observing and 'directly' questioning the peoples among whom it is found, and especially neighbouring and more primitive peoples who may reasonably be considered as connected, by race or by environment, with them. On the other hand, it is difficult, if not impossible, to obtain, by the 'direct' (or questioning) method, the beliefs of a people in relation to such a subject as disease. For its ideas are apt to be nebulous and in a state of flux; old practices often persist, but receive a changing explanation as in course of time the beliefs of the community develop; even old beliefs may be preserved and unreflectingly maintained, despite the fact that they are logically inconsistent with the newer beliefs which an advancing civilization or the adoption of a foreign culture brings with it.

In the face of these difficulties, we shall confine ourselves in this article mainly to the study of disease among definite primitive peoples. We shall examine specific instances instead of working with uncertain generalities. Such a study will show us how illness has been attributed first to personal (human or demonic) and later to Divine resentment, as the ideas of human magic, of interference by evil spirits, and of godhead have gradually developed. Comparing primitive and more advanced peoples with one another, we shall see how treatment becomes more complex as different diseases are allotted to different evil spirits, demons, or gods. Different medicine-men are invoked; definite remedies become attached to definitely recognized diseases. Many practices, employed even by the most primitive peoples, are continued, but are regarded in quite another light as civilization advances. They are found to have a good effect, although the original cause for their application is no longer believed in. Thus massage, or counter-irritation, and often steam are employed by many primitive peoples with the object of driving out the evil matter or spirit or the demon of the disease from the patient's body. The evil is kneaded, stamped, or pounded out of the body; or it is rubbed in a definite direction—usually from the part affected towards the feet, where it escapes; or cuts are made in the skin, causing some flow of blood. Again, the conviction felt by the patient that the medicine-man is able by his actions to control the evil spirits of disease is responsible, more than any other factor, for the success of primitive therapeutics. So, too, among the most advanced communities, despite their changed beliefs, massage, hydrotherapy, and, at all events

until recently, venesection persist as useful practices. As regards suggestion, it is open to question how far the most modern treatment, or the most 'specific' drug, can restore the patient to health, unless he has been induced to believe in its efficacy. Among primitive peoples, knowing the name of the evil spirit, using archaic language, summoning medicine-men from another tribe, are frequently important factors in effecting a cure. Among ourselves, a physician is held of slight account who cannot give a name to his patient's illness; he still writes his remedies in a dead language; and his reputation is apt to be greater abroad than at home. Although the medicinal aspect of treatment has come more and more to the front, in no part of the world can the magical aspect be said to have altogether disappeared.

1. Australia.—Turning now to various primitive peoples in order to study their practices (and, so far as is possible, their beliefs) in regard to the causation and treatment of disease, let us first examine the native Australians, who have been studied with considerable care by Spencer and Gillen (*The Native Tribes of Central Australia*, London, 1899, *The Northern Tribes of Central Australia*, do. 1904), by W. E. Roth (*North Queensland Ethnography*, Bulletin 5, Brisbane, 1903), and by Howitt (*The Native Tribes of South-East Australia*, London, 1904).¹ Among these peoples disease is attributed to some evil magic prepared by one man who wishes to harm another. A widely spread method of causing disease is for the sorcerer to take an *irna*, a stick or bone less than a foot long, sharpened at one end, the other end being usually tipped with porcupine-grass resin (S.-G.* 534). Any native may act as a sorcerer. He goes away into the bush with his *irna*, which he places in the ground, muttering some such curse as 'May your heart be rent asunder!', 'May your head and throat be split open!' Then he goes back to his camp, returning later to fetch the *irna*, which he hides somewhere near his camp. He bides his time until he can get near enough one night to distinguish his victim without being himself observed.

'He then stoops down, and turning his back towards the camp takes the *irna* in both hands and jerks it repeatedly over his shoulder, muttering the same curses again' (S.-G.^b 458). This pointing of the *irna* causes disease, and even death, unless the evil magic which has proceeded from the point of the *irna* can be removed. Usually a string is attached to the wax end of the *irna*, and this the sorcerer often burns in the fire to ensure the death of his victim. There is general agreement, among Europeans resident in primitive communities, that natives are extraordinarily open to suggestion, so far at least as the transmission of disease is concerned. A man who believes that magic has been exercised upon him 'simply lies down, refuses food, and pines away' (S.-G.* 537). The writer was assured, during his stay in the Torres Straits, that it was sufficient if a man recognized as having magic power made a slight movement towards another who was aware that the former owed him a grudge. The victim would then go home, refuse food, and become seriously ill. This pointing with the bone extends, with variations, throughout Australia. In some cases a spear is used with a human bone attached to it (R. § 139 f.); in others a human fibula is used (H. 358), often along with human fat (*ib.* 361), which the medicine-men are believed to be able to abstract from other victims and to use as a powerful aid (*ib.* 367). In place of the bone, stones may be employed (S.-G.^b 467; H. 378); pieces of quartz, especially in the crystalline form, are believed to be capable of projecting magic towards the victim.

¹ For brevity's sake, we shall refer to these books as S.-G.^a, S.-G.^b, R., and H. respectively.

(H. 357, 365; R. § 114). Certain stones may, from their mythical history, be exceedingly powerful (S.-G.^b 472, 469). A dead man's hair made into a girdle or worn in a necklace, lengths of opossum string (R. § 131), a dead man's head-band (S.-G.^a 538), a knout made of strands of vegetable fibre (^b 469), a woman's head-band (*ib.* 465), are also powerful objects for evil magic. Ant-hills are similarly employed; a curse is muttered into an ant-hill, which is then secretly brought back to the camp, pounded, and scattered over the ground in the camp to which the victim belongs (*ib.* 466).

There is little specialization of function among most of the Australian tribes in the causation of disease; any man can magically affect another. It is more particularly in the treatment of disease that special 'medicine-men' play a part (S.-G.^b 479). These may wear special emblems, and be compelled to submit to certain regulations in diet and training (*ib.* 485). The medicine-man may suck or knead the affected part (H. 380, 384). He may merely lay on his hands (*ib.* 382), or make passes (S.-G.^b 484), or he may suck at or bind round the patient strings of human hair or opossum fur (R. §§ 155, 156). His object is commonly to produce from the patient's body the bone or the stone which the patient's enemy has employed against him (S.-G.^b 480; H. 379, 384); he sometimes produces a bit of quartz or charcoal, or a marble, and often spits out blood somehow obtained from his own mouth after prolonged sucking. In some cases the patient is bled (H. 385), or is treated with herbs, etc. (*ib.* 384). Or it may be enough for him to place a woman's head-band upon his stomach, whereupon the evil magic passes into the band, which is thrown away into the bush (S.-G.^b 474).

There are several minor features also described by observers of the Australians; but the above may be considered to be typical of this people generally, and will suffice to show broadly their attitude towards disease. It is clear that disease is commonly regarded in Australia as an evil sent by one man to another, which is transmitted through the magic influence of pointing some such object as a bone, a stone, or a piece of quartz. It enters the body in that form, and in the same form the evil must be withdrawn from the body.

2. *Torres Straits.*—Now let us turn to the Torres Straits, between Queensland and New Guinea. Here, too, the belief in the power possessed by individuals in causing disease is accepted. It is probable that in his heart each native knows that he cannot cause disease in another; nevertheless, he is always in terror lest some enemy may have the power of causing it in himself. In Murray Island, certain families were credited with influence over the growth of bananas, coco-nuts, or yams; others were supposed to direct the movements of sharks; many erected stone images in their gardens to protect their food. There arose a belief in disease as the sequel to robbery or some similar crime, and in the value of certain stones or marks as an indication and assurance that disease would follow if the objects protected by such signs of *tabu* were disturbed.

In Murray Island the writer obtained a description of a species of sorcery, called *maid*, which was formerly inflicted by any of the older men, in cases of hatred (*maid urkeriam*) or adultery (*maid koskeriam*). Finding his victim alone, the avenger takes up a chance stone, and, pronouncing over it some magic words (*zogo mer*) in a half-whisper, spits once or twice on it, and hurls it with great force to strike the back of his enemy. The latter falls to the ground, breathing heavily, and loses consciousness. The assailant and certain relatives who have accompanied him now close in on the prostrate body of the victim, and belabour it with

their clubs. They then rub the body with a mixture of herbs and coco-nut oil, and give the victim coco-nut milk to drink. The assailant, while rubbing him, tells him to go up a coco-nut tree and to fall down from it, breaking his leg; or he orders him to be bitten by a centipede (*esi*), which will produce fatal blood-poisoning; or he may tell him to go to a certain point in the island, and then to return home and die. The avenging party now withdraw to a short distance, leaving the man's knife and some bananas and coco-nuts beside him. When he awakes and begins to wonder what has happened to him, one of the hiding party takes up a stone and hits a tree near the terrified man. This makes him start, forget his bruises, and rush home, where he lies thirsty and comatose for some days. Then (according to the order of his assailant) he will say to his wife: 'I think I shall go up that coco-nut tree.' He goes up, falls down, breaks his leg, and perhaps dies. As the informant said, 'He no go up himself. Medicine [*i.e.* the magic ceremony] make him go up.'

A third feature in the Murray Islander's attitude towards disease consists in his treatment of it. A special group of men, the *lukup zogo le*, are concerned in curing disease. The sick man is placed on the sand-beach; his eyes are closed; no one may see the approach of the *lukup zogo le*. As he comes near, previously anointed with coco-nut oil by his attendant, he halts, and, spitting or blowing on his hands, performs a series of movements with them, as if he were sweeping something from himself towards the patient. The doctor firmly fixes his gaze upon the patient throughout these actions. Then he makes some movements of the leg and further movements of the arms. Finally, he shouts the word 'Sirar' in a shrill voice and rushes off to the sea, accompanied by the sick man. Some few hours after bathing, the *lukup zogo le* visits the patient in his hut and rubs him down with a decoction of herbs, sea-weed, and coco-nut oil. This massage is repeated daily if necessary, until the patient recovers (*Camb. Exp. Torres Straits*, v. 320-326, vi. 222-240).

3. *Melanesia.*—These three characteristics—the belief that sickness is a result of disregarding a *tabu*, the use of suggestion and interference with memory in causing injury or disease, and the more elaborate ceremonial in treatment of sickness—indicate a more advanced state of culture than exists throughout Australia generally. We may trace this state among the neighbouring people of New Guinea, in the Bismarck Archipelago, in the Solomon Islands, in the Banks Islands, and in the New Hebrides; it is a Papuo-Melanesian attitude towards disease. Thus, according to Seligmann (*The Melanesians of British New Guinea*, Cambridge, 1910), 'one or more . . . men who were sorcerers would follow their intended victim to his garden. . . . There he would be speared and clubbed, and, when dead [*i.e.* unconscious], cut to pieces. One end of a length of rope is then looped round the dead man's hand or knee, while the opposite end is steeped in certain "medicine" (*gorto*). The medicine passes along the rope and revives the victim. He is at first dazed, and does not know where he is or what has happened to him. He is told that he will die shortly, but he at once loses memory of this. He manages to crawl back to his village, where his friends realize what has occurred by his silly, feeble condition, although the victim can give no account of what has befallen him (*op. cit.* 170). At Savo, Guadalcanar, Malanta, and at Florida, in the Solomon Islands, the victim is met in solitude by his assailant, who 'seizes him, bites his neck, stuffs . . . [certain] magic leaves down his throat and knocks him on the head with an axe, but not so as to kill him.' The

charmed leaves make the victim forget the name of his assailant. He goes home, and dies two days later (Codrington, 206). In Lepers Island, New Hebrides, the assailant, after having overcome his victim, shoots a little charmed material at his head by means of a bow and arrow, whereupon he can remember nothing of the scene, but goes home to fall ill and die. His friends, seeing the wound, know what has happened to him (*ib.* 207).

In the central part of New Britain (Neu Pommern), Bismarck Archipelago, property is protected by tabu signs which, if disregarded, will cause headache, sores, etc., on the trespasser or the thief. If grasses are charmed and laid on the tree stems, madness will ensue. A human bone placed on the spot whence an object was stolen will cause the thief to waste (R. Parkinson, *Dreissig Jahre in der Südsee*, Stuttgart, 1907). In the Solomon Islands the disregard of tabu marks is similarly believed to result in disease.

Among the Eastern Papuo-Melanesians of New Guinea we find a further development of the view that disease is due to some emanation from the sorcerer. At Bartle Bay, for instance, disease can be caused 'by means of a "sending" projected from the body of the sorcerer or witch. . . . The "sending" is most commonly projected from the body of a woman, and after her death may pass to her daughter, or with her spirit or shade (*aru*) pass to the other world.' At Gelaria, in the same region of New Guinea, the 'sending' is called *labuni*. *Labuni* exist within women. They are said to wear petticoats, which, however, are shorter than those worn by the women of the district. They 'produce disease by means of a sliver of bone, or fragment of stone or coral, called *gidana*, which they insert into their victim's body. A fragment of human bone or a man's tooth is a specially potent *gidana*' (Seligmann, 640 f.). The *gidana* is thrown by the *labuni* at about sixty yards' distance; only the 'spiritual' part is said to enter the victim's body. The process of removing the spell can be performed only after the woman who sent the *labuni* has been appeased by presents. The treatment is usually undertaken by a man, and consists in rubbing the body until the *gidana* is extracted in the form of a material lump, which is sucked out through the closed hands of the masseur.

This notion of the discharge of an independent emanation or spirit from a living person, which itself lives as a petticoated individual, probably led to a further development in which disease is attributed to the influence of an evil spirit. Amongst the Roro-speaking peoples of New Guinea there is 'an ill-defined but real belief in demon-producing spiritual agencies controlled by a sorcerer' (Seligmann, 291). In the Gazelle Peninsula, New Britain, the most powerful of evil spirits is called *Kaia*; it dwells in high trees, dark caves, and other inaccessible places which are held sacred. Any one profaning one of these sacred places invites sickness or death. *Kaia* manifests itself in the form of a snake (P. A. Kleintitschen, *Die Küstenbewohner d. Gazellehalbinsel*, Münster, 1906, p. 337). So, too, in the New Hebrides, spirits are the chief objects of veneration; a sick man always attributes his illness to a spirit which he has offended by trespassing on some spot or profaning some object belonging to it, or which some enemy has invoked to bring illness (Codrington, 184).

In the Banks Islands, on the other hand, sickness is generally attributed to the resentment, not of evil spirits, but of ghosts of the dead. Also in Florida (Solomon Islands) it is a *tindalo*, i.e. a ghost of the dead.

* that causes illness; it is a matter of conjecture which of the known *tindalos* it may be. Sometimes a person has reason to

think, or fancies, that he has offended his dead father, uncle, or brother. In that case no special intercessor is required; the patient himself or one of the family will sacrifice, and beg the *tindalo* to take the sickness away; it is a family affair.* But, if he is uncertain of the ghost, if, for instance, his child is sick, he will summon a doctor, a *mane kisu*, to decide. 'The doctor called in will . . . chew ginger and blow into the patient's ears and on that part of the skull which is soft in infants, will call on the name of the *tindalo*, and beg him to remove the sickness' (Codrington, 194 f.). If this proves unsuccessful, another *tindalo* is addressed, or another *mane kisu* is summoned. The latter may undertake to get his own *tindalo* to intercede with the *tindalo* that is causing the illness.

Thus we are able to trace in Oceania a development, along two directions, of ideas as to the causation of disease. In the one, disease is attributed to some interference on the part of the dead. Probably this belief, traces of which appear even in Queensland (R. § 114), is correlated with the growth of the cult of the dead, which is so complex in certain parts of Melanesia. Thus, according to Seligmann (*op. cit.* 12 f.), one of the distinguishing characteristics of the Western Papuo-Melanesians, ranging from Cape Possession to Orangerie Bay, is the close association of certain institutions with the shades of the dead, whereas the Eastern Papuo-Melanesians show no fear of the visitation of the deceased, and no fear of supernatural beings. They attribute disease, as we have already seen, to the discharge of a spirit from a living person, thus closely agreeing with the general Australian view.

The other line of development in Oceania consists in the attributing of disease to an offended spirit, which has to be propitiated by sacrifice. This conception finds a far higher development in Polynesia. In Samoa, for example, disease was considered due to 'the wrath of some particular deity.' The high priest of the village ascertained the cause, and ordered some sacrifice on the part of the patient, e.g. a canoe or a piece of land. Or a confession was obtained from every member of the patient's family as to the crimes each had committed or the curses he had uttered in a moment of anger against the patient or some other member of the family (G. Turner, *Samoa*, London, 1884, p. 140). In Tahiti, again, the sickness of chiefs was attributed to the anger of the gods. 'Whole fields of plantains and a hundred or more pigs' would be taken to the temples, where prayers were offered up (W. Ellis, *Polynesian Researches*, London, 1831, i. 349). In Polynesia generally, disease was supposed to be a visitation from the gods.

* When a person was taken ill, the priest or physician was sent for; as soon as he arrived, a young plantain-tree, procured by some members of the family, was handed to him, as an offering to the god; a present of cloth was also furnished, as his own fee. He began by calling upon the name of his god, beseeching him to abate his anger towards the sufferer, to say what would propitiate him, or what applications would afford relief' (*ib.* iii. 37). Indeed, the medicine administered (e.g. powder or infusion of vegetable matter, hot baths, etc.) was 'considered more as the vehicle or medium by which the god would act than as possessing any power itself to arrest the progress of the disease' (*ib.* 47).

In Hawaii the medicinal herbs employed were believed to have been obtained many generations ago, by a man named Koreamoku, direct 'from the gods, who also taught him the use of them' (*ib.* iv. 335).

Thus, starting from the rude Australian belief that disease was sent by one individual against his enemy, we have reached the high Polynesian conception of illness as the result of sin against the gods. Instead of employing a medicine-man to remove the stone or bone which had entered the victim, the latter relies for his recovery mainly on prayers and sacrifices offered to the offended god. Throughout Oceania the various practices we have described are combined with therapeutic measures, the most important of which, alike in the causation and in the treatment of disease, unquestionably is suggestion. Massage, with or without the external application of herbs, is a very common treatment

prescribed. Bleeding is occasionally resorted to. Trephining was practised in the Polynesian Islands, and is met with in certain more western islands, e.g. Loyalty Island, Duke of York Island, Neu Mecklenburg (New Ireland), and in the Gazelle Peninsula of New Britain, for the relief of severe headache and epilepsy. Hot baths are often employed in Polynesia and in other islands, e.g. the Solomon Islands, the patient being wrapped in a cloth and seated over a pile of heated stones, which are covered with herbs and leaves. Fractured bones are set with splints of bamboo. Herbs are pounded, made into decoctions, and administered to the patient internally. Sometimes they are merely warmed in a coco-nut shell over the fire, and the steam therefrom, being applied to the patient, is expected to drive away the pain or the disease. Especially in Melanesia, into which the areca has been introduced from the Malay Archipelago where it is similarly valued, betel nut, betel leaves, and lime are considered powerful medicinal substances, both for internal and for outward application.

We have attempted to trace in vague outline various stages in the attitude of different Oceanic peoples towards disease. But, as we have already pointed out (p. 724*), a people, when passing to a higher plane, does not discard the beliefs of the lower, but carries them with it, perhaps adapting them to suit its further development. Thus the Hawaiians, although they attribute disease to the gods, nevertheless believe that a sorcerer may be employed by a man to bring disease or death to his enemy. Consequently presents are made to the god, not only to appease his anger, but also to turn the disease back to the person who sent it (Ellis, *op. cit.* iv. 293). So the Samoan, despite his belief that disease is due to the wrath of a deity, protects his property by various tabus. For example, he may suspend a stick horizontally from one of his trees; this expresses 'the wish of the owner that any thief touching it might have a disease running right across his body, and remaining fixed there till he died' (Turner, *op. cit.* 186). Or he may bring some pieces of clam shell, 'erecting at the spot three or four reeds tied together at the top in a bunch like the head of a man' (*ib.*). This was recognized as expressing a wish that the thief might be seized with ulcerous sores. Thus punished, the thief would confess and make a present to the owner, who would send him in return some native herb as medicine.

We have already drawn attention to the Australian belief in the potency of human bones as a cause of disease. It is also met with in various parts of Melanesia and New Guinea. In the Banks Islands, where, as we have seen, illness is attributed to the ghosts of the deceased, a piece of human bone, belonging to the corpse of the ghost whose services are required, is applied to a fragment of food taken from the victim. The whole is then 'charmed,' and allowed to decompose or to burn. In the same islands and in Florida (Solomon Islands) a piece of bamboo is stuffed with leaves, a dead man's bone, and other magical substances. The aggressor covers up the open end of the bamboo until he meets his foe, when he opens it and lets fly the magic influence against him (Codrington, *op. cit.* 204). So, too, among the Roro-speaking peoples of New Guinea (Seligmann, *op. cit.* 239) there is a widely spread belief that parts of newly dead bodies are of value in the preparation of charms, and amongst the Eastern Papuo-Melanesians about Milne Bay (*ib.* 551) sorcerers are supposed to open graves of the dead and to eat their bodies.

From the powers over disease attributed to the human dead we may pass to those attributed to living animals, chief among which is that of the

snake. The most potent of evil spirits in the Gazelle Peninsula of New Britain preferably manifests itself in the form of a snake. The man who wishes to injure another cuts up sea snakes and mixes them with leaves, roots, lime, and something—e.g. hair, blood, or footprints—connected with the victim. He places the whole in a short piece of bamboo, mutters secret words over it, and throws it into the sea, or buries it in the bush (Kleintitschen, *op. cit.* 343). In Pentecost Island (New Hebrides) delirium is attributed to a *mae*, a mysterious snake, which can be removed from the patient if he sits over the smoke of a heated coco-nut husk into which the medicine-man has breathed his charm (Codrington, *op. cit.* 200). If the *mae* snake took away a piece of food into the place that was sacred to a spirit, the man who had eaten the rest of the food would become ill as the fragment decayed. Among the Roro-speaking tribes of New Guinea disease is commonly attributed to snakes and to certain magical stones. The sorcerer is thought to be able to extract a deadly stone from the black snake, and this stone kills every person who touches it. Even the sorcerer, it is said, takes care not to come into immediate contact with it. In order to obtain a snake-stone, the sorcerer fasts in the bush alone for a fortnight, his food being limited to roasted bananas. He is particularly careful to avoid the sight of women. Sooner or later he dreams of the whereabouts of a very poisonous snake. Protecting his limbs by means of bandages, he proceeds to find and then to worry the snake, and 'as it glides away, it exposes a small stone,' which he picks up by thrusting against it a kind of fishing-spear provided with numerous closely set points. It is dropped from the spear into a bamboo tube. The snake-stone is described as being the size of a filbert, and red-hot, hissing and losing its power if dropped into salt-water. The snake can be sent by the sorcerer to bite his victim, if it has been allowed to smell the clothes or some other object belonging to the latter (Seligmann, *op. cit.* 28).

The charming of any objects belonging to the victim is believed to play so important a part in producing disease, not only in Oceania, but over the greater part of the world, that it is only natural for primitive man to take every care lest cuttings from his hair, parings from his nails, refuse from his food, his expectoration, excretions, footprints, or clothing pass into the hands of his enemy. In New Britain, for example, one or other of these objects (*panait*) is used by the sorcerer (*papaït*), who murmurs an incantation over it, burns it with lime, and blows it from his hand into the air (Parkinson, *op. cit.* 118). In Tana (New Hebrides) a sorcerer, on seeing a discarded banana-skin, will pick it up and wear it all day in a leaf hanging round his neck, thus frightening every one into thinking, 'He has got something; he will do for somebody by and by at night' (Turner, *op. cit.* 320). In Florida (Solomon Islands) a man could make another ill by secretly taking a morsel of the latter's food, and throwing it into a spot which was the known habitat of a certain ghost of the dead.

4. Malay Archipelago.—Let us now pass to another people culturally and physically most closely related to the Polynesians, among whom, in consequence, we may expect to find disease attributed to gods or spirits, and cured by the offering of prayer and sacrifices to them—the inhabitants of the Malay Archipelago. Thence it will be possible to pass to the Malay Peninsula, and to trace the native ideas of disease westward to the Indian, and northward to the Mongolian, peoples.

Among the various tribes, and in the various

islands of the Malay Archipelago, there is considerable diversity in their beliefs; but, generally speaking, their spiritual world may be described as inhabited by the souls of animals (e.g. hawks, fowls, pigs, etc.), by spirits of the river, home, etc., and by the gods of thunder, harvest, life, death, etc., one of whom may be supreme over the rest. Consequently, of the two main causes attributed in this region to disease, evil spirits are one; and the treatment consists in effecting the departure of the evil spirit either by the persuasions of prayers and sacrifices or by the more cogent means of magical charms (Timor, Celebes, Bali, Java, Sumatra). The ceremony is often attended with much noise of gong- and drum-beating. Commonly, e.g. in Borneo, Ceram, Timor Laut, Buro (cf. Frazer, *GB*² 1900, iii. 97 f.), the evil spirit or the disease—for it is difficult to separate cause from effect—is induced to enter a well-provisioned model boat, which is made to sail down the river, carrying its noxious burden out to sea. This custom of sending away the disease down river extends throughout the Malay Peninsula to Burma, Siam, Annam, and even to Ceylon. Among the Milano of Sarawak the ceremony is performed in the following way:

The medicine-man (*orang bayoh*), having decided which spirit (*antu*) is responsible for the disease, returns home and prepares a log of sago palm cut in the image of that *antu*. This image, or *dakan*, may be enclosed in the model of a house or a boat. The patient's room is decorated with coloured cloths, flowers of the areca palm, and leaves fantastically plaited to represent objects, especially birds. A swing of rattan is erected, and plaited leaves connect it with the receptacle containing the *dakan*, so that the spirit may enter the latter after having been summoned by the *orang bayoh* to the swing. Several people may successively mount the swing, swaying their bodies in every possible attitude, to the sound of drums played in the background. Himself swaying on the swing, the *orang bayoh* recites 'almost in a monotone an incantation in the old language, addressed to the spirit, begging him to come down and take the sickness out of the patient's body' (Lawrence and Hewitt, *JAI* xxxviii. [1908] 391). 'The whole incantation is a succession of appeals . . . to the spirits, who come gradually nearer and nearer until the chant addresses them as if they were just outside the house, and finally as though present in the room' (*ib.* 408). At length the medicine-man falls from the swing apparently insensible; and after recovery he crosses to the patient, muttering incantations, sprinkling yellow rice, and waving over him an areca flower. Whenever the swing is unoccupied, an areca flower is hung across it. Finally, the patient himself may be transferred to the swing, and now, when the long-besought spirit is declared to be present, the patient and the *orang bayoh* proceed to enter the boat or house, the latter spitting betel-nut juice on the *dakan*, pouring water over it, and then sprinkling the drops over the patient's body, still murmuring incantations. Next day the *dakan*, provided with *padi* and yellow rice and adorned with areca flowers, is taken in procession to a stream, where it is left to rot in its receptacle, except when the receptacle takes the form of a boat. In that case, the boat is decorated with flags, manned with a crew, and armed with cannon all of pith, and it is made to float down the river or towed out to sea. No Milano, save the *orang bayoh*, will dare to touch the *dakan* after the performance of this ceremony. Generally there is a 'sound, logical connection between the sickness and *dakan* used,' the spirits of the water being responsible for dysentery, those of the air for headache and fever, those of the jungle for malaria, swellings of the legs, and other diseases attendant on jungle life (*ib.* 393).

This account is interesting as showing the complexity or the ritual which may be attained in endeavouring to drive the evil into a boat, which is then floated out to sea. The ceremony in one form or another is spread, as we have stated, throughout the Malay-peopled countries; it is also found in the Solomon Islands, which perhaps it reached with the advent of the areca or betel-nut from Malaysia. The above account is also interesting, inasmuch as it introduces certain new features—the use of the swing in driving out the disease, the transference of the disease (or evil spirit) to an image, the swooning of the medicine-man, and the attribution of different diseases to different spirits or causes.

In some cases a more simple and less public form of treatment is observed. The *dakan*, after having been incarnated by the spirit (*antu*), is taken by the medicine-man into the jungle, or hung on a tree, i.e. in the air, or placed in the river, accord-

ing as the spirit's real home is jungle, air, or water (*ib.* 390). In Amboyna a white cock is used, with which the patient is rubbed. It is then placed on a model boat and sent out to sea (Frazer *GB*² iii. 99).

The swooning of the medicine-man brings us to another important feature in the cure of disease among primitive peoples. So far as we have considered the mental state of the individual at all, it has been that of the patient, not that of the doctor. It is true that in certain parts of New Guinea and Melanesia the medicine-man finds that his magic is more efficacious if he enters upon it in a fasting state or in other ways maltreats himself. But probably in these peoples there is not that mental instability which is to be found among the Malayan races, leading, under provocation, to loss of consciousness, auto-hypnosis, or other forms of change in 'personality,' such as are exemplified in running *amok* and in *latah*. The altered mental state of the medicine-man during his treatment of disease is well exemplified in the second of the two main ideas in regard to disease which prevail in the Malay Archipelago. One of these ideas we have already considered, viz. possession or visitation by an evil spirit. The other idea, also wide-spread throughout this region, extending to Burma, the Andaman Islands, Tibet, and Northern Asia (Tylor, *Primitive Culture*, 1873, i. 437), is that disease is due to a wandering of the soul. Just as in death the soul has finally left the body, so in sickness it is temporarily absent; therefore it has to be pursued and caught by the medicine-man. The writer happened to see this ceremony of catching the wandering soul during a chance evening stroll along one of the long verandahs of a house in Sarawak, Borneo. It has been picturesquely described elsewhere (Hose and McDougall, *JAI* xxxi. [1901] 184), and may be thus summarized:

The medicine-man, after chanting several verses with closed eyes, receives, in a dreamy state, his war-coat, shield, and sword (*parang*) from the hands of an assistant. With a short wand he sprinkles water on his *parang*, and then on each of the patients ranged before him. A young fowl is handed to him. Before cutting off its head, he prays its soul to take a message to the supreme god to remove all sickness and to preserve the people from harm. Then, waving the bird over each patient and murmuring some archaic formulae, he kills it and sprinkles its blood over the patients. With a second fowl in his hand, he describes the wanderings of his own spirit, how he has to cross a great river, where finally he meets with the soul of one of his sick patients. He lays his fingers on the head of one of the patients, and at that moment the patient's soul is believed to re-enter his body. At the same time he ties a piece of rattan cord round the patient's right wrist, to confine the soul to the body. The same performance is repeated in the case of the other patients, and then the medicine-man, after further chanting, during which his own soul is returning to his body, ties a piece of the string round his own wrist. The second fowl is now killed, and the blood-stained *parang* is wiped on the arm of the patient, and is used to cut off the ends of the wrist-string. The chanting continues, until suddenly the medicine-man gives a slight stagger and recovers consciousness. During the ceremony he had been heedless of his surroundings; and, from experiments which the writer knows to have been made at other times on such medicine-men, the claim is probably correct.

The use of strings in the cure of disease (from which perhaps the unthinking use of ligatures was derived) extends over other parts of Oceania (e.g. Queensland) which we have already studied. In the Gazelle Peninsula of New Britain, threads are prepared and are charmed in order to cure and to prevent disease. For the former purpose, they are worn round the affected part; for the latter, round the neck (Parkinson, *op. cit.* 119).

In the Banks Islands, a charm consisting of 'a bit of human bone, a fragment of coral, a splinter of wood or of an arrow by which a man has died,' is bound up with leaves and placed in the victim's path to strike him with disease. This charm, called *talamatai*, depends for its efficacy on the tying and binding tight with fibre (Codrington, *op. cit.* 204). The use of archaic incantations is also common in these parts. Frequently, words which are not understood are borrowed from other tribes. We have already stated that a man may

recognize his inability to cause disease, yet may fear the existence of that power in others. So, frequently a tribe may consider another tribe specially versed in the causation or treatment of disease, and may use its language or summon members of it to its aid.

In the Malay Archipelago, bits of wood, stones, or rags are sometimes drawn out of the patient's body, as demonstrating the cure of the disease. The medicine-man's chest will often contain curiously twisted roots, knotty sticks, pebbles, coloured marbles, pieces of quartz, etc., many of which, he claims, are revealed to him as medicines by benevolent spirits in his dreams. It is said that by means of the quartz crystal the medicine-man can diagnose the disease, see the soul, and catch it in its wanderings (Ling Roth, *Natives of Sarawak and British N. Borneo*, London, 1896, i. 273). Possibly this is another example of the susceptibility of the Malayan to auto-hypnosis (crystal-gazing).

Another important feature of Malayan medicine consists in the prominence of women doctors. There are instances of this feature throughout Oceania, but in certain parts of the Malay Archipelago it reaches its highest development. It is stated that in Borneo, for instance, at least in the past, a certain class of medicine-men, on adopting their profession, were emaculated, dressed in women's clothes, and thereafter treated as women (Ling Roth, *ib.* i. 270, 282). At the present day many cures in that country are undertaken by women, and most of the spirits invoked by the medicine-men receive the prefix *ini*, 'grandmother'—perhaps in accordance with the former importance of womanhood in the treatment of disease.

In the Malay Archipelago, betel-nut and pepper are the common outward remedies for almost any disease. Turmeric, honey, spices, and onions are taken internally. Cholera is treated by rubbing with *kayu putih* oil, and by water from certain sacred jars. Bleeding is practised; cupping is common—usually by means of a bamboo cane, the air within which is exhausted either by suction or by lighting a fire at the upper end. A wound may be cauterized by burning with a red-hot wire. A patient may be exposed to the smoke of a fire lighted below a bamboo grating on which he sits.

5. Malay Peninsula.—Coming now to the Malay Peninsula, we find that diseases become more distinctly personified as demons. Each disease is (not, is caused by) a different demon; the demons all arise from the thunder-god, who sends them by the winds, because of the sins of the people. There are ape-demons, black-dog-demons, tiger-demons, jungle- and river-demons, any one of which may cause disease. Certain new features, possibly of Indian or Chinese origin, begin to make their appearance here. Amulets now become important. Women obtain protection from disease by wearing combs, with inscribed patterns on them, and the patterns cause the disease-bearing wind to fall to the ground until the wearer has passed. A Semang woman may possess twenty or thirty such combs, which apparently depend for their efficacy on the particular pattern that they bear. The men's 'talismans are . . . incised on the quivers and charm-holders' (Skeat and Blagden, *Pagan Races of the Malay Peninsula*, London, 1906, i. 423). There is supposed to be some connexion between these patterns and the flowers which the good god, Ple, at one time allotted as remedies for the various diseases. The diseases were also thought to be laid by the winds on the parasitic plants of trees, between death and burial of the victims. Now, so runs the legend (which, however, must be accepted with caution), as new diseases have arisen since Ple dwelt on earth, and since the vegetable kingdom then apportioned by him to different

diseases is exhausted, such illnesses as smallpox and cholera 'have no rest, but, as soon as they have killed one man, fall straightway upon another even before the soul of the first has left the body' (*ib.* i. 212). Among the Mantra (of Malacca) also amulets are much in use; they are made of pieces of turmeric or other substance, strung on a shred of bark, and worn round the neck, wrists, or waist. The Sakai have bamboos decorated with magical patterns, which are kept from the public gaze (*ib.* ii. 252).

Incense is used in the Malay Peninsula. The Blandas of Selangor exorcize the evil demon by burning benzoin and invoking the spirits (*hantu*) of tigers or elephants or monkeys to enter the medicine-man's body. The patient lies on his back within a shelter of *nibong*-palm leaves. As soon as the spirit enters the medicine-man, he brushes the patient seven times from head to foot with certain leaves, repeating an incantation which evidently is intended to expel the demon from the body. Among the Sakai the invalid is similarly beaten with leaves, after a censer of burning benzoin has been swung over his couch. The object here is to drive the demon within a cage which is suspended over the head of the patient (*ib.* ii. 257).

Trees also assume more importance. Disease may be cured by removing roots and stumps which are suspected to be the home of the demon, and by casting saplings into the jungle so that evil spirits may accompany them.

Among all the peoples of Eastern Asia sticks are of great value for the treatment of and protection from disease. Thus among the Ainu the demons of disease are propitiated by making them what is called *inao*. An *inao* is a whittled wand; groups of *inao* are collectively called *misa*. They are sometimes worshipped as messengers to the gods; sometimes they are regarded as offerings to the gods; or they may be regarded as mere charms. 'So, when a person falls sick, the elders often meet together and make *inao* of this [willow] tree. After they have been worshipped they are taken out to the sacred place and stuck up among the *misa*' (J. Batchelor, *op. cit.* 88). Sticks of elder about four feet high are set up in a village for protection from a prevailing epidemic (see art. AINUS). So, too, in the Andaman Islands, when an epidemic occurs, the medicine-man, who is called *oko-pai-ai* (lit. = dreamer), brandishing a burning log, bids the evil spirit retire, and plants before each hut stakes painted in stripes with black bees' wax, the smell of which helps to keep the demons at a distance (Man, *JAI* xii. [1883] 97). In the Malay Archipelago, sticks with fine shavings attached also play a similar part. Among the Tibeto-Burman peoples, a kind of arbour is erected before the sick man's house, made of grass and boughs supported on four poles, round which are hung little balls of split cane rolled tightly together. Strands of cane are stretched round the house from this arbour. The demons cannot pass through this barrier, consequently those already inside the house cannot be assisted by others from without (Shakespeare, *JAI* xxxix. [1909] 378 f.).

6. Africa.—In Africa illness is commonly attributed either to the machinations of an enemy or—more usually perhaps—to resentment on the part of the ghost of a dead man owing to the disrespect with which he has been treated. In West Africa, apparently, it may even be one of the sick man's own spirits which thus vents his annoyance on the body (Tylor, ii. 130). Almost universally, before treatment is begun, the name of the ghost must be discovered. Among the Nandi, this takes place by divination. Some near relative is sent for, who takes four (for a woman, three) stalks of the castor-

oil plant or of millet, and tries to stand each upright in a fragment of pot containing water, which is placed near the patient's bed. As he takes each stalk, he calls on one of the deceased relatives of the patient by name. When one of the stalks stands erect, he exclaims, 'I have got thee, O medicine-man,' and the patient solemnly kicks it over with his big toe. The stalks are distributed in various places in or around the house; a little mud or sand mixed with the water is smeared on the forehead and throat of the invalid; 'the rest, together with some eleusine grain, beer, and milk, is sprinkled between the bed and the door and also thrown outside the house,' the relative beseeching the ghost to depart in return for the food which is being offered it (A. C. Hollis, *The Nandi*, London, 1909, p. 69). Among the A-Kikuyu (W. Scoresby Routledge, *With a Prehistoric People, the Aikuyu of British East Africa*, London, 1910, p. 263) such divination is practised by arranging a number of counters in equal heaps and observing the remaining unit. Among the Baganda small pieces of buffalo- or cow-hide are cast (J. Roscoe, *JAI* xxxii. [1902] 40). Among the Bangala on the Upper Congo River the *ñanga*, or medicine-man, addresses questions to the patient to discover what particular *bwete*, or spirit, is causing the disease. He beats his drum, talks excitedly, and chants various incomprehensible phrases before the patient. 'The lilt of the metre together with the rhythm of the drum make the patient sway to and fro and have a hypnotic effect on him.' His body jerks and twitches, as he is now plied with questions by the *ñanga*. In this way the cause of the illness is found out (J. H. Weeks, *JAI* xl. [1910] 425). In the Sudan the writer received a description of a similar divination by means of music; the rite, which is known as *zar*, is said to be employed even in Cairo, among women. The patient is visited several times by the practitioner, who wears a different coloured dress and sings a different incantation at each visit. Ultimately one dress or incantation is discovered which presumably by its action on the demon causes the patient to swoon. This knowledge having been obtained, the patient is seated astride a live sheep, and the same dress and incantation are employed again. After the patient's second swoon the sheep is killed, the blood is smeared over her, and the meat is partly sacrificed, partly given her to eat.

The use of animals in the cure of disease is a characteristic feature throughout Africa. Thus among the Hottentots, the hand of a sick patient is introduced within the leg of an ox, which is then killed and eaten by married people who have children. A child recently recovered from a severe illness is dragged through an arch over which an ox is made to stand. The ox is killed, and eaten only by married people who have children (Frazer, *op. cit.* iii. 405). Among the Bondei, a white chicken is tied to the head of the bed-post; and later, when it has grown to a fowl, it is taken to a tall tree, killed, and eaten. The medicine-man and patient, on their return, take care not to look behind them (Dale, *JAI* xxv. [1896] 219). In these cases it appears that some good influence is derived by eating an animal which has been brought into contact with a person recently affected by disease.

But, generally speaking, the animal is used only for the transference of the disease to it. Thus, in Bechuanaland, a king after an illness seats himself on an ox stretched on the ground, the head of which is then held in water until it dies of suffocation. To cure a headache, a man will sometimes beat a lamb or goat until it falls down, with the object of transferring to it his pain (Frazer, *op. cit.*

iii. 14). A Guinea negro will tie a live chicken round his neck to cure disease (*ib.*). In such cases the animal or bird is generally driven away or killed. In the Upper Congo, the *mieta* (spirits), 'when they are troubling a family, can be driven into animals by the *ñanga ya bwaka* ['medicine-man of the wat'], and killed by him' (Weeks, *op. cit.* 378). Of all the *ñanga*, this 'medicine-man of the wat' was the most powerful. On his arrival at the sick-house, he put stakes into the ground, and, by tying a mat round them, made an enclosure, in which he sat speaking to the various *mieta*, answering 'himself in assumed voices, pretending he was holding a conversation with them' (*ib.* 383). 'A string was tied from the roof of his clients' house to one of the stakes in his mat enclosure, and the end of the string dropped inside. From this string there dangled dried plantain leaves, twigs, etc.' (*ib.*). When he was tired he shook the leaves—a signal for the lads sitting outside the enclosure to start beating their drums, and for the folk to sing their chorus. Thus he would spend several days in trying to find out which of the *mieta* was troubling the family. Finally, he makes

'a terrific noise inside the mat, as though he were fighting for his life. Shouts, screams, derisive laughter, whacks, thuds, and smacks proceed from the interior of the mat, and at last the *ñanga* rushes out, panting and sweating profusely, holding in his hand a bleeding head [really the head of a rat or lizard, but believed by the people to belong to a mysterious animal dug up from within the mat], and declaring that he has killed the animal that was possessed by the spirit that was troubling the family' (*ib.* 384).

So in Uganda, the evil spirit, which is supposed to dwell at the top of the centre hut-pole, is caught by raising a buffalo's or cow's horn, within which shells are placed so as to make a squeaking noise when the horn is shaken, which is supposed to be the spirit of the horn. When the evil spirit is thus caught, the horn is simply covered with a piece of bark-cloth, placed in a water-pot, and thrown into the river or burnt in the jungle (Roscoe, *JAI* xxxi. [1901] 125 f.).

In addition, of course, to the determination of the particular spirit causing the disease, and to the transference of it to an animal, other therapeutic measures, some of considerable complexity, are prescribed by the medicine-man. Among the Bondei, dieting is common: certain objects of food are tabooed. Among the Bageshu (Roscoe, *JAI* xxxix. [1909] 187), 'sometimes herbs are rubbed over the sick man and buried in the path. It is believed that the first person who steps over the herbs will contract the disease. . . .' In the Upper Congo, cupping is often practised, usually by sucking a horn placed over the skin. Massage is a common treatment, often terminated by the pretended extraction of a small object—a palm-nut, stone, or piece of iron—from the patient's body. Enemas and fomentations are also used. Rheumatic pains in the limbs are relieved by tying certain medicines to a brass rod, which is then worn by the patient. Knotted strings are tied round the sufferer's wrists and feet. Among the people of British Central Africa (Stannus, *JAI* xl. [1910] 285), many children's illnesses are treated by boiling certain leaves in water and holding the child over the medicated vapour-bath. Bleeding is arrested by the powdered bark of an astringent tree. Internal remedies are only sparingly used. The treatment of snake-bite is by ligature.

Among the A-Kamba (British East Africa) the medicine-man's gourd commonly contains pebbles, hard seeds, nuts, and such objects as the bone of a lion's paw, a cock's spur, pieces of porcupine quills, etc. He also carries various powders, e.g. a grey powder made from certain trees, and believed to be an antidote to magic and poison; a white powder called *iga* (also used by the A-Kikuyu, and called by

them *ira*); a blackish mixture prepared from some tree, and used to cure swellings of the limbs; a dark medicine contained in a gazelle's horn, which is of value when pointed at the abdomen of a woman in labour; and a medicine which, when mixed with water, is given internally for diarrhoea (C. W. Hobley, *Ethnology of A-Kamba and other East African Tribes*, Cambridge, 1910, p. 100). The A-Kikuyu sew up sword-slashes and spear-stabs. Their *chembu* is made of castor-oil, sheep fat, honey, goat's milk, water of various streams in Kikuyu, urine of a male and female goat and sheep, magumo wool, and the milky sap of wild figs. A little of this mixture placed on the penis cures hæmaturia; it is also good for a cough. Indeed, it will revive a dying man if he be touched with it on the forehead, tongue, navel, buttocks, and toes, and if some be passed five times round his head. Other Kikuyu medicines are made from seeds, leaves, roots, and from the ashes of roots and barks. They are usually kept in the form of a dry powder, and are applied by touching the patient much in the manner described. Expectoration plays an important part in the ritual of treatment, the patient at the same time exclaiming, 'I expel what is bad' (Routledge, *op. cit.* 262; Hobley, *JAI* xl. [1910] 448).

7. Central and S. America.—Among the Indians of America we naturally look for those characteristics in their attitude towards disease which we have met with in Eastern Asia and Malayo-Polynesia (see 'American' section of this article, below). As regards S. America, in South Chili the medicine-man is dressed as a woman, and the great nervous excitement, followed by a state of coma or trance into which he is thrown, forcibly recalls the shamanistic condition existing in Asia and Malaysia. But there is one striking feature in S. America which is on a distinctly lower plane of culture, viz. the persistent attribution of disease to material objects. Thus, among the Araucanos of Chili, the principal god, formerly called Pillan, the thunder-god, was served by malignant spirits called *Huecurus*, who could transform themselves into any shape and produce invisible wounds by means of invisible weapons. All disease is attributed by them to evil spirits, which produce an invisible wound or introduce some foreign body within the victim. Not only Divine beings, but the living and the dead, may, as malign spirits, assume a form, e.g. snake, ant, or lizard, which may produce disease (R. E. Latham, *JAI* xxxix. [1909] 346). Consequently diseases are treated first by discovering their source, and then by expelling the harmful substance from the body. In Central Brazil the 'good' medicine-man finds the poison which has been sent to the victim by the 'bad' medicine-man, and lays it in water, thus rendering it harmless. The sorcerer may have obtained some hair or blood from the victim, which he then mixes with the poison of wasps, ants, and other insects, prepared with oil and certain resins in a calabash. But, if he cannot obtain blood or hair, he poisons a twig or a woollen thread. He then introduces this into the victim's house, or shoots it with an arrow into a tree near where he lives. The twig is supposed to wound the victim; and so the 'good' medicine-man sucks the wound until the twig (or woollen thread) appears, and then he spits it out. Tobacco-narcosis is a very common mode of treatment, the medicine-man blowing tobacco smoke over the patient's body, kneading it with great force, while the medicine-man's groans and lamentations resound through the village. At length he begins to suck, and ultimately expectorates the cause of the illness (K. von den Steinen, *Unter den Naturvölkern Zentral-Brasiliens*, Berlin, 1897, p. 300).

Similarly, in Paraguay the witch-doctor is supposed to have the power of introducing beetles into a man's stomach. So, when a man is ill, he summons the medicine-man, who, to an accompaniment of rattles and the excited singing of his assistants, spits on and sucks at the patient's stomach until at length he produces a beetle, a palm-nut, or a fish-bone. The witch-doctors usually wear ear-disks faced 'with bright pieces of glass or bits of polished tin' (S. H. C. Hawtrey, *JAI* xxxi. [1901] 291).

LITERATURE.—This is given throughout the article. The only general book known to the writer, Max Bartels' *Die Medizin der Naturvölker* (Leipzig, 1898), cannot be strongly recommended.

C. S. MYERS.

DISEASE AND MEDICINE (American).—

As certain aspects of primitive medicine will be treated in art. MEDICINE-MEN, the present discussion will be limited to the consideration of disease itself from the various points of view of the American aborigines' ideas, customs, ceremonials, etc., connected with its prevention, relief, and cure. Among a race as widely scattered as the American Indians, and occupying, for long periods of time, all kinds of environments—from the Arctic north to the tropical south, from the seashore and coastal regions to the high plateaus and mountainous areas of the continent, island regions like the Caribbean, arid plains like those of the south-western United States and parts of south-western South America, the thick forests and well-watered lands in some other directions, the valleys of the great rivers and the basins of great lakes—the prevalence of diseases, the susceptibility to them, the methods of treatment, and the psychological reaction to the general situation were naturally subject to considerable variation.

1. American Indians a comparatively healthy race.—At the time of the Columbian discovery, the Indians were, on the whole, a healthy people, and, in spite of the effects of intertribal wars and their attendant evils, were holding their own in point of numbers, or, as some authorities believe, were even increasing in population, especially in some parts of the continent. Our knowledge of diseases among the American Indians, before the coming of the whites, is not very satisfactory even for the semi-civilized peoples of Mexico, Central America, and Peru; for many of the uncivilized tribes of both North and South America the data at hand are scanty indeed. Where direct statements of early explorers, missionaries, pioneers, and colonists are lacking, certain inferences can be made from the mention of diseases in myths and legends and cognate folk-lore material. Dr. Hrdlička, our best and most recent authority on the matter, says (*Bull.* 30 BE, pt. i. [1907] p. 540):

'The condition of the skeletal remains, the testimony of early observers, and the present state of some of the tribes in this regard, warrant the conclusion that on the whole the Indian race was a comparatively healthy one. It was probably spared at least some of the epidemics and diseases of the Old World, such as smallpox and rickets, while other scourges, such as tuberculosis, syphilis (pre-Columbian), typhus, cholera, scarlet fever, cancer, etc., were rare, if occurring at all. Taking into consideration the warlike nature of many of the tribes and the evidence presented by their bones (especially the skulls), injuries, etc., particularly those received by offensive weapons, must have been common, although fractures are less frequent than among white people.'

Since contact with the whites, a marked decrease in numbers has taken place nearly everywhere, the causes of this diminution being 'the introduction of diseases (particularly smallpox), the spread of alcoholism, syphilis, and especially tuberculosis . . . and increased mortality due to changes in the habits of the people through the encroachment of civilization.' Certain tribes, however, are now beginning to show a slight increase in population, and Dr. Hrdlička thinks that, 'as more attention is paid to the hygienic conditions of the Indians, an increase comparable with that in whites may be

expected in many sections.' The writer of the present article has pointed out several cases of such increase in his art. 'Indians, North American' in *EBR*¹¹, xiv, 452. Mixed bloods are said to suffer, more than the pure bloods, from 'many disorders and diseases known to the whites,' but the evidence in this matter is by no means convincing.

2. Epidemics, etc.—As has been already noted, epidemics of disease appear to have been rare in pre-Columbian America. According to Dr. H. U. Williams (p. 342), the New World, up to the period of its discovery and occupation by the whites, offered a marked contrast to the Old in the fact that 'the American race, during its sojourn of some thousands of years apart from the rest of mankind, developed a surprisingly small number of infections peculiar to it.' Concerning certain epidemics and wide-spread outbreaks of disease contemporaneous with the settlement of various parts of the continent by Europeans, it is still somewhat doubtful whether the infection in question came from Europe (by way of white people, or, possibly, through Indians who had been taken to Europe) or was of native origin. An interesting example is the epidemic among the Indians of New England in 1616-1620, of which a critical study has recently been made by Dr. Williams. This pestilence, which was accompanied by great mortality among the Indians, from Cape Cod to the Penobscot, and sporadically outside these limits, but from which the English seem to have been mostly immune, may have been a variety of the 'bubonic' plague prevalent in London during the early years of the 17th cent., and transferred to America by sailors, colonists, or returning Indians. It could hardly have been smallpox, as some have thought; this disease raged among the Indians later on (e.g. in 1633). The idea that it may have been carried to the Indians by certain shipwrecked French sailors held captive among them is also to be considered. The European settlers of the period were prone to regard such calamities as visitations of God, just as many Indian tribes looked upon them as the work of evil spirits, etc. The idea also prevailed among the Indians that epidemics of diseases unknown before the advent of the whites were in some way let loose among the natives by the English and other white peoples. Interesting on this point is the following extract from Winslow's *Good News from New England* (1624), cited by Dr. Williams (p. 345):

'Here let me not omit one notable, though wicked, practice of this Tisquantum (Squanto); who to the end he might possess his countrymen with the greater fear of us, and so consequently of himself, told them we had the plague buried in our store-house; which, at our pleasure, we could send forth to what place or people we would and destroy them therewith, though we stirred not from home. Being, upon the aforementioned brabbles, sent for by the governor to this place, where Hobbamock (an Indian) was and some other of us, the ground being broke in the midst of the house, whereunder certain barrels of powder were buried, though unknown to him, Hobbamock asked him what it meant. To whom he readily answered: That was the place, wherein the plague was buried, whereof he formerly told him and others. After this Hobbamock asked one of our people, whether such a thing were, and whether we had such a command of it. Who answered No; but the God of the English had it in store, and could send it, at his pleasure, to this destruction of His and our enemies. This was, as I take it, about the end of May 1622.'

Ethically, at least, some of the English and some of the Indians were not far removed from one another.

There has been much discussion of the question whether syphilis is of pre-Columbian origin in America, or has been introduced from Europe since the discovery. Dr. A. S. Ashmead (*Amer. Journ. Dermat.*, 1908, pp. 226-233) is convinced of its pre-Columbian origin, and Dr. F. Grana identifies it with the Peruvian *huanti*; Dr. Ivan Bloch (*Intern. Amerik.-Kongr.* xiv. [1904] 57-79), from historical and osteological evidence—he has re-

cently also published a volume on the subject—is another believer in the pre-Columbian theory, which is also shared by E. G. Bourne, the American historian, who considers the legend of the culture-hero Guahagiona and his sores 'conclusive evidence that syphilis had existed in the West Indies long before the coming of the Spaniards' (*Proc. Amer. Antig. Soc.*, N.S., xvii. [1906]). Drs. Tello and Palma of Peru, who have studied the question, seem also to share the opinion that syphilis is pre-Hispanic in Peru, citing in evidence certain representations of the effects of the disease in anthropomorphic pottery, etc.; so also R. D. Wagner and Dr. Capitan, the French anthropologist (*Journ. Soc. des Amer. de Paris*, N.S., vi. [1909]). Dr. Lehmann (*Globus*, xcvi. [1910] 12-13) is of opinion that the evidence in Tello and Palma does not settle the matter satisfactorily, and Dr. Hrdlička is by no means convinced of the prevalence of syphilis in pre-Columbian America. The exact character of the Peruvian *uta*, the Columbian and Paraguayan *buba*, and some other diseases, all of which may possibly on some occasions be mistaken for syphilis, is not yet clearly decided. The idea of syphilis-infection of man from the llama—a belief occurring in certain regions of South America—is not sustained (in man and in the llama the disease is comparatively rare now in Peru). Leprosy, according to Dr. Ashmead, was introduced into America from Spain. There are other interesting S. American diseases that call for further investigation, such, e.g., as the Ecuadorian *huicho*, which seems to have some analogies with the African 'sleeping sickness.'

Among a number of American Indian peoples (e.g. the Oregonian Klamath) there are general dances and like ceremonies carried out for the purpose of avoiding or driving away epidemics and outbreaks of disease. Some of the Indians of the south-western United States tried to 'capture' the spirit of smallpox during an epidemic of that disease, and similar procedures are reported from elsewhere.

3. Conceptions of the nature, source, etc., of disease.—Under this head could be cited illustrations of all manner of ideas, from the most natural and simple to the most far-fetched and complicated, or even metaphysical. On this point Dr. Hrdlička remarks (*Bull. 30 BE*, pt. i. [1907] p. 837):

'The causation and the nature of disease being to the Indian in large part mysteries, he assigned them to supernatural agencies. In general, every illness that could not plainly be connected with a visible influence was regarded as the effect of an introduction into the body, by malevolent or offended supernatural beings or through sorcery practised by an enemy, of noxious objects capable of producing and continuing pain or other symptoms, or of absorbing the patient's vitality. These beliefs, and the more rational ones concerning many minor indispositions and injuries, led to the development of separate forms of treatment, and varieties of healers.'

Among the American aborigines one finds examples of the attribution of disease and illness in man to his own misdeeds and sinfulness, to his neglect of his ancestors, to violations of innumerable kinds of tabus and prohibitions, to the malevolence or ill-will of the dead, to the touch of ghosts, to the actions of the wind and the moon, to the machination of enemies through magic and witchcraft, etc., to the desire for revenge of the animal world ill-treated by man, to temporary loss of the soul, to the introduction of foreign objects into the body, to the shadows of certain other people (e.g. mourning widows and widowers), to women (particularly when menstruating), etc. For certain special diseases and pathological conditions very curious reasons are sometimes given. Some of the names of diseases and terms relating to or describing their symptoms are interesting psychologically. In Tsimshian the

term for 'having epileptic fits' really signifies 'like a bear'; and the word for 'crazy' means 'like a land-otter.' The Chinook term for 'rheumatism' means lit. 'tired all over'—quite an expressive name. In Kutenai the general term for 'sick' is *sanitlgōinē*, lit. 'bad-bodied he is'; the corresponding word for 'well' being *sūkitlgōinē*, 'good-bodied he is.' The term 'sick' is applied in a number of Indian languages to denote emotions and the like. Thus in the speech of the Mosquito Indians the term for 'angry' signifies lit. 'liver-sick'; in Haida, 'downcast' is 'heart-sick,' etc. By the Mosquito Indians the liver is regarded as the seat of emotional life; among the Kutenai and many other Indian tribes it is the heart. With some of them, unless the heart can be touched or struck, the efforts of the shaman to injure or kill a man turn out useless. Certain tribes believe that diseases are 'shot' into the body (e.g. 'pains' with some Californian tribes).

4. Ceremonials, magic and religious, in relation to disease and its cure.—The employment of magic rites and formulae, of religious or semi-religious ceremonials, ritual and other performances, for the purpose of preventing or curing diseases of various sorts is common in all regions of the globe, especially among uncivilized peoples, and the aborigines of America are no exception to the rule. These rites and ceremonies vary, from the simple procedures of the 'medicine-men' and 'medicine-women,' shamans, or sorcerers, who by rude incantations and noise-making with rattles, drums, etc., sought to drive away disease, or by laying on of hands, sucking, tricks of legerdemain, and the like, pretended to extract noxious objects from the body of the patient, to the more elaborate and highly developed ritual activities of 'medicine-societies' carried out sometimes for the benefit of an individual, or a whole family, and again on behalf of the entire community. The whole wide range is occasionally to be found within the limits of a single linguistic stock. Thus we have the crude rites of the lowest Athapascan tribes of Alaska and north-western Canada, on the one hand, and, on the other, the complicated system of the 'night chant' of the Navaho, who are of the same lineage; in like manner, also, the simple procedures of the shamans of the barbarous Utes and Shoshones, the lowest representatives of the Uto-Aztecan stock, contrasting with the rites and ceremonies of the Aztecs of ancient Mexico and their semi-civilized kindred, who mark the highest limit attained by this people. And S. America, while not exhibiting, perhaps, such extremes of diversity within one and the same stock, shows equal variety, if one compares the barbarous and completely uncivilized tribes of the Brazilian, Peruvian, and Venezuelan forests with the ancient Peruvians. Healing ceremonies of great interest occur among many American Indian peoples; the best known and those described in greatest detail belong to some of the Plains tribes and peoples of the Algonquian stock. As Dr. Hrdlička remarks (*Bull. 30 BE*, pt. i. p. 838):

'Among most of the populous tribes the medicine-men of this class (the priest-healer type) were associated in guilds or societies, and on special occasions performed great healing or "life-(vitality)-giving" ceremonies, which abounded in songs, prayers, ritual, and drama, and extended over a period of a few hours to nine days.'

There also existed among some tribes

'large medicine-societies, composed principally of patients cured of serious ailments. This was particularly the case among the Pueblos. At Zuni there still exist several such societies, whose members include the greater part of the tribe and whose organization and functions are complex. The ordinary members are not actual healers, but are believed to be more competent to assist in the particular line of diseases which are the specialty of their society, and therefore may be called by the actual medicine-men for assistance. They participate also in the ceremonies of their own society' (p. 838 f.).

The curative ceremonies of such people as the Navaho, when employed for the benefit of individuals, are both prolonged and costly, being exceedingly elaborate both in ritual and in paraphernalia. According to Dr. G. A. Dorsey (*ib.* p. 229):

'Among the non-Pueblo tribes of the S.W., especially among the Navaho and Apache, the extended ceremonies are almost entirely the property of the medicine-men, and must be regarded as medicine-dances. Many of these are of an elaborate and complicated nature, but all are designed for the restoration of the sick. In these ceremonies masks are often worn, and complicated and elaborate dry-pictures are made, both these features probably having been borrowed from the Pueblo tribes.'

Some of these great 'medicine' ceremonies have gathered about them practically all the ritual lore and legend of the tribe, and serve as a general outlet for the observance and dramatic sense of all the people. The great *Mide'wiiwin*, or 'grand medicine society,' of the Algonquian Ojibwa and related tribes is described in detail by Hoffman (7 *RBEW* [1891] 143-300); the medicine-men of the Athapascan Apache by J. G. Bourke (9 *RBEW* [1892] 443-603); the esoteric fraternities of the Zuni by Mrs. Stevenson (23 *RBEW* [1904]); the Cherokee medicine-men and their sacred formulae by Mooney (7 *RBEW* 301-397); the secret societies of the Kwakiutl by Boas (*Rep. U.S. Nat. Mus.*, 1895); the organizations of the Algonquian Cheyenne by Dorsey (*Anthr. Publ. Field Columb. Mus.* ix. [1905]); the 'mountain chant' of the Navaho (5 *RBEW* 379-467), and the great 'night chant' of the same people, by Matthews (*Mem. Amer. Mus. Nat. Hist.*, N.Y., vol. vi. [1902]). For other N. Amer. Indian tribes much valuable information will be found in the various monographs of Boas (Eskimo and peoples of North Pacific coast), Dixon and Kroeber (Californian tribes), Kroeber, Wissler, Lowie (tribes of the Great Plains), etc. For general information concerning the American Indian shaman, the article of Dr. R. B. Dixon (*JAFI* xxi. [1908] 1-12) is of importance. From some points of view, the ceremonials of the Navaho are the most remarkable of American healing-rituals. For S. America, we have not much accurate and detailed material of a reliable character concerning the rites and ceremonies of the secret societies having to do with 'medicine.' The best is to be found in the recent works of Koch, Nordenskiöld, Ehrenreich, Hawtrey, Guevara, Latcham, etc. Some data are also contained in the writings of certain of the early missionaries, explorers, and historians, such as Charlevoix and others. Concerning the great 'night chant' of the Navaho, a ceremony lasting nine days, Dr. Matthews says (*Amer. Anthropol.* ix. [1896] 50):

'The principal purpose of this great ceremony is to heal the ailing man or woman, who defrays all the expenses of the ceremony; but the occasion is used, also, to implore the gods for various temporal blessings, not only for the sick man, but for all who participate in the work, with their friends and relations. This ceremony, like nearly all ceremonies, ancient and modern, is connected with a myth or legend (several myths, indeed, in this case), and many of the acts in the ceremony are illustrative of the mythic events.'

He also observes further:

'In them we find a nocturnal vigil analogous to that of the mediæval knight over his armour; we find a vigil in which men and gods, or the properties that represent the gods, alike take part; we find evidence of the belief in a community of feeling and interest between gods and men, and we have an instance of a primal feast in common or love-feast closely resembling certain ceremonial acts performed among ourselves to-day.'

5. Games and gaming implements as preventives and as remedies for disease.—That games among savage and barbarous peoples have certain preventive and curative rôles with regard to disease as well as other afflictions and calamities of mankind is not at all surprising, especially if one takes the view of their magic and religious origin expressed by Stewart Culin in his monograph on 'Games of the North American Indians' (24 *RBEW* [1907]). Among the Sacs and Foxes (Culin, p. 448 f.) the

game of ring and pole was played about the house, because 'people believe there is a spirit of sickness, Apenaweni, always hovering about to get into the lodges, and this game is encouraged in order to keep it away.' The employment among the Kwakiutl Indians of Vancouver Island of a sort of 'bean-shooter' (Dr. Newcombe calls it 'the figure 4 dart-shooter') in a medical ceremony is thus described (Culin, p. 761, quoting Newcombe):

'Among the Kwakiutl of the Nimpkish tribe, this is called *Hendlem*. In use a small stick is placed across the top of the pliant side-pieces, and is shot to some little distance by pressing on the trigger-piece, which is horizontal to the figure 4. The figure is held in front of the body with both hands, with the short end of the trigger downwards, and the perpendicular stem of the 4 horizontally. It is frequently used when children are sick, and small sticks are shot in different directions to chase away the spirit supposed to be causing the sickness. It was used as lately as two years ago at Alert Bay. Sets of four of this instrument are employed by grown-up people—relatives of the sick. The sticks are left lying about after the performance, but the guns are burned when done with. This goes on for four nights in succession. The noise of the two flexible sides coming together when the stick is ejected is supposed to aid the good work. At night the four shooters are left loaded near the sick child, to scare the ghost or spirit. They are also used as a game by children.'

This is an interesting example of the employment of the same implement or instrument in a children's game and in a 'medical' procedure. Rings or hoops, similar to those used in the hoop and pole game, are used in certain 'medicine' ceremonies by the shamans of the Ojibwa Dakota Indians (Culin, p. 435) for the purpose of aiding in the cure of the sick. On the first day of the healing rite of the Navaho, known as *Yebitchai*, similar gaming rings are made. These rings were used to touch the mouth and other parts of the patient's body, and were afterwards rolled out of the lodge. Of the 12 rings used in this ceremonial, as described by Col. J. Stevenson (8 *RBEW* [1891] 239), 'three were afterwards taken to the east, three to the south, three to the west, and three to the north, and deposited at the base of piñon trees.' We are further informed: 'The rings were placed over the invalid's mouth to give him strength, cause him to talk with one tongue, and to have a good mind and heart. The other portions of the body were touched with them for physical benefit.' Culin (p. 437) reports having seen 'actual practical game rings' used in ceremonies. Naturally, where the beginnings of the priest and the doctor are found together in the primitive shaman, the implements and objects in ceremonial use must often be the same or very similar. And the lines between 'games' and other more or less ceremonial performances are not always very marked; indeed, the former are not infrequently made a part of religious or quasi-religious observances—and this is not at all peculiar to the aborigines of the New World.

6. Medical operations, surgery, etc.—Some of the performances of the American 'medicine-men' belong rather to the field of jugglery and legerdemain than to that of operative therapeutics. Others have, doubtless, more of a religious or mystical than of a medical significance. There are, however, a number that may justifiably be classed as relating to the beginnings of medical operations and surgery as we understand them. The range of these among even quite primitive tribes may be seen from Father Morice's article (see Lit.) on the surgery of the Dénés, an Athapaskan people of British Columbia, where items relating to bleeding, burning, blistering, treatment of broken limbs, deformities, uterine troubles, child-birth, cataract, etc., are briefly considered, some new and interesting facts being reported. Some of the procedures in vogue are as follows:

Blood-sucking is in use both as a general practice and as a special procedure for wounds, cuts, bites, and stings of animals and insects, particularly those of a poisonous nature, including

wounds due to arrows and other weapons that have been tipped with deadly substances, snake-bites, abscesses, etc.

Blood-letting—by means of flint-knives, arrow-heads, etc., was practised by the ancient Peruvians and Mexicans, and is also reported from a number of uncivilized tribes, such as the Central Californian Indians, the Kwikwagmiut of the Yukon (Alaska), certain tribes of the Isthmian region of Central America, the Brazilian Carayá, etc. The place of venesection differs according to the trouble, and varies with divers peoples. Bartels (p. 269) notes that for headache the Carayá incise the veins of the forehead; the ancient Peruvians cut into the veins of the root of the nose, the Indians of Honduras the veins of the leg or the shoulder; for troubles in the upper part of the body, certain Californian tribes practised venesection on the right arm, and on the left arm when the limbs were affected. Certain Indians of the Isthmian region are said to have practised venesection by shooting small arrows from a special bow into various parts of the patient's body until a vein was opened.

Scarification and kindred procedures are wide-spread over primitive America, ancient and modern, the implements used being knives, sharp pieces of stone, bits of shell, pieces of flint or obsidian, thorns, fish-spines, teeth of animals; some tribes have developed special implements for the purpose, as, e.g., the Carayá of Brazil.

Cauterization with cedar-bark is practised by several tribes of the North Pacific coast (e.g., Bilqula, Twana) for rheumatism and other diseases of a like order; by some Southern-Californian tribes with a hot coal for syphilis; by some Central American peoples with hot ashes and heated leaves for wounds, etc.; by the Choctaws and certain Nicaraguan tribes. Many North American Indian peoples practise cauterization for obstinate sores, etc.

Bone-setting is accomplished quite cleverly by a number of tribes all over the continent, particularly the Siouan Winnebagos, the Creeks of the south-eastern United States, some of the peoples of the North Pacific coast, and certain of the Brazilian tribes; splints and bandaging are employed especially by the Bilqula, Creeks, Winnebagos, and others.

Amputation does not seem to have been generally practised among the American Indians, even such peoples as the Creeks and Winnebagos, who were skilful in bone-setting, seldom or never resorting to it.

Trephining was in use in ancient Peru, as indicated by the crania from various pre-Columbian burial-places, and a special study of these has been made by Muniz and McGee (16 *RBEW* [1897] 3-72). Dr. Hrdlička (*Bull.* 30 *EE*, pt. i. p. 838) says: 'The highest surgical achievement, undoubtedly practised in part at least as a curative method, was trephining. This operation was of common occurrence, and is still practised in Peru, where it reached its highest development among American tribes. Trephining was also known in quite recent times among the Tarahumare of Chihuahua, but has never been found north of Mexico.'

For the purpose of *stopping bleeding* of a dangerous sort, many American tribes used down of various birds (*Haida*), mineral and plant substances (Dakotas, Winnebagos), hot ashes (for nose-bleeding); and the Brazilian Carayá (Bartels, p. 286) are credited with the use of bindings for the limbs. With the whites the use of gunpowder for stopping blood has come into practice with many tribes all over the continent. According to Hrdlička (*loc. cit.*, p. 837), 'antiseptics are unknown, but some of the cleansing agents or healing powders employed probably serve as such, though undesignedly on the part of the Indians.'

7. Materia medica, etc.—In both the procedures of individual shamans and the more elaborate and extensive ceremonies, such as those carried out by the Navaho, etc., a large number of 'fetishes,' charms, amulets, and the like are employed, and the principles of *similia similibus* and sympathetic magic are appealed to in innumerable ways, sometimes with exceeding skill and cunningness. Dr. Hrdlička (*l.c.*, p. 836) says:

'The fetishes used are peculiarly shaped stones or wooden objects, lightning-riven wood, feathers, claws, hair, figurines of mythic animals, representations of the sun, of lightning, etc., and are supposed to embody a mysterious power capable of preventing disease or of counteracting its effects.'

Of real *materia medica*, animal and mineral substances are comparatively rarely employed. Dr. Hrdlička (p. 837) says:

'Animal and mineral substances are also occasionally used as remedies. Among South-western tribes the bite of a snake is often treated by applying to the wound a portion of the ventral surface of the body of the same snake. The Papago use crickets as medicine; the Tarahumare, lizards; the Apache, spiders' eggs. Among the Navaho and others red ochre combined with fat is used externally to prevent sunburn. The red, barren clay from beneath a camp-fire is used by White Mountain Apache women to induce sterility; the Hopi blow charcoal, ashes, or other products of fire, on an inflamed surface to counteract the supposed fire which causes the ailment.'

The oil, grease, etc., of certain animals are used for external and internal application, often as antidotes—thus, among certain tribes of Central Mexico, scorpion-oil for scorpion-bites; among

the Caribs, snake-oil for snake-bites. Among the Yamamadi and neighbouring tribes of Brazil (Bartels, p. 120) we meet with the curious custom of plastering the affected portion of the patient's body all over with feathers. Some of the Southern-Californian Indians used pills of wild dove's dung as a remedy for gonorrhœa. Pounded charred bones are in use by the Kutenai for sore eyes. The great mass of primitive remedies, however, come from the plant-world—roots (most commonly), twigs, leaves, bark, flowers and seeds (rarely)—and are most frequently employed in the form of a decoction, made from either the fresh or the dry plant (sometimes from its powder). The 'doctrine of signatures' and similar ideas controlled a good deal of the botanical medicine of the aborigines of America, which reached its height with such peoples as the ancient Mexicans, as may be seen from Father Gerste's monograph on the subject, where the data in the old historians, are carefully brought together. In the warmer and tropical regions of America numerous vegetable gums and balsams, the use of many of which has passed over now to the white population as well, were employed for medical purposes, for stopping bleeding, curing and cleansing wounds, etc. The number of plant-remedies in use even among the uncivilized tribes is often quite large. Among the Californian Karok, 13 species of medicinal plants were reported; among the Twana and neighbouring tribes of the State of Washington, 18; among the Ojibwa (according to Hoffman), 56; the list of Schoolcraft, representing several N. American tribes, contains 89; of the plants known to the Moqui or Hopi, according to Hough (*Amer. Anthropol.*, 1898), 45 are employed for medical purposes—there being probably not over 160 indigenous species in the environment. As Bartels (p. 209) notes, the Indians possess quite a large number of plant-remedies for diseases and troubles of the eyes. Abundant emetics and astringents are also provided. Plant-remedies are in vogue for the treatment of cuts, burns, bruises, wounds, bites, stings, and stomach-ache and kindred ills, diseases of the respiratory tract, and nasal troubles, in the form of poultices and plasters (often of hot leaves), decoctions, lotions, and inhalations. With the Cherokee Indians the plants furnished all the remedies as against the animal world, which inflicted diseases upon mankind. The formulae of the medicine-men of this interesting Iroquoian people have been recorded by Mooney, and they form a body of data of great importance for the study of primitive medicine in its incantational and invocational aspects. With the sowing and gathering of medical plants there are sometimes connected certain rites and ceremonies, as, e.g., is the case with the 'medicine tobacco' of the Crow Indians of the Siouan stock. Interesting also is the sacred *rule pollen* in use among the Apache, known as *hodentín*, and 'given or applied because of its supposed supernatural beneficial effect.' Many plants 'are employed as remedies simply for traditional reasons, without any formulated opinion as to their modes of action' (Hrdlička, p. 837).

8. *Drugs, narcotics, etc.*—In connexion with puberty-rites, 'man-making' ceremonies, and performances of a kindred nature, certain narcotic and stupefying substances were employed among tribes representing all stages of culture all over the continent. In the *huskanaw*-ceremonies carried out on boys at the age of puberty among the Virginian Indians, the subjects were stupefied by a decoction of *Datura* ('jimson weed'). A variety of *Datura* was used by the shamans of the Californian Yokuts to induce religious frenzy. This was done also, in all probability, by those of the Indian tribes of the south-western United States (Navaho, Hopi, etc.)

who are acquainted with the properties of the *Datura*. Various tribes of the Gulf States employed in their ceremonial purifications the 'medicine' known as the 'black drink,' a decoction made from the leaves of the *Ilex cassine*. This 'medicine' figures in the great *Busk*, or annual green-corn thanksgiving ceremony of the Creeks. According to Hall (*Rep. U.S. Nat. Mus.*, 1885), the Creeks were in the habit of preparing and drinking it before council-meetings, because they believed that 'it invigorated the mind and body and prepared for thought and debate.' In various regions of North, Central, and South America several kinds of tobacco furnished medicine for divers diseases. Pipe-smoking for asthmatic troubles is reported from the Dakotas, Winnebagoes, Creeks, and other tribes; in several parts of Mexico, tobacco was used for similar purposes, and likewise against rheumatism. Among the Ipurina Indians of Brazil, incurable sick people are completely narcotized by tobacco and thrown into the river. In South America, tobacco was chiefly used in the form of snuff, and, according to McGuire (*Bull. 30 BE*, pt. ii. [1910] p. 768), 'there is some evidence that the plant was chewed in Central America.' McGuire (p. 768) says:

'Tobacco was cultivated in most tribes by the men alone, and was usually smoked by them only; among the Iroquois and some of the Pueblo trade tobacco was not smoked in solemn ceremonies. At times both priests and laymen smoked plants or compounds that were strongly narcotic, those using them becoming ecstatic and seeing visions. To the Indian the tobacco-plant had a sacred character; it was almost invariably used on solemn occasions, accompanied by suitable invocations to their deities. It was ceremonially used to aid in disease or distress, to ward off danger, to bring good fortune, to generally assist one in need, and to allay fear.'

The general use of tobacco all over America was much furthered when many of the European colonists devoted themselves to the planting and sale of this plant. Its fame as a medicine was really the first basis of its popularity when introduced into the Old World. Among some Indian tribes the planting, cultivating, and harvesting of tobacco had many religious or semi-religious rites and ceremonies attached to them. According to Simms (*Amer. Anthropol.*, N.S., vi. [1904]), as cited by McGuire (p. 768),

'the planting of medicine tobacco is one of the oldest ceremonies of the Crows, consisting, among other observances, of a solemn march, a foot race among the young men, the planting of seed, the building of a hedge of green branches around the seed-bed, a visit to the sweat-house, followed by a bath and a solemn smoke, all ending with a feast; when ripe, the plant was stored away, and seeds were put in a deerskin pouch and kept for another planting.'

In S. America a number of plant-juices were employed for the purpose of making more or less intoxicating or stupefying drinks, used on ceremonial occasions, etc.; and 'getting drunk' was not infrequently a common and regular occurrence, on festival occasions, with certain Brazilian and Paraguayan tribes. In N. America, according to Dr. Hrdlička (p. 837), 'among the tribes who prepare *tiswin*, or *tesvino*, particularly the Apache, parts of a number of bitter, aromatic, and even poisonous plants, especially a species of *Datura*, are added to the liquid to make it "stronger"; these are termed medicines.' Certain Californian tribes made drinks from *manzanita* berries, and the Pima and other tribes of the Arizonian region manufactured an intoxicating liquor from the fruit of the cactus. Among many tribes of ancient and modern Mexico, a decoction of *peyotl* (*Anhalonium lewinii*), a small variety of cactus, had, and still has, a very extensive use; so also in the region of the United States north of Mexico. According to Mooney (*Bull. 30 BE*, pt. ii. p. 237), it was 'formerly and [is] still much used for ceremonial and medicinal purposes by all the tribes between the Rocky Mountains and the Gulf of Mexico, from Arkansas river southward, almost to

the city of Mexico.' The Nahuatl *peyotl* corresponds to the Kiowa *señi*, Comanche *wokowi*, Tarahumare *hikuli*, etc. Under the incorrect title of *mescal* it is well known to the whites, and has been even used for psychological and medical experimentation.

The 'eating of mescal buttons' takes place during ceremonies of considerable length among the Kiowa (where they have been studied by Mooney), Comanche, and other tribes. With these peoples, 'it is rather a ceremony of prayer and quiet contemplation. It is usually performed as an invocation for the recovery of some sick person; it is held in a *tipi* specially erected for the purpose, and begins usually at night, continuing until the sun is well up in the morning.' Women, as a rule, do not take part in the ceremony proper, but 'occupy themselves with the preparation of the sacred food and of the feast in which all join at the close of the performance.' 'At some point during the ceremony the sick person is usually brought in to be prayed for, and is allowed to eat one or more specially consecrated *peyotls*.' Mooney says further: 'The number of "buttons" eaten by one individual during the night varies from 10 to 40, and even more, the drug producing a sort of spiritual exaltation differing entirely from that produced by any other known drug, and apparently without any reaction. The effect is heightened by the weird lullaby of the songs, the constant sound of the drum and rattle, and the fitful glare of the fire.' The Tarahumare and some other Mexican tribes have a *peyotl* dance. The effects of 'mescal buttons' have been studied experimentally by Havelock Ellis (*Pop. Sci. Mo.* lxi. [1902] 67-71), and, as Mooney notes (p. 237), 'tests thus far made indicate that it possesses varied and valuable medical properties, tending to confirm the idea of the Indians who regard it almost as a panacea.' Father Gerste (pp. 63-66) records its use, not only as a sort of panacea for fatigue, etc., but also as a means of obtaining hallucinations, which were then taken for messages from the gods, and prophecies of the future. The Ohichimecs, according to Sahagun, consumed large quantities of *peyotl*, and they believed that 'it gave them courage, took away all fear during battle, rendered them insensible to hunger, thirst, etc., and preserved them from all dangers.'

The 'mescal button' or 'mescal' here described is not to be confounded with the mescal (food and intoxicating drink, the latter post-Columbian) produced in this region from the agave.

9. Inventions for use in 'medicine.'—Besides the vast number of amulets, charms, and talismans, of which some account is given in art. CHARMS AND AMULETS (Amer.), a few 'inventions' of a medical or quasi-medical order, in use among American Indian peoples, deserve mention here. Such are, e.g., a sort of respirator of fine woven grass used by the Kwikpagmiut Eskimo of Alaska (Bartels, p. 222) to prevent the smoke from getting into the lungs of the people in the 'sweat-house'; the scarification-implements of fish-teeth made by the Carayás of Brazil (p. 267), which are of peculiar interest; the bone and horn tubes used by several North American tribes (Navaho, Ojibwa, Creek, Siouan peoples) for scarification, blood-sucking, and similar procedures. Note may be taken here also of the litters for the sick and wounded among a number of tribes (e.g. Dakotas); and the snow-spectacles of the Eskimo.

10. Hygiene, sanitation, etc.—The idea that 'cleanliness is next to godliness' was wide-spread among many American Indian peoples, as their frequent bathing, and other cleansing procedures, the very common use of the 'sweat-house' (accompanied often by elaborate ceremonials), the washing of the sexual parts, and the attention to the body during menstruation, after *coitus*, etc., abundantly indicate. Some of the tribes lowest in intelligence, apparently, are very careful to bathe frequently and thoroughly—the process beginning with the new-born infant, which, even in the cold north, is immediately plunged into the water; the mother also cleansing herself as soon as possible. This treatment of child and mother is discussed at some length in the works of Ploss and others who have written in particular of menstruation and of child-birth among primitive peoples. Fasting, bathing, and sprinkling ceremonials are found accompanying the great religious performances as well as the smaller, and they are also to be met with in connexion with preparation for and participation in games, which have often a more or less religious character. Of the Tsimshian Indians of British

Columbia, who are sun-worshippers, Boas says (5th Rep. on N.W. Tribes of Canada, 1889, p. 50):

'Men make themselves agreeable to the deity by cleanliness. Therefore they must bathe and wash their whole bodies before praying. For the same reason they take a vomitive when they wish to please the deity well. They fast and abstain from touching their wives, if they desire their prayers to be successful.'

It is evident that many tabus, among the American Indians, no less than among primitive peoples in other parts of the globe, are of this hygienic, or quasi-hygienic nature. Sometimes, as among the Tsimshian (Boas, p. 50), when a special object is to be attained, 'to make the ceremony very successful, their wives must join them; if the wife should not be true to the husband, the effect of the fasting is destroyed.' Bathing and cleansing appear also frequently, and sometimes elaborately, in connexion with mourning rites and ceremonies connected with the handling and disposal of the dead. The use of water reaches its maximum, perhaps, with the ancient Mexicans, who 'washed the soul.' The 'purification' of the soul as a means of curing the body of disease was in vogue among a number of the peoples of ancient Mexico, as Father Gerste notes (p. 18). Water was regarded as a remedy *par excellence*, because 'it cured the body by washing the stains of the soul.'

The use of the bath (with some tribes daily) as a hygienic or medical procedure, often complicated with religious or mystical ceremonies, was wide-spread in all parts of primitive America, the water used having added to it sometimes (e.g. among the Dakotas) certain decoctions of plants—occasionally for the purpose of irritating the skin. Some Indian tribes, like the Hopi or Moqui, and the Pueblos, avoided cold baths altogether; others, like the Pimas and some tribes of Lower California, preferred them. With quite a number of tribes (Dakotas, Creeks, Ojibwa, Klamath), especially in the Rocky Mountain region, hot baths were followed immediately by cold, the individual rushing at once from the 'sweat-house' and plunging into the nearest stream. Cold baths for fever were in vogue among many tribes, and the Huastecs of Mexico even submitted smallpox patients to this procedure, thereby greatly increasing the mortality from that disease. The Moqui, when suffering from fever (Bartels, p. 134), 'used to lie down in the cold water until they got well or died'—a sort of 'perpetual bath,' as the author remarks. Similar practices are reported from the Winnebagos. Aspersions with cold water is resorted to by several tribes. Among the tribes of the Columbia region and the North Pacific coast, many are very fond of hot baths, and the institution of the 'sweat-house' or primitive 'steam-bath' is wide-spread all over the continent, from the uncivilized tribes of the Plains and the Rocky Mountain regions to the more or less civilized Aztecs of ancient Mexico, with their *temezcalli*, etc. The Mayan peoples, likewise, had their *tiuk*. In Mexico, Central America, and the Pueblo region, the 'sweat-houses' were more imposing constructions, but over a large part of the continent they were simply made of willows or the like, large enough to contain a single individual, the steam being produced by pouring water over heated stones. The structure usually had a temporary covering of skins and blankets. The body was sometimes scraped before leaving the sweat-house, and some of the Eskimo are said to 'rub themselves after the bath with grass and twigs.' According to Henshaw (*Bull. 30 BE*, pt. ii. p. 661) sweating was practised among the American aborigines for three different purposes: (1) as a purely religious rite or ceremony for the purpose of purifying the body and propitiating spirits: (2) as a medical

practice for the cure of disease; (3) often as purely social and hygienic—'a number of individuals entered the sweat-house together, apparently actuated only by social instinct and appreciation of the luxury of a steam bath' (p. 662). As a religious ceremony it was used by warriors before going forth, by hunters previous to departing for the chase, by boys and girls at puberty, and by all sorts of people in time of danger, or before undertaking special exploits, etc. Moreover, 'among the Plains tribes all priests who perform ceremonies have usually to pass through the sweat-house to be purified, and the sweating is accompanied by special rituals' (p. 661). The ceremonials of the sweat-house with some tribes are elaborate and complicated, especially where there is a village or a general *temezcalli* or *estufa*. Nelson informs us that, among the Alaskan Eskimo, the *kashim* used for the sweat-bath was 'the centre of social and religious life in every village.' With most tribes also the construction of the sweat-house 'was attended with many rules and observances.'

Massage was practised in various ways by numerous American peoples (rubbing, pressure with hands or feet, etc.). Purifications of various sorts, including fasting, bathing, taking various 'medicines,' were in vogue among many tribes, previous to participation in games and other more or less ceremonial performances. Culin (*op. cit.*) refers to such 'medicines' in connexion with the foot-races of the Tarahumare, the ball-games of Zuni, Cherokee, Ojibwa, Choctaws, Mohawks, etc. Care regarding the satisfaction of natural necessities is reported from a number of American Indian peoples. According to Joest (*Int. Arch. f. Ethn.* vol. v. Suppl., 1893), the Caribs and Arawaks, who live near rivers, etc., go thither for such purposes. Otherwise, they go to some distance from the village, scratch a hole in the sand, and carefully cover up their excrement, cleansing themselves with sand. Concerning the Carayá Indians of Brazil, Ehrenreich (Bartels, p. 261) remarks on

'the feeling of decency of these savages exhibited in their manner of defecating, which is of a culture-historical interest. It is done as far away as possible from the village. A hole is made in the sand. The individual sits over it with outspread legs, hiding the upper part of his body behind a mat. The excrements are always carefully buried.'

Certain North American Indians also are very careful in the matter of relieving themselves, always doing so out of the public way, and not in view of any one.

Some of the food-tabus of American Indian peoples have at least a *prima facie* hygienic value. Careful regard for the purity of water is evident both in the Pueblo region of the south-western United States and from the early accounts of the semi-civilized peoples of ancient Mexico.

Ehrenreich reports the Carayá Indians of Brazil (cited by Bartels, p. 238) as inquiring of every stranger, 'Have you catarrh?' and permitting him to enter their cabin only after assuring themselves that there is no danger from tuberculosis—a disease upon the increase among them, and of whose infectious character they are fully aware. But this is post-European. Among the Indians of northern Mexico individuals suffering from contagious or infectious diseases are abandoned by their fellows, who, however, place water and wild fruits within easy reach before leaving (Bartels, p. 242). The ancient Aztecs, according to Gerste (p. 18), had the same fashion of treating severe cases of disease, where death might be expected. The family of the patient carried him to the highest point of some near-by mountain, placed beside him food and a vessel of water, and left him to himself, for death or cure, as the case might be, after forbidding all persons to go near him. The

segregation of the patient in order to keep away evil spirits, etc., was in vogue among many tribes. Some, like the Winnebago Indians of Wisconsin and the Mosquitos of Honduras, went so far as to surround the bed of the sick with poles on which were hung various animals, or to hedge him in with painted sticks, allowing no one but the 'medicine-man' to approach the spot (Bartels, p. 244). Hygienic motives may also enter here in part, as also in the case of the abandonment of persons suffering from contagious or infectious diseases. Here perhaps ought also to be mentioned the fact reported by Dr. Farabee of the very primitive Macheyengas of eastern Peru, that they 'are more afraid of the disease from which he died than of the dead man.'

11. Personification and forms of disease.—The disease or sickness is often given some special form and recognized as having the shape of some object or creature, whose expulsion by the shaman or other qualified person, with or without the accompaniment of primitive music, incantations, conjurer's tricks, and similar devices (the evil object is frequently 'sucked out' by the medicine-man), is followed by relief or cure, temporary or permanent. Such procedures are known all over America, from Alaska to Patagonia, and from Greenland to Brazil. The representation of the disease as a piece of bone is wide-spread; common also is the conception of it as a piece of stone or some similar object. The claws of such animals as the bear, the spines of the porcupine, etc., likewise figure in the same way. Living creatures, corporeally or spiritually, constitute the disease-cause with many American tribes, having in some way or other, of themselves, or through the machinations of shamans or other evil-disposed individuals, been introduced into the body of the patient. The Sioux Indians, like some of the tribes of Central Mexico, personify disease as a worm; the Klamath and certain of the Sioux as some sort of insect; some Indians of Central Mexico as a large ant; the Klamath, Karok, and other Californian tribes of the north as a frog; and the Dakotas as a tortoise. Another common personification is a snake. The Twana, Chimakum, and Klallam Indians of the State of Washington believe that certain diseases are caused by a wood-pecker pecking at the heart of the person affected. Even quite large animals are believed by some Indian tribes to make their way into the human body and cause disease and sometimes death. Such are the bear and deer among the Dakotas; the squirrel among the Twana and neighbouring tribes; the porcupine among the Sioux; the otter among certain tribes of the North Pacific coast region (some birds figure here also, of considerable size). Among the Twana, Chimakum, and Klallam it is believed that evil-minded shamans or sorcerers can send into the body of a man a bear, which eats at his heart and so causes him to become sick (Eells, *Ann. Rep. Smiths. Inst.*, 1887, pt. i.). Among the Nutka Indians of Vancouver Island, according to Boas (*6th Rep. N.W. Tribes*, 1890, p. 44),

'the cause of sickness is either what is called *māyatl*, i.e. sickness flying about in the shape of an insect and entering the body without some enemy being the cause of it; or the sick person has been struck by sickness thrown by a hostile shaman, which is called *menu'qéil*. Their ordinary method of removing disease is by sucking and singing over the patient.'

12. Prognostics, etc.—Devices for the prognostication and prophesying of the issues of diseases of various sorts are reported from many American tribes. Among the Kutenai Indians of south-eastern British Columbia, according to Boas (*5th Rep. p. 46*), 'if the hands of a dead man (before the body is buried) are closed so firmly that they cannot be opened, it indicates that the

tribe will be healthy and strong and free from disease.' The Indians of Michoacan (Bartels, p. 168), in Central Mexico, believe that, if the leaf of a certain plant, when placed on the sore place of the body, stays there, the man will recover; if it drops off, his death is certain. The Mayas of Yucatan are said to have used a crystal for purposes of prognostication. In other parts of the continent the medicine-men, the priests of the Mayas, used to cast lots in order to determine what offering should be made for the restoration of the patient to health.

13. Transference of disease, 'scape-animals,' etc.—The idea of curing a sick person by transferring the disease or illness with which he is afflicted to some other creature, animal or human, is met with in various regions of primitive America. Some of the Nahuas or Aztec peoples of ancient Mexico (Gerste, p. 47) had the custom, in cases of violent fever, of fabricating a little dog of maize-flour, which was then placed on a maguey-plant in the public way; it was believed that the first passer-by would carry off the disease, and thus enable the patient to recover. In like manner, certain Peruvian coastal tribes used to expose on the public road the clothes of the sick man, in the belief that any passer-by who touched them would take the disease upon himself and so relieve the patient.

14. The animal world as the cause of disease.—A typical American Indian legend of the origin of disease is that of the Cherokee reported by Mooney, and given at length in art. CHEROKEES (vol. iii. p. 505). According to this myth, the animals became so offended and outraged at the carelessness of man and the invasions of their rights on the part of mankind that they held a council and determined to obtain revenge by each of them inflicting some disease upon their human oppressors. This they did, the smallest as well as the greatest providing his share. This is why the incantations and rites of the Cherokee medicine-men are so full of references to animals, and why each disease is represented as being caused by some one of them (the interesting details will be found in Mooney's monograph upon this subject). As a result of the action of the animals, the legend goes on to state, all the plants held a council and resolved to present man with remedies for all the diseases inflicted upon him by the former. Thus it happens, also, that for every disease brought about by the animals, there is a remedy to be found in the plant world. The idea of the origin of disease from the animal world obtains among many other American tribes as well, and the doctrine sometimes suggests comparison with the modern scientific theories as to the microbe origin of many human diseases. Among the Klamath Indians of Oregon, birds such as the wood-pecker, the lark, the crane, and various sorts of ducks are believed to be the causers of disease. With them also the otter is made responsible for smallpox.

15. Natural phenomena as causes of disease.—With some American Indian peoples, the shadow of another person is often harmful. Among the Shushwap of British Columbia (Boas, 6th Rep. p. 92) widows and widowers, while observing mourning regulations, 'must avoid letting their shadows fall upon a person, as the latter would fall sick at once.' Similar beliefs prevail among the Bilqula (7th Rep., 1891, p. 13). Lightning, the moon's light, etc., are sometimes supposed to cause illness. The Klamath Indians seem to have believed that the wind had something to do with the causation of disease. In some of the incantations of these Indians the west wind, in particular, is represented as 'blowing disease' out of its mouth; the rainstorm also 'calls up' disease.

16. Human beings as causers of disease.—Besides enchantment, witchcraft, sorcery, and other active procedures of medicine-men and medicine-women, by means of which sickness or disease is caused in another individual or transferred to him, there are other ways in which men and women may infect one another or bring about a condition of ill-health. As may be seen from the abundant data in Ploss's *Das Weib*, the menstruating woman is often regarded as a disease-bringer or a disease-causer, and her segregation is justified for that reason. Among the Songish Indians of Vancouver Island, according to Boas (6th Rep. p. 22), 'menstruating women may not come near sick persons, as they would make them weak.' The maximum theory of woman's responsibility for disease is met with among the Chiquitos of Bolivia, concerning whose 'medical code' Charlevoix states (Gerste, p. 45) that 'it consists of two prescriptions,—first, to suck the part of the body of the patient affected, and, second, to kill some woman, since women are responsible for all the misfortunes of mankind.' Among the Shushwap Indians of British Columbia, according to Boas (l.c. p. 90), 'women during their monthly periods are forbidden to cook for their families, as it is believed that the food would be poisonous.' Among the causes of disease or sickness given by the shamans of the Shushwap (p. 94) are 'that a woman passed by the head of the patient, or that the shadow of a mourner fell upon him.' Ideas cognate, more or less, with the 'evil eye' superstitions of the Old World are met with in various parts of primitive America. The shamans of many tribes (e.g. Shahaptin, Klamath, and other peoples of the Oregonian-Columbian region) are believed to be able to 'shoot' diseases from their eyes. Against these instances of maleficent human beings may be cited cases of *twins as disease curers*. As already noted in art. CHILDREN (vol. iii. p. 526), several American Indian tribes, particularly in the North Pacific coast region, believe that twins are gifted with the power of curing diseases.

Thus, among the Kwakiutl (Boas, 5th Rep. p. 51), twins, who are thought to be transformed salmon, 'have the power of curing diseases, and use for this purpose a rattle called *K'oqaten*, which has the shape of a flat box about three feet long by two feet wide'; among the Nak'omgylisla (6th Rep. p. 62), 'twins, if of the same sex, were salmon before they were born. . . . The father dances for four days after the children have been born, with a large, square rattle. The children, by swinging this rattle, can cure disease and procure favourable winds and weather.'

17. Soul and disease.—In primitive America a great variety of ideas as to the relationship of the soul to disease and kindred phenomena of the human body prevailed. Indeed, we meet with all grades—from the simple belief of the Arawakan Macheyengas of eastern Peru, who, according to Dr. W. C. Farabee (*Proc. Amer. Antiq. Society*, N.S., xx.), think that the soul 'has nothing to do with life, sleep, disease, or death,' to the elaborate and quite metaphysical doctrines of some of the tribes occupying higher cultural stages, where life, sleep, disease, and death have often to be interpreted in relation to the existence of a plurality of souls, constituting sometimes a hierarchical series. Among the Indians of the North Pacific coast regions there are some (for example, certain tribes of the Fraser River, in British Columbia) who believe in the existence of 'several souls, the loss of one of which causes partial loss of life, i.e. sickness, while the loss of all, or of the principal one, entails death'; but, according to Boas (*Bull. SO BE*, pt. ii. p. 617), the idea that the 'life' is associated with the vital organs (blood, breath, etc.), the loss of which causes death, 'is not strongly developed among the American aborigines.' The Hidatsa Indians of the Siouan stock,

like the Fraser River tribes, believe in a plurality of souls, as do a number of other American peoples. The doctrine of souls and of disease among the Chinook Indians has been discussed by Boas (*JAFL*, 1893, pp. 39-43). Here there are said to be two souls, a larger and a smaller; when a man is sick, it is because the latter has left his body, and he recovers when the shaman or medicine-man has caught the soul and returned it to him. In various parts of America the devices for 'soul-catching' are sometimes detailed, with extensive ceremonial, ritual, etc. Among the Tlinkit, Haida, and Taimshian Indians, according to Boas (*5th Rep.* p. 58),

'their art consists in extracting the sickness or in finding and restoring the soul of the sick person. In trying to find it, three or four shamans sing and rattle over the sick person until they declare they have found the whereabouts of his soul, which is supposed to be in the possession of the salmon or *clachen* (candle-fish), or in that of the deceased shaman. Then they go to the place where it is supposed to be, and by singing and incantations obtain possession of it, and enclose it in a hollow carved bone. Then mountain-goat tallow, red paint, eagle-down, and other valuable objects are burnt, and the soul held over the fire. The bone is then laid upon the sick man's head, the shaman saying, "Here is your soul. Now you will be better and eat again." Sometimes the soul is supposed to be held by a shaman, who is paid for returning it.'

The soul of an individual can be removed from his body through the 'magic' of his enemies, their more powerful *orenda*, to use the term of Hewitt, and can be brought back only by the exercise of the same practices of a higher order or a greater cunning. Among the Songish Indians the lower sort of shamans, or *siöua*, who are generally women, are able to cure such diseases as are not due to the soul's absence from the body. The higher class of shamans, or *squnädm*, are able to see the soul and to catch it when it has left the body and its owner is sick. A man becomes a *squnädm* by intercourse with supernatural powers in the woods, where he acquires a guardian spirit, 'called the *tl'k'äyin*, corresponding to what is known as the *tamanowus* in the Chinook jargon, and "medicine" east of the Rocky Mountains.' The method of procedure of the *squnädm* in disease-curing and soul-catching is thus described by Boas (*6th Rep.* 30):

'When he returns from the woods, the shaman is able to cure diseases, to see and to catch souls, etc. The best time of the day for curing disease is at nightfall. A number of people are invited to attend the ceremonies. The patient is deposited near the fire, the guests sit around him. Then they begin to sing and beat time with sticks. The shaman (who uses no rattle) has a cup of water standing next to him. He takes a mouthful, blows it into his hands, and sprinkles it over the sick person. Then he applies his mouth to the place where the disease is supposed to be, and sucks at it. As soon as he has finished sucking, he produces a piece of deer-skin or the like as though he had extracted it from the body, and which is supposed to have produced the sickness. If the soul of the sick person is supposed to be absent from the body, the shaman sends his *tl'k'äyin* (not his soul) in search. The *tl'k'äyin* brings it, and then the shaman takes it and puts it on the vertex of the patient, whence it returns into his body. These performances are accompanied by a dance of the shaman. Before the dance the *siöua* must give a name to the earth, which else would swallow the shaman. When acting as conjurer for sick persons, he must keep away from his wife, as else his powers might be interfered with. He never treats members of his own family, but engages another shaman for this purpose. It is believed that he cannot cure his own relatives. Rich persons sometimes engage a shaman to look after their welfare.'

Shamans are able to make people sick, no less than to cure them of illness. The Nutka Indians, according to Boas (*6th Rep.* p. 44), have the following curious belief as to the cause of sickness:

'The soul has the shape of a tiny man; its seat is in the crown of the head. As long as it stands erect, the person to whom it belongs is hale and well; but, when it loses its upright position for any reason, its owner loses his senses. The soul is capable of leaving the body; then the owner grows sick, and, if the soul is not speedily restored, he must die. To restore it, the higher class of shamans, called *k-ok-outsmaah* (soul-workers), are summoned.'

Among the Kwakiutl Indians (p. 59):

'If a man feels weak and looks pale, the seer (shaman) is

sent for. He feels the head and roof of the nose of the patient, and finds that his soul has left his body.'

The soul is caught again at night by the shaman to the accompaniment of incantations, etc., as already described for the Songish. Among the Shushwap the bringing back of the soul is an elaborate performance. Among the Bilqula (Bel-lacoola) the following belief obtains (*7th Rep.* p. 14):

'The soul is believed to dwell in the nape. It is similar in shape to a bird enclosed in an egg. If the shell of the egg breaks and the soul flies away, its owner must die. Shamans are able to see and to recover souls. By laying their hands on the nape of a person they are able to tell whether his soul is present or whether it has left the body. If the soul should become weak, they are able to restore it to its former vigour. If a person swoons, it is believed that his soul has flown away without breaking its shell. The shaman hears its buzzing wings, which give a sound like that of a mosquito. He may catch and replace it in the nape of its owner. If the soul leaves the body without breaking its shell the owner becomes crazy.'

Unlike many other Indian tribes, the Bilqula believe that the art of shamanism is a direct gift of the deity called *Suq*, obtained during illness, and not procurable by means of fasting, praying, etc. Among the Chilliwack, according to Hill-Tout (*Rep. on Ethnol. Surv. of Canada*, 1902, p. 9), the shaman sends his own soul out to catch the soul which has escaped from the body of his patient. Among the Twana Indians, who have the practice of 'soul-catching,' the reason given for its performance at night is that night on earth corresponds to day-time in the spirit-world. Among the Klamath Indians of Oregon, the treatment of the sick takes place in the winter-house in complete darkness.

18. Ghosts or spirits of the dead and disease.—

An opinion met with among many of the aborigines of America is that, in some way or other, the ghosts or spirits of the dead are responsible for the diseases and sicknesses that afflict mankind. Among the Kwakiutl of Vancouver Island, to see the ghosts of the dead, when they re-appear on earth, entails sickness and death (Boas, *5th Rep.* p. 43); with certain Siouan tribes, to touch them or be touched by them as they move unseen through the air has the same effect. Many peoples, however, believe in an active rôle of these spirits in afflicting human beings with disease; this sometimes amounts to taking possession of the body or of some part or member of it. Among the coast Salish (Boas, *ib.* p. 52), it is believed that 'the touch or the seeing of ghosts brings sickness and death.' So, also, with the Songish (*6th Rep.* p. 28), who believe that 'their touch causes sickness. They make those who have not regarded the regulations regarding food and work mad. Their touch paralyzes man. When one feels afraid, being alone in the woods or in the dark, it is a sign that a ghost is near.'

The following is reported by Boas (*6th Rep.* p. 61) from the Kwakiutl:

'The sight of a ghost is deadly. A few years ago, a woman, who was waiting for her mother, suddenly fell into a swoon. The people first believed her to be dead, and carried the corpse into the woods. There they discovered that she continued to breathe. They watched her for two days, when she recovered. She told them that she had seen two people enter the house. One of them had said: "Don't cry; I am your mother's ghost. We are well off where we live." She had replied: "No; I mourn because you have left me alone." Then she had fallen into a deep swoon.'

This explanation of swooning, fainting, and similar states is common all over primitive America. Among the Shushwaps (p. 93), 'when a person faints, it is a sign that a ghost pursues him.'

19. The hereafter of those dying from sickness and disease.—Among the American Indians, one frequently meets the idea that those dying by violent deaths, women dying in childbirth, and people whose death is due to sickness or disease go to certain special abodes in the hereafter. Thus the Tlinkit, according to Boas (*5th Rep.* p. 47),

'believe that the soul, after death, lives in a country similar to ours. Those who have died a violent death go to heaven, to a country ruled by Tahiti; those who die by sickness (also women dying in childbirth) go to a country beyond the borders of the

earth, but on the same level. It is said that the dead from both countries join during the daytime. I believe that this idea, which is also held by the Haida, must be ascribed to Eskimo influence.

A special heaven for women dying in childbirth is met with elsewhere among uncivilized tribes; also in ancient Mexico.

20. Disease and the gods and demons.—The conception of disease as the work of deity or of demons has not yet vanished altogether from the minds of the civilized Christian peoples of the globe, and it is strongly entertained by many tribes of American Indians representing practically all grades of culture in the primitive New World. The Iroquoian Onondaga, *e.g.*, believe that the evil demons known as *Hondoi* cause both disease and misfortune among men and women, but, when appeased by dances and other ceremonies and by offerings of food, tobacco, and the like, they become friendly and protect them from sickness and disease, as well as from witchcraft. In the dances and kindred ceremonials of the Iroquoian 'medicine-societies,' women masked, representing these disease-demons with distorted human faces, are employed. The secret medicine-societies of the pagan Seneca have recently been studied by A. C. Parker, himself Iroquoian descent. These societies serve for the healing of disease and the furtherance of well-being in the broadest sense. In a Tsimshian myth (Boas, *5th Rep.* p. 50) 'the master of the moon,' the pestilence (*Hoiatilog*), appears as a powerful deity—something ascribable to the influence of the neighbouring Kwakiutl. The Sacs and Foxes believe that the spirit of sickness, *Apenaweni*, hovers about, seeking entrance into the lodges of the Indians. Among the Nez-Perce Indians there is a general ceremony, lasting from 3 to 7 days, carried on by all the men of the community who are between 18 and 40 years of age, with the object of conquering *Mawish*, the spirit of fatigue (Bartels, p. 235); and the Indians believe firmly that by means of it they ensure themselves great bodily strength and capacity for resistance to fatigue.

Water-demons are sometimes credited with keeping the souls of men, and thus causing various diseases and sicknesses. Examples of this are the *Tsakan* of the Mexican Coras, described by Preuss, and the *Pujio* of the Indians of the Bolivian-Argentinian border-land, of which an account is given by Boman (*Antig. de la rég. and.*, vol. i. [1903]). In the case of the *Pujio*, a rather complicated offering is made, after which the soul is called back. The soul is also called back when one is 'frightened to death.' Among the Ipurina Indians of Brazil, persons whose recovery from illness or disease is not expected, and upon whom all the arts of the shaman have been exercised in vain, are devoted to *Inkisi*, 'the great water-snake,' a prominent figure in their mythology. Ehrenreich thus describes their actions in this matter (cited in Bartels, p. 248):

'If there are any sick people who are beyond anything but the help of the Snake, one of the shamans proceeds to the river to call the Water-Spirit. After all accompanying him have disappeared, the Spirit comes forth, and asks first after what gifts have been brought. If he is satisfied with these, he declares himself ready for the reception of the sick man. The latter is stupefied with tobacco and thrown into the river, on the bottom of which he falls "with a dull thud," and wakes up. The Water-Spirit takes him into his house and restores him. The method of cure is not clearly given, but the recovered patient remains for ever in the realm of the Water-Snake, and lives there happily and gloriously, with no desire to return to earth. The accidentally drowned find the same reception, while those already dead on earth are rejected. Moribund people are often hurried into the next world by the clubs of the shamans.'

21. Disease as punishment.—The conception of disease as punishment for the known or unknown sins and offences of the individual, the family, or the community is wide-spread, and is not confined to any particular stage of culture, either in the Old

World or in the New. Primitive America furnishes a number of interesting examples. The breaking of tabus, and the disregarding of various other religious or semi-religious commandments and regulations, are believed by tribes all over the continent to be followed by punishments which often take the form of some sickness or affliction of body or mind, or of both together. The breaking of food-tabus, in particular, is thought to bring diseases of various sorts on the guilty; likewise, the non-observance or neglect of the customs and ceremonies relating to menstruation, puberty, childbirth, *coitus*, etc. The Mayas of Yucatan and the Aztecs of ancient Mexico, both representing the highest reaches of primitive American civilization, believe that certain diseases were sent upon the individual, etc., in consequence of sin; the former holding also that it sometimes was for sins unconfessed. This topic is discussed by Preuss in his article on sin in ancient Mexican religion (see Lit.). It appears that the Aztecs believed diseases and misfortunes of many sorts to be due to the sinful nature of man. Sacrilege and offences against the State were punished by the gods. Tezcatlipoca, *e.g.*, sent leprosy, sexual diseases, gout, skin diseases, dropsy, etc. Father Gerste (p. 19) says on this point that, in cases of severe illness or grave diseases, the 'doctor' told the patient that he must have committed some sin, and kept questioning him until he confessed some offence—very old, perhaps, and almost forgotten. The principle of medication here was to purify the soul first, and then the body might get well. Certain Central American peoples, of the Mayan stock, had practically the same ideas and method of procedure by confession, etc.

22. Special and protective deities of shamans, etc.—Among not a few tribes, especially those belonging to the ancient civilized peoples of Mexico, Central and South America, the 'doctors,' 'medicine-men,' etc., had their special protective divinities. Such, *e.g.*, were, among the Aztecs and closely related peoples, *Toqi*, the great, ancient mother, particularly friendly to women-doctors and midwives, who figured in the ceremonials in her honour; *Xilonen*, a goddess to whom a young maiden was offered in sacrifice; *Tzapotla tenan*, or 'the mother of Tzapotlan,' to whom was attributed the discovery of the medicinal resin called *oxitl*, and who was specially worshipped by male 'doctors'; *Ixtliltlton* (also called *Tlaltecuin*), god of song, dancing, games, etc., into whose temple sick children were taken, to dance (if they could) before his image, and drink of the holy water preserved in the sanctuary. The deities *Tlaltecuin*, *Xochicauacan*, *Oxomoco*, and *Cipactonal* especially were credited with the beginnings of medical art. Among the Mayas, the culture-hero, *Itzamna*, is said to have been the originator of medicine; the same thing is said of *Xmucan* and *Xpiyacoc* among the kindred Quiché of Guatemala. The culture-hero, as primal shaman, appears also in S. America, *e.g.*, in the Yurupari legend reported by Stradelli from the head-waters of the Orinoco. The Guarayan (Bolivia) *Abaangui* prepares the first *chicha*, or intoxicating drink, from maize. Many myths relate that the 'medicine' was received directly or indirectly from the gods themselves or their representatives, the Twins, who figure so conspicuously in the mythologies of the south-western United States, etc.; the 'transformers' of the North Pacific coast; or such animal-deities as the coyote in the Rocky Mountain region and among the Plains tribes. Hoffman has recorded the great Ojibwa myth of the transference to man by the culture-hero, *Manabozho*, of the 'grand medicine.' Cushing has also published the Zuni account of the teaching of 'medicine' to the first

men by the Twins, who are the chief culture-figures in Pueblo mythology.

23. Human sacrifice as a cure for disease.—The sacrifice of animals, etc., as a more or less religious ceremonial in connexion with the ritual of 'medicine' is known from various regions of the globe, where the process of getting well in body is carried out on lines similar to getting well in mind, and maintaining harmony between man and the powers beyond and above him. In this way human sacrifice sometimes occurs. Some of the Indian tribes of ancient Mexico, according to Orozco y Berra, cited by Father Gerste (p. 19), used, in cases of very grave illness of the father or the mother, to kill the youngest child as an expiatory sacrifice.

LITERATURE.—Besides the other references in the text, the following works may be cited as of first importance: A. S. Ashmead, 'Some Observations on certain Pathological Questions concerning the Mutilations represented on the Anthropomorphic huacos Pottery of Old Peru,' *N.Y. Med. Jour.*, 1909, pp. 857-861, and other writings on the subject of syphilis in America; M. Bartels, *Die Medizin der Naturvölker*, Leipzig, 1893; I. Bloch, 'Der Ursprung der Syphilis, Morbus Americanus,' *Intern. Amerik.-Kongr.* xiv. (1904) 57-79, and recent volume on same topic; F. Boas, 'The Doctrine of Souls and of Disease among the Chinook Indians,' *JAFI*, 1893, pp. 39-43, and other contributions; J. G. Bourke, 'The Medicine-men of the Apache,' 9 *RBEW*, 1892, pp. 443-600; S. Culin, 'Games of the North American Indians,' 24 *RBEW*, 1907, pp. 3-809; R. B. Dixon, 'Some Aspects of the American Shaman,' *JAFI* xxi. (1908) 1-12, and other writings; A. Gerste, *Notes sur la médecine et la botanique des anciens Mexicains* 2, Paris, 1910; W. J. Hoffman, 'The Midéwiwin or "Grand Medicine Society" of the Ojibwa,' 7 *RBEW*, 1891, pp. 143-300; A. Hrdlička, various contributions, but especially *Physiological and Medical Observations among the Indians of South-Western United States and Northern Mexico* (Bull. 31, BE, 1908); J. G. McGuire, 'Pipes and Smoking Customs of the American Aborigines,' *Rep. U.S. Nat. Mus.*, 1897; J. Mooney, 'The Sacred Formulas of the Cherokeees,' 7 *RBEW*, 1885-1886, pp. 301-397, and other writings; A. G. Morice, 'Déné Surgery,' *Trans. Canadian Inst.* (Toronto) vol. vii. (1901), pp. 15-27; E. von Nordenskiöld, 'Recettes magiques et médicales du Pérou et de la Bolivie,' *Journ. Soc. des Amér. de Paris*, N.S., iv. (1907) 153-174; R. Palma, *La uita del Perú*, Lima, 1908; Ploss-Bartels, *Das Weib in der Natur- und Völkerkunde* 2, Leipzig, 1891, and *Das Kind in Brauch und Sitten der Völker* 2, 2 vols., Leipzig, 1884; K. T. A. F. CHAMBERLAIN.

DISEASE AND MEDICINE (Assyro-Babylonian).—The chief difficulty in treating of the subject of diseases in Babylonia is to separate the ideas of magic from medicine proper in the native methods of healing. The Assyrian physician never shook himself entirely free from the more supernatural side of his profession, and, apart from the magical incantations for the sick, even the more scientific medical texts depend largely on 'white magic.' The latter consist, for the most part, of short material recipes on which much of our knowledge of the Assyrian pharmacopoeia rests, but they also prescribe spells to be used simultaneously with the administration of drugs. It is therefore clear that, although many of the recipes in use were efficacious from a purely medical standpoint, they were frequently combined with a series of charmed *abracadabra* of more value to the anthropologist than to the student of medicine.

The present inhabitants of the plains of Mesopotamia and the hills of the neighbourhood are probably liable to the same diseases as their ancestors were some thousands of years ago, and we may therefore start on this hypothesis. Sudden plagues, of which cholera is one of the most appalling in its effects, are met with at all periods of the history of this country: 1° dysentery, typhoid,

and like diseases, common to all countries where the drainage is of a casual nature; smallpox and similar pests; malaria, particularly in the swamps of Babylonia; and such other ailments as are common to all mankind without distinction of locality. Particularly, too, must be mentioned the peculiar skin-eruption known variously as the 'Baghdad boil,' or 'Mosul (or Aleppo) button,' and the various forms of ophthalmia common to Eastern peoples. Naturally there are many forms of sickness on the cuneiform tablets that we cannot identify with certainty until our knowledge of the medical literature is more advanced.

The principal causes to which sickness was ascribed were the visitation of some god or goddess, the attack of a devil, and the machinations of sorcerers.¹ Demoniac possession was firmly believed in, and it is for this reason that the priest was as likely to be called in to help a patient as the real doctor. The whole of the cuneiform incantations are full of the belief that some god, demon, or ghost is plaguing the sick man, and must be expelled before the patient can be healed; and similarly we may presume that the so-called Penitential Psalms have their origin, not in the remorse of the suppliant, but in his actual physical malady, which he believes to be due to some supernatural blow. The medical texts are often explicit on this point: 'When (a man) is smitten on his neck, it is the hand of Adad; when he is smitten on his neck, and his breast hurts him, it is the hand of Istar on the necklace.'² 'When a man's temples pain him, and the neck muscles hurt him, it is the hand of a ghost.'³ 'When a ghost seizes upon a man, then mix (various substances) together, anoint him (with them), and the hand of the ghost will be removed.'⁴

There is little doubt that sickness, as understood among the Assyrians, may be reckoned to be due to breaches of the savage tabu. The man so attacked has transgressed a ban; indeed, much of the incantation series known by the name of *Surpu* deals with long lists of possible uncleanness which has caused the patient's malady, the word used being *mamit*. In one tablet there is a categorical list of as many as one hundred and sixty-three *mamit*, or tabus, each severally described briefly in one line, and the magician is supposed to repeat all these, as it is hoped that he will thereby light on the correct cause of the trouble, diagnose his case properly, and show that he possesses a knowledge of the cause of the sickness. That physical ills were held to be the result of incurring some tabu of uncleanness is quite clear from certain *mamit* of the Third Tablet, which are as follows:

To go before the Sun-god when 'Aštar (i.e. under a tabu) (l. 114), to touch a man when one is under a tabu, or to pray in the same state (l. 115, 116), or to hold converse, eat the bread, or drink the water of one under a tabu (l. 117-119), or to drink what he has left (l. 120); or, in the Second tablet, to go before a man under a tabu, or to have a man under a tabu come before one (l. 99, 100), to sleep on the bed, sit on the chair, or to eat or drink from vessels, belonging to such a man (l. 101-104).

According to modern ideas, many of these might be merely an unintelligent development of the principle of infectious diseases (which will provide an explanation in part), but the first three show distinctly that there are other principles in question. The savage tabu of 'uncleanness' is here in a later dress, and sickness is considered as the result of a breach of this very intricate belief. For, if the man for whom the series *Surpu* provides a means of relief be not really and obviously physically ill, there is no reason for the existence of such a series; we cannot suppose that a man called in a priest to relieve him from the obscure tabus which he might have incurred, unless there was some unusual physical condition demanding it.

¹ For these, see art. CHARMS AND AMULETS (Assyrt.-Bab.).

² S. 951.

³ S. 1063.

⁴ K. 4070; cf. K. 4609 b.

¹ Joshua the Stylite (ed. Wright, Camb. 1882, p. 17) says, 'as all the people had sinned, all of them were smitten with the plague' in the year of Alexander. The destruction of Sennacherib's army (2 K 1935, Is 37³⁶) must have been due to some such cause.

Just as we may presume the 'unwitting' tabu (in whatever way the word *naṣṣu* may be translated) of the OT to have manifested themselves in some physical way, so must we suppose that an Assyrian would not have recourse to a priest-physician unless absolutely driven by pain or fear. Sickness is due to a demoniac or Divine influence, and it is well known that a savage fears to incur a breach of tabu from some ill-defined sense of danger from god or devil; it is clear, therefore, that the Assyrians had the same terror in their minds when they edited the *Surpu*-series for the benefit of sick men. The sorcerer must discover—or trick the powers into believing that he has discovered—the tabu which the patient has transgressed, and he can then proceed to cleanse the man from his breach, and lift the ban from him.

The principal god connected with healing is Ea, but it is his son Marduk who is appealed to by the physician as intermediary with the higher power. Marduk, when called on for help, is supposed to repair to his father to ask him for his advice as to what the sick man must do to be healed. This episode is constantly repeated in cuneiform incantations for the sick; indeed, to such an extent was it recognized as the usual procedure that it is frequently inserted in these texts in one line containing abbreviations of the three principal sentences, thus: 'Marduk hath seen'; 'What I'; 'Go, my son.' The full formula is as follows:

'Marduk hath seen him (the sick man), and hath entered the house of his father Ea, and hath said, "Father, headache from the under world hath gone forth."¹ Twice he hath said unto him, "What this man hath done he knoweth not; whereby shall he be relieved?" Ea hath answered his son Marduk, "O my son, what dost thou not know, what more can I give thee? O Marduk, what dost thou not know, what can I add unto thy knowledge? What I know, thou knowest also. Go, my son, Marduk. . . ."

Then follows the actual prescription for the patient. This method of bringing in a Divine episode is nothing more than a development of the principle of the Word of Power, which tradition demands shall be one of the sorcerer's most potent aids in spell-working. A scene is represented on certain of the magical plaques which is apparently intended to portray the sick man and the forces arrayed against him: the celestial powers, demons, protecting gods and spirits, the sick man on his bed, etc., form an interesting picture (see Frank, *LSSt* iii. 3).

Now, this Word of Power, so generally recognized in all magic, consists in its simplest form of the name of some Divine being or thing invoked against the power of evil which the physician is expelling. Hence many of the Assyrian incantations end with the line, 'By Heaven be ye exorcized! By Earth be ye exorcized!' and numerous gods are invoked in the same way.

Two other concomitants to the exorcisms are necessary to the exorcist: first, the knowledge of the name or description of the devil which is being expelled; and, second, some material with either medicinal or magical value whereby the cure may be effected. The former is as necessary as the Word of Power for a complete incantation; when the wizard has a knowledge of the name of his foe, or, in the case of demons, a full description of the ghost attacking the man, he has assumed some considerable influence over him which will finally bring him entirely into subjection. The genesis of such a belief is to be sought in the same source as the collateral superstitions where portions are collected of the hair, nails, or footprint-dust of any one whom the enchanter wishes to bewitch, or the waxen figures made in the victim's likeness. It is enough if something belonging to the person, not necessarily concrete, has been secured, and the

¹ This is the only variation in the formula, being the first line of the tablet.

name is considered as an equivalent for more tangible evidence, such as nail-parings.

The Assyrian sorcerer is compelled to recite long lists of ghosts or devils when he is trying to conjure the evil away from his patient. The idea is that, since obviously he cannot obtain the more fleshy portions of his foe as he might do in the case of a human enemy, he shall mention, in place of this, the name or powers of all possible evil spirits, and ultimately, by his much speaking, hit on the correct identification of the demon, who will then admit the magician's superiority. Hence we find in the Assyrian texts such constantly recurring phrases as, 'Whether thou art an evil spirit, or an evil demon, or an evil ghost, or an evil devil, or an evil god, or an evil fiend, or sickness, or death, or phantom of night, or wraith of night, or fever, or evil pestilence, be thou removed from before me';¹ or even longer descriptions of ghosts of people who have died unnatural deaths, or who have been left unburied, and whose only hope is to torment the living until they perform the necessary rites to give them peace.²

The third and last element of the incantation is some drug, to which in early times a magical, Divine potency was attributed, or some charm or amulet, or, in the broadest sense, some material which will aid the physician in his final effort. The simplest is pure water, which was frequently sprinkled over the patient as a cleansing medium, and this is easily intelligible. One incantation (*WAT* ii. 51b, line 1 ff.) runs thus: 'All that is evil, . . . [which exists in the body] of N. [may it be carried off], with the water of his body, the washings from his hands, and may the river carry it away downstream!' There seems also to have been some principle of enclosing the possessed man in a ring of flour or other powder spread in a circle on the ground, as a kind of *heram* through which spirits could not break. For instance, after an 'atonement' ceremony has been made, the wizard fumigates the man with a lighted censer, and then throws away the 'atonement' (in this case a kid) into the street; he then surrounds the man with flour,³ as a magic circle through which no evil demon can pass to injure him. In another incantation the sorcerer says of certain figures which he has made:

'On their raised arm I have spread a dark robe,
A variegated cord I have wound round their hands, I have placed tamarisk (and) palm-pith,
I have completed the *usurtu* (magic circle), I have surrounded them with a sprinkling of lime,
With the flour of Nisaba (the corn-god), the tabu of the great gods, I have surrounded them,
I have set for the Seven of them, mighty-winged, a figure of Nergal at their heads.'⁴

The tamarisk (or some allied species of tree) was held aloft in the hand during the priest's exorcism; one of the rituals prescribes this to the magician, who says, during his ceremonial:

'The man of Ea am I, the man of Damkina am I, the messenger of Marduk am I, my spell is the spell of Ea, my incantation is the incantation of Marduk. The ban of Ea is in my hand, the tamarisk, the powerful weapon of Anu, in my hand I hold; the date-spathe (?), mighty in decision, in my hand I hold.'⁵

On one of the late Hebrew magical bowls discovered at Niffer there is the figure of a man rudely

¹ See Thompson, *Devils and Evil Spirits of Babylonia*, London, 1903, i. 16-17, ii. 153 ff.

² *Id.* xxiv ff., also *Semitic Magic*, p. 7 ff.

³ Tablet XI. of the *Akakku*-series (Thompson, *Devils*, ii. 35). This is probably the meaning conveyed by *amelu šudtu kuwarrā esir*, and not as the present writer has translated it in the passage. See also Thompson, *Semitic Magic*, p. lvii ff.

⁴ Zimmern, 'Ritualtafel,' in *Beiträge zur Kenntnis*, etc., ii. 169. The curious may see much about these magic circles in the Middle Ages in Francis Barrett, *The Magus*, 1801, p. 24 ff., or even what is believed about them at the present day by certain who dabble in the 'occult,' in Mathers' *Book of Sacred Magic*, 1898, p. xxxvii.

⁵ *Utkku*-series, Tablet III. 1. 204 (Thompson, *Devils*, i. 23). The word translated 'tamarisk' is *GIS MA NU*, undoubtedly some form of tree, the Assyrian equivalent being *eru*, probably the Syriac 'arā'.

drawn, holding up the branch of some tree in his hand.¹ From Sozomen² we learn that, when Julian was about to enter a temple in Gaul, the priest, in accordance with the pagan custom, sprinkled water upon him with the branch of a tree, doubtless symbolical of a purificatory rite. It is possible that we may see some such ceremony prescribed in the Assyrian cleansing rite:

'Perform thy goodly incantation and make perfect the water thereof with priestcraft, and with thy pure incantation do thou cleanse (the man ?) and take a bundle of twigs (?), pour the water thereof on it, and the laver (or water) that cleanseth the temple of the gods,' etc.³

The comparison is, however, uncertain, as we have no right to assume that in this case the water was sprinkled upon the sick man; but Sozomen's anecdote is of value as showing that branches were used in sprinkling water.⁴ There is, however, a parallel to the Assyrian rite in another tablet,⁵ where Ea says:

'Take a bundle of twigs (?) and take water at the confluence of two streams, and perform thy pure incantation over this water, and cleanse (the man) with thy pure exorcism, and sprinkle the man, the son of his god, with this water, and bind his head with . . .'

Of other mystic plants, we find the *piri*' (which is probably the Syr. *perā*, St. John's wort), the *balti* (which may be the Syr. *bal*, the caper), and the *huld* (prob. the Syr. *hla*, the fleabane) all used to hang up on the doors of houses when a ceremony was going on, as a prophylactic against demons.⁶ The first-named, the St. John's wort, has always had great power in magic. 'Gathered on Midsummer Eve, or on Midsummer Day before sunrise, the blossoms are hung on doorways and windows to preserve the house against thunder, witches, and evil spirits.'⁷ The number of plants which occur in the medical and magical texts is very large; but, unfortunately, they are difficult to identify, and the lexicographical tablets which give the names of hundreds do not really afford much clue.

Before proceeding to the medical recipes, we have to notice that peculiar method of healing, used by all savages, and known in modern times as 'sympathetic magic.' It is quite unnecessary here to go into the various forms in which this occurs in modern witchcraft; it is enough to take as a text the homeopathic 'hair of the dog that bit one,' and quote some of the cuneiform texts in which this method is employed.⁸ The best-known examples occur in the *Surpu*-series, where the magician recites various formulæ over a clove of garlic, a date, a flock of wool, some goat's hair, etc., pulling each in pieces and burning it as he does so. As he destroys each, so will the sickness depart. One quotation of an incantation will show the method:

'As this date is cut, and cast in the fire,
The devouring flame consumes it,
Never to return to its left branch,
Nor grace the board of god or king;
So may the ban, the tabu, the pain (?), the woe (?),
The sickness, the agony, the sin, the misdeed, the wrong-
doing, the iniquity,
The sickness which is in my body, my limbs, my muscles,
Be cut off like this date.
So may the devouring flame consume it,
The tabu go forth, and I behold the light!'⁹

This is the most marked form of sympathetic magic, but the principle is used obviously in much

⁹ Zimmern, 'Surpu,' in *Beitr. zur Kenntnis*, etc. i. 20.

of the cuneiform priestcraft, and it occurs in various forms in the examples given in this article.

The name of the physician proper was *asû*, but, as the treatment was frequently of a magical nature rather than purely medical, it was oftener the *asûpu*-priest than a doctor who was called in to heal a sick man. The *asûpu* is the magician who can release the patient from the tabu under which he lies; the same word occurs in Hebrew under the form *assaph*; and the name in Assyrian for the incantation is *šiptu* (from the same root).¹ He claims in his exorcism that he has come supported by the power of Ea, Damkina, and Marduk:

'The man of Ea am I, the man of Damkina am I, the messenger of Marduk am I. The great lord Ea hath sent me to revive the . . . sick man; he hath added his pure spell to mine, he hath added his pure voice to mine, he hath added his pure spittle to mine, he hath added his pure prayer to mine; the destroyer(s) of the limbs, which are in the body of the sick man, hath the power to destroy the limbs—by the magic of the word of Ea may these evil ones be put to flight.'²

Similarly, when the priest comes into the house of the patient, he declares that he is aided by several gods:

'When [I] enter the house, Šamaš is before me, Šin is behind [me], Nergal is at [my] right hand, Ninib is at my left hand; when I draw near unto the sick man, when I lay my hand on the head of the sick man, may a kindly spirit, may a kindly guardian angel stand at my side! Whether thou art an evil spirit or an evil demon, or an evil ghost, or an evil devil, or an evil god, or an evil fiend, or sickness, or death, or phantom of night, or wraith of night, or fever, or evil pestilence, be thou removed from before me, out of the house go forth! (For) I am the sorcerer-priest of Ea, it is I who [recite] the incantation for the sick man.'³

He completes the spell of the Third Tablet of the same series with the words:

'O Ea, King of the Deep, [turn thou?] to see; I, the magician, am thy slave. March thou on my right hand, help on my left; add thy pure spell to mine, add thy pure voice to mine, vouchsafe (to me) pure words; make fortunate the utterances of my mouth, ordain that my decisions be happy. Let me be blessed where'er I tread, let the man whom I (now) touch be blessed. Before me may lucky thoughts be spoken, after me may a lucky finger be pointed. O that thou wert my guardian genius, and my guardian spirit! O Marduk, who blesseth (even) gods, let me be blessed where'er my path may be! Thy power shall god and man proclaim, this man shall do thy service, and I, too, the magician thy slave.'⁴

Armed with these heavenly powers, the priest might exorcize any of the demons which assail mankind, and one of the commonest methods of treatment among the priestly gild was an 'atonement.' The word used is *kuppuru* (the noun is *takpirtu*), the same as the Heb. כָּפַר, as was pointed out by Zimmern ('Ritualtafeln,' p. 92). The idea in the Assyrian method is that the demon causing the sickness is to be offered a substitute for his victim, and hence a young pig or kid is taken, slaughtered, and placed near the patient. The devil goes forth at the physician's exorcism and takes up its abode in the carcass of the substitute, which can then be made away with, and the baneful influence destroyed. This is fully laid down in one of the magical texts against the *asakku* (provisionally translated 'fever'), where it is told how Ea, the lord of the incantation, in showing a method of treating the sick man, lays a kid before Marduk, saying:

'The kid is the substitute for mankind,
He giveth the kid for his life,
He giveth the head of the kid for the head of the man,
He giveth the neck of the kid for the neck of the man,
He giveth the breast of the kid for the breast of the man.'⁵

Instead of the kid, the substitute might be a sucking-pig, and the directions are to put it at the head of the sick man,⁶ take out its heart and put it above that of the patient, and [sprinkle] its blood on the sides of the bed; then the carcass

¹ On the *asûpu*-priest, see Zimmern, 'Ritualtafeln,' p. 91.

⁴ *Id.* l. 280 ff. (Thompson, *Devils*, i. 27; *Semitic Magic*, xxiii.).

⁵ Tablet N, col. iii. l. 37 ff. (Thompson, *Devils*, ii. 21; *Semitic Magic*, 211).

The reader is referred to Frazer's *GB²* for many similar instances of the transference of illness to animals.

⁶ This is rather doubtful, owing to a mutilated line in the text.

must be divided over the man, and apparently spread upon him. The ritual continues with a purification by pure water and fumigation by a censer (as in the story of Tobit), and ends:

'Place twice seven loaves cooked in the ashes against

the shut door, and

Give the pig in his stead, and

Let the flesh be as his flesh,

And the blood as his blood,

And let him hold it;

Let the heart (which thou hast placed on his heart)

be as his heart,

And let him hold it. . . .¹

The migration of demoniac influence to the pig is closely paralleled in the story of the Gadarene swine (Mk 5).² The Indian Muslims of the present day who come to Abdulqadir, the largest mosque in Baghdad, to make a pilgrimage and offer sacrifices, 'vow that if a man who is ill begins to recover he shall go to the shrine.'

'He is stripped to the waist. Then two men lift a lamb or a kid above his head, and bathe his face, shoulders, and the upper part of his body with the blood. While the butcher kills the animal the sheik repeats the first sura of the Koran. They also wrap him in the skin of the animal.'³

The 'twice seven loaves' is paralleled in the Seventh Tablet of the *Surpu*-series: when a man has incurred a certain tabu, seven loaves of pure dough are to be taken, and, after various ceremonies, the magician makes an 'atonement' for the patient, and puts his spittle on the 'atonement' as symbolical of the removal of the tabu from the man to the substitute. The loaves are then to be carried into the desert to a 'clean place,' as in the Levitical ritual, and left under one of the thorn bushes growing there. At the present day in the Hejaz, if a child is very ill, its mother will take seven flat loaves of bread and put them under its pillow, giving them in the morning to the dogs.⁴ Another exorcism gives directions more fully; Marduk is advised by Ea to take a white kid of Tammûz:

'Lay it down facing the sick man,

Take out its heart, and

Place it in the hand of that man;

Perform the Incantation of Eridu.

(The kid whose heart thou hast taken out
Is unclean [?] meet wherewith thou shalt make
an atonement for this man.)

Bring to him a censer (and) a torch,

Scatter it (the kid) in the street.'⁵

But the Assyrians did not confine the 'atonement' ceremonies to the carcasses of animals; they had other methods for ridding a sick man of his devil, notably that of inducing the incubus to leave the human body to enter a little figure fashioned in the likeness of the patient. The magician took various herbs, put them in a pot of water, sprinkled the sick man with them, and made 'atonement' for him; he then modelled a dough image of his patient, poured out his magic water on him, and fumigated him with incense. Then, just as the water trickled away from his body, the pestilence in his body was supposed to trickle off, the water being caught in some receptacle beneath, and poured forth abroad that the sickness might be dissipated.⁶

Sympathetic magic was likewise called in as an aid in other cases. A sickness-tabu might be removed by the use of charms made of black and white hair, just as they are among modern savage tribes. Three examples from different peoples will be ample to show how closely the Babylonian methods resemble those of other nations.

⁶ Tablet 'T', l. 30 ff. (Thompson, *Devils*, ii. 107; *Semitic Magic*, 159, 111); cf. Skeat, *Malay Magic*, Lond. 1900, p. 347.

In India the 'fair-women' take three different coloured threads and knot them twenty-one or twenty-two times, and when the work is finished it is fastened to the neck or upper arm of the patient.¹ Among the Malays it is customary to make little images of dough of beasts, etc., and to place them on a tray with betel-leaves, cigarettes, and tapers. One of the tapers is set on a silver dollar, with the end of a parti-coloured thread inserted between the dollar and the foot of the taper; this thread the patient holds during the repetition of the charm. The disease-devil is supposed to enter the images, and as soon as this has happened the magician looses three slip-knots and throws them away.² Among the modern Persians, O'Donovan saw a similar method for removing fever; a khan spun some camel's hair to a stout thread, and folding it three times on itself spun it again. He tied seven knots therein, blowing on each one, and this was to be worn on the patient's wrist, a knot being untied each day. When the last knot was loosed, the thread was to be thrown in a ball into the river.³

The prescription, as given in Assyrian, in the Sixth Tablet of the *Surpu*-series runs as follows:

'He hath turned his [steps?] to a temple-woman (?), Ištar hath sent her temple-woman (?), hath seated the wise-woman on a couch (?) that she may spin a white and black wool into a double cord, a strong cord, a mighty cord, a two-coloured cord, on a spindle, a cord to overcome the ban: against the evil curse of human ban, against a divine curse, a cord to overcome the ban. He (she) hath bound it on the head, hand, and foot of this man; Marduk, the son of Eridu, the prince, with his undefiled hands cutteth it off, that the ban, its cord, may go forth to the desert to a clean place.'⁴

Or again, in the case of headache, a method is recommended, as usual, by Ea to his son Marduk:

'Take the hair of a virgin kid, let a wise woman spin (it) on the right side, and double it on the left, bind knots twice seven times, and perform the Incantation of Eridu, and bind the head of the sick man, and bind the neck of the sick man, and bind the soul of the sick man, and bind up his limbs.'⁵

Without going further afield into details of comparative magic, it is worth mention here that the same superstition is still believed in at Mosul, close to the mound of Nineveh. A recipe for fever was given the present writer by a boy employed on the excavations, in which the physician, in this case a shaikh, takes a thread of cotton and ties seven knots in it, putting it on the patient's wrist. After seven or eight days, if the fever continues, he must keep it on; if the fever passes, then he may throw it away.⁶

In one of the Assyrian charms for ophthalmia, black and white threads or hairs are to be woven together, with seven and seven knots tied therein, and during the knotting an incantation is to be muttered; the strand⁷ of black hair is then to be fastened to the sick eye, and the white one to the sound eye.⁸ Or in another case (for a disease of the eyes called *amurrikanu*) 'pure strands of red wool, which by the pure hand of . . . have been brought . . . bind on the right hand.'⁹ A parallel to the untying of the knots in the modern charms quoted above is prescribed in one of the Assyrian tablets published by King (*Bab. Magic and Sorcery*, p. 58, l. 99 ff.); the priest must say over the sick man 'Ea hath sent me' three times, and then untie the knot which has been tied; and the man must go home without looking behind him.

We may now for the moment leave the magical side of the physician's art for the more scientific study of drugs and their administration. The efficacy of medicine on an empty stomach was well recognized by Assyrian doctors, and the prescriptions constantly end with directions for such a procedure:

'Bray these seven plants together, and put them in fermented

⁹ Haupt, *Akkad. u. sum. Keilschrifttexte*, Leipzig, 1881-82, xi. ii. 45.

drink; at the approach of the star in the morning let the patient drink them without eating, and he will recover.¹

Not only this, but the use of the enema also was well known, the directions being quite explicit:

'An enema (*hūš*) of oil thou shalt make, and introduce *per anum*.²

For stomachic troubles there were many remedies. Pains were treated with a mixture of 'salt of the mountain' and *amanu*-salt pounded together and put in fermented liquor, which was to be drunk on an empty stomach, used also as an enema, and sprinkled upon the patient;³ or a mixture of the *nukurtu*-plant and seven corns of *ši-ši*, similarly to be used as a draught and an enema.⁴ As a simpler method, the patient was to sit on his haunches and let cold water flow on his head;⁵ or the physician was to lay his head lower than his feet, and knead or stroke the back gently, repeating the formula: 'It shall be good.'⁶ If the patient have colic and his stomach will not retain its food, and there is flatulence, the prescription is to bray up together $\frac{1}{2}$ *kā* of date-juice, $\frac{1}{2}$ *kā* of cassia juice with oil and wine, three shekels of purified oil, two shekels of honey, and ten shekels of the *ammi*-plant. The patient is to drink this before the rising of the *Enzu*-star in the morning, without eating; and then this is to be followed by a draught and an enema of $\frac{1}{2}$ *kā* of *Ši-ka*, with which he is also to be sprinkled.⁷ If there are internal pains—the Assyrian being in this case, 'When a man's inside eats him'—he is to be given *hātappanu*-plant and salt pounded up and dissolved in water or fermented drink, or simply *hātappanu*, or *tiyātu*, or *Ši-Ši*. in fermented drink.⁸ When the patient's internal organs burn and he is constipated, let him drink a medicine of garlic and cummin,⁹ or the pounded rind of green *il* (a plant) mixed with swine-fat.¹⁰ Remedies are prescribed when 'garlic, leeks, beef, pork, and beer are unretained by a man,' and 'in his belching the gall is withheld (?).'¹¹ For what the Assyrian doctor describes as 'the food being returned to the mouth' the head and breast were to be bound and certain drugs eaten in honey, mutton fat, or butter, while the patient was to be kept off certain food for three days, and was not allowed to wash.¹² For liver complaints, garlic was prescribed,¹³ or cassia drunk in beer, or large draughts of beer or 'wine-water.'¹⁴ In the case of jaundice, of which the symptoms are given fully, the physicians were not so hopeful of recovery; but some prescriptions seem to have been potent:

'When a man's body is yellow, his face is yellow and black, the root of his tongue black, *ahhazu* ('seizer') is its name; thou must bake great wild *mūšdingurinna*, he shall drink it in fermented drink. Then will the *ahhazu* which is in him be silent.'¹⁵

In constipation, the patient drank a mixture of green garlic and *kukru*-rind in fermented drink, followed by dates in swine-fat or oil; or another prescription is cypress-cones pounded up and mixed with fermented drink. If, in addition to constipation, 'his inside is much inflamed,' the prescription is a decoction of *hātappanu*-plant, sweet reed, *balrukku*-plant, and cypress administered as an enema. An enema is also prescribed when a man is constipated after heavy eating and drinking, and his inside is 'angry.'¹⁶ In the case of drunkenness, the following remedy is given for the morning after:

'When a man has drunk fermented drink and his head aches and he forgets his speech, and in speaking is incoherent, and his understanding is lost, and his eyes are fixed, bray (eleven plants) together and let him drink them in oil and fermented drink before the approach of Gula in the morning before dawn, before any one kisses him.'¹

Veneral diseases are prescribed for in various tablets;² the colour of the urine was also observed in diagnosis.³

It is curious to see how persistently the old beliefs survive among the Arabs of Mesopotamia of to-day. Toothache is still attributed to a worm, and the writer heard this story on good Mosul authority, that a man with toothache had only to fumigate his aching teeth with the smoke from dried *withanifera* (*solanaceae*), and the worm would drop out of his mouth. This is a belief not confined to the Arabs, occurring, as it does, among other peoples,⁴ and it certainly dates back to several centuries B.C., for we find a Babylonian tablet describing the genesis of this tooth-worm:

'After Anu [had created the heavens],

The heavens created [the earth],

The earth created the rivers,

The rivers created the canals,

The canals created the marshes,

The marshes created the Worm.

The Worm came and wept before the Sun-god,

Before Ea came her plaint:

"What wilt thou give me to eat,

What wilt thou give me to gnaw?

"I will give thee ripe figs,

And sweet-scented . . . -wood."

"What are your ripe figs to me,

Or your sweet-scented . . . -wood?

Let me drink amid the teeth,

And let me rest amid the gums (?),

Of the teeth will I suck the blood,

And destroy the strength (?) of their gums (?);

So shall I hold the bolt of the door."

"Since thou hast said this, O worm!

May Ea smite thee with the might of his fist."

The incantation prescribed for the toothache is:

'Thou shalt do this: Mix beer, *saklibir*-plant, and oil together. Repeat the incantation three times thereon, and put in on the tooth.'⁵

Just in the same way as the tooth has a semi-medical, semi-magical incantation prescribed for it, so do we find similar texts for the heart and eyes. For some form of 'heart' medicine the following incantation is given:

'The heart-plant sprang up in Makan, and the Moon-god [rooted it out and]

[Planted it in the mountains]; the Sun-god brought it down from the mountains, [and]

[Planted it in] the earth; its root alleth the earth, its horns stretch out to heaven.

[It seized on the heart of the Sun-god when] he . . . ; it seized on the heart of the Moon-god in the clouds,

[It seized on the heart of the ox in the stall, [It seized on the heart of the goat] in the fold,

[It seized on the heart of the ass in the stable, [It seized on the heart of the] dog in the kennel,

[It seized on the heart of the pig in the sty, [It seized on the heart of the] man in his pleasure,

[It seized on the heart of the maid in her sleeping-chamber, [It seized on the heart of N.], son of N. . . .'⁶

Magan or Makan is supposed to be the Sinaitic Peninsula, and it is there that the *Hyoscyamus muticus* grows. The Arabs call it the *sakrān* ('drunken'), from its intoxicating effect; it has long spikes very much like the fox-glove, only purple in colour, which may be compared with the 'horns' mentioned in the incantation. It seems quite possible that the Assyrians may have had a knowledge of its existence and properties; at any rate, the name 'heart-plant,' coupled with its provenance, Sinai, another description given of it, is suggestive.

In certain cases of ophthalmia, the prescription is carefully led up to by a description of the cause of the blindness:

'The eye of the man is sick, the eye of the woman is sick. The eye of man or woman is sick—who can heal(him)? Thou shalt send them to bring pure *KU-SA* of the date-palm; chew (*te-hi-pi*) it in thy mouth, twist (*te-pi-ti*) it in thy hand: thou shalt bind it on the temples of the man or woman, and the man or woman shall recover . . .'

⁵ See the writer's copy in *Cun. Texts from Bab. Tablets*, 1908. pt. xvii. pl. 50 (Thompson, *Devils*, II. 160).

⁶ Kichler, *loc. cit.* p. 3.

'The wind blew in heaven and brought blindness (*simme*) to the eye of the man: from the distant heavens it blew and brought blindness to the eye of the man; unto sick eyes it brought blindness. The eye of this man troubleth; his eye is hurt (?) (*a-sa-a*); this man weepeth for himself grievously. Nāru hath seen the sickness of this man, and (hath said), "Take pounded cassia, perform the incantation of the Deep, and bind up the eye of the sick man." When Nāru toucheth the eye of the man with her pure hand, may the wind which hath afflicted the eye of the man go forth from his eyes!'¹

Similarly, the sting of a scorpion is treated with an incantation against the poisonous creature, to be recited while anointing the hurt:

'Her horns stretch out like those of a wild bull,²
Her tail curls like that of a mighty lion,
Bēl hath made a house—when he maketh fast the enclosure,
When he breaketh the wall of lapis-lazuli,
May the little finger of Bēl carry it off,
May it carry off the water . . . (i.e. collected by the inflammation)!'³

It is a little uncertain what the text actually means, but it seems as if the patient puts the scorpion in the model of a house, which Bēl is supposed to have made, and, after fastening the door, he takes it out with his little finger by a hole in the wall.

Another prescription for scorpion-sting is to mix in oil of cedar various substances that have been brayed up, and anoint the wound.⁴ For snake-bite the wounded man was to peel willow root and eat it, or drink a potion of *ŠT-ŠI* plant in fermented liquor.⁵

The 'Baghdad boil,' or 'Mosul button,' was apparently as troublesome in ancient times as it is to-day. A tablet exists in the British Museum, giving the omens for what follows from the 'button' appearing on certain parts of the body.⁶ A case of the boil appears to be referred to in an astrological report to the king of Assyria:

'Concerning this evil of the skin, the King, my lord, hath not spoken from his heart. The sickness lasts a year: people that are sick all recover.'⁷

The boil is popularly supposed to last for a year.

Prescriptions are found for diseases of all parts of the body: the tongue and lips⁸ (K. 9438), the nails and fingers (K. 10464), the hands and feet (K. 9156), or the neck (K. 3637); 'if a man's ears "sing"' (*isaggruma*) (K. 9059); 'if a man's breast and *MAŠ-RA* hurt him' (K. 10728); 'when a man has palpitation (*širūti*) of the heart and his heart . . . [holds] fire (?)' (K. 8760). If a man's left side hurts him (*usannamšū*), then 'water and oil, heaven and earth—incantation, repeat seven times and

rub (*tumassa*'), Arab.  his left side, and repeat the

following incantation over his side and he will recover' (K. 8449). Two tablets (KK. 2413 and 11647) give rites and ceremonies for a woman during pregnancy. (On stones used for conception, see Oefele, *ZA* xiv. 356, and compare the Hebrew 'stones of preservation' against miscarriage called *אבן חַיִּים*.) There is a long series called by its first line, 'When a man's brain holds fire,' in which the various symptoms are carefully described, such as neuralgia of the temples, blood-shot and weeping eyes, etc. (see the present writer's tr. in *AJS*, Oct. 1907). The following are specimens (Tablet ii. K. 2611, col. ii. l. 8 ff.; *Cun. Texts from Bab. Tablets*, 1906, vol. xxii. p. 43): 'When a man's right temple hurts him and his right eye is swollen and weeps tears, it is the hand of a ghost or the hatred of a goddess against (or for) his life; mix *šihu* (tree), *arganu* (tree), *bariratu* (tree), one shekel of "river-foam," *dilbalt*-plant, ginger (?) in ground meal, steep it in beer (and) bind on as a poultice.' Similarly, when the left temple and eye are afflicted (col. iii. l. 1), the physician must bray together dates from Dilmun, thyme, and cedar-sap in oil of *gir*, and apply them before the patient breaks his fast. If the patient, in addition to the neuralgia, vomits, and his eyes are inflamed, it is the 'hand of a ghost,' and the remedy is to calcine human bones and bray them, and then rub them on the place with oil of cedar (l. 5).

These instances might be multiplied, even from the texts

¹ *WAT* iv. 29*, 4, C. II. 6 ff.

² The translation of the first line preceding this is uncertain. The last line, which has been omitted here, runs (according to the copy in Bezold's *Catalogue of the Kouyunjik Collection*), 'May he smite a great fist upon the man (?)!'

³ *Rm.* ii. 149.

⁴ K. 7845.

⁵ S. 1357.

⁶ Virolleaud, *Babyloniaca*, Paris, 1906, i. 91.

⁷ See the writer's *Reports of the Magicians and Astrologers*, Lond. 1900, no. 257.

⁸ Something equivalent to unilateral paralysis appears to be mentioned on the tablet *Rm.* li. 143: 'When a man's lip *kuppul* to the right and he [cannot] speak.' *Kuppul* is perhaps to be referred to the Hebrew root קָפַץ, 'to double.'

which are already published; but there are many tablets on this subject in the British Museum which still remain to be copied. When this is done, it will be possible to speak with less uncertainty about the methods employed by the Assyrian physicians.

Hitherto nothing has been found in the cuneiform texts to confirm the statement of Herodotus (i. 197) that the Babylonians were wont to bring sick folk into the market-place for the advice of any that might suggest a remedy. Both the magical and the medical series go far to show that the profession of medicine was well organized and systematic, although it may well have been that the poorer folk did what Herodotus relates; but, again, if any comparison can be made between ancient and modern Semites in this respect, the deformed, maim, halt, and blind were probably to be found in the *sūk* of every town begging alms of every passer-by, and this perhaps is what Herodotus saw. The profession of the doctor carried with it grave responsibilities, even as far back as the time of Hammurabi. One has only to read the list of fines to which a surgeon was liable if he accidentally inflicted unnecessary damage on a patient in treating him.

The more human side of the healing art is shown in the cuneiform correspondence. Several letters from the physician Arad-Nanā relating to his patients are extant, dating from the 7th cent. B.C., and, inasmuch as he is writing to the king in every case, we may presume that he is the Court physician whom the king has in these instances allowed to visit certain of his staff. That this may well be so is shown by an astrological letter (No. 18 of the writer's *Reports of the Magicians and Astrologers*), which, in addition to giving the formal report, adds, 'Bēl-epuš, the Babylonian magician, is very ill; let the King command that a physician come and see him.' The following specimens will throw some light on the professional skill of Arad-Nanā (we append Johnston's translations, *JAOS* xviii. 162 ff., which are the best that can at present be made of a most difficult subject):

'To the King, my lord, thy servant, Arad-Nanā. A hearty greeting to the King, my lord! May Adar and Gula grant health of mind and body to the King, my lord! All goes well in regard to that poor fellow whose eyes are diseased. I had applied a dressing covering his face. Yesterday, towards evening, undoing the bandage which held it (in place), I removed the dressing. There was pus upon the dressing about the size of the tip of the little finger. If any of thy gods has put his hand to the matter, that (god) must surely have given express commands. All is well. Let the heart of my lord the king be of good cheer! Within seven or eight days he will be well' (S. 1064; see Harper, *Assyr. and Bab. Letters*, Lond. 1900, no. 392).

Similarly in K. 519: 'With regard to the patient who has a bleeding from his nose, the Rab-MUGI reports: "Yesterday, towards evening, there was much hemorrhage." These dressings are not scientifically applied. They are placed upon the ala of the nose, oppress the nose, and come off when there is hemorrhage. Let them be placed within the nostrils, and then the air will be kept away, and the hemorrhage restrained. If it is agreeable to my lord, the King, I will go to-morrow and give instructions; (in the meantime) let me hear how he does' (Harper, no. 108).

As an example of death from a wound, an incident related in a late Bab. letter (c. 400 [?] B.C.) is worth quoting, although the translation of some of the words is not certain.

'... In a brawl (?) I heard that [So-and-so, whom] the noble (?) smote, when he was smitten fell sick of a suppuration (?). He did not understand it, (and) it enlarged and spread, so that he died therefrom.'¹

It is clear, therefore, from the texts which we possess, that Assyrian medicine was worthy of being held in high repute, and, although its trend towards magic detracts much from its science, it was probably a worthy forerunner of the methods in vogue during the Middle Ages.

R. CAMPBELL THOMPSON.

DISEASE AND MEDICINE (Celtic).—The classic authority is the statement of Caesar in his *Gallie War*. The terror of disease, and the art and science of healing, came within the sphere of religion among the Celts. The nation was religious: 'Natio est omnis Gallorum admodum dedita religionibus.' All matters connected with religion were submitted to the judgment of the Druids. They were the 'medicine-men' as well as the teachers and the priests of the Celts: 'atque ob eam causam, qui sunt affecti gravioribus morbis . . . aut pro victimis homines immolant, aut se immolaturus vovent, administrisque ad ea sacrificia Druidibus utuntur.' The principle of life for life was recognized (cf. art. BLOOD-FEUD [Celtic], vol. ii. p. 725): 'quod, pro vita hominis nisi hominis vita reddatur, non posse aliter Deorum immortalium numen placari arbitrantur' (*de Bell. Gall.* vi. 16).

1. **Gods of medicine.**—The God of healing is identified by Caesar with Apollo, who held the place of honour next to Mercury: 'post hunc, Apollinem et Martem et Jovem et Minervam. De his eandem fere, quam reliquae gentes, habent opinionem: Apollinem morbos depellere . . .' (*ib.* vi. 17). The Druidic doctrine of immortality emphasized the value of life and health, and gave Apollo at this period a higher position than Mars.

'regit idem spiritus artus

Orbe alio; longae (canitis si cognita) vitae

Mors media est' (Lucan. *Phars.* i. 456 ff.).

Several Celtic deities of healing have been identified with Apollo. One appears as a presiding deity of healing springs and health resorts. The name occurs sometimes on inscriptions as *Borvo*: 'Deo Apollini Borvoni et Damona' (at Bourbonne-les-Bains in the Haute-Marne). Other forms are *Bormo*, in Central France, *Bormanus* in Provence, *Bormanicus* in Spain. This deity is associated sometimes with *Damona*, as at Bourbonne-les-Bains and Bourbon-Lancy in Saône-et-Loire; sometimes with *Bormana*, as at Aix-en-Diois in the Drôme. The word is akin to the Welsh *berwi*, 'boil,' and has reference to the hot springs (Rhys, *Celtic Heathendom*, p. 25 f.; Anwyl, *Celtic Religion*, p. 40).

Another deity was *Grannos*. In an inscription at Horberg in the Haut-Rhin, he is called 'Apollo Grannos Mogounos.' The name Grannos has been connected with the Skr. word *ghar*, 'glow,' 'burn,' 'shine.' It is considered equivalent to the 'Posphorus' of the Dacian inscription: 'Deus Bonus Puer Posphorus Apollo Pythius.' Apollo, the dispenser of light and warmth, was regarded as the repeller of disease. The name is associated with several hot springs. The old name of Aix-la-Chapelle, or Aachen, was *Aqua Granni*. Inscriptions to him have been found at Graux in the Vosges and at Granheim near Mengen in Württemberg. The stream which receives the hot waters of Plombières in the Vosges is called *Eaux Graunnes*. Grannos was identified with Asklepios and Serapis by Caracalla (Dio Cassius, lxxvii. 15). The other name Mogounos in the Horberg inscription appears in the old name of Mainz, *Moguntiacum*. The word Mogounos points to the *bonus puer* of the Dacian inscription (Rhys, *op. cit.* p. 22).

The name *Maponos* occurs in inscriptions in the

north of England. The Armathwaite inscription reads: 'Deo Maponi' (*Mon. Hist. Brit. Inscr.* 121). It is the old Welsh *mapon*, now *mabon*, 'boy' or 'male child.' The name is therefore identical in meaning with the *bonus puer* of the Dacian inscription from Carlsburg in Transylvania. The witness to the Celtic god of healing stretches across Europe along the line of the Celtic advance (Rhys, p. 21). The memory of Grannos is still preserved in the Auvergne at the Festival of the Brands on the first Sunday in Lent. Fires are lighted in every village. The ceremony of the Grannasmias takes place after a dance round the fire. A torch of straw called *granno-mio* is lighted at the fire, and carried round the orchards. The old Gaulish deity, in his aspect as the sun-god, is invoked with song:

'Granno, mo mio!

Granno, mon pouère!

Granno, mo mouère!

('Granno, my friend . . . my father . . . my mother!'). It is considered by Pommerol to be a survival of solar worship, and the rite illustrates Rhys's derivation of the name (*Antiquary*, xxxviii. [1902] 80).

An altar found near Annecy is dedicated to a deity *Virotutes* or *Virotus*: 'Apollini Virotuti.' Rhys tentatively suggests that the word may be compounded of a Gaulish equivalent for *vir* and *tutor*, and may mean 'man-healing' or 'man-protecting' (*op. cit.* p. 21).

A bas-relief at Munich represents Apollo Grannos associated with *Sirona*. Sirona is connected with the Irish *str*, 'long.' The two deities represent the ever young sun-god and the old goddess, and may be compared with Apollo and his mother Leto in Greek mythology. The hero Mabon mab Modron of the story of Kulhwch and Olwen is probably the same deity, Maponos. Mabon and Modron are suspected of being the exact equivalents of Grannos and Sirona (Rhys, p. 29). An inscription from Wiesbaden reads: 'Apollini Toutiorigi.' The name Toutiorix means 'king of the people,' and expresses the same thought as the title ἀρχηγέτης given to Apollo as 'leader,' in Greek mythology. The name appears transmuted and transformed in Theodorich, and the mythical legends associated with Dietrich of Bern belong more to Toutiorix than to the historical Theodorich the Ostrogoth (Rhys, p. 30).

The *Brigit triad* in Irish mythology holds a place of honour among the Celtic gods of medicine. The Irish god, the Dagda, had three daughters—Brigit, the poetess and seer, worshipped by the poets of ancient Erin; Brigit, the patroness of healing; and Brigit, the patroness of smiths. This points to a Goideic goddess, Brigit, who corresponded to the Minerva of whom Caesar says, 'Minervam operum atque artificiorum initia tradere' (*op. cit.* vi. 17). She has also been identified with the *Brigantia* of the inscriptions, from whom the Brigantes took their name (Rhys, p. 74). Brigit has also the attributes of the ancient goddess of fire (Whitley Stokes, *Mart. of Cengus*, p. 1). The hymns in honour of St. Brigit and the legends attaching to her name suggest that she has stepped into the place occupied by the Brigit of Irish mythology. In the hymn *Brigit be bithmaith*, she is addressed as 'flame golden, sparkling' (line 2), and asked to guard against disease: 'May she win for us battles over every disease!' (Irish *Liber Hymnorum*, H. Bradshaw Soc., 1897, ii. 39). In the story of the visit of the three disciples of Brigit to Blasantia (Piacenza), they are preserved from the effects of a drink of poisoned ale by reciting this hymn (*ib.* ii. 37). The story illustrates not only the healing craft of Brigit, but the memory of her ancient fame among the Celts of Italy. It is perhaps due to the same tradition of

Celtic heathenism that as late as the middle of the 18th cent. human blood was considered in Italy to be a cure for apoplexy (*Antiquary*, xxxviii. 205).

The 'cauldron of renovation' is represented as a talisman of healing in the Welsh story of Branwen, the daughter of Llyr: 'The Irish kindled a fire under the cauldron of renovation, and they cast the dead bodies into the cauldron until it was full, and the next day they came forth fighting-men as good as before, except that they were not able to speak' (*Mabinogion*, ed. A. Nutt, p. 39). This cauldron of regeneration had been brought up out of a lake in Ireland and given to Bran, son of Llyr (*ib.* p. 31). It is equivalent to the cauldron of the Dagda in Irish legend, one of the treasures of the Tuatha Dé Danann. It was called the 'undry' cauldron, for it was never empty (Rhys, p. 256 f.). It was brought from the mythical Murias, some place beneath the sea. The fire beneath the cauldron was fed by nine maidens (*ib.* p. 373). In the Taliessin verses of the *Mabinogion* it is represented as the cauldron of sciences, from which Gwion received three drops. It is with this cauldron that Caridwen was associated (*Mabinog.* p. 295, 307). In the early tales underlying the Quest of the Holy Grail the healing qualities of the Grail or Cauldron rather than its gift of fertility may have been emphasized (A. Nutt, *Studies in the Legend of the Holy Grail*, London, 1888, p. 57).

2. Diseases and their cure.—Among the diseases which have left a lasting impression on Celtic tradition is the *buidechar*, 'yellow plague.' It is probable that it was the occasion of the composition of the *Lorica* of Gildas:

'ut non secum trahat me mortalitas
hujus anni neque mundi vanitas.'

The first outbreak of this disease was in 547 (*Irish Lib. Hymn.* i. 206, ii. 243). Ireland was especially subject to it in the 7th century. The hymn *Sen Dé* of Colman was written against it. 'Colman mac Ui Chuasaig, a scholar from Cork, made this hymn to save himself from the Yellow Plague' (*ib.* ii. 12). Gillies (*Gaelic Names of Diseases*, pp. 10, 23) states that he is unable to identify it. It could scarcely be yellow fever: 'probably it was typhoid, or perhaps typhus under its known aspect of bilious fever.'

Much of the folk-lore of disease may be traced back to the magic and medicine of Celtic heathendom. The healing powers of the *ash-tree*, whether the true ash or the mountain ash, are to be attributed to its association with ancient Celtic and Norse deities. In a Leicestershire wart-charm it is addressed:

'Ashen-tree, Ashen-tree,
Pray buy these warts of me.'

The 'shrew-ash' in Richmond Park recalls an old cure for lameness and cramp in cattle by boring a hole and enclosing a live shrew-mouse in the tree. In this there is an echo of the ancient magic of exchange or transference of disease. In the case of the wart-charm, a pin is stuck in the tree, then in the wart, finally in the tree again (*Antiquary*, xlii. [1906] 423). A curious example of the practice of exchange of disease occurs in the *Martyrology of Oengus*:

'Fursa once happened to visit Maignenn of Kilmainham, and they make their union and exchange their troubles in token of their union, to wit, the headache or piles from which Fursa suffered to be on Maignenn, and the reptile that was in Maignenn to enter Fursa' (*Mart. Oeng.*, ed. Whitley Stokes, p. 45).

The first of August was dedicated to Lug, the Sun-hero. This festival, known in Wales as *Gwyl Awst*, was transferred in Brecknockshire to the first Sunday in August. Early in the morning a visit was paid to the Little Van Lake in the Beacons, to greet the expected appearance of the Lady of the Lake. She has been regarded as a goddess of the dawn, who returned at times to

converse with her children. The eldest of them was named Rhiwallon, and had been instructed by her in the virtues of herbs. He was the founder of a family of physicians in South Wales. The physicians of Myddvai, as they were called, were attached to the house of Dynevor. Their ancestor was of mythical descent, and may be identified in the *Triads* with Rhiwallon of the broom (yellow) hair. He was thus invested with a solar character (Rhys, p. 423).

Folk-medicine consists partly in charms, partly in superstition, partly in a real knowledge of herbs. It rests ultimately on the religious ideas of Celtic heathenism. Witchcraft and medicine were different aspects of Celtic priestcraft in its better sense. The priests, if they were the sorcerers and wizards of their people, were their healers also.

Among the plants and herbs associated with Celtic medicine, the *mistletoe* takes the first rank. It was the sacred bough of the Druids, the gift of the Divine oak-tree, the gift of the Celtic Zeus himself. The Celtic Zeus was 'the Blazer of the mountain-top,' and the great stone-circles mark the sites sacred to him. A story of the Irish hero Diarmaid makes mention of the tree, the well, the pillar-stone, and the stone-circle consecrated to the Celtic Zeus.

'He saw, right before him, a great tree laden with fruit. . . . It was surrounded at a little distance by a circle of pillar-stones; and one stone, taller than the others, stood in the centre near the tree. Beside this pillar-stone was a spring-well, with a large round pool as clear as crystal' (Rhys, p. 188).

These sanctuaries in ancient days were places of healing, as well as places of worship. In the *Tripartite Life* of St. Patrick the idol of Cenn Cruaich, covered with gold and silver, was surrounded by a circle of twelve other idols, covered with brass. Even in the 7th cent. these had nearly disappeared. They represent the primitive pagan sanctuary of the Goidels. The name *Cenn Cruaich*, 'Head or Chief of the Mound,' when transmuted from Goidelic to Brythonic, re-appears in the old place-name *Pennocrucium* on the Watling Street. The site is at Stretton, not far from its modern representative Penkridge in Staffordshire (Rhys, p. 203; *North Staff. Field Club Transactions*, vol. xlii. pp. 116-118).

The mistletoe, the gift of the Celtic Zeus, was the all-healer (*olliach*: 'omnia sanans' (Pliny, *HN* xvi. 95)). It was cut at a New Year Festival with peculiar ceremony—a priest in white, a golden sickle, two white oxen. 'The oxen were sacrificed, the sacrificial meal followed. The mistletoe had great life-giving powers. It healed unfruitfulness in man and beast, and was a protection against poison' (Grupp, *Kultur der alt. Kelten u. Germanen*, p. 149).

Another plant mentioned by Pliny is the *Selago*, which has been identified with the Savin-tree, a species of juniper, and with the club-moss. It had to be plucked stealthily. Bread and wine were offered, and the priest with bare feet and white robe drew near, and, putting his right hand through the left fold of his tunic, gathered it without using a knife. Like the mistletoe, it was then placed on a white cloth. For healing purposes the plant was burnt, and the fumes were regarded as beneficial for the eye (Grupp, *op. cit.* p. 150).

A similar ceremony was followed at the gathering of the *samolus*, whether the brook-weed (*Samolus valerandi*) or the watercress. It was gathered fasting, with the left hand, and with averted face. The *centaury* was also used as a cure (Grupp, p. 151). The *St. John's wort* and other plants were burnt or hung over the door to keep off disease. The *St. John's wort* (*Hypericum perforatum*) is known as *chasse-diable*.

Inscriptions and folk-lore have preserved the traditions of the gods of healing and the healing craft among the Celts.

The deities honoured in different localities would have their own peculiar rites, their own special gifts. Juvavus was a deity who gave his name to Salzburg. Alannus also occurs in certain place-names. Some of the goddesses had healing power. Stanna was the companion of Apollo Stannus. Minerva Belisama and Suleria were associated with Apollo Belenus. Alanna was the consort of Alannus (Grupp, pp. 159-162). There is still much to do in grouping together the facts preserved in the folk-lore of herbs and healing, with a view to learning more of the ancient cult of the local gods of medicine.

The folk-lore of Ireland is rich in its memories of old-time medicine. Dianecht, a member of the Tuatha Dé Danann, may almost be regarded as the Irish god of medicine (cf. CELTS, iii. 285*). A magic cauldron of renovation was ascribed to him. The methods of the Irish witch-doctors still form part of the home medicine in country districts today. *Snails* pounded in salt were prescribed as a dressing in an Irish MS of 1450. They were still used for that purpose in Staffordshire at the close of the 19th century. *Urine* was in common use for eye-disease and jaundice; *dung* was prescribed by Wesley in his *Primitive Physic*. In Ireland, as in England, these remedies were administered, to the recitation of certain charms (Wood-Martin, *Elder Faiths*, London, 1902, ii. 160-205). The *rag-offerings* tied to trees and bushes in the immediate neighbourhood of holy wells are still met with in many parts of Ireland, especially in the west. They are thought by some to have a reference to the transference of disease to the tree-spirit (*ib.* ii. 84). *Saliva* was also in use as a salve. A part of the cure of epilepsy in 1450 was the *burying of a young cock alive* (*ib.* 188).

A more normal system of healing is traceable in the Irish *sweat-houses*, which were in use as a hot-air cure until the 19th century. These sweat-houses were generally of the beehive shape, covered with clay, with a low entrance. They were heated with turfs, like a brick-oven, and the patient was shut in for a given time. The bath was followed by a plunge in a pool or stream near by. This was the usual cure for rheumatism.

A custom clearly connected with medicine among the Irish was the *covade*. On the birth of a child, the father was obliged to take to his bed and submit to a vicarious process of nursing at the hands of the doctor and nurse. The custom was widely spread throughout the world in primitive times, especially among races where kinship was reckoned through the mother. At the same time it is a custom which witnesses to the responsibility of fatherhood even under conditions which exalt the privilege of motherhood (Wood-Martin, *op. cit.* ii. 40). See art. BIRTH (Introduction), vol. ii. p. 635.

In the legendary history of the invasion of Ulster by the Fir Bolg, the adult males were *en covade* and unable to defend the kingdom of Conchobar against the enemy. The defence was made in heroic manner by Cúchulainn and his father only. Rhys (p. 622) refers to this incident as the 'distress of the gods and the sun-hero's aid.' Cf. art. CÚCHULAINN CYCLER.

The Utlonian *covade* lasted five nights and four days, in accordance with the use of the number 'nine' in the reckoning of time among the Celts. It was called *essa noinden Ulad*, 'the Ulster men's sickness or indisposition of a week' (*ib.* p. 363). There is a significant correspondence between the Utlonian *covade* and the Phrygian idea of the hibernating of the gods. Rhys would place the origin of Aryan myth within the Arctic circle. He sees in the labours of Cúchulainn the sun-hero a mythical witness to the period during which the sun in the ancient home of the Aryans remained above the horizon (*ib.* p. 633). Would not the *covade*, or 'distress of the gods,' be a trace of the short period during which the sun remained wholly below the horizon, the period mythically preceding its re-birth and re-appearance in the heavens? The Utlonian *covade* does not explain the origin of the custom, but only the application of a primitive usage to the explanation of the annual birth of the sun-god just within the Arctic circle.

THOMAS BARNES.

DISEASE AND MEDICINE (Egyptian).—I. From the diagnostics of the Egyptian papyri we can distinguish—even identify, in many cases—about 250 different kinds of diseases, and the Ebers Papyrus alone describes 170 varieties. Many of them are the common ills of all humanity, and we cannot even say that they were of more frequent occurrence in the Valley of the Nile than elsewhere: complaints of the stomach, the bowels, the bladder, the respiratory organs, the head, the sinuses of the face, inflammation of the teeth, headache, coryza, ordinary fever, varices, epilepsy, and nervous ailments. Other diseases seem, by comparison with modern Egypt, to have been specially prevalent,—asthma, angina pectoris, anaemia, hæmaturia,—but it cannot be decided whether the chief cause of this is the race or the country. Some are certainly connected with hygiene (or rather its absence), with feeding, and with habits. Skin diseases, smallpox (cf. Elliot Smith's investigations of the mummies in *Annales du service des antiquités de l'Égypte*, Paris, 1900 ff., and *Bulletin de l'institut égyptien*, Alexandria, 1862 ff., *passim*; and Maspero, *Momies royales*, Paris, 1886, p. 532), the infinite variety of parasitic diseases, e.g. 'Arabian elephantiasis' (=the 'crocodile disease' of the ancients), worms, and *pyorrhœa alveolaris* are the several consequences of these in varying degrees. In the same way, it was to the manners and customs that the Egyptian woman owed her long list of infirmities as described in the Egyptian treatises from the XIIth dynasty—flux, menstruation, metritis, dysmenorrhœa, erosions, pustules, prolapsus of the vulva, and cancerous tumours. It was, finally, the combined operations of Nature—water, winds, climate—and of the Egyptian's negligence that produced the terrible frequency of ulcers, Nile boils, carbuncles on the breast and legs, and especially the appalling array of eye-troubles, among which are seen all the varieties known at this day: styes, specks, ectropion, blepharitis, leucoma, lippitude, hydropthalmia, staphyloma, conjunctivitis, purulent ophthalmia, and many more. Such lists as these do not prove the unhealthiness of a country, but rather show the degree to which the knowledge of classical Egypt had advanced in diagnostics and therapeutics; and the close resemblance between ancient and modern Egypt in this respect justifies the conclusion, in agreement with Herodotus (ii. 77) and against Pliny (xxvi. 1), that the Nile Valley was a very healthy country, where the length of life, in spite of the opinion of Chabas ('Prétendue longévité des Égyptiens,' in *Bibl. égyptol.* ii. [1905] 181), was probably in excess of that of the average man of the present day; where the general health was much better than in Greece or Italy, for example; and where, as a rule, the great scourges that so often laid waste the rest of the ancient world—endemic diseases such as malaria—were unknown.

A classification of man's ills so minute leads, even at first sight, to the postulation of ideas already far removed from 'primitive savagery.' This impression is confirmed by the fact that neither the mythology of classical Egypt nor its theologues attribute any special disease to any definite gods. We seem to see in the whole the mark of a considerable scientific and moral advance on the rest of contemporary society. If, however, the pure therapeutics of Egypt witnesses to a relative but very real perfection, on the other hand the Egyptian ideas on the causes and nature of disease exhibit conceptions, even in the historical period, much more akin than one would at first believe to those of 'non-civilized' peoples. At the same time we find that, owing to the special conditions under which Egyptian civilization was formed, this per-

sistent characteristic of the early ages has produced on the rôles of gods, kings, and priests in this connexion systematic views that are capable of finally reaching lofty and noble conceptions.

2. We read in Clement (*ap. Orig. viii. 41*) that, when any part of the body was sick, the demon to which that member belonged was invoked. In a somewhat imperfect form this explains the traditional view of the Egyptian on the nature of disease. It was always regarded as the work of demons, spirits, *jinn*, ghouls, vampires, or spirits of the dead (see DEMONS AND SPIRITS [Egyp.]). They insinuated themselves into the individual by the nostrils, mouth, or ears, and devoured the vital substance. The means by which they surprise man, their constant efforts to do so as they prowl around him unceasingly, and the manner in which they perform their destruction inside his body offer no special interest for the history of religion, though the numerous formal texts describing these peculiarities may interest the specialist in Egyptological science. Compared with other human civilizations the notions on this subject are essentially the same as we find in classical religions, such as the Chaldaeo-Assyrian (cf., *e.g.*, *PSBA* xxviii. [1907] 81), or among modern savages all over the world.

The idea that the power of spirits—the causes of disease—increases peculiarly at certain hours of the day, and particularly at certain seasons of the year, is shown by the papyrus of lucky and unlucky days; and, if this idea is found equally among numerous non-civilized and semi-civilized races, and is the product, in Egypt as elsewhere, of experimental pseudo-observation, yet Egyptian astrology has greatly strengthened the initial data by explaining this periodical virulence by fixed rules, based on the influences of dates of the calendar (*q.v.*) and on mythological history. On such days 'numerous harmful germs permeate the clothing,' because the struggle neutralizes the power of the good gods, who are too busy to protect man, or because great evil influences are seen to be re-commencing in this world.

On 19th Tobi and 5th Pashus, the germs 'penetrate the clothing'; then 'infection steps in and causes death.' On 17th Tobi, the anniversary of great cataclysms, any sexual intercourse predisposes to being 'devoured by infection.'¹ Those born on 4th Paophi are liable to death by 'marsh' fever. The 14th of Athyr is dangerous because it is the anniversary of the 'lesion' of the 'majesty of this god.' This last peculiarity is important to observe. Since disease was the result of the attack of a 'spirit' (or of a demon or the dead), it was of the same type for every one, and every one was exposed to it.

The veterinary papyri show that Egyptian thought conceived of animals' diseases as due to the same causes as those of men, and the same mixture of medical and magical practices was applied to both, just as the same collection of writings might contain both the art of curing men and that of curing beasts.

The question as to whether the dead suffer illness is difficult to settle. They certainly suffer hunger and thirst—which were regarded by the Egyptians as things existing by themselves and due to harmful spirits. They could die 'the second death,' which logically supposes the possibility of attacks of illness. Finally, the precautions taken that the dead may remain in good health (*udjai*) in the other world assume the contrary possibility of illness. We have, however, no decisive texts on this point. It is probably reasonable to hold that the Egyptian dead were believed to be exposed, in certain conditions, to the same dangers of spirit-attacks as the living.

What held true of animals and men also held of the rest of the world, and therefore of the gods; we know of a great number of cases where their constitution, which did not differ in qualities or in nature from that of other beings, suffered various ills, and had to submit to the intrusion of 'evil spirits.' Epigraphic texts and papyri have left us definite evidence. Every one knows how Ra

¹ On the dangers and harm resulting from connexion with women in the various religious, magical, etc., acts of Egyptian life, see art. MAGIC (Egypt.).

had to die because a serpent bit his heel; Isis suffered from a mammary phlegmon after the birth of Shu and Tefnut; Horus was stung by a scorpion, had dysentery (London Papyrus), and an anal weakness (see Oefele, *Vorhippokratische Medizin*, 64). The sky-god himself saw his eyes, the Sun and Moon, affected by sudden diseases, attributed to the attacks of evil spirits, and this was one of the numerous ways in which eclipses were explained.

Even eliminating the cases of doubtful authenticity, the official religion recognized positively that the national gods were not exempt from disease. The medical literature of the temples preserves the deposit of prescriptions used in such and such a case of indisposition by ailing gods. A remedy of this kind had been composed 'by the invalid Ra' (Ebers Papyrus, xlvi.), and there were remedies to cure fever 'in gods and men.' There was nothing, essentially, to protect the highest beings from the ills common to all. But here, as elsewhere, their quality of godhead was derived from their superior ability to concentrate their energies (see DEMONS [Egyp.]), and to contrive defences which made them triumph in the struggle. They were able to find or compose prescriptions and formulæ which, in the special case of disease, brought them out of their trouble. The revelation of the secrets of their art or magic, granted only to those men who were their heirs or ministers, is the very foundation of Egyptian medicine. It unfolds at once its characteristics, its history, and, above all, the gradual formation of its knowledge.

The warfare against disease, taught by the gods (or stolen from them), proceeded of necessity and above all from magic (gaining support gradually from medicine properly so called), since it started originally with exorcism. It is accompanied, therefore, by spells and incantations, with all their accessories, such as fumigation, aspersions, imperative gestures, etc. The knowledge of secret names at first played its usual part, and the doctor of ancient Egypt was a magician-priest, entering upon a struggle with an adversary—to discover the name of the demon causing the illness, to find by secret knowledge the name of a god who had helped in a fight against the same demon in a similar case, and to force the demon to flee. This he accomplished either by disguising himself as the conquering god and imitating his actions, or by summoning this god to his aid, or by employing the relics, talismans, and means of defence which the latter had invented. (These three methods probably constitute three successive phases in the original history of primitive Egyptian therapeutics.) As usual, 'alliteration,' or play on the sound of the words spoken, had its share in all this.

Take a case of the momentary loss of sight, *e.g.*, which was cured by adorning the crocodile; not only did people think that the same remedy which had saved the eye of the heavens (=the sun), when the crocodile tried to devour it, would also save man, and therefore use the same formula; but at the same time they made a play of words on *shu*, 'blind,' and *shu*, the ostrich-feather held by the operator while making the disease return to the crocodile supposed to have sent it.

The belief that the forces and armies of good and evil beings were grouped, like the astral forces, in the four regions of the world produced the further practice of a fourfold pronouncement of the formulæ of spells and exorcisms preceding or accompanying the giving of the material medicine (*e.g.* Ebers Papyrus, ch. 108). Therapeutics was, therefore, at this stage an operation by which the gods were subjugated by the various processes of magic, 'contagious' or mimetic.

The fundamental nature of this original art of healing was a mark of the Egyptian's struggle against disease right down to his last days. In

spite of all the gradual attenuation of magic in favour of pharmaceutical and actually experimental science, therapeutics remained closely bound to Divine influences, both in its staff of officials and in the composition of its didactic treatises. The remedy proper never entirely supplanted the ritualistic and conjuratory part of the process.

The pharmacopœia proper also suffered this general influence. A great proportion of the substances owed their supposed virtues to the magical powers of the beings or things from which they sprang, or to their supposed mythological connexion with a certain god or spirit. The pharmacopœia of curative and harmful plants is related, in origin at least, and often to the very end, to the theory of 'spirits' causing and protecting from diseases; and the Egyptian ideas on this point are found faithfully represented in the list of thirty-six magical plants of Pamphilus (*de Simplicium medicin. facultatibus*). Finally, it is natural that the magical virtues of certain objects against disease have perpetuated, in Egypt as elsewhere and for the same reasons, the use of amulets (cf. CHARMS AND AMULETS [Egyp.]).

3. For the understanding of Egyptian ideas on disease and the methods of conjuring it, it is essential to study the formation of the books relating to it. The gods having known better than any other beings how to organize a defence, it was their ministers (or their possessors) who had the exclusive monopoly of magico-medical cures, revealed as these were by the gods or seized from their secret powers. The original fetish-doctors, then, had as their inevitable successors priest-doctors; and the growth of knowledge was, above all, a mechanical growth, by the union into collective classes, of the 'arts and mysteries' at first scattered over as many sanctuaries as there were originally independent gods. The primitive connexion between the spirits of gods and protection against disease was likewise the cause of the particular manner in which the books relating to diseases and their cure were composed, and of their double character, in the historic period, of traditional compositions and compilations pure and simple, innocent of all attempts to make a harmonious general whole on a rational plan. Further, there is nothing more opposed to an understanding of them and to the exegetical method than to maintain (like Erman, *e.g.* in his *Religion* [Fr. ed., 1907, p. 226]) that the attribution of such and such a chapter of prescriptions to a certain god or fabulous king is an artifice of the editor and indicates a late date. The observation of diseases and the supposed knowledge of the names or forces to be adjured or driven off were the fruit of experience and of magical prescriptions acquired from the very earliest days of Egypt by its pre-historic 'fetichists'; and the final tradition which in the Græco-Roman period attributed to Hermes Trismegistus (Clement, *Strom.* vi. 4) the composition of six books of medicine (on the forty-two hermetical books) reproduced exactly the belief of classic Egypt in its last stages, representing Thoth as the god who invented the formulæ necessary for giving remedies their power against diseases (cf. Pietschmann, *Hermes Trismegistos*, Leipzig, 1875, pp. 20-45 ff.).

The sacred library of the proto-historic Egyptian temple became the depository of the lists of diseases and their cures, and the evidence of historical times in this regard is fully in accord with the reality of the facts, when it speaks of the library that was at Heliopolis, 'the hall of rolls,' and the prescriptions found in the temple of Ptah at Memphis (cf. Wilkinson, *Manners and Customs*, 1878, ii. 355, 358), or when the inscriptions of the

'library' of the temple of Edfu mention the presence of books there 'for turning aside the cause of disease' (cf. Mallet, *Kasr el Agouz*, Cairo, 1909, p. 24).

The gradual formation of medical treatises properly so called came about in the same way as that of the various compositions forming the annals of the sacerdotal calendar in Egypt, its tales of feasts (see FESTIVALS [Egyp.]), its Books of the Dead, and its 'books' of the different sciences. The important sanctuaries gathered together small local collections, and later on made exchanges with each other of the collections thus obtained. They usually proceeded by simple juxtaposition. To the body of information relating to a certain disease generations gradually joined on the ancient prescriptions of different provincial 'wisdom,' and grouped around a book on eye-diseases, internal complaints, and ulcers all the cures and all the diagnostics—often contradicting each other—obtained by these combinations. The part of the body or the disease stated in the title of the work, having served as the basis for the work of compilation, did duty also as a 'rallying sign' for all works on any analogous subject, without distinction of date or origin. This is the explanation of the common sections that are found in papyrus after papyrus—parts common to the Leipzig Papyrus and those of London and Berlin, or to the latter and the Reisner Papyrus of California, and so on. Those common parts show the common origin of our papyri, and their character of compilations from much older writings. The manner in which the very scanty remains of the XIIIth dynasty treatises were composed shows that these processes of compilation, so evident in the XIXth dynasty papyri, had been employed long before. And this fact, in conjunction with a study of grammar and language, leads us to conclude that the Egyptians were stating an absolutely historical truth when they attributed the additions of these great works on diseases to the Memphite kings or to the first legendary dynasties of the Thinites. As leading priest in his kingdom, the king was naturally versed in the magico-medical art of healing, and this was formally said of the most ancient kings; *ισαρος γὰρ ἦν*, said Manetho (*apud* Africanus) of Athotis. Such an attribution to the Pharaohs of a charge to maintain the health of their subjects agreed in every point with their nature as sons of gods, and with their function, which was, above everything, to continue and maintain the work of the good gods, the founders of Egypt (*ισαριεὶν τε ἐξίστηναι καὶ βίβλους ἀνατοκοῦν συνῆραψαι* [Manetho, *apud* Eusebius]).

Being logically devoted to everything that was very ancient and so brought him a little nearer to the Divine origin of all that is good on earth, the Egyptian made scarcely any change in the basis or the form of the knowledge thus obtained; he was always eager to show how the new recension of one of these 'ancient books of knowledge beneficial to man' was attached to the origins of national history. And, indeed, criticism has proved that the Theban manuscripts proceed directly from the proto-Theban, and the proto-Theban from still earlier types. The books that had grown too old materially were piously copied. In the actual body of texts relating to a certain disease, the work of generations consisted in inserting glosses, in slightly retouching, or in supporting the efficacy of a certain formula by extolling in the margin its proved excellence (Ebers Papyrus, lxix. 17, xxxv. 18; and Reisner Papyrus, *passim*), or by telling how it had once cured such and such a mighty personage, prince or king (Ebers Papyrus, lxiv. 4, lxvi. 15). The re-copying or re-modelling of several ancient versions in circulation led the scribe to note the variants in the texts used in composing the new edition, or to insert—rather unskillfully and such as they were—the scholia of his predecessors (cf. the excellent, and unfortunately still unique, work on the Ebers Papyrus considered from this point of view, by Schäfer, *Commentationes de Papyro Medicinali Leipsiensis*, Berlin, 1892). The most serious material changes, then, were not in the idea held of disease, or in the manner of defining or conjuring it, but in the increasing of the means combined for this last purpose. This happened very rarely by the invention of new remedies, but usually, and much more mechanically, by joining to the old writings new treatises from other localities, but equally ancient. These were dismembered, and their substance was joined on according to the diseases enumerated. A work, *e.g.*, devoted to 'abscesses on all the members' became the nucleus round which gathered

everything that could be found in the various temples of the nature of formulæ relating to abscesses. Thus it happened that there were sometimes a dozen methods of curing one disease, and sometimes contradictory methods—e.g. there occurred side by side, in the same compilation, an explanation of diseases based on an anatomy in which the human body possesses twelve great blood-vessels, and another founded on the assumption that it has forty. It was not, then, that the number of remedies actually increased in Egypt throughout the ages; there was rather the diffusion among a greater number of Egyptians of one and the same material which had formerly been embodied in a multitude of petty provincial theories. A general invocation at the end to the god of the place of compilation was enough, in the compiler's opinion, to guarantee a sort of unity to the work composed in this way.

The whole result was, as we may see, far from equal to a treatise of synthetic—not to mention philosophic—character on disease or diseases. It would nevertheless be inaccurate and unfair to see in such works (as does Pierret, *Dict. d'arch. égypt.*, Paris, 1875) nothing but a collection of pharmaceutical prescriptions.

4. Religious and traditional bases so solid and so closely bound up with national beliefs and institutions have necessarily supported a structure whose characteristic lines have remained almost intact throughout the whole existence of Egypt. The science of disease was marked, to the very end of Egyptian history, by its original characteristics: it was, above all, associated with the world of the gods, and with their ministers; it was traditional and formalistic.

Thus the rule not to use remedies that the masters have not taught is to be explained not so much by the will of the legislator, looking to the social interest, as by the belief in the connexion between the virtues of the remedies and the magic teaching of the gods; and the same explanation helps us to understand the non-responsibility of the doctor in a case of death, if he had observed the rules of canonical therapeutics (Diod. i. 82). The assertion that physicians were paid from the public treasury is simply a misunderstanding in the classics, but a misunderstanding which exactly agrees, leaving out of account inexact terms, with historical truth. Born originally in the 'fetish-hut,' the science of healing fixed its abode in the temple. The masters remained the ministers and interpreters of the gods, and the series of *mastabas*, hypogæes, stelæ, and statues show that, from the Memphite Empire to the Ptolemys, the great doctors—those of Pharaoh, e.g., the *Sunu viru* (= chief physicians)—were at the same time high ecclesiastical dignitaries.

Just as the teaching remained religious, the art of healing in its three great branches (symptomology, therapeutics, and pharmacopœia) remained equally impregnated with animistic and magical concepts; thus the classical doctor continued to prepare his own medicines, like the sorcerer of primitive times, and it was held as a fact that in complicated drugs each element acted on a special part of the organism, or, rather, on the evil specially infecting that part; numerous ingredients were considered curative specially for reasons of sympathetic or contagional magic (chiefly animal substances, skin, oils, and the horrible 'coprotherapy'). And yet the universal reputation of Egyptian medicine, and the very real perfection of its equipment, diagnostics, metrology, and healing processes are, on the other hand, as certainly incontestable facts (see an excellent popular account in Erman, *Life in Anc. Egypt*, tr. Tirard,

London, 1894). The distinction of a nation of superior endowment, like Egypt, is precisely the ability to substitute, gradually and without sudden breaks, the conception of the natural healing effect for the unexplained magical effect; and, as science and magic-religion both proceed, essentially, from experimentation, it happens in many cases that only the interpretation of the mechanism of the energies, and not the remedy itself, is evolved. Such as it is, with its original flaws, its lack of theoretical views, its crying errors, its childish complication, and its naive formalism, the Egyptian science of healing nevertheless constituted from the very beginning a system several thousand years in advance of the rest of human society. It retained this pre-eminence as long as Egypt existed. The testimony of Homer (*Il.* iv. 229), the admiration of the Persians (Herod. iii. 1 and 132), the fame and reputation of Egyptian medicine under the Saïtes and the Ptolemys, and the reputation in Rome of the Alexandrian school can only be mentioned at present. Such enduring fame is an explanation of the fact that the medicine of Greeks and Arabians, successors of the Copts, has given a great deal of the ancient Egyptian medicine to our school of Salerno, e.g., or to any other of our ancient seats of medical knowledge in the Europe of the Middle Ages and down to the time of the Renaissance.

5. The development of Egyptian science succeeded in giving a more distant and lofty character to the priest-doctor's sources of information. But it never completely suppressed the primitive notion of direct Divine intervention in cases of illness. We find gods of healing in Egypt as everywhere else; and, similarly, the great scourges—plagues or other great epidemics, *iatu*—are recognized as sent by the gods.

Egypt, however, strikes an original note, in regard to this last point, in the very restricted part played by the idea that great calamities come from the gods, though this idea was known (it may have been less familiar, however, than in the classic East, on account of the proverbial healthiness of the climate). We find mention in Manetho (Müller, *PHG* ii. 539) of the plague which devastated the country in the reign of Semempses, and a connexion is assumed in the text between this scourge and the great sins committed by men. But such statements are very rare in the Egyptian texts. The point is worth noticing, in contrast with other organized religions, for the understanding of the conception formed by the Egyptian of the general rôle of his gods. In the case of individual sicknesses, on the other hand, historical Egypt is already too far removed from the 'non-civilized' stage to establish any connexion between such and such a bodily complaint and the violation of a *iabu*; we ought to notice, moreover, that the idea of disease sent as a punishment by the gods, who either cause it themselves directly or leave the sinner defenceless against the spirits of disease, is quite foreign to the Egyptians. Texts of later date, like the hermetical books, in which mention is made of those 'divine statues which send us disease or heal our pains according to our deserts' (Menard, *Hermes Trismegiste*, 1885, p. 146), seem to be somewhat imbued with Greek or Asiatic conceptions. Disease might, however,—at least in popular cults,—be the direct punishment for a personal offence against a deity, but this is of course quite different from the conception of an infraction of moral rule (see ERNICK [Egyp.]; and, for offences against the 'goddess of the Summit,' see Maspero, *RTy* ii. [1883] 118-123).

Several, if not all, of the gods who had composed the first means of battling with disease continued to grant or reveal directly to men the means of healing; and the majority of the sanctuaries, to which numerous worshippers journeyed, for their oracles (see DIVINATION [Egyp.]) or on annual pilgrimages, retained the privilege of miraculous cures. The temples of Isis at Coptos, of Min at Panopolis, and, in general, all those temples in which the medical books locate the marvellous discovery of writings in connexion with the teaching of remedies (Hermopolis, Lycopolis, etc.) were the places where the gods were themselves able to rout, with a single blow, the infirmities of the human body. We must add to this list a great number of smaller provincial sanctuaries, the local

gods of which, though very humble, had special powers (Assuân, Gurneh, etc.).

Survivals of these innumerable places of miraculous cures in ancient Egypt are seen in the topographical coincidences with various saints' graves of the Coptic Church—having the same privilege—and, after Muhammad, with all the tombs of Musalmân *shaiḥs* which have succeeded to the veneration of ancient days for these places.

Towards the latter days of history, political events tended to group the most important of these centres of medicine round the capitals of Upper and Lower Egypt, and the infiltration of Persian and Hellenistic ideas added new elements to the rôle of the gods against disease.

6. The means used by the gods in such cases to instruct or heal patients are not well known in general. Several texts say that, under the influence of Greek ideas, the custom spread in Egypt of going to sleep inside the precincts of the temples of the gods of healing, or near the supposed tombs of those celebrated historical personages whom legend gradually confused with mythical kings and the gods of healing (see DIVINATION [Egyp.]). This is the case for Imhotep (cf. Psherenptah stela). Invalids were informed of their remedies oftenest in dreams, as is proved by a certain number of allusions in the epigraphical monuments, by the accounts in popular tales, and by the witness of Diod. i. 25. Direct cure, following upon a prayer, and without divinatory revelation, is not formally entertained except in Herod. ii. 65, according to whom sums of money equal in weight to a half or a third of the sick child's hair (?) were vowed to the gods in case of recovery, or a promise was made to buy a beast for the temple herds. The sudden inspiration of the doctor enlightened by Divine grace and working *διὰ τῆς ἰδίας δεισιδαιμονίας* is not a very Egyptian trait, and may be due to foreign influences (cf. Berthelot, *Alchimistes grecs*, 1890, p. 226). The essentially native form of miraculous cure by the intercession of the god appears to have been worked chiefly by the direct application of the healing fluid, either by the priest who carried the Divine relics, the *nibsau*, or in important cases (demoniac possession, epilepsy, and the like), the god himself. The famous Stela of Bakhtan is a familiar example of this type of curing by exorcism worked by a Divine statue. The adoration of the demon of disease, his overthrow, and his departure from the body of the princess, are merely an instance of a practice current in all the religions or 'semi-religions' in which there is a 'dispelling of demons.' It is more interesting to note the manner in which the statue of a god was supposed by the Egyptians to be capable of possessing the necessary power. The Egyptian text proves that this power was possible only to a 'secondary' statue of the god—one of those animated, for a special series of activities, by an 'energy-soul' of distinct name. It derived its chief power from the 'essential' statue of Khonsu, the statue which contained the magic soul of the god and made his will known by movements of its head (see DIVINATION [Egyp.]). This famous statue never left Thebes; it kept the best of the Divine substance there, and consented to detach and lend its healing forces only to such and such a one of its doubles, 'by bestowing upon it (by the nape of the neck) its protective fluid at four intervals' (which is a very valuable indication of the antiquity of the magical conception). Apparently, then, the power against disease did not belong to all the 'doubles' of a god. It was the privilege of the one image in which dwelt the 'true name,' and this assumes that power against demons was a part of the ultimate reserve of the personality of a being.

Finally—the primitiveness of the practice of exorcism by statues being a traditional survival—we may hold that, at the end of a long period of evolution, the views of the Egyptian upper classes on disease often came near to really lofty conceptions. Though, as everywhere, sorcery, the bastard child of primitive religion, preserved the rudeness of the 'dispelling of spirits' of primitive days, still the fight for healing, while maintaining its character of Divine teaching, became more and more natural and scientific. If, indeed, it attributed a large share to the supernatural intervention of the gods, it also gave an important place to Divine inspiration, guiding the man of science. Thoth-Hermes, in his various names and multiple capacities, inspires sacred medicine with a higher knowledge of human infirmities, without, however, assuming the absence of resources founded on therapeutics. The priest-doctor of the later ages of Egypt is a noble figure, resembling that of the magnificent portrait left by Cheremon (FHG iii. 497). And between the magic idol (or fetish) of the first healers of Egypt and the Thoth-Hermes of the end there is the same distance (and the same long way laboriously traversed) as between the anthropophagous Osiris of the Pyramid Texts and the Greco-Egyptian Osiris, who gives a seat at his table of honour in Paradise to the poor beggar 'who had not had his share of happy days on this earth.'

LITERATURE.—There is no monograph treating the subject synthetically. A great number of details and partial theories are found scattered throughout the bibliography of Egyptian medicine. Mention may be made, amongst the works and articles treating more specially the ideas discussed above, of: H. Brugsch, *Über die medicinische Kenntnisse der alt. Ägypter*, Brunswick, 1863; F. J. Chabas, *Ouvrages*, 1903, vol. ii, *Bibl. égyptol.* ii. 173, and *La Médecine des anciens Égyptiens*, Chalon-sur-Saône, 1861; G. Maspero, *Revue Critique*, 1893, ii. 69, *Histoire*, ii. (Paris, 1896) 214-220, 238, 281, *PSBA* xiii. 501-503, xiv. 312-314, *Études mythol. archéol.* iii. (1901) 289, 301, *Journal des Savants*, Apr. 1897 and Feb. 1898, *Journal des Débats*, 23 Feb. 1906; Mallet, *Kasr el Agouz*, Cairo, 1909; E. Naville, *Sphinx*, xiv. (1910) 187; F. Oefele, *Archiv f. Parasiologie*, iv. (1901) 481, v. (1902) 461, *OLZ* ii. 23, v. 157, vi. 376, *AZ* xxxiv. (1899), 55, 140, *Wiener Klinische Wochenschrift*, 1899, no. 47, *Prager Mediz. Wochenschrift*, 1899, nos. 24-29, and especially 'Geschichte der vorhippokratischen Medizin, in die Handbuch der Geschichte der Medizin, i., Jena, 1901; W. Wreszinski, *Der grosse medizinische Papyrus des Berliner Museums*, Leipzig, 1909; and J. G. Wilkinson, *Manners and Customs*, ed. London, 1878, ii. 354-358.

GEORGE FOUCART.

DISEASE AND MEDICINE (Greek and Roman).—Disease and its treatment by rational medical means belong to the domain of scientific medicine. The help of the gods was sought in illness and accidents by purely religious means—by prayer, sacrifice, and, above all, the institution of incubation. The gods granted their assistance either directly, by a miracle of healing, or indirectly, through the medium of an oracle of healing. The subject will be fully treated in the art HEALTH AND GODS OF HEALING, INCUBATION.

ED. THRAEMER.

DISEASE AND MEDICINE (Hindu).—1. Disease.—The earliest view of disease in India was that all morbid and abnormal states of body and mind for which no special reason was assignable were due to the attacks of demons. In the medical charms of the *Atharvaveda*, the earliest medical book of India, the diseases are constantly addressed as demoniacal beings. Thus Fever, a demon who makes men sallow and inflames them like fire, is implored to leave the body, and is threatened with annihilation if he should not choose to do so. 'O Fever,' says another charm, 'thy missiles are terrible; from these surely exempt us.' Itch (*pāman*) is called Fever's brother's son. The malevolent spirits of disease were regarded as specially dangerous to children. Thus infants were liable to be attacked by Naigameṣa, a demon

with a goat's head, who is mentioned in early Sanskrit literature, and represented in an old sculpture found at Mathurā. Jambha, another Vedic godling of disease, was supposed to cause the trismus of infants. A 'dog-demon' attacking boys is said to mean epilepsy, or perhaps whooping-cough. Another ancient superstition attributed the origin of dropsy to Varuṇa, the god of the waters, who binds the guilty, e.g. liars and false witnesses, with his terrible snake-bonds, i.e. dropsy. Elves and nightmares, called *Apsaras* and *Gandharvas*, were believed to pay nocturnal visits to men and women. Disorders of the mind were also very generally ascribed to possession by a demon (*bhūta*), even in scientific works on medicine such as the manuals of Charaka and Sūśruta. When the belief in transmigration took hold of the Hindu mind, it furnished a new explanation of the origin of disease. Diseases and infirmities were traced to sins and offences committed in a previous birth. According to this doctrine of the 'ripening of deeds' (*karmavipāka*), a mortal sinner will have leprosy in a future birth; a Brāhman-killer, pulmonary consumption; a drinker of spirits, black teeth; a calumniator, a stinking nose; a malignant informer, stinking breath; a thief of food, dyspepsia; a thief of horses, lameness; a poisoner, a stammering tongue; a usurer, epilepsy; an incendiary will be born a madman; one who kills a cow or steals a lamp will be blind, etc. (see *Viṣṇusūtra*, ch. xlv.). Most of these punishments in a future life are symbolical. As a consequence of these beliefs, religious penances were performed, for instance, by lepers in order to atone for the heinous sins in a former existence to which their illness was attributed. A more rational theory of disease was found in the idea that worms gave rise to morbid conditions—a universal belief which may perhaps be viewed as the first germ of the modern bacillus theory. Headache and ear and eye diseases, as well as intestinal diseases, were attributed to worms; worms in children and in cattle also find special mention in the hymns of the *Atharvaveda*. The ancient physician Jivaka (see below) is alleged in the Buddhist scriptures to have cured a patient by making an incision in his head and pulling two worms out of the wound. The medical Sanskrit works derive the origin of internal diseases principally from a wrong mixture of the three humours (*tridoṣa*) of the human body—wind, bile, and phlegm; and thus distinguish between wind, bile, and phlegm-diseases.

Of particular diseases, *fever* is perhaps the most important. It is called in the medical works the 'king of diseases,' and appears to have been already the most dreaded ailment at the time of the composition of the *Atharvaveda*, the symptoms mentioned suggesting true malarial fever. This corresponds with modern statistics, according to which nearly two-thirds of the deaths in India are due to fever. *Leprosy* is said to consist of eighteen varieties, seven heavy, and the remaining ones light. It is evident, however, that true leprosy became confused with various skin diseases. *Small-pox* (*masṭrikā*) is first mentioned in mediæval medical works. The *plague* is not mentioned in Sanskrit medical works, and seems to be of recent importation in India.

2. *Medicine*.—Folk-medicine in India is closely connected with sorcery. 'The most primitive witchcraft looks very like medicine in an embryonic state' (Sir Alfred Lyall, *Asiatic Studies*, 1st ser., 1907, p. 118). The earliest collection of charms found in the *Atharvaveda*, which is reckoned as one of the four Vedas, though it never attained the same degree of sanctity as the other three, probably because it contains incantations for destroying an enemy, the idea of injuring another,

be he even an enemy, being opposed to the spirit of Hinduism. In the medical charms of the *Atharvaveda* and of the *Kausikasūtra*, the diseases, and frequently the curative agencies as well, are addressed as supernatural beings (see above). The remedies applied are based, in many cases, on a rude kind of homœopathic or allopathic principle. Thus the yellow colour of a patient affected with jaundice is sent where it naturally belongs—to the yellow sun and yellow birds—the patient being seated on a couch beneath which yellow birds are tied. The hot fever is sent to the cool frog, who may be supposed to find it enjoyable. Dropsy, the disease sent by Varuṇa, the god of the waters, is cured by sprinkling water over the patient's head by means of twenty-one (three times seven) tufts of sacred grass, the water sprinkled on the body being supposed to cure the water in the body. A coral spear-amulet is used to counteract pains that seem as if from a spear—either rheumatism or colic. White leprosy is cured by applying black plants. Red, the colour of life and blood, is the natural colour of many amulets employed to secure long life and health. Amulets, mostly derived from the vegetable kingdom, are used a great deal, the idea being that the supposed curative substance has to be brought into contact with the body. The sores, tumours, and pustules apparent in scrofulous diseases are conjured to fall off, or fly away, because they were supposed to have settled like birds on the afflicted person. The cure of wounds and fractures is effected by incantations which have been compared by A. Kuhn with the Merseburg charm of German antiquity. Flow of blood is charmed to cease by a hymn which seems to indicate the use of a bandage or compress filled with sand. There are many charms for the cure of the poisonous bites of snakes, also charms directed against poison not derived from serpents. Water and fire are viewed as excellent remedies for many diseases; thus a Vedic charm declares: 'The waters verily are healing, the waters cure all diseases.' Fire is especially invoked in charms against mania, and sacrifices to the god of fire, burning of fragrant substances, and fumigation are amongst the principal rites against possession by demons. Some of the herbs used in medicine seem to owe their employment as remedies to their names only, not to any real curative properties possessed by them. The charms of the *Atharvaveda* have been fitly compared with the sacred formulæ of the Cherokees, and other spells current among the Indians of North America. On the other hand, they must be acknowledged to contain a fairly searching diagnosis of some diseases, as, e.g., of malarial fever with its accompanying symptoms, such as jaundice, headache, cough, and itch.

The second period of Indian medicine is the Buddhist period, ushered in by Jivaka Komārabhacca, the contemporary of Buddha himself, of whom the most wonderful cures are reported, and whose name indicates that he was particularly famous for the treatment of children's diseases. The canonical books of the Buddhists contain a number of medical statements. The famous Bower MS., written in the 5th cent. A.D., and called after an English traveller who discovered it at Mingai in Central Asia in 1890, contains three medical treatises, one of them being a spell against snake poison, said to have been applied with success by Buddha himself when a young pupil of his had been bitten on the foot by a cobra. Buddhist kings founded hospitals for men and beasts, and appointed regular physicians. The famous Buddhist convent at Nālanda in Bihār, of which some ruins remain, had ample accommodation, in the 7th cent. A.D., for 10,000 students of philosophy and medicine.

The third period produced the now current Sanskrit treatises of Charaka, Suśruta, Vāgbhata, Mādhavakara, Vaṅgasena, Hārīta, Bheda, Vṛnda, and others on medicine in general or on particular subjects, such as pathology, fever, infantile diseases, *materia medica*, etc. Charaka is said to have lived at the court of the Buddhist king Kaniska (c. A.D. 120); the great work of Suśruta is said to have been re-cast by the celebrated Buddhist sage Nāgārjuna; Vāgbhata was himself a Buddhist. The connexion of the modern period of medical science in India with the Buddhist epoch is thus established, and the high stage of development reached by it seems to date, in the main, from the Buddhist time. The *materia medica* in these works embraces an immense number of drugs belonging to the mineral, vegetable, and animal kingdoms. There are special works on pharmacy and chemistry, containing ingenious processes of preparation, especially of quicksilver and other metallic medicines, which were prescribed internally as well as externally. Indian surgery, as represented in Suśruta and Vāgbhata, can boast of the practice of lithotomy and laparotomy, and of operations performed in cases of cataract, piles, disease in the uterus, for forming new ears and noses (rhinoplasty, which seems to have been borrowed by European surgeons from India), etc., with more than a hundred different surgical instruments. Indian medical works and doctors were exported into Arabia, and Charaka and Suśruta may be found quoted in the writings of Rāzi (c. A.D. 900) and other eminent Arabian doctors. Many medical Sanskrit texts were translated into Tibetan, and again from Tibetan into Mongolian and other languages of Central and Northern Asia. On the other hand, it appears probable that the physicians of India at an earlier period learnt a great deal from the Greeks, especially in the field of surgery, their own knowledge of anatomy being too limited to admit of the performance of difficult surgical operations. Moreover, the ancient superstitious notions were retained by them. Thus a certain form of smallpox, which is treated with cold applications, is personified as Sitalā, 'the cold deity,' and is to be worshipped with a prayer in which it is declared that, whenever a person afflicted with smallpox addresses the deity as 'Sitalā, Sitalā,' the eruptions will at once disappear from his skin, and that this goddess possesses a rain of ambrosia for those tormented by pustules. Seven forms of this disease are described, which survive in the seven smallpox sisters, including Sitalā, whose worship is very common in N. India. The more aggravated forms of mental diseases are attributed to possession by a demon, and the cure is to be effected by propitiating the devil with oblations in a fire lighted in a temple, and with gifts consisting of eatables, an umbrella, etc. Infants are particularly liable to be attacked by a demon, the symptoms described pointing to lockjaw. The treatment of snake-bites includes the recitation of charms. When a child is born, various religious ceremonies take place, such as the offering of oblations in a fire kindled for the purpose, with a view to protecting mother and child against the attacks of demons. The prognostics of disease depend in the first place on various omens, such as the appearance and dress of the messenger come to summon the physician, and the objects or persons seen by the latter on his way to the patient. The Indian physicians (*kvirājās*) of the present day, who belong to the Vaidya caste in Bengal, and to Brāhman castes in most other parts of India, have naturally been losing ground owing to the introduction of European scientific medicine into India; nevertheless they continue to be consulted by the common people, who also still adhere to the popular superstitions

of old. Various godlings of disease in nearly all parts of India are worshipped with offerings of milk, flowers, fruits, sweets, rice, betel-nuts, and sometimes a goat. When a child becomes dangerously ill with smallpox, it is sometimes carried to an image of Sitalā, and bathed in the water which has been offered to the goddess, some of which it is given to drink. There are also incantations for almost every disease—headache, toothache, fever, dysentery, leprosy, madness, burns, scalds, snake-bites, etc. In S. India devil-dancing is very common. Whenever the 'doctor' attending a sick person finds that the malady will not yield to his remedies, he certifies that it is a case of possession, and the exorcizer is then called in to expel the demon. The malignant spirits, the supposed authors of a plague, are tempted to pass into the wild dancers and so become dissipated, the devil-dancers being also thought to become gifted with clairvoyance and a power of delivering oracular utterances on any subject of common interest. See, further, DISEASE AND MEDICINE (Vedic).

J. JOLLY.

DISEASE AND MEDICINE (Jewish).—I.

DISEASE.—1. **Biblical.**—Three initial stages may be traced in the perennial consideration of this subject. Disease—so it was held—is sent from the Deity; it is therefore a punishment for sins committed; that is, every one who suffers from disease has previously done some wrong for which he is atoning by his bodily afflictions. It is obvious that this case is completely covered by the larger and more general question of evil, as dealt with, for example, in Job. Yet, although the Book of Job might be said finally to solve the problem as far as contemporary thought was concerned, inquiry reasserts itself after a brief interval.

In the investigation of Biblical examples of sickness consequent on sin, care must be taken to exclude those cases where the punishment takes the form of a violent or unnatural death. These are included in the larger category of evil. Thus the case of Korah (Nu 16^{30ff}) and that of the disobedient prophet (1 K 13^{11f}) do not apply, but the death of Bathsheba's first son (2 S 12¹⁴) or the smiting of the Egyptian firstborn (Ex 12²⁹) might certainly be cited. It is also important to differentiate cases where the sinner himself is smitten from those where the punishment falls vicariously on others who may be innocent, but whom the sinner loves more than himself. To the former category belong the punishments of leprosy meted out to Miriam (Nu 12¹⁰) and Gehazi (2 K 5²⁷); to the latter, the death of Abijah, son of Jeroboam (1 K 14¹⁸), for the death of the child meant the destruction of Jeroboam's fondest hope—the foundation of a dynasty. Further, as a corollary to the latter class may be mentioned those cases in which the community suffers from disease because of (a) general and (b) individual trespass. The community would seem to be punished because it participates actively or even passively by not rejecting the criminal, for in the absence of duly appointed officials it is every one's duty to take the law into his own hands. It is also suggested that the knowledge that the commission of a certain action may involve others in disease and pain may act upon the evil-doer as a deterrent.

An enumeration of all the cases in the Bible

where disease is a punishment is unnecessary. It may suffice to mention a few examples where it is inflicted as a retribution for sin. In some cases leprosy is the means of chastisement: thus Miriam (Nu 12¹⁰), Gehazi (2 K 5²⁷), and Uzziah (2 Ch 26²¹) were smitten with this disease for slander, avarice, and presumption respectively. Shameful diseases are the result of foul crimes or irreverence (e.g. 'Er and Onan, Gn 38⁷ etc.; the Philistines, 1 S 5^{12a}); Pharaoh (Gn 12¹⁷) and his household were afflicted with plagues on account of the abduction of Sarah; Abimelech and all his house (Gn 20¹⁸) were smitten with barrenness for the same cause; the Sodomites were struck with blindness (Gn 19¹¹) for their attack on Lot; and, finally, Job's sickness is ascribed by his friends to his sinfulness. Gluttony was punished by gastric plague and death at Kibroth-hattaavah (Nu 11³⁴), and in the *Tokhehah*, or Rebuke chapters (Lv 26¹⁴ etc., Dt 28¹⁵ etc.), various diseases are enumerated which will inevitably follow disobedience to God's word.

Turning to the NT, we may trace the same tendency. Thus (1 Co 11³⁰) those who receive communion in an unworthy manner suffer disease in consequence. Further, there is the opposite case of apparently undeserved blindness (Jn 9¹⁷), as an explanation of which the possibility of sin *in utero* used to be suggested; and, finally, there are the instances where disease is said to be due to Satanic agency or demoniac possession (Lk 13¹⁶, Mk 9¹⁷, Lk 11¹⁴).

That diseases follow sin may also be inferred negatively from such passages as Ex 15²⁶ ('if thou wilt surely hearken to the voice of the Lord . . . the diseases which I put on the Egyptians I will not put on thee,' cf. Dt 28⁶⁰); or the Fifth Commandment, where longevity is the reward for obedience to parents; or, in a more general way, Lv 18⁵ ('Ye shall keep my statutes and my judgments by doing which a man shall live').¹

Although these and similar instances are capable of being classified under various different heads and of being arranged in other ways, yet it is by no means clear that alterations would produce any re-adjustment of ideas with reference to the theory of disease. It is not safe to dogmatize or to differentiate between the attitude of the Pentateuch and the Prophets; it is unwise to establish distinctions of time or place, because in no subject is there greater scope for inconsistency. The human mind hovers between the Scylla of ascribing disease to the work of the Deity, and the Charybdis of making disease accidental and so independent of Divine control, by which circumstance Divine omnipotence would be impugned. The 'golden mean' may offer a workable compromise, but it will not often bear philosophic investigation. The Semites, as has often been shown, identified cause and effect. *Pe'ullah* means both reward and the deed which merits the reward. *Hatta'ah* means both sin and sin-offering. The children who mocked the prophet were devoured by bears (2 K 2²³), and the irresistible conclusion to be drawn was *post hoc ergo propter hoc*. The writer of the Books of Kings views history purely from the standpoint of morals; happiness and misfortune, health and disease, are the result of previous conduct; and insistence on this theory was the sole justification for the study of history. The adoption of this attitude was conducive to a belief in free will, since man thus had the power and choice of avoiding disease, while the opposite theory, which made disease fortuitous, led to predestination. To such an extent did the theory that conduct alone is responsible for disease

prevail that Asa (2 Ch 16¹²) is blamed because 'in his disease he sought not the Lord but the physicians.'

The Deity, then, is the source of evil as well as of all good, since He is omnipotent. Yet already in early times it was felt to be impious to ascribe misfortune and disease directly to the Godhead. Hence all manner of expedients were adopted to avoid such a position. In the Books of Samuel 'the spirit of God' is responsible for good and happiness, while sickness and ill were wrought by 'a spirit from (נגח רוח) God.' This was largely developed in the Targums (cf. Memra, Logos, etc.). There is no escape from attacking Divine omnipotence, if disease is independent of the Godhead. Still disinclination to ascribe disease to God grew and gained strength from the earliest times. The example of Korah's sons is a case in point. All the guilty parties gather together, the innocent are warned to withdraw from their company, and finally (Nu 26¹¹) it is stated: 'notwithstanding, the sons of Korah died not.' Still stronger instances occur which afford negative proof. The wicked cannot involve the righteous in disease and death, but the righteous can, conversely, deliver the wicked. Ten good men can save Sodom (Gn 18³²); punishment extends to the third and fourth generation 'of them that hate me,' while loving-kindness prevails to the thousandth generation (Ex 20⁵⁻⁶). The *Middath ha-Rahamim* (attribute of mercy) conquers the *Middath had-Din* (attribute of justice). Finally, the teaching of Job and of Ezekiel established the idea of individual responsibility, and the doctrine that suffering and disease are not necessarily the consequence of wrongdoing.

2. Rabbinical.—In considering Rabbinic literature it will be found that the same tendencies may be traced and the same stages observed. We are brought back to earlier views such as may be found in the Pentateuch and Former Prophets, and, seemingly, the teaching of Job and Ezekiel is completely gone. It will, therefore, suffice to adduce a limited number of instances. In the first place, slander is responsible for many diseases: this may be seen most clearly in *Lev. Rabba* xviii. 4 (ed. E. Schraentzel, Stettin, 1863, p. 29, fol. 15a, outer col. lines 1 ff.):

'There was *haruth* (engraving) on the tablets of stone [Ex 32¹⁶]. Read not *haruth* but *heruth* (freedom). Freedom from what? . . . from chastisements . . . R. Simeon b. Yohai says, at the hour when Israel stood at Sinai and said (Ex 24⁷) "All that the Lord hath said we will do and obey," there was not among them either one with an unclean issue or a leper or cripple or blind or dumb or deaf or mad: concerning that hour is it said (Ca 47): "Entirely fair art thou, O my companion, neither is there blemish in thee." When they sinned, not many days passed when there were found among them those with unclean issues and lepers. About that hour it is said (Nu 5²⁴), "And they dismissed from the camp every leper, etc." Henceforward Israel was liable to issues and leprosy. R. Huna . . . says . . . leprosy came for slander . . . to teach thee that plagues come only in consequence of slander. . . . [The whole passage should be studied.]

In the *Mekhilta* on Ex 23⁸ (ed. I. H. Weiss, Vienna, 1865, p. 106a, top) acceptance of bribes is said, on the basis of the Scriptural verse, to lead to blindness:

'Every one who accepts money to pervert justice (or even to execute justice) will not leave the world until he is bereft of his eyesight. According to R. Nathan, one of three things will befall him: he will lose his knowledge of the Torah, so that he will declare unclean clean, or declare clean unclean, or he will be in need of human aid, or he will lose his eyesight.'

A similar thought is expressed in the parallel passage in *Siphre* to Dt 16¹⁸ (ed. M. Friedmann, Vienna, 1864, §144), towards the end of the section. The *Mekhilta* to Ex 15²⁶ (fol. 54a) should also be regarded. This thought may be followed in a more extended form in Bab. *Erukin* fol. 16a, where R. Johanan (quoted by R. Samuel b. Nahmani) says:

¹ See Manasseh ben Israel's *Conciliator* (tr. E. H. Lindo, London, 1842), question 89, p. 138, question 104, p. 164; see also pp. 29, 114, and question 139, p. 228.

'Plagues come for seven sins, for bloodshed, perjury, unchastity, pride, embezzlement, pitilessness, and slander, as it is said (Ps 101:7), "him who slanders his neighbour secretly, him will I cut off. . . ."

The following verses are then cited to prove each case respectively: 2 S 3²⁵, 2 K 5^{23, 27}, Gn 12¹⁷, 2 Ch 26¹⁶, Lv 14^{36, 58}. See also *Aboth* v. 11 (Singer's *Prayer Book*⁶, London, 1900, p. 200):

'Seven kinds of punishment come into the world for seven important transgressions. If some give tithes and others do not, a dearth ensues from drought, and some suffer hunger while others are full. If they all determine to give no tithes, a dearth ensues from tumult and drought. If they further resolve not to give the dough-cake (Nu 15²⁰), an exterminating dearth ensues. Pestilence comes into the world to fulfil those death penalties threatened in the Torah, the execution of which, however, is not within the function of a human tribunal. . . . At four periods pestilence grows apace: in the fourth year, in the seventh, at the conclusion of the seventh year, and at the conclusion of the Feast of Tabernacles in each year; in the fourth year, for default of giving the tithe to the poor in the third year (Dt 14²⁸⁻⁹); in the seventh year, for default of giving the tithe to the poor in the sixth year; at the conclusion of the seventh year, for the violation of the law regarding the fruits of the seventh year; and at the conclusion of the Feast of Tabernacles in each year, for robbing the poor of the grants legally assigned to them' (i.e. gleanings, forgotten sheaves, corners of the field (Lv 19⁹, Dt 24¹⁹)).

The death of women at childbirth is due to three sins,

'because they have been negligent in regard to their periods of separation, in respect to the consecration of the first cake of the dough and in the lighting of the Sabbath lamp' (Mishn. *Shabb.* ii. 6 (Singer's *Prayer Book*, p. 121)).

The effect of sin (*yēser hā-rā*) on man and on the creation generally is to cause great disfigurement, and mysterious diseases are due to sin. The passage from *Bereshith Rabba* and elsewhere dealing with this point may be studied in F. R. Tennant's *Sources of . . . Original Sin*, ch. vii. ff.

Finally, R. Ami says:

'There is no death without sin, and there is no chastisement without crime' (Bab. *Shabb.* 55a foot). This passage should be carefully studied.

Outside the immediate range of the Talmud and Midrashim the idea may be traced frequently; e.g. Sir 31²⁸ (p. 24, ed. Strack, Leipzig, 1903): 'In all thy actions be modest, that no misfortune befall thee'; or Judah hal-Levi's *Kitāb al-Khazari*, pt. ii. § 58:

'It was one of the wonderful traits of God that His displeasure for minor transgressions was shown on the walls of houses and in the clothes, whilst for more grievous sins the bodies were more or less severely stricken' (p. 119, ed. Hirschfeld, 1905: see the whole paragraph).

II. MEDICINE.—Connected with the question of disease is the question of cure. The function of the priest as physician is clearly laid down in the Pentateuch; he enjoys far greater authority than the surgeon mentioned in Hammurabi's Code, probably because his sphere of treatment was more limited: in Assyria surgical operations seem to have been undertaken more commonly. The Rabbis declared that it was a positive commandment (צוה) for a man to get himself cured, on the basis of Ex 21¹⁹ (see also Rashi, *in loc.*). Healing as a result of special prayer occurs repeatedly in the Bible. According to the Rabbis, all healing is a miracle, and repentance will effect a cure. Thus Bab. *Nedarim* 41a declares:

'No sick man can recover from his disease until his sins are forgiven . . . greater is the miracle performed to a sick man by his restoration to health than that wrought to Hananiah, Mishael, and Azariah (Dn 3^{12ff.}). For their fire was earthly and any mortal could quench it, whereas that of the sick man is from heaven and defies human hand' (see also further).

So, too, the Palestinian Rabbis denied that demons could cause or cure disease (see DEMONS AND SPIRITS [Jewish]), for disease came from God without reference to their agency (see also S. Schechter, *Fragment of a Zadokite Work*, Cambridge, 1910, p. 1, ch. xiv. p. 12, line 3). On the other hand, a man must not avoid sin on that account alone.

A man must not say, "I will abstain from forbidden foods in order to strengthen my body and avoid disease, but in order to do the will of my Father in heaven."

The technical nature of cures recommended by

the Rabbis does not fall within the scope of the present article. Cures by prayer were frequent. See Mishn. *Berakhoth*, v. 3 (p. 10, ed. Staerk, Lietzmann's series, Bonn, 1910):

'R. Hanina b. Dosa used to pray over the sick and used to say, "Such a one will live," "Such a one will die." They said to him, "Whence knowest thou?" he replied, "If my prayer is fluent in my mouth, I know that it will be received." . . .

Reference may also be made to קצטן (Singer's *Prayer Book*, p. 47; partly also on p. 16, § 8 of no. 58 of Lietzmann's series, *Altjüd. Gebete*, Bonn, 1910); to בְּרָכָה תְּהִי לָנוּ (p. 148 top); to the שְׁשֵׁשׁ הַקְּלָיִים, or therapeutic use of Psalms (see also art. CHARMS AND AMULETS [Jewish]); and to the extremely beautiful prayer before reciting the Psalms in cases of sickness.¹ The prayer deserves careful study. It must be observed that, although the Rabbis fully believed in the efficacy of prayer, they did not, as the Christian Scientists do, deny the existence of disease or the power of drugs. The Essenes, for example, according to Philo, joined the care of the body to that of the soul by avoiding cities: 'just as foul air breeds disease, so there is danger of contracting an incurable disease of the soul from . . . bad associations' (*Quod omnis probus liber*, § 12, cited in *JE* v. 227, foot, inner column).

The principle of 'measure for measure,' fitting the punishment to the sin (כְּכֶּה בְּכֶה וְכֶה בְּכֶה), was strongly held by the Rabbis, as may be seen from the extracts cited above, but, in spite of this, the solution of the problem was found in the theory of עֲשֵׂת שְׁלֵם אֱהָבָה, 'chastisements of love' ('whom the Lord loveth he chasteneth'), and this is, of course, the real solution of the whole problem of evil: man's inability to realize that what is to him evil or misfortune need not in reality be so. See Mishn. *Berakhoth*, ix. 5 (p. 17, ed. Staerk, Bonn, 1910, Lietzmann's series):

קֶאֱמָרָה בְּכָל יְמֵי חַיֶּיךָ בְּכָל יְמֵי חַיֶּיךָ וְנִתְּנָה לְךָ בְּכָל יְמֵי חַיֶּיךָ. 'With all thy might (read not וְנִתְּנָה לְךָ but וְנִתְּנָה לְךָ) for every measure (good or evil) which He meteth to thee, thank Him.'

Misfortune is not necessarily evil, nor is disease necessarily the outcome of sin. Man cannot always distinguish good from evil, and his mind has not the power of perception, beyond a certain well-defined limit. 'From the mouth of the Lord shall there not proceed both evil and good?' (Is 45⁷). 'I the Lord make peace and create evil' (Is 45⁷). The inability of man to comprehend the Divine scheme for the government of the universe leads him to erroneous conclusions as to the nature of evil and the origin of disease. This was the generally accepted conclusion.

Virt. and Other Studies*, London, 1907; F. Weber, *Jüd. Theol.*, Leipzig, 1897.

HERBERT LOEWE.

DISEASE AND MEDICINE (Persian).—The doctrines concerning bodily diseases and their treatment by medical art form a very considerable part of the Avestan system. In strict accordance with the dualistic conception of the universe, bodily disease and its treatment by medical art correspond exactly with sin, regarded as a spiritual malady, and its treatment by religious exercises conceived as an ethical or spiritual medicine. Similarly, owing to the dualistic division of the universe into a good and an evil creation, all bodily diseases are expressly declared to be creations of the Evil Spirit (see under art. DUALISM). In *Vend.* xxii. Ahura Mazda declares that Anra Mainyu created 99,999 diseases (a fanciful number, like that of the Hindu

¹ Both of the last-named items may be seen at the end of Heidenheim's ed. of the Psalms, Roedelheim, 1866.

gods), which are variously estimated, however, as 90,000 in the Gujarati translation, or as 10,000 (*Bund.* ix. 4), or even as low as 4333 (*Dinkart*, ed. Peshotan, vol. iv. cap. 157. 41, 43). A considerable number of names of diseases are preserved in various parts of the Avesta, and have been carefully collected and discussed, especially by Geiger in his *Ostirân. Kultur*; but most of the names are decidedly obscure, and little improvement has been made since Geiger's study; even Bartholomae's great lexicon throws no further light upon the terms used.

It is fairly certain, however, that we may find in them fevers (*tafru, dazhu*), and diseases of the head (*širasti, sârama*). As skin diseases were and still are a special scourge of the Iranian countries, we naturally expect to find mention of leprosy, and as a matter of fact this dread disease apparently (in spite of de Harlez's striking argument to the contrary) is indicated by the term *pasao vitareto tanus* (*Vend.* ii. 85; *Yt.* v. 92), probably 'leprosy which segregates the body' (cf. Pahlavi *pâsâh*, Pazend *piak*, Mod. Pers. *pes*, Kurdish *piêt*). In *pâman* (*Yt.* xiv. 48) we may see either leprosy, according to the general interpretation, or itch (S. E. Dubash), which is probably also indicated by *garvnu*. Among other terms, more or less obscure, the identification of which is largely conjectural, *vâvâreshi* (*Yt.* xiii. 131) probably indicates a venereal disease; *tafru* . . . *tanuys* *zoishnuys* (*Vend.* vii. 178) may be puerperal fever; *skenda* (*ib.* v. 160) may indicate a rupture; *aghosti* (*ib.* vii. 146) and *vazem-naosti* (*ib.* xx. 9, 11) most probably signify rickets and caries of the bone; *duruka* (*ib.* xx. 14, 20) almost certainly calculus; *kurugha* (*ib.*) seems to be the Modern Persian *kurrî*, carbuncle (Eoutum-Schindler, *EDMG* xxxvii. [1883] 64 ff.). In *âstairya* we seem to have the name of some eruptive disease, like smallpox or measles. Among a number of hitherto quite unidentified terms, three beginning with *azh-* in all probability refer to diseases caused by snake-bite.

The origin of the art of medicine as recorded in the Avesta is supernatural, and associated with the name of the hero Thritha, who, according to the *Vendidad*, was the first physician, 'the first of those heroic, active, benevolent men, with magic power, brilliant, powerful, before the giving of the Law, who made the various diseases cease.' He besought Ahura Mazda for a remedy against poisons (*vish-citrem*, or perhaps 'eine von Giftpflanzen stammende Arznei' [Geiger]), and a metal knife (for surgical operations). Ahura Mazda narrates that he gave him thousands and millions of medical plants, among them the mysterious *gaokerena*, the later *gôkart* tree, the source of all medicines (*Vend.* xx. 1-17). The Yashts appear to confound this Thritha with Thraetaona, whose name seems to be a patronymic derived from the former—for his *fravashi* is invoked against diseases. Darmesteter quotes Hamza as stating that Faridûn (i.e. Thraetaona) was the inventor of medicine, and adds that the Modern Persian amulets against disease bear the name of Faridûn (see CHARMS AND AMULETS [Iran.], vol. iii. p. 449*). Moreover, the genius Airyaman (apparently the personification of prayer) is also intimately connected with the medical art. Ahura Mazda calls him to come and expel disease and death (*Vend.* xxii. xxiii.). Later on, in the Pahlavi *Dinkart* he becomes the tutelary genius of physicians, to whom he gives miraculous help to cure men's bodies. As we shall see, prayer was always regarded as the most efficacious of remedies.

The commonest term to indicate indifferently 'medicine,' 'healing,' 'medicaments,' or 'physician' is *baeshasa*, corresponding to the Skr. *bhîshaj*, *bhîshaja*. In Pahlavi we find this word as *bešaj*, but more commonly under the curiously inverted form *brîshak*, as in Modern Persian and in the Armen. words *bzishak*, 'physician,' and *bzishkek*, 'heal.'

The Avesta attributes great importance to the threefold division of medicine according to the means employed: *kereta*, the knife; *urvara*, herbs; *manthra*, formula—as we should say, surgery, medicine, and prayer. This is also the well-known division of the Greeks: Pindar, speaking of Asklepios, says (*Pyth.* iii. 91-95):

... τοὺς μὲν μαλακαῖς
ἐποιδαῖς ἀμψέων,
τοὺς δὲ προσάνα, πύ-
νοντας, ἢ γυνὸς περὰσσιν πόντον
φάρμακα, τοὺς δὲ τοιαῖς ἔσσαντες ὀρθῶς.

As Pindar gives the first place to *ἐπαιδα*, so the Avesta esteems the cure by prayer or conjuration the best of all; so that the prayer-physician (*manthro-baeshaza*) is called 'the physician of physicians.' In fact, the Manthra Spenta, or sacred formula, is personified and invoked as a genius: 'Heal me, O Manthra Spenta, O brilliant one!' It is Ahura Mazda himself who speaks, and promises thousands of camels, oxen, and sheep (*Vend.* xxii. 7-10). This *manthra* is not prayer in our sense, but a conjunctory formula, as employed so often among Eastern peoples. Homer, too, shows it as employed together with surgical treatment:

ἀτελὲς δ' Ὀδυσῆος ἀνέμῳ, ἀντιθέου,
δῆσαν ἐπιστάμενος· ἐπαιδῇ δ' αἶμα κελαινὸν
ἐσχέον (Od. xix. 456-8).

There is an excellent specimen of these conjunctory formulae in *Vend.* xx. 7: 'I conjure thee, disease! I conjure thee, death! I conjure thee, burning! I conjure thee, fever! I conjure thee, headache! . . . I conjure thee, smallpox (?)!' There is a striking analogy between these conjurations and those employed by the Akkadians (Lenormant, *Chaldean Magic*, Eng. tr., 1877, pp. 4, 20, 280). These formulae, as with the Greeks and Hindus, may, like so many other elements in the Avesta, be derived from an earlier population (perhaps Turanian) absorbed by the Aryans.¹ The genius of metals, Khshathra Vairya, is said to have given the first physician, Thritha, a knife with a golden point for surgical operations (cf. *Vend.* xx. 3). Careful instructions are given for the training and examination of surgeons and physicians, based on the principle of *experimentum in corpore vili*. The candidate is to practise, not on a Mazdæan, but on a *daiva*-worshipper, that is, the follower of any other religion. Should he operate upon one such with fatal result, and again a second and a third time, he is declared incapable for ever of practising either medicine or surgery. Should he persevere and injure a Mazdæan, he is held guilty of a crime equivalent to homicide. After three successful experiments, however, he is considered a fully qualified medical man (*Vend.* vii. 95-104). A serious view was taken of a physician's duties: he must make all speed to visit his patients; if the disease attack one at nightfall, he must hasten to arrive by the second watch; if at the second watch, he must arrive by midnight; if during the night, then by daybreak (*Vend.* xxi. 9-11). The fees of the physician are minutely regulated according to the rank of the patient. A priest pays only by liturgical prayers and blessings. The payment for the various chiefs of a household, a village, a clan, or a province, are respectively an ass, a horse, a camel, and a yoke of four horses; whilst, for the wives, female animals corresponding are required. It would appear that later on these fees were changed into monetary payments: the Pahlavi commentator estimates the prayers paid by the priest at 3000 *stirs* (Gr. *στάρη*), whilst the yoke of four horses is valued at 70 *stirs*. It may be remarked that the Avestan physician was also a veterinary surgeon, for a scale of charges is also fixed for the treatment of cattle, great and small (*Vend.* vii. 105-117), and it is distinctly said that the same means must be employed for the cure of a rabid dog as for one of the faithful (*ib.* xiii. 97-99).

Turning now to the later Pahlavi literature, we find the whole subject of the art of medicine most fully and systematically treated in an interesting tractate incorporated in that encyclopædic work, the *Dinkart*, and forming ch. 157 of bk. iii. printed in vol. iv. of Peshotan's edition (Bombay, 11 vols., 1874-1910). It is by far the most considerable chapter of the whole work. It falls into

¹ An amusing remark by a more recent Parsi commentator quoted by Darmesteter (note to *Vend.* vii. 120) is thus naively expressed: 'He may not cure, but he will do no harm!'

four distinct parts: (1) medicine, (2) the medical man, (3) diseases, (4) remedies.

It is curious to remark that Hindu medical science also distinguished the 'four feet' (*pada*) of medicine, which, however, were reckoned as: the physician, disease, medicine, the nurse; while Hippocrates has a threefold division: ἡ τέχνη διὰ τριῶν, τὸ νόσους, ὁ νοσῶν, καὶ ὁ ἰσθρὸς (*de Morb. Vulg.* l. 1).

The author begins by defining the basis or foundation (*bān*) and the necessity of medicine, which is, of course, owing to the action of the Evil Spirit. He next distinguishes between spiritual and material medicine, and again between general and individual medicine—the former apparently applying to the maintenance of the public health, and the latter to that of individual patients. It is curious that, whilst on the whole following the medical system of the Avesta as above described, the *Dinkart* recognizes *five*, instead of three, means of healing, viz. formulæ, fire, herbs, acids, and the knife. Another interesting distinction is that of prophylactic medicine (or hygiene, as we should say) for the preservation of health, and curative medicine for the healing of disease. In accordance with this, two kinds of practitioners are also distinguished: the *drūstapat*, 'master of health' (as we might say, officer of health), and the *bišhak*, 'healer,' or doctor. In the section specially devoted to the physician several questions are treated. The supreme chief of corporal medicine is the Sovereign (*i.e.* the king); of spiritual medicine, the *Zarathustrōtēma*, or supreme high priest. The matter (*māto*) on which the physician exercises his art is defined to be, for the spiritual physician, the human soul endowed with a body; for the corporal physician, the human body endowed with a soul. The reciprocal action of body and soul is then discussed with considerable skill, and corresponds pretty much with our idea of *mens sana in corpore sano*. The description of a perfect physician of the body is worth quoting:

'He should know the limbs of the body, their articulations; remedies for the disease; should possess his own carriage and an assistant; should be amiable, without jealousy, gentle in word, free from haughtiness; an enemy to disease, but the friend of the sick; respecting modesty, free from crime, from injury, from violence; expeditious; the right hand of the widow; noble in action; protecting good reputation; not acting for gain, but for a spiritual reward; ready to listen; having become a physician by favour of Aryanman; possessed of authority and philanthropy; skilled to prepare health-giving plants medically, in order to deliver the body from disease, to expel corruption and impurity; to further peace and multiply the delights of life' (§ 19).

The regulations for the probation of the medical candidate are the same as those we have quoted from the Avesta, whilst, as for fees, the treatise simply refers to the sacred text. In the third part we meet the statement that there are two fundamental maladies, denominated *faraēbūt* and *aibibūt*, which seem to indicate rather some forms of moral evil, but their explanation is extremely obscure, although the words occur in several treatises. The Evil Spirit (*Ganāk Mīnōi*) is the cause of all evils, both of soul and body—for the former, of every kind of vice and evil passion; for the latter, of cold, dryness, evil odour, corruption, hunger, thirst, old age, pain, 'and all other causes of malady and death.' The number of diseases is given as 4333; their names are simply those of the Avesta in a slightly altered form. One interesting division of maladies is that which divides corporal diseases into voluntary (such as venereal disease) and involuntary (such as fevers); whilst the diseases of the vital principle (*jano*) are distinguished as vices tending forward (*e.g.* passion and anger) and those tending backward (*e.g.* idleness).

The fourth and last part of the treatise may be styled therapeutic. The number of remedies derived from the vegetable kingdom is said to be seventy, and they are divided again into those which are by nature beneficent, and those which of their nature are poisonous, but may be so treated as

to become medicinal. As an example of the former is given the myrobalan of Cabul—the only plant which is mentioned. The miraculous (*rajdato*) trees, the *Gokart* and the white *Hōm*—here clearly distinguished from one another—are referred to as sources of healing. Health is next divided into two kinds—health of the soul and health of the body; and the various oppositions between the powers of the former and certain vices co-existent and yet hostile are detailed at length. In the whole passage we have a well-sustained distinction between the *hamēstarik* (diametrically opposed, contradictory, excluding the opposite) and the *brātarrato* (co-existent but hostile); and the passage entirely confirms the sense of this latter difficult word which the present writer propounded in the *Academy*, xvi. [1884] 397. A similar distinction is then made between the elements of the body and the hostile forces, cold and dryness, produced by the Evil Spirit—a veritable *bellum intestinum* between the four elementary qualities as described by Galen and other early medical writers. Curiously enough, however, with the Iranians the position of dryness and moisture is reversed, dryness and cold being together reckoned among evil qualities—an inversion, no doubt, to be explained by the rarity and consequent vast importance of humidity in ancient Iran. The action of the blood, of food, and of moderation are next explained, as well as the necessary interdependence of spiritual and corporal medicine.

An interesting question is that of the relations between Iranian medicine and that of India and Greece. The researches of Haas (*ZDMG* xxx., xxxi.) and Müller (*ib.* xxxiv.) have conclusively shown the great influence exercised by Greek medicine on the Hindus, and a question of the latter writer deserves our attention here:

'A fact which concerns not Indianists, but rather students of Middle-Persian and Arabic literature, is this—it may be deduced from the Arabic texts that it is worth while inquiring by what road Indian medical literature reached the Muhammadans. We know that Indian tales reached the realms of the Chalifs through the Pahlavi: is it not therefore obvious to suppose the same road for medical science?' (see also J. Jolly, *Medicin*, *GLAP* lii. 10, pp. 17–19).

We have indicated above certain parallelisms between Iranian medical theories and those of the Greeks, though none of them can be considered very decided. History, however, bears out the probability of such influence of Greek medicine upon Persian. Greek physicians are to be found at all epochs at the courts of Iranian sovereigns. Such was the case even under the Achæmenians: we need cite only Demokedes under Darius I., the famous Ctesias, and Apollonides mentioned by the latter. Spiegel thinks it probable that in populous cities foreign physicians often competed with native ones. Under the Sasanians, too, we find Greek physicians at the royal court, and Spiegel is of opinion that Indian physicians made their way there also (*Eran. Alterth.*, Leipzig, 1878, iii. 582).

LITERATURE.—W. Geiger, *Ostiran. Kultur im Altertum*, Erlangen, 1882, pp. 391–399; L. C. Casartelli, *Traité de médecine mazdéenne traduit du Pehlvi et commenté*, Louvain, 1886, also *La Philosophie religieuse du mazdéisme sous les Sassanides*, Louvain, 1884 (Eng. tr., Bombay, 1889); S. E. Dabash, *The Zoroastrian Sanitary Code*, Bombay, 1906—a skilful attempt, by a highly qualified Parsi medical man, to bring the Avestan medical and hygienic system into correlation with modern European medical science, and 'to show my educated co-religionists how well the laws of the Vendidad, enacted for the preservation of health and for the observance of the purity of things, are in harmony with the laws of hygiene and the principles of the science of medicine.'

L. C. CASARTELLI.

DISEASE AND MEDICINE (Teutonic).—

I. Disease.—Nothing made so powerful an impression upon the feelings of primitive man as the phenomena of disease and death. Whether the end came as the inevitable result of a prolonged

struggle, or whether it befell with startling suddenness in the heyday of life—in either case the terror-stricken mind was forced to face the question as to the cause and origin of the dread occurrence.

Death from loss of blood and death by strangulation were of course more or less familiar incidents of the chase and of war. But what mysterious power was it that suddenly opened the veins within the body, and brought a comrade's life to an end by hæmorrhage; or, again, obstructed the air-passages from within, and thus caused the hale and hearty youth to perish by suffocation, convulsively clutching at his throat? The inmates of the smoky turf-cabin had often felt this malign power at work, as it squatted—crushing and squeezing—on breast and throat, and had awaked with screams of terror and bathed in perspiration: it was the dreaded *alp* (incubus, nightmare), who had all but strangled them to death. By night likewise they were seized by that frightful something which resides in the body permanently, and thus differs from the *alp* that comes by night, or even in the midday slumber, yet speedily withdraws again. The unwelcome visitations of the incubus must have made a profound impression on their victims; and it was an experience of similar character which now and again befell them in spring, when the storm was raging outside, and alternate chills and burnings seized them, causing the shiver of fever, tormenting them in sleep with wildly-rushing dreams, and at length bringing them in their delirium to the experience of things which, as their house-mates affirmed, no one else had perceived: the fell work, surely, of gruesome creatures, invisible, but to feeling all too real, which hemmed them in, prowled after them, fell upon them like stealthy foes—the spirits and demons of disease, which the causal instinct, with its unconsciously creative tendency and its power of stimulating the imagination, depicted in endlessly varied forms, corresponding to the observed phenomena accompanying the affliction. A special object of misgiving was the unseen, though living and potent, entity which dwelt in friend and foe alike, which passed from the body at death and left it behind, *i.e.* the soul, as primitive man was always obsessed by the suspicion that departed souls still pursued their friendly or hostile activities in the shadowy host of disease-spirits.

Among the Teutons the souls of the dead were believed to join the great demonic host which, comprising elves, 'mares,' *Truden*, *Schräte*, and trolls, swept along in the train of Woden and Holla: winged creatures who appeared everywhere, and had their home in the savage forest. On occasion the disease-demons assumed bodily shape, showing themselves in every variety of form, and appearing in the disease itself as worm-like threads that creep under the skin, or as actual worms living in wounds and sores, or being discharged therefrom. The idea of the wriggling worm as the embodiment of the disease-demon was widely current among the Teutons. The demon was supposed to emerge from the worm in the form of some winged being, or of an ugly, crawling, slimy toad.

Next in importance to the incubi, or spirits of the dead, who afflicted the survivors with horrible nightmares, or consorted with them lasciviously in dreams, and who, in the form of some animal, often forced their way to the fireside through holes and cracks (cf. O.N. *mara kvalði*, 'the torment of the mare,' *mara trad*, also *cauche-mar* [*cauche*, from Lat. *calcare*, 'to tread'], 'the walk of the mare'), it was the horde of *alps*—creatures fabricated by the imagination from the nightmare—the *Elben*, the race of elves (A.S. *elf-cynn*), who, as

noxious demons practised their wicked magic (A.S. *elf-siden*) upon mankind, especially in attacks of fever. They were the personal causes of the so-called elf-disease, which injures mankind as 'elf-shot' (A.S. *ylfa gescof*, O.N. *alfskud*, Danish *elverskud*), striking the skin (A.S. *on fell scoten*), the flesh (*on felse scoten*), the blood (*on blod scoten*), or the limbs and joints (*on lid scoten*); or as the less injurious elf-breath, which, when merely blown (O.N. *alvugst*, A.S. *alfblest*, Swed. *elfveblast*) upon human beings, caused a swelling of the limbs; or even as a voracious sucking (A.S. *elf-sogopa*) of blood or marrow or bone; or as some other vagrant affliction (O.N. *alfa-volkum*, 'elf-roll,' cf. 'walk') which falls upon a person in its flight. When a man fell a victim to such an 'onfall' (A.S. *on-feall*), his neighbours said 'the elves are upon him.'

Besides these, however, there were numerous other noxious spirits ill-affected towards mankind, as may be inferred from the personal cast of many of the ancient names applied to particular diseases, as, e.g., *Nessia*, *Nagedo*, *Stechedo*, *Troppho*, *Crampho*. Touching-demons caused dysentery, lymphangitis, and anthrax; stroking-demons (cf. 'moon-struck'), face paralysis and mental derangement; burning-demons, blisters and gangrene; biting, pinching, scratching, and bruising-demons, skin-affection like cancer, extravasation of blood, itch, freckles, or phlegmonous inflammation, but they could also affect the body internally, and give rise to ulcers in the stomach (O.H.G. *magobizado*). As tearing-demons they produced gnawing pains in nerves and muscles; as striking-demons they afflicted men with apoplexy and epilepsy, with blindness and mumps; as pushing-demons they brought on hiccup, and the *nösch*, which presses upon the heart and the womb; as pricking-demons they were the cause of pneumonia and pleurisy, with their accompanying pains in the side, and also of sunstroke; as choking-demons they caused disorders which constrict the throat (croup, diphtheria); as binding-demons, rickets and phimosis; as gripping-demons (*hardgreip*, *widgreip*), the swoonings and spasms of uræmia, eclampsia, and epilepsy; as blowing-demons, disorders of the eyes (especially blennorrhœa in the newly born) and the blisters of anthrax, as also smallpox and plague, though these, no doubt, were sometimes figured as dragons and griffins rushing hither and thither, and killing people with the poisonous fumes they exhaled.

Human beings were also exposed to the aggressions of certain repulsive creatures of diminutive size, such as the *dwarfs*, who caused monstrous births, local paralysis, lunacy, mumps, and similar diseases (e.g. idiocy, apoplexy, herpes), produced convulsions, molested people at night by crushing and stifling, and, in particular, brought about baneful fevers (thus A.S. *dweorg* practically means an attack of fever). Evil-disposed demonic *Schelme* (cf. Scot. 'skellum') smote man and beast with pestilence, conveying influenza (O.H.G. *skelmo*, *skelma*) and the 'black death' in fetid effluvia—an idea which reveals a glimmering sense of the danger of infection, as does also the notion of the 'Schelmenbeine' in starving cattle, the 'Pest-schelme' being supposed to take material shape in these.

Demons of disease dwelling in forests were also regarded as the less noxious *Schräte* (goblins) and *wights*, and were personified as *Düsel* (stupors), or as 'yellow hags,' yellow-bellied *Säiden*, who knit yellow vestments with yellow needles—the yellow smock-frocks which they throw over the bodies of their victims as jaundice (*Gelbsucht*), or as red skin (*Pellmergen*) in erysipelas, or as tumid skin (*Schwellmergen*) in local dropsy. This idea, as implying the personification of local affections, reveals a some-

what more advanced conception of disease, which must have coexisted from the outset with the demonistic view, the latter applying more particularly to acute and chronic infectious diseases, and the whole brood of 'nervous' disorders. The demonistic view of disease has a direct link of connexion with the NT conception of demons in the Gothic word *dæimōnars*, and at length culminates in the mediæval theory of possession by devils (A.S. *dæofolstoc* and *dæofolstocnes*).

2. Medicine.—In the practice of healing, likewise, a simple empiricism no doubt prevailed among the ancient Teutons from the first, though naturally the evidence of this fact has almost entirely disappeared. But this experimental therapeutics became almost inseparably combined with demonistic conceptions and modes of thought.

A wound was first of all cleansed and bound up with vulnerary herbs. If the bleeding was profuse, the sore was sprinkled with the dust of dried plants, and the bandage was tightened. But, as this did not always prove effective, recourse was had to the 'more potent' remedies—of which we shall speak below—as preventives, and this mode of treatment was presently applied in all cases and 'for all cases'; i.e. it became customary to use such remedies at the very beginning of the treatment, as unexpected and apparently causeless contingencies might supervene in the process of healing—complications as mysterious as they were dangerous, such as inflammation, erysipelas, diphtheria, hospital gangrene, and lock-jaw; in short, all those concomitants of bodily injuries which are now traced to infection. These unwelcome manifestations were regarded as 'gruesome companions,' the personified influences of malicious denizens of the world of spirits and demons, though they might also be due to the machinations of evil-disposed human beings who were able to move the demonic realm and make it subservient to their will. Moreover, there was always the possibility that the invalid had in some respect neglected the claims of religion. He might have fallen short in performance of his duties towards the friendly deities of his people, so that they had sent the injury as a punishment, or had given to the wicked elves, whom they generally held in check, that permission to work injury of which they so fiercely availed themselves. For all such possibilities timely and rapid measures had to be taken. Horror lowered upon primitive man from all sides, and it was the part of wise counsellors—both men and women, but, in all that related to disease, more especially women—to soothe the terror-haunted soul.

Diseases of supernatural origin, and, in fact, all painful things that could not be traced forthwith to sensible causes, might be Divine punishments, from which the sufferer could be absolved only by expiation—by the bloody or unbloody sacrifice. The sacrificing priest secured his people against the demons of plague. Odin himself, however, is the master-magician, the 'magic-father' (O.N. *galdro-father*); as the sun-god he scatters the nocturnal swarm of the 'night-goers' (*nihtgenga*); he is the mighty elf-dispeller, the scourge of the *alps* (*græti alfa*). Nevertheless, it was also the custom to offer sacrifice to the *alps* themselves (*alfablot*), who were often well-affected towards men, and had some knowledge of the plants that must be dug on moonless nights. The cult of Eir, the special goddess of healing, is of relatively late origin; she was the personification of the gentle hand of woman in nursing the sick (O.N. *eira*, 'to care for,' 'nurse'). But Odin still held his place as the supreme god of healing, and the healing 'touch' of 'Wodan's finger' was long the prerogative of English and Frankish kings—de-

scendants of Odin—as a cure for scrofula and struma ('king's evil'). At an earlier date the power of curing disease was ascribed to the god Thor, the great preserver in times of sickness and danger, the destroyer of evil spirits. But Odin the Wise knew all the secrets of the magic which counteracts the work of demons: 'succouring oracles of healing' (*Hávamál*, 11, 9), 'long, powerful runes of life' (*Rigspula*, 44), 'succouring staffs and protective runes' (*Sigrdrifumál*, 5 and 9), and 'staffs full of healing virtue' (*Hávamál*, 145).

Here we come upon the most important element in the healing magic directed against the demons of disease, viz. the *spell*, which was inscribed on rods, pieces of bark, or the skin, as, e.g., the hand, of the invalid, and which might be whispered, spoken, chanted, or shouted. All the ancient Teutonic languages furnish numerous examples of such spells or charms—more especially formulæ for the healing of wounds, the stanching of blood, and the prevention of swelling and mortification. Thus, Hartmann von Aue tells how, after a wound had been bandaged, Gawan, faithful to ancient Teutonic custom, uttered the spell: 'Zer wunden wundensegen.' Again and again in the 'blood-charms' we find the phrases: 'stant plot fasto,' 'verstand dû, bluotrinna.' Nor are other possible contingencies forgotten; thus 'dyn stekent, dyn swillent, dyn killent, dyn valent, dyn stükent, dyn swerent, dyn rennent sholt laten'—a spell which calls for uninterrupted convalescence. But the folk-medicine of the ancient Teutons comprised similar spells for many other ailments. Thus we find charms for worms, designed to expel the *nesso* (worm) with *ninn nessimchinnon* ('nine little worms') from the marrow, through veins, flesh, and skin, and so out of the body;¹ or to kill it, or cause it to drop from the sore in the form of maggots. There were also fever-charms, used for destroying or expelling 'ritten'; charms for fracture and dislocation, spoken while the injured limb was being stroked or rubbed, and supposed to help the disconnected bones to reunite; charms for the eye, which arrested runnings, swelling, pain and dimness in that organ; charms for convulsions, curing epilepsy, 'wild shot,' gout, obstruction of bowels, colic (*bermuoter*), 'cold pains,' and 'irregular' gout; charms for consumption, curing all forms of wasting disease; charms for swelling, which removed intumescences (e.g. wens) and swollen glands (*kyrrill*); charms for the teeth, which destroyed the worms of toothache and caries; birth-charms, which were uttered before the knees of a woman in labour, and helped to usher the child safely into the world and bring away the afterbirth (as, e.g., in the *Edda*, they were 'sung vigorously' for Börgny by Oddrún, supported by the birth-runes 'painted on hands and joint-bandages' as 'health-marks').

Sometimes the expedients employed took the form of slips of bast inscribed with formulæ similar to the foregoing (*zouborgiscrib*), and suspended in little boxes (*plechir*) around the invalid, or bound upon the diseased part (*ligatúra*); while they were also used as prophylactics, as amulets for the 'breaking of sickness.' But charms were likewise of avail for the transference of diseases to another place, and for conveying them to animals and trees ('branch-runes,' 'which must be learned by any one who would be a physician,' [*Edda*]). Charms were spoken or chanted in gathering medicinal and magical herbs, in making decoctions, and in other proceedings, such as passing or creeping through split trees; they were uttered over an unconscious invalid, or while a

¹ Cf. the celebrated O.H.G. 'Munich worm-charm,' which will be given in full in the art. *MAJOR* (Teutonic).

rune-embellished gold ring was being moved in a circle round his wound; probably also when an iron or bronze ring was fixed round a limb as a prophylactic against demons, and even in jumping through the solstitial fire, the smoke of which the leaper tried to catch and retain in his clothes as a protection against fever.

The practical parts of these various expedients, and many other actions of the same kind, were, no doubt, frequently—perhaps more frequently—employed without spells, the place of the latter being gradually taken by new manipulations, articles of clothing, and other paraphernalia, e.g. wooden masks, hats, cloaks, bags with the most fantastic contents, such as talons, claws, nails, hair, small bones and similar trumpery—the stock-in-trade of the witch-doctor (shaman, medicine-man) all over the world. Such objects as images of the gods were dipped in water in order to endow it with special remedial virtues; cakes were baked in the form of the powers of healing, and then eaten; wooden arms and legs were hung up in temples or groves as votive offerings, while magic stones, with or without runic writing (stones of life), were worn as amulets.

Such were the 'medical' ideas, practices, and devices by which the ancient Teutons sought to cure existing disorders and to secure themselves against possible injuries to health. But even those remedial measures which might at first sight seem to be purely natural were in many cases conjoined with a superstitious element. Thus, when applying a rolling massage to the abdomen for troubles in that region, the 'doctor' would have in his hand a beetle or some such creature, into which the disease, or the demon causing it, was supposed to pass; while, in trying to dislodge the demons of pain from certain parts of the body by fumigating them with the incense of narcotic herbs, the operator softly uttered a spell, or chanted a magic verse. The demonistic theory of disease was itself of empirical origin. Even here a slight though real element of fact underlies all that is merely fanciful, and it was only as a secondary phase that it unfolded that riotous luxuriance which took shape finally as an imaginary host of disease-demons encompassing mankind. These demons were the outcome of what might be called observation of pathological symptoms, which found its materials in all manner of deformities in men and animals; such deformities, again, adding fresh matter to the ideas born of the nightmare, and constantly confirming them by apparently positive evidence—just as the intestinal or external parasite seemed to corroborate the personifying animistic theory of disease. The parasitical theory of disease is thus intimately related to the demonistic.

The anti-demonic incantation was usually regarded as appertaining specially to the individual, who used it to protect himself against, or deliver himself from, some particular demon; while the bloody sacrifice performed by the tribal priest was designed to guard the whole tribe against surprise attacks by the host of disease-spirits. But we also find incantations of an almost general character used as safeguards against possible onsets of demons—against 'whatever elf it may be' (*ey þat ylfa þe him sie*). All conceivable combinations of the supernaturalistic therapeutics of magic and the physico-chemical therapeutics of manipulation and pharmacy have been evolved in the course of centuries, nor can it even yet be said that, in the folk-medicine of the Teutons or other races, the purely natural standpoint has finally carried the day.

K. SUDHOFF.

DISEASE AND MEDICINE (Vedic).—Limitation of the subject.—The distinction between charms for the cure of disease (*bhaiṣajyāni*) and other charms is frequently evanescent. They approach with special closeness the charms to secure long life (*āyusyāni*, cf. MAGIC [Vedic]) on the one hand, and the charms of exorcism (cf. WITCHCRAFT [Vedic]) on the other. Moreover, charms for easy childbirth, for abortion, and for the promotion or destruction of virility might properly be classed among them, but are in fact classed regularly among the rites pertaining to women (*stri-karmāṇi*, cf. MAGIC [Vedic]). Instead of attempting any theoretic distinction, it seems best to follow the Hindu classification, and treat in this article only charms of the type contained in the *bhaiṣajya*-chapters (xxv.-xxxii.) of the *Kaushika Sūtra*, reserving the related charms for the articles cited above.

1. Sources.—The chief source for our knowledge of the beliefs relating to disease in Vedic times and of the practices based upon them is the Atharvaveda. Of hymns or parts of hymns intended to secure the cure of more or less sharply defined diseases, the Atharvan *Saṁhitā* contains something over a hundred. The practices by which these were at one time accompanied are given in the *bhaiṣajya*-chapters of the *Kaushika Sūtra*.

It cannot, of course, be always confidently asserted that the practices there described are identical with those employed when the hymns were composed. But that the statements of the ritual are, in the main, based upon a good understanding of the hymns is shown by the flood of light that the study of the ritual has thrown upon the interpretation of the hymns (cf. the history of their interpretation which is given in the Commentary to pages 1-48 of Bloomfield's 'Hymns of the Atharva-veda,' *SBE*, vol. xlii.). That the treatment of the hymn in the ritual is secondary is sometimes too hastily assumed. Thus vi. 44 is clearly a charm against *āśvita* (diarrhoea) and *vātikāra* (production of wind in the intestines), but *Kaushika* xxxi. 6 is supposed to rubricate it in a remedial rite against slander. The position of the rite in the *Kaushika* shows that it is intended for the cure of some disease, and, if the commentator is right (as he most probably is) in saying that it is to be employed 'in case of slander,' this means only that the origin of the disease *vātikāra* is ascribed to the evil speech of an enemy (cf. below, for disease originating from curses, evil eye, and sorcery).

a naïve, but not improbable, conception. On the other hand, both the materia medica of the *Kaushika* and its therapeutic practices—alight as these are—seem more advanced than those of the *Saṁhitā* itself. In some cases also the connexion between the rite and the hymn is so superficial that there can be no doubt of the secondary mechanical adaptation of the one to the other. In such cases it is usual to assume that the rite has been made to fit the charm. In view, however, of the great conservatism that in general controls such practices, and the probable pre-historic origin of certain Atharvan charms (cf. Bloomfield, 'The Atharva Veda,' p. 61, and the literature there cited), the opposite possibility deserves more consideration. In the present state of Vedic studies, at all events, we can seldom hope to do better than understand an Atharvan hymn as the *Kaushika* understood it.

Taken together, the two sources furnish a better

picture of primitive medicine than has been preserved in any literature of so early a period. Further interest is added to the subject by the fact that these medical charms are the germ from which the later Hindu medicine was evolved. The stage of its development represented in the medical *Sāstras* implies several centuries of evolution from the standpoint of the *Kaushika*, and is now known (through the discovery of the Bower MS.) to have been attained previous to the 5th cent. of our era. The relation of the later medicine to the Atharva is recognized by the Hindus themselves, who regard the Yajurveda as an 'after-Veda' (*upaveda*) of the Atharva. Hindu medicine in turn has, through the Arabs, left its effect upon European medicine.

Other Vedic texts, owing to the purpose of their composition, do not have occasion to handle the phenomena of disease in the same concrete fashion, and to the same extent. Apart from the addition of details of a similar nature, their chief contribution consists in a picture of the general attitude of their authors and users towards disease. Into this picture as a background the details of the Atharva fit with perfect harmony. The difference between the hieratic texts (the Rigveda in particular) and the Atharva is neither a difference in time, nor a difference in enlightenment between the adherents of these Vedas. It is rather the difference in attitude of the priest and the physician (each liberal enough to employ on occasion the resources of the other) when brought face to face with disease.

2. The Atharvan practice of medicine.—(1) *Knowledge of anatomy*.—The Atharva evinces a very thorough knowledge of what may be called the coarser anatomy of the human body, naming its various external subdivisions, and many of its internal organs. Thus ii. 33 is a long list of the parts of the body from which the disease is to be torn; similar lists occur also in ix. 8, x. 2, and xi. 8. Beyond this knowledge, which was to a great extent a pre-historic acquisition (cf. O. Schrader, *Reallex. d. indogerm. Altertumskunde*, 1901, s.v. 'Körpertheile'), the Atharva can hardly be said to go. The apparent distinction between veins and arteries in i. 17. 3 is offset by the occurrence of the same words in vii. 35. 2, with the more general sense of 'internal canals,' meaning entrails, vagina, etc.—showing how vague were the ideas held with regard to such subjects. The isolated statement of ix. 8. 10, 'what is diseased shall become urine,' may be mentioned as an accidental approximation to a partial truth. To be noted, however, is the fact that the Hindu theory of the constitution of the body of three elements—bile, phlegm, and wind—does not appear in the early Atharvan texts. *Vātikṛtanāśanī* of vi. 44. 3 cannot be urged as proof to the contrary, as it means, not 'destructive of (diseases) produced by the wind in the body' (*vātikṛtanāśanī*), but 'destructive of that which has been made into wind.' Evidently, from its association with diarrhoea, it refers to wind in the intestines. The later theory, which appears first in the *Śaṣṇādhyāya*, Atharv. Par. 68, is, of course, familiar to the commentators, who endeavour to foist it upon the *Kaushika*.

(2) *Theory of the origin of disease*.—The popular mind is ever ready to see in disease the manifestation of the will of a supernatural power. To the Atharvan this power was generally one of the hosts of demons by which he believed himself surrounded. How slight was the distinction made between disease and possession may be seen from a hymn like Atharv. ii. 4, which is directed against disease and demon alike. Compare also v. 23. 2, where Indra is invoked to destroy the worms in a child, and it is immediately declared

that all the *arātī* (certain female demons) are slain. It is also clearly implied by the fact that the *Kaushika* contains, among its remedial practices, ceremonies which consist merely in the driving away of the demons that are causing the disease (cf. xxv. 22-36, xxxi. 3-4); in providing the patient with an amulet to resist their attacks (xxvi. 26 f., xxvii. 5 f., xxviii. 7); or in spells to dissipate and remove the harm they have done (xxvi. 29-32, xxviii. 9-11).

These demons of disease are generally vague in outline and indefinite in number, and are known by the names *piśācha*, *rākṣas*, *atrin*, and *kanva*. Of their various pernicious activities, it may be noted that the *piśācha* devour the flesh of their victims (Atharv. iv. 36. 3, v. 29. 5); the etymology of *atrin* points in the same direction, while the *kanva* prey especially upon the embryo (ii. 25. 3). Other unnamed demons (*id.*) are suckers of blood and takers away of fatness, while in xix. 36. 6 figure the dog-like she-demons that recall the dog-demon of epilepsy (*Āpastambīya Gṛhya Sūtra*, xviii. 1) and the dog-like *gandharvas* of Atharv. iv. 37. 11. Another class of beings to whose influences diseases are ascribed are the *gandharvas* and their consorts the 'mind-bewildering' *apsaras* (cf. Atharv. ii. 2. 5, iv. 37, xix. 36. 6). Insanity in particular is ascribed to their influence (cf. vi. 111. 4, also Rigveda x. 11. 2; Pischel, *Vedische Studien*, i. [1889] 188, and the statement of *Taittiriya Samhitā*, iii. 4. 8. 4: 'The *gandharvas* and *apsaras* render mad him that is mad'). The *rākṣas*, too (Atharv. vi. 111. 3), can steal away one's senses. In Atharv. v. 29. 6 f. is indicated one way in which the demons obtain possession of their victim—by entering him with his food. It is with this possibility in view that *Kaushika* xxvi. 10 orders as a hygienic precaution that the sacks of grain belonging to the sick man shall be surrounded with a ring of heated pebbles. As the Atharva makes but slight distinction between demon and human sorcerer, it is not surprising to find the latter causing disease (Atharv. i. 28, iv. 28, xix. 39. 1) or diseases attributed to magic (iii. 7. 6; for methods of thus producing disease, cf. art. WITCHCRAFT [Vedic]), curses, or the evil eye (ii. 7, v. 15 and 16, vi. 96. 2, xix. 35. 3, and *Kaushika* xxvi. 35, xxix. 15-17).

Theoretically the diseases themselves are demons, and in some cases, e.g. *viṣkandha* and *sauṣkandha*, it is impossible to decide whether the word should be considered the name of a demon or of a disease. But the personality of disease-demons is rarely strongly marked, and none of them is exactly comparable with the later smallpox goddess *Sitalā*. The closest approach is to be found in *takman* (fever), the Atharvan name for the disease known to the later medicine as *jaṇva* (cf. esp. the hymn v. 22, in which he is adjured to go elsewhere; and i. 25, vi. 20, and vii. 116, in which he is offered homage). Certain scrofulous sores called *apachit* are supposed to move of their own volition, as they fly through the air and settle upon their victim. So much is this the case, that earlier interpreters understood the word as the name of a noxious insect. As in other popular systems of medicine (cf. A. Kuhn, in *Kuhn's Zeitschrift*, xlii. 49 ff. and 113 ff.), a number of diseases are ascribed to the presence of worms (practically a form of demon [cf. above]) located in various parts of the body, and most fantastically described (cf. Atharv. ii. 31 and 32, v. 23, with numerous parallels in other texts to be cited below).

Less frequently the Atharva ascribes a disease to one of the greater gods, and then often as a punishment for sin. Varuna sends dropsy to punish crime, especially falsehood (cf. Atharv. i. 10. 1-4, ii. 10. 1, iv. 16. 7, vii. 83. 1-4, xix. 44. 8; once also, i. 25. 3, the *takman* is said to be his son

[*s.e.* sent by him], and in vi. 96. 2 [a charm employed by *Kauṣika* to heal the dropsy, but probably originally of a wider scope] the prayer is to be 'freed from the toils of Varuṇa, the foot-fetter of Yama [Death], and every sin against the gods'. Certain sharp pains are ascribed to the spear of Rudra (*Kaus.* xxxi. 7); the arrow of the same god causes tumours (Atharv. vi. 57); the *takman* and the *kāśikā* (cough) are his weapons (xi. 2. 22), and in xi. 2. 26 he is said to send the *takman*. A ceremony to his children, the Maruts (*Kaus.* xxvi. 24), serves as a cure for leprosy. Diarrhoea is connected in i. 2 with the arrows of Parjanya (the rain-god), and lightning (Agni) is regarded in i. 12 as productive of fever, headache, and cough. Takṣaka, a serpent-god, is worshipped in *Kaus.* xxviii. 1, xxix. 1, xxxii. 20 (charms to cure the bites of poisonous reptiles).

The supposed hereditary nature of some disease seems implied in the name *kṣetriya* (the interpretation is disputed), but even it has demons that produce it. Finally, the *sami*-tree is supposed to have some evil influence on the hair (cf. Atharv. vi. 30. 2f., and *Kaus.* xxxi. 1).

(3) *The diseases treated.*—The identification of the diseases treated in the Atharva is difficult in the extreme. In the first place, there is nothing that can be called diagnosis in our sense of the term. The practitioner is concerned merely with the troublesome symptom; of the cause of the symptom, the disease itself, he knows nothing. Sometimes the symptom, e.g. *jālodara* ('water-belly'), is definite enough to enable us to identify the disease; more frequently it is not, e.g. the terms *apachit* ('sores') and *akṣata* ('tumours') must have covered a great variety of afflictions from the most harmless to the most malignant. In the next place, the *Kauṣika*, as a rule, does not state the disease for which its charms are intended. This important item is left to be inferred from the hymn rubricated. Unfortunately the hymns often combine the most varied diseases; extreme instances may be found in ii. 33, ix. 8.

The commentators (of much later date) endeavour to supply this deficiency. Their statements, however, are not only frequently contradictory, but are also evidently affected by their knowledge of the later Hindu medicine. As an example of the way they work may be taken Keśava's statement that *Kaus.* xxx. 13 is a cure for dropsy, heart-disease, and jaundice. Both the ritual and the hymn rubricated (vi. 24) are plainly concerned primarily with dropsy; this disease is frequently complicated with heart-disease, which is, therefore, mentioned in the hymn. But in i. 22 (a cure for jaundice) heart-disease is also incidentally mentioned. Keśava seems to have reasoned that, since the cure for jaundice (i. 22) cured heart-disease, therefore another cure for heart-disease (vi. 24) must also cure jaundice! Finally, there are many obscure terms both in the *Saṁhitā* and in the *Sūtra*.

The most dreaded disease was the 'fever' especially predominant in the autumn (*viśvaśārada*). Its later name *jvara* does not occur in the Atharva, where it is known as *takman*, a name which conversely is confined to this Veda. To it especially are devoted i. 25, v. 22, vi. 20, vii. 116; and to its specific, the *kusṭha*-plant (*Costus speciosus*), v. 4 and xix. 39; incidental mention of the disease is found in i. 12, 2, iv. 9, 8, ix. 8, 6, xix. 34, 10, 39, 1 and 10. The *Gaṇamālā*, Atharv. Par. 32, gives a long list (cf. *Kaus.* xxvi. 1 n.) of hymns that encompass its destruction. This list, *takmanāśanagana*, is made by taking the first five hymns cited above, and adding to them the hymns against *kṣetriya* (ii. 8 and 10, iii. 7), against *yakṣma* (iii. 11, vi. 85 and 127), various panacea-hymns (ii. 9, iv. 28, v. 9, vi. 26 and 91, ix. 8), and a hymn (vi. 42) originally intended to appease anger—heat forming the *tertium comparationis*. The symptoms described are alternation between heat and cold, delirium, return of the fever either (at the same hour) every day, or every third day, or omitting every third day. Associated with it are jaundice,

certain red eruptions (v. 22. 3), headache, cough, spasm, and itch (*pāman*), the last being its brother's son (v. 22. 12).

Yakṣma (also *rājayakṣma*, *ajñātayakṣma*, to which *Taitt. Sam.* ii. 3. 5. 1-3, 5. 6. 4-5 add *pāpapakṣma*) seems to have in the Atharva (cf. ii. 33, iii. 11, v. 29. 13, vi. 127. 3, ix. 8, xix. 36 and 44) no narrower signification than 'disease.' With this accords the statement of *Vāj. Sam.* xii. 97 that there are a hundred varieties of *yakṣma*. The employment of its hymns in the *takmanāśanagana* implies either a disease of marked febrile symptoms or (preferably) such an indefinite meaning. So also does the fact that *Sāntikālpa*, xiii. 2 employs *yakṣmopaghāta* as a synonymous name for this *gana*, while other texts have the form *yakṣman*, congenically adapted to *takman*. Zimmer (*Altindisches Leben*, 1879, p. 375 ff.), in accord with the later medicine, sees in it a pulmonary disease. But a variety of *yakṣma*, called *jāyanya* (*Taitt. Sam.* l.c.), is probably identical with the Atharvan *jāyanya*; for *jāyanya* is associated with *yakṣma* in Atharv. xix. 44. 2, and called *rājayakṣma* by Keśava at *Kaus.* xxxii. 11. All this will be correct if *yakṣma* means simply 'disease,' and still in harmony both with Dārila's statement (*loc. cit.*), that *jāyanya* is some species of tumour (*akṣata*), and the fact that both etymology and the ritual point to *jāyanya's* being a venereal disease. Venereal disease (*grāmya*) is treated in *Kaus.* xxvii. 32f., while the hymn there rubricated deals with *ajñātayakṣma* and *rājayakṣma*. Sāyana's statement, that consumption produced by sexual excesses is meant, is evidently an attempt to harmonize the ritual with the meaning of *yakṣma* in the later medicine. Here may be added the mention of 'abscesses' (*vidradha*, vi. 127, ix. 8. 20); 'serofulous swellings' (*apachit*); and the similar, but harder, 'closed tumours' (*akṣata*, vi. 25 and 57, vii. 74. 1-2, 76. 1-3). Leprosy (*kilāsa*) is the object of two hymns (i. 23 and 24). Keśava also assigns to its cure the practice (*Kaus.* xxviii. 13) with the *kusṭha*-plant, which Dārila, supported by the *Gaṇamālā*, declares to be a cure for fever. Keśava's statement has probably no deeper basis than the fact that *kusṭha* in the later language means leprosy.

Kṣetriya is another term of uncertain meaning. The Atharvavedins regularly explain it as 'inherited disease,' though 'chronic disease' has recently been suggested by Jolly. No description of its symptoms is given. As in the case of *yakṣma*, the inclusion of its hymns (ii. 8 and 10, iii. 7 [cf. besides ii. 14. 5]) in the *takmanāśanagana* suggests either a disease of marked febrile character or a general term for disease. Even if, as is most probable, the word means 'hereditary,' there is no reason to believe that the designation was accurate.

Easily identified, on the other hand, is dropsy (*jālodara*). To its cure i. 10, vi. 22-24 and 96, and vii. 83 are devoted. In vi. 24 it is associated with heart disease—an instance of good diagnosis. The mention in the same hymn of pain in the eyes, heels, and front part of the foot refers to the characteristic puffing of these parts. Heart-disease (*hrdyota*, *hrdyāmaya*) is mentioned only incidentally (i. 22. 1, v. 20. 12, 30. 9, vi. 14. 1, 24. 1, 127. 3), and probably referred to any pain in the region of the heart. Paralysis (*pakṣahata*, lit. *hemiplegia*) is mentioned in the *Kauṣika* itself (xxx. 18), but the hymn rubricated is extremely obscure, and was probably not intended for this purpose.

Excessive discharges (*āsrāva*), and in particular diarrhoea (*atisāra* of the later medicine), have for their cure i. 2, ii. 3, and probably also vi. 44 (cf. above). There is perhaps an allusion to it in

connexion with fever in v. 22. 4. The opposite troubles, retention of urine and constipation, are the subject of i. 3 according to *Kaushika* xxv. 10 ff.; the hymn itself seems, however, to be entirely concerned with the first of these diseases.

Cough (*kāś*, *kāsa*) is mentioned in connexion with fever (i. 12. 3, v. 22. 10-12), and is also the object of a separate ceremony in which vi. 105, vii. 107 are rubricated. *Balāsa* is variously interpreted as 'consumption' and as 'internal sores'; the assonance both with *kāsa* and with *kilāsa* is noteworthy, and strengthens both interpretations. The hymn in which it figures most prominently is vi. 14, rubricated by *Kauś.* xxix. 30 in a ceremony which Keśava terms a 'phlegm-cure.' This term cannot, however, be taken to indicate necessarily some throat disease, as it means any disease ascribed to an abnormal condition of the 'phlegm' in the technical sense of the later medicine (for Keśava's use of such terms cf. xxvi. 1 and 28). *Balāsa* is also mentioned in iv. 9. 8, v. 22. 11-12, vi. 127. 1-2, ix. 8. 8, 10, xix. 34. 10. In connexion with it (v. 22. 11) appears *udyuga*, perhaps 'spasm.'

Headache (*śirśakti*, *śirśāmayā*) is mentioned in i. 12. 3 and v. 4. 10, both times in connexion with fever, and also in ix. 8—an effort to enumerate all diseases. The practice of *Kauś.* xxviii. 13 is said by Dārila to be a cure for headache, while Keśava applies it in a broader fashion. Neuralgia (*viśalyaka*) is mentioned in vi. 127, ix. 8. 2, xix. 44. 2; pain in the ribs (*prṣṭyāmaya*, inter-costal neuralgia?) in xix. 34. 10; rheumatic troubles are perhaps meant by *viṣkāṇḍha*, and *śaṁskāṇḍha* (i. 16. 3, ii. 4, iii. 9. 6, iv. 9. 5, xix. 34. 5, 35. 1); with these may be associated *viśara* (ii. 4. 2), *āśarika*, and *viśarika* (xix. 34. 10). Some sharp internal pain is ascribed in vi. 90 to the spear of Rudra. Its exact nature is indeterminable, but the later medicine applies the same term to colic. A 'limb-splitting' disease (*angabheda*) also occurs in xix. 44. 2, while two hymns (ii. 33, ix. 8) aim at eradicating pain and disease from all parts of the body. Pains in the eyes (cf. also v. 4. 10, 23. 3, vi. 24. 2, 127. 3) and ears may be especially mentioned. A separate charm for diseases of the eye (*alajī* occurs also in ix. 8. 20 as the name of some form of eye disease) is found in vi. 16 according to its manipulation in *Kauś.* xxx. 1-6. The parallelism of the hymn with v. 23 suggests that the pains in the eyes are ascribed to the presence of worms. For diseases ascribed to worms cf. above.

Of more external evils a 'flow of blood' (*lohita*, vi. 127, *vilohita*, ix. 8. 1, xii. 4. 4) means, perhaps, bleeding at the nose (cf. the association with diseases of the head in ix. 8. 1). A special charm against bleeding is i. 17 (rubricated at *Kauś.* xxvi. 10), to stop, according to Keśava, either an external or internal hæmorrhage, or excessive menstruation. Against the last of these troubles is directed the practice of *Kauś.* xxviii. 15, rubricating v. 6. The cure of wounds and fractures is the object of iv. 12 and v. 5 (rubricated at *Kauś.* xxviii. 5-6 and 14). Wounds or sores of unknown origin (*ajñātārus*) are healed with vi. 83. 4. In a snake-infested country like India cures for poison were sure to be in demand. For the poisonous bites of snakes the Atharva contains three charms (v. 13, vi. 12, x. 4), besides one (vii. 56) against the bites of scorpions and other poisonous reptiles, and another (iv. 6 and 7) against the poison of arrows. Internal poisoning does not seem to have been treated separately.

In certain forms of disease, e.g. mania, epilepsy, the distinction from possession is very slight. In case of possession, iv. 20 and 37, vi. 2. 2, or 52, or 111 (this last hymn speaking unmistakably of madness), or the *chātānagaṇa* (list of hymns for

expulsion of demons) may be employed. In a rite against madness, *Kauś.* xxviii. 12, Atharv. v. 1. 7 is rubricated; epilepsy (*apasmāra*) is said by Keśava to be one of the diseases for which i. 22 is employed at *Kauś.* xxvi. 14-21. *Grāhi*, 'fit,' 'seizure,' is practically a she-demon (cf. ii. 9. 1, 10. 6, iii. 11. 1, vi. 112. 1, viii. 2. 12, xii. 3. 18). Another demon which seizes children is *jambha*—apparently a designation of convulsions or lock-jaw (cf. ii. 4. 2; *Kauś.* xxviii. 1-2).

The *Kaushika*, in accordance with its method of treating symptoms, has also cures for 'thirst' (xxvii. 9-13) and 'fright' (xxvi. 26 f.), which we should hardly class as diseases. The latter may be what we call nervousness, but V. Henry has no warrant for interpreting the former as dipsomania. Inauspicious marks (cf. art. PRODIGES [Vedic]) on the body (*pāpalakṣaṇa*, xxxi. 1; *arīṣṭa*, xxviii. 15) are also treated as diseases. Keśava thinks that the ceremony to remove wrinkles (*Kauś.* xxv. 4 f.) has reference only to wrinkles in a young man, in whom they are portentous. The ceremony to stop the loss of hair (*Kauś.* xxxi. 28), employing two hymns, vi. 136 f., evidently composed for this very purpose, is to be ascribed to the same motive rather than to vanity. A person whose hair has come into contact with a *śamī*-tree is called *śamīlīna* ('cut by a *śamī*-tree'), and is supposed to be in danger of suffering some injury to his hair. For his benefit is the ceremony of *Kauś.* xxxi. 1, and the hymn rubricated seems to have had the same case in view.

Finally, a number of ceremonies are designated as panaceas (cf. *Kauś.* xxv. 4-5, 20, 21, 22-36, xxvi. 1, 34, xxvii. 5-6, 27, 34, xxviii. 8, 17-20, xxx. 17-18, xxxi. 5, xxxii. 3-4, 18-19, 26-27), though in some cases a more narrow interpretation seems possible.

(4) *The materia medica of the Atharvans.*—That the waters should be considered healing is most natural in virtue of both their cleansing and their cooling properties. So it is stated in Atharv. ii. 29. 6 that the waters give strength, and in iii. 7. 5=vi. 91. 3 that they are remedial and expel disease (cf. also the passages from the Rigveda cited below). In the *Kaushika*, water is employed most frequently, either for its own sake (so the holy water in xxxi. 21) or as a vehicle for other remedies. To the waters are especially devoted the hymns, Atharv. i. 4-6, employed as a panacea at *Kauś.* xxv. 20, and vi. 22-24, employed as cures for dropsy at *Kauś.* xxx. 11-13. Of particularly great efficacy, however, is the water dug up by ants (cf. Atharv. ii. 3, vi. 100, and Bloomfield, *Am. Jour. Phil.* vii. 482 ff.). Hence earth from an ant-hill serves as an amulet, a drink, or an external application for the cure of diarrhoea, etc. (*Kauś.* xxv. 7), and of *kṣetriya* (xxvi. 43); and as an antidote for poison (xxxi. 26, xxxii. 6). There is the possibility of the patient's receiving sufficient formic acid (cf. art. CHARMS AND AMULETS [Vedic] for method of investiture) to act as a cathartic. In all these passages, except xxxi. 26, there is associated with it a lump of ordinary earth. The separate use of the latter as an emetic in *Kauś.* xxviii. 3 (so Dārila) is doubtful, as Keśava and Sayana understand the fruit of the *madana*-tree. Noteworthy is the fact that both the clod of earth and the ant-hill seem to be looked upon as growths (cf. their inclusion in the list of auspicious plants, *Kauś.* viii. 16). Similar remedies are earth from a mole-hill, to cure constipation (*Kauś.* xxv. 11), this material being selected because the animal makes its way through dark passages, and also because one of its names, *ākhukarīṣa*, is compounded with a word for 'excrement' (cf. *Satapatha Brāhmaṇa*, ii. 1. 1. 8); and earth from a bee-hive (xxix. 10), as an antidote to poison.

Plants are to the Vedic mind the offspring and the essence of the waters, the embodiment of their curative properties. Hence they, too, are implored to bestow remedies (cf. Atharv. vi. 96, and esp. the long hymn viii. 7 addressed to all plants, and used as a panacea at *Kauś.* xxvi. 40; cf. also the *ośadhī-stuti* of the Rīgveda cited below). The list of plants employed as remedies in the *Kauśika* is long, and comprises the following: in a number of passages (xxv. 20, xxvi. 40, xxvii. 5, 20, 33, xxix. 30, xxx. 8, 11, xxxi. 8) the prescription calls simply for 'auspicious trees,' that is, the trees enumerated in viii. 15. Of trees in this list are specifically prescribed: *palāśa*=*Butea frondosa* (xxv. 30, xxvi. 34), a tree of pre-eminent holiness because of its mythical associations (cf. art. CHARMS AND AMULETS [Vedic]); *kāmpīla*=*Crinum amaryllaceae* (xxvii. 7, xxviii. 8); *varaṇa*=*Crataeva roxb.* (xxvi. 37; cf. same art.); *jaṅgīda*=*Terminalia arjuna* (xxvi. 43); *vetasa*=*Calamus rotang* (xxvii. 10). Other remedies figure in the list of auspicious plants (*Kauś.* viii. 16): *samī*=*Prosopis spicigera* (xxviii. 9, xxxi. 1); *samakā* (xxx. 1); *darbhā*-grass=*Poa cynosuroides* (xxv. 37, xxvi. 30, xxvii. 23, xxxi. 2 [Com.]); also, after its use as sacrificial straw, *barhis* (xxv. 31); *dūrva*-grass=millet (xxvi. 13); rice (xxv. 18; cf. also the use of porridges, below); and barley, *yava* (xxv. 17, 27, xxvi. 2, 35, 43, xxviii. 20, xxx. 17), efficacious because fancifully connected with *yavayati*, 'he separates.' Another plant not in this list, but evidently employed because of its holiness is the *soma*-plant (xxx. 22).

Other plants owe their efficacy as remedies to their anti-demoniacal qualities (for these qualities cf. art. WITCHCRAFT [Vedic]): *īṅgīda*-oil (xxv. 30); *tīla*, *taila*=sesamum and the oil made from it (xxvi. 1, 13, 43, xxvii. 33, xxix. 8); reed (xxvi. 27); *virīṇa* and *uśīra*=*Andropogon muricatus* (xxv. 30, xxvi. 26, xxix. 24-26, xxxii. 13); hemp (xxv. 28, xxvii. 33); *khadīra*=*Acacia catechu* (xxv. 23 f.); mustard (xxv. 23, 27, 31, xxx. 1 f.; cf. also the *Asurikalpa*, Atharv. Par. 35); *trapusa*=cucurbit (xxv. 23; also mentioned by Keśava at xxvi. 22, where it seems to be used principally for its colouring property). The use of wood from a club (xxv. 23) belongs to the same category.

A number of other plants owe their employment to more or less fanciful etymologies: *muñṣa*-grass=*Saccharum munja* (xxv. 6, xxvi. 2, 33, xxxii. 3), associated with *muñchati*, 'he loosens.' Leaves of the *paraśu*-tree, 'axe-tree,' are employed at xxx. 14 to cause sores to open, and wood of the *kṛmuka*-tree at xxviii. 2 to cure wounds inflicted by poisoned arrows, because *kārmuka* means 'bow.' Growth of the hair is promoted (xxxi. 28) by the *nītatnī*-plant, 'she that takes root,' with which are associated the *jīvi* (root *jīv*, 'to live') and the *alākā* plants. The *lākeśa* of xxviii. 5 seems to be a synonym for *arundhatī* of the hymn iv. 12, felt to contain *arus*, 'wound,' and the root *dha*, 'to set,' and hence employed to cure fractures and wounds. Bunches of grass (*stambā*) are employed (xxix. 4) to confine (root *stambh*) the effects of poison; they are also added (xxxii. 3, 14) to water with which a patient is washed or sprinkled.

In addition are employed: lotus roots (*bīsa*), combined with *āla* and *ula*, xxv. 18); *haridrā*=*Curcuma longa*, as a cure for jaundice (xxvi. 18) [because of its yellow colour], as an antidote to poison (xxviii. 4, xxxii. 7 [Com.]), or as a panacea (xxx. 5 [Com.]). It is also prescribed, according to the commentators, in the cure for leprosy of xxvi. 22. As the cure consists merely in painting out the spot, *Eclipta prostrata* or indigo may be used instead. There is mention also of *pṛśnīpārnī*=*Hemionitis cordifolia* roxb. (xxvi. 36); *pippatī*, pepper (xxvi. 38); black beans (xxvii. 14); *sadam-*

puṣpā (xxviii. 7); *kuṣṭha* (xxviii. 13); *alābu*=*Lagenaria vulgaris* (xxix. 13 f.); *khalatula* (xxix. 15 f.); *karīra*=*Capparis aphylla* roxb. (xxix. 20); *sigru*=*Moringa pterygosperma* (xxix. 23); *śāka*=*Tectona grandis* (xxx. 4); *vibhitaka*-nut=*Bellerica terminalia* (xxx. 9); *nikatā*-plant (xxx. 10); *samī-bimba*=*Momordica monodelpha* (xxx. 8); *śirṇa-pārnī*=*Azadirachta indica* (xxx. 8); *priyaṅgu*=*Panicum italicum* (xxxii. 2). The commentators at xxv. 10 also mention, as instances of substances that promote micturition, camphor, *Terminalia chebula*, and *haritaki*.

The fragrant powders employed in xxvi. 29 are probably made from plants, and owe their efficacy to their fragrance, just as the use of liquorice (xxxii. 5) is due to its sweetness. On the other hand, the *pūtika*-grass is employed (xxv. 11) in a cure for constipation, because of the offensive odour implied in its name.

Next in prominence to the plants are the products of the cow, which, as partaking of its holiness, are used either for their own efficacy, or as a suitable vehicle for other remedies: butter (*ājya* and *sarpis*, xxv. 4, 8, xxvi. 1, 8, 29-33, xxvii. 14, xxviii. 4, 13, xxix. 22 f., Com. to xxxi. 5 and xxxii. 7); curds (*dadhī*, xxvi. 13); milk (xxvi. 17, xxviii. 14, xxxi. 24, xxxii. 2); milk and butter (xxviii. 6); butter-milk (xxx. 23). The hair of a red steer is employed (xxvi. 14), cow-dung (xxvi. 22), and cow-urine, the particular remedy of Rudra (cf. below), at xxxi. 11. The *pañcagavya* (five products of the cow), which afterwards becomes a potent panacea, is not yet concocted, though all its ingredients are in use. Its preparation and administration are described in one of the Atharvan *Parīśiṣṭas*, *Brahmakūrcha-vihī*.

Food of any sort (xxviii. 12, 15, xxix. 16) may serve as a vehicle, but porridges (xxvi. 19, xxvii. 10, 31, xxviii. 3, 16, xxix. 15, Com. at xxxi. 5 and xxxii. 7), especially rice porridges (xxvi. 18, xxvii. 32, xxix. 27), are thus employed most frequently, or even separately administered. Honey (xxvi. 1, xxviii. 28, xxxi. 23) and fat (xxvi. 1) are also prescribed, and in xxxii. 1 the mother's breast serves as a vehicle for giving medicine to an infant.

A number of substances are applied, on account of their offensiveness, to sores, in the hope of inducing them to fly away: powdered shell and dog's saliva (xxx. 16); the scourings of teeth and pollen of grass (xxx. 14 f.); rock-salt and spittle (xxx. 17). Comparable perhaps is the administration of rotten fish in xxvii. 32. Of animals comparatively little use is made; the frog figures in a cure for fever (xxxii. 17), and yellow birds in a cure for jaundice (xxvi. 18), but in both cases the disease is to be transferred to them. The porcupine serves in xxix. 11 f. as an antidote to poison, because he is an animal not liable to trouble from snakes. For the same purpose also an unknown insect is employed as a representative of the mythical steed of Pedu (cf. Bloomfield, *SBE* xlii. 605 ff.). Also for mythical reasons are employed in xxxi. 18 f. earth that a dog has stepped upon, and a louse from a dog (cf. *ib.* p. 500 ff.). Manufactured articles are employed chiefly as amulets (cf. below). There occur also: wood-shavings (xxv. 11); grass from a thatch (xxv. 37, xxvii. 3, xxix. 8, xxx. 13, Com. at xxxi. 2); old clothes and broom (xxviii. 2); bowstring (xxix. 9, xxxii. 8, 10); *pramanda*, tooth-wash (xxv. 11).

The efficacy of these remedies depends not entirely upon themselves, but also upon the method of their preparation and administration. In the first place, as in other magic performances, there is a quasi-religious performance (cf. art. MAGIC [Vedic]), and the remedies are regularly daubed with the leavings (*sampātā*) of the offering. There are other requirements besides: the offerings must

sometimes be made from *cornucopiae* instead of a spoon (xxv. 30), or the medicine must be administered from *cornucopiae* (xxviii. 8), or from a particular sort of cow's horn (xxxi. 6), or a red copper vessel (xxix. 19), or through a yoke (xxvii. 1), or with a pestle (xxix. 22); or must be prepared in a vessel of reed and stirred with a reed (xxvii. 10), or stirred with poisoned arrows (xxvii. 3); or the fire used must be a forest fire (xxix. 19), or made of birds' nests (xxix. 27); or built on a mat of reeds floating in water (xxix. 30). The place of the ceremony is not always a matter of indifference: one cure of dropsy (xxxii. 14) must be attempted at the confluence of two streams, other cures at the cross-roads (xxv. 30, xxx. 18), or in a ditch (xxvii. 4). The position of the patient (xxvii. 10, 25), the clothing and food of the celebrant (xxxi. 28), are also efficacious. So, too, is the time of the ceremony: thus that of xxvii. 21-25 must be repeated at sunrise, noon, and sunset. The time most frequently prescribed is *avanakṣatre* (xxvii. 29, xxviii. 5, xxx. 9 [Dārila], xxxi. 28, 'at the time when the stars fade away'). The purpose is clearly expressed in Atharv. iii. 7. 7: 'when the constellations fade away and when the dawn fades away, (then) shall he shine away from us every evil and the *keṭtriya*.' In one case (xxxi. 28), where the purpose is to secure (black) hair, the time is further defined as 'before the crows come.'

(5) *The Atharvan methods of treating diseases.*—Of practices of a real therapeutic value the *Kausika* contains but little. The most delicate is the probing of the urethra, which seems to be prescribed (xxv. 15-16) for the relief of one suffering from retention of urine. It is instructive to observe that the discovery of this operation may be due to an attempt to carry out practically the statements of the hymn: 'I split open thy *pasas* like the dike of a lake,' and 'relaxed is the opening of thy bladder.' Originally, however, these were probably nothing but the usual statements of the conjurer that he was accomplishing what he wanted to accomplish. A similar instance (at a later period) of the evolution of a practical out of a magical proceeding may be seen in Dārila's comment on xxv. 12, where the giving of an enema is substituted for an operation, the symbolism of which should be transparent. The same hymn (Atharv. i. 3) harbours another practice, the real value of which may have helped the Atharvavedins in the cure of minor troubles. The urine is to come out with the sound 'splash,' and the ritual speaks also of the pouring out of water—a piece of symbolism to be attributed unhesitatingly to the time of the composition of the hymn. The sound of flowing water, however, does exercise a beneficial influence in such cases, especially when the trouble is of a nervous origin. A compress of sand is employed (*Kaus.* xxvi. 10) to stop the flow of blood, and the practice is indicated in the hymn itself (Atharv. i. 17. 4). In *Kaus.* xxviii. 3 an emetic is given to one wounded by a poisoned arrow. The application of leeches to sores is found in *Kaus.* xxx. 16, but accompanied by other ceremonies that one would expect to produce infection of the wound; and the same may be said of the breaking of pustules (xxxii. 10) by rubbing them against the door-post. In *Kaus.* xxxii. 24 a torch is applied to the bite of a serpent. The original intent must have been symbolic, but the result may have been some sort of cauterization.

Apart from these instances, the treatment is always magical. As usual in the Atharva, it is magic veneered with religion. The employment of a hymn is regularly accompanied with an oblation, perhaps even inserted in the elaborate framework of the New and Full Moon Sacrifice (cf. art. MAGIC [Vedic]); and it is this oblation, generally through the leavings of the offering, that gives efficacy to

the ceremony. Of the hymns but little need be said, as all are accessible in translations.¹ They are prayers addressed to the gods, or to the disease, or to the remedy, with more or less explicit indication of what is wanted of them. Sometimes the author adopts a more confident tone, especially when he knows the name or lineage of the disease, or its remedy, and thus has them in his power. Then he states what he is doing, or orders the disease to depart. For, according to a well-known principle of magic, a verbal statement is an efficient symbolical imitation of an act.

The ceremonies are of greater interest. As the diseases are generally ascribed to a demon, the problem for the practitioner is the removal of this troublesome being. The methods of accomplishing this are in general either to propitiate or to exorcise the spirit, and in this we have the division into homeopathy and allopathy. In the one case, the demon is given what is most acceptable to him, as being of his own nature; in the other case, he is brought into contact with what is presumably the most repugnant to him.

Some ceremonies in which the exorcistic character is specially noticeable are: *Kaus.* xxv. 22-36, rubrication of the *chātanaṅga* (list of expelling hymns); xxvii. 6, xxxii. 18, in which the cure is effected by the laying on of hands; xxviii. 11, in which a ring of magic powder is drawn round the house to prevent the return of the demon; xxix. 7, where the door is opened to facilitate the departure of the demon; and xxxi. 3, a curious ceremony in which the offering is made in a fire surrounded by a ditch filled with hot water, the potency of this ring having been increased by circumambulation. The apparatus seems to be a trap for the demons.

The methods by which the magical substance is brought into contact with the patient may next be noted. In cases where this constitutes the whole of the ceremony the references are in italic figures. Inhalation: wood is laid on the fire, and, according to vii. 28, the patient breathes the smoke. This is part of the ceremony for expelling demons (xxv. 23) and worms (xxvii. 17, 20, repeated at xxvii. 26, xxix. 30). Its use alone (xxv. 20 f.) as a panacea must also be simply exorcistic. Fumigation occurs at xxxi. 19 and 22. The breath of the performer is also efficacious (xxv. 9). The power in the laying on of hands has already been met with; hence it is not surprising to find that poison may be driven out (xxxii. 23) by rubbing the patient from head to foot. Rubbing is also prescribed (xxxii. 9) for sores and (xxv. 5) for wrinkles. There are many applications that must be smeared or rubbed on, as ointments (xxv. 4, xxviii. 6, 10, xxx. 5, xxxi. 9); other substances are either smeared over the whole body of the patient (xxvi. 18, 29, 36, xxviii. 13) or applied locally (xxv. 8, xxvi. 22, 34, xxix. 23, xxxi. 18, 26). All these applications seem intended to benefit the patient; but in another group of cases (cf. above) the purpose is apparently to drive sores away by applying to them the most offensive substances. Whenever any indication is given, the rubbing must be downwards, to drive the trouble into the part of the body where it can do least injury, and finally out of the feet. This rule, implied in Rigveda x. 60. 11-12, may be taken as universal; so also the precept (*Kaus.* xxviii. 13) that the rubbing must not be reversed. When this is done, its effect is destructive, and hence it is employed (xxix. 22) to kill worms.

Two other methods, *āplavana*, 'the pouring on,' and *avasechana*, 'the sprinkling on,' are distinguished also by the fact that the water in the former case contains the leavings of the offering,

¹ For such as are not included in Bloomfield's translation, cf. the Whitney-Lanman tr. of the Atharvaveda *Saṁhitā*, Harvard Oriental Series, vols. vii. and viii.

while in the latter case it is merely blessed with the hymn, unless, as in xxvii. 28, xxviii. 8, xxix. 30, there is a specific direction for the addition of the leavings. In either case the patient is wiped down (vii. 17) from head to foot, and given (vii. 26) some of the water to drink. The water may, of course, contain other substances also, and the position of the patient and the manner in which it is to be poured are also in some cases specified. Instances of the *āplavana* are xxvi. 41, xxvii. 4, 7, 84, xxviii. 19, xxix. 26, xxxii. 3, 14; of the *avasechana*, xxv. 17, 37, xxvi. 25, 31, xxvii. 1, 8, 28, 29, 33, xxviii. 2, 5, 8, xxix. 8, 9, 30, xxx. 8-10, 13, xxxi. 2, 28, xxxii. 4, 10, 15, 17. The two are sometimes combined (xxvi. 41, xxvii. 1, 4, and 7-8, xxxii. 3-4 and 14-15). In the last case hot water is used for the one, cold water for the other. Other methods of washing, chiefly of a more local nature, are xxv. 34, xxviii. 1, xxx. 17, xxxi. 1, 11, 13. The leavings of the offerings are also put directly upon the patient's head (xxvi. 39, xxix. 19), or blessed substances are inserted in his nostrils (xxvi. 8, xxxii. 21). Frequently also the magic substance is given to the patient to drink (xxv. 7, 11, 18, xxvi. 1, 12-13, 14, 17, xxvii. 12, 29, xxviii. 1-4, 6, 14, 16, xxix. 8, 10, 11, 13, 18, 30, xxxi. 5, 6, 23-25, 26, xxxii. 2, 7) or to eat (xxvi. 18, xxvii. 31, xxviii. 9, 12, 15-16, xxix. 12, 15, 25, 27, 28, xxx. 3-6). In this way hot infusions (*juāla*), prepared by plunging a burning or heated substance in water, are employed (xxvii. 29, 33, xxviii. 2, xxix. 8, xxx. 8, xxxii. 10).

The medicine may also be applied as an amulet. In this case the patient will have to drink a solution in which the amulet has been steeped for three days, so that he may be benefited more than would at first sight appear (cf. art. CHARMS AND AMULETS [Vedic], and add to the instances cited: *Kaus.* xxvi. 11, a potsherd from a ruin (?) to stop the flow of blood; xxvi. 21, hairs from the breast of a red steer, glued together and wrapped with gold wire, to cure jaundice; xxvi. 26-27, four stalks of white-blooming *Andropogon muricatus* [virinal], or four pieces of reed, each burnt in three places, to cure 'fright'; xxviii. 7, *sadāmpuspā*-plant = *Calatropis gigantea*, in case of possession; xxx. 1, mustard for diseases of the eye; xxxi. 26, piece of an ant-hill, in case of poison; but the liquorice of xxxii. 5 is administered in liquid form, according to the commentators).

The transfer of a disease to another person is a wish most vigorously expressed in Atharv. v. 22. 4 ff. and vi. 26. 3. The ritual endeavours to accomplish this in xxvii. 9-13, in the interest of a person suffering from 'thirst.' More frequently the transfer is to an animal: fever to a frog (xxxii. 17), jaundice to yellow birds (xxvi. 18), madness to birds (xxvi. 33). The selection of the cross-roads for some ceremonies is doubtless to be connected with this idea, as is also the direction (xxxi. 10) for the rubbing of sores against the door-post (cf. also Atharv. xii. 2, 19, 20).

In addition to these general practices there are a number of symbolical acts adapted to the special situation, sometimes with a great deal of ingenuity, sometimes in the most banal fashion. As it is impossible to describe all these in detail, it seems best to present some typical examples of the whole process of an Atharvan cure.

Atharv. i. 12 is a prayer to lightning conceived as the cause of fever, headache, and cough. A man suffering from these diseases is given to eat fat, honey, ghee, and sesame oil that have been blessed with this hymn. The head of the patient is then covered with a turban of *mukha*-grass. This grass is not only connected by its name with the idea of loosening, but it is also a mythical home of lightning (*Agni*), from which the patient is planning to be released. He then takes in his left hand (this is inauspicious) a sieve containing parched grain (a symbol of the effect of the fever), and walks along, scattering the grain while he recites the hymn. He continues to advance, carrying in his left hand the sieve and the turban, in his right hand a

bow-string and an axe. He is followed by the celebrant, and preceded by the latter's assistant—a measure of precaution. When some manifestation of the disease occurs (so that the presence of the demon is assured), he lays down the sieve and the turban (the abode of the cause of the disease), and the procession returns. On the way home he lays down the bow-string (to stop pursuit by the demon who has been exorcized). Ghee is blessed with the hymn and put up the patient's nose. Finally the priest mutters the hymn, while touching the patient's head with a bamboo staff that has five joints (and seems to serve as a conductor of the magic potency).

In a case of jaundice, the practitioner desires to banish the yellow colour to yellow objects, and to obtain for the patient a healthy redness, or, as the hymn puts it, 'to envelop him in every form and strength of the red cows.' Hence he puts the hair of a red bull into water, blesses it with Atharv. i. 22, and gives it to the patient to sip. Then he pours water over the back of a red bull, and gives that to the patient to sip. An amulet, prepared from the part of a hide pierced by a peg, is tied on the patient while he is sitting on the hide of a red bull, and he is also given milk to drink. Next the patient is fed with a porridge mixed with yellow turmeric, and he is daubed with the rest of this porridge and with another porridge from which he has not eaten. He thus acquires a yellow coating that can easily be removed. Certain yellow birds are then tied by their left legs to the foot of the couch, and the patient is washed so that the water will fall upon the birds (carrying the yellow coating of porridge with it). If these cry out, the patient must address them with the hymn. The patient is then given a porridge and told to step forth. Finally he is provided with an amulet of hairs taken from the breast of the red bull.

Much simpler is a cure for fever by heating an axe while muttering Atharv. i. 25, plunging it in water, and pouring the water thus heated over the patient. Leprosy may be cured in an equally simple fashion by rubbing the spot with cow-dung until it bleeds, and then painting it by rubbing in yellow turmeric, *Eclipta prostrata*, or indigo, blessed with Atharv. i. 23 and 24. Or a ceremony may be performed to the Maruts, in which all the ingredients are black.

3. Statements relating to disease in other texts.

—In the R̥gveda the interest naturally centres in the relation of the greater gods to disease. Among these Rudra may claim the first mention; the twofold aspect of this god is well summarized by the author of viii. 29, a *brahmodya*, or series of theological charades. Verse 5, to which the answer is 'Rudra,' runs: 'One holds a sharp weapon in his hand, is bright, potent, and has as his remedy the *jalāsa*.' On the one hand, he is a malevolent deity armed with a 'cow-slaying,' 'man-slaying' missile, whose ill-will, if not deprecated, will bring injury and death to man and beast (cf. i. 114. 7, 8, ii. 33. 1, 4-6, 11, 14, 15, iv. 3. 6, vi. 23. 7, x. 169. 1). These are but general statements of the association of Rudra with disease which the Atharva (vi. 90, and passages cited above) expresses in concrete form. On the other hand, as the sender of disease, he is best qualified to cure it, and hence he is styled (ii. 33. 4) 'the most eminent of physicians.' His healing powers are mentioned with great frequency, as are also the choice and numerous remedies he holds in his hands. With them he is implored to remove disease and make all sound, both man and beast. His distinctive remedy, the *jalāsa*, is shown by the Atharvan ritual to be cow-urine, the medicinal use of which goes back to Indo-Iranian times, as *gao-maēza* is prescribed in the Avesta (cf. Bloomfield, *Am. Jour. Phil.* xii. 425-429). For these aspects of Rudra, cf. i. 43. 4, 114. 5, ii. 33. 2, 7, 12, 13, v. 42. 11, 53. 14, vi. 47. 3, vii. 35. 6, 46. 2, 3; Atharv. ii. 27. 6.

The Ásvins are also divine physicians, but, unlike Rudra, they are invariably beneficent (cf. i. 34. 6, 89. 4, 167. 6, vii. 71. 2, viii. 9. 15, 18. 8, 22. 10, x. 39. 5; Atharv. vii. 53. 1). What is most characteristic of them is that, in addition to general invocations of their healing aid, stories are frequently told of their cures of particular individuals, which are not to be explained as merely myths relating to natural phenomena. They restored Chyavana to youth and his powers (i. 116. 10, 117. 13, 118. 6, v. 74. 5, 75. 5, vii. 68. 6, 71. 5, x. 39. 4, 59. 1), and did the same for Kali (i. 112. 15, x. 39. 8); probably also the gift of a husband to Ghoshā (i. 117. 7, x. 39. 3, 6, 40. 5) was preceded by a similar rejuvenescence. To R̥jāśva they restored his eyesight (i. 116. 16, 117. 17-18); for Viśpalā they provided an iron leg (i. 116. 15, 118. 8), to replace

the one she had lost in battle; while Parāvṛj was cured by them (i. 112. 8) both of blindness and of lameness. For the story of their cure, in connexion with Sarasvatī, of Indra, cf. below. The methods of their cures are not indicated, but rather have the air of the miraculous. It may be noted, however, that honey is most closely connected with these gods (cf. Macdonell, *Ved. Mythol.*, 1897, p. 49), and also possesses medical efficiency (cf. above, including all cases of amulets).

In still another way Varuṇa is brought into connexion with disease. Disease is the punishment of sin, and Varuṇa is the moral governor *kar-ṣṣoḥ*. The connexion is particularly clear in i. 24. 9: 'Thy remedies, O king, are a hundred, a thousand. Let thy good will be broad and deep. Drive into the distance Nirṛti. Free us from the sin committed' (cf. also vi. 74 and x. 97). It may be taken as certain that the efforts to escape the fetters of Varuṇa and the constantly recurring prayer for forgiveness of sin are not all inspired by pure feelings of contrition and remorse, but are in part at least due to the desire to escape the payment of the wages of sin. The specific thing in connexion with Varuṇa's relation to disease is the fact that he, as the lord of the waters, sends dropsy in punishment for sin, and especially falsehood. This idea, unmistakable in other texts, is probable for the Rigveda (cf. i. 24. 8, where Varuṇa is the 'speaker away of the heart-piercing' demon; and Hillebrandt, *Varuṇa und Mitra*, 1877, p. 63 ff.), though it is not so clear as to be beyond the possibility of denial (cf. Bergaigne, *Religion védique*, 1878-83, iii. 155).

The healing power of the waters is also mentioned quite frequently. Rigv. i. 23. 16-24 is devoted to their praise; they are said to contain immortality and all remedies, and are besought to bestow their remedies and carry away sin (cf. also x. 9. 5-7, and note the frequency with which the waters appear in prayers for long life). In Rigv. vi. 50. 7 they are healing, and in x. 137. 6 they are healing and dispellers of disease.

It would, however, be a mistake to infer from such passages that the concept of the cause of disease is radically different in the Rigveda from what it is in the Atharva. The association with the Rakṣas is clear in iii. 15. 1, vii. 1. 7, 8, 6, 38. 7, viii. 35. 16-18, ix. 85. 1, x. 97. 6, 98. 12, 162. 1; furthermore, in x. 85. 31—a stanza to be recited when the bridal party passes a cemetery—is to be recognized the ascription of disease to the influence of the spirits of the dead. It is for this reason that the sun-gods (i. 35. 9, 191. 8-9, x. 87. 3, 100. 8) and Agni (i. 12. 7, 159. 5) and Bhṛaspati (i. 18. 2, x. 93. 8) are dispellers of disease—they being the great demon-slayers. The prayer for food that causes no disease (*anāmīdā īśā*, iii. 22. 4, 62. 4, x. 17. 8) may also be mentioned here as based on the idea of the disease-demon entering a man with his food. The goddess Apṛā, a drastic embodiment of 'detestation from fear' invoked in x. 103. 12, may be classed as a disease-demon (cf. Atharv. iii. 2. 5, ix. 8. 9).

Medical charms are, of course, likely to call in the assistance of and every god; but, apart from these, the explicit mention of healing in connexion with other deities than those mentioned is very sporadic, though doubtless it is conceived as included in a general fashion in their powers of giving long life and prosperity and of destroying demons. The Adityas drive away disease (viii. 18. 10); Indra cures Apālā of skin disease and her father of baldness (viii. 80; for the treatment of this legend in the Brāhmaṇas, cf. Oertel, *JAOS* xviii. 26 ff.); the Maruts, as children of Rudra, have pure, salutary, and beneficent remedies (ii. 33. 13), which they are asked to bring from various places (viii. 20. 23 ff., cf. also v. 53. 14); Vāta gives remedies (i. 89. 4, x. 186. 1); for Soma, cf. i. 91. 12, iii. 62. 14, viii. 72. 17, 79. 2, ix. 97. 43, x. 25. 11; for Soma-Rudra, vii. 74; for Vāstōpati, vii. 54. 1, 55. 1; for the Dawns, x. 35. 6; for the All-Gods, x. 63. 12; for Yama, x. 14. 11; and the more general prayers for health among other blessings, iii. 16. 3, 59. 3, x. 18. 7, 37. 7.

The number of medical charms in the Rigveda is extremely limited. They are, however, of the same general type as the Atharvan charms, and most of them recur also in the latter collection.

Rigv. i. 50. 11-13 is a prayer to Sūrya to destroy heart-disease and dropsy, upon which Atharv. i. 22 has drawn. Rigv. x. 137 = Atharv. iv. 13 is a rather colourless panacea-hymn: 'the gods are to make alive again the man that has sinned; one wind shall blow him a remedy, another shall blow away his disease; the practitioner has come to the patient with weal and health, he has brought a remedy kindly and powerfully, and is driving away the *yakṣma*; the gods, the Maruts, and all creatures shall protect the sick man, that he may be free from disease; the all-healing, disease-dispersing waters shall make for him a remedy; the performer touches him with his two hands, which confer immunity from disease. Rigv. x. 161 = Atharv. iii. 11 is a charm against *ajñāyayakṣma*, *rājayakṣma*, and *grāhi*. The performer declares his power to bring back the patient even though he has gone into the presence of Death and the lap of Nirṛti. Comparable with this is the group of hymns Rigv. x. 67-80, the purpose of which is to recall the mind wherever it may have gone. The closing verses are: 'Here the mother, here the father, here life has come. This is thy refuge, come hither, O Subandhu, enter in. As men bind a yoke with a rope that it may hold indeed; so do I hold for thee thy mind, that thou mayest live, mayest not die, mayest not be harmed. As the great mother (Earth) here supports these trees; so do I hold, etc.' From Yama, son of Vivasvant, have I brought back the mind of Subandhu, that thou mayest live, etc. Down blows the wind, down burns the fire, down milks the cow, down shall go thy disease. This hand of mine is rich in blessings, this hand richer still, this hand all-healing, this rubs auspiciously.' Subandhu ('good friend') need not have been originally a proper name, but it was felt to be so at least as early as the time of the Brāhmaṇas, which spin legends about his return to life.

Rigv. x. 163 = Atharv. ii. 33 is a charm of another type: 'From thine eyes, thy nostrils, thine ears and chin, from thy brain, from thy tongue, I tear out the disease of thy head.' The practitioner then proceeds to enumerate other parts of the body, concluding, to guard against any possible omission, with the statement that he tears the disease from the whole being of the patient.

Rigv. vii. 50 is a charm against poison—chiefly that of snakes—abounding in obscure words. Mitra-Varuṇa are to give protection, Agni is to burn it away, the All-Gods are to drive it away, and the rivers are to bestow remedies for it. Rigv. i. 191 is a charm for the same purpose, but more aggressive in its efforts to secure its ends. The beings at which it is directed are styled the 'unseen,' and seem to be chiefly scorpions and small venomous vermin; but doubtless the imaginary worms (cf. above) were also in mind. They are adjured to perish, they have been made visible to all, hence harmless. Their lineage (curiously exalted; Dyauṣ is their father, the Earth their mother, Soma their brother, and Aditi their sister) is known, hence they must be quiet. The sun grinds and burns them. The conjurer has put their poison on the sun, their poison-bag on the house of the keeper of spirituous liquor. The sun will not die, neither will their victims. Little birds and sparks of fire drink their poison without harm: twenty-one peahens and seven unmarried sisters handle it as if it were water; (a fortiori) the conjurer (and his clients), who has grasped the names of all ninety-nine plants that destroy poison, shall not be harmed. Finally, the conjurer, likening himself to the mongoose, which on coming down from the mountains proclaimed the powerlessness of the scorpion's poison, splits the creature with a rock, letting its poison flow to distant lands.

The couplet Rigv. vii. 48. 4-5 seems to be a prayer to guard against any nauseating or diarrhetic effects of drinking soma. Finally, in Rigv. 10. 97 we have the *oṣadhīratū*, or praise of the curative power of plants.

Mention of particular diseases is extremely rare in the Rigveda: *yakṣma* (x. 85. 31, 97. 11-13, 137. 4, 163. 1-6), with its compounds, *ajñāta-*, *rāja-* (x. 161. 1); [*a-yakṣma* (ix. 49. 1) is merely disease in general]; *vandana* (?) (vii. 50. 2); jaundice and heart-disease (i. 50. 11-12); heart-disease (i. 24. 8); *grāhi* (x. 161. 1); allusion to *prstyāmaya* is made incidentally in a comparison (i. 105. 13). Extremely obscure are the epithets *asipada* and *asimida*, applied to the waters and streams in vii. 50. 4; they seem to mean 'not causing the diseases *kūpa* and *śmi*,' of which no other mention is made. *Sipivīṣṭa*, however, occurs as the designation of an animal rendered unfit for sacrifice by skin disease (cf. J. Schwab, *Das altind. Thieropfer*, 1886, p. xviii), and as an epithet of Viṣṇu (*Kausītaki Brāh.* iv. 2; *Sāṅkhyaśāstra* SS. xv. 14. 4; and A. Weber, *Über die Königsweihe, den Rājāsūya*, Berlin, 1893, p. 125). Various bodily defects are more frequently mentioned; defects of sight seem especially feared (cf. *andha*,

anaṣṣa, *kāṇa*, *mīlhūḍrś*); defects of hearing (*badhira*, *abadhira*); lameness (*asreman*, *śroṇa*); loss of virility (*vadhira*).

It is neither possible nor desirable to treat at this length the whole of Vedic literature; but, as the omissions are no less important than the statements, it seems best to limit the treatment to certain texts as representative of the Yajurveda, the Brāhmaṇas, and Upaniṣads. For the Yajur texts the *Vājasaneyi Samhitā* has been chosen.

The whole system of sacrifice is an attempt to induce the gods to bestow prosperity, in which health is an important element. It is, however, a noteworthy fact that health is by no means so conspicuous an object of prayer as is wealth. Even when it is sought (cf. xxv. 14-23 = Rigv. i. 89), it is in general terms, thus resembling the charms for long life (*āyusyaṇī*) rather than the medical (*bhāṣayānī*) charms.

For such incidental prayers compare, in addition to prayers for strength, lustre, vigour, life of a hundred years, that occur *passim*, such formulae as: iii. 17, 'O Agni, thou art protector of bodies, protect my body. O Agni, thou art giver of life, give me life. O Agni, thou art giver of splendour, give me splendour. O Agni, what is wanting in my body, that do thou fill out for me'; ix. 21, 'By sacrifice may my life succeed, my vital breath, my sight, my hearing, my back' (fuller lists in xviii. 29, xlii. 33); xiv. 17, 'Protect my life, my *prāṇa*, my *apāna*, my *vyāna*, my sight, my hearing: enrich my speech, quicken my mind, protect my being.'

For other formulae of the same general type, cf. vii. 27, xv. 7, xvii. 15, xviii. 2, 6, xlii. 28, xlii. 18, xxxvi. 1, xxxix. 1, 8. Compare also such prayers for the senses as i. 20, 'Thee for sight (I take)'; and ii. 16, 'Thou art protector of sight, O Agni, protect my sight.' Numerous parallels from other texts may be found under the words *chakṣus* and *śrotra* in the Vedic Concordance. More interesting are the verses xx. 5-9, containing benedictions on various parts of the body. In xx. 26 the blessed world is described as one 'where weakness is not found,' and in xii. 105 the speaker quits 'weakness, lack of strength, and sickness.'

The incidental statements of the relation of the gods to disease are on the plane of the Rigveda, and are frequently repetitions of that text. Varuṇa in xviii. 35 is styled a healer-seer (cf. viii. 23 = Rigv. i. 24, 8, and xviii. 49, xxi. 2 = Rigv. i. 24, 11). For the healing power of the waters, cf. iv. 12, ix. 6, xviii. 35, xxxvi. 12; for Brhaspati, iii. 29 = Rigv. i. 18, 2; for Savitar, xxxiv. 25 = Rigv. i. 35, 9; for Agni, ii. 20, xv. 37, xvii. 15; for Āsvin, xviii. 9, xxviii. 7, 40, xxiv. 47. Tvāstar, the divine *artifex*, is more directly connected with the repair of the body than in the Rigveda (cf. ii. 24 = viii. 14 = Atharv. vi. 53, 3 and *Vāj. Sam.* xxxviii. 9).

Of more interest are the collections of *mantras* for ceremonies directly connected with disease. At the *sākamēdha*, the third *parvan* of the *chāturmāsya*-sacrifice, occurs a *pitṛyajña* after which are employed four verses (iii. 53-56) of one of the Subandhu-hymns (Rigv. x. 57, 3-6), to keep the spirits of those engaged in the sacrifice from following the *pitṛs* on their return to the world of Yama. Another portion of the same sacrifice is the *Traiyambakahoma* to Rudra. The formulæ are found in iii. 57-61; their purpose is to propitiate the god, and so induce him to pass to other peoples without harming the sacrificers. Of similar nature is the *Satarudriyahoma* at the *agnichayana*. The sixteenth book of the *Vāj. Sam.* is composed of its *mantras*. The concept of Rudra is essentially the same as that of the Rigveda, though worked out in fuller detail.

The *Sāutrāmāṇī* is a sacrifice originally intended to expiate the sin of excessive soma-drinking, which leads to a drunken discharge of the sacred liquid. The heavenly prototype of this ceremony is the cure which the Āsvins and Sarasvatī wrought upon Indra when he had been beguiled into *surā*-drunkenness by the demon Namuci. For the details of this story, cf. Bloomfield, *JAOS* xv. 143-163. The formulæ employed constitute books xix.-xxi. of *Vāj. Sam.* Of particular interest are: xix. 10, containing

the name of the disease-demon; xix. 80-95, the detailed account of Indra's cure; xix. 12, 16, xx. 3, 56 ff., 75, 80, xxi. 13, 18, 29, references to the healing power of his physicians and their remedies; xix. 55, 62 = Rigv. x. 15, 4, 6, prayers to the *pitṛs* for health. (For the ritual, cf. A. Weber, *Über die Königsweihe, den Rājasiṃya*, pp. 92-106, and A. Hillebrandt, *Ritualliteratur*, 1897, p. 159.)

Anatomically interesting are the lists of various parts of the body: xix. 81-93, xxi. 5-9, xxv. 1-9 (parts of the horse), xxxi. 10-13, xxxix. 8-10, and the statements relative to conception and birth (xix. 76). The theory of the vital breaths now begins to become prominent; but the whole of this question must be dismissed with a reference to A. H. Ewing, 'The Hindu Conception of the Functions of Breath,' *JAOS* xxii. 249-308.

Of names of disease few occur: *yaksma* is disease in general (cf. the coupling of *ayakṣma anamīva*, i. 1, iv. 12, xviii. 6, and the mention of the hundred *yakṣmas*, xii. 97). This disease is also mentioned in the *oṣadhīstuti* (xii. 75 ff. = Rigv. x. 97). Its last verse (xii. 97) is, however, peculiar to the version of *Vāj. Sam.*, and mentions *balāsa*, *upacit* (= Atharv. *apacit*), *arśas* (haemorrhoids), and *pākāru* (of uncertain meaning). *Apā* occurs in xvii. 44 = Rigv. x. 103, 12, while *Viśūchikā* (xix. 10) is an equally vivid name ('she that makes go in all directions') for the demon to whom are ascribed the nauseating and diarrhetic effects of debauch. Heart-disease is mentioned in viii. 23 = Rigv. i. 24, 8; diseases of the eye, *arman*, in xxx. 11; skin-disease in xxx. 20; leprosy in xxx. 17, 21; various deformities in xxx. 10, 21, 22.

Physicians are recognized as constituting a profession (xxx. 10). An amulet is used by the Divine physicians (xix. 80) for the cure of Indra. Finally, iv. 3 is a formula addressed to ointment from Mt. Trikakud: 'Thou art the eye of Vṛtra (for mythology, cf. Bloomfield, 'The Myth of the Heavenly Eye-ball,' *Am. Jour. Phil.* xvii. 399-408), thou art the giver of sight, give me sight.'

In the *Āitareya Brāhmaṇa* there is very little material bearing on the subject. Incidental allusions to various parts of the body occur, among which may be noted the distinction between the senses of taste, sight, and smell, and their organs (v. 22). The processes of procreation and birth are also frequently alluded to in the effort to produce a mystical body for the sacrificer. There is likewise a great deal of talk about the 'vital breaths'—the way in which they may be established in the sacrificer, or may be cut short. The same is true of the various senses and the power of virility; and there is the constantly recurring effort to secure vigour, splendour, sharpness of sense, and the full term of life.

All of this is too general to be of interest in the present connexion. More concrete are i. 18, where the Āsvins are said to be the physicians of the gods; v. 34, where the Brahman priest is the physician of the sacrifice. Freedom from disease is expressly sought in viii. 10 and 11; the healing power of herbs is recognized in general in iii. 40, and in particular that of collyrium for the eye in i. 3. That disease may be produced by a curse is seen in v. 1 (deformity) and vi. 33 (leprosy). Madness is alluded to in vi. 33, and in v. 29 there is mention of a girl possessed by a *gandharva*. Varuṇa's fetters, as productive of drowsy in punishment for a broken vow, figure in the story of Sunaṣṣepa (vii. 15 and 16). The origin of certain deformities is explained mythically in ii. 8. The closest approach to a cure for disease is found in iii. 19, where is imparted the knowledge that will enable one to preserve his sight to old age. In i. 25 is explained the way in which the Hotar

may cause the sacrificer to suffer from *rājayakṣma*, which here seems to mean some (scrofulous) disease of the neck.

An examination of the *Bṛhadāranyaka* and *Chhândogya Upaniṣads* shows that the chief interest of these texts in this connexion lies in their anatomical statements. Besides more isolated instances that occur *passim* may be noted the list of the parts of the horse (Brh. i. 1. 1); of the human body (ii. 4. 11); and the elaborate comparison of man with a tree (iii. 9. 28). There are also statements about the heart and its veins (Brh. ii. 1. 19, iv. 2. 3, 3. 20; Chhând. vii. 6. 1 and 6); the structure of the eye (Brh. iii. 2. 3); the disposition of food in the body (Chhând. vi. 5); the process of sleep and dreams (Brh. ii. 1. 16 ff., iv. 3. 7 ff.; Chhând. iv. 3. 3); and the process of death (Brh. iii. 2. 11 ff.). All these statements are, however, connected with the theory of the 'vital breaths,' and appear to be entirely speculative.

With regard to the origin of disease may be noted the power of a curse to produce bodily ailments implied in the threat, 'thy head shall burst' (Brh. iii. 7. 1, 9. 26; Chhând. i. 8. 8); the statement (Brh. iv. 3. 15) that the evil caused by waking a man while his spirit is abroad in dreams is hard to cure; and the mention (Brh. iii. 3. 1, 7. 1) of women possessed by *gandharvas*. Sickness is incidentally mentioned (Brh. iv. 3. 36, v. 11. 1; Chhând. iv. 10. 3, vi. 15. 1, vii. 26. 2, viii. 4. 2, 6. 4). The itch (*pāman*) is the only disease specifically mentioned; and Raikva's scratching it off under a cart (Chhând. iv. 1. 8) is probably a method of cure to be associated with the cases of transference cited above.

The full term of life is often promised as a reward for certain knowledge (Brh. i. 2. 7, ii. 1. 11 f.; Chhând. ii. 11 ff., iv. 11 ff.); an *āyusya*-ceremony is also mentioned (Brh. vi. 4. 25). In Chhând. iii. 16 are contained directions for the cure of any disease, by following which one may live 116 years.

A number of factors combine to prevent diseases and their treatment from figuring to a great extent in the *Śrauta* ritual. All connected with the sacrifice must be in good health: an animal victim must be free from blemishes, among which certain diseases (cf. J. Schwab, *Das altindische Thieropfer*, p. xviii) are included. If, after the selection of the horse for the *Āsvamedha* (*q.v.*), diseases develop in it during the year that must elapse before its sacrifice, an expiatory sacrifice is required, which varies (cf. A. Hillebrandt, *Ritual-litteratur*, p. 150) according to the disease. Bodily ailments are also sufficient to prevent a priest from being chosen to officiate at a sacrifice (cf. A. Weber, *Indische Studien*, 1868, x. 145 ff.); and it is expressly stated (*Āśvalāyana Gṛhya Sūtra* i. 23. 20) that the priest must refuse to officiate for a *yajamāna* who is suffering from a disease. Under these circumstances it is but natural that the possibility of sickness should receive scant consideration except in so far as it is subsumed under prayers for long life and the exorcism of demons. This tendency must have been helped by the popular origin of the medical charms. In spite of this origin, they passed, as did everything, under the influence of the priesthood; but in the main they were more adapted to incorporation in the simpler form of the *Gṛhya* rites, which presented the further advantage of not bringing the diseased (*i.e.* demon-possessed) person into a contact with the priests that might prove dangerous for them. Exceptional situations, of course, occur: soma-drunkenness is a sacrificial sin, and must be healed by a sacrifice; or, as at the *pinḍapūṣṭyajña*, the lives of the participants may be exposed to special

dangers against which precautions must be taken. But an examination of some of the *Śrauta* rites will show (cf. what was said of the *mantras* of the *Vājasaneyi Samhitā* above) that these are primarily concerned with the securing of wealth, progeny, and triumph over enemies, much more than with health, except as it is implied in prayers for protection and long life couched in the most general terms. Secondly, however, the sacrifice may be adapted to the securing of various desires. Among these the cure of disease figures to a greater extent, though still overshadowed by other wishes.

In the ritual of the New and Full Moon sacrifice (cf. A. Hillebrandt, *Das altind. Neu- und Vollmondsopfer*, Jena, 1880) there is no allusion to the subject. In the animal sacrifice it may be noted that among the wishes that determine the choice of the tree for the *yūpa* there is none closer to our purpose (cf. Schwab, *op. cit.* p. 2) than *viryakāma* and *chakṣuṣkāma* (cf. also the wishes that determine the length of the post in *Satapatha Brāhmaṇa*, xi. 4. 7. 1, and *Taittīriya Samhitā* vi. 3. 3. 5-6). At the *mārjana* (purification) is employed (cf. p. 122) a verse which has its parallel in a remedial charm (Atharv. vi. 96. 2). The connexion between the two uses is due to the connexion between sin and disease. There is a colourless prayer for long life at the offering of *ṛṣadājya* to Vanaspati (cf. p. 147), and the prayer after the last *upayāja* (p. 155) to the waters and plants is for spirit in one's heart, a soft skin, a son, and a grandson. The prayer to Varuna at the hiding of the spit (p. 162) is found also in a cure for dropsy (Atharv. vii. 93. 2), and the place required is somewhat similar in both rituals. The final worship of the *yūpa* (p. 164) also contains a prayer for long life. This sacrifice, however, possesses greater interest for anatomy on account of the details incidental to the cutting up of the animal (cf. p. 126 ff.).

At the *pinḍapūṣṭyajña* prayers for long life also occur (cf. W. Caland, *Altindischer Ahnencult*, Leyden, 1893, pp. 7 and 10). More interesting are the attempts to call back the spirit after its communion with the *manes* (cf. above, and Caland, pp. 11 f., 178 ff., 243, and the statements that the leavings of this offering have medicinal effect, p. 191).

Of *soma*-sacrifices, the most interesting, the *Sautrāmāṇi*, has been treated above. The *Rājasūya* contains, among its preparatory ceremonies, a number that served originally for the cure of diseases, which A. Weber (*Über die Königsweihe, den Rājasūya*, p. 5) rightly takes as an indication of the fact that this sacrifice has been built up on the basis of simpler popular practices. Thus *Maitrāyaṇi Samhitā* iv. 3. 1 has a ceremony against *ksetriya*, including a sacrifice upon an ant-hill. *Kātyāyana ŚS* xv. 1. 23 states that the *pañchavātiya* is a cure for disease, and xv. 3. 39 that the *charu* for Soma-Rudra is a cure for leprosy. Prayers for long life are found (*Kāt. ŚS* xv. 5. 22; cf. *Sat. Brāh.* v. 4. 1. 1), also at anointing of kings (Weber, p. 49), and while touching a gold piece worth 100 *raṭṭikā* (*Kāt. ŚS* xv. 6. 32). The recitation of the Sunahsepa-legend also forms part of this ceremony (cf. Weber, p. 49 ff.), for the purpose of releasing the king from the fetters of Varuna. The beating of the king may originally have been exorcistic, as he is assured that the beating leads him beyond death. At the *puruṣamedha* also a portion of the ceremony is (*Sāṅkhāyana ŚS* xvi. 13. 3) or may be (*Vaitāna ŚS* xxxviii. 1) devoted to the cure of the *yajamāna*.

By certain modifications a *Śrauta* sacrifice may be employed for the attainment of a special wish. The parallelism of these *kāmyeṣṭayah* with Atharvan charms has been pointed out by Caland

(*Altindisches Zauberritual*, Amsterdam, 1900, p. viii). An idea of the range of the wishes sought may be obtained from such lists as *Kauṣītaki Brāhmaṇa* iv. containing twelve modifications of the New and Full Moon Sacrifice, of which none is intended for the cure of disease; or the much longer list of *Taittirīya Sāmhita* ii. 1. 1. 1-ii. 4. 14. 5. In this are included sacrifices for one 'long ill' (*gyogamayāvin*) that will make him live 'even if his spirit is gone' (ii. 1. 1. 3; 2. 7; 9. 3 [release from Varuṇa's fetter]; ii. 4. 2; 10. 4; 3. 11. 1, cf. also iii. 4. 9. 3); for one 'seized by Varuṇa' or for release from Varuṇa's fetter (ii. 1. 2. 1; 2. 5. 1; 3. 12. 1; 13. 1); for one who wishes to live his full term of life (ii. 2. 3. 2); for one who fears death (ii. 3. 2. 1); or in case cattle or men are dying (ii. 2. 2. 3); for one wishing virility (ii. 3. 7. 2) or power of his senses (ii. 1. 6. 2; 2. 5. 4; 3. 2. 2); for one wishing sight (ii. 2. 4. 3; 9. 3; 3. 8. 1 [even though blind he sees]); for one in fear of impotence (ii. 3. 3. 4); for one in fear of skin-disease (ii. 1. 4. 3; 2. 10. 2); for one who vomits *soma* (ii. 3. 2. 6); for one whose 'mind is slain, who is an evil to himself' (ii. 2. 8. 3 [for insanity, cf. also iii. 4. 8. 4]); for one who has been suffering long from an unknown disease [cf. *ajñātayakṣma* above] (ii. 1. 6. 5); for one suffering from *pāpayakṣma* (ii. 3. 5, containing the mythical account of the origin of *pāpayakṣma*, *rājayakṣma*, and *jāyanya* [cf. ii. 5. 6. 4], and the statement that for this purpose the sacrifice must be offered at the new moon in order that the sacrificer may fill out with it).

In the *Grhya*-rites the phenomena of disease appear more frequently, though still treated in a general fashion which contrasts unfavourably with the details of the *Atharva*. Sickness is a sufficient excuse for sleep at sunrise or sunset (*Āśvalāyana* *GS* iii. 7. 1-2), and disqualifies a *yajamāna* (ib. i. 23. 20); bodily pain also stops the recitation of the *Veda* (*Sāṅkhāyana* *GS* iv. 7. 38). At the *upanayana*, Agni is invoked as the physician and maker of remedies (*Hiranyakeśin* *GS* i. 2. 18, cf. *Atharv.* v. 29. 1). At the *Śrāddha* also prayers for long life are employed (cf. Caland, pp. 26 and 43), and, according to *Hiranyakeśin* ii. 12. 9, the sacrificer, if over fifty, offers to the *pitṛs* some of his hair, with the request that they take nothing more. The reason is that he feels he is now on the down grade and desires to prolong his life as much as possible (other interpretations in Caland, p. 177). The prevention of disease and sorcery may also be attained, according to *Gobhila* *GS* iv. 6. 2, by the daily repetition of a formula. The *Āgṛayana* also, especially in its presentation in *Sāṅkhāyana* *GS* iii. 8, seems to be a rite to render the new food fit for use by driving out any demons that may be lurking in it (cf. the *Āgṛayana* *Kāmyeṣṭi* for an *annādyakāma* in *Kauṣītaki Brāhmaṇa* iv. 12). As a panacea *Sāṅkhāyana* *GS* v. 6. 1-2 prescribes an oblation of rice-grains and *gavedhukā*-grass (*Coix barbata*) with *Rigv.* i. 114; similarly *Āśval.* *GS* iii. 6. 3-4 six oblations of boiled rice with *Rigv.* x. 161 (cf. the directions for protection of the embryo in *Sāṅkh.* *GS* i. 21). Another way of securing health (*Āśval.* *GS* iv. 1. 1) is for an *āhitāgni* to leave the village when he is sick; the sacred fires will desire to return, and will consequently grant him health. This is clearly an adaptation of a popular practice.

Of special diseases: *Pāraskara* *GS* iii. 6 contains an interesting cure of headache by rubbing, while reciting a verse parallel with *Rigv.* x. 163. 1 = *Atharv.* ii. 33. 1. This verse is also employed at *Āpastambīya* *GS* iii. 9. 10 for the rubbing of a sick woman with lotus leaves and roots. When the pain is confined to one side of the head, a different formula is used, the wording of which suggests the ascrip-

tion of the pain to worms. An elaborate cure for epilepsy, conceived as due to the attack of a dog-demon upon a child, is described (*Hiranyakeśin* *GS* ii. 2. 7. 1; *Āp.* *GS* vii. 18. 1; *Pāras.* *GS* i. 16. 24). With it may be compared the exorcism of the *Vināyaka* in *Mānava* *GS* ii. 14, giving many details of the symptoms (including dreams) and of the cure. An attempt to secure a child from all diseases (*keśetṛiya* is particularly mentioned) is found at the *medhājānana* (*Hir.* *GS* ii. 3. 10; *Āp.* *GS* vi. 15. 4). For snake bites, cf. *Khādīra* *GS* iv. 4. 1 = *Gobh.* *GS* iv. 9. 16; the ceremony consists merely in sprinkling with water while muttering a verse. Worms are similarly treated in *Kh.* *GS* iv. 4. 3 = *Gobh.* *GS* iv. 9. 19, while the following *sūtras* provide for their treatment in cows; cf. also *Taittirīya* *Āraṇyaka* iv. 36. 1; *Āp.* *SS* xv. 19. 5. Other cures for cattle are *Āśval.* *GS* iv. 8. 40 (the cows are led through the smoke of a fire in which an oblation has been made; cf. *Hir.* *GS* ii. 3. 8. 10, and *Kh.* *GS* iv. 3. 13).

The *Rigvidhāna* deals frequently in cures for diseases, but not in a way to call for special comment (cf. i. 2. 5; 17. 8; 17. 9; 18. 4; 19. 1; 19. 3; 20. 3; 23. 7; 24. 3; 25. 5; 27. 1; 28. 4; 29. 2; 30. 4-31. 2; ii. 1. 3; 20. 3; 25. 10, 11; 26. 3; 33. 1-3; 34. 5; iii. 3. 2; 7. 6; 11. 3; 18. 5; iv. 1. 1-3; 9. 4-7; 16. 1; 19. 3-5).

The *Sāmavidhāna Brāhmaṇa* has among its *kāmyāni* a series of ceremonies of interest: when the children of one's wife die young (ii. 2. 1; the ceremony is described in art. CHARMS AND AMULETS [Vedic]); when one is seized by a demon (ii. 2. 2); for any disease (ii. 2. 3); in case of pain in a limb (ii. 3. 1, 2); for protection from snakes (ii. 3. 3).

Henry, *La Magie dans l'Inde antique*, Paris, 1904, pp. 178-205; W. Caland, *Altindisches Zauberritual: Probe einer Übersetzung der wichtigsten Theile des Kauṣītaka Sūtra*, Amsterdam, 1900, pp. 67-107; M. Bloomfield, 'Hymns of the *Atharva-veda*,' *SBE*, vol. xlii, pp. 1-48 and commentary thereto, also 'The *Atharva-veda*,' in *GIAP* ii. 1, B. Strassburg, 1899, pp. 58-63 (with copious references to the earlier works on the subject). Since the writing of this article, the *kāmyāni śāyāṇa* have received a full treatment in W. Caland, *Altindische Zauberei: Darstellung der altind. 'Wunschopfer'*, Amsterdam, 1908. G. M. BOLLING.

DISGUST is primarily a feeling in regard to the physically repulsive, and is therefore accompanied by actual or reproduced organic sensations. In 'moral' disgust, these sensations are suggested by analogy. The emotion of repugnance, which appears in disgust, abhorrence, detestation, and horror, is a particular feeling-attitude,¹ or disposition of the self, towards an object which stands in a special relation to the nature of the individual. The object which arouses the emotion is not the hostile as such, or the merely harmful; it is the unnatural—that which involves a perversion of nature. In other words, it is at variance with that primary fitness of things which is based on the essential nature of things. This is evident in the case of the morally repulsive. The abnormal prominence of the animal nature, desires which lead to misuse of functions, desires of any kind raised to an unnatural pitch, all arouse the emotion of repugnance. The same principle is at work when merely physical objects are concerned. Objects of this kind are 'natural' in their proper place, but they may be misplaced. This is the *rationale* of all physical repugnance. The characteristic expression of this emotion in conduct is the avoidance of all relations with the repugnant object. It thus serves to protect, not so much the life of the individual, as his distinctive nature.

DISSENT.—See NONCONFORMITY.

DISTRIBUTION (of income).¹—By the economic theory of distribution is meant the doctrine of the manner in which the products of industry are distributed among the factors producing them, viz. land, capital, labour, and enterprise.

1. The manner in which the distribution is made.—The products are distributed to the producing agents by one of them, viz. the employer, who takes the risk of the market, and, according to the price that he expects, guarantees their shares to the other agents as wages, interest, and rent. He gets his own share, viz. profit, as residuary legatee of the price. It is thus the price of commodities that pays all the shares. The price of a thing may be twopence or ten pounds; it pays for the whole past history of the thing as a commodity, from the landowner and the producer of the raw material in it, the capitalist or employer who took the risk of having it made, on through the course of its making and carriage, of commercial dealings with it, and shopkeeping, till it finally secures its twopence or ten pounds, and out of that pays them all. Thus a great many people have a cut even out of the twopence, and it may seem that some of them might be dispensed with; the money-lenders, perhaps, and the traders or middlemen, who have been called robbers and parasites on the 'real' producers. But the only share that any one takes is what he gets from a buyer who has need of his services; for the normal price of a commodity only pays those means of producing it which are necessary, and for which the spur of competition can find no better alternative.

The system is comparatively recent. Formerly the consumer was the sole or the chief employer of labour; there were few *entrepreneurs*. The present is called the 'capitalistic' system, not so much because capital has grown so huge and efficient, as because it is directed by an employing class. Real capital consists of all the fixed capital used in production and of the circulating capital, viz. raw materials and the real wages of labour. But nominal capital—money in the wide sense—is not merely the measure of real wealth. It has become the pivot on which the whole industrial system is swung, and the means by which capitalism is carried out; for it enables the employer to turn the forces of nature, labour, and real capital in one direction or another.

This was barely appreciated by the earlier writers on distribution; it was hardly time. In simplifying or generalizing their problems, as every science must, they supposed primitive conditions, and stated laws true enough in their way, but apt to mislead when applied to more complex conditions. The notorious example was the 'wages-fund' theory, which assumed that at any time there is a definite amount of capital in a country, and that the country must wait for the next harvest or so before addition could be made to the stock, especially to the stock of its circulating capital. That assumption is too remote from present conditions to be of use, and the problem is now simplified by making the opposite assumption. The nation is taken not as a lone island, but as part of the world, and the national income is taken as produced, distributed, exchanged, and consumed every day. Into this very fluid stream comes the employer to direct its course. His action is determined by the price that he expects, and it is distributed through him. He guarantees the other agents their shares, and takes the rest; he buys them out. If he is a contractor, he knows the price he will get, and what he can afford to pay the other agents. Or he may undertake the further risk of not knowing the price he

will get; he may place an order for goods in view of a demand that he hopes to find or create. Or, e.g., as a mining company, he may have to speculate at greater risk. His profit may be large, or it may be less than nothing, according to the price that he actually gets to cover his output.

The employing function is very often associated with one or more of the others in the same person, or in a company, as when a lender, or a landowner, has to take part of the business risk, or when an employer uses his own capital and land, or is his own manufacturer, manager, or workman. But the functions are distinct, and receive much the same shares on the average as when they are exercised by different persons.

It is enough merely to mention that commodities which form the real national dividend are ultimately distributed not merely to their producers, but, through their producers, as payment for all kinds of services—from professional to domestic; and that, to provide a fund for the variety of public services, all shares are more or less tapped by taxation.

2. The shares.—In dealing with the relative amounts that go to the four factors in production, one course is to treat rent, interest, and wages as prices, and to follow out the consideration that, like all prices, they are determined by this, that each has a marginal quantity and quality which it just pays the employer to buy. The margins are not independent of one another, since the employer may substitute machinery for labour, one kind of labour for another, a cheap site requiring much capital for a dear one requiring less. And he expects a certain margin of profit for his own enterprise, short of which he would prefer to join the ranks of the employed. But, as data for an ethical judgment of the system, it is better to regard the shares more directly.

(a) *The share to land or nature.*—Economic rent comes out of the price of a commodity in respect of the superiority of the soil and site concerned in its production. The growing demand for food and raw material, houses and factories, requires the use of inferior natural conditions; resort is had to inferior lands and sites, and more capital and labour are put into those already occupied, though the return per unit is less. Since it must pay to use the inferior conditions, it more than pays now to use the better. The surplus is rent. Hence it does not need a system of landlord and tenant in order that there should be rent. When a farm is cultivated by its owner, it earns the same economic rent as if he had let it, for its produce brings the same price.

In respect of the amount that goes as rent, it is best, and it is the practice, to begin by regarding a farm or a town-block as having a value estimated from its selling price, or from its earnings capitalized. Thus the earnings are all profit and interest on the selling price; rent is not something additional, it is contained in the profit and interest. To separate it out is to make a fresh analysis, tracing now the stock to its origin, and distinguishing the part that is not due to the owner's capital and labour. Besides 'the natural and indestructible powers of the soil' and the suitability of the site, this part includes the improvements, e.g. road and rail, that are due to the capital of others. Some (e.g. Pierson, *Princ. of Econ.*, London, 1902, vol. i. ch. 2) include as yielding rent, and not interest and profit, all advantages that are due to capital permanently sunk in the land. But theoretically it is better, and for the purpose of special taxation it is usually the intention, to distinguish the advantages of land and site that are due to nature or to the expenditure of others, and not due to the expenditure of owners present or past. For urban lands it is

¹ For Distribution of wealth, see art. WEALTH.

thought that from about 25 to 40 per cent of their annual value is rent, the higher figure being the estimate for London. Of the annual value of agricultural land in England, probably 23 per cent is pure rent (R. J. Thompson, *Journ. Roy. Stat. Soc.*, 1907, p. 610).

(b) *The share to capital.*—This must not only make good the capital that is consumed in producing the commodity, but pay interest on it as well. And it is the same with interest as with rent; capital need not be lent in order to earn interest. If the owners of real capital use it themselves, and use it equally well, it earns much the same interest as when the capital is borrowed, for its products get much the same price. A machine or other piece of real capital pays its costs out of its products; and, if it could produce them all at once, there would be no interest, for the price got for them in respect of the machine would just cover the cost of the machine. But to do its work the machine needs time. This involves other costs, e.g. repairs, insurance, and the risk of becoming obsolete; and these must be covered by the price of the products. But also the mere time must be paid for, and, the more time that is needed, the more the produce must pay. Interest is, therefore, a rate on the capital per unit of time; and it is paid because the time is necessary, like the power that works the machine, or like the need for repairs. One machine or process would be able to displace another equally economical in all other respects, if it made an economy merely in time. From this case of a machine and its working we may generalize regarding the interest on all capital, commercial as well as industrial, that claims a share in the national dividend; for the bulk of loanable capital is employed in the purchase and working of real capital. Interest, then, is the share of the price of commodities that goes to capital on account of the time that the capital needs to get its products and have them sold. The interest on capital that is borrowed, not for production but for consumption (e.g. a dwelling-house or a war-loan), does not concern us; it is not an additional claim to a share in the distribution of the dividend, but merely the exchange of one person's present claim for another's in the future that suits him better. It may be observed, however, that the rate of such interest follows the rate on productive capital, so far as it is pure interest, and not also a premium on the risk of loss, or an extortion from folly or distress.

It was a mistake to suppose that there must be a minimum rate of interest, below which the increase of capital would be checked, and the rate correct itself; for with the diffusion of wealth come prudence and the joy of possession. On the other hand, to prophesy that the rate must decline is hazardous, considering the demands for capital that may arise at any time to meet the increasing supply of it. But a normal rate over long periods it is quite possible to distinguish; and it is important to do so, in order to separate pure interest from the employer's share, from rent, and from gains and losses that are due to a rise or fall in the value of the capital itself. The distinction from the employer's share is already obvious, but to separate it from the other two we have to regard interest as a rate not on what the capital may have cost originally, but on its selling value. Then we can say that all capital, so far as it is used as capital, earns interest, and that competition keeps interest at a normal rate for different kinds of stock. This rate is that at which capital remains in the industry; rates are above and below the normal, and indicate the employer's profit and loss, when they tend to increase or diminish the supply of that kind of capital. When an owner or a valuator finds the average interest in a stock to be over or

under the normal, he writes the capital value up or down to a figure at which the capital earns the normal rate for that kind of stock. Similarly with government and other stocks; it is the interest that is regarded as constant, and the owner's capital that is written up or down. The more a stock is an investment stock, the more this is apparent, and it is really the same with stocks that are more speculative. The interest on first-class securities is taken as the minimum of the normal rate. The minimum varies with the demand for such securities and their supply, and for different lengths of credit. But the average interest on loans for three months on these securities is conveniently regarded as the rate of pure interest, because all factors are eliminated but time. From 1844 to 1900 the average rate of the Bank of England was £3, 12s. per cent, and the market rate about 10s. less (Palgrave, *Bank Rate and the Money Market*, London, 1903).

(c) *The share to labour.*—The rest of the product goes to the living factors. The relative amount of it cannot be estimated without an adequate census of production, and, in particular, because the estimation of interest has to be made on the earning capacity of capital, and not on its cost. But the earning capacity of the living factors may be taken to be about five times that of land and capital together (Nicholson, *Strikes and Social Problems*, Lond. 1896, v. and vi.). The struggle between labour and capital does not lie here, however; a less figure need not imply any loss to labour, for the substitution of machinery for labour is to the ultimate advantage of the latter. The struggle is not of labour against rent and interest, for we have seen how these are already fixed and inevitable, but for the division of the share that goes to the living factors. Most directly it is between the share to the labour or enterprise of the employer, and the shares to the labour of all kinds that he hires.

The hired labour may be manual or mental, industrial or commercial, the labour of workman, clerk, or manager. And it is not of theoretical importance whether the wages are paid weekly or as salaries; for whether the employer pays before selling the product is immaterial, the essential thing being that the share is made a fixed cost, independent of the business risk. But, while it is the struggle between employer and employed that is most in evidence, the real struggle is deeper. As in all buying and selling we see competition in the higgling between buyer and seller, but behind, and entirely determining the average price, there is the more vital struggle of buyer with buyer and seller with seller, so it is in the labour market. This was wrongly expressed in the 'wages-fund' theory, which required a rise in the wages of one class of labour to be met by a fall in wages elsewhere. The theory was right in holding that the action both of the buyer and of the seller of labour is limited; but the limit is not capital but the price of the product. And it was also right in saying that the classes of labour are in mutual competition; but the force of each depends ultimately on its efficiency. This is partly obscured when the power of collective bargaining is strong in one class and weak in another, and it is to be hoped and expected that the lower grades will advance more rapidly than those requiring skill, intelligence, and managing ability; but progress and competition will continue to make the great difference. They will continue to determine the supply of labour at the different grades, and thus to make the differences in wages and salaries correspond with a difference in ability. It seems unjust that in almost any industrial group it is the most wearing and unpleasant labour that gets the smallest share of the product; but the unfairness cannot be charged to

the system of distribution, so long as efficiency is taken for the test of desert. For it is no part of the system itself that competition must be greatest at the bottom and least at the top, and that the hardest and most monotonous labour should thus have to rank as least efficient. A considerable part of the rise in the average wages of manual labour has been due to the rise in occupation.

'The constant tendency away from agriculture and the textiles, where the average earnings of all employed, either through the low relative wages of the male (as in agriculture), or the large relative employment of lower-paid women and children, are low, towards the more highly-paid engineering, mining, and building industries, has had the effect of increasing the average earnings of all employed in industrial occupations more rapidly than the earnings in the occupations taken separately. . . . The Standard of Comfort of the British wage-earner is now, on the average, not less than 50 per cent, and probably nearer 80 per cent, higher than that of his predecessor in 1850, and of this advance more than one-half has been obtained during the past quarter of a century' (G. H. Wood, *Journ. Roy. Stat. Soc.*, 1909, pp. 98, 101).

(d) *The share to enterprise.*—Profit is what remains of the price of the product after the employer has paid the other shares. There are all grades of enterprise, from those requiring little capital and ability to those requiring much, and ordinarily there is competition at all grades with other employing individuals or companies. The individual profit is frequently little more than the salary of a hired manager at the same grade, and, considering the number of failures, the average is possibly less.

'There is good reason to believe that the community gets its employing done for it more cheaply than it gets any other

service, just because the speculation and the free life are very large elements in the real remuneration' (Smart, *The Distribution of Income*, p. 163).

The existence of the employer and his profit, which distinguishes the present system from its predecessors, has often been regarded as its defect; and Socialism (*q.v.*) is the view that this function should be undertaken by the State, and not by individuals or companies. The discussion on the question is beyond the scope of this article; but it may be repeated, on behalf of the present system, that many of the current economic evils are wrongly charged against it. The system of distribution would not be affected, for example, by any measures of taxation and expenditure that aimed at a better distribution of wealth; and the regulation of monopolies is an essential office of Government, which has given freedom from its old control only because it has found a more effectual substitute in competition. The most serious defects lie in competition itself; but the defects are not all inevitable, and they prevent the very efficiency which the system is meant to bring out. Cf. art. COMPETITION.

LITERATURE.—All the text-books in economics give a prominent place to distribution; several books are confined to the subject, the most distinctive being J. B. Clark, *The Distribution of Wealth*, London, 1900, and W. Smart, *The Distribution of Income*, Glasgow, 1899. Wages, interest, and rent have each a large literature; and the recent works on monopolies and trusts may be regarded as the special authorities on profits. In comparative statistics regarding wages, special reference may be made to the work done by Rowley and Wood, and for current comparisons there are the Reports of the Board of Trade mentioned under art. CONSUMPTION (Economic), to which has now to be added the corresponding Report on Wages and the Cost of Living in U.S.A. (1911). W. MITCHELL.

DIVINATION (Introductory and Primitive).—By 'divination' is meant the endeavour to obtain information about things future or otherwise removed from ordinary perception, by consulting informants other than human. While mostly directed to foretelling coming events, it is not confined to this, but may seek to find out, *e.g.*, what is going on at home while the inquirer is abroad. Ancient as well as modern thinkers have repeatedly denounced it and exposed its fallacy; nevertheless it is still practised all over the world by the more backward races of mankind and by uneducated members of the civilized peoples. Even under the highest religions—Buddhism, Islām, Judaism, Christianity itself—diviners, like other magicians, have continued to flourish, although their arts form no part of the prevailing rites and beliefs, and, indeed, have been often and vigorously denounced by the leaders of religion. Like other pseudo-sciences, divination rests on very ancient and wide-spread convictions, inherited from lower levels of culture; and its great stronghold is in the utter inability of the undeveloped human mind to understand and appreciate a negative argument. No doubt wilful deceit on the part of diviners has done much to retain their hold on popular belief; but for the most part they have been the dupes of their own pretensions, and, like their consultants, have remembered successful predictions and forgotten unsuccessful ones.

Divination is a pseudo-science, and has a cer-

tain order and logicity in its structure, once its erroneous premisses are granted; although it must be remembered that the logic of uncivilized and semi-civilized man—or, for that matter, of our own children—is much less stringent than ours, and less quick to detect fallacies. Indeed, the whole argument for divination may be said to be based on a glaring fallacy of 'ambiguous middle.' To explain this, it is necessary to consider what train of thought may be supposed to have given rise to the beliefs under discussion.

Perhaps the first idea which suggests itself is that divination grew out of false induction. A savage, we may imagine, noticed a bird, for instance, behaving in a peculiar way, and soon afterwards met with some mishap. He put the two happenings together, did the same in several other cases, and came to the conclusion that such-and-such a movement on the part of a hawk or parrot meant that the observer was in danger of a bad fall, or would have no luck if he went fishing. That such a train of reasoning may often have taken place we do not deny; but we are of opinion that such a process would not be likely to lead to anything more than a miscellaneous series of omens, not a system such as divination often is among quite uncivilized races. Also it would result in the most arbitrary relations between omen and subsequent event; whereas between the sign and the thing signified there very often exists, allowing for uncivilized ways of thought, a perfectly

rational connexion, sometimes amounting to causality.

It seems, then, more likely that divination should be treated as a branch of sympathetic magic, and regarded as a deduction or series of deductions from a vaguely conceived principle of something like the uniformity of Nature. The reasoning may be thus paraphrased in our definite phraseology: like causes produce like effects; therefore this occurrence, which is like that other one, will produce a like result. The fallacy lies in the ambiguity of 'like,' and the reasoner's inability to differentiate between those things whose likeness to one another is real and essential and those which bear only an accidental or fanciful resemblance to one another. Thus, 'whistling for a wind' rests on the likeness between whistling and the rush of an actual breeze; while in the realm of omens, the Melanesian belief, that, if a non-domestic animal, entering the house,¹ makes any outcry, a death will ensue, seems to rest on the resemblance of the strange creature's cry to the wailing of mourners. How real the causal connexion is often felt to be is clear from the innumerable cases in all grades of civilization of avoidance or neutralization of bad omens—taking away the cause, that is, to prevent the effect. Thus the Manipuris, if they meet with a mole on a journey—a bad omen—try to kill it (Hodson, p. 132).

But this simple process is not in itself sufficient to account for all the ramifications of the diviner's art.² At least two main developments must be noted. The first is the elaboration of the supposedly causal or quasi-causal connexion between omen and event into a system, often very complex and intricate, of symbolism—a system, the gaps in which, as Tylor notes, are apt to be filled by the invention of new omens, arbitrarily, or on the analogy of those already existing. The second comes with the advance of religious belief and the growing importance of deities of one sort or another. Men come to think of omens as sent by them. A good example of this is the Dayak idea that the hawk, their chief omen bird, while it sometimes comes of its own accord to foretell the future, is regularly the messenger of Balli Penyalong, the Supreme Being.³ Finally, it must be remembered that, although the chief source of divination is probably sympathetic magic, other ideas have contributed to the long list of omens.⁴

Divination may be roughly divided into two kinds: (a) 'automatic' divination, in which an omen is looked for and interpreted, so to speak, in its own right, with no thought of appeal to any supernatural power, god, or spirit; and (b) divination proper, in the strict etymological sense of the word, which inquires of some sort of a deity, generally by means of signs conceived of as being sent by him. But of many cases it is hard to say which category they fall under. Take the well-known method of divining by the Bible and key; we doubt if the people who use this method could say definitely whether they suppose the answer to be sent by God or to come from some quasi-magical power inherent in the book itself. The same applies to many such survivals; one is in doubt whether to consider them purely magical or affected by the current religion. For the purposes of this article, we shall classify divination according to the means employed, noting roughly the distribution of each.

¹ For the ominous nature of such an occurrence in general, see below.

² It should be noted that, although no people apparently is without some system of divination, the ruder tribes (e.g. the Australian blacks) have only very rudimentary ideas of it, and even to use it but little.

³ Hose-McDougall, in *JAI* xxxi. 179.

⁴ See esp. § 7, on 'Divination from animals.'

1. **Dreams.**—That a dream may be in some way prophetic is a view held by all races at all times, and still popular, to judge by the numerous modern dream-books.¹ The simplest form is that the dreamer sees, as actually as if he were awake, what is being done or at least contemplated. A recent book² gives an excellent account of the way the Lenguas of the Paraguayan Chaco regard dreams. We quote a typical case:

'A spirit appeared in the form of a horned beetle, and, flying round the sleeper several times, eventually entered his body in the vicinity of the knee. The pain of its entrance was distinctly felt. The sleeper, awakening, noticed no mark or other sign of injury. The pain, however, was still slightly felt. What explanation could there be, according to the Indian's way of thinking, except that an actual beetle had entered, possessed by a spirit?'

The explanation usually given by savages is that the dreamer's soul, or one of his souls,³ goes away from his body and sees the things he dreams of. Hence the reluctance among many uncivilized peoples to awaken a sleeper—his soul may be shut out, or an evil spirit get in, etc.

Another idea is that the temporarily liberated spirit visits the spirit world and there secures information. This, we gather, is the Ewe belief,⁴ and it is frequently met with elsewhere. Or the revelation may be given by spirits visiting the dreamer. An excellent example of this is found in the skull-divination of the Torres Straits⁵ natives. A skull, preferably that of a kinsman, is placed, after sundry honorific ceremonies, beside the pillow of the consultant. In his sleep he hears it speaking to him, with a sound like teeth chattering. The modern method of putting bridesake under one's pillow would seem to be a survival of an even cruder kind of magic. Finally, a god, not a mere ancestral spirit, may choose this method of sending an oracle, and in that case the dream is generally sought for by sleeping in a holy place—the Greek *ἐγκομνίους* (see DIVINATION [Greek]). An example from lower culture is the N. Amer. Indian custom—found also among the Dayaks—of going to some solitary and more or less holy or haunted spot, to learn in a dream or ecstatic vision the identity of one's guardian spirit.

But, even with the simplest and crudest ideas of dream-divination, it soon becomes clear that all dreams cannot be taken literally. To enumerate all the methods of interpretation would be an endless task; perhaps the simplest case is that in which the dreamer dreams of something which, if actually seen, would be ominous: e.g. in certain parts of Australia, to dream of 'old-man' kangaroos sitting about the camp presages the advent, not of kangaroos, but of danger; and the kangaroo sometimes gives omens to men awake.⁶ With the increasing complication of dream-interpreting, the services of a professional diviner become necessary. He may either dream himself, like the Melanesian *tatua gogogore*,⁷ or interpret other people's dreams, like the Nāga *maiba*.⁸

Distribution: world-wide. Typical cases are: literal interpretation (Sea Dayaks);⁹ symbolic dreams (Malays).¹⁰

2. **Presentiments** may perhaps be noticed here, although they hardly amount to actual divination. The Zulus, for instance, believe that a man look-

¹ See Aristotle, *De div. c. somn.*, for an eminently clear-headed discussion of this belief.

² W. B. Grubb, *An Unknown People in an Unknown Land*, 1911, p. 127 ff.

³ Men have several souls apiece, according, e.g., to the Sea Dayaks.

⁴ Spieth, p. 564.

⁵ Camb. Exp. p. 361 ff.

⁶ Howitt, p. 400 ff.; cf. Hodson, p. 129: 'The Tangkhuls say that a man who is attacked by a buffalo will lose any lawsuit in which he happens at that time to be involved. They also believe that, if a man dreams that he is attacked by a buffalo, he will suffer similar misfortune.'

⁷ Cordington, p. 208.

¹⁰ Skeat, p. 532 ff.

ing for a thing sometimes 'feels internally a pointing' which will guide him aright; 'but if it is done by mere head-guessing . . . he generally misses the mark,' to quote a Zulu cited by Callaway.

Distribution: not specifically mentioned by most of our authorities, but may be presumed to be universal or nearly so.

From these cases, in which a man may almost be said to prophesy to himself, we turn to the large class of—

3. *Divination from bodily actions*.—Of the various involuntary movements and noises of which the human body is capable, perhaps sneezing is the one most universally regarded as ominous, and, in nearly all cases, as a bad omen. The reason is apparently that it is feared that the internal convulsion may disturb or drive out the soul.¹ Hence the common custom of blessing the sneezer, prevalent alike in civilized Germany (*Gesundheit!*) and among the Nandi (*Ko'-weit-in Asis*, 'God be good to you!'). We cannot recall any non-classical examples of the idea that a sneeze is a sign sent to denote Divine approval of words or actions (see DIVINATION [Greek]).

A curious form of divination is the Melanesian *so ilo*. In this, the hands are rubbed above the head and a ghost (*tindalo*) invoked by a magic song. A cracking of the joints, variously significant according to the particular joint which cracks, is taken to be the spirit's answer (Codrington, 21). Other ominous signs are hiccuping, the twitching of an eyelid, and so on; but these omens are mostly trivial and not much regarded either by savages or by civilized races. The sneeze, stumbling,² and *so ilo* are the only really important ones we know of. Some voluntary actions are considered unlucky, and therefore avoided, by various races;³ but this is hardly divination, nor is the idea that 'praise to the face is open disgrace'—very common among many peoples from Europeans downwards—properly germane to our subject.

Distribution: important cases given above; minor omens from bodily actions are world-wide.

All the above forms of divination depend upon a more or less normal condition; we now proceed to consider those which depend upon an abnormal state of body or mind, or both.

4. *Divination by ordeal* may be thus classed. Ordeals are of two kinds: either a suspected person (or the suspect and his accuser) is subjected to some process which would normally injure or endanger him; or the process is a magical one, with power to hurt the guilty, but not the innocent. Examples of the first class are the ancient European 'judgment of God' or 'wager by battle,' and the Gold Coast method of making, *e.g.*, a wife suspected of infidelity plunge her hand into boiling oil.⁴ The innocent and wrongfully accused person is Divinely aided to win the combat, or protected against what would normally harm him or her. The author believes that this is the root-idea of judicial torture, at least among people so humane in general as the ancient Athenians. The idea probably was that an innocent man or a truthful witness would feel no pain.⁵ Of the second class the Nandi and Masai furnish very instructive ex-

¹ Tylor, i. 100 ff.; cf. Ellis, 208; the Ashanti believe a sneeze indicates 'something unpleasant or painful having happened to the indwelling *kra*.'

² *e.g.* among the Malays (Skeat, p. 558); also Græco-Roman (see special articles) and modern (see § 12, 'Survivals').

³ Thus a Malay child is avoided if he lies on his belly—the almost universal attitude of a resting child—as this is considered unlucky; and sundry bits of table etiquette amongst the same people have a similar sanction (Skeat, p. 531 f.). Cf. the classical habit of entering a room right foot first.

⁴ Ellis, p. 196 f., gives examples of both classes.

⁵ Ellis, p. 201, remarks that a guilty woman will often confess rather than face the ordeal, as a beating hurts less than a badly scalded hand!

amples. Among the former,¹ the accused lays a skull at the accuser's door, saying: 'If I have done this thing, may this head eat me; if I have not done it, may it eat thee,' and one or the other dies accordingly. Among the latter,² the accused drinks blood, saying: 'If I have done this deed, may God kill me!' (*Ten ataaas elle-bae, naaar eng-Ai*); and, if guilty, he dies accordingly. These different methods, occurring among tribes so near to each other in territory and culture, warn us of the thinness of the party-wall between magic and religion. This *eng-Ai*, who punishes the guilty man in the latter case, is a genuine deity—a 'high god'; but in the corresponding ordeal of the neighbouring tribe, it is the inherent magical power of the skull (or the ghost), apparently, which 'eats' the false swearer. It is noteworthy that the Nandi diviners, who in other respects are exactly like their Masai confrères, are said to worship, not Asista, their 'high god,' but the ancestral spirits.³ But the root-idea is the same in any case: guilt weakens the wrong-doer, robs him of his *mana* or of Divine favour, and so renders him an easy prey to any injury, natural or magical. This weakness extends to his agents, as in the Malay ordeal by diving, described by Skeat (p. 542 f.). In this, boys, hired by the parties to a suit, plunge simultaneously under water, with the result that the representative of the party in the wrong has to come up again at once, while the other is not inconvenienced. Such a belief as this indicates a people not without some advancement in moral ideas.

Distribution: Africa, *passim*; in Asia, *e.g.* among the Nagas; also in Melanesia and among Malays; formerly in Europe; not in Australia; traces in North America.

5. *Divination by possession* ('shamanizing').—Not only do spirits visit sleepers, but they often possess a diviner or priest, rousing him to a prophetic frenzy. This belief, while adopted by some higher cults, as that of Apollo (see DIVINATION [Greek]), is most characteristic of those races in whose religion the spirits of the dead are prominent. Thus, the shamans of the Tunguses in Siberia are possessed, not by Tengri Kaira Khan, or Erlik (the leading good and bad deities respectively), or by any of their emissaries, but by the ancestral spirits—the objects, one may conjecture, of an older cult. We translate a part of Radloff's vivid account:

'The individual marked out by the might of the ancestors for shamanhood feels a sudden faintness and exhaustion . . . a heavy weight presses on his breast and suddenly wrings from him violent, inarticulate screams.' (After wild paroxysms he sinks to the ground.) 'His limbs are wholly insensitive; he snatches whatever he can lay his hands on, and swallows aimlessly everything he gets hold of—hot iron, knives, needles, . . . afterwards casting up dry and uninjured what he has swallowed.'

Apparently this eccentric diet does him no harm. His only relief is to seize the shaman's drum and begin to 'shamanize': his chief danger is that he may resist the frenzy and die or go mad. Not till after this experience does he receive any instruction in his art from other shamans. He is able, by the help of the spirits, to foretell the future, besides exercising various priestly functions. There seems to be no doubt of the sincerity of some, at least, of these men, who continue to ply their art despite Governmental prohibition. 'I must shamanize,' said one of them to a traveller, 'both for my own sake and that of my people.'⁴ What their actual state is during 'possession' we leave to physiologists to determine. The shamans of

¹ Hollis, *Nandi*, p. 76.

² Hollis, *Masai*, p. 345.

³ So the Toda diviners are mostly possessed by foreign gods; and, in general, where a race's religion has advanced beyond the earliest stages, the diviners, like other magicians, represent the older and cruder forms.

⁴ Stadling, in *CR*, 1901, p. 86 f.

Northern Asia use a drum in divining; but in some other cases the possessing spirits speak by the mouth of the wizard, as among the Tshi-speaking peoples,¹ whose priests are possessed, not by spirits, but by gods. Some similar cases will be considered in the next paragraph.

Distribution: Ural-Altaic races of N. Asia and Europe; N. America (see DIVINATION [American]); more or less modified forms common in Africa and elsewhere (e.g. Todas).

6. *Necromancy.*—Death increases rather than diminishes a man's magical powers, including his prophetic faculties. Hence we find the wide-spread practice (of which, indeed, shamanizing might be considered a variant) of consulting either the souls of the dead in general or the soul of a particular dead man, or his corpse. A very crude instance of the last comes from Central Australia. Tree-burial is largely practised among these tribes, and it is the custom to observe the direction taken by the liquid matter exuding from the corpse and flowing along the ground. If the stream flows, say, north, the slayer lives to the northward;² if it is short, he is close at hand; if long, he is far away. Skull-divination has already been noticed, and might be classed under necromancy. But we are chiefly concerned with necromancy proper, or the evoking and consulting of ghosts. This, as distinct from seeing a ghost casually in a dream, or meeting or hearing one unsought, which might happen to any one, is the task of a professional diviner or a priest. Thus the Zulu witch-doctor is visited by the *amatongo* (=manes) and their voices are heard giving answers. 'The voice,' says a native witness, quoted by Callaway, 'was like that of a very little child . . . it speaks above, among the wattles of the hut'—a clear case of ventriloquism. Among the Melanesians a *tindalo*, or ghost, comes on board a canoe, its presence being detected by a *mane kisu*, or diviner, and gives affirmative or negative signs in answer to the question, 'Shall we go to such-a-place?' The Ewe diviners summon a *tro*³ in case of sickness, and from its answers—in audible to profane ears—foretell the course of the disease, and so on. In most, if not all, cases, the spirits thus consulted are given offerings of various kinds to win their favour and induce them not only to foretell, but to make things turn out as the inquirer wishes (see Spieth, *l.c.*).

One curious case might be called either necromancy or ordeal. It comes from the Gold Coast, and is used when a creditor makes a claim on a dead man's estate, about which the heirs are doubtful. The claimant drinks water in which the corpse has been washed, swearing to the accuracy of his statement; if he is lying, the power (*sisa*) of the deceased will punish him.⁴ This is an illustration of the difficulty of applying any rigid classification to a large and miscellaneous body of savage beliefs.

Distribution: in one form or another, worldwide. Typical instances are given above.

From men, living or dead, we pass to their surroundings, animate and inanimate. Beginning with the former, we find a large and interesting class.

7. *Divination from animals.*—(a) *Augury.*—The movements of birds or beasts are considered ominous in some degree by nearly, if not quite, all races. In

some cases the reason is quite obvious. Thus the Melanesians have a bird which they call *wisi*, from one of its cries. This happens to mean 'No' in the local dialect, and the creature is thus able to answer questions—its other cries being taken to mean 'Yes.' But this is 'not seriously thought of' (Coddington, p. 221), and in the vast majority of cases the omen is symbolical, frequently needing a professional diviner to interpret it. Thus the Kenyahs of Sarawak have a method of divination worthy of Etruria, by which high-born angurs, after due ceremonies, sit in a leaf-shelter and watch a particular part of the sky for hawks, until the favour of Balli Penyalong is shown by one bird flying right, another left, and a third circling.¹ Why this should be a good omen is by no means clear; the symbolism of augury is a product of many generations, and mysterious, probably, even to the initiated. A more profitable question is, Why should animals give omens at all?—for, no doubt, the original idea is that the animals themselves gave answers, not that any god sent them.² Leaving the Kenyahs for a much more primitive people, we find a case which throws great light on the origin of the belief. A certain young member of the Yui tribe had the kangaroo for his personal totem, by inheritance. Whenever this man saw an 'old-man' kangaroo coming towards him, he knew that he was being warned of danger.³ The Kenyahs are not totemic; but the Ibans (Sea Dayaks), who are of the same family, have a sort of personal totem, the *ngarong*,⁴ or 'spirit-helper,' who generally takes animal form. It is not unlikely, then, that the omen-animal or bird was originally some sort of a personal totem, or—since 'totem' is a word apt to be abused—a *manitou*, which gave warnings and advice, as friendly animals do in folk-tales of all countries. Originally only this one particular spirit-animal would give omens;⁵ this would then be extended to all its species; and, finally, with the coming of more advanced religious views, they would be considered the messengers of a god, perhaps originally a theriomorphic one. We put forward this theory tentatively, however, recognizing its difficulties, such as the existence of augury among the Kenyahs, who apparently have not even the *ngarong*, and its non-existence in Torres Straits, where totemism flourishes.

It should be mentioned that men may be counted among omen-animals. We have already dealt with the omens a man may draw from his own actions; but he may also do things significant for others, though not for himself; e.g., if twins are born, this, like almost all events a little out of the common, is held to be a good or a bad omen by various peoples; thus the Nagas⁶ hold that the birth of twins of opposite sex is unlucky. Again, the Masai⁷ believe that if, on a journey, one meets a solitary wayfarer, the journey will be fruitless.

Finally, in augury, one cannot divide the ominous creatures simply into lucky and unlucky. The same bird or beast may give opposite omens according to the place where it is heard or seen. To take one example out of many, and again from the Masai,⁸ the bird they call *tilo* (*Mesopicus spodocephalus*), if heard on the right, is good; if on the left, bad. If heard behind, on a journey, it means, 'Go on, you will be hospitably received.'

¹ Hosi-McDougall, p. 175 f.

¹ Ellis, p. 191. Note that in a few cases (as the Masai [Hollis, p. 324 f.]) a frenzy is induced by an intoxicant or other drug.

² 'Death from natural causes' is a notion quite foreign to Australian blacks; all deaths are caused either by violence or by magic. Compare Marett, *Threshold of Religion*, 1909, p. 26.

³ Spieth, p. 506.

⁴ Ellis, p. 197 f. Note the primitiveness of this rite among a people who, according to Ellis, 'implicitly believe in the superhuman power of their gods,' and do not attempt to coerce them by any magic (194 f.).

⁵ Both ideas persisted in late beliefs and speculations; see, e.g., Stat. Theb. iii. 486-8 ('seu purior axis amotumque nefas est rarum insistere terris uera docent [alites]') for the former.

⁶ Howitt, p. 400 f.

⁷ Nyarong, in Hosi-McDougall, p. 173; but this is said to be a misprint; Gomes, in *Athenæum*, 18th March 1911.

⁸ The Ibans say that not all omen-birds, but only 38 of each kind, are the messengers of Singalang Burong, the hawk-god, the others do not give true omens, and are not, like the 33 immortal.

⁹ Hodson, p. 134. ⁷ Hollis, *Masai*, p. 324. ⁸ *Ib.* p. 323 f.

(b) *Haruspicy*.—Not only living, but dead, animals can give omens, though the latter are for the most part intelligible only to professional diviners. Before passing to a consideration of these cases, it is well to notice that a dying animal is sometimes consulted. The Nāgas, for instance, sometimes kill a fowl and watch its death-struggles for omens. They also have a more economical, though less reliable, method, in which the fowl is held up by the wings. 'Should the animal cross its right foot over the left, the omen is good; the opposite, bad.'¹

Perhaps the simplest case of what might loosely be called haruspicy is that given by Gomes.² The Sea Dayaks, he tells us, consider it a very bad omen if they find a dead animal in their fields; the crops will poison the owner if he ventures to eat them, unless some one with strong *mana* removes the tabu by ceremonially eating a little, and thus absorbing the evil influence into his own powerful person.

But in haruspicy proper we have to deal with a not very primitive type of religion. The slaughtered animal is regularly a sacrificial victim; the *haruspex* is generally not merely a diviner, but a priest, where such a distinction exists; and the entrails therefore contain the cryptic message, to be read by enlightened eyes, of a god. The method of reading is a more or less complex symbolism; thus, to find the internal organs in an unusual position—heart on the wrong side, or the like—means generally some disastrous upheaval.

Distribution: augury and haruspicy both in Sarawak; augury alone in Malay Peninsula and Melanesia; haruspicy alone among Masai and Nandi; both found, singly or together, in more or less complicated forms, in nearly all parts of the world.

8. *Divination by mechanical means*.—Of mechanical means of divination there is no end. We may divide them, very roughly, into: (a) *coscinomancy*, or devices akin to the modern *planchette*, and probably worked by unconscious muscular action; (b) *sortilegium*, or devices involving some kind of a game of chance, generally of simple form.

(a) Skeat (p. 536 f.) reports a simple case of *coscinomancy* among the Malays, which he himself saw. A kind of pendulum is made, with appropriate rites—charm and sacrifice—by thrusting a fish-spine through a lemon, and suspending it on a cord of seven different coloured strands. Questions are then put to it; it says 'Yes' by swinging, 'No' by staying still. The same people use a divining-rod, which vibrates in the presence of a thief; the Melanesians³ use a similar rod in cases of illness, to discover which of the recently dead is 'eating' the patient. The stick vibrates at the right name. To take another illustration from Skeat (p. 538 f.)—a thief may be discovered, after appropriate rites, by two people holding a bowl of water between their fingers. The names of suspected persons are presented to it in writing, and at that of the guilty man it twists around and falls. In all these cases, as in *planchette* writing, if we exclude deliberate cheating, we are left with the supposition that the diviner unconsciously moves his divining-machine in the way he is expecting, or perhaps contrary to his conscious expectation and even his conscious volition.⁴ But the usual, so far as we know, the universal, explanation given by the lower races is that the movements are caused by some spirit which, to borrow the jargon of modern spiritualism, 'controls' the instrument. It may well be thought, however, considering the obvious antiquity of this

and kindred modes of divination, that, before any definitely animistic belief came to prevail, the implement, being by virtue of proper ceremonies made 'big medicine,' had in itself the power to answer.

(b) Whether or not Tylor¹ is right in seeing in *sortilegium* the origin of all games of luck, it is so wide-spread and miscellaneous that we can do no more than give a few random examples, some of which, provisionally accepting Tylor's hypothesis, we class under the main forms of games of chance. (1) *Odd and even*.—This is used among the Masai and Nandi, whose diviners shake pebbles out of a buffalo-horn, and observe whether an odd or an even number results.² On the Gold Coast a similar method is used, with nuts for pebbles and without the horn.³ (2) *The teetotum*.—The coconut, being a natural teetotum, is much used in the Pacific, both in games of chance, pure and simple, and for divination. Tylor (*loc. cit.*) gives examples of both. (3) *Dice and similar implements*.—Dice, as we understand them, are but little used among savages; but the underlying principle—something which, if thrown, may fall in any one of several different ways—is common enough. The most rudimentary form is perhaps the mangrove-embryo used by women in the Torres Straits⁴ to determine the sex of an unborn child. It is thrown between the legs, backwards, and no notice is taken of which side it falls on, but merely of whether it flies straight or crooked—the first presaging a boy, and the second a girl. The same people have a folk-tale, in which the hero holds up his throwing-stick, 'and it fell in the direction of Daudai. "I will go there by-and-by; I think I will kill them all," he said.'⁵ (4) A number of methods of mechanical divination have not, so far as we know, resulted in actual games. The most interesting is the magic drum of the shaman, the surface of which, in Lapland, was painted with various figures. A ring or bunch of rings was placed on the skin of the drum, which was then beaten with a horn hammer, 'not so much to make a Noise, as by the Drumming to move the Ring . . . so as to pass over the Pictures and shew what they seek after.'⁶ Besides particular signs given by the pictures, the ring gave a good omen if it went sunwise, bad if it went *withershins*. A simpler omen is that found among the Nāgas. 'At Mao and Marām the issue of a hunting party is prognosticated by their success in kicking small pebbles on to the top of a monolith.'⁷ More curious, because harder to explain, though it probably is a simple conjuring trick, is the Zulu divination by sticks or bones. The sticks, after proper ceremonies, rise up and jump about by way of saying 'Yes,' lie still for 'No,' and, if asked 'Where is so-and-so's ailment?' strike the questioner on the corresponding part of his body. And so on. The list might be extended indefinitely, but the principle is always the same: 'chance' is the working of some non-human power, who makes a die fall a particular way, or an odd and not an even number of pebbles jump out, or a particular man draw a particular lot, just as Athene makes the arrow of Pandaros miss its mark (*Il. iv. 127 ff.*).

Distribution: in one form or another, universal.

9. *Divination from Nature*.—(a) *Astrology*.—With the elaborate pseudo-science which grew out of the belief that the position and influence of the heavenly bodies more or less mould human affairs, we have nothing to do here; it is a product of

⁴ The writer has had personal experience of quite genuine performances of this sort on the part of a *planchette*.

comparatively advanced civilization, and involves real knowledge of pure and applied mathematics, far beyond the capacity of most savage races. The rudiments, however, of astrology, together with star-myths of varying complexity, are early and common. Thus the Malays, along with quite a complicated foreign astrology, with calendars and lucky and unlucky days, etc.,¹ have preserved such simple bits of symbolism as that a star near the moon means an approaching marriage. Among the Maoris the moon represents a besieged *pah*, and the stars the attacking force—their relative position indicating the result of the campaign.

(b) Other natural phenomena, such as earthquakes, lightning, etc., are everywhere held to portend something—usually misfortune. But it seldom goes beyond 'something.' Homer's remark on lightning, which indicates Zeus to be 'fashioning either great rain unspeakable or hail or snow . . . or, somewhere, the great mouth of bitter battle' (*Il.* x. 5 ff.), is a good summing up of the vagueness of the beliefs usually connected with these phenomena. They are too rare, comparatively speaking, and also too noteworthy in themselves, for a system of divination to be built upon them. They frighten rather than forewarn.

Distribution: traces everywhere; so far as we know, except for civilized peoples, nowhere very important or noteworthy.

10. *Miscellaneous divination*.—Finally, we may note one or two methods which cannot be classed under any of the above heads, but are interesting in themselves. (a) *Clairvoyance*.—This is not the place to ask whether any such power really exists. It is enough for our purposes that, e.g., the Malays think it does, and some of them, according to Skeat, practise it. (b) In the Torres Straits² we get a good example of a not uncommon idea, that a small mishap of any kind is the forerunner of a greater one. Thus one of the natives, who was a skilled dugong fisher, returned empty-handed one day with his harpoon broken. Shortly after, three deaths occurred, to his great comfort, as it showed that his bad luck had been sent as an omen and was no fault of his own. (c) *Blood* is 'uncanny' and ominous. Thus a Sea Dayak,³ finding a drop of blood on the floor-mats, will consider that a spirit has shed it, and that it is a very bad omen. (d) In general, any occurrence at all unusual is ominous; and a diviner, or some skilled person, is usually consulted.

11. *Survivals*.—The methods of which we have given examples belong to the lower stages of civilization. With political and religious advance one of two things happens: either some kinds of divination are taken into the State religion (Greece, Rome; see special articles) and the others become insignificant and even disreputable, like all magic; or, as in the case especially of Christianity,⁴ the dominant faith declares against them all as either false or the work of evil spirits. The first beginnings of this we have already seen in a few instances. But the counter process, by which the higher religions degenerate into magic, must not be forgotten. Thus, the Jewish and Christian formula 'In the name of . . .' has been found in magical papyri (see Kenyon, *Brit. Mus. Papyri*, i. [1893] 65 f.; Heitmüller, *Im Namen Jesu*, 1903); a chapter of the Qur'an is read as a charm during the Malay ritual of divination with a bowl of water, described above; Orphic and Mithraic rituals have been used for purely magical purposes; the Buddhist *Om mani padme hum* is often used as a charm and not a prayer. But, apart from this, popular belief

dies hard; and, for example, in modern Europe we find all kinds of beliefs which are most probably relics of pre-Christian divination, little, if at all, affected by the official religion, except that they are often not definitely felt to be magico-religious. We give a few examples of both classes.

To the class of divination by mechanical means we must add, among peoples who possess sacred writings, or books for any reason esteemed to contain great wisdom (such as was attributed to the works of Vergil in the Middle Ages), a form of *sortilegium* which consists in opening such a book at random and taking an omen from the first passage met with. The prestige won for the Bible by the establishment of Christianity in Europe has resulted in the *sortes Biblicae*, still used, we believe, among uneducated people.¹ Church festivals also have affected the popular beliefs in lucky and unlucky days, for how else can the bad reputation of Friday be explained? Astrologically it should be lucky, being the day of Venus, especially for marriages and the like; yet comparatively few people even to-day would care to be married on a Friday.

As to survivals pure and simple of ancient ideas about omens, wholly unconnected with Christian beliefs, their name is legion. The author gives a few personally known to him. A patient in a Plaistow hospital showed genuine instinct for sympathetic magic and divination by refusing to fasten on her wedding-ring when her emaciation made that desirable, because, 'if you bind up a ring you bind up poverty with it'; and the idea is common in the East End of London. Creaking furniture heralds a death in many places in Yorkshire; a bird flying into the house 'brings ill-luck with it,' in most parts of England; a stumble in going upstairs—this we cannot explain—presages a wedding. Astrology² and oneiromancy still flourish; Tylor mentions an instance of haruspicy in Brandenburg;³ palmistry, known among the Malays, is common at every fair. Augury has perhaps a survival in the habit of bowing to magpies. Cf. Shakespeare's mention of them:

Augurs and understood relations have

By magot-pies . . . brought forth

The secret'st man of blood" (*Macbeth*, iii. iv. 124-126).

Compare the custom of turning over the money in one's pocket on hearing the first cuckoo. So hardly does an ancient belief yield to either science or common sense.

LITERATURE.—On the subject in general, see E. B. Tylor, *Primitive Culture*, 1903, vol. i. For particular races the following will be found useful: H. Callaway, *Rel. Syst. of the Amazulu*, Natal, 1870; *Cambridge Anthropol. Exp. to Torres Straits*, 1901-8, vol. v.; R. H. Codrington, *The Melanesians*, Oxford, 1891; A. B. Ellis, *Tshi-speaking Peoples*, 1887; T. C. Hodgson, *The Naga Tribes of Manipur*, 1911; A. C. Hollis, *The Masas*, 1905, also *The Nandi*, 1909; C. Hose and W. McDougall, 'Men and Animals in Sarawak,' *JAI* xxxi. [1901] 173; A. W. Howitt, *Native Tribes of S.E. Australia*, 1904; W. Radloff, 'Das Schamanenthum und sein Kultus,' in his *Aus Sibrien*, 1898, vol. ii.; W. H. R. Rivers, *The Todas*, 1906; W. W. Skeat, *Malay Magic*, 1900; Spencer-Gillen, *Native Tribes of Central Australia*, 1899, and *Northern Tribes of Central Australia*, 1904; J. Spieth, *Die Ewe-Stämme*, 1906.

H. J. ROSE.

DIVINATION (American).—Throughout the two continents of America divination and prophetic utterance were and are generally practised by the priestly class (shamans and medicine-men) of the various nations and tribes which have inhabited them. The methods of divination in use did not vary much so far as the different divisions of

¹ Tennyson's *Enoch Arden* gives a well-known example.

² Among us, as among the Malays, in two forms: (1) borrowed from the medieval systems (Zadkiel, etc.); (2) popular, as in the belief, held by nearly every one except those who know anything of meteorology, that the weather depends on the moon.

³ Compare divining from a sheep's shoulder-blade, well known from the references in Drayton and other writers. See Tylor, *passim*.

¹ See Skeat, p. 544 ff., for details.

² *Camb. Exp.* p. 361.

³ Gomes, *op. cit.* p. 158.

⁴ Buddhism is also hostile; among the Buddhist section of the Tunguses there is no shamanism, according to Radloff. The corrupt Buddhism of Tibet cannot be taken as typical.

American nationality were concerned, nor did they display much dissimilarity from those in vogue among other barbarian peoples. In ancient or pre-Columbian Mexico and Peru there was a college of augurs, corresponding in purpose to the *auspices* of ancient Rome, the alumni of which occupied themselves with observing the flight and listening to the songs of birds, from which they drew their conclusions, pretending to interpret the speech of all winged creatures. In Mexico the *calmecac*, or training-college of the priests, had a department where divination was taught in all its phases, and that the occupation was no mere sinecure will appear later. Among the less advanced communities the services of the diviner or seer were much in request, and the forecasting of the future became, sooner or later, the chief concern of the higher classes of medicine-men.

The methods adopted by the priests or shamans in the practice of divination scarcely differed with locality, but many various expedients were made use of to attain the same end. In the Peru of the Incas, besides those augurs who were supposed to interpret the songs of the feathered race, there were other castes who specialized in the various kinds of divination. Thus, some practised oracular methods in much the same way as did the priesthood in ancient Egypt and Greece. The idols became the direct mediums by which Divine wishes were disclosed or the future made clear. Necromancy was also extensively practised, the priests pretending to raise the dead, whose instructions they communicated to those who had consulted them. In the Mexico of the Aztecs, also, necromancy was in vogue, and the raising of the spirit of the Princess Papantzin, sister of the ill-fated Montezuma, who foretold the downfall of his empire and his own destruction, will be familiar to every reader of Prescott. To return to Peru, still other classes predicted by means of leaves of tobacco, or the grains or juice of coca, the shapes of grains of maize, taken at random, the appearance of animal excrement, the forms assumed by the smoke rising from burning victims, the entrails and viscera of animals, the course taken by spiders, visions seen in dreams, the flight of birds, and the direction in which fruits might fall. The professors of these several methods were distinguished by different ranks and titles, and their training was a long and arduous one, and undertaken in no mere spirit of flippancy. If their clients were deceived, it is safe to say that they themselves were as unconscious of deceit as is a modern physician who has wrongly diagnosed a case.

In considering the practice of divination and prophecy among the aboriginal peoples of America, it will be necessary to deal separately with each of the principal methods by means of which they are performed. These are (1) by observing the flight of birds; (2) by oracular and necromantic practices; (3) by means of hypnotism; (4) through the interpretation of dreams and visions, and by conditions of ecstasy produced by drugs; (5) by means of astrological practice; and (6) by the appearance of various objects.

1. By observing the flight of birds.—It has already been noticed that the Mexican and Peruvian priesthoods, or that class of them devoted to augury, made a practice of observing the flight of various birds and of listening to their songs. This observation of birds for the purpose of augury was common to other American tribes. The bird, with its rapid motion and incomprehensible power of flight, appeared to the savage as a being of a higher order than himself, and its song—the only hint of music with which he was familiar—as something bordering upon the supernatural, the ability to understand which he had once possessed, but had

lost through the potency of some evil and unknown spell. Some great sorcerer or medicine-man alone might break this spell, and this the shamans of the tribe sought assiduously to achieve, by means of close attention to the habits of birds, their motions and flights, and especially to their song. 'The natives of Brazil regarded one bird in especial as of good augury,' says an early 18th cent. traveller, Coreal (*Voyages aux Indes occidentales*, p. 203). He does not state to what bird he alludes, but proceeds to say that its mournful chant is heard by night rather than by day. The savages say it is sent by their deceased friends to bring them news from the other world, and to encourage them against their enemies. Here, it would seem, we have an example of bird-augury combined with divination by necromancy. Coreal probably alluded to the goat-sucker bird, which, with the screaming vulture, some South American tribes—the Guaycurus of Paraguay, for example—suppose to act as messengers from the dead to their priests, between whom and the deceased persons of the tribe there is thought to be frequent communication.

A typical example of augury by bird-habit has come down to us in the account of the manner in which the Nahuas of Mexico fixed upon the spot for the foundation of that city. Halting after years of travel at the Lake of Tezcuco, they observed perched on the stem of a cactus a great eagle with wings outspread, holding in its talons a writhing serpent. Their augurs interpreted this as a good omen, as it had been previously announced by an oracle; and on the spot drove the first piles upon which was afterwards built the city of Mexico-Tenochtitlan. The legend of its foundation is still commemorated in the arms of the modern Republic of Mexico, and on its coinage and postal stamps.

2. Oracular and necromantic methods.—We have already seen that the priesthood of Peru practised oracular methods of divination by 'making the idols speak.' Whether they accomplished this by ventriloquial arts or by the more primitive means of concealing one of their number, we do not know. But we know that the *piagés*, or priests of the Uapes tribe of Brazil, practise oracular divination by means of a contrivance known to them as the *paxiuba*. This is one of their most sacred symbols, and consists of a portion of a palm-tree about the height of a man, and some 10 cm. in diameter. By a device consisting of holes bored in the part of the tree beneath the foliage, its leaves are made to tremble by the breath of the priestly ministrant, and the sound so caused is interpreted as a message from Jurupari, their principal deity. Necromancy is also practised extensively by the Uapes Indians, a class of *piagés* being set apart for this purpose solely. Indeed, in most Indian tribes the shamans or medicine-men, or a portion of them, specialize in the art. A great similarity marks the methods of procedure of most American tribes, from the Eskimos to the Nahuas. A circular lodge consisting of poles planted firmly in the ground is covered with skins or mats, a small hole only being left for the seer to make his entrance. After entering, he carefully closes the aperture, and proceeds to make his incantations. In a little while the entire lodge trembles and sways, the poles bend to breaking point, as if ten strong men were straining at them, and sounds, strange and supernatural, coming now from the depths of the earth, now from the air above, cause those who listen outside to tremble. At last the medicine-man cries out that the spirit he has invoked is present, and will reply to questions. Presents to the supernatural visitor are inserted beneath the skins, as a preliminary to consultation; and the spectators commence to interrogate the dread presence in fear and trembling. The replies received are, for sheer ambiguity, equal to the oracular answers of the pythonesses of ancient Greece. Converted Indians have repeatedly

averred that in performing this feat they were merely passive agents. But, as many of these barbarous seers excite themselves into a condition of permanent lunacy when under the influence, there is very little doubt that they are as much the victims of hallucination as are their hearers, although the taking of gifts and the occasional shrewd nature of their replies would seem to point to the possession of considerable powers of calculation.

3. Hypnotic divination.—Divination by hypnosis is no new art in America. Jonathan Carver, a British sea-captain who travelled among the Sioux in the latter end of the 18th cent., mentions it as in use among them; and J. E. Fletcher observed it among the Menominee about the middle of last century. In the 'Ghost Dance' of the Paviotso of Nevada (a ceremonial religious dance connected with the Messiah doctrine, which originated among that people about 1888 and spread rapidly among other tribes, through the agency of the pretended prophet, one Wovoka, a medicine-man who had lived among whites), hypnotic trances were frequently induced to enable the Indians to converse with their dead relatives, who were, it was said, to return to them, and sweep the earth clear of the whites in a great Armageddon. The movement was defeated, but survives to some extent in the 'Crow Dance' of the Cheyenne and Arapaho, in which prophecy by hypnotism is still practised.

4. Dreams and visions.—The business of divination by means of dreams and visions, it is hardly necessary to say, was almost completely in the hands of the priestly class in America, as is exemplified by the derivation of 'priest' in the native languages. By the Algonquians and Dakotas they were called *wakanwapi*, 'dreamers of the gods'; in Mexico, *teopixqui* or *teotecuhlli*, 'masters or guardians of divine things'; in Cherokee, *atsilung kelawhi*, 'those having the Divine fire'; in Maya, *cocome*, 'the listeners,' etc. Nearly all messages supposed to be received from the supernatural came through the medium of dreams or visions, and those who possessed ability to read or interpret the dream were usually placed in a class by themselves. The medicine-men or shamans held it as an article of belief that the glimpse into futurity with which visions or dreams provided them was to be gained only by extreme privation and by purifying the vision through hunger or the use of drugs. To induce the ecstatic condition the Indians made use of many different mediums, such as want of sleep, seclusion, the pertinacious fixing of the mind upon one subject, the swallowing or inhalation of cerebral intoxicants, such as tobacco, the *maguery*, coca, the *chucucaco*, the snake-plant *ololuhqui*, the *peyotl* (these last two in Mexico), and the *cassine yupon*, and *Iris versicolor* (among the tribes in the southern parts of the United States). According to Hawkins, the Creeks had no fewer than seven sacred plants cultivated for this purpose, among them the *Ilex vomitoria* or *Ilex cassina* of the natural order *Aquifoliaceæ*; and the 'blue flag,' *Iris versicolor*, of the order *Iridaceæ*. 'The former is a powerful diuretic and mild emetic, and grows only near the sea. The latter is an active emetocathartic, and is abundant on swampy grounds throughout the Southern States. From it was formed the celebrated "black drink" with which they opened their councils, and which served them in place of spirits' (Brinton, *Myths of the New World*, Philadelphia, 1905, p. 315, note).

From dreams during the puberty-fast a person's entire future was usually divined by the shamans, his spiritual affinities fixed, and his life's course mapped out (see art. CALENDAR [American], vol. iii. p. 68^b). The elaborate ceremonies known as 'dances' were usually adumbrated to the priests

through dreams, and the actual performance was made to follow carefully in detail the directions supposed to have been received in the dream or vision. Many shrines and sacred places were also supposed to have been indicated to certain persons in dreams, and their contents presented to those persons by supernatural beings whilst they were in the visionary state. The periods for the performance of rites connected with a shrine, as well as other devotional observances, often depended on an intimation received in a dream. 'Visions' were also induced by winding the skin of a freshly-killed animal round the neck until the pressure on the veins caused unconsciousness, and dreams resulted, possibly from an overflow of blood to the head. Some tribes believed that the vision came to the prophet or seer as a picture, or that acts were performed before him as in a play, whilst others held that the soul travelled through space, and was able to see from afar those places and events of which it desired to have knowledge.

Numerous instances of the truly marvellous manner in which events have been foretold by American medicine-men are on record, and it is hard to believe that they do not possess the gift of clairvoyance in some degree.

In his autobiography, Black Hawk, a celebrated Sac chief, relates that his grandfather had a strong belief that in four years' time 'he should see a white man, who would be to him as a father.' Supernaturally directed, as he said, he travelled eastward to a certain spot, and there, as he had been informed in dreams, met with a Frenchman, who concluded an alliance on behalf of his country with the Sac nation. Coincidence is certainly possible here, but it can hardly exist in the circumstances of the narrative of Jonathan Carver. While he was dwelling with the Killistnoes (i.e. Cree), they were threatened with a famine, and on the arrival of certain traders, who brought them food in exchange for skins and other goods, their very existence depended. The diviners of the tribe were consequently consulted by the chief, and announced that the next day, at high noon exactly, a canoe would make its appearance with news of the anxiously looked-for expedition. The entire population came down to the beach in order to witness its arrival, accompanied by the incredulous trader, and, to his intense surprise, at the very moment forecast by the shamans, a canoe rounded a distant headland, and, paddling speedily shorewards, brought the patient Killistnoes news of the expedition they expected.

John Mason Brown has put on record an equally singular instance of the prophetic gift on the part of an American medicine-man (see *Atlantic Monthly*, July 1866). He was engaged several years previously in searching for a band of Indians in the neighbourhood of the Mackenzie and Coppermine rivers; but the difficulties of the search induced the majority of his band to return, until out of ten men who had originally set out only three remained. They had all but concluded to abandon their search, when they stumbled upon a party of braves of the very tribe of which they were in search. These men had been sent out by their medicine-men to find three villages, of whose horses, accoutrements, and general appearance the shaman had given them an exhaustive account; ere they set out, and this the warriors related to Brown before they saw his companions. Brown very naturally inquired closely of the medicine-man how he had been able to foretell their coming. But the latter, who appeared to be 'a frank and simple-minded man,' could only explain that 'he saw them coming, and heard them talk on their journey.'

Under the heading of 'dreams and visions' may also be noticed the practice, common in some parts of the American continent, of attempting to pry into the future through gazing fixedly at some polished object, until semi-insensibility is attained by self-hypnosis. The Indians of Central America employed for this purpose (and still make use of) small shining stones made of hard polished sandstone, which they at times consult when dubious as to the future.

A case is on record where a Cherokee kept a divining crystal wrapped up in buckskin in a cave, occasionally 'feeding' it by rubbing over it the blood of a deer; and similar instances might be multiplied. At the village of Teopan, Guatemala, Stephens and Catherwood saw a remarkable stone which had been placed on the altar of the church there, but which had previously been used as a divining stone by the Indians of the district. Fuentes, one of the Spanish historians of Guatemala, says of it: 'To the westward of the city there is a little mound that commands it, on which stands a small round building about six feet in height, in the middle of which there is a pedestal formed of a shining substance resembling glass, but the precise quality of which has not been ascertained. Seated

around this building, the judges heard and decided the causes brought before them, and their sentences were executed on the spot. Previous to executing them, however, it was necessary to have them confirmed by the oracle, for which purpose three of the judges left their seats and proceeded to a deep ravine, where there was a place of worship containing a black, transparent stone, on the surface of which the Deity was supposed to indicate the fate of the criminal' (Stephens, *Incidents of Travel*, II. 149). Stephens found this 'stone' to be a piece of common slate, fourteen inches by ten. For purposes of divination it would probably have been covered with water.

5. Divination by astrological practice.—Divination by astrology was, of course, resorted to only in that part of America where the knowledge of the movements of the heavenly bodies had advanced beyond the elementary stage. Among the Aztecs the planetary influences were less powerful than the arbitrary signs they had adopted for the months and days. The nature of the principal sign in each lunar cycle of thirteen days gave a colour to the whole. The figures relating to succeeding days and hours modified this, however, and it was in coalescing these opposing forces that the art of the Aztec diviner lay. No event in life, of any consequence, was permitted to pass without consulting him. On the birth of a child he was summoned in haste. He ascertained the exact time of the event with exceeding care, and then proceeded to cast the infant's horoscope, the family standing by in trembling suspense the while.

6. Divination by means of various objects or practices.—Various other methods were in vogue by means of which the native priesthood attempted to forecast the future. For this purpose fetishes and small personal idols were often consulted. The grains of cocoa in the bottom of a drained vessel were 'read,' as the remaining leaves still are in many European tea-cups. The viscera of sacrificed animals were carefully examined for signs regarding the future. The course and shape of smoke, too, was keenly watched by the shamans of many peoples.

According to Fuentes, the chronicler of Guatemala (Stephens, *op. cit.* II. 127), the reigning king of Kiche, Kichan Tanub, when informed by the ambassador of Montezuma II. that a race of irresistible white men had conquered Mexico and were proceeding to Guatemala, sent for four diviners, whom he commanded to tell him what would be the result of this invasion. They asked for time to discover the future fate of his kingdom, and, taking their bows, discharged some arrows against a rock. They returned to inform their master that, as no impression had been made upon the rock by the arrowheads, they must prognosticate the worst, and predicted the ultimate triumph of the white man—a circumstance which shows that the class to which they belonged stood in no fear of royalty. Kichan Tanub, dissatisfied, sent for the *priests*, obviously a different class from the diviners, and requested their opinions. From the ominous circumstance of an ancient stone—which had been brought from afar by their forefathers—having been broken, they also augured the fall of the Kiche empire.

Many objects, such as small clay birds, boats, or boat-shaped vessels, etc., have been discovered in sepulchral mounds in North America, and it is conjectured that these may have been used for purposes of divination. As any object might become a fetish, it is probable that any object employed appears to have been so to treat the object that the probable chances for or against the happening of a certain event would be discovered—much, indeed, as some persons still toss coins to 'find out' whether an expected event will come to pass or not. Portents, too, were implicitly believed in by the American races, and this branch of augury was, we find, one of the accomplishments of Nezahualpilli, king of Tezcuco, near Mexico, whom Montezuma consulted concerning the terrible prodigies which startled his people prior to the advance of the Spaniards upon his kingdom, and which were supposed to predict the return of Quetzalcoatl, the legendary culture-hero of Anahuac, to his own again. These included earthquakes, tempests, floods, the appearances of comets and strange lights, whilst mysterious voices

were heard in the air—such prodigies, indeed, as tradition usually insists upon as the precursors of the downfall of a mighty empire.

Stephens, *Incidents of Travel in Central America*, London, ed. 1854. LEWIS SPENCE.

DIVINATION (Assyro-Babylonian).—The practice of divination entered very largely into the religious life of the Babylonians and Assyrians. Not only was it carried on by unofficial augurs and seers, whose services could be secured for a comparatively small fee by any one desirous of reading the future or of learning the interpretation of some portent which had been vouchsafed to him, but it also formed one of the most important departments of the national religion; and its rites were jealously guarded by a large and organized body of the priesthood. In fact, during the later periods of Assy. and Bab. history it had become a highly complicated science. Every great temple had in course of time accumulated a store of recorded portents, with notes as to the events which had been observed to follow on them. As a result of their classification and study by the priesthood, there had been evolved an elaborate omen literature, comprising long series of tablets dealing with every class of augural phenomena. Thanks to the literary zeal of Ashurbanipal (668-626 B.C.), we possess a wealth of material for the detailed study of Bab. divination, since a considerable portion of the literary and religious texts of which he had copies made for his library at Nineveh were works on divination in its various forms. It is true that many of these have been recovered in a far from complete condition, but enough remains to indicate the important part which the prediction of future events played in both the official and the popular religion.

That the contents of these comparatively late texts may not only be regarded as representing contemporary beliefs, but may also be employed to illustrate the practice of earlier periods, has been amply demonstrated. The texts themselves in their present form are obviously the result of a gradual process of growth and accretion, and the series under which they have been arranged bear evidence of much earlier editing and redaction. Moreover, we possess a few similar texts dating from earlier periods; while the historical and votive inscriptions furnish data by means of which it is possible to trace some of the principal forms of Bab. divination back into the earlier period of Sumerian history. That the Semitic Babylonians expanded and developed the science was but natural; but there can be little doubt that they inherited many of their augural beliefs and practices from the earlier Sumerian inhabitants of Babylonia, whom they eventually conquered and absorbed. Thus already in the reign of Urukagina, king of Lagash (c. 2300 B.C.), we have evidence of the wide-spread practice of divination by oil. From augural texts of a later period (c. 2000 B.C.), we know that in this particular form of divination the procedure consisted in pouring out oil upon the surface of water, the different forms taken by the oil on striking the water indicating the course which events would take.¹ A professional diviner

¹ See *Cuneiform Texts in the Brit. Mus.* III. pl. 2 ff., v. pl. 4 ff.; and cf. Hunger, 'Becherwahrung bei den Babyloniern,' in *Leipzig. Semit. Stud.* I. [1903] 1.

was naturally required to carry out the accompanying ritual and to interpret correctly the message of the oil, and Urukagina records that among the reforms he inaugurated was the abolition of certain exactions and fees which had been demanded in connexion with the practice, not only by the diviner himself, but also by the grand vizier and the *patesi*.¹ In the later Sumerian period we find that Gudea, when purifying Lagash before the erection of his temple, drove out the wizards and sorcerers, in addition to kindling a fire of aromatic woods. From this record it might perhaps be inferred that at this period divination was not officially recognized, were it not that Gudea himself expressly states that before starting upon his temple-building he consulted the omens and found them favourable.² Moreover, the elaborate vision in which the gods revealed their wishes to him with regard to Ningirsu's temple, and the far earlier vision of Eannatum (c. 3000 B.C.), in which Ningirsu encouraged him for battle,³ prove that the study of dreams and their interpretation had been elaborated by the Sumerians. It is, therefore, possible to regard the later augural texts as incorporating earlier practices; and deductions drawn from their study may legitimately be regarded as of general application, and not as confined to a single late period.

In attempting to classify the great range of phenomena which formed the subject of Bab. divination, a convenient distinction may perhaps be adopted which has been drawn between voluntary and involuntary divination.⁴ Under the former the diviner deliberately sought out some means of foretelling the future; under the latter he merely interpreted the meaning of portents, signs, or phenomena which, without being sought out, forced themselves on his notice or on that of his clients.

The principal method of voluntary divination was *hepatoscopy*, or divination by the liver of a sacrificial sheep. The diviner, termed the *barā*, or 'seer',⁵ after the due performance of the accompanying rites and the slaughter of the victim, exposed the animal's liver, and by an examination of its principal parts was enabled to predict the future. The chief parts of the liver which were examined in this way were the right and left lower lobes, the upper lobe and its two appendices (the *processus pyramidalis* and the *processus papillaris*), the gall-bladder, the cystic duct, the hepatic duct, the hepatic vein, and the 'liver gate' (*porta hepatis*).⁶ The system of interpretation was based mainly on an association of ideas. Thus a swollen gall-bladder was regarded as pointing to an increase of power; on the other hand, a depression in the liver gate pointed to a decrease in power; signs noted on the right side were favourable, on the left side unfavourable, etc. Moreover, the markings on the livers, due to the subsidiary veins and ducts, were carefully studied and interpreted in accordance with their resemblance to the weapons or symbols of the gods. In the tablets of liver-omens, the predictions, as is usual throughout the omen-literature, are vague enough. But these vague indications were made to apply to very

definite circumstances by means of questions addressed to the god before the sacrifice. This we gather from an elaborate series of prayers, addressed to Shamash, the Sun-god, during the reigns of Esarhaddon and Ashurbanipal, which throw an interesting light on the method of procedure.⁷ The prayers contain appeals to the oracle on political matters. Definite questions were asked as to the course of future events within a specified time, and the priests answered the questions according to the omens presented by the sacrificial victims. The questions were framed with great ingenuity, so that all contingencies might be covered. The prayers also prove that scrupulous care was taken in the preparation of the victim and the recital of the accompanying formulae, while it was also essential that the diviner, no less than the victim, should be free from any ceremonial impurity. It is interesting to note that, in these prayers to the Sun-oracle, the signs found in the victim are noted but are not interpreted. The roughly-shaped tablets on which they were written were actually used in the course of the ritual: they contain the appeal to the oracle and the oracle's answer as seen in the victim's liver. The question was first written out, and the tablet was placed before the god (cf. the Greek practice at Delphi); the god's answer was afterwards added in terms of the liver. For the diviner's interpretation of this answer to the king no doubt another tablet was employed.

Many of these oracle-tablets, especially those of Esarhaddon's time, contain appeals to Shamash to reveal the outcome of the military campaigns in which he was engaged. They also furnish evidence that the Assyrian king, doubtless following Babylonian precedent, consulted the oracle on every occasion of importance, such as the dispatch of an envoy, the giving of a daughter in marriage, the sickness of a royal relative, the appointment of a high official, etc. In the case of the Sun-oracles the answers received by the king have disappeared, but it is probable that they resembled certain oracles of Ishtar of Arbela, which the goddess vouchsafed to Esarhaddon,⁸ obviously in answer to such questions as those addressed to the Sun-god. Here the oracles are composed in the first person, the speaker representing the goddess; but in each case the name of the priest or priestess who pronounced the oracle on the goddess's behalf is given.⁹ The answers of the oracles which have been collected and preserved are invariably encouraging, and promise success to the king in somewhat vague and general phraseology. They are clearly happy omens that have been fulfilled.

The reason why the god of the oracle should reveal the future through the liver of the victim is not at first sight obvious. But it is certain that the liver, not the heart, was regarded by peoples in a primitive state of culture as the seat of life; and there is much to be said for the theory that the sacrificial animal on being accepted by the deity, was regarded as assimilated to him.¹⁰ The soul of the animal was thus put in accord with the soul of the god, and, by reading the one, the diviner read the other. This theory also underlay the practice of hepatoscopy among the Etruscans, Greeks, and Romans (see 'Greek' and 'Roman').

¹ Cf. Knudtzon, *Assyr. Gebete an den Sonnengott*, 2 vols., Leipzig, 1893.

² Cf. Rawlinson, *WAI* iv. pl. 61. In addition to Shamash and Ishtar, the other gods whose names are particularly associated with royal oracles are Ashur and Nabû. In Babylonia, Marduk's claim to supremacy in this, as in other departments of the national religion, was not contested.

³ To one oracle a note is added, giving directions for its presentation to the king with accompanying ceremonial. It was to be recited to the king after precious oil had been poured out, offerings made, and incense burnt (cf. Strong, *Beiträge zur Assyriologie*, II. [1894] 628, 630).

⁴ See Jastrow, *Rel. Bab. und Assyriol.* II. 213 ff.

¹ See King, *Hist. of Sumer and Akkad*, London, 1910, p. 183.

² *Ib.* p. 266 f.

³ *Ib.* pp. 124, 266.

⁴ Cf. Jastrow, *Proc. Amer. Phil. Soc.* xlvii. [1908] 143 f., 146 ff. This distinction applies most satisfactorily to the two principal forms of official divination—hepatoscopy and astrology. It is not so clear when applied to some of the minor forms of divination (see below).

⁵ For a discussion of the *barā* and his functions, in contradistinction to the *asipu* and *zammeru* priests, see especially Zimmern, *Ritualtafeln für den Wahrsager, Beschwörer und Sänger*, Leipzig, 1896–1901, p. 82 ff.

⁶ See Jastrow, *ZA* xx. [1907] 118 f., *Trans. Philad. College of Physicians*, xxi. (3rd ser.) 117 ff., *Harper Memor.* Vol., II. (London, 1910) 281 ff., and *Die Religion Babyloniens und Assyriens*, II. 213 ff.

sections), who doubtless derived much of their augural lore from Babylonia.

No such theory underlay other forms of voluntary divination, such as *oil-divination*,¹ or divination by *arrows*,² or the *flight of birds*, etc. In all such cases (including possibly the flight of birds) the oracle was deliberately invoked, but there was no question of the instrument being assimilated to the deity. Each was merely a passive witness to the Divine will, which was made plain according to a traditional code having the sanction of the oracle.

The most important form of involuntary divination concerns the portents exhibited by *the heavens*. Eclipses, storms, and unusual atmospheric conditions would naturally be regarded from the earliest periods as manifestations of Divine anger, and their correct interpretation would be of the utmost importance to a race, however primitive. To go still farther, and trace a connexion between earthly occurrences and the movements of the heavenly bodies was a much later development, and undoubtedly followed the identification of the planets and principal fixed stars with the chief gods of the pantheon. Winckler's assumption that there was thought to be a perfect correspondence between heaven and earth, and that the occurrences on earth were merely a reflexion of heavenly phenomena (see STARS [Assyr.-Bab.]), is quite untrue for the earlier historical epochs, and is true only in a restricted sense for the latest periods of Neo-Babylonian speculation. The Neo-Assyrian astrological reports indicate what a careful watch was kept at that period by the royal astrologers for any indication of the Divine will, and the calendars of favourable and unfavourable days were but one result of the study which had been devoted to the astrological branch of divination. In most of the omens connected with both hepatoscopy and astrology the predictions refer to the general rather than to the individual welfare, in which we may see an indication of their official character.

Private and unofficial divination, to the continued existence of which the private letters of the later Assyrian period bear witness, bulks far more largely in the collections of augural tablets dealing with birth-omens, the interpretation of dreams, and of incidents in daily life. Monstrosities, human and animal, were naturally treated as significant, and future events were also predicted from minute variations in human infants and the young of animals. The class of general portents which were thought to foretell public disasters is well illustrated by an Assyrian copy of a list of forty-seven portents which preceded a conquest of Babylonia.³ The phenomena from which the portents were derived may be classified under two headings: (a) rare natural occurrences, and (b) events which appeared to break some law of Nature. Under the first heading we have the fall of beams in houses, the outbreak of fire in sacred places, the appearance of wild beasts and birds in Babylon, a great flood at Borsippa, when the waters of the Euphrates rose within the precincts of Nabû's temple Ezida, and a flight of meteors or falling stars. Under events which appeared to be contrary to some law of Nature may be set the story of a decapitated head crying out, the occurrence of human and animal monstrosities, cases of incest and unnatural matings of animals, fruitfulness of the male in the case of a dog and of a male date-palm, unnatural growths and appearances of de-

palms, and the appearance of evil spirits in sacred places. Under the last heading may also be set the appearance of honey on the ground at Nippur and of salt at Babylon, though these were doubtless natural secretions of the soil. The importance attached to such portents, affecting general and not individual welfare, is attested by the fact that in the Neo-Babylonian period chronicles of such events were compiled on the same lines as the historical chronicles and were regarded as of equal value and significance.¹

The tablets of unofficial portents prove that almost every event of common life was capable of being interpreted as a favourable or unfavourable sign. But it should be noted that many of the events referred to on the tablets are to be taken as occurrences in dreams, though this may not be explicitly stated in the portion of the text preserved. In fact, the interpretation of dreams was one of the most important duties of the professional seer or diviner both in unofficial and in official life. Reference has already been made to the existence of this branch of divination in the earlier period, and the Assyrian historical inscriptions prove that the gods continued to adopt this method of sending encouragement to the king or of making known to him their wishes. The visible appearance of Ishtar, to encourage Ashurbanipal's army in Elam,² may be explained as a vision in sleep, and she probably did not appear to the king himself, but to a professional seer, as is definitely stated on another occasion when she sent the king a message. Such theophanies, accompanied by direct messages, were naturally of very clear and certain interpretation; but the meaning of most dreams was quite uncertain to the dreamer, for significance attached to the most minute points in the vision, and in every case it was necessary to have recourse to a highly trained diviner.

One of the most interesting classes of unofficial omens was drawn from the appearance of the various parts of the body during sickness, for the events predicted generally concerned the chances of the sick man's recovery, and they may thus be regarded as having something in common with the scientific study of disease. Not only were the sick man's colour and his cries and groans minutely noted, but such physiological phenomena as convulsions, epileptic movements, shivering from fever, and palpitations were carefully studied and made the subject of prognostication. It may be noted that many omen-texts which were formerly regarded as connected with births are rather to be connected with this class of divination.

There is evidence that the practice of various forms of divination, like that of Bab. astrology, was adopted by the Greeks after Alexander's conquest, and so survived under modified forms into the mediæval period. The mere fact that 'Chaldean' was used by the Greeks as a synonymous term for 'astrologer' indicates the spread of the Babylonian astrological system, but there is also evidence that other forms of divination were practised by native diviners who had wandered to the coasts of Asia Minor and the West.³ It is thus possible that more than one form of divination which has survived to the present day may be traced to a Babylonian origin.

LITERATURE.—In *La Divination et la science des présages* (Paris, 1875) F. Lenormant published a very able summary

¹ Cf. King, *Chronicles concerning Early Babylonian Kings*, London, 1907, i. 212 ff.

² Cf. *WAI* v. pl. v. line 95 ff. So, too, the god Ashur is said to have appeared to Gyges, king of Lydia, and to have commanded him to pay homage to Ashurbanipal (*op. cit.* pl. ii. line 98 ff.).

³ See Hunger, 'Bab. Tieromina nebst griech.-röm. Parallelen' (*MVG*, 1900, p. 3).

¹ See above, p. 785b.

² This form of divination is referred to as employed by the Bab. king in *Ezk* 21²².

of the subject, considering the period at which he wrote. Much new material has been published and classified by A. Boissier in his *Documents assyriens relatifs aux présages* (Paris, 1894-99) and his *Choix de textes relatifs à la divination assyr.-babylonienne* (Geneva, 1906, etc.); see also *Cuneiform Texts in the British Museum*, pls. xx., xxvii. f. and xxx. f. The fullest discussion is that by M. Jastrow, *Die Religion Babyloniens und Assyriens*, Gießen, 1902 ff., II. 138 ff., 203 ff. For other references see the footnotes throughout the article.

LEONARD W. KING.

DIVINATION (Buddhist).—The art of divination was widely practised in India, as in Ancient Europe, at the time of the Buddha's birth. The early accounts of the latter event relate that eight Brahmins 'most versed in the science of astrology' were called in by the prince's father 'to examine carefully all the signs prognosticating the future destiny of his son' (Bigandet, *Life of Gaudama*², Rangoon, 1866, i. 46). Buddha himself, as was to be expected, when he became a teacher is invariably represented in the scriptures as discouraging and condemning divination and all allied arts. Although he personally was credited with foreknowledge, this endowment, in common with that of working miracles, etc., is regarded by Buddhists as the supernatural power (*īdhi*) inherent in every perfected saint, or *arhat*; and he is never represented as using this prophetic power for sorcery or soothsaying purposes. His chief right-hand disciple, however, Maudgalyāyana, is reputed in the scriptures of both divisions of Buddhism to have practised divination and sorcery, by means of which he is represented as having extended the popularity of that faith. For such pandering to popular prejudice he is reproved on several occasions by the Buddha, who is recorded to have said: 'That mendicant does right to whom omens, planetary influence, dreams, and signs are things abolished; he is free from all their evils' (*Sammā-paribhājanīya sutta*, 2).

Nevertheless, divination was obviously too deep-rooted in the popular life to be eradicated; it is found at the present day flourishing among professing Buddhists of all sections, and among monks as well as the laity. It is not merely that foreign aboriginal methods of divination have been accorded a measure of recognition by Buddhism in its extension as a popular religion outside India to the Mongolian races, who have been inveterately addicted to divination and shamanism from the earliest times; positive elements of Indian astrology have been introduced by the Buddhist monks, who are now the chief astrologers for soothsaying purposes, not only in Tibet and Mongolia, but in Burma, Ceylon, and Siam. The grosser forms of divination remain for the most part in the hands of the laity or of the priests and priestesses of the pre-Buddhistic cults. But even some of these have been given a veneer of Buddhism by replacing in several instances the aboriginal cabalistic words of incantation by stereotyped sentences (*mantras*) in the Indian language, culled from the Indian Buddhist scriptures.

Divination is sought after by the majority of professing Buddhists in matters of almost everyday business, as well as in the great epochs of life—birth, marriage, and death—or in sickness. It is primarily employed for the most part to ascertain the planetary influences which are lucky or unlucky, rather than those directly supposed to be caused by the demons (cf. DEMONS AND SPIRITS [Buddhist]), though the latter are usually regarded as the chief agents for executing the evil influence of the planets. The birth-horoscope of every individual, which is jealously treasured by himself, fixes the special planetary influences which are hostile throughout life. The intensity of such influence varies according to whether the planet in question is ascending or not. Then these personal unlucky days have to be compared with the

general lucky or unlucky days for that particular day and week, and these again with those for that season and the elements, according to the varying positions of the planets at the time. The results, moreover, vary with the kind of business or adventure contemplated, which introduces another set of unlucky combinations. Thus an almost endless variation in the forebodings of luck or ill-luck is made possible; and this is to be sought out beforehand, and the evil duly avoided or counteracted. In this way is usually determined which is the right day and hour on which to commence any particular work, the right direction in which to set out on a journey, etc., the issue of any special business or matter of anxiety, or the interpretation of omens and dreams.

The methods of divination practised by Buddhist peoples appear to fall broadly into three categories, namely: (a) lots—the simplest, and generally performed by the people themselves; (b) astrology, for which learned adepts are necessary, usually the higher Buddhist priests; and (c) oracles, usually given by a priest or priestess of the aboriginal religion, seldom by a Buddhist monk.

Astrology is the more reputable form of divination practised by orthodox Buddhist monks, and from the preparation of the horoscopes and the worship prescribed therein the monasteries derive a considerable amount of their income. Among the 'Northern' Buddhists the presiding genius of the astrologers is the Bodhisattva Mañjuśrī. The oracles and professional soothsayers are almost exclusively confined to the followers of the pre-Buddhist religion of the particular country. A few isolated temples are famed for their oracles, in which the presiding divinity or demon, or, it may be, the spirit of a departed saint, is believed to inspire the officiating priest. More frequently the seer is a hermit who has gained a reputation as a prophet; but most commonly it is one of the numerous witch-doctors who is resorted to for an augury. These are of the class generally known as *shamans*, some of whom are women. They are usually illiterate, but possess a very shrewd and ready wit. They deliver their oracular response whilst in an exalted state, into which they work themselves by frenzied gesticulations. The office usually descends in the family. One of the commonest questions they have to answer is that relating to the source of the bewitchment or enchantment (Skr. *prabhāva*, Tib. *mt'u*) which is causing sickness to some particular person.

The Burmese, who may be taken as a type of the 'Southern' division of Buddhists, are fettered in the bonds of horoscopes and witch-doctors (see art. BURMA, § 19).

Amongst 'Northern' or Mahāyāna Buddhists divination is almost universal. In Chinese Buddhism it is only a little less prevalent than in that of Tibet and Mongolia, where it reaches its culminating point. Here the Indian astrological elements are largely mixed with the Chinese, and the oracular methods are of a more frankly shamanist type.

In Tibet, all three of the above-noted classes of divination are widely current. Those monks who practise the art of astrology for divination purposes are called *tsi-pa*, or 'calculators.' Each sect has its own *tsi-pa*, who are among the most learned and respected members of the monastery. The astrological methods follow the general lines already indicated; but the Chinese system of astrology largely predominates over the Indian, as has been shown in the specimens of actual horoscopes translated in detail by the present writer (*Buddhism of Tibet*, pp. 458, etc.). The combinations of unlucky portents are complicated by the introduction of a more complex system of

elements and cyclical animal-years and trigrams. In arriving at the calculations an important part is played by the famous mystic Chinese trigram, 'the eight *kuā*' (Tib. *par-k'ha*), on which the mysterious 'Book of Changes,' *Yi-king*, with its 64 hexagrams, is built up. A notable difference between the Tibetan and Chinese methods is that, while the former use only the trigrams for divination, the latter employ exclusively the derived hexagrams for this purpose.

The method by lot is the most popular and common of all, and for its practice nearly every layman is equipped with a pocket divination manual called *mô-pe*, by which the augury may be ascertained. This booklet, which the present writer has translated in great part, divides the results into different sections intended to cover all the events for which an augury is likely to be sought. The usual headings are 'Household,' 'Favours,' 'Life,' 'Medical,' 'Enemy,' 'Visitors,' 'Business,' 'Travel,' 'Lost Property,' 'Wealth,' and 'Sickness.' The lots are of various kinds, and include the following:—(1) Barley-corn or other grain, or pebbles or coins drawn from a heap, or a clutch of the rosary-beads; the last being perhaps the most common of all modes. (2) Dice upon a board on which are drawn geomantic figures with Tibetan references or symbolic animals, or a magic square with 9 compartments called the 9 *sMe-ba* (pronounced *me-wa*), or magic squares of 15 or 20, etc., numbered compartments, of Indian character, or consecutive lotus leaves numbered or inscribed, also derived from India. (3) Twigs—one of the forms of sorcery-divination is called 'the green twig spell' (*sNga-sNgag*). This suggests to the present writer a parallel with the ancient Greek term for 'lot,' namely *κλῆρος*, from *κλάδος*, 'twig'; and the greenness of the twig seems to imply the living presence of the tree-god. (4) Cards on which geomantic figures or allegorical animals or signs are drawn or painted, with sentences to which Tibetan characters are assigned for reference. (5) Sheets or passages of the Buddhist scriptures drawn at random after an incantation. An official instance of divination by lot is seen in the selection in this way of the Dalai Lama by the 'Ordeal of the Urn' (see art. by present writer in *JRAS*, 1910, pp. 69-86), the result of which is believed to represent a direct expression of the Divine will. Indeed, some lamas go so far as to profess to determine by dice the particular region and state in which a deceased person has been re-born.

In all these operations the recital of Buddhist mystic formulæ (*mantras*) as magical spells or incantations plays an important part.

The oracle is a living institution in Tibet, largely resorted to by all the sects, reformed and unreformed. The monks of the yellow-cap and other sects who train as sorcerers (*sNgag-pa*, pron. *ngag-pa*) do not practise oracular divination except for ascertaining the presence and identity of evil spirits supposed to be actually causing sickness or other harm, with the view of exorcizing them. The soothsaying oracle-giver is usually a follower of the aboriginal Bon religion, and, though attached to one of the great monasteries, is not considered to be a member of the brotherhood, and is allowed to marry. The leading exception is the State Oracle at Nechung near Lhasa, at present represented by a celibate monk of the yellow-cap sect, but his origin from a non-Buddhist Mongolian source has been traced by the present writer in detail. He is given the title of 'defender of the faith' (*cho's-skyong*), and is consulted by the State on all great undertakings, and daily by the public. Among the other oracles not absorbed within the monastic order and retaining their aboriginal

features, the most important is at Karmashar in Lhasa, which purports to be inspired by the devil. The dress and equipment of these priests and their frenzied bearing identify them with the Bon cult and the shamanist devil-dancers. They possess no literature, and deliver their sayings orally in cryptic oracular form. They are ordinarily resorted to for the interpretation of omens and dreams, as well as in matters of business and anxiety. Their implements include (1) an arrow (*dah-dar*), to which coloured silken rags are attached; (2) a magic mirror of metal, which reflects the future—a Taoist and Shinto feature. For their augury they may gaze into a bowl or pool of water, or observe the smoke of a sacrificial fire, or the entrails of animals sacrificed and sheep's droppings, or the lines on charred sheep's bones, such as shoulder-blades—an ancient Mongol custom. Women frequently are the recognized oracles in the country districts. In recording several of the ways in which divining was practised in Tibet, a mediæval Chinese observer wrote: 'Notwithstanding the variety of their methods of divination, and their unskilfulness in their mode of examining, they are quite frequently surprisingly accurate.' This criticism still holds good.

LITERATURE.—W. W. Rockhill, *JRAS*, 1891, pp. 235, etc.; Sir G. Scott ('Shway Yoe'), *The Burman*, London, 1882; L. A. Waddell, *Buddhism of Tibet*, do., 1895, and *Lhasa and its Mysteries*, do., 1905. L. A. WADDELL.

DIVINATION (Celtic).—According to Justin (XXIV. iv. 4), the Celts were skilled beyond other peoples in the science of augury, and Pausanias is mistaken when (x. xxi. 2) he doubts the existence of the art of divination among them. The Celts practised all kinds of divination. It was by the flight of birds that the Gauls who invaded Illyricum were guided (Justin XXIV. iv. 4). It was by lot that the Hercynian forest was allocated to Sigovesus (Livy, v. xxxiv. 4). The coincidence of two names of countries was an omen that led the Gauls to found a town in Cisalpine Gaul (Livy, v. xxxiv. 9). The Gallie king Catumandus made peace with the people of Marseilles because of a dream in which Minerva appeared to him (Justin, XLIII. v. 5). In 218 B.C. the Galatæ allied with Attalus refused to go any further because they were frightened by an eclipse of the moon (Polyb. v. lxxviii. 1). Before engaging in battle, the Gauls used to consult the entrails of victims; and once, when the entrails announced a great defeat for them, they massacred their women and children in order to gain the favour of the gods (Justin, XXVI. ii. 2). According to Strabo (IV. iv. 5 [p. 198]), the sacrifices and augural practices of the Gauls were opposed to those of the Romans; the human victim, who was very often a criminal, was killed by a sword-stroke on the back, and the future was foretold from the way he fell, the nature of his convulsions, and the flow of blood, in accordance with an ancient and unbroken series of observations (cf. Diod. Sic. v. xxxi. 3). Artemidorus relates that in a certain harbour there were two crows that had their right wings tinged with white; people who were in litigation used to lay cakes on a board, each arranging his own in such a way as to avoid all confusion. The crows swooped down on the cakes, ate the one person's and scattered the other's, and the disputant whose cakes were scattered won the case (see Strabo, IV. iv. 6 [p. 198]). Vervain was used by the Gauls for drawing lots and foretelling the future (Pliny, xxv. lix. 106; cf. Servius on *Æn.* iii. 57). Hippolytus (*Philosophumena*, 25) mentions lots by pebbles and numbers among the Celts. The evil omens noticed by the Britons of the 1st cent. were of great variety: noises outside the curia; howlings in the theatre; the appearance of a buried city at

the mouth of the Thames; the Atlantic looking like a sea of blood; human forms left on the shore by the tide (*Tac. Ann.* xiv. 32).

Ornithomancy, haruspicy, and the other methods of divination were undoubtedly practised originally by the tribal chiefs. The Galatian king Deiotarus was renowned as an augur (*Cic. de Div.* i. 15 [26-27]; cf. ii. 37 [78]); he never began an undertaking without first consulting the auspices. Once, when he had started on a journey, he was turned back by the flight of an eagle; he broke off his journey, and so escaped harm. The British queen Boudicca drew a favourable omen from the course of a hare which she had concealed among her clothes and then set at liberty (*Dio Cass.* lxii. 6). At a very early period among the Celts there were priests whose duty was to foretell the future. Justin (xxxii. iii. 9) mentions haruspices at Toulouse who, in order to free the Tectosages from an epidemic of pestilence, bade them throw the gold and silver they had got from the expedition of Brennus into the Lake of Toulouse. Diodorus Siculus (v. xxxi. 31) distinguishes the Druids and the bards from the soothsayers (*adversus*), who foretold the future by the flight of birds and by examining the entrails of victims; they enjoyed great authority. They are identical with the *oóðres* (Gr. transcription of Lat. *vates*) of Strabo (iv. iv. 4 [p. 197]). They are often confused with the Druids (*q.v.*). According to Cæsar (vi. 13), the Druids interpret the will of the gods. The Druid Divitiacus used to predict the future partly by the observation of birds and partly by conjecture (*Cicero, op. cit.* i. 41 [90]). In the time of Tacitus, Gallic Druids announced that the burning of the Capitol preaged the approaching fall of the Roman Empire and the control of the world by the Transalpinæ (*Hist.* iv. 54). A scholium tells that it was after eating acorns that the Druids foretold the future (*Usener, Commenta Bernensia*, 1869, p. 33). Lastly, the priestesses of the Island of Sena, who were endowed with various magical powers, such as the power to rouse the sea and the waves by their songs, the power of changing into animals, and of curing otherwise incurable diseases, had knowledge of the future and foretold it to those who sailed to consult them (*Mela*, iii. vi. 48).

There were women in Gaul in the 3rd cent. of our era who foretold the future. One of them warned the emperor Alexander Severus of his approaching end (*Lampridius, Alexander Severus*, 60). The emperor Aurelian consulted Gallic prophetesses on the future of his posterity (*Vopiscus, Aurelian*, 44). A female soothsayer who kept an inn at Tongres promised the Empire, it is said, to Diocletian (*Vopiscus, Numerianus*, 14).

Among the Irish, as known to us from the ancient pagan epics, divination was held in high esteem. It was practised by the Druids. The source of their predictions was often the observation of natural phenomena; the best known form was divination by the clouds, and the word *néladoir*, lit. 'one who studies the clouds,' was used to designate the soothsayers. But divination takes place very often with the help of various objects: a yew-rod marked with ogham characters; a wheel, which recalls the well-known symbol of a Gallo-Roman deity. The Druids also interpreted dreams and the cries of birds, especially the raven's croaking and the wren's twittering. Sometimes omens were taken from the howling of a dog, and from the form of a tree-root. In the *Togall Bruidne Dá Derga* we find a pig sacrificed in order to discover the future.

We have no direct information on divination among the ancient Britons. But the Cornish *teulet pren*, 'to throw wood,' means 'to draw lots'; the Welsh *coelbren*, 'wood of prediction,'

means 'lot'; and the Irish *crann-chur*, 'to throw the wood,' means 'to consult the lot.' The etymological agreement of the three dialects proves that divination by pieces of wood, mentioned by Tacitus among the Teutons (*Germania*, x.), was practised equally by the Gauls and the Britons. See also art. CELTS, vol. iii. p. 300, § 4, and COMMUNION WITH DEITY (Celtic), vol. iii. p. 750, § 5; and art. FATE (Celtic).

DIVINATION (Christian).—I. Divination was regarded by early Christian writers as a branch of magic. It was a danger to religious life, it excited a morbid curiosity, it led to needless anxiety, it held the will in bondage by destroying the sense of responsibility. St. Augustine sums up its dangers:

'Quæ tamen plena sunt omnia pestiferæ curiositatis, cruciantis sollicitudinis, mortiferæ servitutis' (*de Doctr. Chr.* ii. 24).

Christ is the door (Jn 10⁹); 'neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal him' (Mt 11²⁷). 'The gates of the Divine Reason are rational, and they are opened by the key of faith' (Clement Alex. *ad Gent.* 1). And St. Clement adds the warning: 'Be not curious of ungodly shrines' (*ib.* 2). Divination is a practice which rests on occult methods, methods which had their place in primitive religion, but gave way to the higher methods of Jewish and Christian sacramentalism. This distinction of method was the guiding principle in the Christian view of divination. The diviner sees; he has an insight into Divine things. The Christian 'walks by faith, not by sight' (2 Co 5⁷); he has touch with God, but this touch is 'through the veil, that is, his flesh,' in the widest sense of the economy of the Incarnation (He 10²⁰). Divination is impatient to draw the veil aside.

Christianity, therefore, as the religion of the Incarnation, has discouraged rites and practices which set aside the limitations of the flesh, and are easily able to get beyond control. The subjective type of divination, whether in the form of psychic exaltation or prophetic ecstasy, necessitates a suspension of the intellectual energies. The 'sympathetic passivity suitable for the transmission of the Divine thought' produces a weakening or destruction of individuality, by means of 'ecstatic enthusiasm, deep sleep, sickness, or the approach of death' (Chambers's *Encycl.*, art. 'Divination', iv. 19). Christianity, in its responsibility to strengthen human nature as a whole by keeping control over the different faculties by means of Divine grace, has kept divination and ecstasy in the background as a danger to the mind and the will. This control is emphasized by St. Paul: 'The spirits of the prophets are subject to the prophets' (1 Co 14²⁹).

The history of Christian divination is the history of the subjection of divination to the control of authority. This principle is summed up by Gratian in reference to divination by lot, one of the practices which claimed for itself Apostolic authority (Ac 1²⁴):

'Sic et sortibus nihil mali inesse monstratur, prohibetur tamen idellibus, ne sub hac specie divinationis ad antiquos ydololatricæ cultus redirent' (*Corp. Jur. Canon.*, ed. Friedberg, 1879, pt. I.; *Deor. Grat.* p. li. caus. xxvi. qu. li. c. i.).

Such control was not a new thing in the exercise of religious authority. When Augustus assumed the office of Pontifex Maximus, he destroyed the magical books which were held to be of no weight, and preserved only the Sibylline books:

'quicquid fatidicorum librorum Graeci Latini generis nullis vel parum idoneis auctoribus vulgo ferebatur, supra duæ millia contracta undique cremavit; ac solos retinuit Sibyllinos' (*Sueton. Cass. Aug.* 51).

For the same reason, it is related that L. Petilius publicly burnt certain Greek books as endangering the religion of Rome:

'Graecos, quia aliqua ex parte ad solvendam religionem pertinere existimabantur, L. Petilius Praetor Urbanus ex auctoritate senatus pro victimariis igne facto, in conspectu populi cremavit' (Valer. Max. i. 1. 'de Religione', 12).

And the reason assigned by Valerius Maximus applies equally to the history of Christian divination:

'Noluerunt enim prisci viri quicquam in hac asservari civitate, quo animi hominum a deorum cultu avocarentur' (Valer. Max. 6.).

And St. Augustine, although he himself confesses that the turning-point in his life was the opening of the 'Codex Apostoli' at the words (Ro 13¹⁸) 'non in comessionibus et ebrietatibus' (Conf. viii. 12), deprecates the practice:

'Hi vero qui de paginis evangelicis sortes legunt, et si optandum est ut hoc potius faciant, quam ad daemonia consulenda concurrant; tamen etiam ista mihi displicet consuetudo' (ad inquisitiones Januarii [Ep. lv. i. 20]).

2. Rabanus Maurus (+ 856) sums up the practice of divination in the early ages of the Church in his treatise de *Magorum Praestigiis*, collected from various passages in Augustine and Isidore of Seville, and quoted in the *Decretum* of Gratian under the name of Augustine (*Corp. Jur. Can.* pt. i. p. 1024). On the authority of Varro, divination was of four kinds: 'geomanticam, ydromanticam, aeromanticam, pyromanticam.'

Geomantia is defined as 'ars e terra vaticinandi' (Ducange, *Gloss. ad Script. med. et inf. Lat.*). It is recorded that the resistance of Padua to the arms of Eccelino de Romano in 1226 was foretold by this practice:

'quidam de carceratis solliciti perquirebant per sortes, ad quem finem vester exercitus veniret. Et unus per puncta quadam unius artis, quam dicunt nescio quam Geomantiam, dicere videbatur, quod Padua non poterat hiis temporibus capi' (Rolandini Patavini, de factis in Marchia Taurisina, x. 11, ap. Muratori, *Rer. Ital. Script.*, Milan, 1726, viii. 319). The same chronicler refers to it again in the preparation made by Eccelino for his last campaign in 1269 (ib. xii. 2).

Hydromantia is described by Augustine, in reference to Numa, as an act of divining by water:

'ut in aqua videret imagines deorum, vel potius ludificationes daemonum, a quibus audiret quid in sacris constituere atque observare deberet' (de Civ. Dei, vii. 85).

This practice still survives in the water of silence and other ceremonies associated with Christmas Eve, Hallowe'en, St. Mark's Eve, and Midsummer Eve. A love-couplet quoted by Abbott from *Salonica* illustrates the practice:

'A lump of gold shall I drop into the well,
That the water may grow clear, and I may see my husband
that is to be' (*Macedonian Folk-lore*, pp. 51-57).

Aeromantia is another practice of divination which, under the form of weather-signs, survives to-day.

Pyromantia has also its innocent adepts in the present day. Some see faces in the fire, some see strangers on the bars. So in Macedonia a flickering in the fire, a flaring in the candle-flame, betokens the coming of a guest (Abbott, p. 98).

Rabanus, again quoting Isidore of Seville (*Etym.* viii. 9), says: 'duo sunt autem genera divinationis: ars et furor.' Under 'ars' are the various methods of art magic which are practised by the diviner; under 'furor' the enthusiasm and ecstasy and frenzy which form the atmosphere most conducive to divination. The ecstatic condition may still be found, not only among the dervishes of the East, but in some professedly Christian sects in the West. Authority alone can exercise the control both in the practice of spiritual art and in the frenzy of the religious devotee.

Among the professors of divination referred to in the literature of the Church are *incantatores*, *arioli*, *aruspices*, *augures*, *astrologi*, *genethiaci*, *mathematici*, *horoscopi*, *sortilegi*, *salvatores* (Isid. viii. 9). The *incantator* divined by means of spells or incantations. He claimed to cure diseases, to

bless or curse the crops, to influence the weather. Constantine in 321 endeavoured to control the practice by law (*Cod. Theod.* lib. ix. tit. xvi. 3). The interpretation of this law reads:

'Malefici, vel incantatores, vel immissores tempestatum, vel hii qui per invocationem daemonum mentes hominum turbant, omni genere poenae puniantur.'

In the words of Pliny (*HN* xviii. 2), such spells were an insult to human wisdom: 'virum sapientissimi cujusque respuit fides.' The writings of the Fathers, the canons of the Church, and the experience of our times prove how great a hold such practices have even among those who profess Christianity. It is to them that St. Paul alludes in Gal 3: 'O foolish Galatians, who hath bewitched you?' Liddell and Scott (*s.v. βακαλίσω*), quoting Theocritus, write: 'The charm was broken by spitting thrice' (Theoc. vi. 39). The *tempestarii*, storm-raisers or storm-quellers, are constantly referred to in the canons, the capitularies, and *penitentiaria* of the Councils, the Emperors, and the Bishops (Ducange, *Gloss.*, *s.v. 'Tempestarii'*). In Ireland such charms have been grafted into the religious customs of the people (Wood-Martin, *Elder Faiths of Ireland*, ii. 104-108). A spell against whirlwinds in Macedonia is this: 'Alexander the Great liveth, aye he doth live and reign.' Abbott (oh. xiii.) gives many examples of such spells and incantations.

The *arioli* were those who circled round the idol altars, uttering prayers, and making unhallowed offerings:

'Arioli vocati, propter quod circa aras idolorum nefarias preces emittunt, et funesta sacrificia offerunt' (Isid. viii. 9).

A law of 357 condemns the practice, and rebukes the curiosity which encourages divination: 'Sileat omnibus perpetuo divinandi curiositas' (*Cod. Theod.* lib. ix. tit. xvi. 4). The object of the rites of the *arioli* was to receive some response. This practice of 'raising the devil' is referred to by Tertullian:

'qui aris inhalantes nomen de nidore concipiunt, qui ructando orantur, qui anhelando praefantur' (*Apol.* 23).

There may be some survival of this rite in the *Desiul*, or 'Holy round,' a circling sunwise round a rude stone monument or a well, and in the *Tuapholl*, or 'Unholy round,' which brings a curse. This cursing round was accompanied with incantations and the casting of cursing stones on the altar (Wood-Martin, ii. 51-57). The 'peccatum ariolandi' is condemned with the 'scelus idolatriae' in an Epistle of Stephen of Tournay (*Ep.* 120, ap. Ducange, *Gloss.*).

The *aruspices* are referred to in the laws of Constantine in 319 (*Cod. Theod.* lib. ix. tit. xvi. 1-2). The *aruspex* divined by means of inspecting the entrails of a victim offered in sacrifice. The decree does not destroy, but only regulates their practice. The *aruspex* must not go into private houses. He must be consulted only in the temple: 'aras publicas adque delubra'; and in the open light: 'libera luce tractari.' 'Superstitioni enim suae servire cupientes, poterunt publice ritum proprium exercere.' The Empire as well as the Church recognized the importance of keeping the practice of divination under control.

This practice still survives. The use of the shoulder-blade in divination is an art in itself, known as *omoplatoscopy*. The colour, the spots, the lines are all read by the expert. The breast-bone of the fowl is used for the same purpose. This art flourishes still in Western Macedonia and Albania. In England the practice is remembered in the reading of the speal-bone. The breaking of the 'wishing-bone,' which many of us remember as a solemn diversion of our childhood, as enjoyable almost as the feasting on the fowl, is also to be traced to the same source. This use of the 'merry-thought' is derived from the ancient use of the

cock in divination (Abbott, p. 97 f.; Wood-Martin, p. 141).

Augury was of two kinds: 'ad oculos' and 'ad aures.' The divination was from the flight or from the song of birds. It was regulated by decrees of 357 and 358 (*Cod. Theod. lib. ix. tit. xvi. 4. 6*). There are many survivals of this kind of divination:

'A whistling maid and a crowing hen
Are hateful alike to God and men.'

The crowing of a cock out of hours, the hooting of an owl, the cawing of a crow on the house-top, are all regarded as uncanny. The pigeons which frequent the mosque of Bajesid in Constantinople and the Piazza of St. Mark's at Venice are looked on as birds of good omen. The geese in the cloister of the Cathedral of Barcelona may be a survival of the geese kept in old time in the Roman temple on the same site. The series of Dove-Bishops at Ravenna and the letting loose of pigeons at certain festivals, though now associated with the gift of the Holy Ghost, have doubtless a more ancient root in the rites of divination. A certain Hillidius delivered the people of Vieille-Brionde from a Burgundian raid by the leading of a dove: 'ut aiunt, commotione columbae alitis incitatus.' And Gregory of Tours adds:

'Quod ne quis invidet confectum de columba, et homini praestitum Christiano, cum Orosius consulem Romanum, id est Marcum Valerium, a corvo alite scribat adjutum' (*de Mir. S. Juliani*, 7; Oros. iii. 6).

The magpie in England is still greeted with the rhyme:

'One for sorrow, two for mirth,
Three for a wedding, and four for a birth.'

And the flight to right or left is a survival of the augury 'ad oculos.' The swan was sacred to the children of Llyr. The word *drean*, 'wren,' is in Cormac's *Glossary* explained as '*Druid-en*, a Druid bird, a bird that makes a prediction.' He was the 'magus avium' in Irish hagiology. The stork, the starling, and the swallow also have their place in the folklore of divination. 'A dove from heaven' protected St. Moling at his birth.

'A madman and a fox (lived with him), also a wren and a little fly that used to buzz to him when he came from matins, till the wren hopped on it and killed it; and this killing by the wren was displeasing to him, so he cursed the wren, and said: "My fly. . . Howbeit," says Moling, "but he that marred for me the poor pet that used to be making music for me, let his dwelling be for ever in empty houses, with a wet drip therein continually. And may children and young persons be destroying him!" Howbeit then, but the wren killed the fly. Then the fox killed the wren. The dog of the steading killed the fox. A cowherd killed the madman, namely, Suibne son of Colman' (Whitley-Stokes, *The Birth and Life of St. Moling*, Paris, 1906; Wood-Martin, ii. 140-150; Abbott, pp. 106-110).

Rhys tells the story of a bird-warning associated with the sunken palace of Bala Lake (*Celtic Folklore*, Oxford, 1901, p. 409). The common saying, 'A little bird has whispered it in my ear,' shows the continuity of tradition as to augury. Wood-Martin (ii. 143) gives a picture of a bronze instrument with bird ornaments, found in a bog near Ballymoney, Co. Antrim, which has been thought by some to be a divining-rod. It is not earlier than the 6th century.

The *astrologi*, *genethliaci*, and *mathematici* were all adepts in divination by means of the study of the stars. The term *mathematici* was a common one in the 4th cent.: 'quos vulgus mathematicos vocat' (Jerome, *Com. in Dan.* c. ii. 2). So also in the 1st cent. (*Didache*, c. 3). St. Augustine has frequent references to them: 'Jam etiam mathematicorum fallaces divinationes, et impia deliramenta rejeceram' (*Conf.* vii. 6). The title of the *Theodosian Code*, under which the practices of divination are regulated, is: 'de Maleficiis et Mathematicis.' They are specially mentioned in edicts of 357, 358, 370, or 373. A decree of Honorius and Theodosius in 409 reads:

'Mathematicos, nisi parati sint, codicibus erroris proprii sub oculis Episcoporum incendio concrematis, Catholicae Religi-

onis cultui fidem tradere, nunquam ad errorem praeteritum redituri, non solum urbe Itona, sed etiam omnibus civitatibus pelli decernimus' (*Cod. Theod. lib. ix. tit. xvi. 12*).

The *horoscope* had an important place in the divination of the *mathematici* and *genethliaci*. Isidore of Seville writes: 'Horoscopi dicti, quod horas nativitatis hominum speculantur dissimili et diverso fato' (*Etym.* viii. 9). In the Morocco crisis of 1911, a heading in the *Standard* of July 28, 'The Kaiser's Horoscope,' shows that there are still some who attach meaning to these practices.

The *sortilegi* were those who divined by lot or by the chance opening either of the Scriptures or of Virgil:

'qui sub nomine fictae religionis per quasdam, quas sanctorum sortes vocant, divinationis scientiam profitentur, aut quarumcunque scripturarum inspectione futura promittunt' (*Ibid.* viii. 9).

The *sortes Sanctorum* were similar to the *sortes Vergilianae* (ap. Spartian. *Vit. Had.* 5). Severus is said to have read his destiny in the line:

'Tu regere imperio populos, Romane, memento.'

Sometimes the answer was obtained by opening the book at random, sometimes by pricking the text with a pin. The practice was not regulated by the *Theodosian Code*. It was forbidden in a *capitulaire generale* of 789:

'De tabulis vel codicibus requirendis. Et ut nullus in psalterio vel in evangelio, vel in aliis libris, sortiri praesumat, nec divinationes aliquas observare' (*Op. Carol. Magn.* (Migne, *PL* xcvii. 187)).

The method of the *sortes Sanctorum* is given in a *Life* of St. Hubert of Liège (c. 714). After a fast of three days, two books were placed on the altar—a Book of the Gospels and a Sacramentary:

'Reseratur autem Evangelium hanc primum legenti sententiam obtulit: Ne times, Maria; invenisti enim gratiam apud Dominum. Liber etiam Sacramentarium in sui apertione hoc primum videnti obicit: Dirige viam famuli tui' (ib. p. 188, note).

The election of St. Martin to the Bishopric of Tours was decided by such a use of the Psalter:

'Unus e circumstantibus, sumto psalterio, quem primum versum invenit, arripuit. Psalmus autem hic erat: Ex ore infantium et lactantium. . . ' (*Sulp. Sev., de Vita S. Martini*, ch. 9).

The open practice of this mode of divination in the Church is illustrated on the occasion of the visit of Chramnus to Dijon (c. 556). The clergy determined to tell his fortune from each of the three *Lections* of the Gallican Mass:

'Positis clerici tribus libris super altarium, id est Prophetiae, Apostoli, atque Evangeliorum, oraverunt ad Dominum, ut Chramno quid eveniret ostenderet.' The three readings are then given (Greg. Tur., *Hist. Franc.* iv. 16).

In another case, three books were placed on the tomb of St. Martin:

'Id est Psalterii, Regum, Evangeliorum: et vigilans tota nocte petit ut sibi beatus confessor quid eveniret ostenderet.' This was in 577 (ib. v. 14).

The practice of learning by such means the character and administration of a newly elected Bishop became in early times an established Church custom. Ducange, in his *Glossarium* (s.v. 'Sortes Sanctorum'), gives illustrations from the *Lives* of Anianus of Orleans, Lanfranc, and others. It was known as the *Prognosticon*.

Another form of divination was also practised, known as *sortes per breviam*. In cases of doubt, papers were drawn, and the lot thus taken. In the *Chronicle of Cambrai*, it is recorded that the Bishops of Poitiers, Autun, and Arras claimed the body of St. Leger. The lot fell to the Bishop of Poitiers:

'tribus Epistolis, horum trium nominibus subscriptis, et confusa sub palla altaris obiectis, factaque in commune oratione, Pictavensi Episcopo ex indicibus sanctum corpus debere declaratum est' (ib.).

In Spain a similar kind of divination was known as *ensalmos* or *impsalmum*. The *sortes Apostolorum* was a collection of pious sayings drawn up for this purpose. At the end are these words:

'Haec sunt Sortes Sanctorum quae nunquam falluntur, neque mentiuntur: id est, Deum roga et obtinebis quod cupis. Age Ei gratias' (Smith-Cheetham, *DCA*, art. *Sortilegy*).

Charles Simeon sought for comfort in this way: 'It was not for direction I was looking, for I am no friend to such superstitions as the *Sortes Virgilianae*, but only for support. The first text that caught my eye was *Matth. xxvii. 32*' (Chambers's *Encycl.*, art. 'Sortes Virgilianae').

There is also a reference to the use of rods in the casting of lots in the *Lex Frisonum* (tit. 14. 1, ap. Ducange, s.v. 'Tenus'):

'Tunc unusquisque illorum septem faciat suam sortem, id est, tenum de virga.'

This kind of rhabdomanancy was condemned by the Council of Auxerre in 578:

'non licet ad sortileges vel ad auguria respicere, nec ad sortes, quas Sanctorum vocant, vel quas de ligno aut de pane faciunt aspicere.'

The *sors de pane* refers to purgation by bread. The guilt or innocence of an accused was tested by the eating of bread. It was known as *corsned*:

'Si quis altari ministrantium accusetur, et amicus destitutus sit . . . vadat ad iudicium, quod Anglice dicitur Corsned, et fiat, sicut Deus velit' (*Leges Canuti Regis*, cap. 6, ap. Brounpton; Ducange, s.v. 'Corsned').

The *salisatores* were those who divined by leaping:

'quia dum eis membrorum quaecunque partes salierint, aliquid sibi exinde prosperum seu triste significare praediciunt' (Isid. viii. 9).

It would also refer to what is popularly known as the 'jumps,' a twitching in the body. St. Augustine refers to it: 'His adiunguntur millia inanissimarum observationum, si membrum aliquod salierit' (*de Doctr. Chr.* ii. 20). There may be a trace of this in the *Life of St. Melling*:

'The cleric said to the Spectre: "Grant me a boon" . . . Then he bound that boon on the Spectre's hand. Thereafter he leapt his three steps of pilgrimage and his three leaps of folly. The first leap that he leapt, he seemed to them no more than a crow on the top of a hill. The second leap that he leapt, they saw him not at all. . . . But the third leap that he leapt, 'tis then he alighted on the stone-wall of the church . . . then he leapt from the stone-wall, and reached the church, and sat in his place of prayer. . . . After that he looked at the boy, and thus he was, with the glow of the anger and the fire on him, and the radiance of the Godhead in his countenance' (Whitley-Stokes, p. 161.).

3. Primitive Christianity would seem to have been more tolerant of divination than the more developed Catholic Christianity of the West. The evidence of the books of the NT points to this difference. It is in St. Matthew's Gospel alone that the Star is recorded (2^a), and that dreams are referred to as a means of revelation. The dreams of Joseph (1st 21^a, 13. 19. 22) and the dream of Pilate's wife (27¹⁹) are an echo of the early belief in this form of divination in the Jewish-Christian Church. The only instance of the Divine lot is in the cradle of Christianity at Jerusalem, in the choice of St. Matthias (Ac 1³⁶). In the extension of Christianity the Gospel triumphs over divination. Simon the Sorcerer of Samaria (Ac 8^a), Elymas the Sorcerer of Cyprus (13^a), the woman with the spirit of divination at Philippi (16¹⁶), the sorcerers of Ephesus (19¹⁹), stand condemned in the records of the early mission outside Judæa. Occultism gives way before Sacramentalism, although faint traces of the primitive faith are recognizable in the stories of the 'shadow of Peter' (Ac 5¹²), the handkerchiefs from the body of Paul (19¹²), and the trances of Peter (10¹⁰) and Paul (22¹⁷, 2 Co 12^a). Witchcraft under the form of *pharmakela* is condemned in Gal 5¹⁹, Rev 9²¹ 18²² 21⁸ 22¹⁵.

In the sub-Apostolic ages there are a few references to the practice of divination. The *Epistle of Barnabas* links together *magela* and *pharmakela* (xx. 1). St. Ignatius in his *Epistle to the Ephesians* also refers to *magela*, and speaks of the one Bread of the Blessed Sacrament as the *pharmakon* *athanasias* (xix. 2, xx. 2). Hermas calls a *magela* a heathen practice (*Mand.* xi. 4). The *Didache* forbids it: *οὐ μαγεύσεις, οὐ φαρμακεύσεις* (c. 2); and again: *τέκνον μου, μὴ γίνου οὐνοσκοπός . . . μηδὲ ἐπαισδός, μηδὲ μαθηματικός* (c. 3). If the 'Two Ways' is an early Jewish-Christian document, this straight teaching against augury, incanta-

tion, and astrology implies a continuance of the practice among Eastern Christians.

This is supported by the evidence of Irenæus at the end of the 2nd century. The magical arts of Marcus coloured his sacramental rites as well as his teaching (c. *Hær.* i. xiii.). The followers of Simon Magus would appear to have grafted his magic into their Christianity.

'Igitur horum mystici sacerdotes libidine quidem vivunt, magias autem perficiunt. . . . Exorcismis et incantationibus utuntur. Amatoria quoque et agogima, et qui dicuntur pædri et onirupompi, et quæcunque sunt alia perierga apud eos studiose exercentur' (ib. xxiii. 4).

The followers of Carpocrates practised the same art:

'Artes enim magicas operantur et ipsi, et incantationes, philtra quoque et charitesia, et pædros, et onirupompos . . . (ib. xxv. 3).

Dreams are here included with incantations and philtres.

Tertullian in his *de Anima* (c. 209-214) regards divination as a faculty of the soul:

'Dedimus enim illi . . . et dominationem rerum, et divinationem . . . Definimus animam . . . dominatricem, divinatricem' (ch. 22).

Dreams may be 'peculiare solatium naturalis oraculi' (ib. 46), but he points out their danger:

'Definimus enim a daemonibus plurimum incuti somnia, et si interdum vera et gratiosa, sed, de qua industria diximus, affectantia atque captantia, quanto magis vena et frustratoria et turbida et ludibria et imunda' (ib. 47).

And of the magical arts in brief: 'Quid ergo dicemus magiam? quod omnes pæne fallaciam' (ib. 57). This he wrote as a Montanist. As a Catholic (c. 197), in reply to a charge 'de sterilitate Christianorum,' he numbers among the critics of the Church 'magi, item aruspices, arioli, mathematici' (*Apol.* 43).

Clement of Alexandria refers to the practice of divination among the Germans. There were women among them who could foretell the future by looking into the whirlpools and currents and eddies of a river (*Strom.* i. 15). 'The inventors of these arts as well as of philosophy were nearly all Barbarians' (ib. i. 16). Origen more than once speaks of divination as a snare to the Christians of Egypt:

'Hæc ergo omnia, id est, sive auguratio, sive extispicium, sive quælibet immolatio, sive etiam sortitio, aut quicunque motus avium, vel pecudum, vel inspectio quæcunque libarum, ut aliquid de futuris videantur ostendere, in operatione daemonum fieri non dubito' (in *Num.*, hom. xvi. 7). He calls the 'opprobrium Aegypti' of his day 'observare auguria, requirere stellarum cursus, et eventus ex iis futurorum rimari, servare somnia cæsterique huiusmodi superstitionibus implicari. Idololatriæ namque mater est Aegyptus' (in *Libr. Jer. Nave*, hom. v. 6).

The inscriptions of Eumeneia in the 3rd cent. show that the city was to a large extent Christian. But, as it was necessary to keep up the forms of the national religion, and as the 'courtesies of society and ordinary life, as well as of municipal administration, had a non-Christian form,' the 'spirit of accommodation' must have ruled in the religious life of the citizens (Ramsay, *Cities and Bishoprics of Phrygia*, vol. ii., Oxford, 1897, p. 504). The disciplinary canons of the Synod of Ancyra in 314 are an echo of this 'spirit of accommodation' of an early age. The 4th cent. tightened the reins of discipline as well as the definitions of the faith. The practice of divination was condemned by canon xiii. (*al.* xxiv.):

'Qui divinationes expetunt, et morem gentium subsecuntur . . . sub regula quinquenniil jaceant' (*Decret.* p. ii. caus. xxvi. qu. v. 2).

The same need of discipline was recognized in the far West. The Synod of Eliberis (Granada) in Spain (between 314 and 324), in addition to many canons against idolatrous rites, has one canon forbidding women to frequent cemeteries: 'ne feminae in coemeterio pervigilent' (can. xxxv.). St. Jerome refers to the custom of resorting to cemeteries as a means of divining with the dead:

'sed sedens quoque, vel habitans in sepulchris, et in delubris idolorum dormiens; ubi stratis pellibus hostiarum incubare soliti erant, ut somniis futura cognoscerent' (*in* 1s. 664).

The clergy were forbidden to practise divination by the Synod of Laodicea (c. 343-381):

'non oportet sacris officiis deditos vel clericos magos aut incantatores existere, aut facere phylacteria' (can. 80, *ap. Decret. p. II. caus. xxvi. qu. v. 4*).

Priscillian and his followers were accused of practising astrology. And his writings give some grounds for the accusation, though he clearly states how far he thought it right to go:

'Addendi autem lunaris ideo cursus jubetur, non ut in eo observatio religionis sit, sed quia in ea quae videntur omnis homo vincitur et germana aelementis caro...' (*Priscill. Op.*, ed. Schepss, 1889, p. 78. 3 ff.; cf. F. Faret, *Prisc.* 1894, p. 144).

The Church of the 4th cent. was weakened by this 'curiosity' in the matter of divination. It had difficulty in detaching itself from the practice of the magical arts. At the close of the century Nicetas of Remesiana, a prominent Bishop of the old Latin Church of the Danube, writes:

'abrenuntiat inimico et angelis ejus, id est, universae magicae curiositati... renuntiat et operibus ejus malis, id est, cultus et idolis, sortibus et auguriis...' (Niceta, ed. A. E. Burn, Cambridge, 1906, *de Symbolo*, c. 1).

The Gallican Church seems to have been troubled by this curiosity in magic. It is referred to in the canons of Agde (506), Orleans (511), and Vannes (461 or 465). In a canon of the Synod of Auxerre (578), in addition to the *auguria* and *sortes Sanctorum*, mention is made of *characteres*. These were of the nature of charms:

'Phylacteria et Characteres diabolicos nec sibi nec suis aliquando suspendant, incantatores velut ministros diaboli fugiant' (Aug. *de Temp.*, serm. 163, *ap. Ducange, Glossar.*).

The Church of Spain also regulated the practice of divination. It is condemned in the *capitula* of Martin of Bracara (c. 72), and in can. 30 of the Council of Toledo in 633. But it survived throughout the West, and in the Carolingian Renaissance of discipline it required stringent treatment. In the *Decretals of Gratian* is a long extract from an unpublished capitulary which illustrates its danger under the Frank Empire:

'Episcopi crumque ministri omnibus viribus elaborare student, ut perniciosum et a sabulo inventam sortilegam et magicam artem ex parrochiis suis penitus eradicent' (*Deer. p. II. caus. xxvi. qu. v. 12*).

The Church of Rome expressed the judgment of the whole Church in the Council of 721 under Gregory II:

'Si quis ariolos, aruspices vel incantatores observaverit, aut phylacteris usus fuerit, anathema sit' (*ib. qu. v. 1*).

T. BARNES.

DIVINATION (Egyptian).—From more than one point of view it seems impossible to bring Egyptian divination under the classifications in general use in the study of mantics; we cannot make either the ordinary definitions, or the purpose, or even—to a certain extent—the means employed fit in exactly. In fact, in this study, as in so many others, the Egyptians made no attempt to formulate a theory, or even to lay down general principles. In Egypt we find nothing corresponding to the didactic treatises on mantics composed by the Chaldeans and by the Hellenic world, nothing like the prodigious variety of means of divination of the Assyrians and Greeks, including the observation of almost every phenomenon of Nature, beings, and things. The observation of the ordinary aspects of the sky is confined to the realm of astrology; its unusual aspects (meteors, shooting stars, comets, zodiacal light, eclipses) are explained in advance by mythology, and do not require an interpretation from actual divination. There is no mention of the

mantics of rain, winds, clouds, or smoke, etc., in the Egyptian texts, or of the twenty kinds of hydromancy, or of divination by 'palmistry.' In connexion with living creatures there is no ritual study of the movements or appearances of animals (ornithoscopy, ichthyoscopy, etc.); nor do we meet with haruspicy, extispicy, or teratiscopy. There are no evidences in the Egyptian texts or monuments of cledonancy, libanomancy, rhabdomancy, axinomancy, clairomancy, lithoboly, belomancy, knuckle-bones, dice, divining-rods, or, indeed, of any of the means of inquiry by the production of phenomena for interpretation.

When we apply to Egypt the classifications in general use for the mantics of other peoples, we find a certain number of divinatory processes mentioned by the ancient Greek and Roman authors, about which, however, it is very important to observe: (1) that they are of rare occurrence, or are employed only in popular superstitions and not by official divination; and (2) that they were introduced into Egypt at a late date, under the influence of Asia or of the Hellenic world.

To the first class we may assign the indications drawn from the flight of birds and encounters with serpents; e.g. the story of Alexander's expedition to the Great Oasis. This form of divination possibly belongs to Egypt, and the inscription of Hammamat (Erman, *ZÄ* xxix. [1891] 60) may be cited in its defence, in which a gazelle shows the spot in the desert where the stone of the royal sarcophagus is to be set up. But the incident was related rather as a miracle, and there is no ground for considering it a regular method of divination. The use of the divinatory vase seems equally unknown to the priests of the official cults, and the so-called magic consultation of Nectanebo is a legend of Greek origin. The divinatory vase certainly existed in Egypt in the last centuries of its history, and the demotic texts agree on this point with the Greek and Roman evidences; but it is very probable that this practice was imported from Persia, and in any case it was never employed by the court-priests, but only by magicians.

Apart from the reference in Gn 44^b to the divining cup of Joseph, which may be a non-Egyptian adaptation, we know from the classics (Plin. xxiii. 46; Plutarch, *de Iside*, lxi., lxiv.; Horapollo, i. 39, etc.) that this was a part of the cult of Anubis in particular; the god was invoked by means of a vase full of liquid or a flame; and the reading of the divinatory signs or images was performed through the medium of a child, on whom they worked by incantations and the laying on of hands. And thus, says Diodorus (xvii.), 'the soul foresees future events in the phantoms she herself creates' (cf. Virey, *Religion égypt.*, Paris, 1909, p. 227, and Ermoni, *Religion égypt.*, do. 1910, p. 122). The use of the child, because of its innocence, is a common practice in all magic, and is connected with the universal belief in the inferiority of a man who has committed a sin or has had sexual connexions, in the struggle against the spirits. Lefebvre connects these methods of divination of the later period with analogous practices occurring all over North Africa (*Revue Africaine*, 1906, no. 267, p. 211), and conjectures with great probability (*Sphinx*, vi. [1902] 61) that the material process consisted in creating in the child's brain phantoms and images of Anubis and others, by means of hypnotism and looking at a shining object. We know, besides, that these processes persisted down to our own days in the Arabic world.

It is possible, then, to find in Egypt in the last centuries some of the processes of divination of the Mediterranean and Chaldaeo-Assyrian world. The fact of their combination with innumerable popular superstitions tended to produce in the official cults a multitude of practices which do not really belong to the history of Egyptian divination.

With the above restrictions, it appears that the contents of Egyptian divination were essentially four: (1) the interpretation of dreams (*q.v.*), sought or unsought; (2) the reading of horoscopes (see STARS); (3) divinatory calculations made from the position and influences of the stars (*q.v.*); and (4) the manifestation, directly and plainly indicated, of the will of the gods themselves. This last branch includes (a) the movements of the sacred animals, (b) the responses of the 'prophetic statues,' and (c) the words spoken by the gods in their temples, i.e. oracles properly so called.

(a) The first group in the last class seems to have
¹ Herodotus and some modern authorities have confused veterinary examination to ensure the purity of sacrificial victims with examination for purposes of divination.

played a very limited part. Consultations of the bull Apis are known in the classics. Pliny (viii. 71) and Amm. Marcellinus (xxii. 14) relate that the omen was good or bad according as Apis accepted or refused the food offered by the worshippers, and that the sacred animal refused the offering of Germanicus. They also tell of prosperity or adversity being foretold for the country according as the bull chose to go into one or the other of two stalls.

There is little doubt that these superstitions are truly Egyptian and very ancient. But it is very doubtful whether, at the classical period, such manifestations were employed by the priests as means of divination; it is far more probable that they were simply popular superstitions, existing throughout all Egypt wherever sacred animals were kept in the temples, and that what the Greeks and Romans tell of Apis happened also in the case of the crocodiles of Ombos, and the rams of Elephantine or of Mendes. It may have been due to the influence of the Greeks, who were accustomed to give importance to this very type of mantics, that these customs became embodied in the priestly cult, or at least were given a greater importance as methods of divination. In fact, dreams, astrology, and, in particular, the direct consultation, in definite language, of living images of the gods, had at an early period supplied the official religion of Egypt with methods of consultation far more convenient, more explicit, and more in keeping with the fastidious genius of the race; and it is to these classes that nearly all the known examples of Egyptian divination belong.

(b) Among the most characteristic processes in the consultation of statues is the designation of the Ethiopian sovereigns by the statue of Amon-Râ at Napata. The ancient authors had been struck with it (see esp. the account of Diodorus, iii. 5, and a corrupted version in the satirical writings of Synesius [*Works*, French tr. by Bruon, Paris, 1878, p. 244]). The famous *stela* of Jebel Barkal, on which the election of Aspalut is recorded, is the most complete account of this practice accessible in the English language. After a number of ceremonies, too long to describe here (see Maspero, *Boulaq*, pp. 69, 336, and *Guide Cairo Museum*, ed. Dec. 1910, p. 215, Room S, West Side, no. 692), the candidates for the throne were brought before the statue of the god, which had been adjured to make its choice known. They filed past the idol, which remained motionless until it 'seized' the candidate it chose. The statue thereupon declared in formal terms that this was the king. The newly-elected monarch then entered the sanctuary, and was crowned by the god himself.

Recent Egyptological discoveries show that all the traits of this curious ceremonial were borrowed by Ethiopia from the divinatory ritual of Egypt. On the tomb of Nib Uônaf at Gurneh (see Sethe, *ZÄ* xliii. [1908] 90 ff.) there is an account of the election of the high priest of Amon-Râ. The candidates were led before the statue of the god. They were all shown to it in turn, 'and not to a single one of them did it make the motion *hanu* [see below for the actual gesture] except, said the King, when I pronounced thy name.' Then, Nib Uônaf being thus chosen, the statue conferred the power upon him by four magic passes. A second text, discovered later, proves that the custom was in existence even in the time of Amenhotep III., and it is quite logical to suppose that it goes back to a much earlier period; it may perhaps be even as ancient as the worship of the god himself.

The right of consulting the god is reserved, of course, to his people, i.e. to the king or the chief 'prophet' (a poor modern tr. of the word *honu*, which is, more exactly, a 'man belonging to some one'). The consultation does not take place at any time, but only, according to traditional etiquette, on one of the days of the holy image's 'going out' (*khânu* = 'assemblies', 'processions')—in the case of the Theban Amon, e.g., at 'his great festival of Apit.' There is a recognized place where it is allowable to present the divinatory request to the god, and even to interrupt the 'going out' of the god to question him. At Thebes it is the place called the 'silver pavement.' The priest approaches the shrine containing the statue and begins by an invocation (*âsh*) in court language. He then asks the statue if it is convenient for it to listen to such and such an affair. The terms used here also are traditional: 'O God of Good-

ness, my Lord,' is the beginning of the question. Then the case is stated: a theft has been committed; will the god help to find the stolen property and the culprits? A funerary monument has been robbed; does the god desire the punishment of the spoilers? Sometimes even more circumlocution is used: 'Lord, may we lay before thee a serious affair?' (e.g. among the Banis of the Great Oasis; see below). If the statue remains motionless, the request is refused, and the matter is dropped. If it consents to listen, it acquiesces (*hanu*) 'twice with decision.'

The actual gesture of consent is difficult to determine. Nearly all authorities admit that the statue 'shook its head.' The word *hanu*, always employed, without exception, in all the texts, for this method of divination, may, indeed, mean a shake of the head, according to the usual signification of the word in ordinary language. Amon-Râ of Karnak, in the long series of examples known to us, Amon 'Pakhoniti' of Memphis (cf. Pleyte, *PSBA* x. [1892] 41, 55), Amon 'Ta-Shoni' (*ib.*), Khonsu 'Nofrihâtep' of Thebes, Amenôthes I., king of the dead (cf. Erman, *SBAW*, 1910, p. 210), and the images of the Ethiopian Amon of Napata gave responses in this way (*hanu*). The same is true of Isis of Koptos (Petrie, *Koptos*, London, 1896, pl. xix. lines 11-13). There is doubt, however, in the case of Jupiter Amon of the Great Oasis (cf. Brugsch, *Reise nach der grossen Oase*, Leipzig, 1878, pl. xxii.), and the consultation granted afterwards to Alexander, on his famous journey to this sanctuary. But there is no decisive context to prove that it was the head rather than the arms that moved, and, as we have no remains of these portable statues, scientific reserve must be maintained on this material detail. The passage in the famous *stela* of Bakhtan, in which the king asks the statue of Khonsu 'to incline its face,' is nothing more than an ordinary expression in court language, meaning 'to be in a benevolent mood, or 'to consent gladly' to something. Finally, it will be observed: (1) that several passages in the inscriptions and papyri say that the statue performs *hanu* 'towards' some one hidden in the midst of a group or a crowd; (2) that, in many other circumstances besides interrogations proper, the statue 'seizes' some one, or 'holds the string' (the ritual term for founding a temple), etc. These evidences, along with others too long to give here, justify us in assuming, with equal probability, that the *hanu* may have been a movement of the arm of a jointed statue, accompanied perhaps by a sound, a whistling, or a cry, of suitable strength. We have absolutely no exact details here, though we know that, in the case of oracles proper, the god spoke; but this Divine language is itself a matter for discussion. Maspero, in all the works in which he discusses these 'prophetic statues' (see *Literature*), holds that they were actual jointed dolls, with strings attached to their arms and heads, and that the officiating priest pulled a string for each response and each gesture. In his earliest works (cf. *RHR* xv. [1887] 169 ff.) he even seems to admit the existence of actual machinery, worked, when required, by fire or steam. The explanation that the statue had a jointed head seems to be generally accepted. It is a very ingenious and satisfactory hypothesis—but nothing more, for no single text or representation supplies formal proof.

Divination was the exclusive privilege of the 'essential' statue, just as was the possession of the fluid *ad*, and the gift of exorcism, of healing, of 'vital breaths,' etc.; and—probably for reasons of magic awe—the Egyptians never made a single representation to show what such a statue was. There is one portable figure of Min, it is true, nude and ithyphallic, carried on his shield and having his 'magic-case' with him, in a number of Theban representations of processions (Luxor, Medinet Habu, and Ramesseum). This statue suggests, at the very first glance, the idea of a string hanging from the neck to the ground—which would justify the theory of statues with movable heads. But it is doubtful whether this is a 'prophetic' statue—from the very fact that they have dared to show it in bas-relief. We know, finally, that the sacred image was carried on the *bari*; and, even allowing that the *naos* was open during the consultation and that the statue was taken out of it and placed on the ground (cf. Pleyte, *PSBA* x. 43), it is difficult to see by what sort of mechanical means movements could be produced. All that we can state with certainty is that the idol indicated its wishes by a gesture, or by a gesture and a cry at the same time, and repeated twice.

After this sort of 'duty performance,' the king or the chief priest puts the question. The cases about which we know (from inscriptions, papyri, and ostraca) are of great variety (cf. Brit. Mus. Papyrus 10335; Mariette, *Catal. mon. d'Abidos*, Paris, 1881, no. 1225; Brugsch, *ZÄ* ix. [1871] 85; Erman, *SBAW*, 1910, pp. 344, 346 = Cairo Ostrakon 25242; Turin Papyrus 126, ch. 3; Erman, *Agyp. Rel.* 186; Louvre Manner Stela; Breasted, *Anc. Records*, iv. [Chicago, 1907] 317; Naville, *Inscr. hist. de Pinodjem III.*, Paris, 1883, p. 111). A consideration of all the questions submitted shows that the majority are judicial decisions, and that

they are entirely concerned with the people and things ruled over or possessed by the god; in short, that they are cases not of interpretative divination or divination of the future, but of the divination, for the immediate present, of the god's formal decision. This remark helps us to understand how the process of the Divine response by *hanu* tended to become a settled gesture, almost a piece of legal phraseology, the divinatory element of which in the end quite evaporated (see below).

The process of questioning is controlled by rigorous fixed rules. A series of definite questions are asked, each one bringing nearer, *ne varietur*, the solution of the difficulty. To each question the statue has to reply by 'yes' (i.e. by performing *hanu* 'twice with decision') or 'no' (i.e. by remaining unmoved). In certain cases, the final decision depends entirely upon the statue's gesture. Two pieces of writing are placed before it, the one saying that an accused person is guilty, the other that he is not guilty; and the statue is required to choose. To make quite sure, this test is repeated twice. The case of the steward Thothmes is an example of this kind, in which, twice over, 'the god refused to take the writing that declared him guilty, and took that declaring him innocent' (cf. a good tr. of this typical example in Breasted, *Anc. Records*, iv. 325).

This curious passage would lead one to suppose that, even although *hanu* means a shaking of the head, the statue certainly moved or stretched out its arm to take the writing. This evidence should be laid alongside of the various texts that seem to show that at the coronation of the king the statue of Amon-Râ put the crown on the new sovereign's head, as in Ethiopia (see below).

Taken in connexion with the indication of the Ethiopian kings and the Theban chief priests by the statue, these examples of judicial decisions throw light upon the philosophy of such proceedings. It is possible—and probable—that originally the gesture of the statue was actually divinatory, inasmuch as, though an indication was looked for from it that was the result, it is true, of solicitation, its exact answer or choice could not be foretold. In the earliest times the *hanu* of the statue was as impossible to anticipate with certainty as were the miraculous movements recorded in other inscriptions—the statue making a gesture of welcome or salutation, during a procession, as it passed before a court official (cf. Petrie, *Koptos*, pl. xix. line 11 f.), or, more frequently, before the prince who was destined one day to mount 'the throne of Horus,' and of whose future position as king of Egypt no indication had ever until then been made. The original nature of the process had a tendency gradually to become an operation in which the process of investigation, procedure, and inquiry was carried through more and more by human means, and the only uncertain element—i.e. the opinion, or the will, of the god—was reduced to the very restricted alternative of saying 'yes' or remaining motionless. Divination proper, thus reduced to the minimum of interpretative freedom, and confined to cases equally definite and real, became, by force of circumstances, rather a registration of the god's consent taken for granted in practice, and soon even simply a formality with practically no divinatory significance in it. This was almost certainly the nature of the Divine *hanu* in the cases of the election of the Ethiopian king and the nomination of the Theban chief priest; and similarly in the ratification of judicial sentences. This all serves to explain how, in the course of history, the Divine consent by a movement of the statue came to be the regular and necessary accessory of registration for all kinds of contracts, deeds of gift, marriages, wills, and even rescripts relating to funerary lots passed before the temple authori-

ties, in which there was no kind of 'divination' to be seen—unless, indeed, we give that name to the desire (or would-be desire) to be quite certain, for the sake of the validity of these actions, that the spirit of the god was not opposed to them (cf. (1) the process in the Turin Papyrus 126; (2) Erman, *ZÄ* xxxv. [1897] 12, for the registration of a will; (3) Maspero, *Boulaq*, p. 336, for the registration of a funerary decree; and (4) what Breasted says in *Anc. Records*, iv. 325, about a special work on this series of legal documents).¹

(c) From the known examples, it appears that the consultation of statues usually consisted in obtaining a series of acquiescings manifested by the *hanu*. We have seen, however, that movements of 'seizing' sometimes accompanied this manifestation of the god's will. There were also other movements of an analogous kind; e.g., when the image of Khonsu consented to grant its magic power to one of the statues of Khonsu in order to drive off a demon, it is said that it 'made four passes of the magic fluid'—from which we may assume actual movements, no matter how rudimentary, of the arms or of an arm. In some of the cases cited above, it is formally stated that the *hanu* was accompanied by spoken words, sentences more or less brief, but practically forming a short discourse; this is the case in the election of the kings of Napata. It is, indeed, certain, from a number of other texts, that the gods spoke—not, of course, to the common herd of mortals, but to their sons and their ministers (i.e. to the members of the royal family and the high priests). The gist of the wishes they manifested thus was afterwards reduced to the form of a decree (*utu*), and engraved on the walls of the temple as 'the words of the god himself'; or their wishes were embodied in one of those rhythmical prose accounts, lyrical in character, which have been rapidly enriching the *corpus* of Egyptian historical inscriptions in recent times.

These oracles are of as many varieties as the consultations of the statues examined above. Sometimes the god himself, of his own accord and unsolicited, suddenly manifested his will, making his voice heard, in the silence of the sanctuary, to the king or priest coming into his majestic presence; and he would order a mission to Lebanon for wood for his house, for stones for his temples, for perfumes and rare trees for his altars and sanctuaries (cf. Erman, *ZÄ* xxxviii. [1900] 1; and Golenischeff, *RTx* xxi. 127). Sometimes the manifestation was less unforeseen: it might be the complement of a previous warning in a dream, a formal explanation of which the god was graciously granting by request; or it might be the answer to a passionate request of the king. To the last category belongs the discourse received by Hatasu in the temple of Deir el-Bahari, when she came, after prayers and fasting, to seek a manifestation of the Divine will, and was ordered to send an expedition to the country of spices (cf. Naville, *Deir el Bahari*, London, 1898-1901, iii. 84). This famous example is a good specimen of the manner of proceeding. The other examples of the same type show that in no single case was the divination accompanied by ecstasy, religious frenzy, or hypnosis of the subject, and that the god never used mysterious language, or broken mangled words that were afterwards submitted to the interpretation of professional soothsayers. The statements made by the god were in clear and coherent terms. They were practical replies as to a fact, a decision to be taken, or the issue of a concrete imminent event. All the Egyptian precision and love of clearness are seen in these oracles, as we may call them. Seti I. implores the god, and is shown a place where he must make a well in the desert, while the god demands a sanctuary in exchange (cf. Breasted, *Anc. Records*, iii. 82); and orders, solicited or unsolicited, relating to the construction and repair of buildings (e.g. Mariette, *Karnak*, Leipzig, 1875, pl. xii. = Breasted, *Anc. Records*, ii. no. 606) appear to have held the chief place in these oracles—perhaps, indeed, just because these responses more than others were engraved on the walls of the buildings with which they were thus connected. Another kind of prediction which we find of more and more frequent occurrence is the foretelling of a prince's coming to the throne. Thothmes III. was informed by the god long in advance that he would one day be king of Egypt (Inscription of the year 23 at Wady-Halfa); and this prediction was confirmed later by the statue suddenly stopping in front of Thothmes, proclaiming

¹ On the question of illusion or fraud in the above processes, see Foucart, *Religion et art dans l'ancienne Egypte*, Paris, 1908, vol. I. ch. I. p. 37 ff.; Maspero, 'Les Statues parlantes,' in *JD*, 21st Dec. 1898.

him king, crowning him, and making him a speech (cf. Breasted, 'Coronation Inscription,' in *Anc. Records*, II, 60, no. 140).

Such facts should be compared with those telling how the Divine statue proclaimed the king, appeared in public with him under its protection, and gave him his crown and diadems (e.g. Daresy, *Annales*, III, [1903] 271, for Ramses II., and similar facts for the Thothmes, the Amen-hoteps of the XVIIIth dynasty, and Harmhab). They seem to indicate that here we have, for historical Egypt, the continuation of an extremely ancient divinatory process. If we further consider the remarks of Breasted (*Anc. Records*, II, 225) on the antiquity and persistence of the coronation ritual of Heliopolis, it is a possible assumption that the whole is a survival, made regular and ritual, of a much earlier state of things, and that, in pre-historic times, the accession of a chief was actually settled by divination, the idol (or, before it, the fetish) intervening by prophetic processes to indicate the man it desired to be its minister and to rule over men in its name. Such a view would modify our ideas on the origins of Egyptian monarchy, and should be considered along with the analogous customs to be found among numerous uncivilized races of the present day relating to the designation of kings or priests by divination.

The inscriptions of the classical period published in recent years show that the gods themselves gave direct orders by speeches, and it is beyond all doubt that consultation of the gods by the kings was of very frequent occurrence, and that divination was involved in the majority of important decisions. At grave junctures, e.g. when there was a conspiracy to frustrate, a treaty to arrange, or an expedition to command, the king asked help from the god, and he did not ask it in a sign or prodigy to be interpreted afterwards; he requested an answer in articulate language and exact terms. It is difficult to find a nobler tone in the ancient literature of the East than that of some of the inscriptions in which a king relates how he came to the temple to seek for Divine wisdom, stated his business before his ancestor, asked him what he ought to do, and turned away from this mysterious interview with face lit up and heart full of joy, because he had heard his god speak to him 'as a father to his son' (cf. e.g. Bouriant, *ETR* xv, [1896] 178; *Inscription of Thothmes IV. at Konosso*). This fine formula recurs in several inscriptions relating to consultations of the god by the king.¹

To these examples of oracles of the Pharaonic period we may add, as having an Egyptian character and no foreign elements, the demotic inscriptions of Nubia, relating to the oracles of Isis of Philæ and Thoth of Pi-Nubs. The records that the 'chief of the temple held a consultation of the god' connect this method of divination with the official procedures already noticed (cf. Révillout, *Revue égyptologique*, v. nos. i.-ii., and *PSBA* x. 56-58). At the oracle of Dakke, held in great veneration by the Ethiopians and the Blemmyes, the statue of the god was consulted 'at the great feast' (*do en lo*). Texts show that a consultation of this oracle was a recognized thing when a prediction of the circumstances favourable for the celebrated yearly journey of the statue of Isis of Philæ to the Blemmyes was desired. It is also an Egyptian custom that we find at Korti, when the chief priest of the temple leaves the choice of his successor in the hands of the god (cf. *Revue égyptol.* v. no. 111, for a series of examples of all these oracles).

It is very difficult to discriminate between what is Egyptian and what is foreign in the mass of examples of divination and sanctuaries having an oracle mentioned in connexion with Egypt by Græco-Roman authors. The same restraint must be observed as for the divinatory processes discussed above in the inquiry concerning the prophetic statues. As a rule, the recently discovered

¹ As to the very difficult question of the material method by which the god spoke, Garnault (*Revue scientifique*, no. 21, May 1900, p. 643 f.) suggests ventriloquism; Maspero holds that the priest spoke by Divine inspiration in the name of the god—the most satisfactory theory in many instances. But in some cases the king alone, without the intervention of the priest, appears to have received the Divine response directly in his own soul.

information of Pharaonic age tends to confirm for the majority of cases the actual national character of the modes of divination. Thus at the oracle of Bisu in the Thebaid (Herod. i. 182; Amm. Marcellinus, xix. 12), and at that of Heliopolis (Macrobius, *Saturn.* i. 30), the means of getting the future divulged consisted in reducing the questions to writing, according to carefully arranged formulæ. Such a method is fairly similar to what took place, as we saw above, in the judgment of the steward Thothmes, and the importance of the proper wording of the formulary noted by Pliny (xxviii. 3) and Juvenal (*Sat.* vi. 390) corresponds exactly with Egyptian formalism. But these formulæ, deposited under seal in the temple, and the replies given, also sealed, with the same ceremonial, are a method of Divine correspondence which the hieroglyphic inscriptions have not yet confirmed for the classic period. We know from Zosimus that in the reign of Constantine the government seized a number of oracles which were given into the hands of the Imperial police and involved a number of Egyptians in imprisonment and exile.

The cases of divination by incubation are the most complicated. If it is certain that the sanctuary of Ptah Sotmu in Memphis was giving oracles in the Pharaonic epoch to sufferers who came to consult it (see DISEASE [Egyp.]), and that the gods had been sending dreams, for long ages and almost everywhere, to reveal remedies to the patients who came to sleep in their temples, it is no less certain that the result of the combined influence of Asia and Greece was to extend and modify the essentials of these processes of divination, just as in the cases already noticed of prophecy by interpretation of inanimate things.

The famous oracle of Jupiter Amon of the Great Oasis deserves special mention. Although manifestly in decadence in the time of Strabo (xvii. 759), its advice was still held of great value in difficult questions (Juvenal, *Sat.* vi. 654). A study of the principal Græco-Roman authors who describe the manner in which the god made his will known (Ptolem. § 81; *Scriptores rerum Alex. Magnæ*, ed. Müller-Didot, 1846, p. 37 f.; Arrian, *Anabasis*, III. 4. § 5; Quintus Curtius, iv. 7; Ephippus, § 8; Strabo, vii. fr. 1; Diodorus, xvii. 51; Plutarch, *Alex.* 27; and especially Callisthenes, fr. 27 and 39) shows that it was in absolute conformity with the Egyptian rule: the statue of the god, the response by gesture, and, if need be, by spoken words, the consultation by the high priest, and the questioning at the 'ceremonial going out' of the god (notice the passage of Strabo [vii. fr. 1] remarking indirectly that the responses of the oracle were given in conventional signs, *διὰ τινων συμβόλων*). We also find indirectly, from the evidence of Ephippus (§ 8), that the divinatory statue had a human form, and was provided with shoes, a mantle, and horns. This last trait—granting that the Amon of the Oasis is certainly a copy of the Theban Amon—helps to confirm the conclusion that the prophetic statue of Thebes had a ram's head. The most famous episode in connexion with this oracle was the visit of Alexander, who was summoned by Amon as his son and lawful successor upon the throne of Egypt. Maspero (*Ann. de l'École des Hautes Études*, 1897, pp. 1-32, 'Comment Alexandre devint dieu en Egypte') shows clearly that the deification of the great conqueror was carried through completely in accordance with the forms of the Pharaohs, in spite of the mistaken statements of Greek authors, who were ill-informed as to Egyptian procedure.

The consultation of statues by signs and oracles being entrusted to the priest in charge of the ordinary priestly functions led, of necessity, to the suppressing of professional soothsayers and seers filled with religious frenzy, divinatory ecstasy, etc. There was not even a set of officials whose duty it was to interpret dreams; this function was entrusted by the Pharaoh to some of his chaplains or secretaries. Finally, we know of no regular body of individuals charged with the execution of the rules of mantics as applied to time and space (cf. art. STARS [Egyp.], for a partial exception to this). It is true, of course, that innumerable trifling cases of divination in daily life engaged the attention of all classes, from the man in the street to the king himself. But these were dealt with directly, by individual

intelligence, by an answer obtained from a book of magic, or by explanations sought from some private person celebrated for knowledge and sagacity—this last word being understood in its narrowest sense of a high degree of skill in magical studies. This practice of private divination (which must be carefully kept distinct from official divination) seems to have been of wide occurrence in Egypt in all periods. It presents cases of an infinite variety of application, but these will be more appropriately discussed under MAGIC (Egypt.).

LITERATURE.—There is no monograph on the subject. A good number of testimonies of classical authors, almost entirely neglected in Egyptological works, are gathered together in J. G. Wilkinson, *Manners and Customs*, ed. 1878, ff. 462-464, where, however, the actual facts are not stated from Egypt itself. An isolated branch—the study of prophetic statues—is treated by G. Maspero, in a great many publications (see esp. *RHR* xv. [1889] 159, 188; *RTr* I. [1882] 152; *JD*, 21st Dec. 1898 (speaking statues); *Guide au Musée de Boulaq*, Paris, 1888, pp. 69, 336; *Études de Myth. et d'Archéol.* iii. [1901] 156, 220; *Annuaire de l'École des Hautes Études*, 1897). A short account is given in A. Erman, *Agypt. Religion*², Berlin, 1906, p. 186. The rest of the important documents and articles on the subject have been mentioned in the article.

GEORGE FOUCART.

DIVINATION (Greek).—Of the beliefs with regard to divination held by the Hellenes at the time of their arrival in Greece we have no knowledge. That they practised it is highly likely; and it is inconceivable that the inhabitants of Knossos, Tiryns, Mycenae, and the other centres of pre-historic culture had no belief in it; but definite information is entirely wanting. The most we can say is that certain ancient oracles very possibly date from pre-Hellenic times. We begin therefore with the feudal period of Greek history (i.e. 1200 B.C.), of whose culture we know something from Homer.

1. In Homer.—Here we find for the most part 'independent diviners' (*divins libres*, to adopt Bouché-Leclercq's convenient terminology). The oracular shrines, so famous in later ages, are scarcely mentioned at all. One instance occurs of a private consultation at Dodona,¹ and Achilles mentions the wealth of the shrine at Delphi;² but no important oracles are mentioned as emanating from either. Agamemnon, for example, does not appear to have consulted any one but the seer Kalchas with regard to the Trojan war. The famous portent of the serpent and the nest of swallows is interpreted by him, and Odysseus bids the discouraged army 'wait awhile and see whether Kalchas prophesieth aright or not.'³ So far, then, as divination is official and professional, it is the individual seer (*μάντις*, *οἰωνοδόλος*) and not any sort of priestly corporation, that we have to deal with. The *μάντις* is not, as a rule, an inspired prophet, but rather a craftsman (*δημιουργός*), classed with leeches and carpenters in a famous verse of the *Odyssey* (xvii. 384, *μάντιν, ἢ ἱγίηρα κακῶν ἢ τέκτονα δοῦρῶν*). He practises seer-craft, *μαντοσύνη*, the later *μαντική* (*τέχνη*), as a doctor practises physic, and by the favour of the gods⁴ he has more skill in it than ordinary men. But any one can interpret an omen on occasion, just as Patroklos, who is not a regular physician, on occasion heals the wounded Eurypylos. Of anything like possession or prophetic vision, apart from the interpretation of omens, we hear very little. The most famous instance is the 'second-sight' of Theoklymenos (*Od.* xx. 351 ff.), who suddenly sees the hall filled with the ghosts of the wooers of Penelope. The typical Homeric method of foretelling the future is by the actions and cries

of omen-birds (*οἰωνοί*),¹ or sometimes of other animals, or by portents (*τέρας*).

The former of these (*ορνιθομαντεία*, *οἰωνοσκοπία*) was always of more or less importance in Greece, although it never attained the imposing dimensions of Etruscan augury. In Homer, the omen-bird is generally an eagle, and always sent by Zeus, Apollo, or Athene.² Its actions are symbolical, and need no complicated augury for their interpretation. A characteristically transparent allegory is that given by the eagle in *Il.* xii. 200 ff.:

'For a bird appeared unto them as they strove to cross, even an eagle of high flight, upon the left, staying the folk; he bore a monstrous red serpent in his talons, alive still and breathing, that was not yet forgetful of strife, for it struck at the bird that held it upon the breast by the neck, writhing back. And the eagle dropped it from him to the earth, galled by the pain, and flung it down into the midst of the throng, and himself flew with a scream on the breath of the wind. And the Trojans shuddered when they saw the writhing snake lying in the midst of them, a portent of Zeus, the ægis-bearer.'

Here the eagle represents the Trojans, the snake the Greeks, and the discomfiture of the eagle indicates the result of the contest. That it is meant as an omen is shown by the species of bird—not all birds are ominous³—and by the unusual nature of the occurrence—it is called a portent (*τέρας*). It is seen on the left, i.e. the west, the quarter of darkness,⁴ and so must be unlucky. A much simpler omen encourages Odysseus and Diomedes:⁵

'Unto them Pallas Athene sent a heron, on the right, near their path; they saw it not with their eyes through the murky night, but they heard its cry. And Odysseus rejoiced at that omen (*ὄρνις*), and made prayer to Athene.'

In neither of these cases is the diviner strictly a professional. Polydamas, who interprets the first omen, is renowned as an augur, but he is present at the battle simply as a warrior, and only incidentally interprets omens and advises Hector. Odysseus is a favourite of Athene, but has nothing of the priest or wizard about him. The method of interpretation is of the simplest in these and all other cases in Homer; and Hector, who is by no means impious, is frankly contemptuous about the adverse sign.

Portents, strictly speaking,—i.e. ominous events of a miraculous nature,—are not very common in Homer. One has already been mentioned in passing. The omen of the serpent, interpreted by Kalchas, ends by the creature being turned into stone; but no one seems to deduce anything from this. The word *τέρας*, indeed, is used to mean any sign⁶ from a god, whether miraculous or not, or any wonderful thing, like the ægis, which apparently Eris carries in *Il.* xi. 4. In any case, it is definitely from a god that the sign always comes; and this applies to the other forms of divination mentioned below. Of familiar spirits, animals which give signs of their own accord, and the like, we hear nothing in Homer.

Besides augury and portents, the most important omens are *dreams*. These are almost always definitely sent by a god, and usually speak in plain language. Generally also they are true, an exception being the 'baneful dream' sent by Zeus to deceive Agamemnon.⁷ Usually the vision takes the form of a man or woman known to the sleeper

¹ Strictly, *ὄρνις* is 'a bird, in general,' *οἰωνός*, 'an omen-bird'; but the distinction is often neglected. *οἰωνός* also means an omen given by a bird, hence an omen in general; and *ὄρνις* was used in this sense.

² See Amels on *Od.* x. 274. For the association of these three deities, of the repeated line *αὖ γὰρ, Ζεῦ τε πάτερ καὶ Ἀθηναίῃ καὶ Ἀπόλλωνι*. The eagle is 'most perfect' (i.e. most thoroughly ominous) of winged fowl (*Il.* vii. 247, xxiv. 816).

³ *Od.* ii. 182. ⁴ *Il.* xii. 239 f. ⁵ *Il.* x. 274 ff.

⁶ Called in general *σημα*. A falling star is called *τέρας* (*Il.* iv. 76). The stock reared of later times, a monstrous birth, or a birth from a mule (see, e.g., Plato, *Cratylus*, 393 B), does not occur in Homer.

⁷ *Il.* ii. 5 f. Zeus is, it would appear, the normal sender of dreams (ib. i. 63); and we hear of no other god who, so to speak, keeps dreams ready-made. The others appear themselves in sleep, or make and send phantoms.

¹ *Od.* xiv. 327; cf. xix. 296. ² *Il.* ix. 404. ³ *Il.* ii. 299 f.

⁴ *Il.* i. 72. Plato, following the recognized classification, divides divination into *μαντική* *ἐνθεός* and *τῶν ἐμφάνων ζήτησις* *τοῦ μᾶλλοντος* (*Phaedrus*, 244 B-C). The former is absent from Homer, practically, and has been ascribed (wrongly, we think) to the influence of Dionysos, by Bouché-Leclercq and others.

(in this case, Nestor). However, the clear, non-allegorical language is not invariable, and there exists a class of dream-interpreters (*ὄνειροποδοί*), but, we may safely assume, no masters of any complicated and wide-reaching science like that taught in later days by such men as Artemidoros. Part of their craft, it would seem, consisted in telling true dreams from false ones; so we gather from the apologue of the gates of horn and of ivory, in the speech of Penelope to Odysseus (*Od.* xix. 560). According to the geography of *Od.* xi., the 'folk of dreams' (*ὄμηρος ὄνειρων*) occupy a position beyond Ocean and near Hades; but such ideas have at least as much poetic fancy as genuine popular belief in them. What is important for our purposes to observe is that Penelope's dream is of the kind we have elsewhere noticed¹ as the simplest form of allegorical dream—a vision of an ominous happening. Incubation (see below) is unknown in Homer. One unusual example of a dream, or vision, not divinely sent, remains to be noted. As Achilles sleeps, the spirit of his dead and unburied friend appears to him (*Il.* xxiii. 62 ff.) to beg for speedy release from his homeless condition. But everything about this scene, including the *revenant*, is unusual, and even inconsistent with normal Homeric beliefs.

The occasional appearances of deities, who speak face to face with favoured heroes (Athenes with Achilles and Odysseus, Hermes with Priam, etc.), are foreign to our purpose; but we may note, in passing, the peculiar occurrence which later Greece called *φήμη*, Homer *ὁμφή* or *ὄσσα*—the rumour which, coming from no one knows where, spreads through a crowd. This the Greeks always recognized as heaven-sent. We mention it to introduce a similar idea, found both in Homer and in later writers, namely, that the Divine will may be made known by means of the casual words of a mortal (*καλῶδών*). Of this we have a noteworthy example in *Od.* xx. 98 ff. Odysseus, about to take vengeance on the wooers, prays for Divine encouragement; a thunder-clap answers him, and is followed by a few words from a tired maid-servant, who curses the wooers for keeping her up all night to grind corn for their feasts. Later ritual developed and systematized this method at the oracular shrine of Hermes Agoraios in Pharaï.² The consultant whispered his question into the god's ear, then stopped his own ears, went out, and, when he got beyond the market-place, listened for chance words from passers-by. These were construed into an answer. This form of divination (*cleidonomancy*) remained popular at all periods. It appears in various forms, such as the puns on names (*Ἑλένα*—*ἐλέανος*, *ἑλάρδος*, *ἐλέττολις*, in the *Agamemnon*, 686 f.), and seems to have had this great advantage, that one could either accept (*δέχεσθαι*) or disregard an omen of this kind.³

Allied to *cleidonomancy* is the omen from *sneezing* (*Od.* xvii. 541 ff.)—one of the large class of omens from involuntary human actions (*παλμοί*), elaborated in later times into a complicated system. In the Homeric instance, Telemachos' violent sneeze simply indicates Divine approval of Penelope's words. This idea lingers on to-day in Greece. If a sneeze is heard after any one has spoken, the sneezer is not only given the customary 'Good health to you!', but the words *καὶ ἀλήθεια λέει*, 'and he (the last speaker) tells truth,' are added.

Necromancy proper—the evoking of a ghost or ghosts—is not found in Homer. The nearest approach, besides the appearance of Patroklos' spirit, is in the vision of Odysseus to Hades (*Od.*

xi.). Here the ghosts are certainly approached with regular necromantic rites, blood-offerings and the like, and the whole passage suggests something other than the normal Homeric idea of the dead as 'strengthless.' It may well be that, while the Achaean lords were not ghost-worshippers, their subjects were,⁴ and that this bit of ritual has percolated up from lower levels of society. But even here the ghosts are not raised from their graves or called into the upper world; nor have they any prophetic powers, except Teiresias, who, by special grace, retains his old seer-craft or something like it. The only approach to the usual idea of a dead man's powers of divination is the foresight shown by some dying men, e.g. Hector.⁵

Such are the main forms of Homeric divination, to which Hesiod makes no addition, for his weather signs are simply crude meteorology, with nothing of magic about them.

2. Historic period.—We now pass to the historic period, which we may roughly divide into (1) the time of Greek development and political importance (8th to 4th cent. B.C.—First Olympiad to the death of Alexander), and (2) the decadence (from the 4th cent. onwards).

(1) *The period of political importance.*—In this period, besides the Homeric methods, several new forms of divination were introduced, which will be briefly discussed in their proper place; but the chief feature of it was the immense importance of the oracular shrines, and particularly of three—those of Zeus at Dodona, of Apollo at Delphi, and, later, of Zeus Ammon. The first of these is undoubtedly of great antiquity.⁶ Homer⁷ mentions its priestly tribe or caste, the *Σελλοί* 'of unwashed feet, sleepers on the ground'; and the way in which the oracles were given—by the sounds made by the sacred oak—suggests an ancient tree-worship, older than the cult of Zeus as we know it, and very possibly practised before the god was heard of. It remained respectable, though overshadowed by Delphi, until quite late times.

But the greatest of all oracles was the Delphic or Pythian. From very early times an oracle of some sort appears to have existed in this lonely and exquisitely beautiful place,⁸ and, if we may trust the legends, it was held by Ge-Themis possibly in conjunction with Poseidon. Inspiration was given by some sort of vapour rising from a cleft in the ground;⁹ this is so well established by ancient evidence that we cannot doubt it, although modern researches have shown that no large chasm existed—in fact, thanks to the French excavators, any one can now see that for himself. But, whatever it was, it was enough to serve as evidence of the presence of a chthonian power, and it was held to inspire prophecies—possibly by means of dream-visions, the characteristic form of earth oracles. To this old and well-established shrine there came, at some period of which we have no definite knowledge, a Northern tribe,¹⁰ who worshipped Apollo. Despite the non-chthonian character of this god, Delphi became Apolline henceforward. Under the management of the 'Holy Ones' ('*Οἱ ἅγιοι*'), it became the most important oracular shrine in Greece, and to some extent the official head-centre of Hellenic religion.

¹ For a discussion of the whole question, see Rohde, *Psyche*,⁴ Tübingen, 1907, vol. I. ch. I.

² See Divination (Introductory), § 6, 'Necromancy.'

³ See Farnell, *OGS* I. 33 ff.; Bouché-Leclercq, II. 277 ff.

⁴ *Il.* xvi. 233 ff.

⁵ See Farnell, IV. 180 ff., for an excellent discussion; but in our opinion he underestimates the part played by the natural advantages of the spot. The Greeks were extraordinarily sensitive to beautiful scenery, though not given to sentimentalizing about it.

⁶ Cf. Plutarch, *de Defect. Orac.* 43.

⁷ Oreste also had a traditional connexion with Delphi; see *Hom. Hym. Apoll.* 388; *Paus.* x. vi. 7; *Pind. Pyth.* v. 52. A lion's head in Knossian style has been found at Delphi.

¹ See DIVINATION (Introductory), § 1, 'Dreams.'

² Bouché-Leclercq, II. 399; Pausanias, VII. xxii. 3-4.

³ Cf. *Æsch. Agam.* 1652 f.

ΑΙ. . . οὐκ ἀνάσσειν θανέν.

ΧΘ. δαχόμενοι λεγέιν θανέν σοι.

Several methods of divination were employed at one time or another, such as the *μαντικά ψήφοι*, which appear to have resembled the Zulu divining-sticks; but the usual procedure was by possession (*μαντική ἐνθεός*). The Pythia or prophetess, after a draught of water from the underground spring Kassotis,¹ seated herself upon the tripod in the inner shrine, probably over the cleft, became inspired, and prophesied. The official interpreters (*προφῆται*) then reported her utterances, normally in hexameters.² The opportunity this gave for very liberal 'recension' of the inspired and probably quite unintelligible words of the Pythia is obvious; still, all oracles were supposed to come through her direct, as is shown by the common phrase *ἡ Πυθία χράε*. The theory was briefly this: Zeus was omniscient, and Apollo was his favourite son and his confidant. Apollo, therefore, from time to time³ made known his father's will or foreknowledge to such mortals as chose to consult him after due purification and sacrifice, employing as his medium the Pythia, who,⁴ possessed much as a shaman is possessed (*plena deo*, in Vergil's phrase), spoke not her own words but those of the god. How much of all this the 'Holy Ones' believed, we cannot say; certainly the oracle had immense influence,⁵ especially in religious matters, where it was, on the whole, conservative, except for its advocacy of Dionysiac worship and of hero-cults. In political matters it usually avoided any decided position, though it was philo-Spartan in the Peloponnesian war; and a certain vagueness and ambiguity in all fore-tellings of the future saved the god from the disagreeable position of a false prophet. In one respect, however, Apollo seems really to have acted as a useful information Bureau. Founders of colonies regularly came to him for advice, and that advice was generally good. It may be, however, that here, as in the case of codes of laws supposed to emanate from Delphi (*νόμοι Πυθόχρηστοι*), the god did no more than give his approval to a course already decided upon.

The influence of Delphi, and the lesser influence of other oracles of Apollo (Klaros, Branchidai, etc.), had its effect on legend, as is shown by the persistent torturing of myths about ancient seers into making the latter sons or pupils of Apollo, and inspired prophets rather than augurs. The great bulk of the oracles, and their proverbial obscurity, called into existence a class of interpreters (*ἐξηγηταί*) whose business it was to reveal the god's meaning to the less sharp-witted public. It was recognized that to be a good exegete one must be something of a diviner; and, later on, in the nonage of Greek culture, the collection and interpretation of oracles in the light of a degenerate philosophy occupied such men as Porphyry.

But even Apollo did not extinguish the race of *divins libres*. The craze for knowledge of the future which was very noticeable during the Peloponnesian war produced a demand for oracles which was liberally met by the circulation of the prophecies (*χρησμοί*) of various ancient sages, such as Musaios—among them those of Bakis, of whom Aristophanes makes such delightful sport in the *Knights* and elsewhere. At Athens, especially, prophecies sprang up like mushrooms, and such ominous lines as the famous

ἤξει Δωριакὸς πόλεμος καὶ λοιμὸς ἀπ' αὐτῶ,¹ with its no less terrifying variant λιμός, were in every one's mouth. Soothsayers of all kinds plied a lively trade. Nikias was especially dependent upon them, but no general crossed a river or entered the enemy's country without consulting the *μάντεις* attached to the army.

These official diviners practised an art unknown to Homer, namely, *haruspicy*. Whereas the Homeric heroes simply sacrificed and had done with it, in later Greek rites the victim was required to give a sign (by shaking its head when the libation was poured upon it) that the god accepted it, and the entrails² were inspected for signs of Divine approval or disapproval, especially before a battle. Indeed, there is more than one instance (notably at Plataea) of a general delaying action for a considerable time until at last a victim's entrails gave a favourable omen. *Empyromancy* was also practised, i.e. the observation of the fire consuming the sacrificial flesh. If it burned low or went out, it was a bad sign, and so on. This was not restricted to altar-flames. It is hardly too much to say that everything capable of being affected by a moderate-sized fire was scrutinized for signs at one period or another.³ But most of these curious methods and most of the countless other forms of divination, of which we have no room even to give a list, were relatively unimportant, formed no part of any State religion, and were only here and there adopted by oracles. Haruspicy was the normal official method, and in important matters an oracle was consulted.

Dreams, however, deserve separate mention. The recognized medium of chthonian oracles,⁴ they were opposed by the Apolline cult, but found a footing in the worship of medicinal heroes, especially Asklepios. The cult of heroes, indeed, grew very important at this period,⁵ and Asklepios was particularly popular. His shrine at, or rather near, Epidauros—to-day one of the most interesting ruins in Greece—and many lesser shrines at Athens and elsewhere, healed the sick by means of incubation (*ἐγκοιμῆσι*, *ἐγκλισίαι*). The patient, after preliminary rites, slept in the temple, and in a dream was tended or advised—generally the latter—by Asklepios.⁶ Here, of course, the medical knowledge of the priests (*Ἀσκληπιάδαι*) came into play. That it was considerable is clear, both from a number of votive offerings describing treatments which, even by modern standards, are quite scientific, and also from the rise of the Asklepiads of Kos to well-earned renown, especially in the person of their greatest member, Hippokrates. But, even apart from this, and despite the vogue of Delphi, several heroes, notably Trophonios of Lebadeia, gave oracles by dreams or visions.

Finally, as illustrating the extent to which divination at this time became a regular profession, despite the theoretical importance of individual inspiration, mention should be made of the great prophetic families—the Iamidae of Elis and the Melampodidae of Akarnania being the most famous.⁷ Alongside of these families (or gilds)⁸ of professional diviners, we begin to hear of that curious figure of later mythology, the Sibyl.

(2) *The decadence*.—In this period we have to notice, firstly, the weakening of the Greek genius,

¹ See Farnell, iv. 188. The prophetic virtues of water from sacred springs were widely recognized.

² Other metres, and even prose, were used later; see Plut. *de Pythiæ Oraculis*.

³ The Oracle could be consulted only at certain seasons (*τερόμεναι*) and on certain days.

⁴ This was a regular Apolline method, e.g. at his ancient cave-shrine at Hyal in the Mæander.

⁵ The more so as most gods had either no oracles or none of any importance. Hence we find Apollo consulted, for example, on a question affecting the worship of Demeter at Eleusis.

¹ Thuc. ii. 54.

² Especially the liver (hepatoscopy). See, for one example of many, Plut. *Vita Arati*, ch. xliii. Cf. DIVINATION (Assyr.-Bab.).

³ See Bouché-Leclercq, vol. I., for a full treatment of this and other forms of divination, such as lecanomancy.

⁴ Cf. Eur. *Iph. Taur.* 1259f.

⁵ It was, as we have seen, favoured by Delphi, so long as the monopoly of prophecy was not infringed.

⁶ See Aristoph. *Plutus*, for a farcical description.

⁷ Bouché-Leclercq, ii. 62ff.

⁸ The patronymic termination often connotes no more than this; cf. *Ομηρίδας*, *Ἀσκληπιάδαι*.

and the consequent influence of foreign cults; secondly, the part played by philosophy in regard to the belief in divination; and, finally, the degeneration of the great national cults, and the consequent downfall of the official divination—oracular and otherwise—which formed part of them.

Of the foreign ideas which came in with the backwash from Alexander's conquests, the most noteworthy was the Chaldaeo-Egyptian belief in astrology.¹ Somewhat modified by Greek ideas, it pervaded the whole of Western thought, and became the principal form of divination. This is not the place to go into details as to the methods employed, but a few salient points may be noted. Firstly, it was almost wholly novel. The idea of taking omens from the heavenly bodies or from such phenomena as lightning and shooting stars is old enough in Greece, but no elaborate system, and no idea of anything like planetary influences, had ever existed. This was the product of the sideral cults of the East; it is a remarkable fact that the Greeks hardly worshipped the heavenly bodies at all.² Astrology—this is another noticeable fact—aided the late tendency to syncretism. Thus, joined with the popularity of the Eastern sun-gods, it helped to identify Apollo with Helios; Artemis was confounded with Selene; the ram-horned (and doubtfully Hellenic) Zeus Ammon with the sign Aries, and so on. Thirdly, astrology invaded all branches of divination to such an extent, that we find haruspices, palmists, etc., using terms borrowed from it, and tracing the influence of the stars in the formation of beasts' entrails and the like.

Philosophers of the decadence and of the period immediately preceding it (that in which Plato and Aristotle lived and wrote) were, on the whole, favourable to divination. Plato, at heart a mystic, while outspokenly contemptuous of the disreputable vendors of indulgences and oracles, was by no means adverse to beliefs in the supernatural, and, in fact, seems to have held that divination was not only possible, but a reality;³ and his late followers, the Neo-Platonists, who constructed an elaborate system of *dyalpeores* on the basis of the *Timæus*, found therein a full and satisfactory explanation of oracles. Epicurus, indeed, whose system denied Providence and Divine interest or interference in human affairs, was hostile to the pretensions of diviners; but the Stoics passionately championed astrology, as evidence of their doctrine of Fate.⁴ The degenerate and mongrel system, which goes by the name of Neo-Pythagoreanism, was freely credulous of all marvels, divination included, and produced its own inspired prophet, Apollonius of Tyana (*q.v.*).

Under pressure of foreign cults, including finally Mithraism and Christianity, the ancient State religions of Greece became gradually weaker; and this inevitably entailed a decline in the importance of the oracles, and of official diviners. Individualism also was rampant, as is shown by the popularity of the post-Aristotelian philosophies; and this meant that divination became more and more of a private affair. While it is wholly untrue that the oracles ceased at the coming of Christ,⁵ it is a fact that by about 100 A.D. they were no longer of great importance;⁶ indeed, quite

apart from other causes, the political insignificance of Greece meant, sooner or later, the insignificance of her great religious institutions. Finally, Christian opposition for the most part stamped out pagan divination.

There were, however, survivals. Astrology lingered on despite theological denunciations—political opposition it had already endured for centuries—and still survives. Oneiromancy, which had grown into a most complicated science, still retained a considerable hold on popular belief. Finally, the prophecies of the Sibyl or Sibyls—the number and names vary⁷—being in later times of Judæo-Christian origin, were hospitably received and ranked almost equal with the Hebrew prophets. 'The old man is Sibyl-mad,' says Aristophanes' slave of his master Demos; and in the Middle Ages her name was still held in reverence; 'Teste David cum Sibylla.'

LITERATURE.—A. Bouché-Leclercq, *Hist. de la divination dans l'antiquité*, vols. i-iii., Paris, 1879-1880; L. R. Farnell, *Cults of the Greek States*, Oxford, 1896 ff., esp. vol. i. (Zeus) and vol. iv. (Apollo). The former work gives a full bibliography of earlier writings.

H. J. ROSE.

DIVINATION (Indian).—In India, divination has gone through two phases of development. Originally it seems to have been practised chiefly with the intention of obviating the evil consequences of omens and portents; in the later period, rather to ascertain the exact nature of the good or evil which those signs were supposed to indicate. Both phases presuppose the firm belief in omens and portents, which appears to be a common feature of primitive culture. In India this belief can be traced back to the Vedic Samhitas; birds are invoked to be auspicious, and certain birds, especially pigeons and owls, are said to be messengers of death (Nirrti, Yama).² A great many details are furnished by later Vedic books, especially the *Adbhuta Brāhmaṇa*, which forms the last chapter of the *Saṁvimsa Brāhmaṇa* of the Sāmaveda, and the 13th chapter of the *Kaushika Sūtra* of the Atharvaveda.³ The subjects treated in the 12 paragraphs of the *Adbhuta Brāhmaṇa* are, according to Weber's⁴ enumeration: common incidents, diseases of men and cattle, agricultural calamities, loss of ornaments, earthquakes, phenomena in the air and the sky, miraculous happenings to altars and idols, electrical phenomena, monsters; in each case the god is named to whose province the particular incident belongs, and the *mantra*, or the ceremony for the expiation of the evil sign, is prescribed. The second treatise is similar to the first; but it differs from it in this, that in it the omens and portents are more specialized and more varied, and that the Brāhmaṇa who is to prescribe the remedy for them must belong to the Atharvaveda. The last point need not surprise us, for that Veda was largely engaged with occasional and optional practices, with charms and spells; hence the house-priest (*purohita*) of the king, who had to ward off the evil influences which menaced king and country, was required to be deeply versed in the secret lore of the Atharvaveda. Therefore all that refers to mantic and magic was naturally believed to come within the province of that Veda. The last contribution to it is the 72 *Parīśiṣṭas* (appendixes or paralipomena),⁵ treatises on different subjects connected with the Atharvaveda. Some of them are of comparatively late age, since they betray an acquaintance with Greek astronomy. About a third part of this

¹ Bouché-Leclercq, ii. ch. vi.; cf. art. STARS (Greek).

² Even the sun is unimportant, as is indicated by the extreme rarity of names such as *Heliodoros* or *Heliades* before the 3rd cent. A.D. The attempts made to identify any of the leading Hellenic deities (save Zeus, who is vaguely a sky-god) with celestial phenomena are without exception unsatisfactory.

³ Socrates had certainly been of that opinion before him.

⁴ *E.g.* Manilius, iv. 14 f.

⁵ The tale is an invention of Christian apologists, who considered oracles the work of evil spirits. Archaeological evidence alone is quite conclusive against it.

⁵ The *Parīśiṣṭas* of the Atharvaveda, ed. G. Melville Bolling and Julius von Negelein, Leipzig, 1909-10.

work deals with prognostics, especially from phenomena in the atmosphere and the heavens. Here we find divination in its later development, i.e. with the object of predicting future events. But the expiatory ceremonies and *mantras*, so characteristic of the preceding period, continued to be looked upon as important matter; thus the 67th *Parīṣiṣṭa*, called *Adbhūtasānti*, is, on the whole, a metrical paraphrase of part of the *Adbhūta Brāhmaṇa* mentioned above.

The art of divination with which we have dealt as yet was part of the religion, especially of the Atharva priest, who was the orthodox soothsayer. There were probably already in early times soothsayers and fortune-tellers of no religious character (*naimitika*, *mauhūrtika*,¹ *sāmudrika*) who made single branches of prognostics their speciality. But the whole art of divination became independent of religion when Greek astronomy and astrology were introduced into India in the early centuries of our era. The astrologer possessed what was believed to be a real science of prediction, the accuracy of which was uncontestedly proved in one branch of his science—the astronomical—and was, therefore, readily believed in in the other—the astrological one. For astronomy and astrology were in India, as indeed also in Europe till quite recently, but two branches of one science. And the Indian astrologer added to these two branches a third—the art of divination, hitherto practised by the Atharva priest. We shall call the latter natural astrology, in contradistinction to judicial astrology adopted from the Greeks. An accomplished astrologer or astronomer (*jyotiṣa*) had to know astronomy, judicial astrology (*horā*), and natural astrology.² Judicial astrology is subdivided into (1) nativity (*jātaka*); (2) prognostics for journeys, especially marches of princes in war (*yātrā*); and (3) horoscopy for weddings (*vivāha*). Natural astrology is treated in works which are called *Samhitā*. The best known *Samhitā* is the *Brhat Samhitā* of Varāha Mihira, written about the middle of the 6th cent. A.D., on which an extensive and very valuable commentary was composed by Bhāttotpala in the 9th century.³ The contents of the *Brhat Samhitā* may serve as a summary of the original Indian art of divination—of course, in its last stage of development. We therefore transcribe Varāha Mihira's enumeration of them (ii. 5, tr. H. Kern, *JRAS*, 1869):

'The course of the sun and of the other eight planets, and, during it, their natural and unnatural symptoms, their size, colour, and brightness of the rays, their shape, risings and settings, their roads and deviations, their retrograde and post-retrograde motions, the conjunctions of planets with asterisms, etc., as well as the respective consequences for the different parts of the globe; the course of Canopus, the course of the Seven Seers (Great Bear), the division of things as belonging to the domain of each planet, the same as appertaining to the domain of each asterism, the conjunction of the five planets in the figure of a triangle, etc., the planetary war, the conjunction of the five planets with the moon, the effects produced by the planets on the years presided over by them, the symptoms of pregnancy of the clouds, the conjunction of the moon with Rohini, with Svāti, with Aśādhā; the forebodings of instant rain, the conclusions to be drawn from the growth of flowers and plants as to the produce of trees and crops, the mock-sun, the halo, the cloudy line piercing the sun's disk at rising or setting, the wind, the meteors, the glow of the sky, the earthquake, the glowing red of twilight, the Fata Morgana, the dust rain, the typhoon, the cheapness or dearth of the products of the earth, the prognostics for the growth of corn, the banner of Indra, the rainbow, architecture, palmistry, the auspicious or ill-lucky movements of crows, the augural circle, the movements of wild beasts, of horses, the circle of winds, the good or bad signs of temples, of statues, the consecration of statues, the treatment of trees, the observation of the

soil for finding veins of water, the lustration, the sight of wagtails, the alaying the influence of portents, miscellaneous matters, the anointment of a king; the signs of swords, of ornamental goldplates, of cocks, of tortoises, of cows, of goats, of horses, of elephants, of men, of women; reflections on woman-kind; the prognostics of bolis, of shoes, of torn garments, of chowries, of umbrella-sticks, of couches and seats, the examination of jewels, the foretokens at a lamp, the good or bad signs of tooth-sticks, etc., such as occur in common life to everybody as well as to kings,—all these things have every moment to be considered by an astrologer with undivided attention.'

As the astrologer had thus appropriated all prognostics to himself that had belonged to the Atharva priest, he became the successful rival of the latter. This change must have set in during the 2nd or 3rd cent. A.D.; for Garga, an early predecessor of Varāha Mihira, had proclaimed:

'The king who does not honour a scholar accomplished in horoscopy and astronomy, clever in all branches and accessories, comes to grief.'—As the night without a light, as the sky without the sun, so is a king without an astrologer; like a blind man he erreth on the road' (ib. ii. 7. 9).

It is beyond the scope of the present article to enter into details about judicial astrology as taught by the Hindus; but it must be noticed that they have also adopted Muhammadan astrology, and treated it, under the name *tājika*, as distinct from the Greek astrology, or *jātaka*.

There are several branches of prognostics which seem early to have been cultivated by specialists, and in some degree to have become independent disciplines. To this category belonged the interpretation of dreams. The belief in the significance of dreams is already found in the *Rigveda* (viii. 47, 14 ff.); dreams indicating death are enumerated in the *Āitareya Aranyaka*, iii. 2, 4; the expiation of evil dreams is treated in *Kaṣika Sūtra*, xli. 9 ff., and in the *Gṛhya Sūtras*. The 68th *Parīṣiṣṭa* of the Atharvaveda, called *Śvapnādhyāya*, deals with oneiromancy, and so do several Purāṇas in a chapter bearing the same name, and some separate works (see, further, art. DREAMS [Vedic]).¹ Interpreters of dreams, their dream-book, and its contents are frequently mentioned by the Jains.² Another important branch of prognostics is the interpretation of the marks of the body, including palmistry and physiognomy. It is an ancient discipline, for it is a tenet of the Buddhists that Buddha possessed the 32 lucky marks (*mahāpuruṣa-lakṣaṇa*) and the 80 minor marks. The art of interpreting bodily marks is called *sāmudrika*, and several works treating of it are extant; those who practise it are also called *sāmudrika*. Angry proper (*śākuna*) is, as we saw above, a very old branch of divination; it has been developed in the course of time. A very full dissertation on this subject is given by Eugen Hultzsch, *Prolegomena zu des Vasantarāja's Śākuna*, Leipzig, 1879.³ Finally, it may be mentioned that sortilege was also practised in India; a specimen of this kind of divination is published by A. Weber, 'Über ein indisches Würfel-Orakel' (*MBW*, 1859).

The Jains also practised the art of divination. According to them, it had eight branches (*aṣṭaṅga-mahānimitta* [*Kalpasūtra*, i. § 64]), which are specified in the commentary to the passage in question: *divya*, *utpāta*, *āntarika*, *bhauṃa*, *aṅga*, *svara*, *lakṣaṇa*, and *vyākṣaṇa*; in another enumeration the same names are given, only that *śvapna* is added, and *divya* is omitted. As far as can be judged from this division, the Jain system of prognostics must, on the whole, have been similar to that of the Hindus in general.

LITERATURE.—Besides the works quoted in the course of the article, see A. Hillebrandt, 'Ritualliteratur,' *GIAP*, Strassburg, 1897, p. 182, and the literature quoted there, p. 184 f.

HERMANN JACOBI.

¹ The *mauhūrtika* is the predecessor of the astrologer proper. Chāpākya, who wrote about 300 a.c., mentions the *mauhūrtika* (*Kautilīyam*, Mysore, 1909, p. 38), while Kāmandaki, a late adherent of Kaṭilya's school, speaks of *Horā-gaṇita-tattvavid* (*The Nṛsiṅga*, by Kāmandaki, Calcutta, 1884, iv. 38).

DIVINATION (Japanese).—1. Definition.—The Japanese for 'divination' is *ura* or *uranahi*. If we consult the 'Vocabulary of the most ancient Words of the Japanese Language' (*TASS*, vol. xvi. pt. 3, p. 280), we find that, according to B. H. Chamberlain, the old word *ura* signifies: 'the back or hind part of anything, inside, the reverse; hence the heart, the mind, divination of things unseen, soothsaying.' The primitive meaning is clearly seen in present-day phrases: e.g. *te no ura* means the palm of the hand; *kimono no ura*, the inside of a coat; *ura no ie*, a back-house. From this we see that, for the Japanese, the idea of divination does not necessarily involve a prediction, but only the discovery of something hidden—present, past, or future. It may be employed not only to find out whether such and such an event will occur in the future, whether it will be lucky or the opposite, etc., but also to reveal the present will of the gods on such and such a point, and even to discover why a certain event—generally an untoward one—has occurred in the past.

2. Objects.—To get a good idea of the various objects of divination, we have only to look through the ancient Shintō documents, beginning with the *Kojiki*. Even in the very first pages of the sacred story we find divination playing a part in the life of the primitive couple: Izanagi and Izanami have produced badly-formed children; the cause is discovered by divination, viz. that in the marriage ceremony the woman had spoken first (see *Kojiki*, tr. B. H. Chamberlain, p. 22). An eclipse of the sun takes place; the gods have recourse to various magical processes in order to stop it, and among these is divination—employed, no doubt, to discover the will of the Sun-goddess (ib. 64). At a later period, one of the first emperors, Suinin, who had a son afflicted with dumbness, learns in a dream that his child will be able to speak if a temple is built to a certain god, who does not reveal his name; by a process of divination the sovereign discovers the identity of the god, and removes the curse (ib. 237 f.). Outside of these longer mythological tales, we see divination practised in innumerable other cases, especially in the *Nihongi*. It is employed to foretell the result of a military expedition (see *Nihongi*, tr. W. G. Aston, vol. i. pp. 121, 227, 237); to reveal the cause of plague, rebellion, and other public calamities (i. 152) or private misfortunes (ii. 102); to discover what person is to be entrusted with the cult of a god (i. 153, 177); what offerings must be made to the god (i. 178); whether the Emperor should make sacrifices in person or send a representative (i. 189, 190); why the Emperor's soup almost froze into ice one day (this was due to a case of frost in the court, i. 324); what place should be selected for building a tomb (i. 355) or a palace (ii. 95); what was signified by a mysterious omen (ii. 59, 306). Finally, in addition to these cases officially reported in the ancient chronicles, we find divination constantly invoked in the life of individuals in more humble circumstances—from the maiden seeking to know when she will have a husband and what will be his name, to the person who is anxious to recover a lost possession or to find the track of a thief. In the poems of the *Manyōshū*, which give us a very true and vivid picture of ancient Japanese civilization, divination is employed fairly often in the relations between lovers and married people (see these poems in Satow, 'Ancient Japanese Rituals,' *TASS*, vol. vii. pt. 4, p. 446 ff., and in F. V. Dickinson, *Primitive and Medieval Japanese Texts*, Oxf. 1906, Romanized texts, pp. 125, 142 f., and Translations, pp. 204, 227 f.).

Divination was a regular process in certain essential points of Shintō worship: it was by

divination that the priestess of the Sun was chosen at Ise (see esp. *Nihongi*, i. 176); that, more generally, the ceremonial purity of all those taking any part in religious rites was ascertained; that it was determined, at the great festival of the first-fruits (*Ohonhe*) held at the accession of the Emperors, from which provinces the sacred rice should be brought, what local persons should prepare it, etc. At court, a special divination took place annually, on the 10th of the 12th month, to find out what misfortunes were to be feared for the Emperor in the coming months, and to provide propitiatory measures accordingly.

3. General character.—Aston says (*Shinto*, 338) that, though the art may very probably have 'passed through a non-religious phase,' yet the cases met with in the oldest records are commonly associated, explicitly or implicitly, with an appeal for divine guidance; and he quotes Hirata's definition of divination as 'respectfully inquiring the heart (*ura*) of the gods.' This view seems to exaggerate to a certain extent the religious side of divination at the expense of its magical aspect. In fact, in the most ancient documents, divination appears to be, above all, a mechanical process, the virtue of which resides in the ritual performances rather than in the will of the gods. A clear proof of this lies in the fact that the gods were no wiser than men in obscure affairs, and had themselves to resort to divination for light. As is shown by their name *Kami*, they are 'superior' beings; but their superiority is relative, and they are distinguished from men by a difference, not of nature, but only of degree. Therefore, they are not endowed, in the intellectual order, with the omniscience attributed by more advanced religions to their Deity. They are constantly in perplexity, and require the wisdom of a general assembly to guide them (see *Kojiki*, 63, 112, etc.).

The Counsellor-deity, Omohi-kane, who gives advice on these occasions, does not seem to be quite infallible: when the gods are deliberating on means of 'pacifying' the country which the future Emperor is to rule, Omohi-kane proposes that an ambassador—whom he himself selects—should be sent; the ambassador does not return; Omohi-kane chooses a second, who behaves in the same way as the first; he then finds a third, who is slain; and only after these three unsuccessful attempts does he finally succeed (*Kojiki*, 112 ff.). The gods in their celestial abode do not know what is happening on the earth: when they learn of the death of the third ambassador—the Pheasant—they do so only by means of the arrow that killed him flying to the plains of high heaven and falling bloody at their feet (*Kojiki*, 115). The gods, indeed, have no knowledge of the present, past, and future. Their first ambassador, Ame no ho-hi, made friends with Oho-kuni-nushi, whose submission he was sent to obtain; they do not know this fact. After three years, being uneasy at having received no news, they send Ame-waka-hiko, who straightway marries Shita-teru-hime, the daughter of Oho-kuni-nushi, and then devotes his whole energies to making the conquest for himself; they know nothing of this treason. It is not until eight years afterwards that they decide to send the Pheasant to try to get some news, and they have no more fore-knowledge of the accident of which he is to be the victim than they had of the former events (*Kojiki*, 113 f.). If their knowledge of material facts is thus limited, *a fortiori* they cannot guess what is taking place within hearts: when they curse the murderer of the Pheasant, their formula is conditional, because they do not know what his real intentions may have been (*Kojiki*, 115). It is for this reason—because they cannot penetrate what is hidden—that they have recourse to divination. In the case of the first children of Izanagi and Izanami, mentioned above, we are told that these two deities 'ascended to Heaven and inquired of their Augustesses the Heavenly Deities,' and that then 'the Heavenly Deities found out by the great divination' an answer to their inquiry (*Kojiki*, 22); similarly, in the collymyth we see 'the eight hundred myriad Deities assemble in divine assembly' and 'perform divination.'

This procedure manifestly lowers the gods to the level of men, making one and the same fate hover over all. Primitive Shintō seems to admit, without naming it, a vague impersonal Power, like the *Moirai* of Homer at the time before Zeus was the *Moiragetes*. Later, the Japanese theologians, like the Greek poets, were very much embarrassed by this ancient idea, which flattered

neither the wisdom nor the power of their gods. Was it not strange, for example, that, on being consulted by the first couple, the greatest gods should show themselves unable to reply until they in their turn had appealed to some sort of superior intelligence? Hirata, who is always ingenious, tries to solve the question by comparing them to a prince who has entrusted a particular function to each of his servants, and who, on being asked for information on any point whatever, begs the questioner to apply to the person who is best informed on the subject; but this ulterior excuse of an apologist cannot efface the impression left on us by the texts. In a word, since gods as well as men must have recourse to divination, it is very probable that, in ancient Shintō, divination was an affair of magic far more than of religion.

4. Various forms. — (a) *Official divination*. — Having made this important point clear, we shall now examine the forms of this magical operation. We must distinguish between the official procedure, i.e. the 'Greater Divination,' and other minor proceedings. The 'Greater Divination' consisted in *omoplatoscopy*, a process which is met with not only among the Chinese and other races of the North-East of Asia, but also among certain Western peoples, like the ancient Germans, the Greeks ancient and modern, and even, down to within a recent date, the Highlanders of Scotland (the custom of 'reading the speal'). In primitive Japan, *omoplatoscopy* was practised by flaying the shoulder-blade of a deer over a bright fire and watching the cracks produced upon it by the heat. This was the form of divination resorted to by the gods in the circumstances already mentioned, and we find that it was under the special care of the god Koyane, the legendary ancestor of the Nakatomi, or hereditary corporation of priests representing the Emperor in his sacerdotal functions (see esp. *Kojiki*, 64, and cf. a variant in *Nihongi*, i. 82f., which claims to give the mythical origin of the custom by telling how the god Koyane, at the command of the great god Takami-musubi, 'was made to divine by means of the Greater Divination, and thus to do his service'). Similarly, when we find the Emperor commanding a divination, which is then carried out by the Palace college of diviners, it is the 'Greater Divination' that is meant, though the text simply speaks of 'divination' without further epithet. This practice underwent modification very early by the substitution, in the place of the deer's shoulder-blade, of the tortoise carapace employed by the Chinese. This innovation was undoubtedly facilitated by the fact that the tortoise already held an important place in native Japanese mythology (*Kojiki*, 160; *Nihongi*, i. 113, 182, etc.).

The first reference to it is found in the *Nihongi* (i. 152): the Emperor Sujin, in the year 91 B.C., wishing to discover the cause of various calamities which had laid waste the country, decided 'to commit the matter to the Sacred Tortoise'; but this detail is certainly an anachronism, as indeed is the whole context in which it appears, for we find the Emperor attributing national calamities to his personal faults, in accordance with Chinese theory. As a matter of fact, the substitution must have taken place about the year 553, when some Koreans, of high repute in the art of divination, came to exercise their talents at the Japanese court. The *Nihongi* story shows us, at least, that the tortoise carapace was the usual means of divination at the time of its composition, i.e. in the 8th cent., and the *Engishiki* (10th cent.) mentions no other process in the descriptions of the official cult.

It was only in certain provinces that the deer's shoulder-blade of the primitive mythology continued to be employed. Just as the tortoise carapace was always used, it is said, in the island of Hachijo, where there were no deer or other large quadrupeds, but where the waters abounded in tortoises, the deer's shoulder-blade remained in use, long after the introduction of the Chinese custom, in certain villages; this survival is men-

tioned in old writings even at the end of the 17th cent. (see Satow, *loc. cit.* 453). It can, moreover, be observed even to-day among the Ainu (see N. G. Munro, 'Some Origins and Survivals,' in *TASJ*, vol. xxxviii. pt. 3 [1911], p. 46).

(b) *Secondary forms*. — Of secondary and non-official forms of divination the principal was *tsuji-ura*, or 'cross-roads divination.' We find in the poems of the *Manyōshū* that it was employed chiefly by women and lovers. The persons having recourse to this form of divination went to the cross-roads at dusk (whence the other frequent name of *yufu-ura*, 'evening divination'), planted a stick in the ground, and then took the remarks of the passers-by as an answer to what they wanted to know. In this rite, the stick represents Funado, the staff which Izanagi drove into the sand when leaving Hades, in order to check the pursuit of the infernal deities (just as the American Indians use staffs to drive off the spirits of the dead), and which was afterwards transformed into a phallic god, a powerful preserver of life, granting protection from the diseases sent by the under-world demons, and at the same time filling the rôle of patron of travellers (see Revon, *Le Shintoïsme*, 321). Still another method of *tsuji-ura* was practised by women. They went to the nearest cross-roads, and there repeated the following poetry three times:

<i>Funadosahe</i>	'Of Funadosahe,
<i>Yufuke no kami ni</i>	The god of the evening oracle,
<i>Mono toheba,</i>	When we ask things,
<i>Michi yuku hito no</i>	Ye who go along the way,
<i>Ura masa ni se yo!</i>	Deliver thy oracle truly!

[The first line is explained by the fact that the road-gods, and especially Funado, were regarded as *Sahe no kami*, 'preventive gods,' against disease and demons.]

While repeating these lines, the women drew a line of demarcation on the road and sprinkled rice; for rice, with the mysterious spirit it contains (*uga no mi-tama*), was a powerful agent against evil spirits, as is also seen in the custom of sprinkling it in the hut of a pregnant woman (see *Le Shintoïsme*, 134, 303). After this was done, each of the women, turning towards one of the roads, passed a finger along the teeth of a box-wood comb that she held in her hand, and made it sound three times; this was a means of inviting the god to speak, the word *tsuge* meaning both 'box-wood' and 'inform me.' After this, they listened for the words of the first person who came within the space marked off by the enchanted limits, and drew an answer therefrom. The *tsuji-ura*, in these more or less complete forms, seems to have enjoyed popularity for a long time: it is mentioned in the *Oh-kagami*, 'the Great Mirror,' a famous pseudo-historical work of the 12th cent. (see Satow, 448); and a passage in the dramatist Chikamatsu Monzaemon (Dickins, *op. cit.*, Tr., p. 66) shows how much importance was attached, even so recently as 200 years ago, to the chance words spoken by people met on the street.

Connected with *tsuji-ura* we have *hashi-ura*, 'bridge divination,' in which the same processes were employed, but on a bridge instead of on an ordinary road. We may notice also *ashi-ura*, 'foot divination,' practised, according to a poem of the *Manyōshū*, by a lover before the door of his house along with 'evening divination' (Satow, 447); but our information on this 'foot divination' is not sufficiently accurate, although it comes into one of the most ancient myths, viz. the dance of the god Ho-deri (*Nihongi*, i. 107; and cf. *Le Shintoïsme*, 210). Still another variety is mentioned along with *tsuji-ura* in the *Manyōshū* (Dickins, Tr., p. 66)—*ishi-ura*, or 'stone divination,' which consisted in foretelling the future from the apparent weight of a stone (*ishi-gami*, 'stone-deity') when lifted up. The following is a text

which, if it is not a simple imaginary divination according to the inspiration of the moment, may well contain one of the most ancient applications of this process:

'In the beginning, when the Emperor (Keikō, A.D. 71-130, according to traditional chronology) was about to attack the enemy [the *Tsuchi-gumo*, 'earth-spiders,' f.e. earth-cave-dwellers], he made a station on the great moor of Kashiawo. On this moor there was a stone six feet in length, three feet in breadth, and one foot five inches in thickness. The Emperor prayed, saying: "If we are to succeed in destroying the *Tsuchi-gumo*, when we kick this stone, may we make it mount up like a *kashiha* (oak) leaf." Accordingly he kicked it, upon which, like a *kashiha* leaf, it arose to the Great Void' (*Nihongi*, i. 186).

Other secondary forms of divination presented a local character. In the temple of Kasuga, to which belongs one of the chief rituals of ancient Shintō (*norito* no. 2), and in various other provincial temples, *mi-kayu-ura*, or 'divination by gruel,' was practised. The purpose of this divination was to find out what kinds of vegetables and cereals it would be best to sow for the year. It took place on the 15th of the 1st month, the date of the festival of *Sahe no kami* (see above). A pot was placed before the gods, and in it were boiled some *adzuki* beans (*Phaseolus radiatus*)—a little red bean whose colour served to suggest the idea of health, of victory over the demons of disease (people who visit Japan may see this used even to-day to colour sacred rice—the rice, e.g., offered on the domestic altar at the annual Feast of Ancestors). When this gruel was cooked, 54 tubes of reed or bamboo were plunged into it, each bearing the name of one of the vegetables it was proposed to cultivate; next, the priests withdrew the tubes with chopsticks, and derived prognostics as to the good or bad crops to be borne by each particular kind of grain from the manner in which the grains of rice, mixed with the bean-gruel, went into the tubes. The peasants then sowed their seed according to these indications. An analogous, but less important, process consisted in arranging beans round the hearth very near the fire, and drawing omens from the manner in which they turned black or remained untouched (Satow, 418; Aston, 342). *Koto-ura*, or 'harp divination,' was another local form. It was employed at Ise to make sure of the purity of the priests taking part in the three great annual ceremonies, as also of the tables, vessels, and other objects employed to present offerings. The night before the ceremony, at midnight, a priest stood with a harp at one of the outer doors of the temple. Turning towards the temple, he prayed the Sun-goddess to give light on the point requiring elucidation. Then he struck the harp three times, each time uttering a loud 'Hush,' after which he asked all the gods to come down from the heavens to answer his question, pronouncing the following three-fold poetic formula:

Ah! ya!	Ah! ah!
Asobi ha su to mauseanu;	We do not merely amuse ourselves;
Asakura ni,	On to your splendid seat,
Ama tsu kami kuni tsu kami,	Gods of heaven and gods of the country,
Orimashimase!	Descend!
Ah! ya!	Ah! ah!
Asobi ha su to mauseanu;	We do not merely amuse ourselves;
Asakura ni,	On to your splendid seat,
Naru Ikadzuchi mo,	Sounding Thunderbolt also,
Orimashimase!	Descend!
Ah! ya!	Ah! ah!
Asobi ha su to mauseanu;	We do not merely amuse ourselves;
Asakura ni,	On to your splendid seat,
Uha tsu ohoyo shita tsu ohoyo,	Upper great elder brother and lower great elder brother,
Mawiri tamahe!	Deign to come!

[We do not know who the two 'elder brothers' invoked in the second last line were.]

After this formula, the names of all the priests were called, and at each one the officiant asked: 'Is he clean or unclean?' He then struck the harp again, and, by a process which recalls certain rites of Polynesian sorcerers, tried to whistle by drawing in his breath; only if the whistle could be heard was the priest in question considered clean. The same rite was employed to settle the same question in regard to the people who had prepared the offerings, the offerings themselves, and the material utensils. Finally, the priest sounded his harp again three times, with a solemn 'Hush!' and sent the gods back to their own abode by reciting a formula of opposite meaning from the preceding one.

This curious ceremony, in which magic plays the dominant part, is not described in detail except in one work of the 12th cent.; but an 8th cent. document makes allusion to it, and Satow is right in thinking (*op. cit.* 450) that it is a pure Japanese custom.

Last in this class of local methods of divination we may mention 'cauldron divination,' which Aston quotes (p. 343) as employed to this day in a temple in the country of Bitchu. At the request of a member of their congregation, the priests recite a ritual, light a fire beneath a cauldron, and note the sound it produces: if it is like the bellowing of a bull, the omen is good.

Such are the processes, important and secondary, general and particular, of Japanese divination. A process which may serve as the transition between these indigenous systems and the Chinese methods gradually introduced is that known as *kitsune-tsukahi*, or 'fox-possessing.' A fox is buried alive, with only its head out of the ground; food is placed before it, which it cannot reach in spite of desperate efforts; when it dies, after this tantalizing torment, its spirit is supposed to pass into the food, which is then mixed with clay and formed into an image of the animal; the possessor of this fetish is regarded as endowed with marvellous divinatory power (W. Weston, *Mountaineering in the Japanese Alps*, Lond. 1896, p. 307). This cruel rite has a strange resemblance to another magical process, viz. that of the *inu-gami* ('dog-deity'), in which a dog is treated in almost the same way, its head being finally cut off, to be used afterwards in spells along with the furious spirit inhabiting it; and, if this rite of the *inu-gami* is of Shintō origin (see *Le Shintoïsme*, 166), the same may be the case with that of the *kitsune-tsukahi*.

We have no precise information regarding divination by birds, which certainly existed in ancient Japan (Satow, 449)—we do not even know whether it resembled the Chinese system of bird-divination. On the other hand, there is no doubt as to the Chinese origin of such methods as *astrology*, introduced by Koreans in A.D. 675, when, as the *Nihongi* tells us (ii. 326), 'a platform was for the first time erected from which to divine by means of the stars,' and also geomancy (*Nihongi*, ii. 76, 126), cheiromancy, physiognomics, etc.

(c) *Isolated cases.*—After thus treating of the regular processes of divination, it is advisable to mention the individual and accidental recourse to various means of divination invented on the spur of the moment. Occurrences of this nature are very often found in the most ancient annals. To show the process to the life, it will be of interest to quote a passage from the *Nihongi*, relating to Jimmu Tennō, the legendary founder of the Japanese Empire:

'All the places occupied by the enemy (the indigenous race who had to be conquered) were strong positions, and therefore the roads were cut off and obstructed, so that there was no room for passage. The Emperor, indignant at this, made prayer on that night in person, and then fell asleep. The Heavenly Deity appeared to him in a dream, and instructed him, saying: "Take earth from within the shrine of the Heavenly Mount Kagu (a mountain in Yamato), and of it make eighty Heavenly platters (for rice). Also make sacred jars (for

sake), and therewith sacrifice to the gods of Heaven and Earth. Moreover, pronounce a solemn impression. If thou doest so, the enemy will render submission of their own accord." The Emperor received with reverence the directions given in his dream, and proceeded to carry them into execution. . . . He caused Shihî-netzu-hiko [a fisherman whom he had with him as guide] to put on ragged garments and a grass rain-coat and hat, and to disguise himself as an old man. He also caused Ukeshi the Younger [a local chief who had joined his party] to cover himself with a winnowing tray, so as to assume the appearance of an old woman, and then addressed them, saying: "Do ye two proceed to the Heavenly Mount Kagu, and secretly take earth from its summit. Having done so, return hither. By means of you I shall then divine whether or not I shall be successful in founding the Empire. Do your utmost, and be watchful." Now the enemy's army filled the road, and made all passage impossible. Then Shihî-netzu-hiko prayed, and said: "If it will be possible for our Emperor to conquer this land, let the road by which we must travel become open. But if not, let the brigands surely oppose our passage." Having thus spoken, they set forth, and went straight onwards. Now the hostile band, seeing the two men, laughed loudly, and said: "What an uncouth old man and old woman!" So the two accord they left the road, and allowed the two men to pass and proceed to the mountain, where they took the clay and returned with it. Hereupon the Emperor was greatly pleased, and with this clay he made eighty platters, eighty Heavenly small jars and sacred jars, with which he went up to the upper waters of the River Nifu and sacrificed to the gods of Heaven and of Earth. Immediately, on the Asa-hara plain by the river of Uda, it became as it were like foam on the water, the result of the curse cleaving to them. Moreover, the Emperor went on to utter a vow, saying: "I will now make *ame* ['sweetness,' a sweetmeat made of millet, malted] in the eighty platters without using water. If the *ame* is formed, then shall I assuredly without effort and without recourse to the might of arms reduce the Empire to peace." So he made *ame*, which forthwith became formed of itself. Again he made a vow, saying: "I will now take the sacred jars and sink them in the River Nifu. If the fishes, whether great or small, become every one drunken and are carried down the stream, like as it were to floating *maki* [*Porocarpus*] leaves, then shall I assuredly succeed in establishing this land. But if this be not so, then will never be any result." Thereupon he sank the jars in the river. Their mouths turned downward, and after a while the fish all came to the surface, gaping and gasping as they floated down the stream. Then Shihî-netzu-hiko, seeing this, represented it to the Emperor, who was greatly rejoiced, and, plucking up a five-hundred-branched *masakaki* [*Cleyera*] tree of the upper waters of the River Nifu, he did worship therein to all the gods. It was with this that the custom began of setting sacred jars [in the courtyard] (*Nihongi*, i. 119-121).

In this one passage, and with a single point to elucidate, we have no fewer than four different processes of divination. The case of the famous Empress Jingô, the conqueror of Korea, is similar:

"Proceeding northwards, she arrived at the district of *Matsumura* in the land of *Hizen*, and partook of food on the bank of the River *Wogawa*, in the village of *Tamashima*. Here the Empress bent a needle and made of it a hook. She took grains of rice and used them as bait. Pulling out the threads of her garment, she made of them a line. Then, mounting upon a stone in the middle of the river, and casting the hook, she prayed, saying: "We are proceeding westward, where we desire to gain possession of the Land of *Treasure*. If we are to succeed, let the fish of the river bite the hook." Accordingly, raising up her fishing-rod, she caught a trout." And further on: "The Empress returned to the Bay of *Kashihî*, and, loosing her hair, looked over the sea, saying: "I, having received the instructions of the Gods of Heaven and Earth, and trusting in the spirits of the imperial ancestors, floating across the deep blue sea, intend in person to chastise the West. Therefore do I now lave my head in the water of the sea. If I am to be successful, let my hair part spontaneously in two." Accordingly she entered the sea and bathed, and her hair parted of its own accord. The Empress bound it up parted into bunches [i.e. in many fashions] (*Nihongi*, i. 227, 228; cf. also 229, 237, 231).

(d) *Divination by lots*.—In addition to these unimportant but picturesque secondary means of divination, it remains to notice a method of very general character, but whose lack of originality renders it somewhat less interesting; this is divination by lots. We find it already mentioned in the *Nihongi* (ii. 257), which, in telling of a conspiracy formed in A.D. 658, says that the various conspiring princes 'divined the future of their treasonous conspiracy by drawing slips of paper.' Recourse was also had to sticks on which numbers were inscribed. Sometimes this method was preceded by prayers to the gods (Aston, 343); sometimes it constituted a purely magical process, as in the case of the above-mentioned conspiracy; and sometimes it was nothing more than a handy secular

means of deciding something by chance, such as is constantly used by people to-day as far removed from religion as from magic; in Tôkyô, e.g., at *jinrikisha* stands, the *kurumaya* often have at hand a bundle of cords of different lengths all tied in a knot, and use it to decide, when a passenger appears, which of them is to have the privilege of conducting him. But this form of divination, vulgar as it is, assumes a quite outstanding importance when we consider that the drawing of lots plays a dominant part in the divination founded upon the complicated Chinese diagrams of the *Yih-king*, the 'Book of Changes' (*Eki* in Japanese). This obscure book, indeed, just because of its divinatory character, was one of the first Chinese works to be introduced into Japan (in A.D. 553, according to the *Nihongi*, ii. 68; cf. 72, 306), and it became the basis of the system of divination in use at present. Takashima Kaemon, who was the most celebrated diviner in modern Japan, took this work as the foundation for his art; when he was only a student, he was put in prison for some youthful misdemeanour, and, having nothing but this ancient classic beside him, he discovered the secret of the meditations which brought success to his brilliant career. The present writer frequently had occasion to meet this diviner, to hear from his own mouth an account of his most ingenious consultations, and even to receive his lessons, and he can say that, if the principles of the system are doubtful, its individual results are often wonderful: the value of divination is in proportion to the skill of the diviner, and the lucky financier of Kanagawa, the able promoter of so many new schemes, was always a prudent man who could see far ahead. As Chamberlain says (*Things Japanese*, Lond. 1898, p. 112), Takashima, after studying the *Yih-king*, 'realized a fortune by obedience to its precepts'; but there are many Japanese, even in the highest grades of society, who also profited by his wide experience of men and things; one has only to read the *Takashima Ekidan* of Shigetake Sugiura (Tôkyô, 1893) to get a good estimate, from numerous examples, of the penetration of his mind and the wisdom of his counsel. The Japanese, moreover, even the educated classes, still hold divination in high esteem, although it is not officially recognized by modern Shintô, and have recourse to it frequently in all sorts of circumstances, from a wedding to a removal to another quarter of the town. At the University of Tôkyô, 15 or 20 years ago, the present writer had as colleague an old professor of the ancient school, who still adhered religiously to the tuft of hair of the feudal period; the last survivor of a perished race of *savants*, he was greatly esteemed by his colleagues as the only man capable of expounding the *Yih-king*. Among the people divination is correspondingly widespread; every quarter has its modest diviner working with his divining-rods and consulting his diagrams, and telling more or less skilfully how lost possessions may be found. The writer could give personal experiences in this connexion, but prefers to quote a little anecdote of Chamberlain's (*loc. cit.*), which shows both the popularity and the weak points of divination:

"A favourite dog of the present writer's was lost in November 1892, and all search, advertisement, and application to the police proved unavailing. Meanwhile, the servants and their friends privately had recourse to no less than three diviners, two of whom were priests. One of these foretold the dog's return in April, and another directed that an ancient ode containing the words, "If I hear that thou awaitest me, I will forthwith return," should be written on slips of paper and pasted upside down on the pillars of the house. It was the sight of these slips that drew our attention to the matter. The best of it is that the dog was found, and that, too, in a month of April, namely April 1896, after having been missing for three years and five months!"

5. Ordeals.—After thus analyzing the various

forms of Japanese divination, ancient and modern, we have still a special process of its application to investigate, viz. ordeals. This judicial divination is represented in ancient mythology by a well-known story giving a case of ordeal by fire.

The Heavenly prince Ninigi, having been sent by the other gods to earth to govern Japan, married Ko-no-hana-saku-yahime (the Princess Blossoming-brilliantly-like-the-flowers-of-the-Trees); but she became pregnant after a single night, and the young husband was astonished; she then shut herself up in an underground hall (a *muro*, which here does duty for the *ubu-ya*, or lying-in hut, where the Japanese women used to retire for delivery), and set fire to the hall with her own hands, when on the point of delivery, in order to prove her innocence by the fire-test. 'If the child,' she said, 'with which I am pregnant be the child of an Earthly deity [i.e. of a god of the country], my delivery will not be fortunate. If it be the august child of the Heavenly deity [i.e. thy child and the descendant of the sun-goddess], it will be fortunate.' And the princess came out of the test victorious, after having brought into the world in the furnace three gods, one of whom was to be the ancestor of the first Emperor (*Kojiki*, 1481; cf. corresponding versions in *Nihongi*, i. 73, 85, 88).

This myth would seem to point to the existence of the fire-ordeal in the customs of the pre-historic period. In the historic period, however, it was essentially the boiling-water test that constituted judicial divination. First of all the *Nihongi* gives us an example which it assigns to A.D. 277:

A certain man, Takechi no Sukune, was slandered before the Emperor by his younger brother, Umashi-ushi no Sukune, and accused of wishing to overthrow the Emperor and seize his power. Takechi, who was at the time on a tour of inspection in the provinces, hastened to the capital to prove his innocence. 'The Emperor forthwith questioned Takechi no Sukune along with Umashi-ushi no Sukune, upon which these two men were each obstinate, and wrangled with one another, so that it was impossible to ascertain the right and the wrong. The Emperor then gave orders to ask of the Gods of Heaven and Earth the ordeal by boiling water. Hereupon Takechi no Sukune and Umashi-ushi no Sukune went out together to the bank of the Shiki river, and underwent the ordeal of boiling water. Takechi no Sukune was victorious. Taking his cross-sword, he threw down Umashi-ushi no Sukune, and was at length about to slay him, when the Emperor ordered him to let him go' (*Nihongi*, i. 251.).

A more important case was occasioned, in the beginning of the 5th cent., by the pretensions of high families who were attempting to increase their prestige by false genealogies. In the year 415, two Imperial decrees of Ingyō censured those powerful families who 'purposely lay claim to high family,' those bold functionaries who 'describe themselves, some as descendants of Emperors, others attributing to their race a miraculous origin, and saying that their ancestors came down from Heaven'; and the abuse reached such a pitch that the Emperor finally had recourse to the ordeal to remedy it.

'Single Houses,' he said, 'have multiplied and have formed anew ten thousand surnames of doubtful authenticity. Therefore let the people of the various Houses and surnames wash themselves and practise abstinence, and let them, each one calling the gods to witness, plunge their hands in boiling water.' The cauldrons of the ordeal by boiling water were therefore placed on the 'Evil Door of Words' spur of the Amagashi Hill. Everybody was told to go thither, saying: 'He who tells the truth will be uninjured; he who is false will assuredly suffer harm.' Hereupon every one put on straps of fire-fibre, and, coming to the cauldrons, plunged their hands in the boiling water, when those who were true remained naturally uninjured, and all those who were false were harmed. Therefore those who had falsified their titles were afraid, and, slipping away beforehand, did not come forward. From this time forward the Houses and surnames were spontaneously ordered, and there was no longer any one who falsified them' (*Nihongi*, i. 316-317, and cf. *Kojiki*, 387.).

A gloss on this passage of the *Nihongi*, probably as ancient as the text itself, tells us that this ordeal, known to-day under the name of *yusuguri*, was then called *kugadachi*, and adds valuable evidence of other varieties of usage at this period:

'Sometimes mud was put into a cauldron and made to boil up; then the arms were bared, and the boiling mud stirred with them. Sometimes an axe was heated red-hot and placed on the palm of the hand.'

The great prevalence of the custom is clearly shown by a complaint made to the Emperor, in the year 530, by an ambassador of Imna, a small

kingdom in Korea, against a whimsical judge, who, in order to simplify his task, abused the ordeal:

'Kena no Omi is fond of setting the cauldrons for the ordeal by boiling water, and saying: "Those who are in the right will not be scalded: those who are false will certainly be scalded." Owing to this, many persons have been scalded to death by plunging into the hot water!' (*Nihongi*, ii. 22).

Still other forms of ordeal are noticed by a Chinese traveller, who visited Japan in the year 600, and, in describing both the means of torture employed to force the confession of criminals and the tests for the purpose of distinguishing the guilty from the innocent, gives the following exposition:

'In the trial of cases where a great wrong has been suffered, those who will not confess have their knees squeezed with a piece of wood, or have their necks sawn with the tight string of a very powerful bow. Or small stones are placed in boiling water, and the disputants are ordered to take them out. It is supposed that he who is in the wrong gets his hand scalded. Or, again, a snake is put in a jar, and they are made to take it out; it being supposed that he who is in the wrong will get his hands bitten' ('Ma-Twan-Lin's Account of Japan,' by E. H. Parker, in *TASJ*, vol. xxii. pt. 2, p. 421.).

This serpent-ordeal, which is also found among other peoples, e.g. the blacks of Africa, was certainly in existence in Japan in the primitive period. We are led to this conclusion by the tests to which Susa-no-wo subjects his future son-in-law, Oho-kuni-nushi, who is made to sleep in the hut of serpents, and then in the hut of centipedes and wasps; he would never have escaped if he had not had the help of the magic scarfs of princess Suseri; and Susa-no-wo ended by showing him high esteem, because, seeing him spit red earth mixed with muku-berries (*Aphananthe aspera*), he thought he was eating the centipedes themselves (*Kojiki*, 86 f.). Later on, and down to the present period, the tests of plunging the hands in boiling water and walking bare-footed over a bed of burning coals, with, however, special precautions, were employed as a means of rousing the piety of believers; but this is no longer ordeal. On the other hand, even in the 17th cent., Kaempfer observed a curious ordeal for forcing confession of a crime, which consisted in making the accused swallow, in a little water, a small piece of paper with drawings of ravens or other black birds upon it (Kaempfer, *Hist. du Japon*, Fr. ed., Paris, 1732, bk. iii. ch. 5, p. 51). Perhaps we may see here a faint recollection of the god of scare-crows, who appears in primitive mythology and was thought to know everything under the sun (see *Le Shinntoïsme*, 156).

6. Omens and dreams.—All that now remains to be treated is omens and dreams. These come under divination, even though in them we are not dealing, in principle, with processes involving the active initiative of man, but only with spontaneous facts, outside of man, for which he seeks an interpretation after they have occurred. Omens are often mentioned in mythology and ancient annals. Without speaking of omens that are looked for by those interested, and therefore belong to the class of divinations devised on the spot (e.g., in *Kojiki*, 292, while two chiefs, on the eve of an expedition, 'hunted for an omen,' and one of them had climbed an oak, a furious wild boar uprooted the tree and devoured the man), we could give numerous examples of omens properly so called, i.e. independent of the human will. As a general rule, white or red animals, which were striking in virtue of their rarity and, further, harmonized with the favourite colours of a solar religion like Shintō, were regarded as of good omen (see, for white animals, *Nihongi*, i. 292, ii. 124, 174, 236, 237, 239, 252, 286, 322, 326, 352, 394, 410, 416; and, for red animals, *Nihongi*, ii. 337, 347, 351, 352, 357, 407, 409). But the Japanese also regarded as good omens, perhaps just when it suited them to interpret them as such, any parti-

cular occurrence whatever (e.g. an owl or a wren going into a lying-in hut [*Nihongi*, i. 277]). Earthquakes, storms, and floods were considered ill omens, foretelling war: they were the scourges calling on each other. Similarly, other extraordinary phenomena, such as the appearance of a comet (*Nihongi*, ii. 166, 167, 169, 333, 353, 364, 367), or a prolonged eclipse of the sun's light (*ib.* i. 238); strange incidents like a migration of rats from the capital (*ib.* ii. 226, 245), or the mysterious movements of a swarm of flies (*ib.* ii. 270); bad meetings, as with a blind man or a cripple, when starting on a journey (*Kojiki*, 238); disturbing incidents like a dog coming into a temple and laying down a dead hand (*Nihongi*, ii. 263); or, finally, unaccountable accidents like a leg-rest breaking with no apparent cause (*ib.* ii. 256), were all evil omens. It would be useless to attempt to study in detail all these and analogous cases, which are very numerous (see *Nihongi*, i. 227, 238, 320, ii. 59, 237, 239, 259, 266, 269, 276, 277, 293, 331, 359, etc.). Let us simply point out that this belief in omens is current to this day among the Japanese. Thus, at certain grave crises in her contemporary history, Japan has been seen more than once to turn anxiously towards the temple of the Sun-goddess, seeking for light on the future. At a critical point in the Revolution of 1867, the white horse of the temple of Ise escaped, and only returned after three days: from this it was concluded that the Imperial party would soon have the victory. During the Chino-Japanese war, the sacred horse disappeared for ten days: this foreign war, therefore, was to last three times as long as the previous civil war (rumour registered in the *Japan Mail* of 17th Sept. 1894, p. 2).

In the same way, dreams were always regarded as affording foresight, by a more or less skilful interpretation, of future events, or indications as to the future behaviour of the person interested. Take, e.g., one of the oldest documents of Shintō, the *Tatsuta no Kaze no Kami no Matsuri* (ritual no. 4), which gives its proper legendary origin. For several years, some unknown gods had spoiled all the harvests, and the diviners had not been able to discover the culprits. Then the sovereign himself 'deigned to conjure them,' and they revealed themselves to him in a dream. They were 'Heaven's-august-Pillar's augustness and Country-august-Pillar's augustness,' the Wind-gods who support the firmament. They required certain offerings from him—the foundation of a temple at Tatsuta, and a liturgy—in return for which they promised 'to bless and ripen the things produced by the great august people of the region under Heaven, firstly the five sorts of grain, down to the last leaf of the herbs' (*TASJ*, vol. vii. pt. 4, p. 442 f.). We shall now take one of the most dramatic stories of the ancient chronicles:

The Emperor Suinin is betrayed by his wife, who, at the instigation of her accomplice, the prince of Saho, attempts to assassinate him during his sleep. 'So the Heavenly Sovereign, not knowing of this conspiracy, was augustly sleeping, with the Empress' august knees as his pillow. Then the Empress tried to cut his august throat with a stiletto; but, though she lifted it thrice, she could not cut the throat for an irrepressible feeling of sadness, and she wept tears, which fell overflowing on to the Heavenly Sovereign's august face. Straightway the Heavenly Sovereign started up, and asked the Empress, saying: "I have had a strange dream: a violent shower came from the direction of Saho and suddenly wetted my face; again, a small damask-coloured snake coiled itself round my neck. Of what may such a dream be the omen?"' And the Empress, seeing that it would be useless to deny the truth, confessed her treason of which the Emperor had been warned by this dream (*Kojiki*, 231 f.; cf. *Nihongi*, i. 171).

It would be easy to multiply examples of this kind, in which the ancient documents abound (see *Kojiki*, 165, 215, 237, 295; *Nihongi*, i. 115, 153, 155, 161, 165, 281, ii. 36). These divinations given by dreams were considered so natural that they

were even attributed to animals, as the following story will show:

'There is a popular story that a long time ago there was a man who went to Toga, and spent the night on the moor. Now there were two deer which lay down beside him. When it was on the point of cock-crow, the male deer addressed the female, saying: "This night I had a dream, in which I saw a white mist come down copiously and cover my body. What may this portend?"' The female deer answered and said: "If thou goest out, thou wilt certainly be shot by men and die, and so thy body will be smeared with white salt to correspond with the whiteness of the mist." Now the man who was spending the night there wondered at this in his heart. Before it was yet dawn, there came a hunter, who shot the male deer, and killed it. Hence the proverbial saying of the men of that day: "Even the belling male deer follows the interpretation of a dream" (*Nihongi*, i. 290).

There is still one more form of divination, which plays an important part in ancient Shintō, namely, Inspiration (*q.v.*).

LITERATURE.—Sir Ernest Satow, in *TASJ*, vol. vii. [1889] pt. 4, pp. 445-452; W. G. Aston, *Shinto*, London, 1905, pp. 337-348; M. Revon, *Le Shintoïsme*, Paris, 1905, Index, s.v. 'Divination.' For the texts: B. H. Chamberlain, *Kojiki*, Tokyo, 1906; Aston, *Nihongi*, London, 1896; Revon, *Anthologie de la littérature japonaise*, Paris, 1910. MICHEL REVON.

DIVINATION (Jewish).—I. Introductory.—In the present article the writer follows the same system as in art. CHARMS AND AMULETS (Jewish), in not attempting to fix chronological dates for the various forms of divination mentioned in ancient and mediæval writings. Without discussing here the wider meaning of magic in general, there is no doubt that magic is much older than any literary record, and that it has survived through ages, with comparatively few variations and modifications. The study of folk-lore has revealed the fact that to a surprising degree exact parallels with some of the most ancient forms of divination have been preserved to this very day, and a careful examination of the latest survivals throws light upon ancient practices which have hitherto remained in many cases obscure. It follows naturally that allusions in the Bible are only the oldest literary references to practices of magic and divination. The words denoting magical practices belong, no doubt, to the pre-Biblical period, when their original meaning may have already undergone some sort of change, although this is not very likely, as nothing is preserved with greater tenacity than magical terms and formulae. It is thus futile to attempt, on the basis of Hebrew etymology, to fix in every case the precise meaning of these technical terms. It must also be pointed out that, though the practices in question are here classed as 'Jewish,' this by no means implies that they are of Jewish origin, but only that the knowledge of them has come to us through the medium of the Bible, and that they were doubtless employed by the Jews—in direct contradiction to the spirit and teaching of Judaism—especially during the older period of Jewish history.

Nothing could be more emphatic than Dt 29²⁹ ('The secret things belong unto the Lord our God: but the things that are revealed belong unto us and to our children for ever, that we may do all the words of this law'), but scarcely less emphatic is the condemnation of the heathen practices of divination found throughout the Bible. As late as the 2nd cent. B.C. we find Ben Sira protesting against this dabbling in mysteries (Sir 32²²; cf. Bab. Hag. 13a, and *JQR* iii. [1891] 690-8). It is a noteworthy fact that Genesis and the books grouped under the name of the 'Former Prophets' (esp. Judges, Samuel, and partly Kings) are replete with practices of divination scarcely veiled; they represent a primitive state of mind and cult in which the heathen and the Jewish elements are strangely blended; one can follow up, as it were, the transition from one to the other, but the people do not yet clearly distinguish between them. The seer

and the prophet rank no higher at the beginning than the diviner and the soothsayer, and, from the information we are able to cull from the pages of the Bible, both seem to act in the same manner, one appealing to Baal, Dagon, and other gods, the other—the prophet and the seer—appealing to the God of Israel, whilst performing almost identical ceremonies and using similar practices. Samuel, Saul, Jonathan, David, Elijah, Elisha, and others are found using divination of various forms and degrees, and by a right interpretation of their practices much is explained. No real condemnation of these practices is found in the historical books, such as appears in the other four books of the Law, and in the fiery denunciations of the 'Later Prophets.' The prophets are always conscious of the heathen origin of these practices, and in the Apocryphal literature they are traced back to the fallen angel Shemhazai (see the legend in Eth. En. 8¹ [Charles]; and cf. Gaster, *Chron. of Jerahmeel*, 1899, p. 52, ch. xxv.). But no denunciation, however strong and severe, could prevail against the desire of peering into the future and of obtaining information from whatever source or by whatever means man might learn that which is hidden from him.

2. Biblical and post-Biblical references to divination.—The chief passages in the Pentateuch in which the practices of divination are mentioned are Dt 18¹⁰, Lv 19²⁶, 31 and 20⁶, 27.

(1) It will serve our purpose best to start with the *m'nahēsh* (RV 'enchanter'), from the root *nāhash*, which is of frequent occurrence in the Bible and in post-Biblical literature. The word is used by Laban (Gn 30²⁷); it occurs twice (Nu 23²³ 24¹) in the history of Balaam; and in 1 K 20³⁸ the Aramaean servants of Benhadad watch for a good omen (RV 'observed diligently'). The history of Gideon and that of Jonathan furnish us with two more examples of this mode of divination from the 'first word' spoken by the enemy (Jg 7¹¹⁻¹³, 1 S 14^{17a}), and also that of Eliezer at the well (Gn 24¹⁴), which they took as telling them of their future success. We shall meet with a similar kind of divination later on. In the following passages the word *m'nahēsh* can also mean only prognosticator from omens, and not 'enchanter' as RV: Lv 19²⁶, Dt 18¹⁰, and 2 K 21⁸ (2 Ch 33⁹). It is evidently of Western Aram. origin. It cannot be connected with *nāhash*, 'serpent' or 'snake.' In the opinion of the present writer, there is no trace of serpent-worship among the Jews, or any of the nations with whom they came in contact. The transformation of Moses' rod into a serpent belongs to the category of magic and not to divination or worship; the brazen serpent in the wilderness was merely symbolical and a kind of protective charm, not an object of worship.

(a) A specific form of divination—by means of the cup—is found in the history of Joseph (Gn 44⁵⁻¹⁹). To judge from later parallels, the practice must have consisted in filling a cup with water or wine, and gazing intently on the surface, till the beholder saw all kinds of images. The method of divining by cups has not been entirely lost. Allusions to it are made indirectly in the Talmud, where the princes (demons) of cups (*sarē ha-kos*) and egg-cups (*sarē bēgin*) are mentioned. This system of divination is alluded to in manuscripts in the writer's possession (Cod. 443, etc.), where, in addition to these two, the princes (demons) of the cup-like palm of the hand (*sarē ha-kaf*) and the princes of the thumb-nails (*sarē ha-bohen*) are mentioned. The method of divining from the palm of the hand is also described in an anonymous compilation (*Mifaloth Elohim*, Lemberg, 1865, no. 69), where it is used for finding the thief and the stolen article. All the formulae

given for the above-mentioned modes of divination from egg-cups, etc., are identical in all essentials with the latter.

Traces of divination by the cup and by finger-nails have been preserved, though no longer understood, in the ceremonies connected with the cup of wine and the lighted candle used at the outgoing of the Sabbath at the service called *Haddalah*, or the division between Sabbath and the weekday, the beginning of the week being considered as a very propitious time. When the blessing is said over the wine-cup filled to overflowing, the man performing the ceremony at a certain moment shades the cup and looks into the wine; and, when the blessing over the light is said, it is customary to let the light of the candle fall on the finger-nails and to look at them intently. There is no doubt these are remnants of divination. Other explanations have been suggested which are wide of the mark. Closely allied with this is the following practice: *To find out whether a man will survive the year.*—Take silent water from a well on the eve of Hosh'anah Rabbah, fill a clear glass vessel with it, put it in the middle of a room, then look into it; if he sees therein a face with the mouth open, he will live, but, if the mouth is closed, he will die. This must be done in the hour of the domination of the moon. Some do it on the Day of Atonement, with a vessel filled with lighting oil instead of water (*Mifaloth*, 119).

Cup-like bowls with magical inscriptions found in Babylon and elsewhere seem to have been also used for divination, and not for purely therapeutic magic, as hitherto believed. The conjurer or person who wanted to divine, or to detect a crime, or anything of the past, present, or future, looked, no doubt, into the bowl filled with water or oil and divined from it, or the suspected person drank the contents, and according to the result was found innocent or guilty. There was a similar operation in the case of the woman suspected of adultery (Nu 5^{12a}): a cup (earthen vessel) filled with water was employed; the mysterious power by which the guilt of the woman was to be detected was also a written inscription (though blotted out in the water of bitterness), without the addition of any of the names of demons or heathen gods, as in the Babylonian bowls; and the drinking of the water showed by its consequences her guilt or her innocence. It was an ordeal (*q.v.*) through the 'divining cup.'

Instead of peering into bowls filled with shining liquid, we find it recorded in Talmudic and later times that it was customary to gaze into brass or glass mirrors for the same purpose; and a distinct formula exists for crystal-gazing, or, as it is phrased, 'seeing the princes (demons) of the crystal (*sarē hab'dōlāh*). This is distinctly different from throwing metal pieces into cups and watching the movements of the water, or divination by means of molten wax or lead poured into a cup filled with water by the conjurer who attends on the patient, in order to find out, from the shape which the wax or the lead assumes, the real cause of the illness—a universal practice among the nations of the Near East, Jews and non-Jews alike. The oldest example of this is found in the Alexander legend of pseudo-Callisthenes.

(b) Under the general term *nāhash* (from the same root *nāhash*) fall also the various forms of divination by observation of signs not produced by any direct act of the diviner; Jewish tradition is unanimous on this interpretation of the term.

(a) *Augury* in a somewhat limited form is the first to be considered. There is no passage in the Bible which refers directly to the flight of birds, or to their peculiar movements on certain occasions; the passage in Ec 10²⁰ ('A bird of the air shall carry the voice') is metaphorical. In Talmudic times the science of *haruspicy* appears to have reached the Jews from the Arabs or some other people who coined the technical expression *ṭayyar* (cf. the Arab. root *ṭayr* = 'bird,' and *mantiq al-ṭayr*). It is especially the raven that is mentioned as a bird of omen. The reference to ravens in the history of Elijah (1 K 17⁴) is not explicit enough to allow us to draw any definite conclusions, but, on the other hand, Noah's sending the raven out

of the ark on a kind of errand of divination (Gn 87) no doubt lent colour to the belief so widely spread in the significance of the mysterious movements of the raven. In Bab. *Gittin* 45a and the *Pesikta* 156b, Midr. Rabb. on Numb. sec. 19, 237b, and Midr. on Ec 10⁹⁰, divination from the flight of birds is described as the wisdom of Eastern sages. The raven by his croak warns Ilish of the danger which awaits him; one who understands the language of birds explains it to him; he takes the warning to heart, and escapes. The references in Talmudic literature are, however, not numerous enough to give us full insight into divination from birds. In the *Zohar* and in the *Tikkunim* reference is often made to the twittering of birds as foretelling future events such as the death of man, etc. In Cod. Gaster 335 numerous mediæval texts have been collected, dealing with divination from the twittering of birds, and especially from the croaking of the raven. They belong mostly to the pseud-epigraphical writings, and the Hebrew texts may be translations from the Arabic, though the original source may lie far back in ancient times. In Hebrew legends King Solomon was credited with the knowledge of the language of birds. He overheard a conversation between a swallow and its female, in which it boasted of being able to destroy the Temple with a kick of its foot, and, questioned by Solomon, said: 'Should I not boast before my wife?' (*Parables of Solomon*, ed. Constantinople, 1516). In another legend he is rebuked and humbled by an ant (*Maase Hane-malah*). A Hebrew tale older than the 12th cent. tells of a boy who was taught the language of birds, and was thereby able to solve some riddles and to foretell future events (Gaster, 'Fairy Tales from inedited Hebrew MSS', no. iv. 'Story of the Young Man and the Ravens,' in *FL* vii. [1896] 242 ff.).

The dove is also mentioned occasionally as a bird of good omen; it is identified with the nation. Through the peculiar movement of a dove Abishai learns of the danger of David, who has fallen into the hand of the giants of Nob, not to speak of the dove sent by Noah after the raven on a similar errand, or of the dove as a symbol of the Holy Ghost in the baptism of Jesus (Gaster, *ZDMG* lxii. [1908] 232 ff. and 528 ff.).

(β) Ezk 21²¹ (20) 'he looked in the liver' refers to a kind of divination (*hepatoscopy*) not otherwise known among the Jews. This is not the place to discuss what this looking into the liver may mean, and whether the future was prognosticated from a special conformation of the liver or from the convulsions or spasmodic movements of the liver of the dying animal. This latter seems to be nearer the truth, for a peculiar kind of divination is still in existence which depends upon the twitching or convulsion of the separate portions of the human body. No doubt it is a direct outcome of the practice of looking into the liver or lungs of sacrificial victims for the purpose of divination, or a parallel to it. The convulsions or twitchings of the living took the place of those of the dying victim of old. A compilation similar to that which the Greeks ascribed to Melampus appears in Hebrew literature under the title *Sepher Refafoth*. It is found already in a manuscript of the 12th century (Br. Mus. Or. 2853, fol. 62a); Judah Hasid, Eleazar of Worms, and others mention it, and Elijah de Vidas prints it from old MSS (*Midr. Talpizot*, Lemberg, 1875, fol. 8a-b; see also Chwolson, *Ssabier*, St. Petersburg, 1856, ii. 266-272).

(γ) Ancient tradition also identifies *nāhash* with omens. In the *Sifra* to Lv 19²⁰ and in the *Sifre* to Dt 18^{10a}, it is stated that *nāhash* means to see omens in such incidents as bread falling from one's mouth, or a staff from one's hand, or a snake crawling on the right side, or a fox on the left

hand, or a fox's tail trailing across the road, or a raven croaking when a man starts on a journey. All these forebode evil to his enterprise; furthermore, those who listen to the twittering of birds or the squealing of a weasel, and those who deduce from a given star being in the ascendant that the time is propitious for an undertaking, practise divination. Star-gazing was also thus included under the term *nāhash*, and these practices were called *darkē ha-Emorei* (the practices of the Amorites or heathen), and are condemned as idolatrous.

On account of their importance, we give here full references to all the passages on the ways of the Amorites in Rabbinical literature. These are: *Sifra*, ed. Weiss, p. 90; *Sifre*, ed. Friedman, ch. 1711; Bab. *Hullin* 77; *Shabb.* 67b; *Tosefta Shabb.* vi., ed. Zuckerman, pp. 117-119; *Sanh.* 65a-68; Jer. *Shabb.* vii. 2; *Yalkut. Sim.* l. fol. 169c-d, § 587; Maimonides, *Hilcot 'Aboda Zara*, ch. xi.; Jacob ben Asher, *Tur Yoreh de'ah*, ch. 179; and Karo, *Shulhan 'Aruch*, ch. 179.

(δ) A peculiar kind of divination is the study of the shadow on the moonlit night of Hosh'a'nah Rabba; for, if a man loses his shadow on that night, he is sure to die in the course of the year (cf. Chamiisso, *Peter Schlemihl*, tr. Bowring, London, 1878). Very likely the origin of this practice is found in the statement, 'For their shadow has departed from them' (Nu 14⁹).

(2) *Me'onen* (RV 'who practises augury'), another kind of divination of which even tradition has not preserved a definite interpretation. One connects it with the root *'ayin*, 'eye,' and makes the *me'onen* to be 'one who conjures,' 'one who produces hallucinations' (*ahizath 'enayin*); another seems to connect it with *'anan*, 'cloud,' probably = 'one who studies the formation of the clouds'; but it is not explained for what purpose the clouds are to be studied. (a) It appears to the writer that the *me'onen* is the *weather-prophet* in the widest sense, not one who merely studied the clouds for some purpose of divination, but one who could affect the gathering of clouds, and their dispersal. That man was of the utmost importance to an agricultural people, for he could cause drought or rain, bring rich harvest, or complete failure with famine and starvation. Weather-makers figure in the literature of popular magic throughout the whole world, and it would therefore have been surprising to find so important a man missing among those ancient diviners and soothsayers. The law would never have condemned to death a man who merely looked at the clouds; he must be a man who could cause serious hardship, and perhaps lead people astray to false beliefs. Seen in this light, the various incidents in the historical books assume a new and most satisfactory complexion. Samuel at the time of the wheat harvest calls on the Lord to bring thunder and rain—a most inopportune time (1 S 12¹⁷); here we have the very action of the *me'onen*. Then we have Elijah, who tells Ahab (1 K 17¹), 'There shall not be dew nor rain these years, but according to my word.' Ahab seeks him everywhere, evidently believing that it lay in the power of Elijah to make and unmake drought. It will now be easier to understand the sign of Gideon, who asked that the fleece of wool should on one night be found wet. 'If there be dew on the fleece only, and it be dry upon all the ground' (Jg 6³⁷), and *vice versa* (v. 30). These were the signs expected of the *me'onen*. Very likely the request of Joshua, that the sun and moon should stand still, and that a hail-storm should overtake the army of the enemy and destroy them (Jos 10^{12a}), Joshua appearing as a *me'onen*, and, finally, Elijah bringing down sheets of lightning in order to destroy the messengers of the king of Samaria (2 K 1^{10a}), may be further echoes of a similar conception. Even the prophet Amos defines the

power of God in the sentence, 'I caused it to rain upon one city and not upon another' (Am 4⁷). In the Talmud we find the story of Nakdimon ben Gorion and the twelve wells which are filled at his prayer by the appointed day, and the sun shining again although it had apparently already set (*Ta'anit*, fol. 19b-20a, Exempla no. 85; *Nissim*, fol. 19b; *Maase Buch*, no. 96), and the stories of Honi ha-me'agel, Raba, and others who force rain to come down (Gaster, 'Beiträge,' in Graetz, *Ztschr. für jud. Geschichte und Wissenschaft*, 1882 [and Bucharest, 1883, ch. xi. p. 79 ff.]).

(b) Of more importance would be the man who could foretell the weather for the coming year. R. Akiba (*Sifre*, § 171) explains *m'ōnen* to be the man who can foretell from the weather on the eve of the Sabbatical (seventh) Year [or rather on the eve of Shabuoth, Feast of Weeks] whether the year will be one of rain or drought, of plenty or scarcity. In the Talmud we find that from the form of the ascending cloud of smoke which rose from the altar in the Temple on the Day of New Year and subsequent few days the weather for the next year could be predicted, and that the weather of certain days was taken as prognosticating that of the next year (see Gaster, 'Jew. Weather Lore,' in jubilee number of the *Jewish Chronicle*, 1891, where the whole literature is given). The cloud of smoke was called Anan as the cloud of mist and rain. Transferred to the Kalendæ of January, this prognostication was attributed to Ezra (see Tischendorf, *Apocalypses apocr.*, Leipzig, 1866, Prolegomena, pp. xiii-xiv).

The *m'ōnen* was the master of thunder and rain, as shown by Samuel and Elijah. The latter, moreover, has experience of wind and earthquake before the appearance of God (1 K 19^{11a}). Earthquake and lightning were further taken as premonitory signs of disaster. In Jewish literature, such brontologia and seismologia have been preserved under the title *Simanê ra'ashim ve-ra'amim* (Constantinople, n.d.). In Greek literature they were attributed to David (Fabricius, *Cod. Pseudep. VT*, Hamburg, 1713-33, p. 1162, and *NT*, do. 1703-19, i. 951-953; Gaster, *Lit. Pop. Rum.* 506).

(c) It is doubtful whether astrology and the observation of stars and planets come within the sphere of the *m'ōnen's* activity. Here we encounter the special name 'star-gazers.' The knowledge of astrology, star-gazing, divination by constellations, and forecasting from the new moon is clear from Is 47^{1a}, which exhibits a distinct difference between the *m'ōnen*—the weather-prophet—and the real astrologer, whose observations were limited to the changes, conjunctions, and other positions assumed by the heavenly bodies. The phrase *hōbrê shāmayim*, if it means 'dividers of heavens,' i.e. those who divide up the heavenly circle into a number of constellations and forecast the future from them, would correspond to the *gāzrîn* in Dn 2²⁷ etc. To this section belongs the horoscope and other astrological divinations dependent upon the changes of the calendar and the juxtaposition of days, and the conjunction of the stars and planets, as well as the lists of good and bad, ominous and propitious, days. This was attributed by Maimonides and Jacob ben Asher (*loc. cit.*) to the *m'ōnen*, whom they confused with the astrologer. Reference should be made in this connexion to divination from the sudden appearance of stars and comets, e.g. Balaam's prophecy (Nu 24¹⁷), to which such Messianic importance has been attached ever since by Jews, Samaritans, and Christians. So, Josephus tells us (*BJ* vi. v. 3 [Niese, § 289]): 'There was a star resembling a sword, which stood over the city,' foretelling the impending destruction of the town. For the star in the NT (Mt 2), and the further development of

the same idea in the Apocrypha, see R. Hofmann, *Leben Jesu n. d. Apokryphen*, Leipzig, 1851; Winer, *Bibl. RWB*, 1847, ii. 523 ff. A star appears at the birth of Abraham, and is interpreted as a portent of evil (*Chron. Jerahmeel*, xxiv. 1). The appearance of many suns in the dream is found in the oracle of the 'Sybil of Tibur,' probably originally a lost Biblical apocryphon (Gaster, *JRAS*, July 1910, pt. iii. p. 609); cf. also the Song of Deborah (Jg 5²⁰): 'The stars in their courses fought against Sisera.'

(3) *Kōsem, kesem* (RV 'diviner,' 'divination').—(a) Taking the various passages together where this word occurs in the Bible, and also looking at the traditional interpretation, we find, in the first place, that the *kōsem* was a professional diviner, trained in the art of *kesem*, unlike the previously mentioned diviners, who practised without any special professional training, and who thereby did not obtain any official standing. The *kōsem*, on the other hand, was the professional (priestly) seer, 'seeing' in a state of trance or ecstasy brought about by one means or another, in which he spoke words of divination (oracles) concerning future events. This state of trance was brought about 'by bowing down to the earth [evidently like the attitude of Elijah, 1 K 18⁴²], and crying aloud, or looking into a brass or glass mirror, or taking a stick in the hand and leaning heavily upon it, or striking therewith the ground, until he loses consciousness and talks' (*Tur.* l.c. ch. 179). In the Bible in many passages we find the *kōsem* holding among the heathen the same position as the *hōzeh* or *rd'eh* among the Jews. But the Jewish conception of revelation is differentiated as the uncovering of the hidden by the grace and inspiration of God, from the heathen *kōsem*, who is thought to have been inspired by an evil spirit whilst he himself was unconscious. That unconsciousness is brought about by action, for action characterizes this kind of divination, and action on definite lines. The *kōsem* is not confined to Western Aramæan peoples; according to the Bible, the men of Moab, Midian, and, later on, the Philistines, had professional *kōsemim*. Balaam is the first mentioned; and it is clear, from the description given in Nu 24¹, that, after certain magical operations had been performed, such as building of altars, walking in a definite way, and using, no doubt, other means, he falls into a trance, or, as it is put there: 'And the man whose eye was closed saith: he saith, which heareth the words of God, which seeth the vision of the Almighty, falling down, and having his eyes opened [internal].' As far as can be judged, some tangible results were expected by Balak from the *kesem* of Balaam, such as a curse or blight, or a direct indication of the best means of overcoming the power which protected Israel. The *kōsemim*, together with the priests, were asked by the Philistines (1 S 6²⁻⁹) to find out the cause of the plague, and they advised a divination by means of cows walking in a definite direction.

(b) The eldest tradition in *Sifre* (l.c.) connects *kesem* also with *rhabdomancy*, i.e. divination by means of staff, rod, arrows, etc. In our opinion, the earliest example of this divination is Jacob's peeled rods (Gn 30^{37a}), an incident which has remained very obscure in spite of all the commentators, who seem to have overlooked Gn 31^{10, 12}—the vision of Jacob and the appearance of the angel. The peeling of the rods and putting them in the trough was an act of divination which was explained to him by the angel in his dream; for surely the peeling alone could not, even on the basis of physiological impressions, have had the result of producing so widely different marks as black sheep and goats, ring-straked, speckled, grised, etc.—too complex a result to be expected from

one and the same impression. R. Moses of Coucy (1235) has preserved to us the description of an oracle or divination by means of peeled rods which were thrown into the air, and, according as the peeled or unpeeled side fell uppermost, success in marriage or the opposite was indicated (R. Joseph Karo, in his commentary to the *Tur*, l.c.). The appeal to the staff as an oracle we find in Hos 4¹². With some hesitation, one might also mention here the rod of Moses wherewith he was to do the signs (Ex 4¹⁷), and which has been invested with miraculous powers by very numerous legends, and believed to have been a rod from Paradise (see *Chron. Jerahmeel*). Another rod from Paradise, used as a beam in the building of the Temple, fills an important rôle in the legend of the history of the Cross. The angel that appears to Gideon (Jg 6³¹) also holds a staff in his hands, with which he touches the meat and the unleavened bread, and fire comes out from the rock. Elisha sends Gehazi with his staff to put it on the face of the dead child of the Shunammite, so that it may revive (2 K 4²⁹), and he tells him: 'If thou meet any man, salute him not; and if any man salute thee, answer him not again.' The spell is not to be broken, whilst the action is to be completed by the staff or divining rod. Of course, it is here a miracle to be performed through the grace of God.

From this time onwards we hear of the wand of the magician; and Rabbinical tradition demands that the *kosem* shall use, among other things, a staff or a rod (*Tur*, l.c.). Mention may be made also of the budding rod of Aaron, by which his selection was to be made manifest (Nu 17⁸), to which numerous parallels exist. In most cases it is a withered rod or staff stuck in the earth, which unexpectedly buds and flourishes, and is thereby a sign to the penitent that his sin has been forgiven: e.g. the legend of Lot, who waters the rod with mouthfuls of water brought from Jordan at the bidding of Abraham; and the flourishing rod proclaims forgiveness of sin (Fabricius, *Cod. Pseud.* VT.1, 428-31; Gaster, *Lit. Pop. Rum.* 284-86). Mediaeval literature knows a similar legend about a sinner appealing to R. Judah Hasid, when the rod flourished (*Maase Buch*, and Tendau, *Sagen*, 1873, no. 62; cf. the legend of Tannhäuser); and a similar selection of Joseph by the budding rod to take Mary as his ward is told in *Proten. Jacob*, ch. 8 (ed. Tischendorf, *Evangel. Apoc.*, Leipzig, 1858, pp. 15-19), and *pseudo-Matth.* (chs. iv.-viii. pp. 60-67), not to speak of the innumerable parallels in the Legends of Saints and in popular literature.

Throwing sticks into the air and watching the way they fall is still one of the many forms of *rhabdomancy*. To this kind of divination belongs the shooting of arrows, which is tantamount to sending a pointed stick high into the air and watching the direction in which it falls. It is as such an act of divination that the shooting of arrows by Jonathan is best explained (1 S 20^{20a}). The shooting of arrows for the purpose of *kesem* is found in the history of Joash (2 K 13^{18a}). The smiting of the ground seems to have been an accompanying ceremony. The use of the arrow in *kesem* appears also in Ezk 21²¹ (28). The fall of arrows was to indicate the road the king of Babylon was to take, for the arrows must have been shot straight up into the air and allowed to fall by themselves. In the legends about the fall of the Temple (Bab. *Gittin*, 56a, *Exempla* no. 70), Nero is said to have shot arrows from the four corners, and, as they all fell into Jerusalem, it indicated to him the impending fall of the town. It is still an element in Oriental, notably Gipsy, fairy-tales for the hero to shoot an arrow into the air and go in quest of it, and where the arrow falls things await him—good or evil.

(c) Akin to these forms of divination would be the *tree oracle*—the shaking of the boughs in one direction or another being taken as prognostication of some future event. This must have been the meaning of the oak of Meonen (Jg 9⁷). David heard in the noise of the shaking boughs of the mulberry tree (2 S 5²⁴) the sound of marching. In Talmudic times we find a special art of divination mentioned under the name of *shath d'palm*, the

language of trees. R. Yohanan ben Zakkai is mentioned as one who possessed this knowledge (see Bab. *Sukkah*, 28a). Abraham Gaon, who lived in the year 1140 of the Seleucid era (A.D. 829), could understand the speech of palms (*Aruch*, s.v., Sh. ii.). Through Arabic influences, special books of divination by means of palm trees or palm leaves (ascribed to Abu Iflah of Saragossa) have been preserved in Hebrew literature, in which the origin of this science is referred back to King Solomon (Cod. Gaster, 19, 329b, 523). Another species of divination mentioned in the Talmud and Midrash concerns the tree as a life token. At the birth of the child a tree is planted, and from its state of flourishing or decay one can divine the state of the man himself. By seeing the withering of Job's tree planted in their garden his three friends knew of his misfortune, and came to comfort him. Such trees were sometimes cut on the day of marriage, to be used as ornaments; the premature cutting of such a tree by a Roman general brought about, according to the Talmud, the war of Betar (Bab. *Gittin*, 57a).

(4) *Höbër* (RV 'charmer').—Not much information is found in the Bible concerning the activity denoted by this name. The tradition in *Sifre* (l.c.) which explains the *höbër* as one who could gather together (*häber*, 'companion') huge or small animals according to his skill—for what purpose is not stated—throws an unexpected light on many incidents in the Bible which have hitherto remained obscure, in which we recognize now the work of the *höbër*, though not under that name. If a similar view is to be taken of him as of the *m'ônén* (weather-maker) he must have been a man who could bring or avert, foretell the coming or disappearance of obnoxious animals. His inclusion in the list in Deut. would thus be thoroughly justified; for to bring wild animals into the land or to draw them away would be a curse or a blessing to the people. To this category would belong the priests who were asked for by the Cutheans from the king of Assyria, to be sent from Babylon to Samaria in order to drive away the lions which infested the land (2 K 17²⁴⁻²⁷). The priest sent was no doubt considered to be a powerful diviner or charmer, a *höbër*. Similarly Elisha, upon whose curse two she-bears appeared and destroyed the children after they mocked him, acts as a kind of *höbër* (2 K 2²⁴). So also a certain man from the sons of the prophets (1 K 20^{35a}), at whose bidding a lion kills the disobedient fellow-prophet, acts as a *höbër* who has power over animals for good or evil. In 1 K 13 we see the lion turning against the prophet (charmer) whose spell was broken through disobedience, although his power is still shown by the animal's standing quietly by the corpse next to the ass without hurting the latter. Going higher up the stream of Biblical tradition, we find Samson (Jg 14⁸) tearing to pieces a lion, in whose carcass bees afterwards swarm, contrary to the nature of bees, which never hive in dead bodies. Samson is able also single-handed to catch three hundred foxes and put firebrands between their tails (Jg 15⁴). Here we have an exact portraiture of a *höbër* (as interpreted by the present writer), one who is able to gather animals either for good or for evil purposes. According to later tradition, the presence of a pious man or reputed saint was sufficient to drive away obnoxious animals from a place. In the Temple area itself no fly was seen, nor did a wild animal ever hurt any visitor to Jerusalem (*Pirke Aboth*). The sanctuary took the place of the pious man in averting the evil of wild beasts (see Gaster, 'Beiträge,' ch. iv. p. 22 f., in connexion with the legends of Virgil, St. Patrick, etc.).

How far Beelzebub would fall within this cate-

gory would be difficult to state, but the Philistines attributed the plague of mice (1 S 6^{44, 19}) to the presence of the ark, and they returned golden mice as a votive offering with it. Here the ark, in inflicting the plague, acted in a similar though opposite direction to the sanctuary (ark) in Jerusalem, which prevented a plague of vermin.

It is a remarkable fact that all the acts of divination mentioned hitherto are found among the ten plagues inflicted by Moses in Egypt at the bidding of the Lord, no doubt to bring home to the Egyptians, in the manner best understood by them, that all the acts of the enchanters, augurs, charmers, weather-makers, could also be performed by a man in the name of another power against whom their own diviners and charmers could not prevail. We have—with the addition of (a) the rods of Moses and Aaron turned into snakes—(1) blood, (2) frogs, (3) lice, (4) various animals, (5) plague, (6) boils, (7) hail storm, (8) locusts, (9) darkness, and (10) the death of the firstborn. These correspond, with the exception of the last, to which reference will be made later on, to the arts of the *mānāhēsh* (a), *mē'ōnēn* (7, 9), *kōsem* (1, 3, 5, 6) and *hōbēr* (2, 4, 8). These practices known in Egypt were strictly forbidden to be practised by the Jews, and were strongly denounced in Leviticus and Deuteronomy.

The process of elimination of deep-rooted practices and of transforming them in accordance with the spirit of Judaism, runs on parallel lines with those of the spread of Christianity and of Islam. Local practices and heathen ceremonies were adapted with slight changes to the new order of things; heathen gods became local saints, heathen practices became Christian in the Church. Similarly, the forbidden practices of the *mānāhēsh*, *kōsem*, *hōbēr*, etc., were adopted and adapted to the spirit of Judaism; and they were practised by leading men—seers, priests, judges, etc.—in the name of the Lord God of Israel. And thus the people were slowly educated, until, with the establishment of the Temple in Jerusalem and the era of the great prophets, they broke finally with the past, and drove even the remnants of ancient superstition out of the Jewish worship and Jewish practice.

(5) 'Ob, *yidd'ōnī*, *dōrēsh el-hammēthīm* (RV 'familiar spirit,' 'wizard,' necromancer).—There still remains another kind of divination, which rests on the conception of Animism and the survival of the dead. No hint is given in the Bible whether it was a spirit of the dead or his material body which was sought after or inquired of. It is a fact that 'ob and *yidd'ōnī* always occur together except in the history of the woman of Endor (but even there in the same chapter Saul is mentioned as having destroyed [1 S 28³] familiar spirits and wizards) and Is 29⁴, where the voice of the 'ob is described as coming from the ground. We must, therefore, conclude that these two were intimately connected with each other. 'Ob has the fem. pl. *'ōbōth*, whilst *yidd'ōnī* has the masc. pl. *yidd'ōnīm*—probably an indication of differentiation of sexes, one the female and the other the male. In Is 8¹⁹ they are described as they 'that chirp and that mutter' (RV; better, 'conjurers who whistle and groan' [cf. Magical Papyrus Paris, where the god or the conjurer whistles and groans]), and are by the prophet connected with the dead (v. 19). In both cases *dāraš* ('to seek') and the alternative *sha'al* ('to inquire') are used. We find then that the 'ob and *yidd'ōnī* were things made. In 2 K 21¹⁶ and 2 Ch 33⁶, the Heb. נָפִיץ (RV wrongly 'dealt with') means 'and he made'; and Lv 20²⁷ must not be understood in the sense that men or women have in their body a familiar spirit, but that they are the possessors of an 'ob—evidently a material thing. The translation of 'ob as 'familiar spirit' is contrary to indications in the Bible. The woman of Endor is called distinctly *ba'alath 'ob*, 'the possessor of an 'ob'; not 'one possessed by an 'ob.' She must first perform a certain ceremony, she is to use enchantment (*kesem*) in order to get the 'ob to work (1 S 28⁸ 'divine unto me'), and only after-

wards she asks Saul whom he wishes her to raise from the dead.

Now, it is a very remarkable fact that the 'ob does not occur in Genesis, in Joshua, in Judges, in 2 Sam., in 1 Kings, or in any of the latter prophets except Isaiah. Another word, equally mysterious, is used, viz. *trāphīm* [note that the word is plural, and 'obōth and *yidd'ōnīm* occur also mostly in the plural form]. The *trāphīm* are mentioned in Gn 31^{19, 34}, but not in the other four books of the Pentateuch; then they occur in Jg 17⁵ 18^{14a}, 1 S 15²³ 19^{13, 16}, 2 K 23²⁴, Ezk 21²¹ (26), Hos 3⁴, Zec 10²; only in one case are they mentioned together with the 'obōth and *yidd'ōnīm*—2 K 23²⁴, where they are said to have been put away by King Josiah. The *trāphīm* also were 'made,' e.g., by Micah (Jg 17⁵, where they are differentiated from 'a molten image and a graven image'), and they are also asked or inquired of (*sha'al*), like 'ob and *yidd'ōnī* (Ezk 21²¹ (26)); in Zec 10² they 'speak,' Laban is the first to mention them, and calls them his gods (Gn 31³⁰); Rachel hides them (v. 34) in the saddle-bag (RV 'camel's furniture'). King Nebuchadnezzar consults them (Ezk 21²¹ (26): cf. the Parthian woman in Jos. Ant. XVIII. ix. 5 [344], who conceals the images of her gods which she worships in the house). All the evidence points to a Western Aramæan origin, whilst the 'ob and *yidd'ōnī* point much more to Egyptian origin; Is 19³ connects them with Egypt. It is, therefore, perhaps not improbable that we have here two different names for practically the same object of divination, connected more or less with the dead body, or, to put it more clearly, a mummified body worshipped and used for divination. The story of Michal in 1 S 19^{13, 16} leaves no room for doubt that the *trāphīm* so closely resembled life-like human bodies (mummies, not wooden images) that the soldiers could believe that David was sleeping in the bed. A legend in Jer. Targ. to Gn 31¹⁹ relates that 'they used to slay the firstborn of a man and cut off his head, salted it, and embalmed it, and wrote incantations on a plate of gold, which they put under his tongue, and stood it up in the walls, and it spake with them; and unto such Laban bowed himself' (see also *Chapters of R. Eliezer*). Here we have the mummified head, which might be called *trāphīm* among the Western Aramæans, and 'ob and *yidd'ōnī* in S. Palestine, according to the sex of the mummy used for necromancy. In Bab. *Keritot*, 3b, we find that the necromancer burnt incense to the demon, and then questioned him. Rabbinical tradition (*Sifra*, par. 3, ch. vii.) says of the 'ob that he is the Pithom (Python) who causes the dead to speak through some part of his body, *shehi* (see also *Sanh.* vii. 7), and, furthermore, that necromancy was performed by means of the skulls of dead men—no doubt because the process of mummification had died out, and mummies were not easily accessible. The same holds good for the necromancy as practised by other peoples, in which the skull of the dead plays a prominent part. In this connexion the death of the firstborn of the Egyptians would appear in a new light.

The idea of a *familiar spirit* is of much later date; it was introduced at a time when belief in the existence of evil spirits became deeply rooted, and when it was supposed that it was in the power of man to conquer and subdue such spirits and force them to serve their master in any office to which he might choose to appoint them.

Solomon became a legendary master of the demons, or *shēdīm*. The Temple was built by *shēdīm* (*Giftn*, 68a) at his command; and through his seal, on which the ineffable name of God was engraved, he could command the obedience of all the spirits. Here two sets of thoughts and beliefs have been blended, and Solomon's power was made to rest upon the knowledge and possession of the ineffable name of God with its tremendous

efficacy. The Apocryphal Testament of Solomon and the *Clavius Solomonis* (Solomon's Key) teach how to obtain mastery over *shēdm*. We find the history of a man having a *shēd* at his disposal (Bab. *Erlin*, 105b). *Shēdm* could not be conjured up on Sabbath or holy days (*Sheelat Shēdm*, see Levy, *Neuhebräisches und chaldäisches Wörterbuch*, 1876, s.v. 'Shēd', iv. 510). Conversation with the *shēdm* was considered a great art (*Sukkah*, 28a, see Zund, *Gottesd. Vorträge* 2, 1892, p. 173). In a Jewish fairy-tale a man overhears the conversation of *shēdm*, saves the king's daughter, and re-opens a well which had been stopped by their mischievous powers (*Exempla* no. 29, and Gaster in *FL* vii. [1896] 231). Nachmanides writes that pious Jews in Alemannia held *shēdm* in servitude, who did their bidding and carried out orders (*Responsa of R. Sal. b. Adrat*, no. 414); see also Manasseh b. Israel, *Nish. Hayyim*, iii. ch. 12, fol. 113b ff.).

Men who were reputed to hold communion with the dead were probably believed to be able to quicken the dead temporarily or permanently. The fact that Elijah (1 K 17^{17a}) and Elisha (2 K 4^{20a}) each revived an apparently dead child, and that the mere touch of the bones of Elijah was sufficient to call a man back to life again (2 K 13²¹), seems to point in the direction of such belief. But the subject is very obscure, and later tradition does not help us to elucidate the problem. Real necromancy does not seem to have flourished among the Jews. So little was this the case, that none of the later authorities gives any further information about 'ōb and dōresh *el-hammethim*, and about the *yiddē'ōnē* they tell us only that the man put into his mouth a bone of a certain animal called *yaddu'a*, which caused him to speak—which is, of course, a mere guess, or probably a misinterpretation of the use made of the bone of the dead (men and animals) for the operation of divination (see *Tur*, l.c.).

(6) Thus far we have dealt with the various kinds of divination of a heathen origin mentioned in the Bible, and practised by Jews at an early date, only after they had been stripped of their heathen garb and adapted to the teaching of Judaism. As the Law, however, condemned certain modes of divination, other means had to be found in full accordance with the true spiritual teaching of Judaism. The whole world was the creation of one God, and from Him alone the answer must come, and to Him men must turn at critical moments of their lives. The means by which the answer is to be vouchsafed is of a threefold character: by dreams, or by *Urim*, or by the vision of the prophet (seer). To such means did Saul resort (1 S 28⁶), and only when he found himself forsaken by those lawful means did he turn to the forbidden arts and go to the woman of Endor, the mistress of an 'ōb.

(a) *Dreams*.—Of dreams there are abundant examples in Genesis and in the historical books, but none of the same kind in the other books of the Pentateuch. God came to Abimelech in a dream (Gn 20³); Jacob dreamt of the ladder (28^{12a}), and again in connexion with his peeled rods (31¹¹); Laban also is warned in a dream against attacking Jacob (31²⁴). The forecasting of future events appears in Joseph's own symbolical dreams (37^{5a}), as well as in the dreams of the butler and the baker in Egypt (40⁶), and the dream of Pharaoh (ch. 41), interpreted by Joseph as a solution granted by God. No reference to such prophetic dreams occurs elsewhere in the Pentateuch, although we have the statement (Nu 12⁶) that God speaks to prophets in a dream. Quite different is the character of the dreamer of dreams (Dt 13^{1a}), rather a sinister personage, as in Jer 23²⁵⁻²⁸, 22 27⁹, where diviners, dreams, and soothsayers are mentioned together (cf. also Zec 10²). The dream of the Philistine is understood by Gideon as foretelling future success (Jg 7¹³). The Book of Daniel is full of dreams and prophetic visions of the future, which border on the higher sphere of prophecy, or the direct revelation of the future by God through His prophet. This lies outside the immediate scope of divination, for the human initiative is practically

eliminated; the prophet now acts simply as an agent selected by God, for His purpose, to carry His message to the people. The last time that God speaks to His chosen in a dream is to Solomon at Gibeon before the building of the Temple (1 K 3⁹), and immediately on its completion (9⁹); no other example after this is mentioned in the Bible—a fact of deep significance.

Apocryphal and apocryphical literature is, however, full of such prophetic dreams. In the *Chron. of Jerahmeel* alone no fewer than eight or nine such dreams are recorded; the dreams of Methuselah and Enoch (ch. xxiii. p. 48, intr. lxxi); the dream of Pharaoh foretelling the birth of Moses (chs. xlii. xlviii. p. 102, intr. lxxxvii.); the dreams of Naphthali (xxviii. 3 and 5); the dream of Kenaz (vii. 39, 40); the dream of Mordecai, Ahasuerus' dream; and the dream of Alexander the Great (xxxv. 4ff.; found also in Samaritan literature [*Abulfath*]). Mention may be made also of dreams in the *Test. of the XII Patriarchs* (Charles); Levi, Jacob, Naphthali, and Joseph; the visions of Enoch in the Book of Enoch (lxxxiii.-xc. pp. 220-259 [Charles]), and the visions of Ezra in 2 Esdras. Later Jewish literature abounds in prophetic dreams sent to the people to warn them of danger, such as that in the legend of Bostanai the exilarch (*Seder 'Olam Zutfa*).

The interpretation of dreams became a recognized art. Many examples are found in the Talmud of men who received payment for this function. Twenty-four interpreters are said to have practised at the same time in Jerusalem. A certain Bar Hadya is mentioned by name as one who shaped his interpretation according to the amount received.

Such interpretations are found in the Talmud (*Ber.* 56a ff.; *En Yaacob*, par. 110; *Jer. Ma'aser sheni* iv. 6), the *Exempla* of Rabbis (nos. 215-217), and *Maase Buch*, Amst., no. 28, fol. 7b. These form the basis of the Hebrew *Oneirokritika* which are ascribed to Joseph, Daniel, Hai (ed. pr. Ferrara, 1552), Saadya, etc., and published by Almull in his *Pitron Halomoth* (*Mefasher Halmin*, ed. pr. Lisbon (?) 149-; see Cod. Gaster, 383, 364, and 1087). Some of the sages ask that the answer should be given in the dream to their query, like Raba (*Bab. Menahot*, 67a) and R. Johanan (*ib.* 84b). He who sees an ill-omened dream fasts and recites a special prayer whilst the *kōhānim* pronounce the priestly blessing during the service (*Bab. Ber.* 55b). A curious collection of 'responses from Heaven' exists in Jewish literature, dating probably from the 12th or 13th century.

(b) *Urim and Thummim* was another means of divining the future, explaining the past, declaring guilt and innocence, dividing land, and deciding the issues of war and peace. In accordance with the system pursued of concentrating every possible sacred or sacrificial action in the hands of very few, and thus of weaning the common people from such practices, the divination by means of the Urim and Thummim was reserved for the high priest. Only he, in his priestly robes and wearing the breast-plate called 'the breast-plate of judgment' (decision) (Ex 28³⁰), could use the Urim for the purpose of obtaining an answer from God to his question. We cannot here enter fully upon the discussion as to what the Urim and Thummim may have been. These words occur altogether seven times in the whole Bible; and in two of these, Ezra and Nehemiah, as a remembrance of old (Ezr 2⁶³, Neh 7⁶⁶). To the other five passages we must add two in which the practice is implicitly referred to (Jg 1¹ and 20¹⁸, where the children of Israel went up to Bethel to inquire of the Lord, i.e. through the priest, who only could obtain the answer by the Urim and Thummim). The ephod consulted by David in K'elah (1 S 23^{9a}) was worn by the priest Abiathar. Evidently the reference is to the Urim and Thummim within the ephod, and similarly in 1 S 30^{7a}; and probably the ephod in Hos 3⁴ also means the oracle of the Urim and Thummim. In 1 S 28⁶ we are told that Saul had inquired of the Lord 'by the Urim,' and only because he got no answer he went to the woman of Endor. In 1 S 14¹⁸ Saul says to Ahijah, 'Bring hither the ark' (LXX, 'the ephod'), and in v. 4, when the guilty party is to be discovered, he says *hābāh tāmim*, which must be read *hābāh tūmmim*, i.e. Urim and Thummim; and then they cast lots, and Saul and Jonathan are first taken.

and afterwards Jonathan alone. This reminds us of the identical process in the case of Achan (Jos 7^{14a}). Rabbinical writers identify the Urim and Thummim with the twelve stones of the breastplate, and explain these names as 'lighted up' and 'dark,' stating that the stones lit up or a light shone in them (according to some the letters stood out lighted up) in the case of a favourable answer, and that they remained dark at an unfavourable one. After the establishment of the sanctuary in Jerusalem by David, no further mention is made of this kind of divination by lots and by means of the Urim. That event was the turning-point in the whole history of Jewish worship and in the practice of divination.

Special mysterious powers were ascribed to the stones of the breast-plate, and from Epiphanius onwards the literature of *Lapidaria*, or 'stone books,' has grown continuously. Hebrew literature shows a variety of such *Lapidaria* (*Kohot ha-abanim*). A number of unedited texts have been collected by the present writer in his Cod. 377, besides other MSS (Cod. Gaster, 337, 714; de Vidas, *loc. cit.* fol. 9a).

After the disappearance of the Urim and Thummim another inspired oracle took its place—the *Bible oracle* (the oral recitation of Biblical verses). Infants were asked to tell a verse to a man who met them quite unexpectedly, and from the verse which the child repeated innocently the questioner drew his own conclusions, for he saw in it the oracular answer to his query. We may look upon the passages referred to above under '*M'naḥesh*' (Gn 24^{1st}, Jg 7¹¹, 1 S 14⁸⁻¹², and 1 K 20³⁸) as the oldest examples of divination from the opening words of the enemy or interlocutor. This is the origin of the Bible oracle (stichomancy) by means of a written and later on a printed book. It consists in opening the book and looking at the first verse that meets the eye as a means of divination, or in putting in a pointer, and the passage where the pointer rests is taken as full of significance and prognostication. Samuel used to inquire through 'the Book' (Bab. *Hullin*, 95b; cf. the *sortes Vergilianae*). The Bible oracle leads to that of the *Shimmusha Rabba* (or that of selected portions of the Bible) known in the 8th or 9th century. In the *Shimmush T'hilim* the Book of Psalms is used as a means of divination (Cod. Gaster, 1094^a, and often printed with Book of Psalms; best ed. by W. Heidenheim).

At an indeterminate period in post-Biblical times a large number of magical ceremonies and practices of divination flowed into the stream of Jewish tradition, and it is often difficult to trace each of these elements to its proper source. All that was done was to copy and to borrow such material, and so change and mould it as to make it compatible with the special teaching of Judaism, though the line of demarcation between, e.g. Jews and Muhammadans in these practices is so faint as to be often indistinguishable. Nowhere does this borrowing show itself more clearly than in the books for telling future events, or fortune-telling books (*Sifre Goralot* [Amsterdam, 1700], *Urim Vethummim* [Dyrenfurth, 1700], ascribed alternately to Hai-Saadya, Aben Ezra, Pokeah, Ibrim [Venice, 1657]; Cod. Gaster, 61, 213, 439; Aben Ezra, 35, 112, 465, 470, 471, 592, 594, 702; Saadya, 602, 679, 782, 1017, 1060, 1090). A thorough investigation of the origin and filiation of these books and their interdependence is still lacking (Steinschneider, *Die hebräischen Übersetzungen des Mittelalters*, § 533, pp. 867-71).

The hand and the face of man were also used for the purpose of divination. The *Zohar* (Exodus) already contained almost a complete treatise on physiognomics (*hochmath ha-parsuf*), and the Hebrew version of the *Secretum* ascribed to Arisototele (ed. Gaster [contains in bk. xi. a treatise on physiognomy]) continued to spread and to fortify

the belief in physiognomics among the Jews. Cheiromancy (*Hochmath ha-yad*, last ed., Warsaw, 1902) is found in many manuscripts and prints, and also in translations in the Hebrew-German (Cod. Gaster, 443, fol. 90b f.).

(c) *Rô'eh*, or *seer*.—The last form of divination to which Saul resorted was through the *nābî*, the prophet, or rather the *rô'eh*, the seer, 'for he that is now called a prophet was beforetime called a seer' (1 S 9⁹). He was expected to answer not only important questions affecting the safety of the king or nation, but also trivial inquiries about lost property, e.g. the asses of Kish (1 S 9^{30a}). The seer was then acting as the Hebrew counterpart of the heathen *kōsēm* (like Balaam, etc.), who also claimed to 'see' and to be a 'seer' (Nu 24⁴⁻¹⁶). Samuel is consistently called the seer and not the prophet in 1 Ch 9²² 26²⁸ 29²⁰; and other personages belonging to the time before the building of the Temple appear under the same names of *rô'eh* and *kōsēm*, which alternate with one another and are both distinguished from *nābî*. The latter was, no doubt, considered as yet inferior to them; for we find the 'company of prophets' (1 S 10^a. 10. 11), Saul turned prophet (10¹¹), and 'the sons of the prophets' (1 K 20³⁸, 2 K 2² etc.) all playing an inferior rôle to that of the *rô'eh*. Similarly the *nābî* in the Pentateuch seems inferior to the *nābî* of the time of the kings. He is more akin to a diviner. Abraham is called a *nābî* (Gn 20⁷), although he does not prophesy, but knows of Abimelech's dream. Aaron is appointed *nābî* to Moses (Ex 7¹), certainly not as superior to him; seventy elders prophesy (Nu 11²⁶), and Eldad and Medad do so in the camp, like the bands of prophets and Saul mentioned above. In Nu 12⁶ God speaks to the *nābî* in a dream. In Dt 13^a. 18²⁰ the *nābî* is placed on the same footing as the dreamer of dreams (see above). The *nābî* of Dt 18¹⁵ must therefore be taken in the same sense as the *nābî* in all the other passages in the Pent., and loses the special significance attached to the name. It is noteworthy that Moses is called *nābî* only after his death (Dt 34⁹). Saul resorted to a *nābî* for the purpose of learning what the future had in store for him (1 S 28³), and therefore one is justified in including this *nābî* among the diviners, like the *kōsēm* and *rô'eh*—the Jewish equivalent of the heathen *kōsēm*. But from the time of David onwards a change took place in the value attached to the name. The *nābî* was no longer a man who could take any initiative, or answer questions put to him, but an inspired agent of God, selected by Him to send His messages to rulers and peoples.

With the prophets of the Second Temple prophecy had come to an end. Instead of it there was the *Bath Kōl*, i.e. the second voice, a kind of Divine echo heard within the precincts of the Temple or in answer to queries put to Heaven by the Rabbis (Bab. *Yoma*, 9b; *Sanh.* 11a; Jer. *Ber.* 3b).

The final stage of divination was by the use of the mysterious and ineffable Divine Name. This was a dangerous mode of divination; of the four great men who attempted to penetrate the Divine mysteries (*Hag.* 14b), only one, Aqiba, escaped unhurt. Practical *Qabbalā* is the final outcome of this mystical development, which has almost entirely driven out all the older forms of divination. From the time of the Essenes (2nd cent.) downwards magic and divination centre in the mystical names of God, angels, etc. Magical papyri abound, containing directions how to divine theft, or how to obtain a dream which would foretell the future. The most ancient book of this kind is the famous 'Sword of Moses' (ed. Gaster, London, 1896), a complete manual of such operations. Some of the formulæ and practices contained

therein have survived to the present day. Many a man in mediæval times was credited with insight into the future through the knowledge of this ineffable name.

The last stage in the development of the art of divination was reached when the place held in ancient times by the *kôsem* or *menahesh*, then by the *ro'eh* and *nâbi*, then by the scholar and sage, was finally taken by the *ba'al shem*, the possessor of the ineffable wonder-working name of God. He is the exact counterpart of the *ba'alath 'ob*, the female possessor of the *'ob* (woman of Endor). He also could conjure the dead, foretell the future, and perform every possible miraculous deed. The legend of the *ba'al shem* told in *Ma'ase Nissim* (see Tendlar, *Sagen*,⁴ no. 52, p. 25 f.) makes him raise out of a cup Joab b. Zeruiah (King David's general). Practically the last link in this chain is the famous *ba'al shem* (known as Besht [Ba'al Shem Tob]), the founder of the sect of the Hasidim at the beginning of the 18th cent., whose successors are the reputed wonder-working Rabbis of the Hasidim in Galicia and Eastern Europe.

But all these modes of divination have gradually disappeared. Only the Qabbalistic formulæ are from time to time resorted to and practised in addition to those borrowed from other nations; for in modern times, and especially in Eastern countries, the Jews follow the superstitions of the native population, and practise the same modes of divination for such lower purposes as to detect a thief, or to find out whether a woman will marry in the course of the year, whether her child will be a boy or girl, whether or not an undertaking will be successful. But there is nothing specifically Jewish about them.

LITERATURE.—As the writer of this article differs fundamentally in the interpretation of the Biblical terms on divination from all other scholars, he does not refer to any other article on this subject, or to any of the special books hitherto written on divination in the Bible. In addition to the references given in the text of the article itself, the following bibliography will serve the purpose of directing students to a vast field of hitherto scarcely explored literature. One name stands out prominently, that of M. Steinschneider, and his great work, *Die hebräischen Übersetzungen des Mittelalters*, Berlin, 1893 (notably § 589, p. 893 f.; § 641, p. 906; § 622, p. 849; § 583, pp. 867-71; § 575, p. 963 f.; and § 534, p. 871), contains the most reliable data on many of the subjects of the later period of Jewish literature, when it stood under the influence of Greek, Arabic, and mediæval Latin literature. Still even he left room for additional information. Some of it, especially MSS material, may be found in the bibliography to artt. BIRTH (Jewish) and CHARMS and AMULETS (Jewish), in which very much matter referring to divination may be found. A few more books may be now mentioned here: M. A. Delrio, *Disquisitionum magicarum libri sex*, ed. Cologne, 1790, iii. p. 11 q. iv. a. 6, pp. 473, 478-480; Manasseh ben Israel, *Nishmat 'Hayyim*, ed. Amsterdam, 1652, bk. iii. chs. 4-29, fol. 101 f.; M. Güdemann, *Gesch. des Erziehungswesens und der Cultur der Juden*, Vienna, 1880, vol. I. p. 201, no. 2; M. Gaster, *Literatura Popularis Rumana*, Bucharest, 1883, pp. 324, 606 f., 517, 517a, 531, 532a; K. Krumbacher, *Geschichte der byzantinischen Literatur*,² Munich, 1897, pp. 627-631 and *passim*; H. Diels, *Beiträge zur Zuckungs-literatur*, Berlin, 1908; Jacob Racah, *Kishurim le Yaakov*, Leghorn, 1850, fol. 24a-26b.

M. GASTER.

DIVINATION (Litu-Slavic).—A synopsis of the various means employed by the Prussians and Lithuanians to divine the future is given in the art. ARYAN RELIGION, vol. ii. p. 54 f. As grounds of their predictions they had—or still have—recourse to the flight and cries of birds; appearances in the sky and other natural phenomena; sacrifices, entrails, and blood; chance meetings, the rustling of the oak, fire and smoke, dreams; various happenings and utterances at weddings; wax, lead, glass, the foam of beer, amulets, sieve-turning, plants, and innumerable other things. One of the most ancient and widely-used accessories of divination was *blood*, both of man and beast. When the Grand-duke Keistut of Lithuania was overthrown and taken prisoner by King Ludwig of Hungary in 1351, he made a treaty with the victor,

pledging himself to embrace Christianity and desist from further troubling. This treaty was ratified by a rather curious Lithuanian oath, the preliminary to which was a blood-oracle:

'Et facta est hæc promissio per regem cum tali iuramento: accepit enim bovem et in praesentia regis Ungariae et suorum fecit bovi duas venas incidere in collo, et, si sanguis ferventer exiret, bonum esse indicium futurorum; et largitus fuit sanguis effusus. Tunc rex Litowiae bovem fecit decollari et inter bovis caput et corpus progrediens iuravit, sibi sibi contingi, si promissa non servaret' (Scriptores Rer. Pruss. iii. 420).

But human blood likewise might be used for purposes of prophecy. Thus, in 1325-26, when the Grand-duke Gedimin sent twelve hundred horsemen to the assistance of King Lokietek in his struggle with the margrave of Brandenburg, 'prepositum de Bernow, hominem corpore grossum et pinguem vincunt, caput inter crura detorqueunt, dorsum eius gladiis aperunt, profluvium sanguinis attendunt, de exitu belli per ipsum divinare cupientes'; and it is also recorded that in the same campaign 'quibusdam guttura preceiderunt et divinationes suas exercebant' (cf. A. v. Mierzynski, 'Der Eid des Keistutis', *Sitzungsber. d. Altertums-gesellsch. Pruss.*, no. 18, Königsberg, 1893, p. 104).

Such incidents show that as late as the 14th cent. of our era the Lithuanians, like the prophetesses of the Cimri (cf. *ERE* ii. 54^b), were in the habit of killing their prisoners of war in order to ascertain by an inspection of their blood whether the approaching battle would result in victory or defeat.

Leaving the Baltic peoples, we proceed to speak of the Slavs, and, more particularly, of the Russians. Here, in the 16th and 17th centuries—a period from which several continuous records survive—we find an almost incredible development of the belief in omens (*primëtü*) and the practice of fortune-telling (*gadanie*). It is scarcely too much to say that among the Russians of that age the individual's course of life was entirely conditioned by premonitions. Books of magic and collections of warnings and predictions, though banned by the clergy, were passed from hand to hand. A creaking in the wall or a singing in the ears foretold a journey. An itching in the palm signified a gift of money. Itching eyes betokened weeping. The croaking of ravens or the crowing of cocks was an omen of misfortune. The cackling of ducks or geese, twitching of the eyelids, the crackling of the fire, the howl of a dog, the squeaking of mice or their nibbling of clothes, a cat appearing at the window with a captured mouse, a terrifying dream, meeting with a blind person—all these foreboded loss by fire. In a MS in the Rumjanzov Museum we read:

'When the shores heave, and the sea rages, when dry or moist winds blow, when rain, snow, or storm-clouds appear, when thunder rolls, the storm howls, the forest rustles, the trunks of trees grate on one another, wolves howl, or squirrels leap—then will ensue plague, or war, or scarcity of water; in summer fruits will grow nowhere, or they will disappear.'

The people believed in dreams, and framed an elaborate system of reading their significance. They saw portents in the act of sneezing, in the crawling movements of insects, in every sort of object they came across. It was thought unlucky to meet with a monk, a horse with hair worn off, or a pig. As early as the 12th cent. we find St. Theodosius censuring those who allowed such occurrences to scare them home again. Native and foreign superstitions were inextricably blended. The people had also complete written systems of prophecy, called *rafi*—a term of Arabic origin ('libellus astronomicus seu mathematicus Persarum' [Ducange]; Arab. *raml*, 'geomancy'); the *Domostroj* (cf. *ERE* iii. 465, note 1), § 23, warns against their use. Mention should also be made here of the so-called 'birth-magic' which the sorcerer, at the mother's request, performed over the newly-born child, and by means of which he ascertained or

¹ Cf. for what immediately follows, Kostomarov, 'Sketch of the Domestic Life and Customs of the Great Russians in the 16th and 17th Centuries,' in *Sovremennik*, vol. Ixxiii. (Russ.).

determined its lot in life. It is, therefore, no exaggeration to say that the Russians of that day lived from the cradle to the grave in an atmosphere of constant dread and solicitude regarding the future; and the beneficent and emancipating results of culture and enlightenment are never more profoundly felt than when contrasted with a human existence thus harrowed by omens and superstitious terrors from morning till night (cf. *ERE* ii. 55^b).

Even at the present day, however, among the Russian peasantry, the belief in omens and predictions still prevails to an extent without parallel among any other European people. The manifold superstitions of an aged Russian peasant woman are thus set forth in Turgenev's romance, *Fathers and Sons* (ch. 20, at the end):

'She was pious and impressionable to a degree; she believed in all kinds of omens, predictions, spells, dreams; she believed in lunatics (see below), in household spirits, forest spirits, unlucky forgerthings, enchantment, popular remedies, Maundy Thursday salt (the salt sprinkled on Maundy Thursday bread ranks as a powerful specific); she believed that the end of the world was at hand, that the buckwheat prospers if the candles are not extinguished at the evening service on Easter Sunday, and that mushrooms cease growing when they have been seen by a human eye,' etc.

In the present article we do not propose to deal further with this mass of detail, but will restrict ourselves to a somewhat fuller consideration of two particular points: (1) peasant weather-lore, which, amid a chaos of absurdity, nevertheless contains a certain measure of rationality, based upon experience and the observation of Nature; and (2) the interval between Christmas and Epiphany—a period during which, even in the Russia of to-day, all conceivable forms of augury and prophecy are still in full swing.

(1) The first of these topics, *peasant weather-lore*, has been dealt with by A. Ermolov in two volumes of his comprehensive work, *Agricultural Folk-wisdom in Proverbs, Sayings, and Weather-saws*: i. 'Der landwirtschaftliche Volkskalender,' Leipzig, 1905, and iv. 'Popular Weather-lore' (Russ.), St. Petersburg, 1905. It is shown in these works that, while all European peoples have a vast store of weather-wisdom, sometimes exhibiting remarkable affinities and parallels, yet the inhabitants of Eastern Europe surpass all others in this regard. In that region there is no animal so diminutive, no herb so insignificant, but its doings or properties may supply omens of future events, of weather that will be favourable or unfavourable to the husbandman; while, again, there is no natural phenomenon, occurring at some particular time, but may act as the harbinger of a good or a bad harvest. In Kasan, the Chuvashes (a Finnish, now Finno-Russian, tribe) are said to be looked upon as oracles.

'Strange as it may seem, they scarcely ever go astray in their predictions. By long-continued observation they have become sensitive to signs which enable them almost unerringly to forecast the weather.' 'Their memories are stored with a mass of all but infallible maxims inherited from the past.'

(2) The period between Christmas and the Feast of Epiphany is known in Russia as *svyatki* (from *svyati*, 'holy'), or *koljada* (from Lat. *calendae*), the latter term being also applied to the practice of going about from house to house at Christmas and on New Year's morning. During the Christmas week the practice of prognostication, which is applied in the main to affairs of love and marriage, and partly also to forecasting the weather and the harvest, attains its highest vogue (cf. *Russian Folk-poetry* [Russ.], Glasunov ed., St. Petersburg, 1904, p. 86; Stepanov, *Popular Festivals in Holy Russia* [Russ.], St. Petersburg, 1899, p. 149). When young men or young women wish to know something of their future partners in life, they have recourse to the *horse-oracle*. The young women, for example, take out a horse, and walk it over a

beam: if it stumbles, the husband of the person consulting the oracle will be a good man; if it steps clear, he will be bad.¹ Divining the future by means of a splinter of wood is also concerned with marriage. When the splinter has been partly dipped in water, it is set fire to at the dry end; then the shorter or longer interval before the flame expires foretells respectively a happy or unhappy marriage.²

The period between Christmas and Epiphany was, as already indicated, a special time for weather-prophecy, as witness the following extract from Ermolov, *op. cit.* i. 518 f.:

'In Little Russia, before the supper on Christmas eve, the oldest of the household brings a bundle of hay into the cottage, spreads it upon the bench in the front corner, covers it with a clean tablecloth, and then places above this, and just beneath the bracket for the saint's image, an untreshed sheaf of rye or wheat. During supper those present engage in reading the signs which indicate the character of the ensuing harvest. For this purpose they draw hay-stems from under the tablecloth, and from the length of these form an estimate as to the growth of the corn. They likewise pull stalks of straw out of the sheaf under the ikon; if the stalk bears a full ear, they may look forward to a good harvest; while, if the ear is shrivelled, the crops will be a failure. When the supper is over, and the housewife has cleared the table, the reading of omens is renewed, these being now found in the seeds dropped from various plants among the hay. If most of the seeds are black, the buckwheat will turn out well; while, if white or red seeds predominate, oats, millet, and wheat may be expected in abundance. At the killing of the pig before the Christmas festivities, the peasants in Little Russia inspect the pancreas. If it is large, thick, and of equal breadth throughout its whole length, the winter will not be a long one, and there will be no severe frosts; but, if the gland be of irregular shape—thick at the head end and thin at the other, or inversely—the winter will be cold at the beginning and warm towards the close, or vice versa. If the pancreas be thin about the middle, the peasants expect a thaw in mid-winter.'

This custom recalls the Roman Saturnalia and haruspication; and it is also said that the Russians have a parallel to the *signa ex tripudiis*, i.e. divination by the eating and drinking of fowls (cf. the 'Roman' section of this article). It may be said without misgiving, indeed, that analogies of the Roman auguries and their underlying superstitions are nowhere found more abundantly than in the east of Europe. It should be observed, however, that the peasantry are quite well aware that during the *svyatki* they have still one foot in paganism, for, as they say, 'the beginning [of the season] also ushers in the revelries of the Evil One and the witches, who steal the moon and the stars from the sky, keep holiday, and disport with the demons.'

While, nowadays, as the foregoing bears out, the Russian people—men and women alike—are all highly proficient in *primity* and *gadania*, these arts were formerly to a great extent in the hands of wizards and sorcerers, the various names applied to whom are enumerated and explained in the art. CHARMS AND AMULETS (Slavic), vol. iii. p. 465^a. Besides these adepts, however, there are other two classes of persons to whom is attributed a special measure of supernatural and prophetic power, viz. women and lunatics.

The belief that the faculty of seeing into the future belongs in an eminent degree to women can be traced everywhere in ancient Europe, and, as existent among the Germans, finds its clearest expression in Tac. *Germ.* 8:

'Inesse quin etiam sanctum aliquid et providum putant, nec aut consilia auri aspernantur aut responsa negligunt'; cf. also *Hist.* iv. 61: 'veteri apud Germanos more, quo plerumque feminarum fatidicas et augecentes superstitione arbitrantur deas' (further particulars in K. Müllenhoff, *Deutsche Altertumskunde*, Berlin, 1870-1900, iv. 208 ff.).

As regards the basis of fact which underlies the real or imaginary prophetic gift thus ascribed to women, and exalting them in the people's eyes to

¹ For the horse-oracle among the Indo-Germanic peoples, cf. *ERE* ii. 55.

² On this topic, cf. the present writer's remarks on the Indo-Germanic marriage in *Die Indo-Germanen*, Leipzig, 1911, p. 87 f.

the position of *Haliurunnas* (Goth. [Jordanes, *Get.* xxiv.]), 'those who know the secrets of hell, or of the under world,' we shall hardly err in tracing this element to the nervous and hysterical nature of woman, which, in moments of excitement, seems to raise her above earthly conditions. It was in the state of ecstasy likewise that the Greek *Pythia* uttered her oracles. This was also the case in the remarkable outbreak of the Russian *klikusi* (from *klikati*, 'to shriek'), the 'possessed' or 'epileptic,' who greatly disturbed the country in the 16th cent., and had to be dealt with by the Church Council of Moscow (*stoglavny sobor*) in 1551. They were principally elderly unmarried women—and thus specially liable to hysteria; they ran about barefoot and unkempt; they shook, they fell, they whirled, they writhed, and amid such doings uttered their predictions of the future. Frequently—and sometimes as a result of bribery—they brought criminal charges against individuals, who were thus rendered liable to legal proceedings. The presence of these women in a city was a veritable plague, and the Church Council referred to petitioned the Czar to order the inhabitants to expel the lying prophetesses from their midst (cf. Kostomarov, *op. cit.* p. 547).

Of a somewhat similar character are the prophetic powers ascribed among the Slavs to *lunatics*. The insane fall under the same category as the Roman *monstra*, as is borne out by the Russian terms applied to them, viz. *jurodivy* (from *urodi*, 'prodigy,' 'monster'). They filled the soul of primitive man with amazement, and even with reverential awe. Like the hysterical women just spoken of, they poured forth incoherent words and phrases, which seemed to come from another world, and to betoken a supernatural knowledge. Precisely the same process of thought manifests itself in the Greek series of words: *μολομα*, 'I rave,' *μωλία*, 'lunacy,' *μωρίς*, 'soothsayer'—a development which goes to prove that at a very early period there must have existed in Greece the same sort of prophetic lunatics as are found in ancient and modern Russia. During the reign of Boris Gudunov there lived in Moscow a lunatic of this type, who was revered as a saint. Naked and with hair dishevelled he went about the streets in the coldest weather, uttering his prophecies of coming woes. In awe-inspiring accents he arraigned Boris for the murder of the young Czarevitch; but the Czar—afraid, it may be, of offending the people, or else convinced of the man's holiness of character—made no sign, and did not attempt to interfere with him in the least (cf. Giles Fletcher, *Of the Russe Common Wealth* [London, 1591], Hakluyt Soc., Lond. 1856, p. 118f.). Even at the present day the insane fill a somewhat similar rôle in Russian village life. In a sketch called 'Village Drama,' by J. Garin (who has a masterly knowledge of the village communities), a merchant makes inquiry regarding a certain lunatic whose favourite occupation it is to pray for the dead upon their graves, and receives the following answer:

'We believe thus: he is a great servant of God. And he has taken up his abode in the bathroom at my house. I do not know why he has chosen me, for I am more wicked than others, and wholly covered with sins, as a mangy dog with fleas. So I cannot tell why it entered his mind to live with me. Still, he has fixed upon me, and now lives with me. We cannot account for him with our thoughts, and so we can understand only by signs (*primety*)—he is, in truth, a great servant of God.'

Such are the ideas which still prevail regarding the insane among the Russian peasantry.

LITERATURE.—This has been given in the course of the article.
O. SCHRADER.

DIVINATION (Muslim).—The methods of divination in use among the Muslims are enumerated in the following order by Ibn Khaldûn (*Prolegomena*, tr. de Slane, 1862-68, i. 218): (a) gazing at polished surfaces or 'crystal-gazing';

(b) haruspicy, i.e. observation of the entrails of slaughtered animals; (c) sortilege with nuts or pebbles; (d) *zajr* or *'iyâfah*, augury, or observation of the motions of beasts and birds; (e) possession; (f) casual utterance; (g) *darb al-raml*, geomancy or divination with sand; (h) (in Rabbinic phrase) *gematria*, or divination by letters. Under one or other of these heads all the forms of divination in use among the Muslims can be ranged; thus the discipline which corresponds with palmistry, but deals preferably with other lines than those on the hand, is clearly akin to haruspicy. Into most of them astrology enters, for the process is supposed to be influenced by the controlling planet.

Of these *augury* certainly goes back to pagan days, and it is noticeable that the word by which the Hebrew prophets describe their visions (*hāzōn*) comes from a root whereby in Arabic this process is described. The verses collected or invented by antiquarians in illustration of the Arabian augury indicate that it was in part etymological; the word for 'raven' comes from a root meaning 'to be a stranger,' whence the appearance of a raven indicates parting or pilgrimage; the name for the hoopoe suggests 'guidance,' whence its appearance is of good omen to the wanderer. Two ancient augural words refer to the motion of the creature from right to left and from left to right; but the usage of the terms seems to have varied with different tribes, nor were they in accord as to the favourable direction.

The following rules are given in the treatise *Mufīd al-'ulūm* of Khwārizmī:

'When mountain beasts and birds leave their places, this presages a severe winter; a plague among cattle presages a plague among human beings, but a plague among swine presages health; a plague among wild beasts presages a famine; loud croaking of frogs presages plague; snoring by a man of importance presages promotion; loud breathing in sleep presages loss of money; loud hooting by an owl in a house where there is an invalid presages his recovery; but loud croaking presages the arrival of an enemy.'

From the practice of augury it is not easy to separate divination by encounter, and indeed the Greeks are said to have applied the word 'bird' loosely to whatever came in their way. In general, meeting with anything which suggests ill-luck is unlucky; the poet Ibn al-Rūmī permitted no inmate of his house to leave it for days, because they would have to encounter a one-eyed neighbour. It is lucky to meet some one who is carrying milk; all over N. Africa it is considered good manners to permit the wayfarer to dip his finger in it (Doutté, *Magie et religion*, p. 352). In the same region it is unlucky to hear the braying of an ass (which, according to the Qur'ān, is the most disagreeable of sounds), and the hearer should pronounce an exorcism. An early European traveller records that Maghribine warriors on their way to the front regard it as a good sign to meet big game, such as lions or boars; a bad sign to meet hares or rabbits. Certain omens are drawn from the conduct of domestic animals and of children; at Ouja, when the children took to lighting bonfires in the streets in the evening, their parents knew that war was at hand. There are cases in which the symbolism is rather less intelligible. Thus in N. Africa honey is thought to be unlucky, and must not be offered to a guest on the evening of his arrival or to a bride.

Haruspicy is properly connected with sacrifice, which occupies a very subordinate place in the Islamic system. The Zenatah who lived between Tlemsen and Tiaret practised divination by inspection of shoulder-blades, taken from sacrificed animals; from the lines or formation the *haruspex* could tell whether the year was going to be good or bad. This 'scapulomancy' is called *'ilm al-aktāf*.

In Turkestan, 'the most common method of divining the course of future events is to place on the coals the shoulder-blade of a sheep, which has been carefully cleaned of the flesh. This is gradually calcined, and the cracks, the colour, and the small particles which fall away from it, denote good or bad luck or the various accidents which may happen on an expedition. Another kind of divination is very common: *kumalak*, by means of dried sheep-dung. The Kirghiz selects forty balls of dung, and divides them roughly into three heaps. He then takes four at a time from each heap, until only four or less remain in each. The remainder he also divides into three heaps, and again takes from each by fours. Three more heaps are thus made, so that at last there are three rows of three piles in each. What is left he divides by three, and sees whether the remainder be one, two, or three. The varying numbers and positions of the balls of dung can be explained by an experienced soothsayer to the intense satisfaction or to the disappointment of the one who consults him' (Schuyler, *Turkistan*, New York, 1876, ii, 31).

Similar omens are drawn in N. Africa from the excrements in the rectum of the victim, and the blood. Scapulomancy is mentioned by Jāhīz († A.H. 255) together with palmistry and another mode of augury which is far less familiar, viz. divination by the gnawing of mice: When the Khalif Manṣūr (A.D. 754-775) was in a village, a mat of his was gnawed by a mouse; he sent it to be mended, but the workman suggested that it ought to be examined by a diviner first; the diviner foretold the Khalif a quiet and prosperous reign (*Zoology*, A.H. 1323, v. 93).

The use of the polished surface or magic mirror goes back to ancient times; according to Ibn Khaldūn, who agrees in this respect with modern crystal-gazers, the image appears not on the mirror itself, but on a kind of vapour which floats between the surface and the gazer's eye. The Khalif Manṣūr had a mirror which told him whether a man was a friend or an enemy; according to Sir 12th, the mirror rusted in the case of the enemy, and this was probably how the Agamemnon of Æschylus worked his 'mirror of friendship' (line 839). The process varies very much in different places, different materials being employed, with great varieties of symbolism. In Egypt the practice called *ḡarb al-mandal* is common, and performed with liquids, e.g. water or ink, or else with solid mirrors, such as sword-blades. Lane (*Modern Egyptians*, ed. 1871, i. 337-346) gives an account of some extraordinary performances of the kind which he witnessed in Cairo; the visions were seen by a boy, casually asked to gaze, in ink placed in the palm of his hand and surrounded by certain numerals; other features were a chafing-dish with live charcoal, in which spells written on paper by the diviner were burned together with frankincense and coriander-seed. In the mirror so arranged the boy saw among other persons Lord Nelson, of whom he had never heard. Lane's story provoked considerable discussion in Europe, but was defended by Sir R. Burton (*Pilgrimage*, ed. 1893, ch. xviii.), Sir Gardiner Wilkinson, and other persons familiar with the East. This process is used for discovering offenders; according to the account of it given by Douté (p. 390), which tallies in many respects with Lane's but adds many details, the medium is supposed to command the services of ten of the *jinn*, who are first told to discharge certain domestic duties and then compelled by an oath to tell the medium anything which he wishes to know. The function of medium is limited to a small class: boys under age, negresses, *enceinte* women, and people with a long 'line of fortune.'

Possession, or inspiration by the *jinn*, appears to have been a principle of the pre-Islamic divination, and the archaeologists profess to name some of the early diviners. Probably possession was not regarded as their normal state, and they hypnotized themselves by some process or other. The importance of the casual utterance doubtless goes back to an early date in Semitic civilization;

what is required is that the utterance should either be wholly unconnected with the matter on which it is made to bear, or that it should proceed from an invisible speaker. The author of *al-Fakhri* gravely narrates cases in which information was conveyed by these mysterious channels.

The two last methods—*geomancy* and '*gematria*'—are probably the most characteristically Muslim methods of divination, and the literature on both subjects is copious. In the former, some sand casually taken up is arranged in fifteen columns of from 5 to 7 grains, bearing technical names; conventional values are assigned to the combinations of these, and these conventional values give the answers to the questions addressed. A Bodleian MS contains a dictionary of those values; but it is not very lucid as to the mode whereby the column is obtained. Divination by the values attached to the letters of men's names is a highly complicated subject; Sabti (a man of Ceuta) invented a divination-table for this purpose called *Zairjah*, consisting of concentric circles, accompanied by an explanatory poem, based partly on letter-values, partly on astrology. Ibn Khaldūn inserts it in his *Prolegomena*; but his translator, de Slane, confesses his inability to follow the system. Some use, which is not very clear, is made of such groups as 222, 333, 444, etc.—a fact which indicates, what is otherwise attested, that the 'number of the Beast' is something far more complicated than the letter-values of a man's name. An obscure discipline, based on the numerical values of the letters, is called *jafr*; the Khalif 'Alī is said to have composed two books bearing the names *Jafr* and *Jāmi'ah*, wherein, by calculations of this sort, doubtless connected with Qur'anic texts, he foretold the whole history of the world until the Day of Judgment. These books are supposed to be in possession of the descendants of 'Alī, and, as was the case with the Sibylline books, some of their contents are occasionally divulged; the author of the *Dict. of Tech. Terms in the Mussalman Sciences* saw an extract which foretold the fate of the Egyptian sovereigns.

A classical manual of the black art is the 'Goal of the Sage' of Maslamah of Madrid († A.H. 398 = A.D. 1007-8), which it took him seven years to compose, containing matter which astonishes the reader. It there appears that both the planets and the constellations divide between them the various objects to be found in the world, and the different avocations of mankind. Thus to Mars belong the power of attraction, natural science, surgery, farriery, tooth-drawing, the Persian language, the right nostril, the gall, heat, hatred, the theology which denies the Divine attributes, silk, haremskin and dogskin, iron-work, brigandage, bitter tastes, dryness, and red stones; to the Ram belong the face, pupil, and ear, yellow and red, bitterness, deserts and robbers' caves, fuel, animals with cloven hoofs. The week-days, besides their planetary assignation, belong to certain angels: Monday to Gabriel, being cold and wet; Thursday to 'Isrā'īl, being hot and wet; Saturday to 'Azrā'īl, being cold and dry; Wednesday to Michael, as being a mixture of all four. The nature of the ink to be used in charms varies with the planets and constellations; and, according to the position of the moon, a charm when written should be disposed of in earth, air, fire, and water. Those who desire the services of the planets should bow down to them, and address to them complimentary speeches calling them by their Arabic, Indian, Greek, or Yunani names. The Greek names (called by this author *Rūmī*) are correctly given. One author, Ja'far of Basrah, whom this writer cites, invented a planetary division of the Qur'ān: by counting the mystic letters contained within

these divisions, he discovered how long each dynasty was to last; for each was controlled by one of the planets.

Lane (i. 328) describes some of the consulting tables or books in use in Egypt. The table of Idris consists of 100 compartments, in each of which a letter of the Arabic alphabet is written; the questioner, after reciting a text bearing on the subject of the Divine omniscience, places his finger at random on a letter; he then makes a sentence by adding every fifth letter till he comes back to the first; the sentence thus formed tells him whether to proceed or desist; it is so constructed that the proportion of negative replies to positive is four to one. Some which the writer has seen consist of Qur'anic texts written in a mysterious alphabet; therefore only an expert can use them; the more cautious experts are ready to give general answers out of them, but decline to give replies in which any sort of exactitude is required. The use of *sortes Koranicae*, or divining by the first text that meets the eye on opening the sacred volume, is said to go back to very early times; many copies of the Qur'an contain directions for this method of using the book. One method mentioned by Lane consists in counting the number of times the letters which commence the Arabic words for 'good' and 'bad' occur on the page, and in deciding for or against a course by the majority. Another substitutes the rosary for the Qur'an, and employs the three formulae, 'God's glory,' 'Praise to God,' and 'There is no god but God,' to represent 'good,' 'indifferent,' 'bad'; two beads are then selected at random, and the formulae recited in the above order, the beads being counted between the two selected; whichever formula goes to the last bead is regarded as answering the question.

That the dream should be commonly employed for ascertaining the future is natural, and there is a considerable literature on *ta'bir*, or 'dream interpretation,' mainly founded on the work of Artemidorus. Lane mentions an Egyptian practice of praying for dreams which can be used in this way: the questioner requests to be shown something white or green, or water, if the course which he contemplates is approved; something black or red, or fire, in the other case. Certain mystical words uttered before going to sleep will produce, it is thought, veridical visions. In some places the Qur'an serves as a sort of vocabulary for the language of dreams; a ship signifies safety, because the word 'save' is used in the Qur'an in connexion with Noah's ark; to dream of a king entering an unusual abode is unlucky, because the visit of a king is said in the same book to be a prelude to disaster. Similar glosses can be got from traditions, current proverbs, or familiar usage of words, while, in other cases, the theory that dreams signify their contraries can be applied; e.g. the victor in a dream-duel will be the defeated in the real encounter. The author of the *Mufid al-'ulum* gives a brief glossary of the dream-language, in the main on these principles; a complete dictionary of it was composed by 'Abd al-Ghani al-Nablusi (printed at Cairo, 1307), including proper names; the number of meanings assigned to the symbols is unfortunately perplexing; thus, to dream of Adam may either signify a warning to repent, or presage promotion to high office, or indicate that the dreamer will be deceived by the words of an enemy, etc. There are places where veridical dreams are more likely to be obtained than elsewhere; these are sometimes caves, more often the graves of saints.

The attitude of Islamic theology towards all these practices is, in general, tolerant, and indeed the presence in the Qur'an of mystic letters strongly favours its magical employment, which is exceedingly natural in those countries in which Arabic

is little understood, though used in both private and public worship. The belief in the *jinn*, who discharge some function in many of these operations, is also orthodox. The prophet himself appears to have attached considerable importance to omens, and, as might be expected, had prophetic dreams. Astrology was a highly respected discipline, on which even orthodox theologians might write. Further, some forms of Sufism took up with ardour the Qabbalistic study of the Qur'an, and in these speculations the letter-values play a prominent part. On the other hand, students of philosophy found ways of introducing a theory of divination into their system. The two most famous essays on the subject are those of Mas'udi (ed. Barbier de Meynard, 1861-77, iii. 323-364) and Ibn Khaldun (tr. de Slane, i. 216-237, and iii. 199 ff.). The former mentions three theories to account for divination: some suggested inspiration by *jinn*; others, the influence of the planet Mercury at the diviner's birth; yet others based the diviner's special knowledge on the purity of his soul; and this last appears to be the view held by Mas'udi himself. He confirms it by the facts that the genuine diviner is usually an anchorite and devotee, and that the famous pre-Islamic diviners showed a tendency to get rid of their bodies altogether: thus the wizard Sa'ih had no bones save in his head.

Ibn Khaldun's theory is that, in all cases of divination which do not depend on calculations, the soul is detached from the senses, and so comes in contact with forms to which it (the soul) serves as matter; such powers, in the case of the Sufis, are an accident of their *askesis*; and, so long as the ascetic is only accidentally a diviner, his statements are more trustworthy than those of the astrologer; but, if he becomes a professional diviner, then he becomes less trustworthy, since some of the purity of his soul is affected by the diminished sincerity of his purpose. This theory can be accommodated to the supposed prophetic powers of the mad (which Aristotle seems to have recognized) by the supposition that, in their case, the connexion between soul and body is less stable than it is in that of the sound-minded; and it suits still better the supposed phenomenon of prophecy by persons at the point of death, or who are just going to sleep. According to Ibn Khaldun, tyrants sometimes put men to death, with the view of learning the future from their dying utterances.

LITERATURE.—E. Doutté, *Magie et religion dans l'Afrique du nord*, Algiers, 1910; *Ghayat al-Hakim*, by Maslamah of Madrid (MS); *Shams al-Ma'rifa* of al-Buni (MS). Cf. also the authorities cited in the article. D. S. MARGOLIOUTH.

DIVINATION (Persian).—While the Avesta polemizes repeatedly against sorcerers and witches (*yātru*, *pairikā*; see the references collected in Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, cols. 1283-85, 863 f.), these attacks are levelled only against 'black magic'; magic operations for beneficent purposes, as for the counteracting of black magic, are quite permissible, and amulets are prescribed for certain contingencies, as well as the repetition of sacred texts for banishing powers of evil (*Yast* xiv. 35-40, 45, 57-60; *Vend.* ix. 45 f.; x. 1 f., xx. 12; cf., further, art. CHARMS AND AMULETS [Iranian]). A precisely similar state of affairs meets us in the *Sāh-nāmāh* of Firdusi (tr. Mohl, Paris, 1876-78), where, side by side with black magic—usually performed by a non-Iranian (a Turk raises a magic storm against the Iranians [iii. 26 ff.; cf. vi. 494 f.]; a Jew envenoms food by causing his glance to fall on milk in it [vi. 235 ff.]; a Turk sends false dreams [vi. 500 f.])—beneficent magic is mentioned, and evidently approved (King Minōšihir 'closed the gate of magic by his incanta-

tions' [i. 164]; a physician employs incantations to aid in childbirth [i. 277]; the use of a magic tamarisk arrow enables Rustam to slay Isfandīār [iv. 539 ff., 545]. There is, therefore, more than a grain of truth in the statement of Diogenes Laertius (*Proem.* 6), that the Magi 'did not know black magic' (τῆν δὲ γοητικὴν μαγείαν οὐκ ἔγνωσαν), though they 'practised the mantic art and prophecy' (δοκῶν τε καὶ μαντικὴν καὶ πρόρρησιν).

Divination relies in great part upon omens (q.v.), which may depend upon the day when they are seen. Thus, on the 'Fox-day' festival in the month of Atarō a white ram was believed to be seen on a certain mountain; if he bleated, the year would be prosperous; but, if he did not bleat, it would be sterile; and, in like fashion, the spectre of a white ox bellowed twice on the night of 16th Din if the year was to be fertile, and once if it was to be barren (al-Bīrūnī, *Chron. of Anc. Nations*, tr. Sachau, London, 1879, pp. 211, 213).

Omens were also drawn in later Zoroastrianism from the appearance of a snake on each of the thirty days of the month, each of the days of the week, and each of the signs of the zodiac (al-Bīrūnī, p. 218; Modi, *Persian Mār-nāmah*, Bombay, 1893; Salemann, in *Travaux du 10ème Cong. des Orientalistes*, St. Petersburg, 1879, II. 497 f.; Gray, 'Alleged Zoroastrian Ophiomancy and its Possible Origin,' in *Hoshang Mem. Vol.*, Bombay, 1911, pp. 454-464), and also from the first appearance of the moon in each of the signs of the zodiac (Gray, 'Parisi-Persian Burj-Nāmah,' *J.A.O.S.* xxx. [1910] 336-342; Rosenberg, 'Burdz-Nāmah,' in *Trans. Orient. Sect. Imp. Russ. Archaeolog. Soc.* [Russ.], 1911). These omens Gray seeks to derive ultimately from Babylonia, while Rosenberg finds their source rather in India. Besides all this, certain days were lucky, and others the reverse, as in a calendar for A.H. 1099—A.D. 1687 (ed. Beck, *Ephemerides Persarum*, Augsburg, 1696), where the lucky days are Arjavāhišt 8, 10, Horvādāt 1, 6, 30, Tir 9, Amerōdat 2, 24, Satvairō 2-3, Mitrō 4, Atarō 1, 16, 30, Din 3, 20, Vohūman 7-8, Spendarmāt 10, 25, and the first epagomenal day; while the unlucky days are Fravartīn 23, Arjavāhišt 11, 23, 30, Horvādāt 26, 28, Tir 28, Amerōdat 28, Satvairō 4, Mitrō 14, Din 4, 23, Spendarmāt 9, and the third epagomenal day.

That omens were not regarded as unlawful among the Iranians is clear from the mention of their study without condemnation in the *Epistles of Manuṣcihar* (I. i. 2, II. i. 3 [SBE xvii. 280, 326]), and in the *Sāh-nāmah* they also find a place.

Chosrū Parviz sees a portent of his approaching downfall when a quince rolls from his hand (vii. 295 f.), and a happy omen is drawn by Bahrām Gōpīn (vi. 475). It was, however, possible to avert an omen. When Isfandīār was on the march, a camel in the van lay down and refused to move, thus delaying the entire army. This was an evil portent, and the general ordered the camel's head and feet to be cut off, 'that the misfortune might fall upon the camel' (iv. 464). On the other hand, omens might be misinterpreted, as when, just after the completion of the bridge across the Hellespont and the canal around Athos, an eclipse of the sun occurred, which the Persian astrologers explained to Xerxes as foreboding the eclipse of the Greek power, whereas the reverse was actually the outcome (Herod. vii. 19).

The regular forms of divination among the Iranians were astrology (which may here include horoscopy [see, further, the 'Persian' section in art. STARS]), oneirismancy, cylicomancy, and rhabdomancy.

1. **ASTROLOGY.**—Reserving for the art. STARS (Persian) a full discussion of that astrological and astronomical knowledge to which the Persians were indebted for no small part of their fame in the classical world, we may note here that the Pahlavi *Dinkart* (9th cent.)—a work which, though late, may be regarded as authoritative in its field—has an interesting summary of the Iranian views regarding astrology (ed. and tr. Peshotan Behramjee Sanjana, Bombay, 1874 ff., p. 590 f. [vol. ix.]):

'The star-readers understand the worth of the allotment (of destiny) by the stars. How long are the chief allotting (stars) to move in bad aspects? How long are they in conjunction with the malignant owner of bad aspects? How long does the man (influenced by such stars) work in the way of wisdom? The laws relating to these and other (astrological) details the astrologers learn from writings on the earth (i.e. from astrology). Astrologers can foretell the good events of a man's (life) from his horoscope.'

Although astrology is not mentioned in the *Avesta*, there is no reason to doubt that it existed

in Irān from a very early date. The first mention in any Pahlavi text thus far accessible, however, seems to be in the romance *Kārnāmāh-i Artaxšīr-i Pāpakān* (dating probably from the middle of the 6th cent.), which relates that Ardavān (Artabanos V. [A.D. 215-224]) summoned before him the sages and astrologers and asked them:

'What do you observe regarding the seven planets and the twelve signs of the zodiac, the position and the motion of the stars, the condition of the contemporary sovereigns of different kingdoms, the condition of the peoples of the world, and regarding myself, children, and our family?' The answer from the two chief astrologers was: 'The *Nahāstg* [Capricornus] is sunk below; the star Jupiter has returned to its culminating point and stands away from Mars and Venus, while Haptōrang [the Great Bear] and the constellation of Leo descend to the verge and give help to Jupiter; whereupon it seems clear that a new lord or king will appear, (who will) kill many potentates, and bring the world again under the sway of one sovereign. . . . It is so manifest that any one of the male servants who flies away from his king within three days (from to-day) will attain to greatness and kinship, obtain his wish, and be victorious over his king' (ed. and tr. Darab Peshotan Sanjana, Bombay, 1896, p. 10 f.). The servant in question (the hero of the romance) does flee, and the king again inquires of the astrologers, learning that the fugitive must be captured in three days, or not at all (p. 15 f.).

The richest source for examples of Iranian astrology is unquestionably the *Sāh-nāmah*, the enumeration of the principal instances in which is as follows:

Farīdūn casts the horoscope of his son Salm (I. 104); the astrologers and mobeds (priests) do the like for Zāl, the father of Rustam (I. 184); astrologers declare to king Miθōdīr that his death is approaching (I. 298); they find that the children alleged to have been born of Sūdābāh were neither begotten of the king nor brought forth by her (II. 185); they foretell misfortune to a city built by Sāvaxā (II. 274); they choose a lucky day for the departure of the army of Kai Chosrū to Tīran (III. 9); they prophesy the fortunes of battle to Tīā (III. 24); they are among those sought to inquire the reason of the disfavour of heaven toward Irān (IV. 186); the famous Jāmāsp (the hero of the *Jāmāsp-nāmah*, ed. and tr. Modi, Bombay, 1903) foretells to Gūstāsp the outcome of battle (IV. 309 ff.) and the death of Isfandīār (IV. 453 ff.); astrologers draw an ill-omened horoscope for Saghād (IV. 567); Queen Humāi has a lucky day chosen by the astrologers for the commencement of her campaign against Rūm (Greece) and for the coronation of Dārāb (Darius III.) (V. 24, 33); the Āskānian Ardavān directs the astrologers to divine the future, and they foretell sorrow (V. 228); the horoscope of Bahrām Gūr is cast by the astrologers (V. 396 f.); Yazdagird, the father of Bahrām Gūr, seeks from them the day and manner of his death (V. 418); ill forebodings are given to Bahrām Gūr by the astrologers (VI. 55); defeat is prophesied for Bahrām Gōpīn in his expedition against Sāvāh (VI. 474); Aīn Gūšāp seeks the future from an aged female astrologer, her evil tidings confirming a former astrological prognostic concerning him (VI. 561 f.); it was prophesied to Chosrū Parviz that he would die far from his retainers by the hand of a slave, between a mountain of gold and one of silver, under a heaven of gold and on an earth of iron (VII. 286); the same king had had a horoscope cast for his son, Qubād (VII. 299 ff.); and an astrologer foresees evil for Yazdagird, the last of the Iranian kings (VII. 350).

Precisely similar methods of astrology are ascribed by Firdūsī to the Chinese (VI. 276, 463), the Arabs (V. 399), and the Greeks (VII. 89); while the Persians are represented as using not only their own astrological tables, but also those of the Hindus (V. 276) and the Greeks (V. 396). At the court of Farīdūn there was a council of sages, scholars, priests, and astrologers (I. 112). It may also be noted that the *Caḥr Maqlā* of Niẓāmī of Samargand (tr. Browne, *JRAS*, 1899, ed. Mirzā Muḥammad, London, 1910) has an entire chapter on astrologers and their art, and there are many other notices on the matter, as that the poet Anvarī made a notably unsuccessful forecast of the weather (Browne, *Lit. Hist. of Persia*, London, 1902 ff., II. 367 f.), though here we are no longer on purely Iranian ground.

2. **ONEIRISMANCY.**—Early in his invasion of Greece, Xerxes had three disturbing dreams, the last of which was (somewhat artificially) interpreted by his magi as portending the subjection of all the world to the Persian sway (Herod. vii. 12 ff.; see also the dream of Cyrus interpreted by Hystaspes [Herod. i. 209 f.], another dream of Cyrus recorded by Dinon [in Cicero, *de Divinat.* i. 23], and the dream of the mother of Cyrus given by Nicolaus Damascenus [frag. 66; *FHG* iii. 399]). In Pahlavi literature the *Kārnāmāh-i Artaxšīr-i Pāpakān* (p. 3 f.), which is closely followed by the *Sāh-nāmah* (V. 218 f.), ascribes to Pāpak a vision, duly interpreted by the diviners, of the future greatness of Sāsān, the eponymous ancestor of the Sasanian dynasty; and in like manner, ac-

according to the late *Zarātūst-nāmāh* (ed. and tr. Rosenberg, St. Petersburg, 1904, p. 23f.), Zoroaster himself had a prophetic dream, for the understanding of which the services of an 'interpreter of dreams' were necessary. But it is in the *Sāh-nāmāh* that we find the richest material for a knowledge of the system of interpretation of dreams in Persia.

The evil Dahhāk (the Azi Dahāka of the Avesta) sees in a dream his approaching downfall at the hands of Faridūn (i. 51ff.); Sām has two visions which cause him to find and restore to favour his son Zāl, whom he had exposed in infancy (i. 171ff.; cf. *ERE* i. 79); a lucky dream of Kai Qubād is interpreted by the hero Rūstām (i. 863f.); the Turanian king Afrāsiāb has a dream of evil portent (ii. 206ff.); Siāvaxš is warned by a dream of his impending death (ii. 311), and himself appears in a vision to Pirān, the general of Afrāsiāb, to announce the birth of Kai Chosrū (ii. 333); the archangel Srōš tells Gūdarz in a dream of the future great deeds of Kai Chosrū (ii. 380f.); Jarirāh is told in a dream of the death of her son, Farid (ii. 603f.); Siāvaxš appears in a dream to Tūs and foretells the successful outcome of the impending battle (iii. 55); a vision of ill omen is seen by Bizan (iii. 254f.); the archangel Srōš in a dream warns Kai Chosrū of his approaching death (iv. 182f.); Nūšīrvān the Just has a vision which is interpreted by the famous sage Buzurjmihr (vi. 190ff.); Bahrām Gōpīn, on the eve of battle with Sāvah, had a dream foretelling defeat; but this was a false vision, sent by a Turk, and it was Sāvah who was routed in fact (vi. 491, 501). Firdūsī also records similar prophetic dreams by a Greek princess (iv. 239f.) and a Hindu king (v. 88ff.).

3. **Cylicomancy.**—Divination by cups is mentioned among the Persians both by Athenæus, on the authority of Hermippus (*Deignosoph.* 478 A: τὸ δὲ κούριον ἐστὶ Περσικὸν τὴν ἀρχὴν ἑίδος δ' ἔχει, ὡς φησὶν Ἑρμιππος, ὡς ὁ κόρυς, ἐξ οὗ τῶν θεῶν τὰ θαύματα καὶ τὰ καρπώσια γίνεσθαι ἐπὶ γῆς: διὸ ἐκ τούτου σπένδεσθαι), and by the *Sāh-nāmāh* (iii. 274ff., 281f.). The latter work refers specifically to the magic cup possessed by Kai Chosrū, whose properties are thus described (iii. 275; ed. Vullers-Landauer, Leyden, 1877 ff., p. 1100, lines 2-6):

'He took that cup in his hand and looked. In it he perceived the seven *kūnars* [regions of the world]; of the activity and character of high heaven he made evident the what, and the how, and the how much. Within the cup he perceived the reflection all at once from Pisces to Aries; what Saturn, what Mars, what Jupiter and Leo, how the sun, and how the moon, and how Venus and Mercury—the magician ruler of the world saw within it all that was to be.' By this method of divination, which is precisely that of crystal-gazing (*q.v.*), the king was enabled to discover the exact plight of the hero Bizan and to take steps for his rescue from captivity. This magic cup was later said also to have been possessed by the earlier and wholly legendary monarch Jamsīd (the Yima of the Avesta, concerning whom see art. BLEST, *ASOM* or *THE* [Persian]); and 'Umar Khayyām could even allegorize the legend, when he wrote (quatrains 355, ed. and tr. Whinfield, London, 1883):

'To find great Jamshed's world-reflecting bowl
I compassed sea and land, and viewed the whole;
But, when I asked the wary sage, I learned
That bowl was my own body, and my soul!'

4. **Rhabdromancy.**—The use of rods for divining is recorded by Dinon (frag. 8 [*FHG* ii. 91]) among the Medes, and by Herodotus (iv. 67) among the Iranian Scythians, whose 'ancestral mantic' (*μαντική πατρική*) was by means of willow rods, employed as follows:

'When they have brought great bundles of rods, they lay them on the ground and untie them, and, putting the rods one by one, they divine; and while saying this they collect the rods and again lay them together one by one. . . . They also practise divination with the bark of the linden; when one has split the linden in three parts, he unweaves and separates it (*διανέμειν* . . . καὶ διαλύει) in his fingers.'

There is also a trace of hippomancy in Persia. According to Herodotus (iii. 84-87), after Darius and six other Persian nobles had slain the pseudo-Smerdis, they agreed that he should be king whose horse should first neigh after sunrise, when they had mounted their steeds. It is true, if we may believe Herodotus, that the choice of Darius in this manner was won by trickery, but the fact remains that the selection of a king by an animal is frequently mentioned in the East. A noteworthy parallel is the repeated account in Indian folk-tales whereby he who is chosen by an elephant (sometimes accompanied by a hawk) is made

king (Knowles, *Folk-Tales of Kashmir*, London, 1893, pp. 17, 159, 169f., 309; Steel and Temple, *Wide-Awake Stories*, Bombay, 1884, p. 140f.; Day, *Folk-Tales of Bengal*, London, 1883, p. 100). And, according to Agathias (ii. 25), the Persians sought to know the future by gazing into the sacred fire—a practice which he thought might be derived from the Chaldeans or some other nation.

In conclusion, mention may be made of an interesting form of minor divination practised by the sage Buzurjmihr, as recorded in the *Sāh-nāmāh* (vi. 371ff.; see also Tha'ālibī, *Hist. des rois des Perses*, ed. and tr. Zotenberg, Paris, 1900, pp. 633-636). He had been imprisoned by Nūšīrvān the Just, to whom the Emperor of Byzantium sent a sealed casket, the contents of which were to be divined without opening it. All the *moheds* failed, and Buzurjmihr was accordingly set at liberty and requested to use his skill. As he passed along a road, the sage met three women—one having a husband and child, the second married but childless, and the third unmarried; and he accordingly was able to inform the king that the casket contained three pearls under more than three wrappers—one of the pearls being pierced, the second half-pierced, and the third unpierced.

LITERATURE.—The passages in the classics regarding Persian divination are indicated by Rapp, *ZDMG* xx. [1896] 76f. The Iranian material appears to have remained unconsidered hitherto.

LOUIS H. GRAY.

DIVINATION (Roman).—Among the inhabitants of ancient Italy we find abundant evidence of the desire to hold intercourse with the gods as a means of securing intimations of their will and disclosures regarding the future. In Italy, however, this desire assumes forms essentially different from those met with in Greece. Thus, the Italians were strangers to the idea that the Deity takes possession of the mental and spiritual faculties of a human being, making him *εθεος*, and using him as the medium for the revelation of its designs; and even if—as has recently been conjectured (W. F. Otto, *ARW* xii. [1909] 548 ff.)—they had in the word *superstitio* a term signifying the state of trance, and thus corresponding to the Gr. *ἐκστασις*, yet the former carried with it from the outset a suggestion of something odd and sinister. In Italy there was no practice of inquiring into futurity by the trance or by immediate Divine enlightenment, and accordingly no trace of that species of divination which the Stoics called *ἀρεχρον* καὶ δόξιακτον *μαντικής γένος*, in contradistinction to the skilled interpretations of casual appearances in the external world (Plut. *de Vita et Poesi Homeri*, ii. 212; cf. Cic. *de Div.* ii. 26 f.). Among the Italian peoples, therefore, we meet neither with predictions emanating from Divinely inspired prophets and prophetesses (the word *vates* being probably borrowed from the Celt.), nor with dream oracles in which the gods vouchsafe their revelations to inquirers sleeping in temples. When Vergil (*Æn.* vii. 81 ff., imitated by Ovid, *Fasti*, iv. 649 ff.) tells us that King Latinus performed the rite of incubation, and received a dream-oracle, in a sanctuary of the god Faunus near Tibur, we shall hardly err in regarding the narrative as a product of the poet's fancy (cf. R. Heinze, *Vergils epische Technik*, Leipzig, 1908, p. 174, note 2), for which the descriptions of famous Greek incubation-shrines, such as that of Trophonios in Lebadeia, may have supplied the model. It is true that, when the Greek cult of the Epidaurian Asklepios migrated to Rome, it carried thither its associated practice of *ἐγκοιμήσις* (cf. M. Besnier, *L'Île Tiberine dans l'antiquité*, Paris, 1902, p. 223 ff.); yet it did not force its way into the ancient Roman or Italian cults; for, of course, the language of

Plantus, *Curc.* 266, 'namque incubare satius te fuerat Iovi,' in no sense implies that incubation was practised in the Capitoline temple, as the poet is merely in jest contrasting Juppiter as the god of oaths with Asklepios; while the testimony of Schol. *Pers.* ii. 56, 'cum Romani pestilentia laborarent, Castor et Pollux in somniis populum monuerunt quibus remediis uterentur,' is not sufficient to justify the hypothesis that incubation was practised in the temple of the Dioscuri in the forum (L. Deubner, *de Incubatione*, Leipzig, 1900, p. 79; *Neue Jahrb. f. klass. Altert.* ix. [1902] 384 ff.). The inscriptions, no doubt, furnish a large number of dedications which were made 'inssu,' 'imperio,' 'ex praecepto,' 'ex visu,' etc., to various deities, or in which the dedicator speaks of himself as 'somno monitus' (instances in Marquardt, *Röm. Staatsverwaltung*, Leipzig, 1885, iii. 100, note 7; A. De Marchi, *Il culto privato di Roma antica*, Milan, 1896, i. 285 ff.); but the majority of these inscriptions are connected with the worship of alien deities, such as Asklepios, Isis, Juppiter Dolichenus, Mithra, etc.; while, again, such dedications as *CIL* xiv. 23 (Ostia): 'Iovi optumo maximo ex viso aram aedificavit,' or v. 2472 (Ateste): 'C. Titius C. l. Pelops a Iove ex visu iussus posuit,' refer, not to incubation at all, but to ordinary dreams, which naturally attracted notice in Italy as elsewhere. L. Coelius Antipater, the historian, who revelled in stories of dreams that came true (*Cic. de Div.* i. 49, 55 f.), and who was probably the object of Sisenna's polemic *somniis credi non oportere* (*ib.* i. 99), no doubt borrowed this artifice for enlivening historical narrative from his Greek models, but he could not have resorted to the expedient unless the Italians had shared the general belief in the significance of dreams. Our contention is, however, that neither the dream nor the dream-oracle was an element in the religious practice of the Italic peoples.

Nor do we find the *gnomic oracle* on Italian soil. The reference of Ennius (*Ann.*, frag. 214, Vahlen, Leipzig, 1903) to the 'versus quos olim Fauni vatesque canebant' (cf. Varro, *de Ling. Lat.* vii. 36), and the ascription of *ἑρμηνεῖα χρησμοί* to the goddess Carmenta (Plut. *Qu. Rom.* 56), are simply hypotheses designed to favour the etymology of the time (Faunus from *fari*, Carmenta from *carmen*), like the derivation of *ager Vaticanus* 'a vaticiniis' (Aul. Gell. xvi. 17. 1; cf. Paul. p. 379). The *carmina Marciana* certainly gained official recognition at the hands of the Roman authorities in 212 B.C., but, as appears from the text in which Livy (xxv. 12) renders them, they were simply Greek Sibylline sentences in a Latin redaction, and their supposed author, Cn. Marcus vates (*Fest.* p. 165), has as little right to be regarded as an ancient Italic soothsayer as the Publicius vates mentioned only by Cicero (*de Div.* i. 114, ii. 113). In point of fact, the oracle as met with in Italy never signifies an utterance emanating from an individual possessed and inspired by a divinity; it involves no more than the listening for and interpretation of the mysterious voices and noises to be heard in the world of Nature. It is to such manifestations likewise that the fragment of the 'Mysteria' of Varro's *Satura Menippeae* (326, Buecheler) refers: 'prisca horrida silent oracula crepera in memoribus.' The belief in the prophetic powers of certain water-nymphs, such as Carmenta and the Camenae, may be supposed to indicate a practice of drawing cryptic revelations from the murmur of springs. In the rustling of the forest was heard the voice of the god Faunus, or his later representative Silvanus—the voice, e.g., which on the stricken field at length announced the sternly contested and long doubtful victory

(Dion. Hal. *Ant.* v. 16. 2 f.; Livy, ii. 7. 2; cf. *Cic. de Div.* i. 101, *de Nat. Deor.* ii. 6, iii. 15); while at Tiora Matiene, a place in the old Sabine country, the woodpecker, the sacred bird of Mars, perched upon a wooden pillar, exercised its prophetic gift (Dion. Hal. *Ant.* i. 14. 5; the 'picus Feronius' mentioned in *Fest.* p. 197, has, no doubt, a similar reference). There are numerous stories of supernatural voices which, echoing forth from sacred woods and temples, intimate the warnings or behests of the Divine powers (e.g. Livy, i. 31. 3, vi. 33. 5; *Cic. de Div.* i. 101); and the unknown divinity who in a communication of this kind had foretold the irruption of the Gauls was honoured—as Aius Locutius—with a shrine erected on the slope of the Palatine Hill above the temple of Vesta—at the very spot, in fact, where his voice had been heard (Livy, v. 32. 6, 50. 5, 52. 11; *Cic. de Div.* i. 101, ii. 69; Varro in Aul. Gell. xvi. 17. 2, etc.).

The distinctively Italic method of divining the future was carried out by means of *sortes*, i.e. small rods or plates bearing inscriptions and strung together (*serere*, whence *sors*); one of these was drawn, and the inscription upon it was read and interpreted in such a way as to provide an answer to the question put by the inquirer. The fact that in process of time the word *sors* came to mean 'fate' in general, and was even used as a designation of Fortuna, the goddess of destiny and luck (thus, according to the inscription *CIL* x. 6303 [Terracina], a 'Sortis signum memphiticum' is dedicated to Isis), clearly shows the importance of the device of sortilege in Italic divination. Cicero (*de Div.* i. 34) draws a rigorous contrast between the oracles 'quae aequatis sortibus ducuntur' and those 'quae instinctu divino adfatuque funduntur.' The procedure followed in drawing the lots is described most precisely in the accounts of the celebrated oracle at Praeneste, which maintained its reputation till the later years of the Imperial period. According to Cicero's description (*de Div.* ii. 85 f.), the *sortes*—mysteriously discovered in some remote age—were inscribed upon tablets of oak, and in this form were preserved in a chest (*arca*) made from the wood of a sacred olive tree; it was from this chest that Juppiter, who shared this particular sanctuary with Fortuna, derived his appellation of Acreanus (*CIL* xiv. 2937, 2972; cf. 2852=Buecheler, *Carm. epigr.*, Berlin, 1897, no. 249, 17). At the bidding of the goddess, a boy mixed the lots and then drew one out; the technical terms for this were *trahere*, *tollere*, and *ducere* (Serv. *En.* i. 508: 'trahuntur sortes'; Tibull. i. 3. 11: 'sacras pueri sortes ter sustulit'; cf. *CIL* v. 5801: 'sacro suscepto, sortib(us) sublati'; Juven. vi. 583: 'sortes ducet'). Denarii of M. Platorius Cestianus from Cicero's time show on the reverse a figure of the boy, with a tablet below him bearing the word *SORS* (E. Babelon, *Monnaies de la répub. rom.*, Paris, 1885, ii. 315, no. 10; also H. Dressel, *SBAW*, 1907, p. 371). To bring the gnome thus drawn into connexion with the question asked, and to interpret it accordingly, was the work of the *sortilegi* (*Cic. de Div.* i. 132, ii. 109; Lucan, ix. 581; Isid. *Orig.* viii. 9. 28; Porph. on Hor. *Sat.* i. 9. 29), of whose function we have direct evidence, not only as regards the worship of Fortuna at Praeneste (*CIL* xiv. 2989: 'sortilegus Fortunae Primigeniae'), but also in connexion with other localities (*CIL* iv. Suppl. 5182, vi. 2274, viii. 6181). When a favourable prediction was fulfilled, it was customary for the inquirer to express his gratitude by a votive offering to the goddess, as is shown by the inscription *CIL* x. 2862: 'Fortunae Iovis puero Primigeniae d. d. ex sorte compos factus Nothus Ruficanae L. f. Plotillae.' The oracle was open for

consultation only on certain days—in particular on one of the two annual feast-days of the goddess (according to *CIL* i.² p. 339: '[hoc biduo sacrificium maximu[m] Fortunae Prim[ig]eniae): utro eorum die oraculum patet, ii viri vitulum immolant,'] the Praenestine festivals fell on the 11th and 12th of April); but exceptions were no doubt permitted in the case of distinguished inquirers, as, e.g., the Emperor Domitian, who, on New Year's Day for many years in succession, obtained a *sors* of happy omen, but received a forecast of disaster in the year of his overthrow (Suet. *Domit.* 15). The Emperor Tiberius, having become sceptical of the Praenestine oracle, resolved to destroy the *sortes*, and had the sacred *arca* sealed and conveyed to Rome; here, however, it was found that the tablets were no longer in the box, and the supposed miracle induced the Emperor to abandon his harsh design (Suet. *Tiber.* 63). In the later period of the Empire the '*sortes Vergilianae*' (*Hist. Aug. Hadr.* 2. 8; *Alex. Sev.* 14. 5) were resorted to at Praeneste as elsewhere, e.g. in the temple of Apollo at Cumae (*Hist. Aug. Clod. Alb.* 5. 4), and on the Apennines (*ib. Claud. Got.* 10. 4-6). In this form of divination the tablets were inscribed with verses from Vergil which seemed peculiarly pregnant with meaning and capable of various interpretations; thus, e.g., Alexander Severus, at the time when Elagabalus was harbouring designs upon his life, received the premonition in *Æn.* vi. 883 f.: 'si qua fata aspera rumpas, tu Marcellus eris' (*Hist. Aug. Alex. Sev.* 4. 6). Still another Italic cult of Fortuna, that, namely, located at Antium, with its two images of the goddess, was associated with an oracle, and it is recorded 'apud Antium promoveri simulacra Fortunarum ad danda responsa' (Macr. *Sat.* i. 23. 13; cf. Suet. *Calig.* 57; Martial, v. i. 3), but we do not know whether *sortes* were employed there or not. They were still in vogue, however, at Cære (Livy, xxi. 62. 5-8; cf. Sidon. *Apoll. Carm. ix.* 190), and Falerii (Livy, xxii. 1. 11; cf. Plut. *Fab.* 2), and in the cult of the river-god Clitumnus at Mevania in Umbria (Plin. *Ep.* viii. 8. 5; cf. Suet. *Calig.* 43) and of Jupiter Appenninus at the summit of the mountain pass near Iguvium ('Appenninis sortibus', *Hist. Aug. Firm.* 3. 4; cf. *Claud. Got.* 10. 4); also in the so-called Oracle of Geryon at Fons Aponi near Patavium, where lots were cast by means of dice; it was here that Tiberius, while on the march to Illyria, was advised, *sorte tracta*, to make a throw into the fountain with golden dice, and in the event gained the maximum number of points (Suet. *Tib.* 14). According to a most felicitous conjecture of Mommsen, the seventeen bronze tablets which were discovered in the 16th cent. and then—all but three—lost again, and whose texts are given in *CIL* i. nos. 1438-1454, as also in Buecheler, *Carm. epigr.* no. 331, came originally from the shrine at Fons Aponi. They consist of little bronze plates, with a ring to hang them upon, and each is inscribed with a hexameter verse. Their language, prosody, and metre are archaic (cf. F. Ritschl, *Opusc. philol.* iv., Leipzig, 1878, 395 ff.), and would appear to be traceable to a renovation of older material made—with many misunderstandings—about Cicero's time. In purport they are banal to the last degree, and doubtless all the better adapted to supply answers to any kind of question; thus, e.g., 'credis quod deicunt? non sunt ita, ne fore stultu(s),' and 'nunc (nuncine, Ritschl) me rogitas, nunc consulis, tempus abit iam.' The three *sortes* found in the Forum novum near Parma, and now in the museum of that city, are of a somewhat different character (*CIL* xi. 1129); on each of their four sides they bear a gnomic saying, composed, so far as we can judge

from the much mutilated text, in hexameter verse of very irregular type (cf. A. Swoboda, in *Wiener Studien*, xxiv. [1902] 485 ff.).

While the practice of supplying oracles by means of *sortes* was thus indigenous to Italy, and prevalent everywhere on Italian soil, yet the Roman State religion took up a curiously disparaging attitude towards it. None of the recognized divinities of the ancient Roman régime delivered oracles, and, while Paulus (p. 368) speaks of deities called 'Tenitae, quae credebantur esse sortium deae, dictae quod tenendi haberent potestatem,' we cannot say whether he was thinking of Roman deities at all, or whether his statement has any better foundation than the obviously absurd etymology of the name. The only reference to *sortes* connected with the city of Rome is supplied by the inscription of a '*sortilegus ab Venere Erucina*' (*CIL* vi. 2274)—an item of evidence emanating from a cult of Greek origin, and dating from a time when the lines of demarcation between native and foreign divination had been obliterated in private life, and when all kinds of Greek and Oriental soothsaying had found adherents in Rome. But the injunction by which the Senate, as late as 241 B.C., prohibited the consul Q. Lutatius Cero from consulting the Praenestine *sortes* (Val. Max. *Epit.* i. 3. 2), and the scornful question of Cicero (*de Div.* ii. 87): 'quis enim magistratus aut quis vir industrius utitur sortibus?' are really explained by the fact that the State religion took a narrower view of the character and purpose of divination than that which prevailed in Greece, or, indeed, among other Italian tribes; note the tone of disdain in which Cicero (*ib.* i. 105, 132, ii. 70) refers to 'Soranus augur' and 'Marsus augur.' From the Roman point of view, the operations of divination were concerned, not with those things 'quae fortuitae putantur, praedictio atque praesensio' (*ib.* i. 9), but exclusively with the determination of the question whether an action just about to be performed had or had not the sanction of the gods. It is true that in Cicero's day there emerged within the Collegium of the official representatives of Roman divination—the '*interpretes Iovis optimi maximi publici augures*' (*de Leg.* ii. 20)—a conflict of opinion as to the function of the augurs, viz. whether they merely expounded a system of doctrine which had been devised for reasons of State, or whether they could actually furnish a '*praesensio aut scientia veritatis futurae*' (*de Div.* i. 105). Cicero, who himself became an augur in 53 B.C., and to whom Ap. Claudius Pulcher (Consul in 54 B.C.), the champion of the second of these views, had dedicated his work *de Disciplina Augurali* (Cic. *Ep. ad Fam.* iii. 4. 1), took up a mediating position, holding, on the one hand, that the augural science of his day was nothing more than an instrument put into the hands of statesmen for political ends, while maintaining, on the other, that it had originally been a '*divinatio rerum futurarum*' (*de Div.* ii. 75; *de Leg.* ii. 32 f.). Even on the latter hypothesis, however, the *disciplina auguralis* had never besought the Deity for light upon the occurrence and course of future events (*de Div.* ii. 70): 'non enim sumus ii nos augures, qui avium reliquorumve signorum observatione futura dicamus', but had merely solicited indications of the Divine consent to intended actions, and endeavoured to recognize the warnings proceeding from the gods; and, accordingly, Cicero is quite correct in speaking of the '*rerum bene gerendarum auctoritates*' as the subject-matter of the science (*de Har. Resp.* 18). Such indications of the Divine will, the interpretation of which was the function of the *disciplina auguralis*, were called *auguria* or *signa*, and were either the solicited intimations of the Divine compliance (*auguria impetrativa*), or signs—chiefly of

disapproval and foreboding—spontaneously vouchsafed by the gods (*auguria oblativa* [Serv. *Æn.* vi. 190, xii. 259]). Solicited omens—so far, at least, as concerned the magisterial consultation of the gods, yet not the priestly operations of the augurs—were originally taken solely from phenomena connected with birds, and thus the word *auspicium* (= *avispicium*) became the general term for those intimations of the Divine will which, approving or dissuading, guided human conduct, as also for the art of identifying and interpreting such intimations. Consultation of the *auspicia* was in ancient times an indispensable preliminary to all important actions both in public and in private life (Cic. *de Div.* i. 28 = Val. Max. ii. 1. 1): thus, we are told that the species of hawk called *agithus* was held to be ‘*prosperrimi augurii nuptialibus negotiis et pecuarie rei*’ (Pliny, *HN* x. 21). Latterly, however, the practice was discarded in private affairs, leaving as its sole vestige the designation ‘*nuptiarum auspices*,’ which was applied to certain witnesses in marriage contracts (Varro, in Serv. *Æn.* iv. 45, etc.). In public affairs, on the other hand, the science of the *auspicium* was practically the basis of official authority, as every public functionary had to make sure of the Divine sanction for every action within his jurisdiction. Accordingly, the prerogative of taking the auspices coincided with the official warrant for undertaking any particular action, so that the *auspicium*, as the Divine guarantee of success, was co-ordinate with the *imperium*, or secular authority, and the phrase ‘*auspicium imperiumque*’ covered the entire range of official power (cf. the expression ‘*ductu auspicio imperioque eius Achaia capta*,’ in the epitaph of L. Mummius [CIL vi. 331]).

As regards the mode of procedure in taking the auspices, we have numerous sources of information (e.g. Fest. p. 348; Serv. *Æn.* vi. 197; Cic. *de Div.* i. 71). When the consul had occasion to perform some duty which must be undertaken *auspicato*,—if, e.g., he was about to enter upon office, to direct the proceedings of the *comitia*, to hold a meeting of the Senate, or to set out upon a campaign,—he proceeded, in the early morning of the day of action, and in company with one or more assistants (‘*qui in auspicio sunt consuli*’), to the scene of the proposed task (in the case of an expedition, to the Capitol). Here a tent (*tabernaculum*) was pitched, open on the one side. Within the tent the consul, having first uttered a prayer, seated himself on a solid chair (*solida sella*), and then, directing his gaze towards the field of vision on the open side, awaited the advent of favourable auguries. It was, however, only a relatively small number of species of birds that were taken into account for the *augurium impetrativum* (Cic. *de Div.* ii. 76); the books of the augurs contained full lists of the *aves augurales* (Serv. *Æn.* i. 398), with precise regulations as to the circumstances in which, for any particular case, the omen was to be recognized as favourable or the reverse. With some kinds of birds the *auspicia* were determined by their flight, with others by their cries, and, accordingly, the augural birds were divided into the two classes of *alites* and *oscines* (Fest. p. 197; Serv. *Æn.* iv. 462). Many species, again, were propitious at one season of the year, and unpropitious at another (Pliny, *HN* x. 30: ‘*cornix . . . inauspicatissima fetus tempore, hoc est post solstitium*’). The Divine assent was intimated by the appearance of certain birds on the right hand of the observer, of others on the left (Plaut. *Asin.* 259 f.: ‘*impetratum inauguratumst, quovis admittunt aves: pius est cornix ab laeva, corvos parra ab dextera consuevunt*’; cf. Cic. *de Div.* i. 85). The auguries, in fact, were subject to an elaborate system of casuistry, certain details of which are

given in the extract in Pliny, *HN* x. 6–42 (cf. D. Detlefsen, in *Hermes*, xxxvi. [1901] 5 ff.). If during the period of observation one of the recognized favourable omens appeared (the technical phrase for this was ‘*adducit aves*’; cf. Livy, i. 36. 3, 55. 3, xxvii. 16. 15; Fest. p. 241), the phenomenon was accepted as evidence of the Divine consent; but, if such favourable omen did not present itself, or if the proceedings were interrupted by the fall of some object (‘*caduca auspicia*,’ Paul. p. 64), or by a disturbing noise, e.g. the squeak of a mouse (Pliny, *HN* viii. 223), or by a deprecatory portent (Paul. p. 64: ‘*clivia auspicia dicebant quae aliquid fieri prohibebant*’), e.g. the appearance of *obscenae aves* (Serv. *Æn.* iii. 241; Aul. Gell. xiii. 14. 6), such as owls or owlets, the consultation was regarded as having miscarried, and the action for which Divine sanction was sought could not be undertaken without a *repetitio auspiciorum*; this, however, could not usually take place until the following day (Livy, ix. 38. 15, 39. 1).

Even when a consultation had resulted favourably, however, it was still possible that the divinity might in some way interfere with the provisionally sanctioned undertaking by sending intimations that had not been asked for. The range of such *auguria oblativa* was very extensive. In the system of the augurs five varieties of *signa* were distinguished, viz. ‘*ex caelo*,’ ‘*ex avibus*,’ ‘*ex tripudiis*,’ ‘*ex quadrupedibus*,’ and ‘*ex diris*’ (Fest. p. 261), but this classification was by no means exhaustive. An official who was about to discharge some duty of State might find a propitious or deprecatory sign in any occurrence in Nature or in his immediate surroundings which he was willing to bring into relation with his intended action. Here lay the vast province of *omina*—events which in many cases were of an altogether indefinite character, but in which the person concerned might read a significance favourable to his design, and which he could, so to speak, press into his service by pronouncing the words ‘*accipio omen*’ (examples in Cic. *de Div.* i. 103 f.). Of the omens thus spontaneously granted, those which were unfavourable were naturally of greater account than the favourable, as the latter merely confirmed the result of the antecedent solicited auspices, while the former actually reversed the Divine consent already granted, and gave warning that the previously sanctioned course of action should not be carried out or persisted in: ‘*etenim dirae* (i.e. all events of an abnormal and therefore alarming nature) sicut cetera auspicia, ut omnia, ut signa, non causas adferunt cur quid eveniat, sed nuntiant eventura, nisi provideris’ (ib. i. 29). Among such prohibitory omens, the phenomena of thunderstorms were regarded as of special importance. The lightning-flash was a solicited portent of great significance, not indeed for the divination of the magistrates, but for certain priestly ceremonies of the augurs (*auguria*), in which the latter sought to make sure of the Divine consent to specific actions by *auguria celestia* (Paul. p. 64): with their *lituus* they divided that portion of the heavens lying within their field of vision into four regions (‘*antica*,’ ‘*postica*,’ ‘*dextra*,’ ‘*sinistra*’), and then decided, by a special *legum dictio* (Serv. *Æn.* iii. 89), the regions in which the celestial signs were to be regarded as favourable. The best-known example of this procedure is the inauguration of priests which Livy (i. 18) describes in full detail, but Cicero (*de Leg.* ii. 20) refers to other *auguria* of a similar kind, regarding which strict secrecy was maintained (Paul. p. 16), so that the actual character of many of them, such as the *vernix auripia* (Paul. p. 379) and the *augurium canarium* (Pliny, *HN* xviii. 14; Fest. p. 285; Philarg. on Verg. *Georg.* iv. 425), is very obscure, while the frequently

mentioned *augurium salutis* (Cic. *de Div.* i. 105; Dio Cass. xxxvii. 24 f., li. 20. 4; Suet. *Aug.* 31; Tac. *Ann.* xii. 23) is expressly spoken of as *μάρτυρας τῆς γλώττης* (Dio Cass. xxxvii. 24. 1), in which the divinity was asked whether it was permissible to pray for the *salus publica*. The latter ceremony is referred to in a *cippus* recently discovered in Rome, and bearing the inscription (*Notiz. d. Scavi*, 1910, p. 133): 'Auguria: maximum quo salus p(opuli) R(omani) petitur, quod actum est (here follow the names of the consuls in A.D. 3 and 7), quae acta sunt (consuls of the years 1, 2, 8, 12, and 17 A.D.)' In all these augural rites the lightning-flash, and especially the *fulmen sinistrum*, was a highly favourable *impetrativum auspicium* (Cic. *de Div.* ii. 74; such an augural ceremony is probably indicated also by the African inscription *CIL* viii. 774, bearing the representation of a lightning-flash, together with the words: 'Deo loci, ubi auspicium dignitatis tale, nuncipes Apisenses'—a dedication which dates, at all events, from the time when the lightning was regarded as a solicited sign even in magisterial divination). As a spontaneously given sign, on the other hand, lightning was assumed to be wholly unfavourable. Thus, a marriage by the solemn rite of *confarreatio* could not be proceeded with if a peal of thunder was heard (Serv. *Æn.* iv. 339), and the supreme deliberative assemblies of the Roman people were subject to the principle, 'Iove tonante fulgurante comitia populi habere nefas' (Cic. *de Div.* ii. 43; cf. in *Vatin.* 20; *Philipp.* v. 7), so that thunder or lightning led to the adjournment of the comitia as inevitably as did an epileptic seizure ('*morbus comitialis*') (Fest. p. 234). It is true that in these, as in all other cases of the unsolicited sign, it rested with the presiding official to decide whether he would apply it to the matter in hand and take account of it (Pliny, *HN* xxviii. 17; Serv. *Æn.* xii. 260); such emergencies fell under the maxim of Cato the Elder, viz. 'quod ego non sensi, nullum mihi vitium facit' (Fest. p. 234)—a principle according to which the magistrates tried their best to avoid the possibility of even noticing unwelcome signs (Cic. *de Div.* ii. 77). But, as such disregard of Divine warnings might result in serious mischief to the State, the legislature put an obstacle in the way of anything like extreme neglect of unfavourable signs by enjoining that the magistrates must, without further investigation, take full account of all such *auguria oblativa* as were announced to them either by another magistrate ('*obnuntiatio*'), or by the augur who was officially in attendance ('*nuntiatio*'). This injunction came to have great influence upon the procedure of the comitia, and in the political conflicts of the day it became an effective instrument of obstruction, as a meeting which took a course unsatisfactory to any party could be adjourned simply by an announcement that a flash of lightning had been seen (cf. I. M. J. Valeton, 'De iure obnuntiandi comitiis et conciliis,' in *Mnemosyne*, N.S., xix. [1891] 75–113, 229–270).

This political perversion of a statute which was in its origin the expression of a religious sentiment is but a symptom of that general deterioration of the auspices which showed itself more and more during the later years of the Republic. The stringency of the ancient regulations was relaxed first of all in the army, and especially during war, as the conditions were then frequently most unfavourable for the ceremonious and protracted observation of the flight of birds. For a time, as would appear, the place of the traditional ceremony was taken by a special *auspicium militare*, which involved some sort of observation of spear-points ('*ex acuminibus*') (Cic. *de Nat. Deor.* ii. 9; Arnob. ii. 67), but, when—during the Second Punic War—this device had at length been abandoned (Cic.

de Div. ii. 77), every other expedient for divining the will of the gods was superseded by the observation of *signa ex tripudiis*, i.e. the manner in which fowls pecked the food strewn by the *pullarius*—the point being, not simply that they ate, but that they fed so greedily that part of what they picked up fell to the ground again (*tripudium* = *terripavium*, *pavire enim ferire est* [Paul. p. 244; Cic. *de Div.* ii. 72]). Such accidental dropping of food was formerly considered a favourable *signum oblativum*, and might as such be mediated not only by birds of any kind, but also by quadrupeds (Cic. *de Div.* ii. 73; Pliny, *HN* viii. 83). These *pullaria auguria* (Serv. *Æn.* vi. 198) eventually degenerated into a mere form, especially as the act of feeding could be so managed as greatly to influence the result of the *signum* (Cic. ii. 73); and a similar fate befell municipal divination, in which the observation of birds was at length abandoned in favour of observation of the sky (*de calo servare*); this, however, was performed, not by the official himself, but by his servant the *pullarius* ('iam de calo servare non ipsos censes solitos, qui auspicabantur? nunc imperant pullario, ille renuntiat' [Cic. ii. 73]). On account of the comparatively rare performance of the augural ceremonies, it had been possible to solicit a lightning-flash as an indication of Divine consent, but with the manifold applications of magisterial divination such a demand could be met only by way of a gross fiction, so that Cicero is perfectly justified in saying (ii. 71): 'haec certe, quibus utimur, sive tripudium sive de calo, simulacra sunt auspiciorum, auspicia nullo modo.'

The performance of divination during war came to be still further circumscribed by the circumstance that in the *imperium militiæ* the duty was assigned—from Sulla's time regularly, and often before—not to the real functionaries of the *auspicium*, i.e. consuls and prætors, but to the holders of prorogated authority, the proconsuls and propraetors, who had no *auspicia* of their own (Cic. *de Div.* ii. 77: 'ubi ergo avium divinatio? quae, quoniam ab iis, qui auspicia nulla habent, bella administrantur, ad urbanas res retenta videtur, a bellicis esse sublata'). But, as it still remained necessary to make sure of the Divine sanction before entering upon any decisive line of action, divination by ordinary methods was superseded in the field by *extispicium*, i.e. the inspection of entrails ('omitto nostros, qui nihil in bello sine extis agunt, nihil sine auspiciis domi' [Cic. i. 95; cf. 28]), which, however, had been previously employed as a supplementary expedient; thus, e.g., according to Livy, xxvii. 16. 15, before Fabius Maximus moved his camp from Tarentum to Metapontum, he first of all inquired by means of birds, and then, not having received the required indication of Divine consent, he caused the *haruspex* to inspect the entrails of a victim. But it should be clearly understood that the inspection of entrails as a means of ascertaining the future was a foreign, not a Roman, method of divination. It is true that the indigenous religious practice sanctioned the inspection of the *exta* of a sacrificial animal—not, however, for purposes of divination, but only as a part of the requisite test applied to the victim in order to determine whether it was acceptable to the deity and suitable for a sacrifice. In such instances the entrails of the victim were examined in connexion with the body as a whole ('*adhaerentia exta inspicere*' [Paul. p. 100]), and boiled in a pot (Varro, *de Ling. Lat.* v. 98); if any abnormality was discovered, the animal was regarded as unsuitable, and the sacrifice could not be validly performed—it did not become a *lītatio* ('*non perlitatum est*'). An abortive sacrifice of this sort might, of course, bear the character of a *signum*

oblativum, and thus be recognized as a Divine warning (as was the case, e.g., in the incident related by Livy, xli. 15), and it was therefore possible to speak of *auspicia* in connexion with *extispicia* (e.g. Paul. p. 244: 'pestifera auspicia esse dicebant, cum cor in extis aut caput in iecinore non fuisset'); but, as already said, this Roman *extispicium*, with its scrutiny and interpretation of entrails, was never resorted to for the purpose of acquiring information as to the course of coming events.

This function, however, was the distinctive feature of the Etruscan *haruspicina*, which had found its way into Rome at the time of the Second Punic War, and in process of time gained so firm a footing that in the closing century of the Republic the *haruspex* became permanently attached to the staff of the commander-in-chief. The Etruscan *haruspicio* (CIL vi. 32328, l. 78) was performed prior to all important undertakings, such as the departure of the army for war, or the beginning of a battle; and its object was, from an inspection of the entrails of a victim slaughtered expressly for the purpose (animals from which 'voluntas dei per exta exquiritur' were called *consultatorie hostiae* [Serv. *En.* iv. 56; Macr. *Sat.* iii. 5. 1]), to deduce information regarding the issue of the proposed action—information which was not confined merely to a presage of success or non-success, but frequently extended to details, as, e.g., an ambushade of the enemy (Livy, xxvii. 15. 16), or a case of imminent death (Ammian. Marc. xxii. 1. 1). The interpretation was arrived at upon the basis of a highly complex system of doctrine, involving a most precise observation of the nature, and especially the abnormalities, of the victim's inner organs—more particularly the liver. The celebrated bronze liver of Piacenza¹ is a direct survival from the practice of the *haruspices*, and, by means of its precise division of the organ, with its various convexities and indentations, and the inscribed names of the gods associated with the several parts, gives us some idea of the procedure of the priests. Moreover, the fact that models of the livers of animals, formed of terra cotta and covered with inscriptions, have been found also in Babylon,² points to a relationship between Etruscan and Chaldean haruspicy which awaits a more thorough investigation.

The Etruscan divination of the future, which, as we have seen, went far beyond the limits of the Roman practice, makes its influence felt likewise in the official treatment of prodigies, i.e. unnatural and alarming occurrences, such as showers of stones, earthquakes, monstrous births (see PRODIGES AND PORTENTS [Rom.]), regarded as signs of Divine resentment. To the Roman mind such phenomena were an evidence that the normal relations between the community and the higher powers were disturbed, as also an admonition to take the necessary steps towards retrieving the *pax et venia deum*, and those who in such emergencies wished to ascertain the measures requisite to an effective reconciliation had recourse either to the *pontifices*, as the custodians of the ancient Roman ritual, or to the representatives of foreign cults, such as the *decemviri* (later, the *xv. viri sacris faciundis*, who were proficient in the *Græcus ritus*, and the Etruscan *haruspices* (Cic. *de Div.* i.

97, 98). The *haruspices*, however, did not confine themselves to a simple specification of the means of reconciliation; on the contrary, they also undertook to deduce from the character and course of the prodigy an answer to the question, 'quid portendat prodigium?' i.e. to discover the future events, such as civil war and conspiracy (Cic. *de Har. Resp.* 18), foreboded by the prodigy. Cicero's oration *de Haruspicio Responso* gives us a clear conception of the matter and form of such a professional finding. The sacred books of the *Etrusca disciplina* supplied full directions for the interpretation of *ostenta*, and in particular they contained a doctrine regarding the interpretation of lightning which was absolutely alien to the augural science of the Romans. According to Roman ideas, the lightning might be either an *augurium impetrativum* (as in the sacred rites of the augurs), or an *augurium oblativum* (as in the proceedings of the magistrates), and in both cases it required to be weighed as a token of Divine consent or prohibition; or, again, especially if it struck something and wrought damage, it was regarded as a *prodigium*, and in that case had to be rendered innocuous by certain acts of propitiation. The procedure of the Etruscan *haruspices*, however, was of a very different character (for their system, cf. e.g. Pliny, *HN* ii. 138 ff.; Seneca, *Nat. Quest.* ii. 39 ff.). They first of all ascertained the region of the heavens whence the flash proceeded, and thereby identified the deities from whom it came; further, they defined the several kinds (*manubiæ*) of lightning-flash sent forth by particular gods, and determined the place, the time, the effect, etc.; then from all these data they elicited not only the kind of propitiation required, but also the import of the phenomenon. Nor did they rest satisfied with a simple announcement that the lightning signified the deity's consent to, or warning against, a given design ('consiliaria fulmina' [Seneca, *Nat. Quest.* ii. 39. 1]), but they also gave quite definite predictions of future events, such as an extension of the frontier and a defeat of the enemy (Livy, xlii. 20. 1), or the approaching death and deification of the Emperor (Suet. *Aug.* 97).

It is a fact worthy of note that this mode of divination was always regarded by the Romans as outlandish and unreliable, and this explains why the *haruspices* were never admitted into the official priesthood, and why their teachings never found a place in the Roman *disciplina auguralis*; so that, when the Senate wished to have the opinion of the *haruspices* in any particular case, it summoned them from Etruria expressly for the purpose (the regular phrase for this was 'haruspices acciendos ex Etruria' [Cic. *de Har. Resp.* 25]). This proceeding, however, must be regarded in the same light as the action of the Roman State in sending ambassadors to lay certain questions before the Greek oracles, such as that at Delphi; the first deputation of this kind was sent just after the battle of Cannæ (Livy, xxii. 57. 5, xxiii. 11. 1). Livy's statements as to still earlier consultations of the Delphic oracle (i. 56. 9, v. 15 f.) are rightly regarded by H. Diels (*Sibyllinische Blätter*, Berlin, 1891, p. 49, n. 3) as without foundation in fact. The truth is that, in times of severe national trial, the Roman people habitually resorted to the vaticination of foreign cults, but they did not thereby admit such practices into their own religion. The case was different with the so-called Sibylline Oracles (*libri fatales*), which were authoritatively introduced into Rome as early as the period of the Tarquins, and had their official custodians and interpreters in the *duoviri* (later *decemviri* and *quindecimviri sacris faciundis*). The Sibyllines, however, were not oracles in the proper sense, but *kabappul*; i.e. the sentences specified the

particular measures—sacrifices, *lectisternia*, supplications, admission of new cults—by which impending dangers could be turned aside and the anger of the gods appeased; but actual predictions of future events lay outside their province, and were first deduced from them at a relatively late period, the earliest known instance dating from 187 B.C. (Livy, xxxviii. 45. 3).

We may thus venture to affirm that the aversion to an over-curious prying into the unborn future, as also to the practice of consulting the Deity with reference to coming events, was a characteristic feature of ancient Roman life, and that the Romans manifested this reluctance in considerably greater measure than the other peoples of Italy. For, as we have seen, they asked no more from their auguries than an assurance of Divine concurrence with their actions, and were unwilling to do anything in opposition to the Divine counsel, being for the rest content to abide the issue, and seeking no further revelation of the future. But, when we bear in mind that in times of calamity even the supreme authorities succumbed to the temptation of resorting to the practitioners of foreign divination for the occult knowledge which their own religion failed to supply, we cannot wonder that in private life all manner of mantic devices of exotic origin acquired in process of time a great and growing influence. Cato the Elder already found it necessary to insert among his directions for the conduct of an estate steward (*vilicus*) the warning: 'haruspiciem augurem hariolum Chaldaeum ne quem consuluisse velit' (*de Agri Cult.* 5. 4); while Cicero gives quite a list of fortune-tellers who, finding their clientele among the middle and lower classes, made a profitable trade of forecasting the future: 'nunc illa testabor, non me sortilegos neque eos qui quaestus causa hariolentur, ne psychomantiam quidem . . . agnoscere; non habeo denique nauci Marsum augurem, non vicianos haruspices, non de circo astrologos, non Isiacos coniectores, non interpretes somniorum' (*de Div.* i. 132). These references are elucidated by evidence from the Imperial period, which shows that the people were in the habit of consulting soothsayers regarding such things as sickness (Pliny, *Ep.* ii. 20, 2 ff.), prospects of marriage (Juvén. vi. 588 ff.), the whereabouts of runaway slaves, or the advisability of purchasing an estate (August. *de Civ. Dei.* x. 11). A further illustration is supplied by a collection of oracular sayings of very general application—and, as it would seem, from a Greek original—extracted from the Merobaudes palimpsest of St. Gall, and published by H. Winnefeld (*Sortes Sangallenses*, Bonn, 1887); from these sayings the inquirer probably selected his particular oracle by means of dice.

The most influential of these exponents of exotic divination were the *Chaldaei*, or, as they were subsequently styled, *mathematici* (Aul. Gell. i. 9. 6), i.e. the professors of Babylonian astrology, who pre-saged the destiny of individuals by means of the horoscope (hence they were also called *genethliaci* [*ib.* xiv. 1. 1]), and gave information regarding the future according to the movements of the heavenly bodies. These astrologers were banished from Rome and Italy for the first time in 139 B.C., in consequence of an edict of the Prætor peregrinus, Cn. Cornelius Hispanus (Val. Max. *Epit.* i. 3. 3), but in the Imperial period, by a long series of resolutions passed—often at short intervals—by the Senate, they were made liable not to expulsion only, but to the severest penalties (*Tac. Ann.* ii. 82, xii. 82, *Hist.* ii. 62; Dio Cass. lxxv. 9. 2; Ulpian, *Mos. et Rom. leg. coll.* [1768] 15. 2). These measures, however, brought about no considerable diminution of their activity (Juvén. vi.

553 ff.), as their clientele included people of the highest rank, and even the Emperors themselves made use of their art. Hence Tacitus (*Hist.* i. 22) could with perfect justice speak of the *mathematici* as 'genus hominum potentibus infidum, sperantibus fallax, quod in civitate nostra et vetabitur semper et retinebitur.' In later times it was only the seeking and giving of information bearing upon the life of the Emperor and the succession to the throne—and, in the case of slaves, consultations regarding the duration of their master's life—that ranked as capital crimes (Paul. *Sent.* v. 21. 3-4; Mommsen, *Röm. Strafrecht*, Leipzig, 1899, p. 861 ff.); and, indeed, Alexander Severus actually instituted public chairs of astrology in Rome, and endowed them from the national exchequer (*Hist. Aug. Alex. Sev.* 27. 5; 44. 4). Then at length Diocletian, in A.D. 294, issued a universal interdict against the 'ars mathematica damnabilis' (*Cod. Just.* ix. 18. 2). The death-blow to divination in Rome, however, was given by the severe decree (25th Jan. A.D. 357) of the Emperor Constantius (*Cod. Theod.* ix. 16. 4 = *Cod. Just.* ix. 18. 5; cf. also *Cod. Theod.* ix. 16. 6 and 8): 'Nemo haruspiciem consulat aut mathematicum, nemo hariolum, augurum et vatum prava confessio conticescat. Chaldaei ac magi et ceteri, quos maleficos ob facinorum multitudinem vulgus appellat, nec ad hanc partem aliquid moliantur. sileat omnibus perpetuo divinandi curiositas. etenim supplicium capitis feret gladio lotore prostratus, quicunque iussis obsequium denegaverit.' Nevertheless, in spite of all such repressive measures, the deep-seated craving of the human heart for light upon the future still continued to assert itself, even after the triumph of Christianity, as is shown by the zeal and vigour with which Christian evangelists like Cæsarins of Arles and Martin of Bracara made war upon the vestiges of pagan divination. The first-mentioned gives a long and detailed list of the various modes of soothsaying still in vogue in his own day (6th cent. A.D.): 'nullus ex vobis caragos vel divinos vel sortilegos requirat . . . nullus sibi præcantatores adhibeat . . . similiter et auguria observare nolite nec in itinere positi aliquas aviculas cantantes attendite nec ex illarum cantu diabolicas divinationes annuntiare præsumite' (Migne, *PL* xxxix. 2269); to these must be added the 'sortes Sanctorum' mentioned later in the records of Councils (cf. R. Boese, *Superstitiones Arelatenses e Cæsario collectæ*, Marburg, 1909, p. 42 f.), i.e. the practice of opening the Scriptures at random in order to find a sentence which might furnish the solution of a stubborn dilemma or give information regarding the future ('qui de paginis evangelicis sortes legunt' [August. *Ep.* lv. 37, p. 212, 3, Goldbacher])—a device which Augustine himself had employed (*Conf.* viii. 12. 29), and which was at an earlier day applied in exactly the same way to the works of the ancient poets, especially Vergil (*ib.* iv. 3. 5). Cf. art. DIVINATION (Christian).

G. WISSOWA.

DIVINATION (Teutonic).—Tacitus (*Germ. x.*) states that the German tribes practised augury and divination by lot as much as any people. He proceeds to describe the latter, which, he says, was used in both public and private life, and which from other references appears to have been a common custom. He says that it consisted in picking up and interpreting chips of wood that were inscribed with some kind of signs (which may possibly have been runic characters), and that had been scattered haphazard:

'If the twigs prove unfavourable, the matter is left over for that day; while, even if they are favourable, the confirmation of augury is still required. For they are also familiar with the practice of consulting the notes and the flight of birds; and it is a characteristic of this people to seek warnings and omens from horses. There are kept at the public expense, in the woods and groves, white horses, free from all taint of human labour; these, yoked to a consecrated chariot, are accompanied by the priest or king or chief person of the community, who observe their manner of neighing and snorting. Nor is there greater reliance on any form of augury, both among the common people, the nobility, and even the priests; for they regard themselves as the ministers of the gods, the horses as acquainted with their will.'

We may compare a passage in the *Flateyjarbók* (saga of Olaf Trygvason, 322), where we hear of horses sacred to Frey at a sanctuary in the Thronðhjem fiord. In the sagas we hear also of wolves being used in augury, but the majority of the instances are concerned with birds, usually the raven. This bird was evidently considered to possess wisdom and knowledge of events, and is specially connected with battle; should one be heard thrice screaming on the roof, it bodes death to warriors; but the appearance of ravens following a host or a single warrior will bring good luck in battle.

A striking instance of the significance of the raven occurs in the saga of Olaf Trygvason in the *Heimskringla*. Earl Hakon, after the defeat at Danevirke, made a great blood-sacrifice, and 'there came two ravens flying, which croaked loudly, and now, thought the earl, the blood-offering has been accepted by Odin, and he thought good luck would be with him any day he liked to go into battle' (tr. Laing). Here the two birds were perhaps supposed to have been Odin's own ravens, Hugin and Munin, from whom he learnt all that was going on in the world. In this connexion we may mention the raven banner of the Northmen described in Anglo-Saxon records; it was woven of plain white silk, but on it in war time there became visible a raven, which by its drooping or flapping wings portended defeat or victory.

Augury from the voices of birds is frequently found in the form of a belief that certain specially gifted persons could understand the language of birds. Procopius (*de Bell. Goth.* iv. 20) gives the story of Hermigislaus, king of the Varni, who interpreted the loud and incessant croaking of a bird as presaging his own death. In the sagas various birds act thus as soothsayers—the raven, the crow, and the nut-hatch. Thus in the poem *Fafnismal*, Sigurd, after tasting Fafnir's blood, is able to understand the speech of certain nut-hatches which warn him of the treachery prepared by Reginn; and the *Ynglinga Saga* gives the legend of a certain king Dag who had a sparrow which he greatly valued, since, like Odin's ravens, it flew to different countries and brought him much news.

Divination appears to have been largely practised by 'wise women,' both among the early Teutonic peoples of the Continent, and in later times in the North. Strabo (bk. vii. ch. ii. [p. 294]) states that the Cimbrî were accompanied to war by grey-haired

prophetesses, who presaged victory in battle from the blood and entrails of slaughtered prisoners; Tacitus has several references to the prophetess Veleda, who was held in much reverence by the Bructeri, and who had predicted the success of the Germans and the destruction of the legions; and Caesar and other writers also refer to the divinations of 'wise women' among the Teutonic armies.

In the sagas, too, we hear of the 'wise woman,' such as Thorbjorg, who, in the saga of Eirik Raudha, visits the house of Thorkel. She has a special dress, seat, and food, and further requires one of the women of the house to sing the 'warlocks,' or spell song. Then she predicts the end of the sickness and famine, and foretells the future of many of the people.

In addition to these forms, we have vague references to some sort of inquiry of the gods, accompanied by sacrifices; as, for example, in the *Eyrbýggja Saga*, where Thórolf of the Mostr makes a great sacrifice and consults Thor, 'his well-beloved friend,' as to whether he shall emigrate or make peace with the king, 'but the word showed Thórolf to Iceland.'

We hear also of divination by dreams, and of the practice of single combat, as a kind of ordeal by battle, to decide disputes, which Tacitus (*loc. cit.*) states was also used to presage the result of a war.

Goth.* iv. 20; Ammianus Marcellinus, xiv. 9, 10; Agathias, ii. 6.

C. J. GASKELL.

DIVINATION (Vedic).—The Vedic art of divination, when contrasted with the Greek art, presents striking differences. Institutions comparable with the wide-reaching influence of the Greek oracles were never developed, and, while the gift of prophecy could, like other mystic powers, be acquired and increased by religious austerities (cf. *Mahābhārata*, 3. 16,870, Calc. ed.), still the power of seeing what is hidden, especially what is hidden in the future, depended in the main not on inspiration or personal gifts, but on the knowledge of how to interpret certain omens and portents. The chief reason for this fact must be sought in the great development of the other branches of magic (cf. MAGIC [Ved.]). A man who is in possession of the magical means to acquire any desired blessing has little reason to inquire what the future has in store. Indeed, his only motive for inquiring about the future can be to learn when danger is impending, in order that he may avert it by the timely performance of the necessary rites. It was primarily to this need that the observance of omens and portents in India was due, though further development was sure to follow, as the attempt to define an evil portent leads of itself to the observation of favourable omens.

The omens and portents recognized in the Vedic system of divination may be classified as follows: (1) ominous appearances and actions of animals, especially birds—*śakuna*; (2) phenomena at variance with the usual course of Nature—*adbhuta*; (3) physical marks—*lakṣana*; (4) omens of an astrological nature; (5) omens drawn from occurrences at the sacrifice; and (6) dreams.

With regard to the omens drawn from the sacrifice, it must be noted that, while they depend in part upon things not wholly subject to the regulation of the celebrant (e.g. the movements and colour of the fire), in part they depend upon things that are subject to his will (e.g. when it is stated that Parjanya will give rain if both or one of the bulls that draw the cart is black [*Satapatha*

Brāhmaṇa, 3. 3. 4. 11]), and so pass over by almost imperceptible transitions from divinatory observations into directions about the sacrificial technique required to obtain a desired object. This subject will be referred to in other articles (cf., e.g., art. DREAMS [Vedic]), and the present article will be devoted to the ceremonies the purpose of which is the attainment of knowledge (*viññāna*), usually of future events, which is unattainable by natural means.

1. Sources.—As was to be expected, the chief source for such ceremonies is the *Kauśika Sūtra*, which is supplemented by an interesting chapter in the *Sāmavidhāna Brāhmaṇa*, 3. 4. Sporadic instances occur in other Vedic texts, sufficient to show that such practices were not confined to these two schools, and that the reason why they are not more frequently mentioned in other texts is to be sought in the nature of the literature.

2. The ceremonies.—The most widely attested *viññāna*-ceremony is the test of the bride, advised or enjoined by the *Grhya Sūtras* (*Āśvalāyana*, 1. 5. 4-5; *Gobhila*, 2. 1. 3-9; *Āpastambīya*, 3. 14-17; *Mānava*, 1. 7. 9-10; *Kāthaka*, 14; *Bhāradvāja*, 1. 11 [the last two in Caland, p. 127, n. 8]; *Kauśika*, 37. 7-10; cf. Winternitz, *Das altind. Hochzeitsrituell*, 1892, p. 37). It is based upon the principle of *attractio similitum*, and consists in offering from four to nine clods of earth, taken from different places, to the bride, whose choice is ominous. *Āśvalāyana*'s list is typical, and comprises clods from a field that yields two crops a year, from the stable of a cow, from a *vedī* (altar), from an undrying pool, from a gambling-place, from cross-roads, from a barren spot, and from a cemetery. They signify respectively that the bride's offspring will be rich in food, rich in cattle, rich in holy lustre, rich in everything, addicted to gambling, wandering in different directions (according to *Kauśika*, that she will be unfaithful, poor, and the cause of the death of her husband (according to *Kauśika*, that she will not live long). When there is a ninth clod (*Gobhila* and *Kāthaka*), it is mixed of all these substances. The ceremony is recommended when it is impossible to determine the bride's qualities from the marks on her body (*lakṣaṇāni*), but *Āpastamba* implies that her family have a right to object to this test. An alternative in *Kauśika*, 37. 11-12, is to require the bride to pour out a handful of water that has been blessed. If she does this in an easterly direction it is a good omen.

With this may be compared the practices for the purpose of seeing whether the ground selected for a house is suitable (*Āpast.* GS 2. 8. 1-8), though these may appear to us practical rather than magical, and the impression is strengthened by the absence of all religious elements from the ceremony. A pit is dug and refilled. If the earth more than refills it, the site is good; if it fails to fill it, the site is bad; if it fills it exactly, the site is indifferent. Or, after sunset, the pit is filled with water. If, in the morning, there is water still in it, the site is good; if the ground is dry, it is bad; and if it is moist, it is indifferent.

Another method of divination in the *Kauśika*, with parallels in the hieratic literature, is based upon the wide-spread belief that a man's reflexion or shadow is part of his personality. Hence, when one cannot see his reflexion, his spirit is gone (he is *gatāsu*, *itāsu*, or *gatamanas*), and he is in danger of death. The *Kauśika*, 15. 9-10, employs this idea as follows: Before a battle the king causes his warriors to look, two by two, into a vessel of water over which *Atharva Veda*, 5. 2. 6, has been recited; if any warrior does not see his reflexion he must not take part in the approaching battle. Similar applications of this idea are found in *Taittirīya Samhitā*, 6. 6. 7. 1; *Maitrāyaṇī Samhitā*,

4. 7. 2; *Āśvalāyana Srauta Sūtra*, 5. 19. 5; *Āpastamba ŚS.* 13. 14. 3. 4; *Kātyāyana ŚS.* 3. 3. 6 (cf. Oldenberg, p. 526, n. 4).

Another method of divination practised before a battle is as follows: Three ropes, made of bowstrings, are laid upon heated coals, and *Athar. Ved.* 5. 6 is recited over them. The middle string represents death, the other strings the two armies. If the middle string passes over one of the other strings it forebodes the defeat of that army; if one of the outside strings passes over the middle string it signifies the victory of the army it represents. Further auguries as to the rank of the men who will fall are drawn from the portion of the string that curls—the top, middle, and bottom of the strings denoting men of similar standing. Reed-stalks (*īṣikā*) may be used instead of the ropes (cf. *Kauśika*, 15. 15-18). The *Sāmavidhāna Brāhmaṇa* (3. 4. 10) attains the same purpose in the following manner: each contestant is represented by a pile of glowing smokeless coals; these are sprinkled at the same time with gḥi. He will be victorious whose pile first blazes up with flames free from smoke and moving from left to right.

To learn who will live long (*jīvita-viññāna*) the same test (3. 4. 11) proceeds in a similar way, but in this case the gḥi must be made from woman's milk and churned on the same day. The favourable omen in this case is for one's pile to burn longest. For the same purpose the *Kauśika*, 15. 13-14, directs that three ropes of bowstrings be laid on heated coals; if they curl upwards it is a good omen.

Another augury before the setting out of a warlike expedition is to produce an inauspicious smoke by sprinkling grass with *ingīda*-oil, reciting certain hymns over it, and burning it with an uncanny fire (for these details cf. art. WITCHCRAFT [Ved.]). The expedition will conquer the region towards which the smoke goes (cf. *Kauśika*, 14. 30-31).

The direction in which a lost object must be sought is discovered in the following ways: A water pitcher is covered with a new cloth and placed upon a bed which is not in its usual position, and the leavings of an offering made with recitation of *Athar. Ved.* 2. 1 are poured over it. The faces of two girls who have not yet menstruated are covered with a cloth so that they cannot see, and they are told to remove the pitcher. The lost object is in the direction in which they carry the pitcher. Dice may be used instead of the pitcher and a plough instead of the bed (cf. *Kauśika*, 37. 4-6). Another method consists of throwing down and spreading out at cross-roads twenty-one pebbles blessed with *Athar. Ved.* 7. 9, but how they indicate the direction is not specified (cf. *Kauśika*, 52. 12 ff.).

Whether a woman will get a husband is ascertained by tying calves to a seven-ply rope, smeared with the leavings of an offering made with recitation of *Athar. Ved.* 2. 36, and bidding her loose them. If she does so in order from left to right she will marry (cf. *Kauśika*, 34. 17). The direction from which the wooer will come is discovered by letting loose a steer, whose head is covered with a new cloth on which have been placed the leavings of an offering made with recitation of *Athar. Ved.* 2. 36 (cf. *Kauśika*, 34. 18-19). The same information is gained, at an oblation offered at dawn to *Aryaman* to obtain a husband for one's sister, by observing the direction from which the crows come (cf. *Kauśika*, 34. 21-24).

The sex of a child is foretold by placing four fruits of the flax plant in the mother's hand, blessing them with *Athar. Ved.* 1. 11, and pouring water over them. If they adhere to one another the child will, for obvious reasons, be a boy. Or the priest may whisper the same hymn over the son of a

Brāhman and order him to touch the mother. If the name of the limb touched is grammatically masculine, the child will be a boy (cf. Kausika, 33. 17-20). The conclusions drawn from the appearance of the root of a plant dug for a charm to secure easy delivery, and from the fact that the symbolical drawing apart of the *muñja*-grass is accomplished without tearing them, are to be considered as the observation of omens rather than charms of divination (Kausika, 33. 12. 3).

The prediction of the weather was an especial object of divination, and apparently undertaken by means of the smoke of burning dung. The idea readily passed into the form that the weather prophet controlled the weather. Hence, Athar. Ved. 6. 128 says: 'When the stars made Sakadhūma (he who predicts the weather from the smoke of dung) their king, they bestowed good weather upon him. "This shall be his dominion," they said.' The hymn is employed in Kausika, 50. 15-16, for the propitiation of Sakadhūma by one who is about to start on a journey (cf. Bloomfield, *AJPh* vii. 484 ff.). Among the Parisistas of the Atharva Veda is also a text entitled *Sadyovṛṣṭilakṣaṇa*, and devoted to the signs of rain that will come immediately.

In addition to these, the Kausika has a number of charms for obtaining the answer to any question. They are referred to briefly, with rubrication of the hymns required, in Kausika 37. 1-3, but fuller details are given in the commentary of Keśava. The first is as follows. The questioner thinks either to himself or aloud of the question he wishes answered. Then he recites a hymn over a milk-porridge; while it is cooking he thinks, 'This porridge is done,' or 'This porridge is not done.' If he has guessed correctly, the answer to the original question will be according to his wish. Similarly, the answer may be made to depend upon whether a substance laid upon heated coals will curl upwards or not; whether the number of blades in a bunch of grass is odd or even; whether a flower will close on the day after a hymn has been recited over it; whether he can foretell the direction in which a reed or arrow shot straight upwards will fall, or the side towards which a yoke or *kāmpīla*-branch (*Crinum amaryllaceae*) balanced on his head will fall; whether the quantity of milk he takes will be sufficient to fill to overflowing a vessel partly filled with water; whether the smoke from the fire moves from left to right, or *vice versa*; whether he can foretell the throw of the dice;¹ whether he can divide twenty-one pebbles into two heaps in such a way that the odd and even numbers will be in the hand that he expected.

On the same principle rest two charms of the Sāmavidhāna Brāhmaṇa, 3. 4. 9 and 6. Two heaps of unhusked grains are designated respectively as 'to be' and 'not to be,' and the person who is consulting the oracle is told to take his choice. Or the celebrant orders two pupils (*brahmachārins*) to raise two bamboo poles; if they bend (as he expects them to do), it is a sign of success. In both of these cases the necessary magic potency is imparted to the apparatus by the celebrant keeping it with him over night, and singing over it a certain *sāman*. At dawn this *sāman* is sung again, and the test takes place. In the same way, a maiden who has not yet menstruated is enabled to see the future in a mirror or spoonful of water (3. 4. 4, 5); a rod is made to forebode success by growing longer in the night (3. 4. 7); and the seeds that will thrive are distinguished by their increase of weight on the night of the full moon of the month of Aṣāḍha (3. 4. 8).

¹ For a late text containing elaborate oracles from dice, cf. Weber, 'Ueber ein indisches Würfeln-Orakel,' *Indische Streifen*, I. (Berlin, 1868) 274 ff.

As an example of such practices in a *śrauta*-text may be cited Taittiriya Saṁhitā, 3. 3. 8. 4, where directions are given to cook a cake of a certain size on the *ekāstakā* (the first or last night of the year), and in the morning to attempt to set fire with it to a thicket. If the thicket burns, it will be a lucky year. The same text also (ii. 509; Hiraṇyakeśin SS. 22. 13-14) employs a horse as a weather prophet. But the ceremony enjoined in Gobhila GS 4. 8. 14 ff.—one goes out of the village in an easterly or northern direction, and erects at cross-roads or on a mountain a pile of the dung of wild beasts, sets it on fire, sweeps the coals away, and makes an oblation of butter with his mouth: if the butter catches fire, he will get twelve villages; if it smokes, three—is less a means of divination than a charm to effect the desired purpose, combined with an augury from the ceremony, comparable with such practices as those of Kausika, 19. 21, 47. 29, and others.

In looking back upon these performances, certain common features may be observed: (1) A religious or quasi-religious ceremony is necessary to impart efficacy to the apparatus. (2) The general principle upon which most of them rest is the idea that, an association being established between two questions, the answer to the one will be the answer to the other, or that the person can answer both correctly who can answer one correctly. This is but a particular application of the fundamental principles of magic, that the part may be substituted for the whole, and that objects connected in any way, even though merely by an association of ideas, constitute a whole. (3) It is noteworthy that none of the *mantras* seems to have been primarily intended for the purpose for which they are here employed. (4) There is a marked tendency for the charms to pass from an inquiry about the future into a means of compelling a desired end.

In some cases the indication of success is the occurrence of what we would term a miracle, e.g. a growing rod, seeds increasing in weight. This idea is employed in several forms of the ordeal (*daivya*, *divya*), while in other cases the ordeal is merely a particularly intensified form of oath. Hence it is also called *śapatha*, literally 'oath' or 'self-curse.'

In reality the ordeal is but a particular form of divination, the question being the guilt or innocence of a suspected man. In view of the occurrence of this belief among other Indo-European peoples (Schrader, *Reallex. der indogerm. Altertumskunde*, s.v. 'Gottesurtheil'), it is surprising to find only two incidental allusions to the practice in Vedic literature. The first of these is Pañcaviṁśa Brāhmaṇa, 14. 6. 6, where the story is told of how the Rṣi Medhātithi taunted the Rṣi Vatsa with being not a Brahman, but the son of a Śūdra woman. The latter proposed that they should both pass through the fire to see which was the better Brahman. They did so, each singing the *sāman* that bears his name, and Vatsa emerged without losing a hair, for that was his wish, and the Vatsa *sāman* is a winner of wishes. The other passage is Chhândogya Upaniṣad, 6. 16. 1-3, where the trial of a man accused of theft, by a form of the fire ordeal in which the instrument is a heated axe, is employed as a parable. Another passage, Kausika, 52. 8, may bear upon the question. Among the practices assigned to the hymn Athar. Ved. 6. 106, which is used to prevent or heal the effects of fire, is the *sūtra*, *śāpyamāṇāya prayachekhati*. Sāyana, who is following Keśava, and who is followed in turn by Caland, explains that in place of the *taptamāṇa* ordeal (cf. below), the celebrant must recite the hymn over the oil or other substance employed before handing it to the person who is undergoing the ordeal. This interpretation cannot be correct, as such magical aids are especially forbidden in

the case of the *viṣa* ordeal; and, according to the *paribhāṣā* (general rule), Kauṣika, 7. 7, the *sūtra* must mean that the hymn is recited over a stirred drink and porridge which are given to the *śāpyamāna*. If it has anything to do with the ordeal, it must refer to a secret preparation, which would have been forbidden had it been detected. In this sense the middle, not the passive participle, should have been employed, and it is best to give to the word the general sense of 'one who is suffering from a curse.' That in later times the ceremony may have been performed especially by those about to undergo with guilty consciences the *taptamāṣa* (and *agni*?) ordeal is not improbable, and Keśava may be accepted as a witness to the fact; but there is no reason to believe that the ceremony was originally devised for such cases, or ever restricted to them.

Further evidence for the fire ordeal was formerly found in Athar. Ved. 2. 12. 1-8 (so Schlagintweit, *Die Gottesurtheile der Inder*, 1866, p. 9; Weber, *Indische Studien*, xiii. (1876) 164 ff.; Ludwig, *Der Rig-veda*, iii. (1878) 445; Zimmer, *Altindisches Leben*, 1879, p. 183 f.; Kaegi, *Alter und Herkunft des germ. Gottesurtheils*, 1887. The interpretation was first doubted by Roth (cf. Grill, *Hundert Lieder des Atharva Veda*, 1888, p. 16), and the ritualistic manipulation of the hymn in the Kauṣika Sūtra finally disclosed its true nature as an imprecation against an enemy for thwarting holy work (cf. Bloomfield, *AJPh* xi. 330 ff.; *SBE* xlii. 89, 294 ff.).

The earliest lawbooks, also, make but slight reference to the practice, most probably because it was not considered of great importance, and because they were consequently willing to leave the details to be decided by local customs. These have been gathered and systematized by the later treatises on law, which finally recognize nine forms of ordeal.

(1) By the scales (*dhata*, *tulā*). The accused is placed in one scale of a balance and his weight in stones and sand in the other scale. He descends from the scale, and after certain ceremonies is again placed on the balance. If he is lighter, he is innocent; if heavier, guilty. Equality of weight is generally considered proof of guilt in a less degree, though the authorities differ upon this point and upon the significance of accidents to the apparatus.

(2) By fire (*agni*). The accused, whose hands are more or less protected by leaves and grains, is required to step in seven circles, while holding in his hands a piece of heated iron. If his hands are burnt it is a proof of his guilt.

(3) By water (*salila*). To prove his innocence, the accused must remain under water until a swift runner can bring back an arrow shot at the time of submersion.

(4) By poison (*viṣa*). If no ill effects are observable within a certain time after the accused has taken the poison, he is declared innocent.

(5) By holy water (*koṣa*). An image of a god recognized by the accused is bathed in water, which is then given to the accused to drink. If he does so without betraying his guilt, and no misfortune happens to him within a certain time, he is innocent.

(6) By rice grains (*tapaṇḍula*). Grains of unhusked rice are soaked in water in which an image of a god has been bathed, and are given to the accused to chew. He is then required to spit upon a leaf. If there is no blood evident, and his gums are uninjured, he is innocent.

(7) By a heated gold-piece (*taptamāṣa*). The accused is required to take a gold-piece from a vessel of heated gḥi and oil. Quivering and blisters are proofs of guilt.

(8) By a ploughshare (*phāla*). The accused, to

establish his innocence, must lick a heated ploughshare without burning his tongue.

(9) By lot (*dharmādharma*). Representations of innocence and guilt are placed in a vessel, and the accused is required to draw one.

The form of ordeal is determined by the nature of the crime, the position of the accused, and the season of the year. There is observable, as always in Hindu law, the tendency to favour the upper castes, but there is also a tendency to moderate the conditions of the ordeal in favour of the accused, and the accuser is generally required to undergo the penalty in case the accused is acquitted. The ordeal can be applied only in the absence of human evidence, and, as was to be expected, is accompanied by religious ceremonies (for further details cf. J. Jolly, *Recht und Sitte*, 1896, p. 144 f., and esp. A. F. Stenzler, 'Die ind. Gottesurtheile,' *ZDMG* ix. 661-682).

The practices described must be much older than the texts in which they are contained. There is no warrant for declaring the essentials of any one form later than another; and the familiar nature of the Vedic allusions to the fire ordeal as something well known warrants the belief that similar, if not identical, practices were in vogue in Vedic times.

Allusions to ordeals are found in the classic literature in Rāmāyana, vi. 101-103 (Gorresio), where Sītā proves her innocence by walking through fire; and in the *Mṛcchhakatikā*, 9. 43, p. 156 S., where the ordeals by fire, water, poison, and the scales are referred to.

Oldenberg, *Die Religion des Veda*, Berlin, 1894, p. 609 ff.; and the indexes to 'Hymns of the Atharva-Veda' (tr. M. Bloomfield), in *SBE* xlii., Oxford, 1897, and W. Caland, *Altindisches Zauberitual*, Amsterdam, 1900.

G. M. BOLLING.

DIVINE RIGHT.—Divine right is a right conferred by God, sanctioned or inspired by Him, and based on His ordinance and appointment. The phrase is generally used to express the theory that kings hold their authority, not from the choice or consent of their subjects, but from God Himself alone. In English history it came into specific use in the 17th century, during the disputes between the Stuarts and their people. The claim of Divine right was pre-eminently made for that dynasty; the doctrine became the badge of Tories and High Churchmen; and at the Restoration in 1660 it was the accepted royalist creed. It was seriously maintained that hereditary monarchy, as opposed to every other form of government, has the Divine approval; that no human power can justly deprive a legitimate king of his rights; that the authority of such a king is necessarily always despotic; that constitutional liberties are not rights of the people, but concessions freely made by the king and liable to be resumed at his pleasure; that treaties which he may make with his subjects merely inform them of his present intentions, and are not contracts of which the performance can be demanded.

The chief representative of the Divine right party was Sir Robert Filmer, who in his books and pamphlets laid down the doctrine that the government of a family is the true original and model of all government, that all kings and governors derive their absolute authority from the patriarchs, and that to the end of the world the king will always have the natural right of a supreme father over a multitude. This fantastic theory was fully developed in his *Patriarcha*, a posthumous work (1680), but his position was sufficiently indicated in works published during his lifetime, his 'Freeholder's Grand Inquest touching our Sovereign Lord the King and his Parliament'

(1648), his 'Anarchy of a Limited and Mixed Monarchy' (1648), his 'Observations upon Mr. Hobbes' Leviathan, Mr. Milton against Salmasius, and H. Grotius, *De jure belli et pacis*, concerning the Original of Government' (1652). It amounted to a paternal despotism: the king alone is the maker of laws, the Lords only give counsel to the king, and the Commons merely 'perform and consent to the ordinances of parliament.' It was this 'patriarchal' theory of government, doggedly adhered to by the Stuarts, that rent the fabric of the constitution in the reign of Charles I., and drove the long-suffering nation to the Revolution of 1688.

In the previous century, Richard Hooker (c. 1553-1600) had given a philosophical statement of the principles of government, making the consent of the people the prime requisite:

'Without which consent there were no reason that one man should take upon him to be lord or judge over another; because, although there be according to the opinion of some very great and judicious men a kind of natural right in the noble, wise, and virtuous, to govern them which are of servile disposition; nevertheless for manifestation of this their right, and men's more peaceful contentment on both sides, the assent of them who are to be governed seemeth necessary.'

'To fathers within their private families Nature hath given a supreme power; for which cause we see throughout the world, even from the foundation thereof, all men have ever been taken as lords and lawful kings in their own houses. Howbeit over a whole grand multitude having no such dependency upon any one, and consisting of so many families as every politic society in the world doth, impossible it is that any should have complete lawful power, but by consent of men, or immediate appointment of God; because, not having the natural superiority of fathers, their power must needs be either usurped, and then unlawful; or, if lawful, then either granted or consented unto by them over whom they exercise the same, or else given extraordinarily from God, unto whom all the world is subject' (*Eccle. Polity*, i. 10; Keeble's edition, i. 302 L).

To popularize the principles of the liberty of subjects, the fiery logic of Samuel Rutherford did more than the massive learning of Hooker. His *Lex Rex* (1644) was intolerable to the Royalists. Not only was it burnt by the hangman in Edinburgh in 1661, and by the hands of Sharpe under the windows of its author's college in St. Andrews, but it would probably have cost him his life, as he was about to be tried for high treason when he 'got another summons before a superior Judge.'

'The king,' he contends, 'hath no mastery dominion over the people, but only fiduciary' (116). 'That the power of the king is fiduciary, that is, given to him by God in trust, Royalists do not deny; but we hold that the trust is put upon the king by the people' (124). 'The people may be without the king, but not the king without the people' (144). 'Though God immediately without any action of the people make kings, this is a weak reason, to prove they cannot unmake them' (148). 'I utterly deny that God ever ordained such an irrational creature as an absolute monarch' (216). 'Whatever the king doth as king, that he doth by a power borrowed from the Estates, who made him king. He must then be nothing but an eminent servant of the State' (233).

The democratic principle was argued for in another classical work on English constitutional law and polity—Locke's *Two Treatises on Government* (1690). In the 'First Treatise' he subjects the writings of Filmer to a searching analysis, going over his arguments *seriatim*, and in the 'Second Treatise' he maintains that civil rulers hold their power not absolutely but conditionally, government being a moral trust which is forfeited if the conditions are not fulfilled by the trustees. Written for the immediate purpose of vindicating the Revolution, Locke's work contains the essential principles which have regulated political progress for over two centuries, and gradually moulded the British constitution.

Carlyle, in his lecture on 'The Hero as King,' remarks that 'much sorry stuff, written some hundred years ago or more, about the "Divine right of kings"' had better be left to rot silently in the Public Libraries. At the same time he does not wish to 'let the immense rubbish go without leaving us some soul of it behind.'

'Find me the true *Könning*, King, or Able-man, and he has a divine right over me. That we knew in some tolerable measure how to find him, and that all men were ready to acknowledge his divine right when found: this is precisely the healing which a sick world is everywhere, in these ages, seeking after!' (*On Heroes*, People's ed. p. 138 f.). 'He that models Nations according to his own image, he is a King, though his sceptre were a walking-stick; and properly no other is' (*Frederick the Great*, People's ed., vol. i. p. 236). In this high sense Cromwell is a king by Divine right; while Pitt is 'not born a King,—alas, no, not officially so, only naturally so; has his kingdom to seek. . . . tragical it is . . . to see a Royal Man, or Born King, wading towards his throne in such an element. But, alas, the Born King . . . so seldom can arrive there at all' (*ib.* vii. 139 f.).

The older doctrine had an ephemeral revival at the time of the Holy Alliance (1814), which, while to all appearances an attempt, inspired by the religious idealism of the Czar Alexander I., to find in the 'sacred precepts of the Gospel' a common basis for a general league of European governments having for its object the preservation of peace, was really a brotherhood of sovereigns holding the reins of government by Divine right. The same high doctrine was dear to the first German Emperor, who intensely believed himself to be the vicegerent of the 'God of battles'; and it is held as firmly by his grandson, who habitually lays stress on the Divine right by which alone the kings of Prussia rule, sincerely holding that they are appointed and inspired to shape their people's destinies. 'Considering myself as the instrument of the Lord, without heeding the views and opinions of the day, I go my way' (Königsberg speech, 1910). The principle is logically applied in Russia, where the Emperor places the crown (as the first Napoleon did) on his own head, deriving his kingly prerogative from no man, and being answerable to no man.

The Old Testament has often been regarded as teaching the Divine right of kings. But it speaks with a somewhat uncertain voice. In gratitude for the monarchy, which, arising out of natural beginnings, drew together all the vital energies of Israel in devotion to one God and one king, the prophets went to all lengths in proclaiming the king's person sacrosanct and his rule Divine. The earthly monarch was sent in the place of the heavenly; he was Jahweh's anointed and His son, the mediator through whom help, salvation, and blessing came to the people. The Civil State was a miracle, a gift of God, and even the glorious kingdom of the future was inconceivable without a heaven-sent king. Time, however, brought disillusionment; a succession of weak and unrighteous kings were unfaithful to the pure religion; Hosea (13¹) regarded the monarchy itself as an evil; and, according to a late stratum of the historical books, Samuel from the very beginning foresaw a dangerous rivalry to the kingship of Jahweh, an autocracy substituted for a theocracy (1 S 8⁷). It is certain that the prophets never renounced their Divine right of criticizing the policy and the character of their kings, and that long before the end came they remorselessly foretold the dissolution of the State and the abolition of the monarchy, at least until the Messiah should come to restore all things.

In the New Testament, Christ Himself acknowledges the rights of Caesar (the reigning Emperor was Tiberius) within his own sphere (Mk 12¹⁷), and St. Paul declares that the Powers that be (*ἐξουσίαι θεραπεύουσαι*) are ordained of God, so that resistance to the Power is resistance to the ordinance of God (Ro 13¹). The Divine-right party in the Jacobean and Caroline period regarded such utterances as strongly supporting their cause; and even Bishop Berkeley appears to have interpreted them as prescribing an unlimited obedience. 'Loyalty is a moral virtue, and "Thou shalt not resist the Supreme Power" a rule or law of nature, the least breach whereof hath the inherent stain of moral

turpitude' (*Works*, iv. 111 [quoted by Sanday-Headlam, *Romans*, Edin. 1895, p. 372]). But the early Christians, who were so loyal to Cæsar 'for conscience' sake' (Ro 13⁵), were loyal to Christ for the same reason; and, when Cæsar went beyond his sphere and claimed from them Divine honours, they not only refused to bow to his authority, but branded him as 'the Beast.'

In truth, the despotic claim of Divine right must always make kings either odious or ridiculous. King James I., who was in the habit of telling his Parliament that 'they held their privileges merely during his pleasure, and that they had no more business to inquire what he might lawfully do than what the Deity might lawfully do' (Macaulay, *Hist. of Eng.*, ed. London, 1871, i. 37), was reminded by Melville that, though he was king over men, he was only 'God's silly vassal.' It was not a courtly speech, any more than Knox's memorable saying to Mary, 'Your will, Madam, is no reason.' But such bold utterances—the expression of the Divine and indefeasible right of private judgment—becoming household words, created an atmosphere in which the doctrine of Divine right to unlimited power ultimately died a natural death. Faint and ghostly echoes of it are still frequently heard abroad, as when Martensen (*Christian Ethics [Social]*, Eng. tr., Edin. 1882, p. 187) advocates hereditary monarchy, 'because of its full manifestation of the fact that the king exists not by the will of the people, but by the will of God, that the king and his authority are given us, that he is exactly the person whom we ought to have, that subjective arguing is in this matter of as little use as it would be to complain that we have not other parents than those whom God has given us, although those parents may have undeniable imperfections, to which we need not be blind, but by which our dutifulness must not be disturbed.'

The ideal State is that in which the Divine right of every personality is recognized, and the throne thus broad-based upon the people's will. In such a State each individual can say, in a much higher sense than was meant by the Grand Monarque, 'L'état c'est moi.' It is vain to imagine that 'there's such divinity doth hedge a king' (*Hamlet*, iv. v. 123), when the king happens to be Hamlet's stepfather, lawless and murderous; but the words have a profound significance when the Divine protection of a good king is mediated by the fervent loyalty of a great nation.

'Where the king doth guide the state, and the law the king, that commonwealth is like a harp or melodious instrument, the strings whereof are tuned and handled all by one, following as laws the rules and canons of musical science' (Hooker, viii. 2, Keble's ed. iii. 440).

DIVORCE.—See MARRIAGE.

DOCETISM.—I. Name and definition.—Docetism (δοκρητισμός) is the heresy which teaches that Christ had no real material body and human nature, but only an apparent body, a phantasm of humanity (like the angel Raphael in To 12⁹). His acceptance of the ordinary laws that govern our life, His eating, drinking, birth, and death, are so many illusions (δόκεῖν, in the sense of 'seeming' only).

The name δοκρηταί (δοκρηταί) appears first in a letter of Serapion of Antioch (191-203 [reproduced by Euseb. *HE* vi. 12]), in which he forbids the reading of the apocryphal Gospel of Peter because it is corrupted by the 'successors of those who preceded Marcion, whom we call Docetes.' It appears again in Clem. Alex. *Strom.* lib. 13 (*PG* viii. 1192), vii. 17 (*ib.* ix. 553), in Hippol. *Philos.* viii. 8 (*ib.* xvi. 3347), in Theodoret (*t. c.* 468), *Ep.* 82 (*ib.* lxxviii. 1264): 'Marcion, Valentine, Manes, and the other Docetes.' But the heresy existed long before the time of these writers. There are traces of it in the NT, it recurs in the Apostolic Fathers, it became part of the Gnostic system, continued in various forms among Manichæans and Monophysites, lasted into the Middle Ages, and was adopted (in part) by Muhammad.

Docetism was not so much a definite system as a tendency. There was not one organized Docetic sect; nor was the idea of a phantasmal body of Christ adopted for its own sake, for the sake of apparent reasons of philosophy, or on the ground of texts of Scripture, or other such arguments. It is rather the consequence to which other heresies led. It is found, moreover, in various forms, more or less perfect. One school had only few Docetic tendencies, another more; it was possible to hold Docetic views about our Lord's birth or conception, but not about His death, and *vice versa*. So we find it in many grades, ranging from a slight tendency to consider Christ's humanity as privileged, more spiritual than ours, less subject to humiliating conditions (in which form it might be held by orthodox Christians), to the extreme school which made all His life on earth a senseless mystification.

2. In the NT and the Apostolic Fathers.—Docetism is the first known Christian heresy. 'The blood of Christ was still fresh in Judæa,' says Jerome, 'when His body was said to be a phantasm' (*adv. Lucif.* 23 [*PL* xxiii. 186]). There are passages in the NT against those who deny the reality of our Lord's body. Certain texts in St. Paul which insist on Christ's birth from a woman, or on His having flesh (Gal 4⁴, Ro 1³ 9⁸; cf. He 2¹⁴), are sometimes supposed to be directed against Docetes. In any case, there is undeniably a polemic anti-Docetic meaning in the Epistles of St. John: 1 Jn 1³ and 4³ clearly have this sense, just as 2²² rejects the Gnostic basis of Docetism. In 2 Jn 7 there is the statement that 'many deceivers are gone forth into the world, even they that confess not that Jesus Christ cometh in the flesh' (A. Wurm, *Die Irrlehrer im ersten Johannesbrief*, Freiburg, 1903, pp. 53-62).

It may seem strange that Docetism should thus be the earliest of all heresies. One would have thought that the first and second Christian generations would at any rate have had no doubt about our Lord's real manhood. The explanation is that Docetism did not develop by a perverse process from the gospel and the Christian system, but came to Christianity from without. Already, before the time of Christ, the philosophy of dualism (*q.v.*) was in possession in Greek and Jewish schools. The concept of the universe as the battle-ground between two worlds—a good world of spirit and a bad world of matter—had a large number of adherents when the Christian gospel was first preached. Dualistic philosophies, then, combining with the Christian faith, produced the long chain of heresies that we class together as Gnosticism and Manichæism. In all the problem of evil (Tertullian, *de Præscr.* 7: 'unde malum et quare') is explained by dualism; and it must be remembered that dualism is not so much a Christian heresy as a totally un-Christian, pre-Christian, philosophy. Certainly in some of the extreme Gnostic schools there is hardly any Christianity at all. Docetism is a corollary of Gnostic dualism. All these combinations of the old Persian philosophy with the new religion took from the gospel at least the name of Jesus Christ as the leading champion of the good world of spirit, if not a final emanation from God its creator and protector. It followed, then, that He could not be Himself polluted by matter. He had come down to redeem men's souls by freeing them from matter; He Himself must be pure spirit. The body is bad, made by the powers of darkness and evil; therefore the Saviour could have no body. So all the passages of the Gospels that refer to His flesh, or to His dependence on matter in birth, eating, death, must be understood as describing mere appearances. It was necessary that He should seem to

have a material body, but this was only what seemed to be.

Docetism in the first period is always the corollary of some Gnostic system. F. Chr. Baur (*Die christliche Gnosis*, p. 258) held that all Gnostics were Docetes. This is not correct. There were Gnostic schools, as that of Basilides, which solved the problem in another way, denying any essential union between Christ, the spiritual Saviour-Æon, and the man Jesus—thus foreshadowing Nestorianism. But more or less advanced Docetic ideas accompany most Gnostic systems; although we cannot say that all Gnostics were Docetes, we may safely say that all early Docetes were Gnostics. Docetism was always a consequence of that representation of matter as evil which is the common element of Gnostic schools. It was a feature of Gnosticism specially hateful to the early Fathers, because it made of the Gospel story—all the Life that is to be our example (Jn 13¹⁵)—a vain pretence. 'Spare the one hope of the whole world,' says Tertullian to Marcion (*de carne Christi*, 5 [PL ii. 760]). Although this theory was not a separate heresy, but rather a consequence of the larger issue about dualism, it could be refuted separately. Apart from the general question whether matter be an emanation from the evil principle, it was possible to defend the real humanity and so the material body of Christ; it was possible to show to any one who accepted the story of His life in the Gospels that He was a real man, subject to the normal conditions of human life. Many Fathers accordingly discuss this question separately, and refute those who deny it, without dealing with the reason of their denial. So they have left us the concept of Docetism as a special heresy, and of Docetes as a particular class of persons.

The *Epistle of Barnabas*, v. 12 ('God says that the stroke of his flesh is from them [*sc.* the Jews]'), is sometimes supposed to contain a Docetic idea ('naiver Doketismus' [Harnack, *Dogmengesch.* i. 215]), but unjustly. The text goes on to declare the reality of the Passion and Crucifixion; the words quoted mean only that this was the fulfilment of prophecy (Funk, *Patres apost.*, Tübingen, 1901, i. 53, n. 12). *Ignatius of Antioch*, in the Greek version of his Letters, repeatedly and vehemently denounces those who say that Christ 'suffered apparently' (τὸ δοκεῖν πεπονθέναι [Trall. 10]), and insists on the reality of His flesh (*Eph.* 7, 18; *Trall.* 9-10). All the first part of *Smyrna*. (1-6) is devoted to anti-Docetic polemic.¹ *Polycarp* quotes 1 Jn 4^{2d}, adding that whoever does not confess the witness of the Cross is of the devil, and whoever denies the Resurrection and the Judgment is the first-born of Satan. He describes these ideas as 'the folly of many people' (*Phil.* vii. 1-2). This is generally believed to be directed against Marcion and his followers. Irenæus tells the story of Polycarp meeting Marcion and calling him the first-born of Satan (*Hær.* iii. iii. 4). *Justin Martyr* counts Marcionites among the other Gnostics who 'in no way worship Jesus, but only confess Him in words' (*Dial.* 35 [PG vi. 551]), and insists on Christ's real human nature (*ib.* 43 [568]).

3. Docetism in apocryphal scriptures.—There are traces of Docetism in several apocryphal books that circulated for a time among early Christians. We have seen that Serapion of Antioch forbade the reading of the *Gospel of Peter* because it had been corrupted by Docetes. The fragment lately discovered (in 1887 at Akhmim in Upper Egypt, published by U. Bouriant in 1892) confirms his judgment. Verse 10 says (of Christ on the cross); 'But he remained dumb, as one who feels no pain

(Harnack, 'Evang. u. Apokal. des Petrus,' *TU* ix. 2 [1893], p. 9).

Except those of Paul, all the apocryphal *Acts* of Apostles contain more or less Docetic ideas, often together with a certain amount of Encratism (a similar corollary of hatred of matter). The *Acts of John* (early 2nd cent.; cf. Euseb. *HE* iii. 25) exhibits the most pronounced form. At the Last Supper, St. John, leaning on Christ's breast, found it non-resisting (89 [Hennecke, *NT Apokryphen*, Tübingen, 1904, p. 451]); at the entombment, the body of Christ was at one moment apparently solid, at another it was 'immaterial and incorporeal and like nothing' (93 [*ib.* 452]). The Crucifixion was only an appearance; at the same moment Christ appeared to John on the Mount of Olives and explained this (97 [*ib.* 454]). The *Acts of Peter* (cf. Euseb. iii. 2) has the statement, characteristic of one school of Docetism, that God sent His Son 'through the Virgin Mary' (7 [Hennecke, 399]). The material Passion was an appearance: 'What appears is quite different from this suffering, as it was from the passion of Christ' (37 [*ib.* 421]). The *Acts of Andrew* is strongly Encratite; its Docetism appears in § 6 (Hennecke, 466), where man is said to be 'immaterial, holy, light,' etc. In the *Acts of Thomas*, Docetism is less evident, but the usual Gnostic antithesis between matter and spirit is supposed throughout; Christ is spirit (Hennecke, 480-544). Only the *Acts of Paul* (*ib.* 369-383) seems free from any trace of this heresy.

In many cases the Docetism of these apocryphal scriptures is latent rather than manifest, or it shows itself only in one or two sentences. For the rest they speak of our Lord in much the same tone as the Canonical books. This explains how they could be read in orthodox circles often without suspicion. On the other hand, they were rejected by authority (cf. Euseb. iii. 25) because of their heretical tendency, shown chiefly in the form of Docetism.

4. The Gnostic Docetes.—The apocryphal scriptures quoted were composed in Gnostic circles; the quotations have anticipated part of what follows. With regard to Docetism the Gnostic schools fall into three classes: (1) those which were not Docetic at all, but distinguished Christ the spiritual Saviour from the normal man Jesus; (2) the milder Docetes, who admitted a body of Christ, though it was a spiritualized one (σῶμα ψυχικόν or πνευματικόν), and only passed through His mother, was not formed of her; (3) the extreme Docetes, who denied all reality to the body of Christ; He was born in no sense at all, and all His human life was a mere phantasm (Harnack, i. 285).

(1) *Basilides* (*q.v.*) (in Alexandria at the time of Hadrian, A.D. 117-138 [Euseb. iv. 7]) was not a Docete, but solved the Gnostic problem in the other way, by distinguishing the man Jesus from the Spirit, the *voûs*, who entered into Him at His baptism. Irenæus says that Basilides' account of the Crucifixion was that Simon of Cyrene was crucified by mistake, 'and Jesus Himself took the form of Simon, and stood by and laughed at them' (*Hær.* i. xxiv. 4). If Basilides really taught this [it is disputed], it shows a trace of one idea, common to most Docetes, namely, the denial of the Crucifixion.

(2) The milder school is represented by Valentinus, Apelles, Bardesanes, and Marinus. *Valentinus* (c. 120-160) taught that Jesus had a 'psychic' body which could not decay, was not subject to the normal laws of matter (Letter to Agathopus in Clem. Alex. *Strom.* iii. 7 [PG viii. 1161]): He passed through His mother as water through a pipe (καθάπερ ὕδωρ διὰ σωλῆνος [Iren. i. vii. 2]). He was an emanation from the thirty Æons, the visible appearance of the pre-existent Christ produced

¹ These passages are wanting in Cureton's Syriac version (Lightfoot, *The Apost. Fathers*, pt. ii. vol. i. [1889] p. 320).

through Mary by the lowest (female) *Æon*, Sophia, and the power of the Creator-demiurge (*ib.* i. xi. 2, 3). Later Valentinian schools developed and modified the founder's ideas in various directions. Some, keeping the idea of the non-natural body of Jesus, further distinguished between Him and Christ as two persons (*ib.* iii. xiv. 1). Mark (Irenæus) contemporary of this school) distinguished two baptisms of Jesus, one the (psychic) baptism of the 'apparent Jesus' (τοῦ φαινομένου Ἰησοῦ) by John for the forgiveness of sins, the other a pneumatic baptism, to which Mk 10^{38a} refers, in which He received Christ, or the Spirit, for His perfection (*ib.* i. xxi. 2). This represents exactly the combined milder Docetism and (as we should say) Nestorianism of this school. Marcion's disciple *Apelles* so far modified his master's teaching that he, too, must be classed among the milder Docetes. He admitted that Christ had a real body, formed from the stars and 'higher' substances of the world, not really born of Mary, but like the body of an angel (*sic*) (Tert. *de carne Christi*, 6 [PL ii. 763]; *adv. Marc.* iii. 11 [*ib.* 335]). We hear nothing of Docetism in *Bardesanes* himself (in Syria, A.D. 154-223? [Euseb. iv. 30]). Ephraim Syr. in his account (*Serm. polem. adv. hæc.* 1 [Opp. Syr., Rome, 1740, ii. 437-439]) says nothing of Christological errors, nor does Epiphanius (*Hæc.* lvi. [PG xli. 989-993]). But *Marinus* and others of Bardesanes' school taught the milder form of Docetism—that Christ had a 'heavenly' body, was not born of a woman, and suffered only apparently (Adamantius, *Dialog. de recta in Deum fide*, iii. [PG xi. 1793]).

(3) The chief defenders of extreme Docetism are Cerdo, Saturnil, and Marcion. *Cerdo* (Κέρδων, a Syrian in Rome at the time of Hyginus, c. 136-140 [Iren. i. xxvii. 1; cf. iii. iv. 3]) is known chiefly as the teacher of Marcion. He is said to have denied absolutely the reality of Christ's body and of all His apparently human actions (birth, death) on earth (Epiph. xli. [PG xli. 692-693]; Hippol. *Philosoph.* x. 19 [PG xvi. 3435-3438]). Irenæus (*ib.*) counts him a follower of Simon Magus, the supposed father of all Gnostic and Docetic theories. *Saturnil* (Saturninus, a Syrian [2nd cent.]), mentioned already by Justin (*Dial.* 35 [PG vi. 552]), was a consistent dualist in all his system, and carried his principles to their logical consequence in absolute Docetism. Our Lord was the Saviour, opposed to the God of Israel, and came to separate the sparks of life and spirit in men from matter. His own freedom from matter is emphasized strongly.

'He said the Saviour was unborn, incorporeal, without figure (*sine figura*), without real matter, apparently seeming a man; and he said the God of the Jews was one of the angels. . . . Christ had come to destroy the Jewish God and for the salvation of those who trusted Him (Christ); these are they who have a spark of His life' (Iren. i. xxiv. 2; cf. Hippol. *Philosoph.* vii. 25 [PG xvi. 3322]).

The most famous of all Docetes is *Marcion*. He was a sailor from Pontus (Tert. *Præscr.* 30 [PL ii. 481]; Euseb. v. 13), who became a Christian at Rome at the time of Eleutherius (c. 177-190? [Præscr., *ib.*]). Then he was attracted by Gnostic circles, and evolved a Gnostic system of his own which obtained a considerable following. Marcionites occur among the heretics in all the anti-Gnostic Fathers. Irenæus traces the line of Marcion's heresy through Cerdo from Simon Magus (*Hæc.* i. xxvii. 1). His Docetism, as regards the beginning of Christ's life, was complete. His followers read a corrupt version of St. Luke (*Hæc.* iii. xii. 7; *adv. Marc.* iv. 2 [PL ii. 364]), in which all the account of the birth and infancy was cancelled. Suddenly Christ appeared as a grown man: 'In the fifteenth year of the reign of Tiberius He descended into the city of Galilee Capernaum

from the heaven of the Creator, into which He had already descended from His own' (*adv. Marc.* iv. 7 [PL ii. 369]); cf. Lk 3¹ 4²¹ (*adv. Marc.* i. 19 [*ib.* 267]; Iren. *Hæc.* i. xxvii. 2). He was in no sense really a man, had no real body; any connexion between the Divine Spirit Christ and matter is impossible (Tert. *de carne Christi*, 3 [PL ii. 757]). Marcion accepted the idea of the sacrificial death of Christ. For this reason it is often said that he admitted a real passion and death. But there is reason to doubt this. It seems that, although he constantly spoke and wrote of the death of Christ as did orthodox Christians, he understood it in a merely Docetic sense. Nikephoros i. of Constantinople (806-815) quotes a sentence from a lost work of Marcion: 'Christ seemed to suffer and be buried' (*Antirrhetika*, 21, in Pitra, *Spicilegium Solesmense*, Paris, 1852, i. 406). Tertullian devotes *adv. Marc.* iii. 8-11 (PL ii. 331-336) to proving, against the heretic, that Christ did not have a 'corpus phantasticum.'

There remains *Simon Magus*, the reputed author of Docetism, as of all Gnostic theories (Iren. *Hæc.* i. xxiii. 2; ii. Præf.; iii. Præf.). His name appears repeatedly as the inventor of this idea; but it is very doubtful how far he is not simply a type to whom all Gnostic developments are traced back.

Clement of Alexandria refers to Docetes (δοκῆται) in *Strom.* vii. 17 (PG ix. 553); in iii. 13 (*ib.* viii. 1192 f.) he alludes casually to a certain *Julius Cassianus* (Ιούλιος Κασσιανός), who, he says, was the leader of the sect of Docetes and a disciple of Valentinus. But the passage tells us nothing about Julius' Docetic ideas; the fragments that Clement quotes of his works (*ib.* iii. 13 and 14 [PG viii. 1192-1196]) show only Enactism. Jerome (*Com. in Gal.* vi. 8 [PL xxvi. 460]) repeats that Cassianus was a Docete. Otherwise nothing is known of him.

The Docetes, besides their principle that the Saviour could not be defiled by a material body, quoted certain texts of Scripture in favour of their view. Marcion made much of Mt 12⁴⁸, as showing that Christ had no mother (*adv. Marc.* iv. 19 [PL ii. 404]). He also quoted Ro 8³ (ἐν ὁμοιωματι σαρκός); so Nikephoros (in Pitra, *loc. cit.*). On the other hand, the Fathers had no lack of texts to quote against Docetism. The Epistles of St. John supplied, of course, many such. Polycarp quotes 1 Jn 4² (*Phil.* vii. 1); Ignatius uses Lk 24³⁹ (*Smyrn.* iii. 2). Iren. *Hæc.* iii. xxii. 1-3 and Tert. *de carne Christi*, 15 (PL ii. 779 f.), are good examples of contemporary controversy against Gnostic Docetism. It may be noted, too, that the body of Christ in the Holy Eucharist is frequently used as an argument against Docetes. Already in the time of Ignatius, Docetes 'abstain from the Eucharist and prayer (προσευχή, prayer of oblation?) because they do not confess that the Eucharist is the flesh of our Saviour Jesus Christ' (*Smyrn.* vii. 1). Irenæus (*Hæc.* iv. xviii. 5, v. ii. 2-3) and Tertullian (*adv. Marc.* iv. 40) use the Eucharist as a proof of the reality of Christ's body.

5. *Docetism in the Fathers.*—Certain Fathers have been accused of Docetic ideas. We have seen that Docetism admits of many degrees. It may be a question whether an otherwise orthodox Father conceived some mild form of it with regard to certain incidents of Christ's life. The *Epistle of Barnabas* has been accused wrongly (see above, p. 833*), nor does there seem to be any foundation for the alleged Docetism of Origen (cf. Harnack, i. 688). The case of Clement of Alexandria is more serious. Photius accuses him of this heresy (*Biblioth.* 109 [PG ciii. 384]). Yet he categorically rejects it (*Strom.* vii. 17 [PG ix. 553], iii. 17 [viii. 1205]); he says that our Lord was really a man

(*Pæd.* iii. 1 [viii. 556]), speaks of His flesh and blood (cf. *Strom.* v. 6 [ix. 58]; *Pæd.* ii. 2 [viii. 409]; *Quis dives salv.* 37 [ix. 641]), etc. His alleged Docetism consists of an idea that the body of Christ was not subject to natural desires, nor His soul to human passions, such as joy, sorrow, etc. (*Strom.* vi. 9 [ix. 292]; *Pæd.* i. 2 [viii. 252]). And in his *Adumbr. in Joh.* i. 1 (*PG* ix. 735) he repeats, as a tradition, the story told in the *Acts of John* (see above, p. 833^b), that at the descent from the cross, St. John, trying to touch the body of Christ, found a void there (the legend is told by Leukios Charinos, for whom see Photius, *Bibl.* 114 [*PG* ciii. 389]). Hilary is quite clear as to the reality of the body of Christ and its natural qualities (*de Trin.* x. 19 [*PL* x. 357]); but he calls it a 'heavenly' body (x. 18 [*ib.*]), and thinks that Christ's soul was not naturally subject to pain (x. 23 [*ib.* 361]). This idea, not uncommon among the Fathers, occurs as a supposed consequence of the hypostatic union, and can hardly be considered Docetism of even the mildest kind (Harnack, ii. 316 f.).

6. The Docetes in Hippolytus.—Hippolytus twice describes a sect whom he calls Docetes (*Philosoph.* viii. 8–11 [*PG* xvi. 3347–3358] and x. 16 [*ib.* 3434]). These people seem to have hardly anything of what is generally called Docetism; their use of the name is difficult to explain. Hippolytus says they call themselves Docetes (δοκῆτας, *ib.* viii. 11); he explains the name (ironically) as derived from the *beam* (δοκός) in their eye (Mt 7^a). Their system ('a much-tangled and inconsistent heresy' [*ib.* 11]) is one of the many forms of tortuous Gnostic philosophy about the origin of the universe. God is like a grain of the fig-tree, very small in size, infinite in power of development. From the seed come forth three emanations—branches, leaves, fruit; so from God three Æons, and all other things from them. Each Æon becomes perfect, that is, tenfold; so we have 30 Æons. They are male and female; they generate a middle Æon, who is the Saviour. So it goes on. One Æon, a fire-god, is the Creator-demiurge. Souls transmigrate. In a long tangle of wild nonsense the only trace of what we call Docetism is the statement that our Lord (whose life was as in the Gospels [*PG* xvi. 3355]) received at His baptism another body, the 'image and seal of the body born of the Virgin.' When His material body was crucified, His soul put on this other one, evidently a spiritual Docetic body. He lived 30 years, in each year manifesting the teaching of a different Æon. No wonder, then, that so many different heresies can appeal to His teaching! But only the Docetes, who are 'from the middle decad and the best ogdoad,' can really understand Him.¹

7. Later Docetism.—The Manichæans, as a consequence of their dualism, took over the Docetic idea. Augustine represents Faustus as denying the birth of Christ (c. *Faust.* ii. 1 [*PL* xlii. 209]), as describing His body as not human but formed of celestial elements (v. 1 [219]; cf. xi. 1 [243]), as denying the reality of His passion and death (xiv. 2 [296]). Mani's Docetism is further complicated by a curious distinction between the *Iesus impatibilis*, who is 'living spirit,' and the *Iesus patibilis*, who is the Soul of the world (G. Flügel, *Mani, seine Lehre u. seine Schriften*, Leipzig, 1862, pp. 35, 258, 337 f.).

Later developments of Manichæism continued the Docetic idea. The Priscillianists in Spain were not Docetes, though they were Dualists

(*Prisc. Can.* 17; ed. G. Schepss, *Corp. Script. eccl. Lat.* xviii. 118, Vienna, 1889). But the Cathari, Albigenses (*q.v.*; see especially vol. i. p. 281^b), and other mediæval Manichæan sects adopted Docetism as part of their system. The Albigenses carried it so far that they taught that the Virgin Mary, St. Joseph, St. John, as well as our Lord Himself, were all angels in the appearance of men (see documents in Döllinger, *Beiträge zur Sektengesch. des Mittelalters*, Munich, 1890, ii. 34, 58, 66 f., etc.). In the year 1017 a Synod at Orleans condemned a number of heretics who denied the reality of the body of Christ (Mansi, xix. 377; Döllinger, i. 65, gives the date as 1022).

Pope Leo I. accuses the Monophysites of Docetism (*Ep.* xxvi. [*PL* liv. 745] etc.). There is something of this heresy in their system and in that of their predecessor Apollinaris, inasmuch as they taught that the body of Christ, absorbed in the Divinity, lost the natural qualities of human flesh. Julius of Halicarnassus († c. 518) and his followers, the Aphthartodoketæ, held this view as their distinguishing theory (cf. Liberatus, *Breviarium*, 19 [*PL* lxxviii. 1033 f.]). Muhammad adopted a Docetic view of the Crucifixion (*Qur'an*, iii. 45, tr. E. H. Palmer, *SBE* vi. [1900] 53 and n. 3). Some Anabaptists were Docetes (see ANABAPTISM, vol. i. p. 410). Lastly, various modern revivals of old heresies—theosophy and such like—have adopted Docetic ideas. Mrs. Eddy introduced a kind of Docetism as part of her 'Christian Science.' Her literary adviser, Rev. J. H. Wiggin, recognized her system as 'an ignorant revival' of Gnostic and Docetic theories (G. Milmine, *Life of M. B. G. Eddy*, London, 1909, p. 337).

LITERATURE.—For Gnostic Docetism the chief sources are Irenæus, *adv. Hæc.* (*PG* vii. 437–1224); Tertullian, *adv. Marcion.* (*PL* ii. 245–524), and *de carne Christi* (*ib.* 763–792); Hippolytus, *Philosophumena* (*PG* xvi. 3347–3358, 3434); Clem. Alex. *Strom.* (*PG* viii. 685–ix. 602), and *Pedagog.* (*PG* viii. 249–682). For Manichæan Docetism: Augustine's works against the Manichæans, esp. c. *Faust.* (*PL* xlii. 207–618); A. Hilgenfeld, *Ketzergesch. des Urchristentums*, Leipzig, 1884; A. Harnack, *Lehrbuch der Dogmengesch.*, new ed., 8 vols., Tübingen, 1909–10 (Eng. tr. of 3rd ed., 7 vols., London, 1894–9); F. Chr. Baur, *Die christliche Gnosis*, Tübingen, 1885; Hilgers, *Krit. Darstellung der Häresie*, Bonn, 1884; L. J. Tixeront, *Hist. des dogmes*, Paris, 1909, i. 196–207; G. Salmon, art. in *DCB*; J. Arendzen, art. in *Cath. Encyclopedia*; G. R. S. Mead, *Fragments of a Faith Forgotten*, London, 1906.

ADRIAN FORTESCUE.

DOCTETISM (Buddhist).—I. Origin and nature.

—Speaking generally, the Buddhist religion has a strong tendency towards docetic ideas as to the personality of its founder. The strictly orthodox Theravādins adhered to the practical moral teaching of the Master, and limited themselves to pious obedience to the rules and traditions of the community. This is the reason why they, and they alone, resisted strongly the docetic tendency of the heterodox Mahāsaṅghikas. On the other hand, the latter, not content with the mere formulae of the doctrine, tried in various ways to amplify the teachings of the Buddha and to pursue them to their respective consequences. The more they deified the Master and developed the idealistic sides of his doctrines, the less they came to think of his historical personality. They were more broad-minded, so to speak, and were not afraid to fly above the clouds of mythical fancies or of metaphysical speculations. On this account the men of this tendency called themselves the Mahāyānists, in contrast to the orthodox Hinayānists (see artt. MAHĀYĀNA, HINAYĀNA), though the origin and date of the former are still involved in obscurity. In this way we may fairly say that the Mahāyānists were more or less docetists, as their mythic fancy or idealistic speculation laid less stress on the historical Buddha.

Though a sharp demarcation can hardly be drawn between these two forms of Buddhism (the Mahāsaṅghikas, for example

¹ There is so little resemblance between the ideas of Hippolytus' Docetes and ordinary Docetism that Salmon in the *DCB* treats them separately as representing different heresies (l. 865–870).

stand midway between them), one of the characteristic differences is that the Hinayanists believe in a single Buddha, whereas many Buddhas are recognized by the Mahāyānists. The former believe in Gautama or Śākyamuni as the sole Tathāgata who is to be adored in this world-period, while the latter see in him one of the Buddhas residing in various Buddha-lands and influencing believers. The *Ekottara-gama*,¹ the Mahāsaṅghika counterpart of the Pāli *Aṅguttara*, tells of Maṇḍalyāyana's visit to the land of the Buddha Śikhī. This belief is extended to the ten directions, in each of which there is a Buddha-land, where a Buddha or many Buddhas reside in the state of bliss and attract their respective believers. It was inevitable, when faith was in this way extended to mythical Buddhas, that the concentration of belief in the actual Buddha should become more difficult or less necessary, and that the historical personality of the present Buddha should become more and more ephemeral and rarefied. This mythologizing and mystifying process of Buddhological speculations went on parallel or conjointly with the metaphysical identification of all the Buddhas in their essential reality. A Buddha appeared once in this world-period, and his historicity is established; but the importance and significance of his personality do not lie in his actual life, but in his connexion with the universal Buddhahood, the so-called *Dharmakāya* (see below).

Thus, docetism, or, to speak more generally, the docetic tendency in Buddhism, made its progress in two ways: one the way of mythical fancies about the Buddha's superhuman qualities, and the other that of metaphysical speculations on his personality as a Tathāgata and on its relations with the truth (*dharma*) which he revealed. So long and so far as the faith of Buddhists in the Master amounted to the reverence paid towards a sage who, having practised all the three branches of the Buddhist training, attained Buddhahood and led his followers in the same way, the Buddha remained a Tathāgata who, starting from the position of a human being, attained to his superhuman (Pāli *manus-suttara*) state.² Whatever his merits and powers, his earthly life was believed to have been as real as that of any other human being. But, as soon as the pious thoughts of believers began to place him side by side with a mythical Chakravartin or to make him far superior to the highest deity Brahmā, whether in his lifetime or after his death, his personality became more mythical and less human. Progress along this line is seen in the myth of his pre-existence in the *Tuṣitā* heaven and also in various *Jātakas* and *Nidānas* (such as that of the king Sudassana); and the tendency reached its acme in the mythologizing biographies, like that of the *Mahāvastu* or *Lalitavistara*. Of course, these mythologizers did not all go so far as to deny the reality of the Buddha's earthly life, yet their ideas verged on docetism and had a close kinship with the decidedly docetic theories, or at least supplied the materials to docetists.

Though the development of these ideas and their mutual relations cannot now be traced historically, it seems nearly certain that the mythologizing began soon after the Master's death, and found many adherents outside of the pale of the strictly orthodox teachers. The resistance of the orthodox Theravādins to this stream of thought is clearly seen in the *Theses* (*Kathāvatthū*), composed in the reign of Aśoka.³ The materials and composition of the *Mahāvastu*, above referred to, may be earlier than, or contemporary with, this orthodox defence of the historicity of the Buddha's life.

A more powerful impetus to docetic tendencies was supplied by the philosophical speculations contained even in Buddha's own teaching. The five *skandhas*, under which he classified the constituents of our bodily and mental life, had been declared to possess no final reality. He also emphasized the illusiveness of the six senses and of the desires arising from them.⁴ In short, the Buddhist ideal of an Arhat or of a Buddha consisted in transcend-

ing the passions and turbulence of physical life, and in finally overcoming life and death. Though the Buddha was not a nihilist, it was not without reason that his doctrines were charged with being 'a nihilistic wisdom' (*suñhāgāra-hatā paññā*). Vacuity (*suñhātā*) was one of his most important tenets, and, though this final vacuity could be attained only after the cessation of the bodily life, the aim of a Buddhist sage was to realize this ideal, among others, even in this life. Thus arose the question whether the Tathāgata existed or not after his death. Though this question was not answered in the negative (or in the affirmative), and though it did not raise the question of the reality of the Master's earthly life, the solution turned inevitably in the direction of docetism, when the transient life on earth was contrasted with the profound abyss of the vacuity beyond. The vacuity of the phenomenal world was still more emphasized in the later 'non-mark' (*alaksana*) philosophy of the Mahāyāna school, and it became a decidedly docetic theory, as applied to the personality of Buddha.

Another direction taken by Buddhist philosophy had its origin in the emphasis laid on the reality of the truths (*dharma*) revealed by the Buddha. His personality and his personal life are not ignored, but he is the Master and the Tathāgata, because he taught men truths according to reality (*yathā-bhūtam, tathatāya*). These truths are set forth, first of all, apparently in his sermons and doctrines (*dharma*), but they are universal in their nature as truths (*dhammatā*), and the capacity or dignity of a Buddha is due to the realization of them. So it is said that all the Buddhas have attained their Buddhahood by respecting these truths and living according to them.⁵ Moreover, they are stable (*dhamma-tiṭṭhā*) and fixed (*dhamma-niyamatā*),⁶ whether the Tathāgata arises or not in this world. Buddha's own utterance that he who sees the *dhamma* sees him, and *vice versa*,⁷ brings out clearly the identification of his personality with the truths, and this may further be noted as implying a distinction between his transitory life and his life as the Tathāgata according to truth. Here we have the clue to, and the source of, the idea of the *dharmakāya*, i.e. the Buddha's personality identified with *dharma* and opposed to his physical life. Though the followers of this school, sometimes called the Dharmalakṣaṇa, do not deny the reality of a corporeal existence of the Tathāgata, they are always inclined to emphasize the metaphysical or transcendental side of the Buddha's personality, and to regard his earthly life as a mere manifestation or a condescension for the sake of common mortals. The tendency is manifested in the *Lalitavistara*,⁸ and is represented chiefly by the *Suvarṇaprabhā* and the *Saddharmapuṇḍarīka*. Those who developed from this thought a systematic Trinitarian theory were Aśvaghoṣa (*q.v.*) and Vasubandhu (*q.v.*), whose followers in this respect are the majority of Buddhists in the Far East.

2. The Mahāsaṅghikas.—While the orthodox Theravādins adhered strictly to the realistic view of the person of their Master, the heterodox progressionists, or Mahāsaṅghikas, boldly proceeded to idealize the Tathāgata. This tendency had long been fostered, as we have seen, and the materials for it were ready to hand in the belief in the Buddha's pre-existences both in this world and in the *Tuṣitā* heaven. The results of the idealization,

¹ Preserved in a Chinese tr. (Nanjio, *Catal.*, Oxt. 1883, no. 542).

² The present writer cannot agree with Kern (*Manual*, Strassburg, 1896, p. 64) in explaining *Aṅguttara*, iv, 38, in a docetic sense. There the expression 'not man' is to be understood in the sense 'not a common man,' i.e. that he is in the world but undetected by the world, as is said in *Aṅg.* iv, 36; *Saṃ.* 22, 94, etc. On this point other passages might be adduced.

³ *Kathāvatthū*, xvii, 1.

⁴ See *Saṃyutta*, xxii., xxv.; *Uddāna*, I, 10, viii, 1.; *Dīgha*, 11; *Kevaladdha Sutta* (tr. Warren, *Buddhism in Translations*, Cambridge, Mass., 1896, pp. 308-313), etc.

⁵ *Saṃ.* 6. 1. 1; *Aṅg.* iv, 21.

⁶ See *Aṅg.* iii, 134 (Warren, *Buddhism in Translations*, p. xiv, where the translation does not bring out the full sense of the word *dhamma*), and *Saṃ.* 12, 20. The same idea is expressed in the *Saddharmapuṇḍarīka*, ch. ii. vv. 100-103 (vv. 99-102 in Kern's tr. *SBE*, vol. xxi, p. 63).

according to the authority of Vasumitra,¹ manifested themselves clearly in the schism of the schools, the orthodox and the heterodox. The idealizing process led to the identifying of the actual Buddha, in the essence of his personality, with all the Buddhas of the past, and thus to the neglecting of his historical personality. It was thought and taught that all the Buddhas were beyond worldly fetters (*lokottara*) and freed from all human passions. This is not very heterodox, but the Mahāsaṅghikas further argued that the single utterances of every Tathāgata implied the revelation of all truths at once. The physical body (*rūpakāya*) of a Tathāgata, they taught, has no limit in space, his virtues and powers are infinite, and his life has an immeasurable duration. How they thought of the infinity of the physical body is unknown, but probably they identified his personality with the cosmos (*dharmadhātu*) itself, as was done by the later Mahāyānists and Tantrists (see below). Further, they taught that the Buddha neither sleeps nor dreams. He is all the time in the state of complete union with all truths, in a deep contemplation, *yoga* (here we have a trace of the Ādibuddha [q.v.] or Dhyanibuddha), and therefore what he preaches is expressed by no notions or names. He is omniscient, comprehending all things at once, in the thought of one single moment, because in his mind is always present the mystic store of the *prajñā* wisdom. In his thought are constantly present at the same time the wisdom of extinction (*kṣiṇa-prajñā*, i.e. the consciousness that all pains are extinguished) and the wisdom of non-growth (*anupāda-prajñā*, i.e. in which is assured extinction in the future for ever). In these theses we see an idealizing identification of the Buddha's person with a universal Buddhahood, despite times and circumstances, the essential quality of a Buddha being his identification with the universe.

Quite naturally from these fundamental ideas is deduced the illusiveness of the corporeal life of a Buddha or of a Bodhisattva, i.e. of one who is preparing for Buddhahood. 'All Bodhisattvas,' the Mahāsaṅghikas say, 'enter the mother's womb, but they do not take up (the successive stages of embryonic development) *kalalāma*, *arabūda*, *peṭi*, and *ghana* in their own bodies.' They would be born in the various forms of transmigration, as brutes or as human beings, as told in *Jātakas*; but this happens not by necessity, but owing to their own decision and for the purposes of accumulating merit and of leading other beings to salvation. Their bodies are furnished with sense organs, which seem to be sometimes attached, sometimes unattached, to outward objects, and appear to be nourished by the bodies. Nevertheless, the Bodhisattvas do not see forms and colours by eyes, or hear sounds by ears, or smell by noses, or taste by tongues, nor have their bodies any real sense of touch; but their minds receive all impressions at once and thoroughly (this state is called the *samākṣa* [?]). What they utter in speech or act by body is done for the sake of others, in order to enlighten them. Therefore, when all is done that is to be done (*kṛta-karāṇīya*), they shut themselves out from all outward impressions and objects. In short, they are supra-men, and their physical lives are mere appearance, in contrast with their eternally serene essence.

Thus we see that the Mahāsaṅghikas were thorough doctetists, whose ideas seem to have proceeded parallel or conjointly with the mythologizing of the Buddha's life, as we see it in the *Mahāvastu* or the *Lalitavistara*.²

¹ See Wassilief, *Buddhismus*, pp. 253-262. The following statements as regards a Buddha and Bodhisattvas are founded on this authority.

3. The Prajñā school.—Though the name *prajñā* meant originally intellectual training in general, it became gradually restricted to the exercise of contemplation transcending all discursive and rational knowledge. The content of this kind of meditation amounts to transcending self and all actual aspects of things, and ascending to the highest region of mystic union (*yoga*). In the Buddha's teaching we repeatedly find admonitions to this exercise, and it is said that his profound doctrine consisted in the teaching of vacuity (*śūñātā*, Skr. *śūnyatā*).¹ Among his disciples Subhūti is praised by the Master as the foremost of those who practised this method of contemplation among forest trees, as the man of meditation abandoning every thought of visible forms.² It is he to whom are ascribed the occasions of the conversations on the subject, and the various texts known as the *Prajñā-pāramitā* are handed down to us bearing his name. Though the longest of the texts is said to contain 100,000 *ślokas*, the gist of the whole amounts to nothing but the vacuity of all phenomena. All possible arguments, including a number of similes and parables, etc., are used to convince man of the non-reality of what is deemed by the common mind to be reality. Thus it is quite natural that the argument should be applied to the person of Buddha, and a most decided doctetism is represented by this group of texts and its followers, whom we would now call the Prajñā, or Alakṣaṇa, school.

Seeing the non-entity of everything phenomenal, and attaining to the height of mystic contemplation, one could realize in himself the depth of the *prajñā* wisdom.³ Buddhahood is the position wherein this wisdom is fully enlightened and the highest illumination is seen face to face. Even when denying any reality, the Prajñā school could not deny the reality of this state of illumination. Not only are a hundred thousand words and phrases used to describe this condition, but it is regarded as the most real of realities and is called the mother of all the Buddhas, the source from which they derive their enlightenment. Thus the innermost qualities of Buddhahood can be sought nowhere else than in the profound abyss of the *prajñā*. The natural consequence of this thought is that the earthly life of the Buddha Śākyamuni, including its incidents and his teachings, is in reality nothing but illusion, like all other phenomena of the visible world (*loka*). As the five constituents (*skandhas*) of the visible world are mere manifestations of what is in itself beyond all these forms, so the person of Śākyamuni is a perfect manifestation of omniscience (*sarvajña-jñāna*) which consists in the full realization of vacuity. All that he did and preached during his lifetime was only a matter of pedagogic (*upāya-karṣaṇa*), intended to admonish men to the exercise of the method and to lead them to this ultimate truth. He showed himself to have accumulated all possible merits of the six Pāramitās and to have accomplished his attainments in behaviour (*śīla*), contemplation (*śamādhi*), wisdom (*prajñā*), deliverance (*vimukti*), and the realization of the knowledge leading to it (*vimukti-jñāna-darśana*); but all these were done not for himself, but for the text is said to belong to the Mahāsaṅghika school, but, according to the Chinese version (Nanjio, no. 680), it used to be revered by the other schools also. We can trace the development of the legends and materials from the Pāli *Vinaya* (with which the Mahāsaṅghika and the Dharmagupta traditions stand nearly on the same level) to the Sarvāstivāda *Vinaya* (Nanjio, no. 1121) and then to the present text. The accumulation of biographical materials with addition of *nidānas* and *avadānas*, and the adoration of the life incidents through mythologizing, can be exhibited by bringing these texts together in a series.

³ The following statements are founded mostly on the *Alakṣaṇikā*, esp. pp. 63, 135 f., 256-278, 300-308, 512 f. (ed. Mitra, Calcutta, 1885).

sake of common men, in order to admonish (*anumodana*) them to similar attainments.

The final extinction (*parinirvāṇa*) of his physical body was, of course, not the end of a mortal, but was meant to be a visible example of ultimate absorption into the depth of vacuity. This applies to all Buddhas, past as well as future, who are infinite in number and nothing but individualized manifestations of the mother Prajñā. The name *Buddha* means the one who has realized the omniscience of the truth and identified himself with vacuity; and *Tathāgata* is a title applied to him on account of his revelation of this ultimate truth (*tathatā*) of vacuity. Common men see in him one who has attained this truth by the accomplishments of Buddhahood (i.e. *tathā-gata*), and who has appeared among men to reveal it to them (i.e. *tathā-āgata*). But, just as every phenomenon leaves no trace (*apada*) either of whence it comes or of whither it goes, so the *Tathāgata* in reality comes from nowhere (*na āgamaṇa*) and goes to nowhere (*na gamaṇa*). In this respect he is like space, and his person has essentially nothing other than the ultimate quality of all things, vacuity. The thirty-two special marks attributed to him are in reality 'non-marks' (*alaksanā*), and 'non-mark' is the characteristic of any *Tathāgata*. He teaches men and leads them to deliverance; still they are mere illusions, and the *Tathāgata* convinces them of their own vacuity. If this paradoxical argument be followed out, the conclusion runs as follows:

'They who saw me by form, and they who heard me by sound,
They engaged in false endeavours, will not see me.
A Buddha is to be seen from the Law (*dharma*); for the
Lords have the Law-body (*dharmakāya*);
And the nature of the Law cannot be understood, nor can
it be made to be understood.'¹

4. Nāgārjuna.—We do not know where or when these Prajñā texts originated. But we have before us one of them translated into Chinese in the 2nd cent. A.D. (Nanjiō, no. 5). A tradition says that the *Aśṭasāhasrikā* was first preserved in Southern India, and was then transmitted to the West and to the North of India.² Whatever the authenticity of the tradition may be, we see in Nāgārjuna, who is believed to have lived in Southern India in the 2nd or 3rd cent., a conspicuous propounder of the doctrine. He was a great dialectician, and pursued the negative dialectics of the Prajñā school till he reached a complete denial of any definite thought about anything, especially in his *Madhyamika-śāstra* (Nanjiō, no. 1179). In the 22nd chapter of this treatise he denies step by step every quality thinkable of the person of the *Tathāgata*. He has no physical body; yet, apart from physical body (which is in reality vacuity), there is no existence. He has no mind; yet, apart from mind, he is an inconceivable thing. Inconceivable and unthinkable as he is, he is not a non-existence. Being (*sat*) or non-being (*asat*) is never to be predicated of him, because both are illusions. He is neither a being nor a non-being, neither a non-being nor a non-nonbeing. In short, he has no substance (*ātma-bhāva*), just as every other being, both in his lifetime and after his death, has none. Any attribute, any thought of his substance, is to be denied, and thorough negations of relativities could lead to the deep insight into it in which is realized the contemplation of *prajñā*.

Thoroughgoing docetist as Nāgārjuna was, he did not deny the historicity of the Buddha's life, and thus was compelled to distinguish between the empirical and the transcendental standpoints in his Buddhology. This distinction is pointed out in his commentary³ on the *Satasāhasrikā*, the

largest of the Prajñā texts. In this work he does not employ negative dialectics, but endeavours to state the common view, i.e. the so-called 'Hīnayānist standpoint, faithfully, according to its adherents, and then to elevate it to, or explain it away from, his own transcendental, i.e. Mahāyānist, standpoint. Thus he admits therein the actuality of the occurrences and teachings in the Buddha's lifetime. In this respect his treatise is a kind of encyclopædia of Buddhist legends and doctrines, and the author reproduces faithfully the anti-docetic arguments, as found in the *Kathāvatthu* (or elsewhere), enumerating the incidents of the Buddha's life and their respective scenes. But Nāgārjuna's arguments run finally to the conclusion that all these earthly incidents belonged to the phenomena of the Buddha's physical body (*jātakāya*, i.e. 'born in flesh'), in contrast with his real substance (*dharmakāya*, also called *ātma-bhāvakāya* and *prajñākāya*). The former view is admitted from the standpoint of the earthly principle (*loka-artha*), and the latter is the only true view according to the first principle (*parama-artha*) of Prajñā. The thirty-two marks, etc., may be attributed to a Buddha only from the former point of view, and the final truth should amount to non-marks (*alaksanā*). If the *dharmakāya* should be stated positively, it fills up the infinite space in all directions, being furnished with all possible and imaginable qualities and dignities. Its activities have no limit; it preaches ceaselessly, and leads all beings to enlightenment with every means and method beyond our imaginations. The *jātakāya* may be of any number and of any kind, the Buddha Śākyamuni being one of them, and the most conspicuous to every eye in this world-period. Yet he was a mere manifestation of the true body, adapted to the needs of common men, who could be educated only by a phenomenal manifestation and by verbal teachings of the *Tathāgata*, appearing in a physical body like themselves. The sunlight pervades everywhere in space, but it can be seen by physical eyes only when reflected from a material body.

Thus Nāgārjuna does not wholly reject the existence of an historical Buddha, but this is a concession made to the common view, just as the physical life of a *Tathāgata* is a condescension for the sake of ordinary men. Yet it is undeniable that Nāgārjuna's speculations proceeded from faith in Śākyamuni's personality as a Buddha; hence he recognizes a distinct personality in Śākyamuni, as one of the innumerable Buddhas, and his descriptions of the Buddha's life and capacities are on the same lines as in the other forms of Buddhism. In short, Nāgārjuna's docetism was a necessary consequence of his philosophical standpoint; but his Buddhology is characterized by a sharp distinction between the *jātakāya* and the *dharmakāya*, in emphasizing the sole reality of the latter according to the fundamental principle of the Prajñā doctrine, and in admitting the historicity of the Buddha's life as a concession to the common view, and also as a manifestation of the Buddha's mercy and potency for the sake of the beings to be led.

5. Eternal Buddhahood.—Just as in Christianity the dogmas of *homoousia* and the Trinity stood in opposition to Docetism, so we see, in Buddhist history, similar aspects of the Buddhological speculations opposed to pronounced docetism. But most Buddhist thinkers had hardly reached a clear understanding of the demarcation between docetism and anti-docetism, and even among those Mahāyānists who, upon the whole, occupied an anti-docetic standpoint very few combated docetic tendencies so decidedly as the earlier Theravādins. The truths (*dharma*) revealed by the Buddha con-

² *Aśṭasāhasrikā*, pp. 224-245.

³ Nanjiō, no. 1169.

tinued to hold the first place, and his person, Tathāgata, the second.

In this way a derivation of the personal Buddha from the original universality of the Truth or Buddhahood constantly taxed their ingenuity. Many thinkers tried to solve the problems in a way very similar to the Christian theories of the Logos and *kenosis*, but with this difference, that their ideas constantly verged on a docetic tendency in emphasizing the Buddhahood *a priori*, thus sacrificing more or less the actuality of the Buddha's life. Some of them laid special stress upon the eight (or four) important incidents in his life as the 'signs' (*lakṣaṇa*) of his Buddhahood; yet those signs were merged in the all-absorbing universality or monotony repeated in the career of each of the innumerable Buddhas. Even the anti-docetic Theravādins saw in Sākyamuni one of the Buddhas who appeared in the past and will appear in the future, and so his Buddhahood was made to consist in the realization of the one road (*ekayāna*) common to all Buddhas.¹ This capacity or dignity of a Buddha is expressed by means of the appellation Tathāgata. Hence the questions arise whether the various Buddhas, though individualized in personal distinctions, are one in substance, and whether the true personality of the present Buddha should be sought beyond his earthly life.

A solution of those questions was attempted in the *Suvarṇaprabhā*,² which took the question of the duration of the Tathāgata's life (*Tathāgata-āyus-pramāṇa*) as its text. In order to answer this question raised by an inquirer, the Buddha manifests himself in heavenly brilliancy, surrounded by the Tathāgatas Akṣobhya, Ratnaketu, Amitābha, and Dundubhīśvara on four sides; the questioner utters verses in praise and admiration of the Buddha's infinite life. Further, it is explained that his appearance in this world is with a view to the education of common mortals (*sattvaṇam paripācāya*), in a way adapted to their capacities. Thus what is essential in a Tathāgata is not his temporary appearance (*nirmāṇa-kāya*), but the eternal and universal life, in full possession of the Truths, *i.e.* the *dharma-kāya* (or *dharma-dhātu*), of which any particular Buddha partakes, and on account of which he becomes a Buddha.³ 'All the Buddhas are identical in their substance (*sama-rūpa*):⁴ therein lies the essence (*dharma*) of the Buddha. The Reverend One is not a maker, nor the Tathāgata a born one.' Thus the universal predominates over the particular, and a docetic tendency is manifest in this idealistic speculation in connexion with the mythologizing processes.

Another book, the 'Lotus of the True Law' (*Saddharma-puṇḍarīka*),⁵ tries to answer the same question on similar lines, and on a grander scale, but in a less docetic fashion. We might call this book 'the Johannine Gospel of Buddhism,' and the quintessence of the whole argument consists in identifying the actual Buddha with the Buddha who had no beginning. His appearance in this world as Sākyamuni was 'for the sole object, the sole aim, . . . of exhibiting to all beings the sight of the Buddha; . . . of opening the eyes to the sight of Tathāgata-knowledge.'⁶ For this purpose, for the sake of all beings, the Buddha adopted the expedient (*upāya-kauśalya*) of being born among the Sākyas, and manifested himself to have attained Buddhahood under the Bodhi tree, near Gayā, and to have entered into nirvāṇa. But in reality he has neither beginning nor end. He existed from eternity, and is to live for ever.⁷ Thus the second chapter of the book, which explains the cause and purpose of the Buddha's appearance, forms the centre of the introductory part; the fifteenth, which reveals the eternity of his essence, the centre of the middle, or main part; and the twentieth, the centre of the concluding part, shows the efficiency of the Buddha's teaching and authority for ever in the future. In other words, we have in the first place the actual appearance of the Buddha among men, as their father and the Lord of the world;⁸ then is revealed the original (*āgama*) essence of the Tathāgata, existing and acting from eternity (*ahimsa*); in the conclusion we have the assurance of the endurance of his personal influence as well as the mission of the Paraclete, so to speak, who is to appear in the latter days of the world. In these statements, however mythical and fantastic they may be in many passages, the text never loses sight of the Buddha's

personality.¹ At all events, we have in this book a Buddhist parallel to the Christian doctrines of the Logos and *kenosis*, if it does not wholly agree with them. Without going into the philosophical ideas underlying these Buddhological speculations, we can easily see how, according as the emphasis is laid on one or other of these two aspects of the Buddhahood,—the eternal and the temporary,—one who derives his ideas from this book may be led to an anti-docetic or a docetic view of the Buddha.

After a profound and elaborate system of Buddhist scholasticism, known as the T'ien-t'ai school, was organized by Ch'i-i² (531-597), the disputes were revived, both among his followers and among his opponents, as to which of the above two aspects was to be emphasized. The original (Chinese *pen*) and fundamental Buddhahood is the real essence, untouched by changes; and the Buddha, when viewed from his own substance, is nothing but his eternal person (the T'ien-t'ai school does not see in this a mere 'thatness,' *tathatā*, as did Nāgārjuna, but constant activities for the good of all beings). On the other hand, the derivative (Chinese *chi*, which means 'trace') Buddhahood is the trace left by the real Buddha among men, in order to educate them. Though Ch'i himself emphasized the inseparable unity of the two aspects, the disputes never ceased about the difference between the two, and as to the superiority of one over the other. Those who emphasized the original as superior to, or more real than, the other took refuge, more or less, in Nāgārjuna's philosophy, and thus inclined towards docetism. The difference of opinion continues to this day in Japan. Among the followers of Nichiren, the most ardent expounder of the orthodox T'ien-t'ai, the problem is shifted, and concerns the importance to be attached to either the Truth (*Dharma*) revealed by, or the person of, the Buddha, but the question remains substantially the same as before.

6. The Trinitarians.—The contrast between the eternal and the temporary aspects of the Buddha's person led to the assumption of a third aspect, which, after the fashion of Gnosticism, was to be the revelation of the Buddha to himself and to the superhuman beings, the Bodhisattvas. We see in Aśvaghōṣa (*g.v.*), the Buddhist Origen, the first systematization of the Trinitarian theory.³ The ultimate principle of his philosophy is the identity of Mind (*chitta*), which is 'thatness' or essence, in the person of the Buddha and in common men. This 'thatness' (*tathatā*) is the *dharma-kāya* of the Buddha, or the *tathāgata-garbha*, *i.e.* the womb and source from which every being derives its existence and activities. The Buddha does not remain in tranquillity in the womb, but manifests himself in the various conditions of bliss, according to the respective merits and enlightenment of the superhuman beings. These manifestations make up the bliss-body (*sambhogakāya*). Further, he adapts himself to the individuation-consciousness of common mortals, and appears in this world in condensation or incarnation, *i.e.* the *nirmāṇa-kāya*. Men see in it a body composed of gross matter which, though in itself not different from mind, is considered by them to be something outward, and thus what they look upon as the Buddha is only something like shadow or reflexion. Aśvaghōṣa's theory of the Trinity is, in this way, based upon an idealistic philosophy similar to the Prajñā school, at the same time with a Gnostic gradation of the Buddha's manifestations to all kinds of existence, and in this respect his Buddhology verges on a docetic view, almost abolishing the distinction of persons in the Trinity through its emphasis on the identity of the substance.

Another representative of the Trinity theory is

¹ On this point the present writer differs from Kern's remarks on p. xxvi of his translation.

⁶ Tr. p. 40.

⁷ See tr. pp. xxv, 54-57, 292-297, 307-310.

⁸ Especially in this part, chapters ii-vii, we can trace many passages to the Pāli *Nikāyas* of the Theravādins.

Vasubandhu, together with his brother Asaṅga. His standpoint is essentially that of Āsvaghōṣa, differing from the latter only in nomenclature and subdivision. Vasubandhu is a theosophist, or a Gnostic, in his way of thinking and in his descriptions of the various mystic attainments. Moreover, he almost loses sight of a definite incarnation, such as Śākyamuni, and believes in innumerable condescension bodies (which he calls apparitions, *nirmīta*), appearing everywhere in any form, in the visions of the Bodhisattvas. These apparitions can meet and cross one another without any hindrance, and can assist one another in their educative purposes. Thus Vasubandhu, though an ardent believer in Maitreya, the future Buddha, opposes most decidedly the view that there appears only one Buddha in one world-period. The universe he sees is filled with all possible apparitions of Buddha, from gross matter, plants, and animals, up to the highest manifestations in the states of bliss.¹ Mysticism, Theosophy, Gnosticism, and Pantheism are combined in his doctetic Buddhology, which at last amounts to nothing else than Cosmology and Psychology.

Lastly, a similar doctetic Buddhology is represented by a chapter entitled the 'Triṭkāya' in the *Suvarṇaprabhā*, which is found only in I-tsing's translation, and is probably a later interpolation from the pen of a follower of Vasubandhu. This is apparently intended to be a further interpretation of the second chapter. Nevertheless, the writer makes no mention of the actual Buddha Śākyamuni, but emphasis is laid on the substantial identity of all the Buddhas, who are considered to be mere apparitions of the sole essence, the *dharma-kāya*. He thinks that, if one sees in the Buddha or Buddhas this identity of substance, as well as of intention and activities, according to truth (*dharma-tathātāyā*), there can be no talk about life or death, sleep or dream, thirst or hunger in the Tathāgata, because his own mind is, in reality, always tranquil in profound contemplation (*yoga*).

Thus we see Trinitarianism finally reaching a decided doctetism, though it started from a standpoint different from that of the Prajñā school. Āsvaghōṣa's psychological cosmology did not decidedly deny the reality of the condescension body. Nevertheless, the idea of unity in the Trinity proceeded, in Vasubandhu and his followers, to that of identity (*satatā*), verging on the negation of differences, as we have found in Nāgārjuna. These doctetists, however, did not go to the extreme of the latter's doctrine, but developed the Mahāsaṅghikas' Pantheism into their own theosophy. This theosophy is again worked up in the mysticism of the Mantra system, another form of decided doctetism, at which we shall now give a glance.

7. Mantra Buddhism.—Though we know very little about the origin and history of Mantra (Jap. Shingon) Buddhism, or Buddhist Tantrism, it shows a most abstruse form of religion, made up of extremely idealistic and materialistic elements. Its origin is ascribed to Nāgārjuna, and it has certainly his all-identifying idealism at its basis, but at the same time mystic interpretations of the material as well as ideal worlds, as found in Vasubandhu, play a great part. Numerous texts and formulæ were produced in India and were widely prevalent there in the last centuries of Buddhist history. We see them also used by the Lamas to-day side by side with their Prajñā texts. The most important text of this mysticism, the *Mahāvairocana-abhiśambodhi*, was brought to China by an Indian, Subhakarasiṃha († 735), and its final systematization was carried out in Japan by Kūkai († 835).

The Buddha, according to this philosophy, is nothing but the whole universe, the *dharma-dhātu*, including its six elements—earth, water, fire, air, space, and consciousness. It is his real body, the *dharma-kāya*, and it may be divided into two complementary constituents, the mental and the material. The former is called the *Garbhadhātu*, corresponding with the *Tathāgatagarbha* of Āsvaghōṣa; and the latter the *Vajradhātu*, the indestructible substance. The individualized phenomena are, in this way, nothing but the Buddha's revelation to himself, and at the same time the methods of benediction (*adhiṣṭhāna*) embracing all beings. The whole is called the Buddha Mahā-Vairocana. The numberless manifestations of his body, such as Buddhas, Bodhisattvas, Vajrapāṇis, Padmapāṇis, etc., make up the whole pantheon of the religion, which is represented symbolically in the two sets of cycles or assemblages (*maṇḍala*), corresponding to the above divisions of the *Dhātu*. We shall not here enter into the details of this symbolism, for, as we might naturally expect, the historical Buddha dwindles almost to naught in this recondite system of mysticism. The name Śākyamuni is preserved in one corner of the *Garbhadhātu-maṇḍala*, but his actual personality means so little that these mystics have almost nothing to say of his life or teaching. A disciple of Subhakarasiṃha tried, in his commentary on the text named above, to explain the eternal Buddha taught in the Lotus as identical with Mahā-Vairocana, and later on some Japanese Mantrists identified Śākyamuni with their supreme Buddha. But all these attempts were carried on to neglect of the historical signification of Śākyamuni. In short, the person of the Buddha is, with them, dispersed and diffused over the whole universe, and he is ranked on the same level as any other superhuman beings. He is elevated on one side to the all-embracing *dharma-kāya*, and on the other is degraded to mere dust. This was a consequence of Buddhist materialism and idealism. It is only natural that, with the disintegration of the personal Buddha, the Buddhist religion, in this form, reached dissolution, and all kinds of abuses and superstitions were accepted and justified.

DOG.—See ANIMALS.

DOLMEN.—See DEATH (Europe, pre-historic).

DOM.—The menial tribe of Dravidian origin, widely spread under various names in most parts of continental India. The Census returns of 1901 (*Census India*, ii. 323) show their numbers to be 977,026; and of the Dommarā, Domar, or Dombar, 97,456. But there must be some error in the tabulation, as none are shown in Bengal, where the Maghāyā Doms of Bihār are an important tribe. The Doms seem to be of diverse origin, and the social position of their various branches is very different. They certainly belong to a large extent to one of the non-Aryan races; but in many places they may be the descendants of the mixed race of serfs or slaves of the early conquerors. As Risley remarks:

¹ See esp. ch. xx. of his *Vijñānīmātrā* (Nanjio, no. 1216).

'The fact that for centuries past they have been condemned to the most menial duties, and have served as the helots of the entire Hindu community, would of itself be sufficient to break down whatever tribal spirit they may once have possessed, and to obliterate all structural traces of their true origin' (*Tribes and Castes*, i. 241).

The Doms of Northern India may be divided into three territorial groups, the ethnological connexion of which can be only a matter of speculation: (1) the eastern branch of the tribe found in the Plains districts to the east of the United Provinces and in Bihār; (2) the Doms of the Himalayas; (3) the Dom or Dūm Mirāsīs of the Panjāb.

1. *The Doms of the Ganges Plains.*—These are divided into numerous sub-tribes, such as the Bānsphor (*q.v.*), the Basor, and others. They differ in social position according to the business in which they are engaged, and in particular their rank depends upon whether they do or do not practise scavenging. The most interesting of these groups is that of the Maghaiyā Doms, who take their name from the ancient kingdom of Magadha or South Bihār. They are found in the western districts of Bengal and to the east of the United Provinces. In their original state they are vagrants pure and simple, who do not possess even mat shelters or tents to protect them in the cold and rainy season, but cower under trees, or lurk in cattle-sheds or under the eaves of houses. They live by burglary, petty theft, and begging, and their women are prostitutes. In Gorakhpur they have two special divinities of their own—Gandak and Samaiyā. Gandak is said to have been hanged for theft a long time ago, and when he was dying he promised to help the Maghaiyās in times of trouble. He is worshipped by the whole sub-tribe, and is invoked on all important occasions; but he is pre-eminently the god of theft. A successful raid is always celebrated by a sacrifice and feast in his honour. Samaiyā is a female deity, and apparently, as is usual among the Dravidians, she is recognized in a vague way to be the consort of Gandak. She is without special history or legend, and no sharp line of distinction is drawn between her functions and those of Gandak; but she seems to be especially invoked at childbirth and in illness. Both these deities are honoured with sacrifices of young pigs, with an offering of spirits mixed with sugar and spices. The Maghaiyās employ no priests; any of their number is capable of performing the rite. The meat and other things, after dedication, are divided among the worshippers. Sometimes at childbirth, or when a child is teething, a pig is specially sacrificed to Samaiyā, or this is done in fulfilment of a vow. They have no idol, altar, or religious platform. When a sacrifice is to be made, a space is cleared in a field, and the rite is performed.

Among those branches of the tribe whose social rank is superior to that of the Maghaiyās there is some approach to Hinduism, and the Mother goddess is worshipped as Bhavāni, while they have some vague idea of an all-powerful male deity called Paramēśvar, 'the great god,' who punishes the guilty, and of a hell; but what it is and how sinners are punished they know not. As Risley, writing of Bihār, remarks (*op. cit.* i. 245):

'The religion of the Doms varies greatly in different parts of the country, and may be described generally as a chaotic mixture of survivals from the elemental or animistic cults characteristic of the aboriginal races, and of observances borrowed in a haphazard fashion from whatever Hindu sect happens to be dominant in a particular locality. The composite and chaotic nature of their belief is due partly to the great ignorance of the caste, but mainly to the fact that, as a rule, they have no Brāhmins, and thus are without any central authority, or standard, which would tend to mould their religious usages into conformity with a uniform standard.'

The Maghaiyās, apparently as a survival of the matriarchate in some form, employ a sister's son to act as funeral priest and to recite the spells

(*mantra*) which are intended to lay the ghost of the dead.

'If a man dies of snake-bite, say the Maghaiyā Doms of the Gya district, we worship his spirit as a *Sāmpariyā* [snake godling] lest he should come back and give us bad dreams; we also worship the snake who bit him, lest the snake-god should serve us in like fashion. Any man, therefore, conspicuous enough by his doings in life or for the manner of his death to stand a chance of being dreamed of among a tolerably large circle is likely in course of time to take rank as a god' (*ib.* i. 247).

Hence arises the worship of Syām Singh, the deified ancestor of the Doms of Bihār, who may have been a successful robber, or of Gandak, to whom reference has already been made. The Bihār branch, again, worship Sansāri Māi, whom some identify with Kālī, but who is probably, as her name implies, the Earth Mother, known to most primitive religions.

'No image, not even the usual lump of clay, is set up to represent the goddess: a circle one span and four fingers in diameter is drawn on the ground and smeared smooth with cow-dung. Squatting in front of this the worshipper gashes his left arm with the curved Dom knife, and draws five streaks of blood with his finger in the centre of the circle, praying in a low voice that a dark night may aid his designs; that his booty may be ample; and that he and his gang may escape detection,' with which Risley (*op. cit.* i. 247 f.) aptly compares the prayer to Laverna:

'Da mihi fallere, da justo sanctoque videri,
Noctem peccatis et fraudibus obice nubem'
(Horace, *Ep.* i. 16. 61 f.).

Similarly in the United Provinces the Doms, whose business it is to slay ownerless dogs, have a female deity called Kūkarmari, 'slayer of dogs,' to whom a sacrifice of a young pig and an offering of spirits are made as a propitiation for the death of the animals of which she is the guardian. The Dom executioner, on the same principle, as he lets the gallows fall, calls to the Emperor, the judge, and all who are concerned in the conviction and sentence of the criminal, to take the guilt of his death upon their own heads, and to save him thus from responsibility. In a still lower grade of belief are the so-called fetishistic practices of worshipping the 'jemmy' with which the Dom burglar makes entry into a house. They also when encamped near a village worship the local gods of the place.

This branch of the Doms feels the dread of evil spirits which is found among all races in a similar stage of culture. Mari Masān, the death spirit of the cremation ground, represents the impersonated dread which attaches to such uncanny places, and it is considered necessary to appease the ghosts of the dead by an annual celebration, if they are not to appear in dreams and afflict the living.

2. *The Himalayan Doms.*—These are in a much higher grade than those of Bihār and the neighbouring districts. They carry on various trades which in the Plains are each allotted to a separate caste. Their beliefs are of the same animistic type as those of the Doms of Bihār. In the first place, they worship a number of deified ghosts who are specially commemorated on account of the tragic circumstances of their death. Ganganāth was a prince murdered on account of a sexual intrigue, and he and his paramour are worshipped. When any one is aggrieved by a wicked or powerful enemy, he goes for aid to Ganganāth, who invariably punishes the wrongdoer. He sometimes possesses one of his followers, and through him prescribes the offerings which must be made to propitiate him. Bholanāth is a deity of the same type, the ghost of a prince who was assassinated. He is represented by a small iron trident placed in a corner of the house, to which offerings are made when any sudden calamity attacks the inmates.

Another class of deities represents the impersonated horror of graveyard or forest. Masān lives at a burning-ground, is black in colour and hideous in appearance. He comes from the ashes of a funeral pyre and chases passers-by at night, some of whom die of fright, whilst others go mad and linger for a

while. He possesses the sick, causes disease, and can be expelled by exorcism. Khabish lives in remote, dark glens, sometimes imitating the bellow of a buffalo, the cry of a goatherd, or the grunt of a wild pig. He frightens and besets unwary travellers. Besides malignant ghosts of this kind they also worship Khetrpāl, 'protector of the land,' the male consort of the Earth Mother, and Kalbisht and Chūmā, kindly deified ghosts who protect the herds and flocks. More terrible is Rāniyā, who rides from village to village on immense boulders, the impersonation of the avalanche or of the rocks falling from the mountain side. He attacks only females; and, should any one attract his attentions, she invariably wastes away, haunted by her demon lover, and joins him in spirit land.

3. *The Dom or Dūm Mirāsī*.—Quite different in occupation, at least from the Maghaiyā or Himālayan Doms, is the Dom or Dūm Mirāsī of the Panjāb, who has been well described by Ibbetson (*Panjāb Ethnography*, 289). He is a minstrel and ballad-singer, plays on the little drum, cymbals, and fiddle, and his women amuse ladies in zanānas by appearing as jesters and singers. It would not be difficult to show that these arts may have developed among the more savage Doms. But the Panjāb Doms are now quite distinct from the Maghaiyās and the Doms of the Himālayas, and in religion they have become nominally Muhammadans, though they still retain many of the animistic beliefs of the other branches of the tribe.

LITERATURE.—For Bengal, see Risley, *Tribes and Castes of Bengal*, Calcutta, 1891, i. 240 ff.; Wise, *Races, Castes, and Trades of Eastern Bengal*, London, 1883, p. 265 ff.; Gait, *Census Report Bengal*, 1901, i. App. vii. p. xlix. For the United Provinces, see Crooke, *Tribes and Castes of the N.W. Provs. and Oudh*, Calcutta, 1898, ii. 512 ff.; Atkinson, *Himālayan Gazetteer*, 1882-84, ii. 319 ff. For the Panjāb, Ibbetson, *Panjāb Ethnography*, Calcutta, 1883, p. 289. For the Dōmba of the Madras Presidency see Thurston, *Castes and Tribes of Southern India*, ii. (1909) 178. W. CROOKE.

DOMESTICATION.—The term applied to the control by human beings of the conditions under which animals and plants live and propagate their species. The extent of this control varies from case to case, and, although, logically, German authorities who include oysters and silkworms among domesticated animals are justified by the definition, the term as a rule is limited to such animals and such plants as are necessary for the existence or well-being of the human race—among animals, to the dog, the horse and the ass, the cow and other ruminants, the rabbit and similar rodents; to animals of great value for transport like the camel and the elephant, and to some birds; among plants, to cereals, roots, and tubers which have an agricultural value, various species of trees, and plants like flax and hemp which contain fibres of great use to man. The most primitive men do not possess either domesticated animals or domesticated plants. So far as at present is ascertained, palæolithic man in Europe possessed neither, though in a stratum intermediate between palæolithic and neolithic, at Mas d'Azil in the South of France, Edouard Piette found representations of heads of horses which in the woodcut look certainly as if they were fitted with halters (though this has been denied). Piette found also a little heap of wheat, which, except in one form, is no longer known in Europe as a wild plant. In rock-shelters of the palæolithic period many admirable drawings have been found of such animals as the reindeer, the horse, and the mammoth, and also large quantities of their bones. But it is generally believed that the bones came into the shelters clothed with flesh intended for food. Even in the 'kitchen-middens' of the coast of Denmark, which belong to the neolithic age, the only animal which can be identified as domesticated is the dog, so

that we may imagine the state of civilization of that period to resemble in the main that of the native Australians at the present day. These have no cultivated plants, and the only animal which can be called in any sense domesticated is the dingo—the native dog. As even the dingo in the pairing season often deserts its master, it cannot be considered entirely domesticated. Other animals are obviously not likely to be long kept as pets among savages who lay up no stores and at certain times of the year find natural products so scarce that they are driven to devouring their own children. The primitive savage has, however, undoubted ability to make friends with dumb animals, and in South America, where the conditions of life are on the whole easier than in Australia, the huts of the natives are full of animals, mostly birds, which they have tamed. The native, however, turns them to no practical use, and when he has been presented with ordinary fowls he uses neither their eggs nor their flesh. When the American Indians were given cattle, they could not imagine any other method of treatment for them than as animals to hunt.

The domestication of animals has obviously been a process continued over a long period of time, and in the case of most animals repeated at many different places by different persons. The stages in this process are not very clear. The most important animal to man in many ways is the cow. Its flesh and milk supply food; its skin provides clothing; its sinews, bones, and horns yield primitive implements. From very early times it has also been used as a means of exchange. As an early Persian writer says in the *Bahrām Yasht* of the Avesta, developing the texts of an earlier Yasna, 'in the ox is our strength, in the ox is our need; . . . in the ox is our food, in the ox is our clothing; in the ox is tillage, that makes food grow for us' (*SBE* xxiii. 247). In other circumstances the goat is of hardly less importance, while the sheep has been much more modified by its contact with man than these; and its bones, in Northern Europe at any rate, are found later and more rarely than those of the ox and goat. The conditions in which the horse was domesticated are also obscure. But this animal became indispensable in countries where large herds of cattle more or less domesticated came into existence. Sheep and goats can be controlled by shepherds with dogs; large herds of cattle can be controlled only by the mounted cowboy, who on the great plains of both the Old World and the New has become an important political factor. The geographical conditions which brought about the domestication of the camel and the elephant were much more limited in range. In the case of the pigeon it has been shown by Darwin that all varieties have arisen, under domestication, from the 'blue rock.' The goose was early domesticated; in the *Odyssey* (xv. 161-2) an eagle carries off one of Helen's geese as she feeds them in the courtyard at Sparta. The goose, duck, and pigeon were domesticated with a view to their use as food, but the turtle-dove was often kept simply as a pet, while the game-cock (the 'Persian bird' of the Greek poets) was kept from a sporting interest. It is impossible here to discuss other birds which have become thus domesticated in different parts of the world in more modern times, e.g. the turkey, the guinea-fowl, the pheasant, and the ostrich.

The causes which produce domestication in animals were classified nearly half a century ago by Francis Galton (*Trans. of the Ethnol. Soc. of London*, 1868, p. 123 ff.). To his analysis, though rarely quoted in recent times, later writers have added nothing of importance. He shows that animals which become domesticated must have an

inborn liking for man, be fond of comfort, be useful to savages, be hardy, breed freely, and be gregarious. The cat, it may be argued, is not gregarious; but it is fond of comfort, and, except in rare instances, is more attached to a place than to a person. The pig, on the other hand, has many of the qualities in which the cat is lacking, but it has for various obvious reasons never been domesticated in the same way, and even the crofter of the Hebrides or of Western Ireland, who shares his habitation with the cattle, as a rule excludes the pig. Some animals are kept by man in captivity without their being in the proper sense domesticated. Till lately the wild elephant had to be tamed, because elephants did not breed in captivity. But the speculations to which this fact has given rise are in the main ill-founded. The tame elephant in conditions approaching his wild state does breed (Darwin, *Variation of Animals and Plants under Domestication*, popular ed., 1905, ii. 165).

Besides the natural causes postulated by Galton, the existence of animals both domesticated and undomesticated was probably to some extent guaranteed by religious or quasi-religious sanctions. In Persia and in Germany white horses were specially sacred (Herod. i. 189; Tac. *German*. 9, 10). In India animal life generally is sacred, but in Greece and Rome the ox which drew the plough was not to be killed. What effect totemism had upon the maintenance of particular animals and plants will be clearer when experts have decided precisely what totemism is (see Frazer, *Totemism and Exogamy*, 4 vols., London, 1910; and, for a different view, A. Lang, art. 'Totemism,' in *EB*,¹¹, 1911). Hahn's contention (*Die Haustierte*, 1896) that the domestication of kine began with animals kept in an enclosure by a temple for purposes of sacrifice has no real evidence in its support. The great enclosures belonging to the Persian kings, called in Avesta *pairi-daeza*, a word borrowed by Greek in the form *παρδείος*, had, it is true, many animals contained within them; but their religious character is not more obvious than that of an English gentleman's park. Most Greek temples stood in an enclosure (*révevos*), but the presence of cattle except at the time of sacrifice was not encouraged there, and in the Æolic inscription published by Kretschmer in 1902 (*Jahresh. d. oester. arch. Inst. in Wien*, v. 141) it is distinctly laid down that such animals are not to be fed in the precinct: *[μὴ σὺλφῆναι δὲ μὴδὲ κτήνηα μὴδὲ βοσκήματα ἐν τῷ ρέμειναι]*. That, however, there were several stages in the domestication of cattle, as Hahn contends, may be readily admitted. Some people, like the Chinese, who have domesticated cattle, look with disgust upon the use of their milk; others, who use both their flesh and their milk, have never employed them as draught animals. But Hahn probably exaggerates the length of time that it took to accustom the cow to yield her milk to a milkman or milkmaid instead of to her calf—a difficulty which is as present to a modern farmer with a cow that has been once allowed to suckle her calf as it was in early times. Probably milking began in the case of cows which had lost their calves, and to which milking was a relief, if they were already, in the Latin phrase, *mansuetæ*, 'accustomed to handling.' The careful selection through untold ages of animals which were 'good milkers' has no doubt increased the size of the cow's udder, but from the beginning the cow and the mare differ in this respect that the foal accompanies its mother from the first, while the cow in her native state when she goes to pasture leaves her calf in a brake and often does not return to it for a long time.

The domestication of plants is not exactly

parallel with the domestication of animals. While savage herdsmen like the Bechuanas object strongly to the women interfering with their animals, woman is undoubtedly the first gardener and agriculturist. As Lummholtz says (*Among Cannibals*, 1889, p. 160),

savage woman 'must do all the hard work, go out with her basket and her stick to gather fruits, dig roots, or chop larvae out of the tree-stems. . . . The stick in question, the woman's only implement, is indispensable to her on her expeditions after food. It is made of hard tough wood four or five feet long, and has a sharp point at one end made by alternately burning it in the fire and rubbing it with a stone. Even at dances and festivals the married women carry this stick as an emblem of dignity, as the provider of the family.'

This stick survives as an agricultural implement even among civilized peoples. The next step, and a long one, is to plant seeds the produce of which will be at hand when it is wanted. But for this several conditions are necessary which do not exist among the lowest savages even now: (1) the family must be either settled in a particular place or wandering in a very circumscribed area; (2) the planter of the seeds must be able to secure by some kind of sanction that they will not be injured by other persons; and (3) the planter himself must have more foresight than the lowest savages, so as to wait for the ripening of the fruit. At present there are hardly data by which we can explain how this was accomplished, but we may guess that the dibbling of seeds began with persons who found movement from place to place difficult, e.g. through the encumbrance of infant children, or through lameness or other physical disability. The protection of the plants, as it seems, could be secured only by superstitious dread. A precinct must be made which it would not be safe for other persons to invade. In other words, a *tabu* protected them. How such a *tabu* developed into law is well seen in the case of the sacred olives (*μωπία*) in ancient Attica, which were protected with a fence (*ἐγκός*), and damage to which was punished with confiscation and banishment.

Here we are faced once more with the problem which arose in connexion with the domestication of animals. Is this protective *tabu* totemism? F. B. Jevons (*Introduct. to History of Religion*, London, 1904, pp. 114 ff., 156, 210 ff.), who is followed by S. Reine (*Culte, mythes et religions*, 1 (Paris, 1905) 86 ff.), would attribute domestication of both animals and plants entirely to totemism; van Gennep (*Tabou et totemisme à Madagascar*, Paris, 1904 [Bibliothèque de l'école des hautes-études, sciences religieuses, xvii.]) no less emphatically argues for the existence of other causes (pp. 241 ff., 307 ff., and *passim*).

From the gathering of grass seeds, as still practised, e.g. in Australia, among the Hottentots, and among the lowest natives of the Pacific slopes of America, there was no doubt a gradual progress (which we cannot trace) to the planting of cereals. The Hindu writer who says that barley was the first of plants is from the point of view of food-grains probably right, but wheat in its many varieties speedily became of equal, if not greater, importance. It is on the different forms of grain that domestication has had more influence than anywhere else. Hence, for wheat, at any rate, the only species for which a wild original has been found is *Triticum monococcum*, of which the origin is said to be *Triticum agiopoloides*. This is found wild from Servia through Asia Minor to Mesopotamia and Antilibanus.

LITERATURE.—Besides the works mentioned above, see art. AGRICULTURE AND ANIMALS in vol. i. A good account of the domestication of animals and plants is given by H. Schurtz, *Urgesch. der Kultur*, Leipzig, 1900, p. 258 ff.; but this, like L. Reinhardt's *Kulturgech. der Nutzpflanzen* (2 parts, vol. iv. of *Die Erde und die Kultur*, Munich, 1911), is vitiated for scientific purposes by a lack of references. See also A. de Candolle, *Origin of Cultivated Plants*, Lond. 1884; G. Buschan, *Vorgeschichtl. Botanik der Kultur- und Nutzpflanzen der alten Welt*, Breslau, 1896; E. Hahn, *Die Haustierte*, Leipzig, 1896, and other works; C. Keller, *Die Abstammung der ältesten Haustierte*, Zürich, 1902, and a charming short account by the same author, *Die Stammesgesch. unserer Haustierte*, Leipzig, 1909, in Teubner's series, *Aus Natur und Geisteswelt*.

P. GILES.

DONATISTS.—'Donatists' is the name given to the adherents of a schismatic Church which was formed in N. Africa at the beginning of the 4th cent., and continued, in spite of severe persecution, for more than a hundred years. Within the area which it affected, Donatism was for the greater part of the 5th cent. numerically the preponderating form of Christianity, but its influence was practically confined to the dioceses of Numidia and Mauretania. While in its origin it was largely due to personal and provincial rivalries, the schism came rapidly to involve serious problems concerning the nature and the functions of the Church, and it was crushed only by a combination of force applied by the State and the dialectical ability of Augustine.

The persecution under Diocletian had revived the question whether a priest or a bishop who had shown weakness or unfaithfulness could continue in, or be restored to, his office. The question had been answered with an unhesitating negative by Cyprian:

'They who have brought grievous sin upon them, that is, who by sacrificing to idols have offered sacrilegious sacrifices, cannot claim to themselves the priesthood of God, or offer any prayers in His sight for their brethren' (*Ep. lxx. 2; cf. lxxv. 2, 8*).

When, on the death of Mensurius, bishop of Carthage (A.D. 311), the deacon Cæcilian was elected as his successor, and consecrated by Felix, bishop of Aptunga, objection was at once raised to the election, on the threefold ground that Cæcilian himself was unworthy of the office; that he had been elected only by the bishops in the district of Carthage, and not by those of the whole province of Numidia; and that his consecration was invalid, having been conferred by one who was himself a *traditor*. The opposition was led and organized, in the first place, by Secundus, bishop of Tigisis and primate of Numidia, who visited Carthage attended by seventy other bishops, excommunicated Cæcilian and those who adhered to him, and consecrated in his place Majorinus, a 'reader' who belonged to the opposite party. The Church of N. Africa was rent in twain. Each side excommunicated the other. Both appealed to the Emperor Constantine, ignoring thereby Tertullian's principle, '*Quid Imperatori cum ecclesia?*', and setting an evil precedent for the future. The Emperor, who, under the guidance of Hosius, bishop of Cordoba, had already shown favour to Cæcilian, yielded to the request of Majorinus, and called on Miltiades, bishop of Rome, with the assistance of the bishops of Arles, Autun, and Cologne, to investigate the dispute, and especially whether Felix was indeed a *traditor*. Their decision cleared the reputation of Felix and confirmed the consecration of Cæcilian, and also condemned Donatus of Casae Nigrae, a leader of the opposite party, on the ground that he had re-baptized Christians and re-ordained bishops who adhered to the schism. As the principles at issue were thus brought to the surface, the Donatists were only confirmed in their resolve to separate from the Church, and Constantine remitted the whole matter to a Synod which he convoked to meet at Arles (A.D. 314). This Synod, which, though described by Augustine as '*plenarium universae ecclesiae concilium*,' cannot claim to be more than a General Synod of the Latin West, condemned the Donatists on all points of their contention. The schism, nevertheless, continuing to spread, and Majorinus having been succeeded by Donatus Magnus, from whom the schismatic Church probably took its name, Constantine proceeded to civil measures, issuing a decree threatening to deprive the schismatics of their churches and to banish their bishops (A.D. 316). The policy of forcible suppression was pursued with great severity by

Ursacius, the Imperial commissioner, but with little success; and in 321 Constantine instructed both Ursacius and Cæcilian to adopt a policy of moderation.

Under his successor, Constans, the history of the schism followed much the same course. Both the persecution and the resistance were more determined. It was a period of much social distress and disturbance in Africa. The Donatists, as ecclesiastical rebels, provided a rallying-point for all the discontented and seditious elements in the population. There was a breakdown of social order. Bands of dispossessed peasants and escaped slaves infested the country, committing abominable outrages and exposing themselves to death with fanatical enthusiasm. They sought to make common cause with the Donatists, and called themselves *milites Christi agonistici*, but are better known as *circumcelliones*, 'hut-haunters.' The Donatists were discredited by these excesses, and suffered in their suppression. Many of them were put to death, many others were banished, and their churches were closed or confiscated. The accession of Julian brought a temporary relaxation to them, as to other schismatics and heretics, but under Gratian and Honorius the persecution was renewed. The schism continued, however, to flourish. Donatus Magnus, who died in exile, was succeeded by Parmenianus, and he by Primi-anus. The situation which Augustine found at Hippo was probably characteristic of many districts; the Catholics were in a minority, and the Donatists refused to supply them with bread. Towards the end of the century the movement was seriously weakened by internal dissension. Tychonius, the celebrated grammarian, was condemned by a Donatist Synod in 390 for having acknowledged that there were saints in the Catholic Church. A further breach took place over the question of admission to the Eucharist. Moreover, the continued and vigorous polemic undertaken by Augustine began to tell. A conference between the two parties was arranged by him at Carthage in 411, and was attended by 286 Catholics and 279 Donatist bishops. It led to no satisfactory conclusion, but provided an excuse for again putting the civil law in motion. Augustine himself provided the first reasoned defence of the persecution of Christians by Christians, though he demurred to the infliction of the death penalty. Fines, imprisonment, and confiscation followed, and in 415 the Donatists were prohibited from meeting for worship. Along with the Catholics they suffered grievously in the Vandal invasion, but there were still traces of their existence as late as the 7th cent., when they are referred to by Gregory the Great.

Donatism was not a heresy; neither did it develop any heretical teaching. It was not a dispute as to the organization of the Church, or even one concerning discipline merely, which underlay the schism. Both parties held by the episcopate, as both held to the Creeds. Donatism represents an attempt—the final one for a thousand years—to resist the process of secularization by which the Church was gradually transformed from a community of holy persons into an institution of mixed character, offering to secure salvation for its members by means of grace over which it had sole control. It belongs, therefore, to the same series of movements as is represented by the Encratites (*q.v.*), Montanists (*q.v.*), followers of Hippolytus, and Novatians (*q.v.*). Insistence on a minimum of personal worthiness in the clergy at least was 'the last remnant of a much more earnest conception' of the Church. It was met by the defenders of Catholicism with a new emphasis on the objective character of the sacraments, and upon

the holiness of the Church apart from the holiness or otherwise of its members and clergy. It was in the controversy with the Donatists, therefore, that the Catholic doctrine of the Church was completely developed. To the foundation principle of Donatism ('qui fidem a perfido sumserit, non fidem percipit sed reatum') Optatus of Mileve opposes an equally fundamental position, 'sacramenta per se esse sancta, non per homines.' It was not difficult for Augustine to show how many practical difficulties were involved in the Donatist contention, chief among them the difficulty, amounting to impossibility, of knowing the true character of the officiating priest. But he went further, and, by asserting the indelible character of Orders, whereby an ordained person retains the power to celebrate a valid sacrament, whatever be his views or his conduct, and the mixed composition of the Church as containing not only 'vessels for honour' but 'vessels for dishonour,' stamped its final form on the Catholic doctrine of the Catholic Church. It is true that in doing so he had to abandon the position taken by Cyprian, and assert the validity of all baptism, even that performed by heretics, provided that it was in the name of the Trinity. It is true also that baptism in this way came to lose some of its significance and to represent only a 'marking' of the recipient, the beginning of a process which, though it might begin anywhere, could be consummated only within the Catholic Church and by the addition of 'charity' to faith. Moreover, in the theory of the Church thus developed in opposition to the Donatists, Augustine at least prepares the way for the Reformation distinction between the Church visible and the Church invisible.

C. A. SCOTT.

DOOM, DOOM MYTHS (Teutonic).—The belief in supernatural powers who preside over the destinies of mankind is met with among all the Teutonic peoples. These powers have more especially the end of life in their control, and they are accordingly now and then identified with the spirit of death. They are believed to become incarnate in female form, now coalescing in a single being, now appearing as three sisters, or even in whole multitudes. According as they dispense good or evil fortune to men, they are distinguished as friendly or hostile. To the individual they frequently reveal his fate in dreams, and this explains why dreams hold so important a place, not only in the common life, but also in the literature, of the Teutonic race (cf. W. Henzen, *Über die Träume in der altnordl. Sagalitteratur*, Leipzig, 1890).

The ancient Teutonic dialects possess several designations for the powers of destiny, and in not a few cases the terms have already acquired an abstract sense. All the tribes had the word meaning *fatum* or *eventus* which appears in O.H.G. *wurt*, A.S. *wyrd*, O.N. *urðr*, and which sometimes signifies the spirit of death or destiny, and sometimes death or destiny itself. In the old Saxon and Scandinavian dialects, again, the name found in O.S. *metod*, A.S. *meotod*, O.N. *mytöðr*, the power which 'metes out' or 'orders,' was in current use; while among the Southern Teutons we find O.H.G. *gascapt*, O.S. *giskap*, A.S. *gescap*, 'the spirit who creates' ('shapes'), which is given in Græco-Latin glosses as the equivalent of *parca*. In works of the 15th cent. the *gachschepfen* are still referred to as powers who bestow life upon man and order its course (Vintler, *Blume der Tugend*, 1411, line 7865).

The belief in the powers of destiny has assumed an altogether peculiar form in northern Scandinavia. Here they are known for the most part by the name of *nornir*. *Norn* is a word of obscure etymology, but appears to be connected with Swed.

norna, *nyrna*, 'to tell secretly,' 'to warn,' and Mid. Eng. *nyrnen*, 'to recite.' The fate of man is the work of the Norns (*skop norna*), and none can evade their decree. Even the destiny of the gods lies in their control. Hence they make their appearance at the birth of human beings, and support the mother in the pains of labour. People seek to win their favour by offerings. In the Faroe Islands it is still the custom for mothers to eat the 'Norn-groats' (*nornagreytur*) after a birth—a survival of the ancient oblation. The Norns then set the tokens of their goodwill upon the finger-nails of the child, and those who have white spots, the 'Norn-marks,' on their nails are children of fortune. Like the *fylgjur* (see art. DEMONS AND SPIRITS [Teutonic], vol. iv. p. 633), the Norns continue their good services to human beings throughout life. Óðin puts his protégé Sigurðr on his guard against the evil Norns, who in battle stand on either side of a man, wishing that he may receive wounds. The blows of fate are supposed to be the work of angry Norns, and defeats in war are also traced to their dictates. A person's death is likewise due to their decree. We thus see the hostile aspects of their character becoming more and more pronounced, and hence, as is stated in the *Völuspá* (8 ff.), they were believed to have sprung originally from the race of giants, and the golden age of the gods came to an end when the Norns came into being. From their leading representative, *Urðr*, is taken the name of the only fountain in the under world, the *Urðr* fountain; here, according to Snorri, lay their abode, and from this retreat they exercised their sway over the fruitfulness of the earth.

The Norns are often found in a group of three, or in three companies. It is possible that in this point the classical myths of the *Parce* may here and there have had an influence upon the sagas of the Norns. They are depicted as maidens who spin the thread of destiny for man. Their doings at the birth of Helgi, the slayer of the Hundinges, are narrated as follows:

'Night lay over the house when the Fates came to forecast the hero's life. They said that he should be called the most famous of kings and the best among princes. With power they twisted the strands of fate for Borghild's son in Bralund; they spread the woof of gold and made it fast under the midst of the moon's hall. In the east and the west they hid the thrums; all the land between was to be his. Neri's sister fastened one strand in the sides of the north, and prayed that it might hold for ever' (*Helgakviða Hundingsbana*, ii. 2 ff., *Corp. poet. bore.*, 1883, ii. 181).

The story of Meleager likewise appears among the Norn myths. The fatal three are present at the birth of Nornagest. The two elder sisters ordain fortune and renown for the child, but the younger decides that he shall live only so long as the taper by his cradle remains unconsumed. Thereupon the elder sister seizes the taper, extinguishes it, and hands it to the mother, thus conveying to mother and child the power of fixing the term of the child's life (*Nornagests saga*, ed. Bugge, 1865, p. 77).

The names *Verðandi* and *Skuld*, sometimes given to two of the Norns, are due to a learned blunder of the 12th cent., and have no better authority than an interpolation in the *Völuspá*. The author of the passage erroneously connected the name *Urðr* with the preterite stem of the verb *verða*, 'to be,' and interpreted it as denoting the Norn of the past; he then proceeded to fabricate a *Verðandi* as the Norn of the present, and a *Skuld* as the Norn of the future, taking the former from *verða*, and the latter from *skulu*, the word used to denote the future tense. The idea that the three Norns inscribe the life of man on tablets emanates from the same writer (*Völuspá*, 20).

LITERATURE.—J. Grimm, *Deutsche Mythologie*, Göttingen, 1875, i. 335 ff.; E. Mogk, *Germanische Mythol.*, Strassburg, 1907, p. 62 ff.; E. H. Meyer, *Mythol. d. Germanen*, Strassburg, 1908, p. 251 ff. E. MOGK.

DOOR.—Doors, whether of dwellings or of temples, play an important part in ritual and belief over a very wide area. Often the dwelling-place of a spirit or divinity, the door has almost invariably a sacred character. The origin of the latter is perhaps best sought in the conception of the door as separating between two worlds—the outside world, where are innumerable hostile influences and powers, and the region within the limits of the house, the influences and powers of which are friendly. The door is at once the barrier against those hostile influences, and that which gives entrance to those who have a right to pass to the sacred region within. Hence those who pass through the door—the limit of the sacred region, and therefore itself sacred—must do so with care and often with certain ritual acts. Thus the sacredness of the door was probably at first independent of its connexion with a god or spirit. But that connexion, once established, could only add to its sacred character. Again, being the dividing line between hostile and friendly spheres, the doorway was supposed to be a place where evil influences clustered, or sometimes even dwelt. But more usually the household spirits dwell at the door and protect it. As these are generally connected with the hearth, it is not clear why they should also be associated with the door. But two reasons may be suggested. The door is the exterior limit of their dominion, where their influence would first be met with, and where they might reasonably be supposed to dwell. And when men dwelt in rock-shelters, caves, or half-open huts, the fire would be at or near the entrance, as it still burns in front of savage huts.¹ When, later, it was taken into the house, the connexion of ancestral ghosts with the hearth would be shared with the entrance, their former exclusive domain. In some cases also burial takes place at the doorway.

Besides being sacred as a whole, the door has special sanctity in its more important parts—threshold, side-posts, and lintel—as will be seen in the course of this article. But it is impossible, with Trumbull, to regard the sacredness of the threshold as originating in its having been the primitive altar—first of the house, then of the temple. The many rites connected with threshold or door by no means bear out this theory, though, where sacrifice is performed at the door, the threshold stone may become for the nonce a species of altar. But more probably the sacrifice is not slain on the threshold, just as the fire at the entrance would not have the threshold for a hearth, while the altar of primitive tribes is unconnected with the threshold (see ALTAR).

The sacredness of the door as the passage to a different domain is seen in many folk-tales of the Forbidden, or Tabued, Door, through which certain persons must not pass, and beyond which lie matters into which they must not penetrate. To do so is generally followed by fatal consequences (cf 306 ff.). Similarly the stranger must not, without due preparation, pass the family door, nor may the profane cross the temple threshold.

1. Ritual acts at doors.—The sacredness of the door as a means of passage from one state to another appears in numerous rites connected with the threshold.

(a) *The bride must step across the threshold of the husband's house with the right foot foremost*, the bridegroom in the ancient Vedic ceremonial instructing her to do so (SBE xxx. 193). This custom is also found in more modern times elsewhere. Or, again, an animal is sacrificed at the threshold, and the bride must step across the outpoured blood—a custom existing among the Somalis, in Syria, Armenia, and with the Copts in Egypt (FLJ vi. [1888] 121; Trumbull, *Threshold Covenant*, 1896, p. 26; Garnett, *Women of Turkey*, 1890, p. 239; Lane, *Modern Egyptians*, 1846, iii.

¹ Cf. BRE II. 356 for instances among the Hereroes.

192). Or an offering is made, the materials being often presented to the bride, while she smears the door-posts with them, before crossing the threshold (see Trumbull, 29 f.). Even more wide-spread is the custom of carrying the bride across the threshold—a rite occurring among the Greeks, Romans, Chinese, Mordvins, Abyssinians, in Syria and Egypt, and found as a survival in parts of England and Scotland (Plut. *Rom. Quest.* 29; FL i. [1890] 459, 487; Bruce, *Travels*, 1804, vii. 67; Burckhardt, *Arab. Proverbs*, 1875, p. 137; NQ, 8th ser., x. [1896] 328; Dalyell, *Darker Sup. of Scotland*, 1835, p. 291; Gregor, *Folk-lore of N.E. of Scotland*, 1881, p. 51; Van Gennep, *Les Rites de passage*, Paris, 1909, p. 186; for other refs., see Trumbull, 38 ff.). The last custom has sometimes been explained as a relic of marriage by capture, but it forms one of a group of rites by which it is sought to safeguard the sanctity of the threshold. Generally, before a stranger can be received, certain rites must be performed to remove the contagion of tabu resting on him *qua* stranger. The bride, belonging primitively to a different kin, was so far a stranger, and therefore dangerous. Hence certain precautions must be taken to render propitious the spirit or divinity of the threshold—an offering is made, or the bride is carried over the sacred spot (carrying or suspending above ground of tabued persons is a common rite), or she steps over, not on, it, but always with the right foot foremost, or she steps over the blood by which the spirit is propitiated, and through which, perhaps, she is brought into a kin or covenant relation with him. This is seen more clearly in a Panjāb rite. The bride holds the door-frame of the bridegroom's house. His mother gives her a cup of water to drink and welcomes her, and presents are given by members of the husband's family. Cotton is laid down, and she is bidden to come in. She steps on it, and is now an integral member of the family (FL ix. [1898] 152 f.). In some cases the bridegroom makes an offering at the threshold of the bride's house—perhaps a relic of those marriages in which the husband went to live in her home. Crooke (FL xiii. [1902] 238, 'The Lifting of the Bride') sees in the lifting a charm to promote fertility in some instances, in others a method of protection against evil influences. It should also be noted that in Lapland and Hungary stepping over the threshold ensures the protection of the family and of the tutelar spirit (Jones and Kropf, *Folk-Tales of the Magyars*, 1889, p. 410 f.).

(b) *Treading on the threshold is frequently forbidden, or is considered unlucky.* It must be stepped over, usually with the right foot first (cf. FL i. 459 [Tatars]; Conder, *Heth and Moab*, 1883, p. 293 [Syrians]; Lane, *Modern Egyptians*, i. 118; Morier, *Second Journ. through Persia*, 1818, p. 254 [Muham. mosques]; Trumbull, 12 [Finns and Teutons]; 1 S 51⁵ [ætiological myth explaining why a temple threshold is not trodden on]). This scrupulous care in stepping over the threshold of a temple, e.g. that of Baal and of Jahweh, is also referred to and condemned in Zeph 1⁹. It is obvious that the act had the force of a religious rite. Similarly, novices, on initiation into a secret society among the Bella Coolas, had to leap over the threshold of the dancing house (Frazer, *Totemism and Exogamy*, 1910, iii. 512). Hence it is also unlucky to stumble on the threshold, especially when going on a journey or on business, etc. (Highlands, Germany, Transylvania, Malaysia, Syria, etc.; see Grimm, *Teut. Myth.* 1815; FL i. 156, xviii. [1907] 59). Pythagoras refers to this belief, and says that 'he who strikes his foot against the threshold should turn back' (*Frag. Phil. Græc.*, ed. Mullach, 1868, i. 510). It is also dangerous to sneeze at the threshold, to sit, or to linger at it; or

for women to suckle their children there (Hindus, Slavs, Syrians, etc. [Crooke, *PE* i. 241; Trumbull, 11-12; *FL* xv. [1904] 208—negroes of Jamaica believe that 'duppies' will take those who sit at thresholds; *FL* xviii. 59]).

(c) The sacredness of the door, and especially of the threshold, demands also that *acts of reverence be paid there*. The threshold is to be crossed with the right foot first. Or a charm or prayer or sacred formula should be said ('Bismillah' [Arabs], Palgrave, *Arabia*, 1865, i. 51; a formula of blessing when the door is first opened in the morning [Hebrides], *FL* x. [1899] 261). Or prostration and touching the threshold with the forehead, kissing it or the door, taking off the shoes, crossing oneself on entering, are practised ([Muhammadans] Trumbull, 11, 123; Morier, 254; *Frag. Phil. Græc.* i. 510; Ralston, *Songs of the Russian People*, 1872, p. 137; Layard, *Nineveh*, 1849, i. 69).

(d) The sacredness of the door¹ makes it a place to deposit objects which are to be preserved in safety. In Iceland the caul, in which the child's guardian spirit or a part of its soul resides, was buried under the threshold, possibly with a view to re-birth in the event of the child dying. The spirit would pass into the mother as she crossed the threshold (Grimm, *Teut. Myth.* 874). Among the Baganda, at the monthly ceremony connected with the king's placenta, to ensure his life and health, it is deposited in the doorway for a night and a day (Roscoe, *JAI* xxxii. [1902] 63, 76).

(e) The door is a usual place at which to offer sacrifices, either to propitiate the household spirit or god, and so to unite the 'house' with him, or to repel evil influences, or to remove the contagion of uncleanness from all in the house.

In Zindero two human victims were sacrificed, one at the threshold, which was smeared with the blood, before a new king entered the royal hut (Bruce, *Travels*, ii. 514). In W. Africa, in time of smallpox or expected trouble, gateways are sprinkled with sacrificial blood (Kingsley, *Travels in W. Afr.*, 1897, p. 451; Nassau, *Fetichism in W. Afr.*, 1904, p. 93). The Dayaks sprinkle the doorway with the blood of a pig sacrificed as an expiation for unchastity, and also with sacrificial blood at seed-time (St. John, *Life in the Forests of the Far East*, 1862, i. 64, 157). Among the Aztecs it was also usual to smear the temple doors with the blood, the sacrifice being offered on an altar near the door (Réville, *Native Rel. of Mexico*, 1884, pp. 179, 183). A similar custom may be seen in Herodotus' account (ii. 48) of the sacrifice of a swine to Osiris, at the door of each house. The carcass was given to the swineherd, so that the main part of the rite was the blood-shedding. In Bab. rituals a lamb was sacrificed at the gate of a house, and its blood smeared on lintel and doorposts, and on the huge images guarding the entrance (Zimmern, *Beiträge z. Kenntnis der bab. Rel.*, Leipzig, 1901, p. 127; cf. Layard, ii. 202). In Muslim houses it is usual to dip the hand in the blood of sacrifices offered on special occasions, and to mark the surface near the door in order to repel the *jinn* (*FL* xviii. [1907] 66). For other examples, Abyssinian, Hindu, see *ERE* i. 56b, iii. 445^a. The same rite of smearing the doorway with blood occurs as a survival in European folk-custom, e.g. in Greece at Easter, and in Ireland on St. Martin's eve, to keep out evil spirits during the year (*FL* i. 275; Mason, *Stat. Account*, 1814-9, iii. 76). It can hardly be doubted that the Hebrew Passover rite goes back to a sacrifice by which the household divinity dwelling at the doorway was propitiated and his protective power secured against the evil powers (the 'destroyer'). The blood was smeared on doorposts and lintel, and was perhaps first poured on the threshold (Ex 12²⁸ 'bason' ['threshold']).

The custom of slaying a sacrificial victim at the door to welcome a guest, or before the entrance of a stranger, or even on the return of the master of a house from a journey, which is so wide-spread, especially in Africa, Syria, and the East (see *FL* xviii. 66; Trumbull, i ff.), had probably the primitive intention of neutralizing the contagion of evil which a new-comer brings with him, and also of making the household gods propitious to him. From this it may have passed into a species of covenant rite—by the blood shed the new-comer or guest was made one with the household or its god. In other cases salt is sprinkled on the threshold, or bread and salt are offered to the

guest (cf. Trumbull, 3 ff., where the importance of the covenant aspect is perhaps over-emphasized).

Other offerings occur at the door. In ancient Vedic law the householder had to place an offering on the threshold, at the same time reciting a *mantra* (*SBE* ii. 107, 203). At seed-time in N.W. India a cup-shaped cake of cow-dung filled with corn, and water poured over it, is placed on the threshold (*FLR* v. [1882] 34). The first bundle of corn is placed near the threshold, and between it and the threshold a libation is poured forth, forming an offering of first-fruits to the household god (*ib.*; Trumbull, 16). In the north of Scotland, part of the first load of sea-*'waar'* used for manure was placed on New Year's day at each door of the farm to bring good fortune (Gregor, in *FLJ* ii. [1884] 331). In Babylonia, libations of oil, honey, and wine were poured over the thresholds of temples, and honey and wine over bolts (Jastrow, *Rel. Bab.*, 1898, p. 664 f.).

(f) The frequent use of sacrifices at or near doors of temples is seen from the fact that in many temples an altar stands beside the door or entrance. Among the Hebrews the altar of burnt-offering stood at the entrance of the tabernacle of the tent of meeting (Ex 40⁶). Offerings were brought to the door of the tent of meeting and slain, and the blood sprinkled on the altar (Lv 1⁵-5 3⁴ 4⁴, etc., cf. 17³⁴). Similarly, in the temple the altar of burnt-offering stood before the entrance to the Holy Place, like the large altar of the outer court of Bab. temples. The greater Greek and Roman altars frequently stood before the entrance to the *vab*s or *cella*. Trumbull notes other instances from Assyria and Asia Minor, Mexico, Polynesia, etc. (115, 121, 144, 150; cf. Ellis, *Pol. Researches*, 1832-6, iv. 89). In Dahomey little moulds of earth are often found at doorways, and on them offerings are laid (Schneider, *Rel. der afrik. Naturvölker*, Münster, 1891, p. 115); and in Greece altars were often placed at gateways or doors. The sanctity of the door or threshold is also emphasized in the OT. At the door of the tent of meeting took place the consecration of Aaron and his sons (Ex 29⁴⁴). In Ezekiel's ideal temple the 'Prince' is to worship at the threshold of the gate of the inner court (46⁹). When Moses spoke to Jahweh, the pillar of cloud descended and stood over the door of entrance to the tent of meeting; and in Ezekiel's temple the glory of Jahweh mounts up from the cherub and stands over the threshold of the house (Ex 33⁸, Dt 31¹⁵, Ezk 9¹⁰). The thresholds of the tent of meeting had their guardians (1 Ch 9²²), and later those of the temple (2 K 22⁴ 23⁴, 2 Ch 23⁴, Jer 35⁴; cf. Ps 84¹⁰). The office of doorkeeper (*θυρωπολ*, *πυλωπολ*) soon came into existence in the Christian Church (Cornelius, *ap. Euse. HE* vi. 43; Bingham, *Antiq.*, 1829, i. 293, cf. 257).

The ancient custom of baptism and font being outside the church (Euse. *HE* x. 4; Cyril, *Catech. Myst.* l. 2), preceded by the custom of baptizing in any place where there was water (*Gen. de Bapt.* 4; Justin, *Apol.* i. 61), is connected with the general idea that none but the initiated can enter the sanctuary, and also with the ritual of purification before sacrificing, entering a temple, etc., for which special vessels stood near the entrance—the *νεπιπαραρτια*, or fonts, at the entrance of the Greek *vab*s, the jars for ablutions which stood beside the altars of Bab. temples, the Bab. *apen*, and the lavers and brazen sea of Solomon's temple (Jastrow, 652-3; Sayce, *Rel. of Anc. Egypt and Bab.*, 1902, p. 468; 2 Ch 4²⁻⁷).

2. Guardian spirits and divinities of doors.—The sacredness of the door was connected with its spirit² or Divine guardianship. In many cases we find deliberate methods resorted to in order to secure a spirit guardian, in the first instance, of the door of a house, and later, of the gate of a city. One of these is *burial*. House burial is of very wide occurrence, and is probably primitive. It usually takes place under the floor, but there are occasional instances of its occurrence under the threshold

¹ The Celto-Iberian custom of dancing at the doors at the time of full moon may be noted (Strabo, iii. 4. 16).

(Ralston, 326 [Slavs]; Jastrow, 599 [Bab.]; *ERE* iii. 34* [Burma]). Burial at gates is also found in Greece—Ætolus was buried in a tomb in the gate leading to Olympia, and, from his grave over the Sæan gate at Troy, Laomedon was believed to guard the city. Neoptolemus was also buried under the threshold of the temple at Delphi (Pausanias, ed. Frazer, v. 4. 4 and notes). The ashes of Belinus, a British god, were said to have been preserved at the gate on the Thames (= Billingsgate [Geoff. Mon. iii. 1])—a myth founded on gate-burial and Divine guardianship of the gate. In other cases, sacrifice was resorted to. At the building of a hut or house a human victim is often placed under the roof-post, the four corners, the threshold, or the foundation, whatever that may be, or the walls; and the same is true of the building of a gate. There is no proof, however, that (as Trumbull supposes [*op. cit.* 21]) the threshold stone was originally the foundation stone. The victims may be intended to propitiate the earth-spirits whose domain is disturbed by the digging, but they are also expected to act as guardians of the house, door, or gate. In old Canaanite houses new-born children were sacrificed and buried under floor, corners, or threshold—a custom later commuted to burial of a lamp or bowls in these places (*PEFS*, 1903, pp. 10 f., 36 ff.). The passages in Jos 6²⁶, 1 K 16³⁴ have an undoubted reference to this custom. In Phœnicia, men were buried beneath gates to make the town secure (Movers, *Die Phönizier*, Berlin, 1840, ii. 46). Instances of sacrifices at the building of a city gate are cited from the farther East (Alabaster, *The Wheel of the Law*, 1871, p. 212 [Siam]; Tylor, *Prim. Cult.*, 1903, i. 106; *ERE* iii. 27* [Tenasserim, Mandalay]), and in Senegambia it was formerly the custom to bury alive a boy and girl before the chief door of the town, in order to make it impregnable (Waitz, *Anthrop.*, Leipzig, 1860, ii. 197). The coins placed under the door in China and Syria at the building of a house are probably surrogates for such sacrifices, like the Canaanite lamps. In Syria a cock is sacrificed, and its blood poured over the lintel and steps of a new house (Doolittle, *Social Life of the Chinese*, 1866, ii. 75; *FL* xviii. [1907] 59).

On foundation-sacrifices in general, see Sartori, *ZE* xxx. [1898] 1 f.; Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 284 f.; Gomme, *Folk-Lore Relics*, 1883, p. 24).

In all such cases it is evident that the spirit of the door is connected with the household spirit, and that both are ultimately ghosts of the dead, though the sacrifice or burial took place there because the door or threshold was already considered an important part of the house. Souls were supposed to dwell under the threshold in ancient India (Oldenberg, *Rel. des Veda*, Berlin, 1894, p. 553). Among the Slavs the *domovoj*, or house-spirit, associated with the hearth, is propitiated at certain times by offerings buried beneath the threshold (Trumbull, 19). Similarly the household *penates* of the Mordvins receive offerings at the door, which is their seat (*FL* i. 422 ff.). In Germany a spirit sits between door and doorpost; hence the door must not be banged, and other precautions must be taken lest he leave and take the luck with him (Grimm, 1820; *FL* xiii. [1902] 238 ff.). In Irish and Scots belief the household fairies reside at the threshold (Crooke, *PR* i. 241). In Samoa the tutelary spirit is also associated with the doorway, and is angry when water is spilt on the threshold (Turner, *Samoa*, 1884, p. 37).

In many regions the door or gate is put under the protection of special divinities, or is called by the name of a god. The Ainu have a god of door-posts, and to him, as to the gods of other parts of the hut, worship is paid at its construction, and offerings of *inao* are made at other times (*FLJ* vi.

[1888] 40; Batchelor, *Ainu and their Folk-lore*, 1901, p. 129). The Japanese have gods of doors and gates who guard against 'unfriendly things from below and above,' and are in some cases personifications of the gates, since these were conceived as living things exercising protective powers. Small prints of the *Ni-ō*, guardians of holy places, are set on the doors for protection (Reyon, *RHR* li. [1905] 389 f.; Aston, *Shinto*, 1905, pp. 168, 283). In China the usual gods of the doors are Shen-Shu and Ju-Lu, though other divinities or guardians occur. They guard the house and other buildings; and images of them, larger or smaller, or pictures of them, or simply their names, are found at the door, with a shrine on the left hand (de Groot, *Les Fêtes annuellement célébrées à Emou*, tr. Chavannes, Paris, 1886, p. 597 ff.; Williams, *The Middle Kingdom*, New York, 1848, i. 731). In India, Vātuma is the threshold god, dwelling there, to whom offerings are made when the doorway is set up. Or, as among the Muls of Chotā Nāgpur, Dvāra Gusāin is lord of the house door, and is propitiated with rites and offerings, in time of calamity, at the doorway. Images and pictures of gods are also placed round doors (Trumbull, 95; Crooke, *PR* i. 104). In Egypt each building had its protecting deity, as doorway inscriptions prove, while sphinxes guarded the entrances of tombs and protected them from the attacks of the spirits of the desert. An inscription runs: 'I protect thy sepulchral chamber, I keep away the stranger, I overthrow the foes with their weapons.' In other cases a royal statue, wearing the magic *uraeus* diadem, guards the tomb (*ZA*, 1880, p. 50; Wilkinson, i. 362 f.; Maspero, *Études de myth.*, Paris, 1893, i. 79). The gates of Thebes were each dedicated to a planet, and connected with planetary worship (Nonnus, *Dionys.* v. 64). In Babylonia and Assyria gates of cities, palaces, etc., were often dedicated to gods or named after them, and each part of a house doorway was associated with the great divinities to whom appeal was made (Maspero, *Life in Anc. Eg. and Assy.* 1891, p. 220; Jastrow, 237). But, besides this, human-headed winged bulls, lions, and other monstrous forms stood at the entrances of temples and palaces to guard them against the approach of the demons, the brood of Tiamāt, with their composite forms (Maspero, 198 f.; Jastrow, 263; Sayce, 119). In Guatemala, Chahalka was the god of houses, and his protection was assured by sprinkling the doors with sacrificial blood. The great doorways of Central American temples were also guarded by human male and female or animal figures (Trumbull, 98, 146). In Rome, Janus was the primitive *numen* of the doorway of the house and the city-gate, preventing the passage of all evil things into the house, and so one of the Penates. He was god of the *jani*, gates in the form of arches on the roads, etc., the most ancient of which was that of the Forum, originally a temple in the form of a gateway. But Janus, as god of doors and gates, was rather god of the entry and departure through the gate or door. This is seen by the fact that each part of the door had its *numen*—Limentinus, of the threshold; Forculus, of the leaves of the door; Cardea, of the hinges (Wissowa, *Rel. u. Kult. der Römer*, Munich, 1902, p. 91 ff.; Toutain, *Études de myth.*, Paris, 1909, p. 197 ff.; Tert. de *Corona*, 13). In Greece, Apollo Agæus or Thyreus and the Antelii were concerned with entrances and doors. Images of Hecate stood at doors, to prevent the entrance of evil spirits and ghosts, and she was also invoked before the threshold for protection against them. At doors and gates stood also the *æqual*, protective images or symbols of Hermes (*CGS* ii. 509, 516; Brunck, *Analecta*, 1772-78, iii. 197; Tert. de *Cor.* 13). See *ERE* iii.

155, for Cambodian spirit-guardians of the door. The belief in Divine guardians of the doorway among the Hebrews is suggested by Ex 21⁹, where the bondman who does not wish to go free is brought to the *Elohim*, to the door or doorpост, where his ear is pierced with an awl (cf. *ERE* i. 445^b).

The presence of the household spirit or god makes the doorway sacred. This receives illustration in other directions in which sacred persons confer sacredness on the door. In Polynesia, when the king or queen entered a temple, the door was shut up as being sacred (Turner, *Polynesia*, 1861, p. 328). In India, any one ill of smallpox, being possessed by the smallpox deity, makes the house sacred, and the door is tabu to certain persons, or must only be crossed with a due ritual (Crooke, *PR* i. 125; cf. *ERE* iii. 312^b). In the South Sea Islands, the first-born being sacred, no one can pass through the door by which he enters his father's house (Gill, *Life in S. Isles*, 1876, p. 46). Cf. also Ezk 44² (the door by which Jahweh enters the temple is to be shut, and none but the 'Prince' can enter it).

The gates and doors of temples are always peculiarly sacred, since the temple is the abode of a god. The outer courts of Buddhist temples in China and Japan have single or double roofed gateways, *mon*, coloured a dull red, with figures on either side. In front are the 'heavenly dogs,' and under the gateway in some instances is the figure of Buddha, and the *Ni-ô*, or two kings, hideous and gigantic figures guarding the gate. Other hideous forms of the thunder and wind gods are set on niches in the gates. Petitions are made to the *Ni-ô*, written on paper pellets, which are chewed and flung against them. Before the inner sanctuary is reached many other gates must first be passed (Curzon, *Problems of the Far East*, 1894, p. 109; Bird, *Unbeaten Tracks in Japan*, 1893, pp. 21 f., 59).

Not only is the temple door sacred, and therefore highly decorated with carving or precious metals, but an isolated gateway or entrance arch is often found in front of it. This is a duplicate of the door, serving the same purpose, but acting as a preliminary entrance to the sacred precincts and a barrier against evil influences. It may be derived originally from the barriers or porticoes hung with charms which are often stretched across roads and entrances to villages to prevent the intrusion of all malicious things, e.g. in Africa (Kingsley, 450-1; van Gennep, 22). Such isolated doorways are placed in front of other buildings than temples, or they occur in other isolated situations, for particular purposes, e.g. monumental memorials. The *torii* of Japan is found in front of all Shinto and many Buddhist temples and shrines. It consists of two uprights and two or more cross-beams painted red, the upper projecting and curving upwards at both ends. Though now regarded as a bird perch, i.e. for the birds sacred to the gods, its original purpose is unmistakable (Aston, 231-2; Chamberlain, *Things Japanese*, 1890, p. 356; Bird, 148). In Korea the isolated gateway, *hong-sal-mun*, is a symbol of majesty and government, and is erected in front of palaces, government buildings, temples, and monasteries under royal patronage. The primitive purpose of the *hong-sal-mun* as a doorway is seen in the *geo-man*, an archway outside the western gate of the capital on the road to Peking, where the king goes to meet the Imperial envoys (Curzon, 142). In China these arches, *pailoo*, are of a commemorative nature. Similarly, the triumphal arch of the Romans suggests its primitive purpose as the gate through which the triumphant soldier returned from a hostile country into his own district. The *propylon*, or towered gateway, of Egyptian temples, with its flanking towers, obelisks, or statues, and tall masts, all led up to by an avenue of sphinxes, forms another example of such gateways. In Babylonia, before the gateway of the great court of the temple, stood two detached pillars, like the Egyptian gate obelisks. They correspond to the pillars Jachin and Boaz in front of Solomon's

temple (1 K 7²¹), and were doubtless the originals of these. Such pillars were commonly placed before Semitic temples, e.g. at Paphos and Hierapolis (Lucian, *de Dea Syria*, 16; W. R. Smith², 457, 483).

Sayce regards the Bab. pillars as representing *Nin-gis-zida* ('Lord of the upright post') and Tammuz, wardens of the gate of heaven, just as the flanking towers of the Egyptian gate were said to represent Isis and Nephthys. In his opinion, Jachin is a translation of *Nin-gis-zida*, and Boaz perhaps a corrupt reminiscence of Tammuz (Sayce, *op. cit.* 350, 459-60; Jastrow, 624 f.).

3. Amulets at doorways.—Images of divinities and monstrous figures at doors and gates are intended to repel evil influences and powers, and to guarantee the protection of the doorway gods. The process is largely a magical one. As the demoniac figures keep off demons, so also the Medusa head, represented on door-knockers, has the same effect, or repels the evil eye. Such door-knockers or handles were used in ancient Italy, and are still common in modern Italy for the same purpose, while the female face on English door-knockers is derivative from these (*FL* xiv. [1903] 217). The same purpose was served by the small images of protective divinities, often with invocations printed on them, buried under the threshold of Assyrian houses, palaces, or temples, or placed at the doors to keep the house from the entrance and malice of fiends or enemies (Jastrow, 289). But, since amulets of all kinds are placed on the roofs, gables, windows, and walls of houses to ward off evil influences, they are naturally also fixed on doorways through which their entrance might so easily be effected. The custom is found from the lowest up to the highest levels of civilization. It is also very ancient. This is proved by the fact that, on the entrances of Neolithic cave-dwellings in Palestine, cup-markings which undoubtedly were religious symbols or served a magical purpose are found (see *ERE* iii. 178^a). In various parts of Africa, charms are hung on the doors to prevent evil spirits from entering; and in civilized Greece, doors and gates of all kinds were similarly protected (Kingsley, 450; Mackay, *Mackay of Uganda*, 1890, p. 112; *ERE* iii. 438^b). The door amulets used among all peoples are of various kinds, and only the principal varieties need be alluded to here.

(a) *Sacred plants, flowers, or branches* are commonly used, especially on particular occasions when evil forces are most to be dreaded, e.g. at a birth.

In Bab. incantations against demons, various plants are mentioned as having been hung on the lintel (Thompson, *Devils and Evil Spirits of Bab.*, 1903-4, i. 137). In India, at a birth, leaves and flowers along with a sickle, edge outwards, are placed outside the door to bar the demons (Billington, *Woman in India*, 1895, p. 2). The Greek and Roman practice of crowning the door with sacred garlands on various occasions (*Part. de Covona*, 10) had more than a festal purpose. In Attica, at the birth of a boy, an olive-wreath was hung on the door (Hesychius, s.v. *στέφανον ἐκέλευε*). In Rome, doorpост and threshold were touched thrice with an arbutus branch, and water was sprinkled at the entrance, at a birth, to keep off witches. Branches and wreaths were also hung up at the Pallida (Ovid, *Fasti*, iv. 721 ff., vi. 156). In modern Greece, a piece of wild onion is placed over the lintel to keep off the evil eye, or garlands of flowers and garlic are hung up on May-day for the same purpose (*FL* x. [1899] 181, 200). In China, at a birth, pumello-leaves and slips of a fragrant thorn are suspended over the door to keep off evil spirits (*FL* v. [1887] 222). In Japan, on New Year's day and on other occasions, branches, etc., are fixed up as averters, or a rope of rice straw with fern and holy leaves is hung up (Aston, 191, 312 f.). The Ainus place *ino* in doorways as charms against evil (Batchelor, 91). In Ireland, on May-eve, the threshold is strewn with marsh marigolds to keep out fairies and to bring luck (*FL* xv. [1904] 467). For similar practices in European folk-custom, see Frazer, *GB* 2 iii. 334; Grimm, *Teut. Myth.* iii. 1200, 1209, 1211; and for additional instances, see *ERE* iii. 354^a, 394^b; Lane, *Mod. Egyptians*, 1846, ii. 77. In the W. Highlands, pearl-water placed on the lintel keeps out ghosts (Campbell, *Witchcraft and Second Sight*, 1902, pp. 108, 172).

(b) *Salt* is sometimes strewn on the threshold, on account of its apotropaic properties, as in Syria (*FL* xviii. [1907] 70). In Aberdeenshire it was placed

with fire on the threshold of a byre, before a cow after calving left the byre (*FLJ* ii. [1884] 330). *Pebbles and grains* are sprinkled on the doorstep to keep out ghosts, who must count them and cannot get beyond three (*FL* xv. 214). *Iron* is also a powerful charm at doors as in other places, especially at birth, when an iron weapon or utensil is placed at the door (India [Campbell, *Spirit Basis of Belief and Custom*, Bombay, 1885, p. 387], and very commonly in European folk-custom at birth, after a funeral to keep the ghost out [*JAL* xv. 69], and on other occasions). Both because it is made of iron and also because of other reasons connected either with the former sacred nature of the horse or with its supposed resemblance to the form of the female sex organs, the *horse-shoe* is a very common door charm in most countries. Usually the charm is effective only when the ends are placed upwards. It keeps out fairies, witches, ghosts, and other evil powers, and keeps in or brings luck; and for this purpose it is found on house-, byre-, or stable-doors, doors of mosques, temples, or even Christian churches (see R. M. Lawrence, *Magic of the Horse-shoe*, Boston, 1899; Farrer, *Primitive Manners and Customs*, 1879, p. 293; Crooke, *PR* ii. 15 [India]; *ERE* iii. 451^b [Japan]; *FL* xi. [1900] 108, *FLR* iv. [1881] 189 [England]; *FLR* iv. 102, *FL* xvi. [1905] 70 [Jamaica]; Campbell, 12, 13, 15 [Hebrides]; *FLJ* ii. 43 [Turcomans]; *Gentleman's Magazine*, 1867, p. 307 ff.). This charm is also very common on houses in the West Highlands.

(c) *A hand with the fingers extended* is represented on or above doors. Sometimes it is formed by dipping the hand in the blood of an animal slain at the door, and then making an impression of it on the door. Or the hand is painted—usually in vermilion—or carved. The custom is very common in the East among both Jews and Muhammadans (*FL* vi. 174, xv. 189, xviii. 66; Luncez, *Jerushalayim*, Vienna, 1892, i. 19; Conder, *Heth and Moab*, 1883, p. 275 f.). It is found in India, Japan, ancient Assyria, in Babylon and in Carthage (see *ERE* iii. 411^a, 446^a; Trumbull, 75, 78, 323). The hand thus serves the purpose of the open hand in folk-belief, as a powerful charm against the evil eye, and it also distracts and repels evil spirits (see Elworthy, *Evil Eye*, 1895, p. 233 ff.). Used to make an impression of blood, its purpose as the sign of a covenant between the contracting parties, human and Divine (so Trumbull, 66 ff.), if it exists at all, is secondary, as, wherever the hand is used, it is believed to be apotropaic, like the blood sprinkled on the doorposts. It is then, in fact, a double charm, both hand and blood having repellent powers. Analogous to the use of blood in this way is the touching of the doorposts with menstrual blood or urine, to dissolve spells of witchcraft or to keep off fairies, ghosts, or the evil eye (Pliny, *HN* xxviii. 24; Campbell, *Superstitions of the Highlands and Islands of Scotland*, Glasgow, 1900, p. 36, *Witchcraft*, 11, 137).

(d) *Sacred symbols* are affixed to doors as a powerful means of protection, like the Divine images at doors and gates. In Christian lands no symbol is more effective than the cross marked on the door or simply signed upon it or some particular part of it, or signed on oneself when entering or going out. It keeps off ghosts, witches, and all powers of evil (*FL* x. [1899] 178, 260, xvi. [1905] 50, 70; Grimm, iv. 1781; Trumbull, 18; cf. Tert. *de Cor.* 3). The *svastika* symbol is commonly marked on doors in the East for the same purpose (Hindus, Buddhists, etc. [Crooke, *PR* i. 12, 160; *ERE* iii. 412]). Perhaps the figures of cherubim carved on the doors of Solomon's temple served the same end (1 K 6²²⁻²⁵), as well as figures of the Paschal lamb, and other symbols on ancient synagogue lintels in

Palestine (Trumbull, 70). For a door charm composed of dust from Muhammad's tomb, see Lane, ii. 76. Over the doors of Egyptian temples was placed the winged disk of the sun, to drive off demons from the building (Erman, *Life in Ancient Egypt*, 1894, p. 272).

(e) *Sacred formulae* written on doors have also a powerful apotropaic virtue, and are of very wide occurrence.

In Babylonia, tablets with sentences from the sacred texts were hung up to protect against demons (Jastrow, 269). In ancient Egypt, names and sentences of a lucky or favourable import were written over the doors or on the doorposts to secure a good dwelling (Wilkinson, i. 346, 361). In modern Egypt, and among all Muhammadans elsewhere, invocations to God, descriptions of His might, or passages from the Qur'an, are inscribed on doors (Lane, i. 26, ii. 74; Porter, *Travels*, 1821-2, i. 440). The Greeks placed inscriptions and wishes for 'good luck' over their doorways. Similar usages are found in India and China (Crooke, *PR* i. 160; Williams, *Middle Kingdom*, i. 731), while the Buddhist prayer poles and flags outside doors are analogous to door inscriptions. These usages show that the command to write the words of laws on 'the door posts of thy house, and upon thy gates' (Dt 6⁹ 11²⁰) was intended to take the place of some analogous heathen custom, though by the Hebrew words must have been regarded as efficacious against evil powers. If the household gods had been associated with doors, this dedication of the door to Jahweh showed that He was intended to take their place. Later Jews still fix the *mezuzah* to doorposts in the form of an amulet with sacred words and Name. This is touched with a finger of the right hand and kissed on going out, while a sacred formula is repeated. For the use of sacred writings or pictures affixed to doors among Christians see *ERE* iii. 425^b, 428^a. Texts carved on the lintel are commonly found on old houses, and this custom is undoubtedly derived from the older practice.

The wide-spread use of these door charms shows that the attack of ghosts, evil spirits, witches, or fairies was chiefly dreaded at the door, through which they sought to enter and do harm to those in the house. Hence at the Compitalia the Romans hung up effigies of all in the household, hoping that the ghosts coming to the door would be satisfied with these and not enter to take the living. But a closed door is not sufficient to keep out ghosts and demons, as in Babylonia they slip through bolts, doorposts, and sockets (Jastrow, 265); hence the value of charms to prevent this. But in some cases the evil powers actually dwell at the door or in its vicinity.

In Germany they are banished to between the door and doorpost (Grimm, iv. 1515). In Jerusalem the powers of evil are supposed to infest the threshold, doors, and entrances (*FL* xvii. [1907] 58). Among the Birhors of Bengal the spirits lurk at the door (Crooke, *PR* ii. 56), and in Burma different evil spirits reside at doors and gates (*ERE* iii. 254). These beliefs perhaps explain the curse of Allatu to Uddishu-namir, 'the threshold be thy dwelling', suggesting that in Babylonia it was the abode of dangerous spirits who would torment him.

But even against such door-dwelling spirits charms were efficacious, since they could keep them in check.

4. *Magic rites at doors.*—Many magical rites are performed at the door, either (1) to transfer evil to those who enter or pass out; or (2) to secure the assistance of the spirits, good or bad, dwelling or lurking there; or (3) simply because the doorway is a sacred place.

For examples of (1), see *FL* xv. [1904] 60; Crooke, *PR* i. 164; Lane, ii. 46; Grimm, 1095^t; of (2), Jastrow, 268; of (3), Trumbull, 18, 20; Theocritus, *Idyl.* ii. 63; *FL* xii. [1901] 299; Campbell, *Witchcraft*, 287.

Other magical rites take place there, to keep off and get rid of ghosts and evil spirits. Of this class was the Roman birth-rite, in which three men struck the thresholds with an axe and a pestle, and swept them with a broom. The iron axe and the pestle tipped with iron had apotropaic virtues; the action of the broom was perhaps symbolic, though all three, being connected with vegetation and agricultural usages, may have had magical virtues, and are charms against spirits and witches. In this case they were supposed to keep out the god Silvanus, and they later supplied names to the three protecting spirits—Intercidona, Pilemnus, and Deverra (Aug. *de Civ. Dei*, vi. 9). Among the Letts, at the feast of souls, the ghosts were got

rid of by taking the staff which served as a poker, cutting it in two with an axe on the threshold, and bidding them go (Frazer, *Adonis*², 1907, p. 312). See also § 1.

5. Gate as seat of judgment.—On account of the sacred nature of the gate, the seat of a spirit or god, it is often a place of judgment, especially in the East. Kings, chiefs, and judges hear complaints, try causes, and decree judgments at the gates of the palace, house, or city. Examples of this are found in ancient Babylonia, Persepolis, Egypt, and among the Hebrews (Trumbull, 60 f.; Dn 2⁴⁹, Ex 32²⁸, Dt 16¹⁸ 21¹⁹, Ru 4⁴, 2 S 15² 19⁸, Pr 24⁷; cf. Am 5¹⁸, Zec 8¹⁶). Probably connected with this custom of administering justice at the gate is that of a person fasting at the door of another against whom he has a claim or proffers a request. In cases where this is refused the claimant starves to death at the door [cf. Celts] *Anc. Laws of Ireland*, Dublin, 1869-70; Joyce, *Soc. Hist. of Anc. Ireland*, 1903, i. 204 f.; [India] Crooke, *PR* i. 191-2).

6. The door and death-rites.—In many regions it is not customary to carry a dead body, especially that of a suicide or criminal, through the door of a house, and various expedients are resorted to in order to avoid this.

Thus the body is taken through the window of the house, or through a special opening made in roof or wall. This is a widespread custom, found, e.g., in W. and S. Africa, Siam, Indonesia, India, China, Tibet, among the Ostiaks and Eskimo, in Fiji, with the ancient Norse, and as a folk survival in Europe (Scotland, Germany). See Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 373; Frazer, *JAI* xv. 70; Tylor, i. 261; Westernmark, *MI* ii. 587; Rameyer and Kuhne, *Four Years in Ashantee*, 1876, p. 60; Dubois, *Hindu Manners*, Oxford, 1897, ii. 27; Williams, *Fiji*, 1890, i. 197; Gregor, *Folklore of the N.E. of Scotland*, 1881, p. 206; Wuttke, *Der deut. Volksaberglaube*, Berlin, 1900, § 756; Lippert, *Die Seelenkult.*, Berlin, 1881, p. 11). Or the body is passed through an opening made under the threshold (Hyllen-Cavallius, *Värend och Wird.*, Stockholm, 1869-8, i. 473 [Sweden]; Birlinger, *Volkskultisches aus Schwaben*, i. [1861-62] 321 [Swabia]; Grimm, *Deutsche Rechtsalt.*, Leipzig, 1899, p. 726 [Germany]; Ralston, *Russ. Folk-tales*, 1873, p. 318 [Slavs]).

The usual reason assigned for these practices is that they are used to confuse the ghost, and prevent its finding its way back into the house (Liebrecht, 414; Frazer, *JAI* xv. [1886] 69 f.). The special aperture is afterwards closed up, or the window is kept shut after the burial (it is often opened to allow egress to the soul when a person is dying, and again closed to prevent the soul's return); or often both windows and doors are closed when a funeral is passing, lest the soul should enter the house (Liebrecht, 372 f.; *FLJ* i. 218, vi. 243; Wuttke, § 250). Or, again, when the body is taken through a hole in the roof, this may be an archaic survival of a time when entrance and egress were obtained through the roof of the hut, as among the Eskimo and Aleuts (Liebrecht, 372, 426). Hence, in some cases, one supposed dead must not, when he returns, enter by the door, but by the roof (Plut. *Quest. Rom.*, no. 5; Brugsch, *Aus dem Orient*, Berlin, 1864, ii. 110 [Persians]). Here the thought of death is enough to suggest its contagion, and entrance must not be first made by the sacred door. But, whatever be the origin of the customs referred to, they are certainly connected with the sacredness of the door, which must not be polluted by the passage of the dead body. If it were merely the return of the ghost which was feared, that could be prevented by door charms (§ 3), and it should be remembered that ghosts at the yearly festivals of the dead are invited to enter by the door and then pass out by it. That it is the pollution of death which is feared for the sacred doorway may be established by other rites of mourning and by analogous tabus.

Thus the Banjara of Khandesh move the hut, and make a new entrance after a funeral, as the door has been polluted by the passage of the corpse (Crooke, *PR* ii. 56). Propitiatory rites are in some cases performed at the door when a corpse has been carried out by it (the threshold is sprinkled with salt

[Japan: Griffls, *Mikado's Empire*, New York, 1876, pp. 467, 470], or with wine [Greece: *FLJ* i. 218]). Among the Kwakiutl Indians, mourners must not use the house door, as they are unclean; a separate door is cut for them (Westernmark, *MI* ii. 537); and in China a messenger who brings news of a death should not pass the threshold (de Groot, *Rel. System of China*, 1894, ii. 1. 644). In various regions a special door or gate in house or city wall is used for the passage of a corpse and for no other purpose (Burma [Sangermano, *Burm. Empire*, 1833, p. 143], Korea [Lander, *Korea*, 1896, p. 118], Italy, Holland [Trumbull, 24, 325]; cf. the 'sacred gate' at Athens, used for funerals [Theophr. *Char.* 14]).

Analogous cases are those in which women at puberty, or during menstruation and pregnancy (tabu states), must not leave the hut by the usual door without special rites; or, again, the flesh of animals slain in hunting is carried in by a special opening (*ERE* ii. 643²; Westernmark, ii. 587; Frazer, ii. 416). Perhaps connected with the danger of female pollution is the superstition that a male, not a female, should be the 'first-foot' i.e. the first person to cross the threshold at New Year; but he must not come empty-handed (*FLJ* iii. 282, vii. 68; Campbell, *Witchcraft*, 229).

7. Doors and gates of the Other-world.—The eschatological beliefs of many peoples show that they consider heaven and the under world to be regions and abodes with doors or gates, bars and bolts, and guardians. The doors of heaven shut out those who have no right to enter there; the doors of the under world enclose those who would fain leave it.

In Bab. writings, reference is made to gates of heaven, especially that of Anu, guarded by Tammuz and Gish-zida. In the account of creation, the great gates attached to both sides of the heavens by Marduk are mentioned. They are secured by bolts, and guarded by scorpion men. Through them the sun passes at morning and evening. The under world, Arallu, has also gates and bolts, seven, or fourteen in number, and a warder stands at the outer gate. They are graphically described in the Descent of Ishtar (Jastrow, 301, 436, 523, 549, 569; Sayce, 79). The Egyptian Other-world was plentifully supplied with gates. Duat or Hades, through which the boat of Rā travelled by night, had twelve divisions and as many fortified pylons with closed doors and serpent guardians, or gates with other keepers. The gates opened at the repetition of magic formulæ, and thus entry was freely obtained. Each gate had its own name. The heaven of Osiris was also entered by a gate in the mountain of the West, and this domain in the fields of Aalu had numerous gates, with porters, warders, and heralds. But all these opened to those who knew the true formulæ and names of gates and guardians (Maspero, *Études*, Paris, 1893, i. 377, 381, ii. 27 ff., 165 ff.; Budge, *Gods of the Egyptians*, 1903, i. 170; *Book of the Dead*, ch. 147 ff.). The classical Hades and Tartarus had also their gates, those of Tartarus being of iron with a bronze threshold. Cerberus guarded the gate of Hades, a hydra with 50 gaping mouths that of Tartarus (*Il.* viii. 15; Virgil, *Æn.* vi. 576). The Scandinavian Valhalla had 540 gates, and Hel had also its portals (Grimm, *Teut. Myth.* 818). In Mandæan mythology, the seven lower worlds of the dark powers have doors which can be made secure by magic spells and talismans (Brandt, *Mand. Schriften*, Göttingen, 1893, p. 147 ff.). The Hebrew Sheol had gates and bars (Job 17¹⁶ 38¹⁷, Ps 107¹⁸, Is 38¹⁰, cf. Mt 16¹⁸). It had divisions, and in later belief these (of hell) were 7 in number, with as many doors (Pr 7²⁷; Gfrörer, *Das Jahrhundert des Heils*, Stuttgart, 1838, ii. 45-6). The 'gate of heaven' is already spoken of in Gn 28¹⁷ (cf. Ps 78²³), and the seven heavens of later Jewish theology had gates. Serpent-like guardians of the gates of hell are referred to in the *Book of the Secrets of Enoch* 42¹. The entrance to Eden was guarded by cherubim (Gn 3²⁴, cf. *Enoch* 42²), and the two gates of the heavenly paradise were of rubies and guarded by myriad angels (Gfrörer, ii. 44). These ideas are found in early Christian theology. Hades has gates of brass, bars of iron, bolts, keys (Rev 1¹²), and warders; but they are burst open by Christ as He descends there (*Gospel of*

Nicodemus, § 5, and many other writers referring to the descent; cf. Rev 1st). Paradise is often described as a city with walls and gates guarded by angels (e.g. *Passio Perpetuæ*, § 11). The analogy is that of the heavenly Jerusalem with its twelve gates and angel guardians (Rev 21st). In those documents which uphold the old idea of several heavens, each has its gate or door (*Apoc. of Paul*, § 19 ff.; *Test. of Abraham*, § 11), while Ps 24th was frequently applied either to Christ's bursting the gates of Hades or to His ascension through the heavens, e.g. by Hippolytus, who speaks of Christ passing through the heavenly gates (Hippol. in *Theod. Dial. 1*; *Comm. on Prov.* [Mai, *Bibl. nova Patrum*, Rome, 1854, ii. 72]; cf. also Rev 4th 'a door was opened in heaven'). Those Gnostic groups which taught the existence of seven or more heavens ruled by the Demiurge and Archons, assigned to these heavens doors guarded carefully. This is found, e.g., among various Ophite groups and the followers of Bardesanes. The gates were themselves dangerous in some cases—'a fiery gateway'—and the Archons or door-keepers would have kept them closed against souls ascending to the Pleroma. But the Gnosis, initiation into sacraments and mysteries, possession of the names of the Archons and of the true magic formulæ, or of symbols and amulets, caused the doors to be opened (see Hippol. v. 8. 9, 26; Wright, *Apoc. Acts*, 1871, ii. 26; Origen, c. *Cels.* vi. 31; *Pistis Sophia*, bk. i. § 20 f.). These ideas of the magical opening of the gates are derived from Egyptian beliefs, and also, perhaps, from Mithraic teachings of the ascent of the soul through the planetary heavens with their gates (Origen, vi. 22). Mystico-magical cults having affinity to Mithraism knew also of the fiery gates of the upper spheres, which opened at the utterance of the names of the gods (Wessely, 'Griech. Zauberpapyrus,' *Denk. d. Kais. Ak. d. Wiss. zu Wien*, xxxvi. [1888] 56 ff.).

8. The door being regarded as a means of passage from one state to another, it was easy to apply the word in a metaphorical sense. Christ speaks of Himself as the 'door.' 'By me if any man enter in, he shall be saved' (Jn 10th, cf. Eph 2nd). This idea is repeated in Christian theology. Ignatius calls Christ 'the door of the Father by which Abraham, Isaac, and Jacob, and all the prophets enter in, as well as the apostles and the Church' (*ad Philad.* ix.). In *Hermas* the gate of the tower is the Son of God (*Sim.* ix. 12); and in the *Clementine Recognitions* (ii. 22) the gate through which men enter the city, the kingdom of the Father, is 'the true Prophet.' The same ideas were current in Gnosticism. The heavenly Christ is the true gate, through which the Gnostic ascends to the Pleroma (Hippol. v. 8, 9). In the hymn used by the Priscillianists, but which was Gnostic in origin, Christ says: 'Janua sum tibi, quicunque me pulsas' (*Aug. Ep. cccxxxvii.* § 8). Among the Bābis the name *Bāb*, assumed by the first preacher of this new religion in 1844, means 'gate,' and was formerly the title given to those intermediaries through whom, as through a gate, communication was made by the Imām to his followers (see art. BĀB, BĀBĪS).

J. A. MACCULLOCH.

DOSĀDH, DUSĀDH.—A menial tribe in Northern India, of Dravidian origin, which at the Census of 1901 numbered 1,253,125, of whom the vast majority are found in Bengal and the United Provinces.

1. Religion in Bengal.—In Bengal they profess to be orthodox Hindus, and it is true that in some districts they employ in their religious rites Brāh-

mans of a degraded class, while some belong to the Srinārāyaṇī sect, or follow the doctrines (*panth*) of Kabir, Tulsi Dās, Gorakhnāth, or Nānak (for which see BENGAL). These beliefs, however, seem to be of comparatively recent origin, and the basis of their religion is Animism.

(a) *Worship of Rāhu.*—Their tribal deity is Rāhu, 'the seizer,' who seems to have been adopted from the pre-Aryan races, and to have been transformed by the Hindus into a Daitya or Titan, who is supposed to cause eclipses by swallowing the sun and moon. The Dosādhs, in order to avert disease and in fulfilment of vows, offer to him annual sacrifices and the fruits of the earth through a tribesman who is known as Bhakat or Chatiyā.

On special occasions a stranger form of worship is resorted to, parallels to which may be found in the rustic cult of the Roman villagers and the votaries of the Phœnician deities. A ladder, made with sides of green bamboos and rungs of sword-blades, is raised in the midst of a pile of burning mango wood, through which the Bhakat walks barefooted and ascends the ladder without injury. Swine of all ages, a ram, wheat flour, and rice-milk are offered up; after which the worshippers partake of a feast and drink enormous quantities of ardent spirits' (Risley, i. 255).

In another form of this rite, the man who has vowed to offer a fire sacrifice to Rāhu must build within the day a thatched hut, in which the Bhakat or priest, himself a Dosādh, must spend the night, sleeping on the sacred *kusa* grass with which the floor is strewn. In front of the hut a bamboo platform is erected, and beyond that a trench is dug, which on the feast day is filled with mango wood soaked in butter, while two earthen vessels of milk are placed close to the platform. The Bhakat bathes and dons a new cloth dyed with turmeric. He mutters a number of mystic formulæ (*mantra*), and worships Rāhu on both sides of the trench. The fire is then kindled, and the Bhakat solemnly walks three times round it in the course of the sun, keeping his right hand always towards it. The end of the third round brings him to the east end of the trench, where he takes by the hand a Brāhman retained for this purpose with a fee of two new wrappers, and calls on him to lead the way through the fire. The Brāhman walks along the trench from east to west followed by the Bhakat. Both are supposed to tread with their bare feet on the fire and to escape unharmed. Risley supposes that this is the result of optical illusion, because by the time they start the flames have subsided and the trench is so narrow that an active man may walk along it resting his feet on either edge, without touching the smouldering ashes at the bottom. Meanwhile the milk has been boiled, and it appears that in some cases the Bhakat pours the boiling liquid over his body, being, it is said, uninjured.

'By passing through the fire the Bhakat is believed to have been inspired with the spirit of Rāhu, who has become incarnated in him. Filled with the divine or demoniac afflatus, and also, it may be surmised, excited by drink and *gānjā* (hemp), he mounts the bamboo platform, chants mystic hymns, and distributes to the crowd *tulsi* (basil) leaves, which heal diseases otherwise incurable, and flowers which have the virtue of causing barren women to conceive. The proceedings end with a feast, and religious excitement soon passes into drunken revelry lasting long into the night' (Risley, i. 255 f.).

The ritual is a good illustration of Dravidian shamanism. Accounts of fire-walking among the S. Indian Dravidians will be found in Thurston (*Ethnographic Notes in S. India*, Madras, 1906, p. 471 ff.). Frazer (*Adonis, Attis, Osiris*², London, 1907, pp. 88, 136 f.) regards it as a commutation of an original human sacrifice by means of fire.

(b) *Worship of deified robbers.*—The Bengal Dosādhs worship a host of deified heroes, in honour of whom huts are erected in various parts of the country. Many of these are the ghosts of bandit chiefs, such as Goraiya, Salesb, Chūthar, or Choar Mal, and others. In none of these shrines are there any idols, and the officiating priests are

always drawn from the Dosādh tribe, who minister to the Sūdra or menial castes which frequent them. The offerings usually are appropriated by the priest or by the head of the Dosādh household performing the worship; but, where this worship has adopted some of the principles of Islam, the fowls sacrificed to the Saint Miran and the Pāñch Pir (see PĀNCHPIRIYA) are given to local Muhammadans.

2. Religion in the United Provinces.—Here also the cult of Rāhu prevails, and it is carried out in a manner much resembling that of Bengal. In one form of the rite the priest climbs the rungs of sword-blades with his naked feet, pours some milk on the ground in honour of Rāhu, sacrifices a cock tied to the summit of the ladder, or, descending, slays a young pig with repeated blows of a spear. Some spirits are poured on the ground, and the meat and the remainder of the offerings are consumed there and then by the worshippers (Crooke, *Pop. Rel.*², 1896, i. 18 ff., *Tribes and Castes of the North-Western Provinces and Oudh*, ii. 355, where one of the songs in honour of Rāhu will be found).

They also worship Chhath or Chhathi, the impersonated sixth day after birth, when, owing to lack of sanitary precautions at childbirth, the child is likely to be attacked by infantile lockjaw. On the day before the feast the worshippers purify themselves with fasting, and go singing to the river side. Here they strip and walk into the water, remaining facing the east till the sun rises, when they stand with folded hands and bow in reverence, making offerings of cakes and other kinds of food, which are consumed by the worshipper and his friends. Their other tribal deities are Bandi, a female, and Manukh Deva, the deified ghost of some tribal worthy, who are propitiated by the sacrifice of a pig or fowl and an oblation of spirits. Seven cups of milk and seven pairs of cakes are also offered round the earthen mound which is the common abiding place of the tribal gods. They observe most of the Hindu holidays, particularly those like the Holi spring fire feast, and the Kajari of the autumn season, which are the occasion of coarse orgies accompanied by drinking and sensuality.

W. CROOKE.

DOUBLES.—The beliefs to which the term 'double' refers may be traced back to two psychological sources. In the first place, they may result from elementary speculation on the category of duplication; in the second place, the phenomena on which the notion of the divisibility or duality of personality is based are such that a potentially duplicate existence was inevitably ascribed to every concrete object of thought. The two sources constantly mingle. The main characteristic of the former is that a double or counterpart arises by multiplication; of the latter, that it arises by division. A secondary characteristic is that in the latter the counterpart tends to be of a different substance, though of the same accidents—the so-called 'spiritual double.' Again, the connected categories of duality, substitution, representation, impersonation, and so forth, combine with such results of the category of duplication as identity, original and copy, idea and reality, to complicate the general conception of doubleness in pre-scientific speculation; and the whole combination binds together a number of customs, some of which are apparently widely dissimilar in origin, though

all, psychologically speaking, are based on the mathematical ideas of multiplication and division. We shall refer to these subsidiary forms of the notion only for the purpose of illustrating what is sociologically the main connotation of the term, namely, the double in the sense of *Doppelgänger*, second self, visible or invisible counterpart, spiritual or material double.

1. Duplication in general.—It is not surprising that in early thought two became a sacred number, when we consider the mystery so often connected with duplication. Conversely, in the creation of certain abnormal mythical beings, the mind frequently unifies a natural duality, as in the one eye of the Cyclopes, and the combination of horse and rider in the Centaurs, and, most notably, in androgynous ancestors and deities. Duplicity in nature is still enough of an abnormality to warrant its inclusion in the list of magical or sacred centres of mystery.

Thus, in Samoa all double things were sacred. Among the native deities were two household gods, represented as 'Siamese Twins,' Taema and Titi. They appear to have been regarded as a sort of gods of doubleness.¹ Similar ideas were connected in Roman religion with the deity Janus, and in Greek with the Dioscuri. The images of many Mexican idols had double faces, back and front, like the Roman *Janus bifrons*.

'The reason,' E. J. Payne observes, 'why the features were duplicated is obvious. The figure was carried in the midst of a large crowd; the duplicate at the back was for the benefit of those who followed. Probably it was considered to be an evil omen if the idol turned its face away from its worshippers; this the duplicate obviated. . . . This duplication of the features, a characteristic of the very oldest gods, appears to be indicated when the numeral *ome* (=two) is prefixed to the title of the deity. Thus the two ancestors and preservers of the race were called Ometsuhtli and Omechuati (=two-chief, two-woman).'²

A close connexion is constantly maintained between diet and conception or the nature of the offspring. A frequent belief is that if a woman eats anything double—a double cherry or a double banana, for example—her child will be double.³

Twins themselves are a striking example of the mystery attached to double objects. See, further, art. TWINS.

Various miscellaneous applications of the double idea may be grouped together here. The law of equivalence, as illustrated by the *lex talionis*, is often superseded by the enforcement of a double penalty. Among the Bedawin the family of a slain man may slay two of the murderer's family. In this case the feud continues. If they slay but one, it is ended.⁴ The Hebrews condemned a thief taken *flagrante delicto* to restore double.⁵ Hence the moral principle of receiving double as a form of pardon.

'The Lord gave Job twice as much as he had before.' 'For your shame ye shall have double . . . in their land they shall possess double: everlasting joy shall be unto them.' 'She hath received of the Lord's hand doubles for all her sins.' 'Even to-day do I declare that I will render double unto thee.'⁶ Similarly in moral retribution: 'Render unto her even as she rendered, and double unto her the double according to her works: in the cup which she mingled, mingle unto her double.'⁷

A double share may be either an honour or a security. 'Elisha said, I pray thee, let a double portion of thy spirit be upon me.'⁸ The idea of corroboration and finality belongs to repetition.

'The dream of Pharaoh,' Joseph says, 'is one: what God is about to do he hath declared unto Pharaoh. The seven good kine are seven years; and the seven good ears are seven years; the dream is one. . . . For that the dream was doubled unto Pharaoh twice, it is because the thing is established by God, and God will shortly bring it to pass.'⁹

⁹ Gn 41:26-30.

A similar principle is reached from a different origin in such beliefs as that an echo is a confirmation.

Miracles and magic acts of duplication and multiplication have a psychological interest in connexion with the development of the metaphysical theory of creation and the mechanical or biological theory of evolution (see below). Such bits of folklore as the notion that turning one's money when one sees the new moon causes it to increase have a significance in both respects. The influence of the waxing moon has been well illustrated.¹ As the moon grows, the money will grow. No doubt, the act of turning the money is also a piece of imitative magic. Turning an object shows its reverse side, its double face, and is equivalent to a duplication of it. On a similar elementary fallacy perhaps depends the actual point of miracles of multiplication (which in the Christian examples lies in the handling or the breaking of the food). It may consist, that is, in an application of a vague theory of *homœomeria* (see below, p. 857^b), according to which each particle of a substance or thing is a miniature duplicate of the whole. Breaking bread would thus produce a multitude of microscopic loaves; their manipulation in the hands is sufficient to institute growth by apposition (analogous in principle to the production of separate pieces of money by turning them), especially if the hands are instinct with *mana*. The case of natural objects is identical, for to the pre-scientific mind there is no essential difference between the artificial growth of a manufactured article and the natural growth of an organism.

There is a fairly large class of customs in which the chief performer—as a rule a sacred person or a person engaged for the time being in a sacred function—is attended, or represented, or impersonated, by one or more persons who are his duplicates in appearance or action. The principle may be either sympathy or the impulse of imitation—'Never alone did the king sigh, but with a general groan' (Shakespeare, *Hamlet*, III. iii. 23)—or delegation for reasons of safety or convenience.

In European folk-custom, particularly in Germany, it is frequently the rule for bride or bridegroom to be attended by one or more persons dressed in the same attire. At Egyptian weddings the bridegroom walks between two friends dressed precisely as he is.² In Abyssinia a bride is accompanied by her sister; both are dressed alike, and their horses are also caparisoned alike.³

In such cases, and in others which follow, the motives originally prompting the custom were no doubt mixed. Sympathy and fellow-feeling may be combined with the idea of safety in duplication or in numbers generally. Duplication is a form of concealment and security. It is commonly employed for the protection of a palladium, as the sacred *ancile* by the ancient Romans, who kept it among a set of duplicates, on the same principle as a valuable jewel is protected by a worthless copy. It is possible that customs like the following of the Kaffirs have a similar underlying meaning.

A Kaffir king employed 'a sort of valets,' who wore his cast-off clothes. When he was sick, they were wounded in order that a portion of their blood might be introduced into his system. They were killed at his death.⁴ The motive is explicit in the Abyssinian custom. The king has four officers, called *Uka mankuva*, 'who have to clothe themselves exactly like the king,' so that the enemy may not be able to distinguish him. 'It is an honourable and dangerous post,' and was once filled by an Englishman, Mr. Bell.⁵ On the Gold Coast an important person

bought a slave of his or her own sex, termed *crabbah* or *corah*. This slave was looked upon 'as the soul or spirit, *alter ego*, of the master or mistress.'

Thus service, substitution, disguise, and 'other-selfhood' shade into each other.

Many cases of mock kings may be resolved into duplication by way of disguise or impersonation. In Siam and Cambodia the king's temporary representative impersonates him in function, performing his magical duties.⁶ The 'king' of the Babylonian festival *Sacaea* was dressed in the king's robes.⁷ In the evolution of the monarchy a frequent stage is the division of the office into temporal and sacred. But such duplication of the king may arise in various ways. When actual substitution is practised in sacrifice, the vicarious sufferer tends to become a spiritual double or unreal phantom. A case in point is the belief found in early Christian speculation that a phantom of Jesus was crucified in place of Jesus Himself. Impersonation is frequently found in funeral customs. Thus, among the Eskimo the first child born after a death bears the dead man's name, and has to represent him at festivals. To these 'namesakes' of the dead, offerings of food and drink and clothes are made. They eat and drink and wear the clothes 'on behalf of the ghosts.'⁸ A case which may be compared with the Kaffir and Abyssinian royal customs is from Fiji.

A certain clan has the duty of supplying the king with a special sort of attendants, who nurse him when he is ill and bury him when he dies. In particular, they conceal his death; in one locality the head attendant 'personates the dead chief, and issues his orders from within the mosquito curtain of native cloth, in the faint querulous tones of a sick man.'

The art of the actor is essentially representation. He is a duplicate of the character, its 'person.' Similarly, his understudy or substitute is, both in English and French terminology, a 'double.' Lastly, the ideas of friendship approximate the friend to the status of the material duplicate. 'Fellow' is a word used in this connexion with a distinct reference to its meaning of a replica. A similar play of thought is seen in the word 'pair.' A friend is, in the commonplaces of literature, a second self, an *alter ego*. Duplication by division is applied here also; the pair being the unit, one or other of them is the 'half'; just as on the other principle he is the 'double.'

The impersonation of a man by a 'spiritual' being cannot always be distinguished from the appearance of a man's ghost or wraith. But there are clear cases—chiefly in connexion with the supernatural impregnation of a wife—where a man's double is a 'spiritual' impostor.

In the Dutch East Indies it is commonly believed that male and female evil spirits, *nita*, can assume the form and personality of lovers and friends. A man or woman keeping an assignation in the forest is liable to be duped in this way. A person who has intercourse with a *nita* dies in a few days. The *nita* is supposed to take away the soul. In some islands an ancestral spirit, named *Boia*, is the bogey of women working in the forest. He assumes the form and appearance of their husbands. The occurrence is proved later when the victim suffers from hemorrhage. The practice is followed even by human magic-workers. The Babar Islanders believe that a male *suwanggi* is able to take the shape of a young woman's husband and cause her to conceive.⁹

When the double, either visible or invisible, does not impersonate, but attends as a helper or enemy, it is not clear whether this can be traced back to beliefs about the soul. Primitive psychology succeeded thoroughly in dividing human personality into two more or less identical duplicates, and there are many cases where the derivation of the guardian angel from the separable soul is explicit. Of course, when developed, the two notions easily pass into one another, and the soul itself is con-

stantly regarded as a protecting spirit. The illustration of this belongs to another inquiry, but a typical case may be cited, where the guardian is actually the double. In Upper Egypt it is believed that with every child there is born a *jinn* companion, which acts as a guardian angel, but sometimes evilly entreats its possessor. It is termed *karina*, and is exactly like the person it attends.¹

In some cases a spiritual entity passing into another form leaves behind it, automatically, a double of itself. It is as if a man, when leaving a place, automatically left a duplicate in his stead. The example which follows comprises this naïve instinct for having one's cake as well as eating it, together with other ideas. In Central Australia, 'when a spirit individual goes into a woman' (who thereby conceives), 'there still remains the *Arumburinga*, which may be regarded as its double.' Spencer-Gillen also speak of this as the double of the person himself, and as his guardian spirit.²

A man may be regarded as a dual person because he is attended by an invisible protector. Such a conception is implicit in the European folk-belief about the guardian angel. This belief is extremely vague in its form, but it shows a tendency to regard the angel as a double of the person, his eternal counterpart, which after his death is, like even the Australian *Arumburinga*, 'changeless and lives for ever.'³ The following example is a case of duplication by apposition, distinct in origin from other forms. The Japanese pilgrim to the Thirty-three Holy Places, or to the Eighty-eight Holy Places of Shikoku, wears a special hat with this inscription—'Two pilgrims travelling in company to such and such a shrine.' This reference to two persons is explained by the idea that the pilgrim is not alone, but is accompanied by the great saint Kōbō Daishi, or the Goddess of Mercy, who

'travels with him along the stony path, supporting his footsteps, encouraging his religious fervour, guarding him from evil all along the way. Therefore not one only but two walk under that broad-brimmed hat on the road to Paradise.'⁴ Similar ideas of the invisible Divine helper are found in most of the organized religions; and, where it is part of the general teaching that the worshipper may become a sort of incarnation of the god by following in his footsteps, we have an interesting case of duplication in the form of the individual as microcosm and the god as macrocosm, the latter being indefinitely multipliable or indefinitely ubiquitous.

Thaumaturgic persons are sometimes credited with a similar ubiquity or power of self-multiplication. There need be no implication that the duplicate in such cases is a spiritual replica, or an entity of different substance. It is simple multiplication, without any question of the method or the vehicle. The ordinary limitations of ordinary humanity are merely suspended. The legends of many Christian saints refer to this power of being in two places at once—bilocation. Thus, it is recorded of St. Alfonso di Liguori, that

'a person going to confession at the house where Alphonsus lived found him there at the very time for beginning the sermon in the church. After he had finished his confession, he went straight to the church, and found Alphonsus a good way advanced in his sermon.'⁵

2. The spiritual double.—The special meaning of the term 'double,' as the so-called 'spiritual double,' is the 'wraith' or visible counterpart of the person, seen just before or just after, or at the moment of, his death. This belief is derived directly from the theory of the soul. Hallucination corroborates it. Few phenomena seem to be better attested than the subjective perception of a

'phantasm of the living' in the circumstances mentioned. It is a remarkable agreement between psychological fact and primitive psychological theory, but the latter is alone quite sufficient reason for the genesis of the belief.

The soul itself constantly tends to be a counterpart or duplicate, a spiritual-material double of the person. The reason for this tendency is to be found in the main source of the belief in the soul. This is the mental percept and the memory-image of an object, which is inevitably a replica of the sensational percept (though possibly not technically identical in its physiological causation), somewhat incomplete, but often vivid enough.¹ It is called up most vividly in dreams, but also in waking memory. It may include roughly the whole personality, or be confined to one aspect of it; but its general foundation is visual.

Some cases may be cited where the soul shows this tendency to be, or actually is, a double. It is to be premised that speculation frequently draws a distinction between this form of the soul and a later transcendental conception.

The *kelah* or *lā* of the Karens 'cannot be distinguished from the person himself,' when, as sometimes happens, it appears after death. It is described as 'the individuality, or general idea, of an inanimate object. It is also the individuality of the animated being. It, in fact, personates the varied phenomena of life.' 'It is distinct from the body,' and 'its absence from the body is death,' yet it is not regarded as the soul proper, which is the *thah*. 'The body and the *lā* are represented as matter and spirit, yet materiality belongs to the *lā*.' It is also described as a guardian spirit, walking by a man's side or

'wandering away in search of dreamy adventures. If it is absent too long, it must be called back with offerings. When the *lā* is absent in our waking hours, we become weak or fearful or sick, and, if the absence be protracted, death ensues. Hence it is a matter of the deepest interest with a Karen to keep his *lā* with him. He is ever and anon making offerings of food to it, beating a bamboo to gain its attention, calling it back, and tying his wrist with a bit of thread, which is supposed to have the power to retain it.'

Not only every living creature, but also every inanimate thing—axes and knives, for instance, as well as all trees and plants—has its *lā*, which is 'liable to wander away from the individual.' When, thus wandering, it is 'interfered with by an enemy of any kind, death ensues to the individual' to whom it belongs. If a man drops his axe while up a tree, he looks down and calls out, '*Lā* of the axe, come, come!'

'When the rice-field presents an unpromising appearance, it is supposed that the rice-*kelah* is detained in some way from the rice, on account of which it languishes. It is recalled with this invocation—"O come, rice-*kelah*, come! Come to the field. Come to therice. With seed of each gender, come. Come from the river Kio, come from the river Law; from the place where they meet, come. Come from the West, come from the East; from the throat of the bird, from the maw of the ape, from the throat of the elephant. Come from the sources of rivers and their mouths. Come from the country of the Shan and Burman. From the distant kingdoms come. From all granaries come. O rice-*kelah*, come to the rice."¹

As distinguished from the *thah*, the *lā* or *kelah* 'is not regarded as the responsible agent in human action. . . . When we sin, it is the *thah*, or "soul," which sins.' 'By some the *kelah* is represented as the inner man, and with others the inner man is the *thah*.' It may leave the body in sleep. Such an absent *lā* may be caught by a wizard, and transferred to a dead man, who is thereby resuscitated. In this case the friends of the robbed man procure another *lā* from another sleeping man, and so on. The same Karens hold that the world is more thickly peopled with 'spirits' than with men, and that 'the future world' is a counterpart of this. Lastly, every organ of the body has its *lā* counterpart. Blindness is due to an evil spirit having devoured the *lā* of the eye.

⁴ J. Gardner, *Faiths of the World*, Edinburgh and London, 1858-60, s.v. 'Bilocation.'

The *lā* in all cases, though not immortal, 'exists before man, and lives after him. It is neither good nor bad, but merely gives life.'¹ In analogous cases this last detail is negated, and it is precisely a mystic unrealized element that is supposed to produce the phenomena of life.

The Lushai term *thla* is possibly connected with the Karen *lā*. It is 'a sort of double.'²

The Chinese hold that the soul may exist outside the body, 'as a duplicate having the form of the body, as well as its solid consistency.' De Groot describes it also as 'the invisible duplicate' of a person, and speaks of 'a conviction which calls up the body immediately before their eyes when-ever they think of the soul.'³

Some striking examples apply the principle so as to form a double creation. Thus, the Asabas of the Niger hold the following opinion:

'Every one is considered to be created in duplicate, and the representative, or, as it were, the reflection in the spirit world of the body and of its possessions, is the *chi* and its possessions. A man's *chi* marries the *chi* of the woman the man marries, and so on. In addition, the *chi* . . . acts as a guardian spirit. . . . *Chi i me jīm*. 'My *chi* has done badly,' is a not uncommon expression. 'Entirely distinct from his *chi*' is the spirit *mon*, which inhabits the man himself.'⁴

The Ba-Huana believe in a soul, *bun*, and a double, *doshi*. Only adults have *bun*; animals and fetishes have *doshi*, but no *bun*. The *doshi* appears in dreams. The *bun* of a dead man may be seen only at night; it is in human form, white and misty.⁵ The peasants of Sicily believe that 'every material thing has an impalpable image or double, which can be detached, and can penetrate other bodies.' The phenomena of dreams are thus explained.⁶ The Zapotecs regarded the soul as a 'second self.'⁷

The tribes living at the southern end of Lake Nyassa believe that the *mzim*, or soul, has the form of the owner, but is intangible and unsubstantial, though it can talk and act as well as the real man. It is visible only in dreams, and the shadow is a 'part of' it.⁸ The Delawares used for 'soul' a word indicating repetition, and equivalent to a double or counterpart.⁹ The Iroquois soul was 'an exceedingly subtle and refined image,' yet material, 'possessing the form of the body, with a head, teeth, arms, legs,' etc. The spectre or wraith was animated by the soul.¹⁰ The Aht soul was 'a being of human shape and of human mode of acting.'¹¹ The Eskimo say that the soul 'exhibits the same shape as the body it belongs to, but is of a more subtle and ethereal nature.'¹² Andamanese souls 'partake of the form of the person to whom they belong.'¹³ The Sihanaka hold that the mirage is the soul of the reflected scene.¹⁴ The soul is regarded by the East Indian Islanders as like the person in every respect, with all his qualities and defects; it is a copy or abstract of him, but is always 'material.' In Java the term for soul is 'refined body'; in Celebes, 'image'; in Toubulu, 'companion'; in Sangir, 'duplicate.'¹⁵

The Malagasy *ambiroa* and the Dayak *amirua*, *hambaruan*, and *bruwa* are connected with a word meaning 'two.'¹ Among the Karo Bataks the soul is 'the copy of the owner, his other self.' The soul which appears after death is the dead man's *Doppelgänger*.² Codrington describes the Melanesian *atai*, 'reflection-soul,' as an 'invisible second self.'³ The soul of the Tongans was not 'a distinct essence from the body, but only the more ethereal part of it, and exists in Bolo-too (the spirit world) in the form and likeness of the body the moment after death.'⁴ In the Hervey Islands the soul was regarded as an airy but visible copy of the man. 'The visible world itself is but a gross copy of what exists in spirit-land. If the axe cleaves, it is because the fairy of the axe is invisibly present.'⁵ The Tahitian soul resembled the body; everything had a soul.⁶ The *wairua* of the Maoris 'seems to have signified a shadowy form.' It was sometimes mistaken for the man himself, and only by melting into thin air was its 'ghostship' recognized. It is described also as a 'similitude.'⁷ The soul of the Dénés is described as a double.⁸

Frequently the soul-double is regarded as a miniature duplicate, varying in size from half size, or that of a child-copy of the person, to microscopic dimensions. In Egypt it occurs as half-size.⁹ In Fiji it is found as of 'a little child,' or of 'small stature.'¹⁰ In Australia, tribes near Adelaide held it to be of the size of 'a boy eight years old,'¹¹ elsewhere 'a little body.'¹² The Dayaks of Sarawak regarded it as a 'miniature human being.'¹³ This is the prevalent notion in the East Indian Islands, as among the Minangkabauers of Sumatra, the Tontemboan of Minahassa, the Toradjas of Celebes; the Semang of the Malay Peninsula regard it as of the size of a grain of maize; the Malays as a kind of 'thumbing,' a 'thin, insubstantial human image,' or 'mannikin,' of about the size of the thumb.¹⁴ The Hindus regarded it as of the size of the thumb.¹⁵ The Nukkas, the Indians of the Lower Fraser River, the Hurons, the ancient Mexicans, the Macusis, certain South African tribes, the Greeks, the Teutons, and other early European peoples also held it to be a miniature copy of the owner.¹⁶

The Egyptian *ka* is a classic example of these beliefs (see BODY [Egyp.] and DEATH, etc. [Egyp.]). The *ka* could live without the body, but the body could not live without the *ka*. Yet the *ka* was material.¹⁷ It is represented not only as a miniature duplicate of the person, but sometimes as half

the size, sometimes as full size.¹ After death it became the man's personality proper, being incorporated with the mummy. In 'the everlasting house,' the tomb, it dwelt as long as the mummy was there. It might go in and out of the tomb and refresh itself with meat and drink, but it never failed to go back to the mummy, 'with the name of which it seems to have been closely connected.' In hieroglyph it was 'represented by two upraised arms, the acting parts of the person,' with a depression in the centre of the horizontal bar which joins them, to suggest the head.²

Before discussing the relation between the full-sized and the miniature double, it is as well to repeat the fact that early thought insists very strongly on the principle of duplication, and extends the application very widely. It serves as a theory of the soul and of a future existence. It also serves as a theory of biological reproduction and of physical evolution generally. Without going into the subject of pre-scientific psychology, it is necessary to note the connexion between the belief in the miniature double and certain widely spread notions about the soul. Corresponding with the percept is the fact that the soul is invisible when its owner is visible, unless, as we shall see, there are special limiting circumstances. The comparative permanence and generalized nature of the memory-image of individuals correspond with the generalized idea of species, as an ideal of which individuals are copies. A belief which may almost be regarded as universal is that children are re-incarnations of the souls of parents or of ancestors. A connected and frequent belief is tantamount to a germ-plasm theory of the soul. Parallel with this is the notion that reproduction can be effected, even in the human species, by fission or budding. All these various beliefs are cases of duplication. They include good reasons why the soul should be regarded as a miniature, whether as germ or embryo, or as a child. A full-grown man develops from a smaller copy of himself, and this from an infinitesimally minute replica which has proceeded from another individual. The theory is applied in early thought far more than in a scientific age which professes practically the same theory. Thus, an Australian, rebuking his son, will say to him: 'There you stand with my body, and yet you won't do what I tell you.'³

The minute size of the soul is explained by the Australians as depending upon the necessity that it should be able to enter a woman's body. But there is also the widely spread recognition of the fact that it leaves the body, both in sleep and illness, and at death. The body remains. Two views are possible, and both are found. Firstly, the duplicate may be a film, easily separable from the body; this would correspond to an outer soul, the soul of the outer man. Or, secondly, the duplicate may be an inset, and therefore an eject. Small enough to leave the body by the mouth, or even by the fontanel, it is often regarded as expandable, filling the body as an inner shape, the soul of the inner man, or the 'inner man' himself. Its flimsy and insubstantial nature, whether in dreams, memory, or hallucinations, agrees well with this elasticity.⁴

The link between the soul as shape and the soul as inner movement may be found here, even if we do not identify the soul as germ and the soul

as inner man. Each of the latter applies to its own peculiar circumstances, and neither is inconsistent with the theory of films. This last theory, in its converse aspect, has been made into a standard metaphysical theory of physical and aesthetic creation by Greek philosophy. It has even been elevated into a theory of vision and sensation generally. In the former application the filmy duplicate of savage thought becomes the transcendental Form, or *εἶδος*, which is impressed upon Matter, or *ὕλη*. Similarly, the savage theory of species and individual was canonized in the Ideal Theory of Plato.

The *oiaron* of the Iroquois¹ is paralleled in many rude philosophies. It is a permanent ideal duplicate of each individual of the species. When it is regarded as a reality, the difficulty of bilocation recurs, not to speak of the problem, Which is the essential reality, the original or the copy? —or, in other words, Which is the original? The Iroquois believed that the *oiaron*, the 'type or model,' was 'larger and more perfect' than any single member of the species. It was sometimes called 'the old one.' Thus, converting type into prototype, the Indian was perhaps more scientific than metaphysical.

The problem of personal identity (similar to that of original and copy in the case of duplicates) is raised in a curious way and with curious results by the duplication theory of reproduction. When the soul of a dead man is re-incarnated in a child, there is no practical embarrassment. But, according to Mann, the father is conceived in the body of his wife, and is himself re-born as his child.² A man is thus his own father and his own son simultaneously. Some analogous notion, combined with a fear of personal insecurity or loss of power caused by this division of personality, seems a not impossible factor in the superstitious form of infanticide.³ A Kaffir will frequently kill one of his twin children, the belief being that otherwise 'he will lose his strength.'⁴

In some psychologies each part of the person has its 'spiritual' duplicate. The theory of *homœomeria* is foreshadowed so frequently in early speculation that we may fairly suppose it to be implicit in early atomic philosophy. When Chinese doctors speak as if the soul were breakable and divisible into molecules,⁵ and when we read of Malay tin-magic that 'each grain of ore appears to be considered as endowed with a separate entity or individuality,' and that it possesses the power of reproduction,⁶ it may well be that each atom is implicitly viewed as a minute replica of the whole.

Duplication by a process of fission or of budding (gemination) is occasionally hinted at in early philosophy. The Central Australians tell how in the time of 'the ancestors' a man would shake himself, and spirit-children would then drop from his muscles. An ancestor suddenly found a duplicate of himself appearing at his side, and exclaimed, 'Hullo! that is me.'⁷

The development of dual personality by a process of division may be illustrated from Hindu theology. 'The One Being was not happy, being alone. He wished for a second. He caused his own nature to fall in twain, and thus became husband and wife.'⁸ This duality is rather that of mirror-images; 'this (second) was only a half

of himself, as the half of a split pea is.' Combination produces completeness, 'as a split pea is (completed) by being joined with its other half.'¹

Modern psychology has studied many cases where the unity of personality is disturbed. The so-called double personality of such cases adds one more apparent confirmation of the ancient theory of duplication by division of what may be described as a two-layered unity. In the ethical sphere the ancient distrust of 'double-mindedness' implies more than a mere tendency to deceit and treachery. It implies the existence of two souls, or a double soul, in one person. Cf. 1 Ch 12⁸³ 'that were not of double heart' (lit. 'without a heart and a heart'); Ps 12² 'with a double heart [lit. 'with a heart and a heart'] do they speak.' Duplication involves not only duplicity but instability; 'a double-minded man, unstable in all his ways.'² It is possible that one factor in the general desire for sincerity was a superstitious notion of the danger of unreality. If a man professes non-reality, he may become non-real himself. 'There is,' says Westernmark, 'something uncanny in the untrue word itself.'³ Cicero observed: 'Nothing that is false can be lasting'—a rhetorical remark which to a savage might express a physical law. It is a curious fact that in civilization a sort of specific insincerity or double-mindedness is popularly ascribed to the artistic temperament, particularly in the case of actors. As the actor is a double, and plays a part on the stage, so is he regarded in his own character. Cf. art. DOUBLE-MINDEDNESS.

The analogy of the soul to the portrait, reflexion, and shadow has led to certain curious examples of the pictorial double. The easiest method of induction is by similars, and early thought seems to have noted identity far more than difference.

This tendency is well exemplified in Chinese psychology, and has to be taken into account in estimating many cases of spiritual identification.

'When a Chinese sees a plant,' for example, 'reminding him, by its shape, of a man or some animal, . . . he is influenced immediately by an association between it and that being. This being becomes to him the soul of the plant, anthropomorphic, or shaped as a beast. . . . Thus, association of images with beings actually becomes identification, both materially and psychically. An image, especially if pictorial or sculptured, and thus approaching close to the reality, is an *alter ego* of the living reality, an abode of its soul, nay, it is that reality itself.' . . . This kind of association is the backbone of Chinese religion.⁴

The soul of the Yaos, we saw, bears to the body 'the relation which a picture has to the reality.' But the Chinese go much further. For all practical purposes the life-sized picture of a dead man is a duplicate personality. It enables the deceased 'to live on among his descendants.' There are stories of statues and portraits acting for the persons they represent, and even begetting children.

There once existed also an art, *Khwai shuh*, by which life could be infused into a statue or portrait. The living image was then made use of, as Frankenstein employed his monster.⁵

Animal-souls or fetish-souls, external souls generally, are frequently described by observers under the term *alter ego*. Tribes of the Niger believe that each person has

'an *alter ego* in the form of some animal, such as a crocodile or hippopotamus. It is believed that such a person's life is bound up with that of the animal to such an extent that whatever affects the one produces a corresponding impression upon the other, and that if one dies the other must speedily do so too. It happened not very long ago that an Englishman shot a hippopotamus close to a native village; the friends of a woman who died the same night in the village demanded and eventually obtained five pounds as compensation for the murder of the woman.'⁶

In the Euahlayi tribe of Australia the *yunbeai*, or individual totem, is an 'animal familiar,' 'a sort of *alter ego*.' 'A man's spirit is in his *yunbeai*,

and his *yunbeai*'s spirit in him.' A medicine-man 'can assume the shape of his *yunbeai*.'¹ The *tona*, second self, soul, or tutelary genius, of the Zapotecs was an animal.

'It was believed that health and existence were bound up with that of the animals, in fact, that the death of both would occur simultaneously.'²

Even a substitute may be similarly described. Among the Bataks a piece of wood the length of the sick man's body is left at the place where the evil spirit that has taken the man's soul is believed to reside. Snouck Hurgronje describes this log as a *dubbelganger*.³

Examples might be multiplied. It is natural that, when once the notion of 'spiritual' duplication has been formed, it may be applied to any thing that strikes the fancy. The origin of external souls generally cannot be ascribed to a desire for safeguarding the life of the owner. At least the method is a very dangerous one. The soul is far more likely to be safe when it is in, or in combination with, the body of the owner. Moreover, this external soul not only dies when its 'original' dies, but involves in its own death the death of the owner. Duplication here simply duplicates danger; and it is unlikely that the derivation of the external soul is from any notion of placing the actual soul of a man in an external hiding-place. In fact, the theory of the soul which involves the belief in the appearance of a man's double or wraith shortly before, or at, or just after, his death brings into very strong relief the danger of making the unity of the person into a duality.

The phenomena of this wraith or double might be illustrated at great length, but they present hardly any variation of detail. A curious and significant fact is the large number of carefully studied cases in modern civilization of such 'phantasms' of the living or the lately dead, which have been seen by educated and intelligent persons, quite free from pathological abnormality.⁴ It is a no less curious fact that the appearances present precisely the same features as are mentioned in mediæval and savage folklore. There is no doubt about the modern appearances, as far as their subjective reality is concerned; nor can there be any doubt about appearances in earlier culture. They are, so far as we know, cases of visual hallucination. Such hallucination may be defined as 'the projection of a mental image outwards when there is no external agency answering to it.'⁵ Hallucination is not to be denied for earlier stages of human evolution, but there is no probability that it increases inversely as mental development. Be that as it may, the remarkable thing is this, that the 'primitive' notion of the soul supplies in theory not only what actually happens in practice, but also adequate speculative reasons for such happenings, though these reasons are both pre-scientific and opposed to all scientific facts. It is unnecessary to enter into any definition of 'ghost,' 'wraith,' 'spectre,' 'phantom,' and similar terms. The occasion of the appearance of the double has been noted. It remains to supply some typical examples and to draw out their spiritualistic explanation.

In Teutonic folklore to see one's 'angel' was regarded as an omen of approaching death.⁶ In English folklore the belief still obtains that at midnight of St. Mark's Eve one may see from the church porch all those who are to die in the course of the year.⁷ Mr. Baring-Gould knew of a young carpenter in Devonshire who was firmly convinced he had seen his own double on St. Mark's Eve. He went to the church porch in a spirit of bravado. 'All he could say was that he had seen

himself go past him, thrust open the church door, which he knew was locked, pass inside, and shut the door after him. He could not be mistaken; the figure had turned and looked him full in the face, and he knew himself as surely as when he glanced into mother's looking-glass.' The young man took to his bed, though nothing ailed him, and died of sheer fright.¹ Shelley declared a few days before his death that he had seen his double. Goethe (who, by the way, practised the visualization of mental images) records his having seen 'an exact counterpart of himself coming towards him.'² Robert Perceval, second son of the Right Honourable Sir John Perceval, saw his own apparition, 'bloody and ghostly, whereat he was so astonished that he immediately swooned away, but, recovering, he saw the spectre depart.' Soon afterwards he was found dead, under mysterious circumstances, in the Strand.³ In 1899, Mrs. Milman, wife of Mr. A. J. Milman, assistant clerk to the House of Commons, declared that her rooms in the Speaker's Court were haunted, and had been haunted for many years, by a spiritual double of herself, which had been seen by many people when she was elsewhere, though she herself had never seen it.⁴ A well-known M.P. died suddenly when away from the House. It was stated that he was seen by several members in the lobby at the time he died.⁵ In Alsace the belief is marked; *se voir soi-même, sich selbst sehen*, are familiar phrases. To see one's self, or meet one's double, portends one's death. A Strassburg man returning home saw himself, and soon after died. It is noted that in Alsace the occurrence is rare compared with the appearance of a man to others. An interesting detail, recurring elsewhere, is that, after seeing his double, a man has 'no repose.'⁶ A question implying the same belief was put to Shelley by the lady to whom he confided his having seen his double. Art and literature are full of examples which might well be founded on fact. D. G. Rossetti's *How they met themselves*, and Calderon's *Purgatory of St. Patrick*, are examples. Sir Walter Scott observed that increasing civilization had 'blotted out the belief in apparitions.' This was to reckon without the phenomena of vision on which they depend.

These phenomena explain both the fact of the appearance of doubles, and also the pre-scientific theory of it which is a part of the early doctrine of the soul. According to that doctrine, the soul is separable from the body. This separation occurs at death, and may occur in illness, and even in a mere attack of fright, in sleep, and in other circumstances which need not be considered here. The soul is more or less universally regarded as a material, but etherialized, visible duplicate of the owner, whether full-sized or miniature, and as constituting his life. When it is removed, he is either dead or in danger of death. Primitive philosophy would say, perhaps, not that when a man dies his soul departs, but that he dies because his soul has departed. The soul of another is invisible when the man himself is seen, alive and well. In this case of full perception there is no mental image. But, when the man is not perceived, the mental image of him in the mind of the subject may suggest possibilities of separation, of division of personality. From another point of view, the man's appearance in death, sleep, or illness suggests the loss of something. Here, too, there is a percept, but it does not answer to the completeness of other percepts of the same object. Thus, whether as a film of the man's outward appearance, or as an ejected but expandible inner duplicate, the soul is easily supposed to leave its possessor. To the former view correspond those cases in which it is said to 'loosen itself' from the body, to the latter those in which it slips away from the mouth or other apertures. Before death the Haida soul 'loosens itself from the body.'⁷ Of course, one cannot press the meaning of such descriptive phrases. But the fact remains that the separated soul is, when seen, a filmy double. The general belief that the soul is away from the body during sickness is significant. The Chinese hold that even in a fainting fit a man's soul is not united with his body.⁸ The 'other self,' *netsein*, of Déné belief, 'was invisible as long as a man enjoyed

good health,' but wandered away when he was sick or dying.⁹ This account is very apt to the point. It explains how the spiritual counterpart of a man is sometimes described as invisible, sometimes as visible. It is invisible, in other words, when it is united with its owner. It may be visible, to himself or others, when it is no longer united. On this line of thought, combined with ideas of the life-giving property of the soul, is developed the notion that health and strength are the soul, or at least an outward show of it. The Minangkabau people of Sumatra regard the *sumange* as

'the cause of the impression a man makes on others: . . . it gives strength, splendour, and vitality to a man's appearance; it is expressed in his look and carriage. A man whose external appearance is weak or sickly, or who has little expression in his face, is said to have a feeble soul.'¹⁰

Similarly, the natives of the Congo identify health with the word *moyo*, and 'in cases of wasting sickness the *moyo* is supposed to have wandered away from the sufferer.'¹¹ The Malagasy supply a complete case. The *ambiroa*, or *ameroy*, the 'apparition' of a man, is, when seen, an omen of his approaching death. But this term is also applied to the soul of a man when there is no actual question of death; for instance, if a man is thin and does not thrive well on his food.¹²

It is clear from the above both why the soul should be away from the body just before, or at, or after, death, or even in illness, and also why it is then visible both to the owner and to others.

The double which appears after death might be supposed to be a duplicate of the man with the marks of death upon him. And so it is sometimes in early belief. Thus, among the Fijians the ghost is decomposed; it is the corpse 'walking.' But, with natural inconsistency, it 'can eat fruit, drink kava, throw stones, weep, laugh, compose poetry, and dance.'¹³ So difficult is it for the mind to get away from the complete idea of the man. In a case already cited, the double appearing before death had the marks of the owner's violent end impressed upon it proleptically. But, as a rule, the 'spiritual' double is the exact counterpart of the owner as he was when last seen. Thus, by the natives of Paraguay

'the souls (*aphangak*) of the departed are supposed, in the ethereal state, to correspond exactly in form and characteristics with the bodies they have left. A tall man and a short man remain tall and short as spirits; a deformed man remains deformed. A kindly-natured man continues so in shade-land. . . . The spirit of a child remains a child and does not develop, and for this reason is not feared. No punishment follows the murderer of an infant, nor is its murder attended by the ordinary superstitious fears.'¹⁴

The Polynesians were familiar with apparitions of the dead. These appeared also in dreams, and their 'shape or form resembled that of the human body.'¹⁵ The natives of the Panjāb believe that 'the little entire man or woman inside the body retains after death the tattoo marks of the person whom it has left.'¹⁶ Among the Nagas the ghost is 'an exact image of the deceased as he was at the moment of death, with scars, tattoo marks, mutilations, and all—and as able to enjoy and to need food and other sustenance.'¹⁷ In some cases the disembodied 'soul' after death is distinguished from the dead man himself, who is believed to 'walk.' The Australians speak of the ghost returning to the grave to contemplate its mortal remains.¹⁸ But there are cases where it is practically the man himself, revived and as he was in life. The Ovaherero believe

that the ghost speaks to people, drinks their milk, and takes their food; also that he is apt to seduce women and girls, and can even marry and live with a woman without her being aware that her husband is a ghost.¹

In the Gospel narratives of the appearances of the risen Jesus it is remarkable that various tests are employed to prove that the form was no ghost or double, but the Lord Himself (cf. Lk 24^{39, 43}). A test frequently employed in cases of the double is to ascertain whether the form casts a shadow or reflexion. For the 'spiritual' double, being itself a sort of reflexion, a visible but 'immaterial' copy, obviously cannot produce a reflexion itself. Hence stories are found, the point of which is either that a supposed real person is unreal, or that a real person, casting no shadow, has *ipso facto* lost his soul. We are thus led to the principle that the 'spiritual' duplicate, while supplying life to its owner, is 'real,' but in a different genus from the body or from the complete person. More precisely, the difference is a question of degree; the dead or sick body is negatively, the life-double is positively, real; the truth of both is the total living unity.

Most significant, perhaps, of the phenomena of doubles is the fact that they are seen just before death, and by their owners in particular. A usual endowment of the medicine-man is that he can see a soul at any time. But this capacity is often limited by the accepted principles of the doctrine of the soul. Thus the shamans of the Thompson Indians are able to see the soul

'before and shortly after it leaves the body, but lose sight of it when it gets further away towards the world of souls. . . . When a shaman sees a soul in the shape of a fog, it is a sign that the owner will die.'²

The rescue and restoration of the straying duplicate is universally, in early culture, the business of the soul-doctor, as in civilization the restoration of health is the business of the physician. The fact that, though ordinarily invisible, it is seen away from its place of location is the best proof that its owner is threatened with its permanent absence. This contingency receives the strongest confirmation when the apparition is seen by the threatened person himself. The inconsistency of the fact that he himself is still alive is one of those which cause no difficulty to the unscientific mind. The soul is separated from the body; that is enough for an absolute proof.

The persistence of the belief in the apparition of the double is precisely one of those cases which cannot be explained by any theory of survival or tradition. The belief is kept alive by hallucinations, and in uncultivated minds by the normal phenomena of visualization.

LITERATURE.—This is fully given in the article.

A. E. CRAWLEY.

DOUBLE-MINDEDNESS.—It is clear that many things in morality and religion which are censured as insincerity and hypocrisy are more accurately describable in terms of double-mindedness. The difference is that in double-mindedness a certain fraction of the entire complex personality—a special set of related states and processes—is so 'split off' from the rest of the self that it acts on its own account and forgets its relation to the full round of diverse elements of the ego. In cases of hypocrisy, if such exist, during the inconsistent act or attitude which has momentarily taken possession of the field of consciousness there is a haunting sense that it is not in harmony with the deeper-lying currents of the selfhood.

1. Pathology of the sense of self.—The diseases conditioned by the splitting of the self are those

¹ Viehe and Palgrave, in *South African Folklore Journal*, I. (1879) 656 ff.

² J. Teit, in *Mem. of Amer. Museum of Nat. Hist.* I. (1900) iv. 363.

of double personality, in which two fairly defined selves in turn struggle for the possession of the field of consciousness, or may exist side by side, each more or less ignorant of the other; multiple personality, with the condition just described, existing among more than two split-off parts illustrated in the work of a skilful hypnotist, who can call up in turn as many selves as he chooses; and alternating personality, in which the two or more selves, like Dr. Jekyll and Mr. Hyde, take turns at ruling the field of consciousness.

Among the remarkable cases that have been studied are: Lucie, Louise, and Léonie, described by Janet, *L'Automatisme psychologique*, 1889; Férida, studied by Azam, *Hypnotisme, double conscience et altérations de la personnalité*, 1887; Mary Reynolds and Ansel Bourne, cited by W. James, *Princ. of Psych.* 2, 1906, I. 388 ff.; the case of Sergeant F., described by Mesnet and quoted by Binet, *Alterations of Personality* (Eng. tr.), 1896; 'Miss Beauchamp' with her four personalities, the subject of Prince's exhaustive study, *The Dissociation of a Personality*, 1906; the autobiographical account of the restoration of a personality by Beers, *The Mind that Found Itself*, 1908; the instance of 'D. F.', a patient of Sidis, reported in his *Psychopathological Researches: Studies in Mental Dissociation*, 1909; and many others.

These studies are in essential agreement on many points in regard to the nature of the self, and throw light upon the milder forms of double-mindedness. The central fact underlying them is that the conscious self at any moment is only a small part of the entire personality, the larger share of which is the subconscious self. This sphere of the subconscious consists in the sum of partially lapsed memories, plus the sum of dimly appreciated instinct feelings and organic experiences, past and present. The elements of the entire self are always somewhat imperfectly knit together, and at best become organized in spots and sections, as determined, for example, by harmonious instinct reactions or a relatively consistent set of vocational experiences, personal habits, and intellectual interests.

The conscious self really consists in the drifting to the surface, out of the submerged selfhood, of certain fairly well organized cores or nuclei of related states and processes. Self-consciousness is potentially bound up in any and all of the elements of the personality. The ego is not a fixed entity that stands apart and watches the life processes go on. The self-feeling, on the contrary, is latent in every psychosis, and emerges when any group of processes is sufficiently organized and so far intensified as to form a warm spot in the usually somewhat diffuse group of experiences that cohere in the single organism. Whenever such a warm spot is formed, the self-feeling crystallized about it and everything else is sharply severed from it and stands as object. There are in the normal personality certain deep-going lines of organization that are fairly constant, and give some stability to the selfhood. It is shown, however, by the use of hypnotic suggestion, that there is no part of the personality that may not in turn be made subject and object. The same subject may seem to himself to be in turn king and peasant, preacher and humorist, saint and sinner, child and adult, kindly and irritable, motor- and visual-minded. While each character is in the centre of the arena acting out its part, it gathers to itself allies from the entire range of the self, and works them out into seeming consistency, and is entirely oblivious to the existence of other selves.

Now, the condition underlying double-mindedness is that two or more centres of related processes, or selves, may drift above the threshold of clear consciousness in rapid succession, while each is imperfectly cognizant of the other. Indeed, it is certain that one set of central processes can be 'thrown out of gear' with the rest, 'so that the processes in one system give rise to one conscious-

ness, and those of another system to another *simultaneously* existing consciousness' (W. James, *Princ. of Psych.* i, 399). Let us represent the entire self, consisting fundamentally of a mass of subliminal processes, by a sphere S. Two smaller spheres, A and B, within the larger one may represent the integrated nuclei of conscious selves. In so-called normal consciousness, these two selves, A and B, will be so nearly coincident, due to the continuity and consistency in the stream of experiences, as to have almost everything in common, M. Although the quality of mentality at any moment or in any situation is different from that of the next moment or situation, so that A and B each has a region exclusively its own, the large common ground M carries over into each successive state of consciousness a rich stock of memories, and accordingly a sense of personal identity. If, however, in an impulsive or impressionable person the successive consciousnesses are inharmonious—call them A¹ and B¹—and so separated as to have only a small region M¹ in common, we have the typical case of double-mindedness. There lie beyond these the extreme instances described above, when, due to some lesion, or to hypnotic influence, the consciousnesses A² and B² are so thrown apart that they have no background of definite memories to unite them.

Among the advantages of considering double-mindedness as lying in a progressive series between a highly unified consciousness on the one hand and alternating personalities on the other, are: (a) it is normal, but may become pathological; (b) the progressive decline of the memory of other selves in pathological cases shows the distinction between double-mindedness and wilful deception and insincerity. A religious enthusiast and propagandist, for example, impelled by the combined effect of auto-suggestion and social-suggestion may at other times be morose, unkind, and even treacherous, and still be only faintly aware of the incongruity. (c) There is, however, a subconscious interaction between the selves. Binet and Janet have shown (Binet, *Alterations of Personality*, Eng. tr. New York, 1896, p. 215 ff.) that, although either member of a double personality may seem to be entirely oblivious of the existence of the other, there is, nevertheless, a leakage between them through the deeper strata of personality. (d) The integration of the self is best brought about, if not invariably, in terms of the subconscious. In chronic cases of double personality there seems to be no way so effectual of healing the cleavage as by a vigorous use of suggestion, the blending of the different selves into the deeper-lying regions of the submerged selfhood. From this point of view the success of religion in the world may be accounted for by its consistent appeal to the 'divided selves,' 'sick souls,' and all who hunger after the higher life, that they renounce the lesser selves and, by an act of faith, sink them into the absolute righteousness of a limitless personality.

2. Sources of double-mindedness.—Whether or not the self is fundamentally or transcendently a unity, it is more just to concrete facts of the mental life to assume that self-consciousness is inherent in the separate psychic processes themselves. Rather than try to explain the incongruous obsessions of the self, therefore, it is more judicious to accept the multiplicity of streaks and strains that inhere in the same personality as the given fact, and then to regard the integrity of the self as a selected product of development. Its utility, let us say, is found in the value to the individual of a self-consistent history, and the increased efficiency of a social order whose units are somewhat similar. The most potent fact about the self is the constant mutations that are going on

within it (cf. W. James, *Princ. of Psych.*, chs. ix. and x.; Bradley, *Appearance and Reality*², 1897, ch. ix.). In any normal individual there are ceaseless alterations and re-combinations of the elements of the self in response to the situations that call them into activity. Each person is in turn, especially and for the moment, a bodily self, a social self, a courageous, a blushing, a righteous, an ambitious, a passionate, a logical self, and so on through a long list. There are conditions which tend to fix these various selves and perpetuate them. In the first place, it is the fate of states of consciousness to be self-limited in proportion to their intensity. To see with rapt interest a bit of colour harmony in a landscape is for the moment to be blind to all else. To feel the thrill of a heroic encounter creates a soldier whose heart is closed to every other 'calling.' The laws of habit get in their work, while vocational activities and the fixity of social customs assist in building the texture of the personality into a seemingly constant and consistent type. The twists and strains of split personality now arise through

'the irruption into the individual's life of some new stimulus or passion, such as love, ambition, cupidity, revenge, or patriotic devotion' (W. James, *Var. of Rel. Exp.*, 1902, p. 176).

It may arise from an enforced change of occupation when the cross currents are aggravated by a psychopathic temperament. The condition existing in milder forms is best seen in abnormal cases.

A young woman, early abandoned to a life of shame, and later placed in a convent, would pass, as the result of nervous disorders, through two periods, believing herself to be alternately prostitute and nun; and in each her tone, manner, dress, and speech were radically different and appropriate' (Baldwin, *DPhP* ii, 236).

One of the chief sources of split personality is the difficulty of a smooth readjustment, during the growth periods from childhood to maturity, to the new demands of later stages. This is most marked during the age of most rapid readjustment in the early teens. The old habitual self of childhood persists with great tenacity. The instinctive uprush of new life floods the youth with a feeling of new possibilities and a sense of awakening, though dimly appreciated, ideals. The struggle between the old self and the new is the crisis long known as 'storm and stress.'¹ The period is well characterized by W. James as that of the

'divided will, when the higher wishes lack just that last acuteness, that touch of explosive intensity . . . that enables them to burst their shell, and make irruption efficaciously into life and quell the lower tendencies for ever' (*Var. of Rel. Exp.* p. 178).

3. Double-mindedness and immorality.—It would seem that most blemishes of character and nearly all misdeeds and crimes might be traceable to split personality. A passionate, shamming, or partial self, either too callous or too sensitive, loses its connexion with, and setting in, the full round of life. Treacheries, for example, are the obverse side of little loyalties, just as are foolish loves and misguided philanthropies. It would appear, too, from the stress which moral codes and precepts place upon such virtues as integrity, sincerity, consistency, *temperantia*, and the like, that the normal evolution of character chiefly consists in the straightening out and unification of the inner self.

'As a fletcher makes straight his arrow,' says the *Dhammapāda* (88), 'a wise man makes straight his trembling and unsteady thought, which is difficult to keep, difficult to turn.'

Something like this is, apparently, the purport of the golden mean of Aristotle, the middle path and the will of Heaven of Confucius, the harmony with the universe of the Stoics, and the straight and narrow way of Jesus.

The danger of a duplicity of the self has been almost universally recognized by morality and

¹ See, for a description of the accompanying phenomena, W. James, *Varieties of Religious Experience*, N. Y., 1902, chs. vi. vii. viii.; Starbuck, *Psychology of Religion*², 1901, chs. v. xii. xvii. xviii.

religion. To heal up its ruptures and knit the entire life into a consistent whole has been their heroic task. Two extreme methods of unification have been advocated, with many gradations of the intermingling of both. At one extreme is the Stoical method of renunciation of everything which can disturb, distract, or fear asunder, so that the soul stands undisturbed in the midst of a changing universe, superior to all things in life or death. The opposite method is to extend the self until it is at one with all things in heaven and earth. Since the self, then, is at one with all-reality, there is nothing that can mar its serenity. One can distinguish at least four types of this latter method of unification: the mystical or baptismal or psychopathic, which would bathe in a limitless ocean of blessedness; the rational or Socratic, which would rise to higher definition and sink to profounder insight until the deeper wisdom catches up all virtue into itself; the æsthetic, as illustrated, for example, in Jesus, which is guided by a warm, refined sense of eternal values; and the practical or 'tough-minded,' represented by those who gird up their loins and preach and practise a doctrine of utmost consistency in thought and deed.

4. **The value to morality of double-mindedness.**—It is an instructive fact that the biography of so many moral and religious geniuses betrays a struggle between the cross currents of the self in the direction of good and evil. Like St. Paul and St. Augustine, what they would not, that they do, and, when the impulses lead towards the higher life, there is a stubborn inner resistance that is hardly overcome. It is probable that, just as an act of clear thought is bought of necessity at the price of severe mental tension, so a world of clean-cut moral values can exist only in the midst of conflicting inner impulses. It is 'when the struggle begins within himself' that 'man's worth something.' It is only then that 'the soul awakes and grows' (Browning, *Fine de la Fair*).

'Of necessity every distinctly moral choice involves the previous presence of a certain tendency to choose the wrong. Yes, moral choice is essentially a condemnation of the neglected motive, as well as an approval of the accepted motive. Otherwise it could be no moral choice. A being possessed of but one motive could have no conscience. . . . You might as well try to define a king without his subjects as to define a moral deed without the presence in the agent of some evil motive' (Royce, in *JJE* iv. [1893-4] 57).

If, now, in the midst of the struggle the agent conquers the lesser motive, he may issue forth into a complex world of specific moral relationships and corresponding moral values, and so come to live victoriously in a 'two-storey universe' instead of floating along a misty stream of indefinite experiences into whose gloom the light of a bedimmed conscience can scarcely shed its radiance. The value of the conflicts, too, in the social order has long been recognized by students of ethics.

'The means which Nature uses to bring about the development of all the capacities she has given man,' says Kant, 'is their *antagonism* in society, in so far as this antagonism becomes in the end a cause of social order. . . . Men have a great propensity to isolate themselves, for they find in themselves at the same time this unsocial characteristic, and each wishes to direct everything solely according to his own notion, and expects resistance just as he knows that he is inclined to resist others. It is just this resistance which awakens all man's powers' (quoted in Dewey-Tufts, *Ethics*, 1908, p. 87).

The study of biographies would even suggest that, the greater the number of antagonisms and oppositions that play against each other, the more is the personality enriched, if only they can be so neatly balanced against each other as not to waste the energies, and if the central stream of life is so directed that the habit of conquering becomes the

habit of growth. Luther, *e.g.*, is an instructive instance of a person containing what Ribot (*Diseases of Personality*, Eng. tr. Chicago, 1895, pp. 112, 126 ff.) designates 'successively' and 'even simultaneously contradictory characters.' He was jocose and serious, joyous and melancholy, submissive and independent, active and meditative, stoical and sensuous, warm-hearted and vindictive, mystic and hard-headed organizer, scholar and poet, and many things besides. The intimate relation between the presence, in such minds, of various cross currents and their moral strength is probably not an accidental one.

EDWIN D. STARBUCK.

DOUBT.—1. **Definition and scope.**—Doubt is the negation of belief, the condition of not having reached a positive conclusion for or against any proposition. In this negative nature doubt differs from *disbelief*, which is a positive conviction of falsity. Disbelief is a form of belief; it is a belief in some proposition which involves the falsity of another, with reference to which the attitude of mind is called 'disbelief.' We disbelieve the Ptolemaic theory because we believe the Copernican. Doubt, on the other hand, implies no such contrary belief. It implies suspense of judgment rather than a positive judgment to the contrary. It is the state of being unconvinced. In this sense an agnostic should be in the attitude of doubt, lacking knowledge (see art. **AGNOSTICISM**). Whether there is ever an absolute suspense of judgment may be questioned, but in the doubting attitude there is at least the absence of a categorical or of a settled judgment with reference to the idea in question. There may be the disjunctive judgment that A or B is true, but doubt as to which alternative is correct, or there may be an alternation of judgments, but no fixed conclusion. In the latter case doubt corresponds to deliberation, although expressing the negative element rather than the consideration of reasons.

As to the *objects* of doubt it is customary to distinguish between theoretical doubt and doubt as to values. The former may concern either (1) the evidence of sense, or (2) the truth of theories. The latter may be doubt as to the validity of our (3) æsthetic or (4) moral judgments. Since religion, as commonly understood, involves judgment as to both facts and values, religious doubt may be of either of the two main kinds.

The distinction sometimes drawn between *universal* and *particular* doubt is a verbal rather than a real one, the former being incompatible with sanity in things theoretical, and with life in things practical. The conscious life is essentially an active, assertive process by which objects are either assimilated, or neglected for those capable of assimilation. This limitation of doubt in the field of knowledge was shown by Descartes, and in the sphere of practice by Hume (see § 2).

The temporal relation of doubt to belief depends upon the conception of the nature of belief. If belief be taken as identical with the instinctive or immediate reality sense, doubt is a subsequent state arising from the conflict of primitive beliefs, especially as involving the disappointment of expectation and the checking of motor impulse. If belief be conceived as a reflective result dependent upon evidence, it is subsequent to doubt, and its legitimate outcome. The condition of doubt lasts as long as the idea in question fails to find its

place relative to the system which represents for us reality. When its position is discovered, the attitude towards it is one of belief—either positive as acceptance, or negative as rejection.

The resolution of doubt, consisting as it does in this determination of the place of an idea relatively to the reality system, involves the exercise of will. Yet this volition cannot be taken as a perfectly free or arbitrary action, without undermining the whole idea of truth. Doubt has significance only in so far as there is pre-supposed a system of conditions to which thought must adjust itself. There is doubt only where knowledge is possible, for doubt is always as to the judgment which ought to be passed if the purpose of thought is to be fulfilled. The resolution of doubt is therefore never a mere 'will to believe,' but a will to believe what conforms to given conditions of belief. The will is not absolute and alone in belief. See also articles BELIEF, FAITH, SCEPTICISM.

NORMAN WILDE.

2. The meaning and value of doubt as influenced by one's philosophical or theological position.—A person's attitude towards doubt and his conception of its meaning will depend much upon his philosophical or theological point of view. Apart from realism, whose psychological and epistemological ground-work is extremely varied, there are at least two general types of philosophizing, viz. absolutism and dynamic idealism, which directly influence one's estimate of doubt and its place in the moral and religious life; the former tending on the whole to disparage, and the latter to encourage, it.

(1) *Absolutism*.—Those who hold that truth or rightness is of a fixed and changeless nature fall into several groups with a variety of shades of gradation among them. For our purpose it will be sufficient to mention two as types; (a) rationalists or a-priorists, and (b) absolutists basing their views upon Divine authority.

(a) Absolutism of the rationalistic sort. There are those whose confidence in a fixed and static truth is so implicit, and who believe so firmly that this truth is of the nature of pure reason and can be attained through a logical process, that doubt is to them synonymous with ignorance. It means failure, up to any given moment of time, to have discovered the whole of truth. Such an attitude is often found among logicians, mathematicians, and theologians who have built upon a rationalistic psychology, although some of them take the matter of doubt more seriously, if, like Plotinus, they have a mystical temperament, or if, like Augustine, they are oppressed by the contrast between finite knowledge and infinite intelligence. Doubt is sometimes employed systematically as a helpful scientific or philosophical procedure by those who, like Descartes, use it as a means of sifting out from the manifold experience the pure elements of knowledge that are changeless. During the quest, rationalism has employed doubt consistently and whole-heartedly. Having established a system of truth or belief, it tends towards dogmatic certainty.

(b) A fixed and static truth or rightness based upon an external authority. From this standpoint doubt means perverseness, waywardness, or even sin, and is dealt with by disapproval, censure, condemnation, excommunication, punishment, or execution.

When either of the types of absolutism just described exists in its relatively pure form, implicit

faith is demanded within the range of the firm foundation of the system, while doubt may in all other matters prevail. There are many also, among Catholics, Protestants, and non-Christian devotees, who accept the finality of both reason and authority and insist upon their oneness. An instructive instance in point is the case of Cardinal Newman. He says (*Gram. of Assent*, pp. 214, 146):

'Now truth cannot change; what is once truth is always truth; and the human mind is made for truth. . . . once certitude, always certitude. If certitude in any matter be the termination of all doubt or fear about its truth, it carries with it an inward assurance that it shall never fail.' 'The difficulty is removed by the dogma of the Church's infallibility. The "One Holy Catholic and Apostolic Church" is an article of the Creed. It stands in the place of all abstruse propositions in a Catholic's mind, for to believe in her word is virtually to believe in them all. Even what he cannot understand he can believe to be true; and he believes it to be true because he believes in the Church.'

(2) *Types of idealism with a dynamic or developmental conception of reality*.—This philosophical position, somewhat older than Aristotelianism, has arisen with new life during the last century and a half. It has been steadily undermining dogmatism and certitude, and not only accepting doubt as a wholesome mental regimen, but interpreting it as a necessary and intimate part of the growth process. Its representatives may be separated into two groups: (a) rationalists, who, like Hegel, abandon the law of identity and contradiction and posit a rational world-consciousness in a process of becoming or evolution; and (b) the large class, including pragmatists, voluntarists, and affectionists, to whom reality seems to be of a plastic, non-rational sort, which the thought-processes, since they are its products, can only symbolize, not reveal.

(a) Hegel may be taken as a representative of the idealists who hold a dynamic and teleological conception of reality, and insist that the 'cosmic spirit unfolds in a strict and vigorous logic, whose consummation is thought of thought' (Cushman, *Hist. of Phil.*, 1911, ii. 281). The absolute reason proceeds everywhere and always according to a law of negativity—passes over into its other or opposite only to return to itself enriched by the contradiction. There is always the threefold act, whether in the personal life or in history—affirmation, contradiction, and return-to-itself (the thesis, antithesis, and synthesis of Fichte and Schelling). The law of contradiction which formal logic and static rationalism respect is not 'true,' but only represents the second step in an endless process of becoming. The unfolding of the Absolute must of necessity, and by its very nature, have contradictions within it, as the condition of passing on to a richer synthesis. Doubt in the individual, therefore, and scepticism in history (see, e.g., Hegel's discussion of the Sceptics, in his *Hist. of Philos.*, 1892-96) are not simply justifiable on account of their stimulating and intensifying power, but are wholly essential parts of the evolution of spirit.

(b) Non-rational idealism. Hegel's philosophical justification of negation was but the formulating of a world-attitude towards the value of doubt that had been developing during the Renaissance and has been gaining momentum to the present time. No reference is here made to its value in the way of mental clarification and as a means of arriving at certainty as in the Yes and No procedure of Abelard and Aquinas, or to the method by which Descartes doubted away everything possible in order to arrive at clear and distinct ideas and therefore dogmatic certainty; what we have in view is rather a growing conception that reality is of a non-rational kind which cannot be truly represented by the cognitive processes. The thought-life is one (among others) of the ways in which the world of being manifests itself. It is epiphenomenal. Its reports are suggestive and

symbolical, not final. Dogmatism is, from this point of view, no longer possible, and the tentative reliance upon a 'truth' so far forth apprehended, of which doubt is the wholesome sign, is fundamentally justifiable. Following upon the acute scepticism and criticism which culminated in Hume and Kant respectively, confidence in the power of pure reason to transcend itself and report objective reality was undermined, and with it the belief was displaced that the universe was constructed on logical principles. The conviction grew insistent that reality is plastic or dynamic, and is of the nature of feeling or will. Being so, its meaning is to be read out in terms of feeling or symbolized through ideation. Illustrative of the affectionists may be mentioned: Kant's faculty of taste and æsthetic judgment as the synthesizing principle behind reason and judgment; Schelling's notion that ideas have not logical worth, but are God's intuitions of Himself, and that æsthetics and religion contain the deeper wisdom which will resolve all contradictions; Schleiermacher's doctrine that religious ideas are forms of the manifestation of religious feeling; and Schiller's and Goethe's conception of the 'Beautiful Soul' revealed through 'disinterested contemplation.' The volitionists are equally numerous and commanding. Illustrations of these are the 'God-will' of Kant, the 'Deed-act' of Fichte, and the 'World-as-will' of Schopenhauer, with his teaching that Reason and Idea are indeed distorted expressions of this fundamental world-will. The doctrine of biological evolution is a concrete form of the prevailing passion (which had possessed the best minds for more than half a century before it was formulated by Darwin) for a developmental account of reality, and in turn has given vast impetus to the conception. Some of the modern forms into which it has become crystallized are pragmatism, radical empiricism, vitalism, and voluntarism. All these give up the possibility of the dogmatic certainty of a unified system of beliefs. As summarized by A. J. Balfour:

'No philosophy or theory of knowledge can be satisfactory which does not find room within it for the quite obvious but not sufficiently considered fact that, so far as empirical science can tell us anything about the matter, most of the proximate causes of belief, and all its ultimate causes are non-rational in their character' (*The Foundations of Belief*, 386-8).

The attitude of all these towards doubt and certainty may be typified by the following from W. James:

'The safe thing is surely to recognize that all the insights of creatures of a day like ourselves must be provisional. The wisest critic is an altering being, subject to the better insight of the morrow, and right at any moment, only "up to date" and "on the whole." . . . "Heartily know, when half-gods go, the gods arrive." . . . I do indeed disbelieve that we or any other mortal men can attain on a given day to absolutely incorrigible and unimprovable truth about such matters of fact as those with which religions deal' (*Varieties of Religious Experience*, 1902, p. 333 f.).

3. Doubt for its own sake.—Most writers make a distinction between doubt as an end and its use in the growth of knowledge. Even those who justify it most unqualifiedly within its proper limits condemn it just as cordially as a chronic obsession.

James goes so far as to observe: 'It is often practically impossible to distinguish doubts from dogmatic negation. . . . Scepticism in moral matters is an ally of immorality. Who is not for is against. . . . in theory as in practice, dodge, or hedge, or talk as we like about a wise skepticism, we are really doing volunteer service for one side or the other' (*The Will to Believe*, 1899, p. 109). Sir William Hamilton, who believes that 'doubt is the first step toward philosophy,' observes: 'Doubt, as a permanent state of mind, would be, in fact, little better than an intellectual death. The mind lives as it believes,—it lives in the affirmation of itself, of nature, and of God; a doubt upon any of these would be a diminution of its life—a doubt upon the three, were it possible, would be tantamount to a mental annihilation' (*Lect. on Met. I*, 91).

The danger of doubting is not only that it may become a fixed habit, but that interest may centre

in the process itself as severed from the complex of normal mental activities and healthy enthusiasms and become a mania (doubting-madness; *folie du doute*; *Grübelnsucht*). Pathologists have accepted this as a special type of insanity (see, for example, B. Ball's art. 'Doubt, Insanity of,' in Tuke's *Dict. of Psychol. Medicine*, 1892). Its symptoms are a state of persistent intellectual unrest, a devouring metaphysical hunger, a morbid anxiety for mental satisfaction, accompanied not infrequently by a Hamlet-like paralysis of the will.

4. Doubt as the condition of knowledge and of its growth.—The dictum of Hamilton, 'we doubt in order that we may believe' (*loc. cit.*), has been, as the result of modern psychological analysis of the nature of the thought-processes, settling into a truism. According to James, 'belief and disbelief are but two aspects of one psychological state. . . . we never disbelieve anything except for the reason that we believe something else which contradicts the first thing' (*Princ. of Psych.*, 1890, ii, 234). Such a conception becomes self-evident through an analysis of the mental conditions involved in certitude. This is shown even in the simplest acts of cognition. No act of perception would be possible without selective attention, a narrowing of the field of consciousness, and a more or less sharp discrimination of the object perceived from related objects. Such an act often, if not generally, involves an artificial cutting away of the object from its setting, as hand from arm, leaf from branch, child from adult, day from night, and the like. Further perceptual processes almost invariably make cross-cuttings of these cuttings as hand-wrist-arm, leaf-twigg-branch, normal-abnormal child, twelve-hours, six-months day, and the like. The growth of knowledge consists just in the healing of the cleavages, and the organization, through judgments, of the discrete elements of experience into wholes after they have been necessarily severed, as the condition of having clear images and states of consciousness. Without dissatisfaction with the accuracy and finality of the discrete perceptual images already experienced (which dissatisfaction is doubt in the making), the further organization, in terms of judgments, of which knowledge consists, would not be possible. All the higher acts of conception involve similar discriminations and artificial separations as the condition that they become clear. They are always interested in a part of experience at the expense of all the rest. Then, when general judgments are formed, it is inevitable that discord should arise between these and each and all the diverse details that they have sought to harmonize. Wenley, in a chapter on 'Pre-established Discord,' has given a faithful analysis of the principle as it concerns the limitation of science and the behaviour of scientists:

'Any science, that is, any body of judgments about a part of experience, becomes self-centred, if you insist that it transform itself into a rational account of experience as a whole. Nay, it may be maintained that, precisely in proportion as science conforms to the ideal of exactness, it declines in truth when universalized, just because it is able to grasp, or adjust, individual cases: advance in knowledge depends upon awareness of problems, of contradictions. Science as a process of investigation consists in an effort to erase these blotches upon consistency' (*Mod. Thought and the Crisis in Belief*, pp. 200-210).

Without the intensification of consciousness resulting from clean-cut images along with their often necessary distortions, there would exist only a dim, confused state of general awareness or a 'feeling of simple reality.' All belief, in every case, has for its criterion, on the contrary, 'a feeling of resolved doubt.' 'What I believe has its pros and cons, and however vaguely, still really, I am better satisfied with the pros than with the cons. Now for the first time, therefore, we have belief' (Baldwin, *Handb. of Psych.*, 1889, p. 158). From

such a consideration it is evident that doubt is bound up necessarily with any act of faith. As expressed by Ladd:

'Skepticism and agnosticism remain legitimate and valuable (even indispensable) attitudes of the mind toward all the objects both of knowledge and of so-called faith. . . . To doubt and inquire, to refuse to affirm, and to deny, whether applied in the 'interest of conduct, of science, or of speculative thinking, are as essential to the process of cognition as are faith and affirmation of the most positive and undisturbed kind' (*Phil. of Knowledge*, p. 369).

The necessity of doubt to knowledge arises also from the retarding effect of a native inertia which causes a discord between thought and action; and this condition is aggravated by the deadening effect of habit and custom, which must constantly be transcended and replaced by a habit of growth, or, in other words, the habit of readjustment. Foster has compared doubt to the moulting of a bird by which it accommodates itself to the rotation of the seasons, and to the process of elimination in digestion. Doubt is therefore the 'purgative, eliminative, excretive side of religious experience, as faith is its nourishing; and therefore we are saved by doubt as well as by faith' (*The Funct. of Relig. in Man's Struggle for Existence*, p. 138 f.).

5. Development of doubt in the personal life.—A valuable suggestion as to the place of doubt in the constructive life of morality and religion is found in the fact that it is the rule rather than the exception, in the growth from childhood credulity, imitativeness, and external authority, into a personal grasp of spiritual verities, that men and women pass through, usually in the late teens, a stage of mental perturbation, and of inquiry into the groundwork of faith. The youth 'turns logician and proves everything, and accepts that only which seems to possess a reason.' A study of biographies and autobiographies seems to show that 'the higher life-purposes develop and intensify simultaneously with the growth of doubt. . . . Doubt is a process of mental clarification; it is a step in the process of self-mastery; it is an indication that all the latent powers are beginning to be realized' (Starbuck, *Psychol. of Relig.*, pp. 223, 242).

6. The cultivation of the science and art of doubting judiciously and constructively.—The number of recent sympathetic discussions by psychologists and theologians of the meaning of doubt would indicate that leaders of thought have come rather generally to accept a constructive interpretation of it when kept within certain limits. The art of judicious doubting was first formulated by Aristotle, who saw in it the golden mean between the scepticism of the Sophists and the logismatism of the popular mind:

'It will contribute towards one's object, who wishes to acquire a faculty in the gaining of knowledge, to doubt judiciously, for a subsequent acquisition in the way of knowledge is the solution of previous doubts. . . . They who carry on an investigation without doubting first are similar to persons ignorant where they ought to walk. . . . There is a necessity that a person should be better qualified for forming a judgment who has heard all the reasons, as it were, of adversaries and opposing disputants' (*Met. ii.*).

It has been an advance over even that great hinker to discover the necessary relation of doubt to the acts of knowledge and belief, and so to find the element of faith which lies embedded in 'honest doubt,' provided one 'clings ever to its sunnier side.' In this view doubt is an index of the direction in which life's deeper problems lie. This has been tersely formulated by Royce:

'In these matters the truly philosophic doubt is no external opinion of this or that person; it is the very essence of our thought. . . . The doubt is inherent in the subject-matter. This doubt is to be accepted as it comes and then to be developed in all its fullness and in all its intensity. For the truth of the matter is concealed in that doubt, as the fire is concealed in the stony coal. You can no more reject the doubt and keep the innermost truth than you can toss away the coal and hope to retain the fire. This doubt is the insight partially attained' (*Relig. Aspect of Philos.*, p. 229 f.).

EDWIN D. STARBUCK.

DOUKHOBORS [in pronunciation the *k* is scarcely heard, and the accent is on the last syllable; there are other forms of the name, but this is the form now usually employed].—The name Doukhobors was used at least as far back as the year 1785, and means 'spirit-wrestlers,' as the Doukhobors claim to fight not with carnal weapons, but armed with the Spirit of Truth. They regard as the founder of their sect a retired non-commissioned Prussian officer who lived and taught in a village of the Kharkof Government about the year 1740, and who, it is thought, was a Quaker. There is every reason to believe this anonymous leader to have been a man of high character, and devoted to the service of his fellow-men. Towards the close of the 18th cent. Doukhobors were scattered from the Volga southward and westward over Southern Russia, with adherents in various other parts of the Empire. The Czar Paul on his accession adopted a policy of toleration towards them, but changed his mind when, in 1799, some Doukhobors openly preached that rulers were not needed. Alexander I. allowed many of the Doukhobors to come together from various parts of Russia and to form a settlement of their own at the 'Milky Waters,' near the sea of Azof (1801-1824). This was a turning-point in their history. From being a religious sect held together by unity of beliefs, anxious to propagate their views among their neighbours, the Doukhobors became a community, and ceased to be propagandists. During the same period, moreover, their leader, Saveli Kapoustin, gained such power over his followers that he could declare himself to be an incarnation of Christ, and could claim for himself and his successors Divine honours; while, on the other hand, his adherents were forbidden to acknowledge that they recognized any earthly leader, so that, even to the present, they endeavour to confuse any outsider who may seek to study their beliefs. It would also appear that the successors of Kapoustin, all of whom gained control of great wealth by the introduction of communism among the Doukhobors, sanctioned the assassination of those who opposed them. At all events, the Russian Government made a thorough investigation of these charges, and in 1841 the Doukhobors were banished from the Milky Waters to the Wet Mountains in Georgia, where the wild hill-tribes were favourably impressed by their non-resisting neighbours, who, when molested, neither retaliated nor sought police protection. There they led a prosperous existence, and later numbered about 20,000. In 1887, when general conscription was introduced in the Caucasus, came the last crisis in their history. Not even the power of the whole Russian Empire

could induce them to join the army once they were persuaded that it is wrong for men to kill one another. Even when they endured it, the Doukhobors had regarded military service as a tyrannous imposition. Meanwhile Tolstoi and his friends, intentionally kept in ignorance of the theocratic claims of the Doukhobor leader, and believing the sect to be merely harmless Anarchists of the Tolstoi type, became interested on their behalf, and at last, in 1898, permission was given them to leave Russia. Far removed and destitute, they suffered much until rescued by the united efforts of Russian, English, and American philanthropists, who came to their assistance in defraying the expenses. Aided by the Canadian Government, 7363 Doukhobors were in 1899 established in Canada, leaving in the Caucasus about 12,000 who did not wish to emigrate. At present their number in Canada exceeds 9000. The welcome given to the first contingent in Canada was overpowering in its cordiality. A salute of artillery greeted them at the port, and the railway journey was a triumphal procession. They were in Canada three years before their leader, Piotr Verigin, was liberated by the Russian Government after sixteen years of exile. The Doukhobor settlements are situated in N.E. Assiniboia, about a day's drive from Yorkton; they stretch still farther to the N.E. over into Saskatchewan on the north, and touch slightly on Manitoba in the east.

The first known leader of the sect was Sylvan Kolesnikof (1750-1775). He was succeeded by Ilarion Pobirohin (1775-1785), and he by Savely Kapoustin (1790-1817), the founder of a Doukhobor dynasty, and the most remarkable of all the leaders. By him communism was also introduced among the Doukhobors. He was succeeded by his son Vassily Kalmikof (1817-1832), and he by Ilarion Kalmikof (1832-1841) and Peter Kalmikof (?-1864). Peter Kalmikof was succeeded by his wife Loukeriya, who proved an exceptionally able leader. She died in 1886, and was succeeded by Piotr Verigin, the present [1911] leader. But his accession provoked such hostility on the part of an important minority that the Government was forced to intervene and to send him into banishment. From his exile he issued mandates, influenced by Tolstoi's teachings, which seemed to the Doukhobors so severe that a considerable split took place in the sect. In consequence, as already noted, less than half of the Doukhobors followed Verigin, these being the ones who emigrated to Canada. Besides those Doukhobors who have been under the leadership of this dynasty, there are other bodies scattered throughout Russia, the exact accounts of whom are so fragmentary that it is difficult to present a consecutive history of them.

Their history shows that, unfortunately, their ills were not always from without. They did not always hold their faith with the same amount of zeal, and it is a history of constant backsliding and revivals. That these revivals were due to the advent of some worthy leader of men seems clearly demonstrated. Recognizing the Doukhobors as morally a race of giants, we must in speaking about them acknowledge the clearness of their perception of certain fundamental formal principles and the heroic tenacity with which they have upheld them. The sect has erred and split in pieces in the past, but the validity of certain principles to which they have testified will remain. The Doukhobor statement of truth is sometimes calm, moderate, persuasive, imparting a philosophic truth to conventional phrases, and at all dangerous points taking refuge in mysticism. At times, on the other hand, it is clear, resolute, radical, and contemptuous of all authority.

The tenets of these men, who will not acknow-

ledge an earthly rulership, may be stated as far as possible to the following effect. There is one God. Their leader Pobirohin in the 18th cent. is said to have explicitly taught that God does not exist by Himself, but is inseparable from man. It is for the righteous in a way to give Him life—a curious doctrine, perhaps, but one which seems to be the mainspring of their innate character. They explain away rather than affirm the doctrine of the Trinity. Jesus Christ was the spirit of piety, purity, etc., incarnate. He is born, preaches, suffers, dies, and rises again spiritually in the heart of each believer. He is the Son of God; but in the same sense we also are the sons of God. The inward word reveals Him in the depths of our souls. It existed in all ages, and enlightens all who are ready to receive it, whether they are nominally Christians or belong to some other religious community. Our souls existed and fell before the creation of the material universe. The Church is a society selected by God Himself. It is invisible and scattered over the whole world; it is not externally marked by any common creed. Not Christians only, but Jews, Muhammadans, and others may be members of it, if only they hearken to the inward word. The Scriptures must be understood figuratively to represent things that are inward and spiritual; and the Bible has less authority than 'the Living Word' (which may imply either an 'Inner Light' or the oral teachings of the head of the Doukhobors). The Christ within is the only true Hierarch and Priest. Therefore no external priest is necessary. The sons of God should worship God in spirit and in truth. The external sacraments have no efficacy. To baptize a child with water is unbecoming, but an adult baptizes himself with the word of truth by the true priest, Christ, with spirit and with fire. Confession is heartfelt contrition before God. The external sacraments are offensive to God, for Christ desires not signs but realities. The forms of worship of all Churches in the world are in themselves but dead signs, mere figures. To pray in temples made with hands is contrary to the injunction of the Saviour. Yet a son of God need not fear to enter a temple of any religious community. Icons are regarded as idols; the saints should not be prayed to; fasting should consist in fleeing from lusts. Marriage should be accomplished without any ceremonies; it needs only the will of those who are united in love to one another, and an inward vow in the souls of those who are marrying. An external marriage ceremony, apart from the inward marriage, has no meaning. The Doukhobors hold that no man and woman should continue to live together as man and wife unless they love and reverence each other. They wish to live up to their belief in 'peace at any price'; to go to war is forbidden. They refuse military service, which was the cause of their persecution in Russia and the reason of their emigration to Canada. Taxation, law courts, and all police regulations are condemned. Commerce is despised, and agriculture should be the great source of livelihood. All men are equal, and all rank and power is unnatural and mere usurpation. They believe that men gifted with reason should not use violence against others, but should influence one another by the appeal of mind to mind. Less violence, crime, vice, poverty (apart from the effects of persecution), superstition, luxury, or wretchedness is to be found among the Doukhobors than among their neighbours. They are sober, laborious, and frugal, clean and tidy in their houses and clothing, and attentive to their agriculture, which is their chief occupation. Those in Canada are almost all vegetarians, total abstainers, and non-smokers.

Under their present leader, Piotr Verigin, the

commune in Canada appears to be a financial success. He arrived there immediately upon his release from the Siberian mines, and has proved himself to be an eminently practical man. The Doukhobors adopted improved agricultural machinery, and established various mills, such as flour mills, oatmeal mills, saw mills, flax mills, etc. They also acquired a brick- and tile-making plant. The communism of their villages in Canada is centralized so that the communal funds of both the Doukhobor North and South Colonies are now all under the control of a Committee of Three. A large warehouse for the distribution of goods among the villages is situated in a convenient position on the Canadian Pacific Railway. The Doukhobor community is the largest experiment in pure communism that has ever been attempted. The Doukhobors of the Prince Albert Colony are more individualistic; they do not hold their land in common, and only to a small extent co-operate with the North and South Colonies.

Previous to Verigin's arrival in Canada, there was much confusion among the Doukhobors, who

were too ignorant, under new conditions, to arrange their plans; and even after he had come there was some friction with the authorities owing to the Doukhobor reluctance to recognize any allegiance except to Verigin. It is about this question, indeed, that all the trouble of the Canadian Government with the sect has centred, and in consequence more than a thousand Doukhobors, forming the Prince Albert Colony, have formed a sub-sect, marked chiefly by their refusal to render to Verigin the honours to which he lays claim.

DRAMA (Introductory).—1. Definition and affinities.—In the most primitive sense of the term, the word 'drama' denotes simply 'deed,' 'action,' as in *Æsch. Agamem.* 532 f.:

Ἡ δὲ δράμα οὐτε συντελεῖς πόλις
ἐξήχεται τὸ δράμα τοῦ πάθους πλέον,—

but before long it had gained the signification which it was henceforth to bear: 'a representation by persons (less frequently by puppets and the like), usually suitably disguised by dress, masks, etc., of acts believed to have been performed, or supposed to be performed, by other beings, the effect often enhanced by appropriate scenery. etc. That this is true was perceived centuries ago by the most rigidly analytic of all thinkers, Aristotle, in whose *Poetics* tragedy and comedy are among those arts "which are all in their original conception modes of imitation" (*πάσαι τευχάνουσι οὖσαι μιμήσεις τὸ σύνολον* [i. 2]); hence, some say, the name of "drama" is given to such poems, as representing action' (*ὅθεν καὶ δράματα καλεῖσθαι τινες αὐτὰ φασιν, διὰ μιμοῦνται δρώντας* [iii. 3]; for the Aristotelian meaning of 'imitation' ['an idealized representation of human life—of character, emotion, action—under forms manifest to the sense'], see Butcher's discussion in his *Aristotle's Theory of Poetry and Fine Art*, London, 1902, ch. ii.).

Whether the idealization implied by Aristotle may fairly be sought in primitive drama, or in comedy as a whole at any period, or in certain specimens of modern tragedy, is not beyond question; but there still remains the fact that 'imitation'—and imitation only—accounts for the rise of drama and for the attraction which it holds to-day, as in the remote past when it originated. To-day, as in its primitive form, drama is designed to reproduce events which already have happened or which are supposed to be happening; and, since such reproduction normally requires the spoken word, it is obvious, as Aristotle already saw, that the drama is closely connected with the epic and the lyric, the difference being that the epic and the lyric require only the spoken word, while the drama always requires action and, except in rare

instances, words as well. These exceptions are formed chiefly by the puppet plays, or marionettes (on which see Pischel, *Heimat des Puppenspiels*, Halle, 1900 [Eng. tr., London, 1902]; Magnin, *Hist. des marionettes*, Paris, 1862; Mairdour, *Marionettes et guignols*, Paris, 1900; Rehm, *Buch der Marionetten*, Berlin, 1905), which, doubtless originating in India, have spread thence throughout Europe (finally degenerating into the 'Punch-and-Judy show') and also far into the East (cf. the interesting varieties discussed below in the 'Javanese and Further Indian' section). Another exception might possibly be considered to be formed by the modern 'moving pictures,' but these have no right to come under the dramatic category at all.

Drama is also linked to yet another art, the pictorial; but the imitation by means of pictorial art, besides lacking the spoken word, is static, whereas dramatic art is continuous throughout the time which the production may consume. Far otherwise is the case with two more of the fine arts—music (whether instrumental or vocal, or both together) and the dance (using this term in its widest connotation). Indeed, so closely connected with the drama is the dance that the Skr. term for 'drama' is *nāṭya*, which literally means 'dance'; and even on the modern stage an entire drama may be performed by pantomimic dance, without the utterance of a single word.

2. Origin.—By the Aristotelian definition of drama, which is neatly epitomized by Suidas and the *Etymologicum Magnum* as 'a doing, an action . . . and also those things mimetically performed by actors, as in a rôle' (*ποίημα, πᾶγμα, ὡς καὶ δράσαι, πράξει. λέγεται δὲ δράμα καὶ τὰ ὑπὸ τῶν θεατρικῶν μιμητῶν γινόμενα ὡς ἐν ὑποκρίσει*), it is an imitation of something. The question then arises, Of what or of whom? On the modern stage this imitation may be of some event known to have happened or supposed to have happened in past time, in both cases considerable elaboration, and even departure from strict historical or traditional accuracy, being allowable to heighten dramatic effect. Such

a drama may be represented by the *Herod* or by the *Ulysses* of Stephen Phillips. Or we may have an acted imitation of a purely fanciful series of events, as in the case of the greater number of Ibsen's plays. Yet it may well be questioned whether in origin the drama admitted any merely imaginary themes. This is, of course, a subject upon which it is extremely dangerous to dogmatize, and our knowledge of the mental processes of primitive man is by no means sufficient to warrant hard and fast conclusions.

The problem with regard to the origin of the drama is here precisely that which confronts us with regard to the folk-tales. It is perfectly true that at a relatively early period folk-tales may be told for the entertainment which they afford, and in like manner a primitive drama, because it chances to give pleasure to its spectators, may come to be regarded as pleasure-giving, and may conceivably be produced time and again for the mere purpose of pleasure. In spite of all this, it seems to the writer highly problematical whether any notion of pleasure, either to actors or to spectators, was intended by drama at its inception. The best evidence at our command seems to show that for primitive man life was by no means simple delight or poetic outlook upon the beauties of Nature, but rather a matter of deadly earnest, a struggle for existence, and a terror of mishap of which we, in modern days, can scarcely form an adequate conception. If such was the case, there can have been scant opportunity of amusement for amusement's sake. We have no right even to assume that the few carvings of primitive European man which have been preserved were made by him for his own delectation; for aught we know they may have been magical in purpose—the figure of a reindeer, for example, being drawn to gain power over reindeer; or they may have been historical—a picture of a reindeer that the particular artist had either tamed or killed (cf., for example, the American Indian 'winter counts'). This is a conjecture, but it is one that must be reckoned with. Again, in the popular stories told as fairy tales to children to-day there is unquestionably present an element—and that element the essential one—which was once believed to be no mere tale to amuse an idle moment, but a fact of grim and terrible reality. The story of Bluebeard is now a common nursery story which the most simple child knows was never 'really and truly so'; but there was undoubtedly a period when it was regarded as an historic and awful instance of the peril of broken tabu (see *CF*, ch. xi.). Throughout their history the drama and the folk-tale have been interlinked; and in India this was also true (cf. Gray, 'The Sanskrit Novel and the Sanskrit Drama', in *WZKM* xviii. [1904] 48-54). Perhaps the 'dramatized novel' really reproduces at least a portion of the process through which the primitive drama passed. The same principle receives another exemplification from children's games. Without citing the mass of American Indian games to which Culin (*24 RBEW* [1907]) attributes a purely religious origin, it may here be sufficient simply to allude to the basal idea of the English and American game of 'London Bridge' (see *ERE* ii. 852*).

If stories, games, and the like were thus profoundly serious in their origin, may not the drama have been equally serious? It must not, of course, be forgotten that early man, like all his succeeding generations, was an imitative creature, and that within the sphere of everyday life he may have seen happening to his fellows events which awakened either his concern or his ridicule, and these he doubtless narrated to his companions with appropriate gestures. In the ludicrous events of

this sort, and in the rough jests on his fellows which primitive man may have occasionally permitted himself, may well be found some of the germs of what was later to develop into comedy. Yet, on the whole, it would appear that drama took its origin, not from the imitation of men, but from the actions, whether legendary or mythological, of far more worshipful beings than men, that is to say, of Divine beings, the very gods themselves, as comes out most clearly in the masks worn in the Hopi *katchinas* (cf. below, p. 871 f.). Nor, if this hypothesis be correct, is the reason for such imitation far to seek. The motive was no idle one, nor had it merely a didactic end. It was probably rather one of the wide-spread manifestations of that homeopathic principle of primitive religion conventionally known as 'sympathetic magic.' By representation of an action believed to be performed, or in past time to have been performed, by worshipful beings, it was held that these worshipful beings would be constrained, were the ritual unerringly performed, to repeat the action in question. The drama would thus be, in origin, a part of magic, and, since the action represented by the drama would be desirable to the community, and since the chief needs of a primitive community are normally connected with the food supply and with other matters more or less conditioned by the powers of Nature, there is reason to suppose that the earliest drama was, in the main, associated with the worship of Nature-gods. The theory here advanced seems to receive confirmation from the development of the Egyptian drama (see *ERE*, vol. iii. pp. 99^b, 101 f.), especially when it is remembered that the ancient Egyptians were singularly tenacious of primitive concepts; so that in many ways they recall the far ruder religious principles which we may still find in vogue among the African *Naturvölker*. Yet more elaborate is the drama as a mimetic representation of the acts of worshipful beings among many American Indian tribes, such as the Kwakiutl (Boas, *Rep. U.S. Nat. Mus.*, 1895, p. 500 ff.), but more especially the Tusayans, the Hopi, and the Zuni (Fewkes, *15 RBEW* [1897], p. 251 ff., *21 RBEW* [1903], p. 40 ff.; Stevenson, *23 RBEW* [1904], pp. 66 ff., 217 ff.). The actors are masked to represent the appropriate deities; and so important is the connexion of dancing with these primitive dramas that one is strongly tempted to seek in some similar phenomenon the origin of the designation of the Sanskrit drama by the simple term 'dance' (*nāṭya*). It is furthermore noteworthy that in the Hopi and Zuni dramas religious ritual and mimetic representation are so interwoven that any strict limitation of the two is practically impossible. Indeed, Grosse (*Beginnings of Art*, New York, 1897, p. 224 f.; cf. von Schröder, *Mysterium und Mimus im Rigveda*, Leipzig, 1908, p. 13 ff.) goes so far as to declare that the drama 'appears, from the point of view of development of history, as a differentiated form of the dance.' In this connexion it is interesting to note that Hindu tradition declares that the first dramatic representations in the presence of the gods were of three sorts: *nṛtta*, simple dance; *nṛtṭya*, a dance with gestures, but without words; and *nāṭya*, a dance with words and gestures (von Schröder, p. 14).

There is yet another vital resemblance, not only between the American Indian and the Sanskrit drama, but also between both these and the Greek. This is song normally accompanied by instrumental music. Without here entering upon the theory of poetry, it will be sufficient to observe that the poem, so far as it relates to drama, falls into two large categories, which we may roughly describe as epic and lyric. Epic poetry is pre-eminently narrative, and originally it was perhaps simply a rhythmic narration of events first told in prose.

Lyric poetry, on the other hand, is produced under stress of some sort of emotion. The outworking of this dramatic use of epic and lyric may be seen at its best in the Greek tragedians; but in the Sanskrit drama, on the other hand, although the Hindus were well acquainted with the epic, we have what is in all probability a more primitive type than the Greek; for here we have, not epic and lyric, but prose and lyric, and the Hopi drama shows that, just as in the Sanskrit drama, the lyric is the essential portion of what we may term the text. A clear light is thrown on this matter by the Buddhist *jātakas*, in which the essential teachings of the tales are in verse, the prose being a mere expansion of them; and the same holds true of the *gāthās* in the northern Buddhistic *Lalitavistara*. There is, therefore, much to be said for the theory of Oldenberg (*ZDMG* xxxvii. [1883] 78-82; cf. von Schröder, p. 4 ff., and Geldner, *GIRP* ii. 29 f.) that certain hymns of the Rigveda and the Iranian *gāthās* originally contained a framework of prose, although only the verse, as being the most essential portion, has survived.

We have seen that drama is an imitation of the acts of worshipful beings; and this implies that, to the primitive mind, the actor is, for the time being, the deity whom he represents. It is for this reason that only those deities can be represented with whom the actor believes that he can become identified. In the most primitive stage of belief probably no deity would thus be excluded, but with the development of religion some Divine beings assume a character which no human being can hope to possess. It is universally recognized that the Greek drama was closely connected with the cult of Dionysus, and Miss Harrison is doubtless correct when she writes (*Proleg. to the Study of Gr. Rel.*², Cambridge, 1908, p. 568):

'Surely it is at least possible that the real impulse to the drama lay not wholly in "goat-songs" and "circular dancing places," but also in the cardinal, essentially dramatic conviction of the religion of Dionysos, that the worshipper can not only worship, but can become, can be, his god. Athene and Zeus and Poseidon have no drama, because no one, in his wildest moments, believed he could become and be Athene or Zeus or Poseidon. It is indeed only in the orgiastic religions that these splendid moments of conviction could come, and, for Greece at least, only in an orgiastic religion did the drama take its rise.'

The drama falls into two main types, which we conventionally term comedy and tragedy. In the very beginning there was probably no such division, for the acts of Divine beings are in themselves neither tragic nor comic; they are events, either desirable or undesirable, and consequently to be deprecated or sought; just as in life itself grave alternates with gay—all blended in one whole. Yet certain events, being more important than others, naturally receive emphasis, and certain seasons when the primitive dramas were presented lent their colour to the mimic action. It was particularly in the spring and at the harvest that the more joyous element was predominant. Many Sanskrit plays explicitly state that they were produced at the spring festival, and we know that the harvest feast was the time in ancient Italy when the *Fescennini* and other rude folk-dramas were enacted (*Verg. Georg.* ii. 385 ff.; *Hor. Ep.* ii. i. 139 ff.; *Tibull.* ii. i. 55 ff.; cf. also *Liv.* vii. 2), in which connexion it is noteworthy that the *Fescennini* were also sung at weddings (*Catull.* lxi. 122 f.; for further refs. see Teuffel-Schwabe, *Gesch. der röm. Lit.*², Leipzig, 1886, p. 5). The Greek word *κωμῳδία* in itself means simply 'revel song' (Meyer, *Handbuch der griech. Etymol.*, Leipzig, 1901-2, ii. 345), and Aristotle was, therefore, right when he said that comedy originated from the leaders of phallic songs (*Poet.* iv. 12). Every trait of comedy points to the conclusion that it was a manifestation of happiness at the re-juvenation and re-birth of Nature, and an expression of joy that Nature

had given birth to the crops; but, by the wanton and even indecent spirit which this joy often excited, it was doubtless believed that, through the principle of sympathetic magic, a genesiac energy would be inspired in the Divine wedlock of heaven and earth, that similar, and even richer, fertility might be experienced in seasons to come. It is evident that what we call indecency must not be regarded as a primitive motive of comedy at its beginning; yet it must be confessed that libidinous pleasure was doubtless aroused by witnessing or taking part in these comedies. With increasing forgetfulness of the primary purpose of the comedy, the salacity which had at first been a mere incident, and designed (from the point of view of primitive man) for a good and desirable end, came to be the dominating motive; and it is the indecency of the comedy that accounts for many of the protests which, from the days of Tertullian to the present time, have been levelled with only too much justice against the entire drama.

Far different, in all probability, was the origin of the second great type of the drama—tragedy. It is true that this, as well as comedy, has been derived by more than one classical scholar from the same source—the worship of Dionysus (Harrison, p. 568 ff.; Gruppe, *Gr. Mythol. und Religionsgesch.*, Munich, 1906, p. 1436; Farnell, *CJS* v. 229 ff.); but this theory rests on slender evidence. It is far more probable to suppose, with Crusius (*Preuss. Jahrbücher*, lxxiv. [1893] 394), Hirt (*Indogermanen*, Strassburg, 1905-7, pp. 477 f., 727), and Ridgway (address before the Hellenic Society, 3rd May 1904 [cf. *Athenæum*, no. 3995, p. 660], and especially in his *Origin of Tragedy*, Cambridge, 1910 [see esp. ch. i.]), that the ultimate source of tragedy was in the funeral songs and funeral games celebrated in honour of deceased heroes, the whole being performed to honour and appease the dead. A noteworthy instance here was the case of Adrastus, a hero-king of Sikyon, where his *ἥρῳς* stood in the market-place. Regarding him, Herodotus (v. 67) writes that

'the Sikyonians were wont especially greatly to honour Adrastus. . . . Both in other respects the Sikyonians honoured Adrastus, and in addition they celebrated his misfortune by tragic choruses (τὰ δράματα αὐτοῦ τραγικοῖσι χοροῖσι ὑψαυον), not honouring Dionysus, but Adrastus. . . . But Kleisthenes gave away (ἀνέδωκε) for the force of this verb, see Ridgway, *Tragedy*, p. 28 f., and of the parallel ἀνέδωκεν ὅσους in this same passage) the choruses to Dionysus, and the rest of the sacrifice to Melanippos.'

This theory finds a support in the hypothesis of Hazen, to be cited below (p. 896), that the Javanese *wayang* was originally a form of ancestor-worship; and Forster (*Reise um die Welt*, ed. Leipzig, 1843, i. 330 f.) saw primitive dramas produced at funeral feasts on the Society Islands.

Here, at a funeral, two young girls danced to the music of three drums, and 'zwischen den Acten führten drei Mannsleute ein pantomimisches Drama auf, in welchem schlafende Reisende vorgestellt wurden, denen einige Diebe mit grosser Geschicklichkeit die Baggage weggestahlen, unerachtet sich jene, grösserer Sicherheit wegen, rund um dieselbe herum gelegt hatten.'

A further confirmation of the theory here advocated appears to lie in the essentially epic movement of the action of the Greek tragedy, and there may be more meaning than is commonly supposed in Plato's characterization of Homer (*Theaet.* 152 E) as 'the foremost poet of tragedy.' In fact, there seems to the writer to be scant reason for connecting the rise of Greek tragedy with the worship of Dionysus, who was essentially a revel god, or, indeed, with any other specific Greek deity. Primarily the son of Semele, an ancient Thracian goddess of Mother Earth, Dionysus was, it is true, later identified with Attis, Adonis, and Osiris, and in an obvious way he was regarded also as a chthonic deity and as releasing from the under world (see the full discussions in Harrison, ch. viii.; Gruppe, pp. 1407-1440; *CJS* v. ch. v.); but

all this seems scarcely sufficient to account for the rise of tragedy from this cult, whereas, on the principles set forth above, his connexion with comedy is readily explicable. At most his association with tragedy rests on the slender logic that, since comedy was (reasonably enough) connected with his cult as a Nature-deity, and since tragedy, like comedy, was a division of drama, therefore tragedy also must be associated with him. Cf. and cf. the 'Greek' art. below.

In this connexion it may not be out of place to consider the original meaning of the word 'tragedy,' which the writer hopes to discuss in fuller detail in the more appropriate pages of a technical philological journal, giving merely his summarized conclusions here. The conventional derivation of *τραγῳδία* from *τραγός* + *οἶον*, 'goat-song,' while possible so far as mere phonology and noun-composition are concerned, has long been felt to be unsatisfactory on any of the theories (1) that a goat was the prize for the best performance; (2) that a goat was sacrificed at or during the performance of the play; or (3) that the actors were dressed in goat-skins. It has accordingly been supposed by Miss Harrison (most recently in *Proleg.* p. 420 f.) that tragedy really means 'spelt-song' (from *trápos* in its meaning of 'a mass of groats made of wheat, spelt,' etc.). This, however, seems little more satisfactory on the score of semantics. Since comedy is repeatedly contrasted with tragedy, and since 'comedy' almost certainly means, as already noted, 'revel song,' one would expect 'tragedy' to have some meaning antithetic to 'comedy.' If, then, in view of the unsatisfactory derivations commonly assigned to the word, we may resort to the principles of comparative philology for a solution, it may be suggested that the first part of *τραγῳδία*, *τραγο-* (the second part, *οἶον*, plainly means 'singing'), is etymologically connected with O. Norse *þrækr*, 'strength, courage, daring,' Anglo-Saxon *þracu*, 'attack, fury, conflict, pressure' (for further, less certain, cognates, reference may be made to the projected article). This would be the second full grade of the Indo-Germanic base **tereg-*, and the base meaning appears to be 'mighty, bold, terrible,' or the like. On this hypothesis, the meaning of *τραγῳδία* would be 'the singing of bold (or terrible) things'—a signification that would not only contrast admirably with the 'revel song,' but would also correspond with all known characteristics of the tragedy, as well as harmonize with the theory of the origin of this type of drama favoured in this article, that it was primarily connected with the funeral rites of deceased heroes (cf. also the noteworthy passage of the *Etymologicum Gudianum*, s.v. *τραγῳδία*: *Κωμῳδία τραγῳδίας διαφέρει· κωμῳδία γὰρ ἐστὶ βωτικῶν πραγμάτων διήγησις· τραγῳδία δὲ ἥρωικον πάθος*).

The original functions of the drama, as here outlined, were soon obscured among all those peoples, as the Greeks and Hindus, with whom it became a distinct form of literature and amusement. The two features which now became prominent, and which have remained the most important ever since, were the light vein of comedy and the heavy vein of tragedy, while the religious foundation survived only in isolated and obscure fragments. Thus comedy became, as with Aristophanes, a means of satire, whether of the 'suffragettes' of his day (as in the *Ecclesiazusæ*) or of the radicalism of Euripides, whom he lashed, and with very good reason. With the rise of the 'New Comedy,' as represented by the fragments of Menander and, most fully, by Plautus and Terence, we have a comedy of manners which finds its analogues in many of the better-class comedies of the present day. India is conspicuous for having no tragedy, though there are scenes, as in the *Nāgānanda* and the *Mālatīmādhava*, which closely approach the tragic, just as in our melodrama.

3. Divisions.—It seems scarcely necessary to enter here into a discussion of all the possible subdivisions of the drama, whether of Polonius's 'tragedy, comedy, history, pastoral, pastoral-comical, historical-pastoral, tragical-historical, tragical-comical-historical-pastoral,' of the minute Skr. classification into ten 'forms' (*rūpakas*) and eighteen 'sub-forms' (*uparūpakas*; see Lévi, *Théâtre indien*, Paris, 1890, i. 140 ff.), or of the more technical division into classic and romantic tragedy, romantic drama, melodrama, emotional drama, spectacular drama, musical drama, classic and romantic comedy, comedy of manners, farce, burlesque, burletta, comedietta, and vaudeville (Hennequin, *Art of Playwriting*, New York, 1890, chs. vii.-ix.); nor is it needful to consider the

problems of the unities, climaxes, catastrophes, scenery, 'business,' and the like. It is, however, worth while to note two forms of drama—opera, and the morality. The opera, which is a drama accompanied by music, and often by an elaborate ballet, is a survival of the very primitive type in which the dialogue was regularly associated with instrumental and vocal music and with dancing; and the writer has elsewhere ventured to suggest that the whole Sanskrit drama 'is to be compared with an opera rather than with a play' (*JAOS* xxvii. [1906] 5). The other type of play, the morality, is of particular value for the student of religion, for in it there is a deliberate effort to present, under allegorical form, a distinct moral or religious teaching. This form of play, to which more special attention will be given in art. MIRACLE PLAYS, is found not only in Europe, but also in India, as is evinced by the Skr. *Prabodhachandrodāya* ('Rise of the Moon of Intellect,' tr. J. Taylor, Bombay, 1812, 1893); and that the morality has not ceased to charm in our own day is shown by the welcome accorded, both in Britain and America, to the charming production of *Everyman*. Finally, it may be noted that, as the writer once heard Brander Matthews say in a lecture, the most primitive form of drama to be found at the present day is that in the lowest type of music hall, with its rough jests and horseplay, its dances (all often of a somewhat questionable character), and its scanty plot.

4. Actors.—The position of the actor in the primitive drama is, of course, a most honourable one; for, where the player is enacting the rôles of the gods themselves, he cannot be other than a most highly respected person; the esteem accorded him is precisely what is accorded, e.g., to the actors in the Passion Play of Oberammergau. But this position of honour does not last long; and in China, Japan, India (cf. the Skr. proverbs given by Böhtlingk in his *Ind. Sprüche*, St. Petersburg, 1870-73, nos. 1593, 2235, 2278, 3165, 5315, 6284), and Rome the actor was regarded as an outcast, this, doubtless, being due, as Krause (*Parivölker der Gegenwart*, Leipzig, 1903, p. 3 f.; cf. Beneke, *Von unehrlichen Leuten*, Leipzig, 1863, p. 21) says, to the fact that the actor's profession demanded a roving life, so that he could not belong to any regular community, while his subordination of his own personality to the rôles which he was to play robbed him of respect in the eyes of the spectators. In consequence, the actors suffered certain civic disabilities, as when they were debarred from being witnesses in courts of law, or when, as in China, their descendants were forbidden to compete in public examinations for three generations (cf. also Post, *Afrikan. Jurisprudenz*, Oldenburg, 1887, i. 171 f.). Equal contempt was manifested towards actresses, so that in India they were classed among courtesans and bawds (Schmidt, *Beitr. zur ind. Erotik*, Leipzig, 1902, pp. 283, 778 f.); and, as in India and China, many peoples have forbidden women to appear upon the stage, their rôles being taken by men and boys. More or less social ostracism still attaches to the great majority of those connected with the stage, and it is unfortunately true that the lives of many players, with their flagrant disregard of social conventions, and even of common morality, have given only too much reason for disfavour. To the peculiar temptations of stage life, increased greatly by the wanderings to which the actor is normally doomed, only allusion is necessary. Yet it must not be forgotten that this darker side is, in reality, nothing but an unhappy incident; only the faults are generally known, and the brighter and nobler side of the actor's life is too little recognized. Accurate statistics of the moral and intellectual standard of the

acting profession would, doubtless, compare favourably with similar standards of many other professions.

5. The ethical aspect of the drama.—Outside the Christian world this problem seems to have received slight consideration. The Buddhist 'Ten Precepts' for monks include 'abstinence from the sight of dancing, singing, music, and shows' (*naccagītavādītaṇṇasūkadassanā veramanī* [*Khud-dakapāṭha*, 3; cf. the citations in Lévi, ii. 54]); but the history of Buddhism proves that this interdiction was ill obeyed (Lévi, i. 319-323). The theoretical position of Jainism against the theatre was the same (*Āyāraṅgasūtra*, ii. xi. 14), with the same disregard of it in actual life; and we have not only the fine Buddhistic drama *Nāgārāṇḍa*, but also such Jain plays as the *Rājamatiprabodha* (Lévi, i. 323 f., ii. 57).

The chief objection to the drama from the ethical standpoint has arisen from Christianity. In the case of the pagan dramas this can readily be understood. They were pagan, and countenanced idolatry (Tertullian's first objection to them in his *de Spectaculis*); they were frankly immoral; and the ascetic tendency of Christianity was against such idle amusements (cf. 'Roman' art. below). With the decay of paganism and the creation of a purer sentiment the first two objections disappeared, while the value of the stage as an educational factor led the Church to encourage the drama; nor is there any doubt that the theatre was a powerful agent in bringing the less educated to a knowledge of Bible history and in enforcing the Church's moral teachings (see MIRACLE PLAYS). The whole tradition of the Catholic Church, whether Roman or Anglican, has been, like that of Lutheranism in Protestantism, distinctly favourable to a pure and lofty drama. Far different was the position of Reformed Protestantism. The most fervent admirers of Calvin, Zwingli, Knox, and their followers would be the most unwilling to deny that these men, one and all, set their faces against everything that they deemed folly; nor can the warmest advocate of the theatre deny that much had come into the drama to arouse antagonism even from men of more compromising type. But, unfortunately, they, as the German proverb has it, 'shook out the child with the bath,' and condemned the theatre utterly. In England, attacks on the stage have come almost entirely from the Puritans, as in Northbrooke's *Treatise wherein Dicing, Dauncing, vaine Playes or Enterluds . . . are reprovved* (1577-79, ed. Collier, for the Shakespeare Society, 1843), Gosson's *School of Abuse* (1579, ed. Collier, 1843), Stubb's *Anatomic of Abuses* (1583, ed. Furnivale, New Shakespeare Soc., ser. vi., 1876-82), and especially Prynne's *Histrio-Mastrix* (1632; on all these see Ward, *Hist. of Eng. Dramatic Lit.*, London, 1899, i. 459-461, iii. 239-245). But suppression of the theatre was hopeless, and has ever since remained hopeless. The Reformed Church has, nevertheless, maintained its position; and in this it has been followed by the Wesleyans and, on the whole, by the Baptists, as well as by many of the smaller sects of the United States, though here, too, practice lags far behind precept. On the other hand, the Anglican Church, by its Actors' Alliance, has set an example which other communions might do worse than follow.

But is the suppression of the theatre desirable? The writer is inclined to doubt it. That there is much represented on the stage which is utterly vile is only too apparent; and that should be crushed (cf. also art. CENSORSHIP). On the other hand, there is an abundance that is of the highest ethical value, and this becomes the more important when it is remembered that the theatre

is largely patronized by the non-churchgoing classes. Without entering into a technical discussion of Ibsen, it would seem that his dramas are full of moral lessons of a Puritanical sternness: the fearful consequences of the sins of the fathers in *Ghosts*, the need of absolute confidence between husband and wife in *A Doll's House*, or the seathing condemnation of hypocrisy in *The Pillars of Society*. And Ibsen is but one of a host of dramatists who for centuries have conveyed through the stage lessons of value for mankind who might otherwise never have received them. There is, moreover, in humanity a real need for the stage; had it not been so, the long-waged war on the theatre would have been crowned with success. From this point of view the question of attending the theatre merges into that of amusements (*q.v.*). The theatre has perhaps yet another *raison d'être*, often overlooked. In a famous passage (*Poet.* vi. 2) Aristotle defines tragedy as 'an imitation of an action that is serious, complete, and of a certain magnitude . . . through pity and fear effecting the proper purgation of these emotions' (*μῦθος πρῶτος σπουδαίος καὶ τελείος, μέγεθος ἐχούσης* . . . δι' ἐλέου καὶ φόβου περλαύονσα τὴν τῶν τοιοῦτων παθόντων κάθαρσιν); and this has been admirably explained by Butcher (*op. cit.* ch. vi.) as meaning that the witnessing of a tragedy rouses in the spectator emotions of fear and pity which expel those same emotions that are lying latent within himself, while 'in the pleasurable calm which follows when the passion is spent, an emotional cure has been wrought.' On this principle, the attendance on any good drama would, in like manner, effect a pleasurable and healthy excitation, and a discharge of emotions, latent indeed, but so seldom aroused as to be in danger of atrophy.

LITERATURE.—The bibliography of the drama is enormous, though much is irrelevant in the present connexion, and more special branches will be given in the literature appended to the following special sections. This section has been intentionally restricted to problems of the origin, primitive purpose, and general ethics of the drama; and the history—here omitted—will be more appropriately discussed in the following sections. There is no complete history of the drama, the most important works on which are Klein, *Gesch. des Drama's* (14 vols., Leipzig, 1865-86); Pröls, *Gesch. des neueren Drama's* (Leipzig, 1880-83); Petit de Julleville, *Histoire du théâtre en France* (Paris, 1880 ff.); Berendt, *Schiller-Wagner* (Berlin, 1901); Ward, *Hist. of Eng. Dramatic Lit. to the Death of Queen Anne* (2 vols., London, 1899); Seilhamer, *Hist. of the American Theatre* (Philadelphia, 1888-91). For interesting studies of some of the great modern dramatists, see Archer, *English Dramatists of To-Day* (London, 1882); Huneker, *Iconoclasts* (New York, 1905); Hale, *Dramatists of To-Day* (New York, 1905). Special attention is due to the edition and commentary on the *Poetics* of Aristotle by Butcher (*Aristotle's Theory of Poetry and Fine Art*³, London, 1902), and Ridgeway, *Origin of Tragedy, with Special Reference to the Greek Tragedians* (Cambridge, 1910). The technical side is conveniently treated by Freytag, *Technique of the Drama* (tr. MacEwan³, Chicago, 1900); Woodbridge, *The Drama, its Law and Technique* (Boston, 1898); Price, *Technique of the Drama* (New York, 1892); Henneguin, *Art of Playwriting* (New York, 1896). For an interesting form of primitive drama among the Manes of N.W. Siberia, see Gondatti, *Traces of Paganism among the Aborigines of N.W. Siberia* (Russ.) (Moscow, 1888; epitomized by Schmidt, in *Cultur der Gegenwart*, i. part 7 [*Die orientalischen Literaturen*], Leipzig, 1906, p. 21 f.).

LOUIS H. GRAY.

DRAMA (American).—In America, particularly in Mexico and Peru, the drama reached a relatively high degree of development. Even at an earlier stage, North American Indian pantomimic dances, usually named after the animals imitated, show an approximation to the drama. Thus, among the Dakotas, a youth on admission to full tribal rights was clothed in a bearskin and pantomimically hunted by the members of the Greek tribe—a scene which reminds one of the Greek mimetic dance described by Xenophon (*Anab.* vi. 1). Among the Puebloan Tusayans and Hopis an elementary form of drama is found in the *katsinas*, which are primarily 'spirits of the ancients of the

Hopis, and personations of them by men bear the symbols which are supposed to have characterized these ancients' (Fewkes, 'Hopi Katsinas,' p. 16). In a secondary meaning *katsina* also connotes a dance in which these heroes are impersonated; and such dramas are presented at stated festivals in honour of the arrival or departure of the heroes or gods. Other *katsinas*, while equally religious in origin and spirit, are given only occasionally. Some *katsinas*, such as the *povamá*, or bean-planting, are performed partly in the open air, and occupy a number of days; but others are given in the *kivas*, or assembly-houses, and approximate more closely to the drama proper. One of the latter class, described in considerable detail by Fewkes (*op. cit.* pp. 40-51; *Proceedings of the Washington Academy of Sciences*, Washington, 1900, ii. 607-626), is noteworthy for its elaborate mimetic dances, while dialogue, as in the Polynesian dramas, plays but a minor part. In the Hopi play, moreover, scenery is employed and stage properties are used, while marionettes are not unknown. Costume is, of course, an important feature of the *katsinas*, and the masks are a characteristic part of the entire ceremony (cf. the collection reproduced by Fewkes, *op. cit.* plates i.-lxiii.).

In Yucatan a form of drama was known, in which 'buffoons' (*balzam*) represented ancient legends, interspersed with jests at the expense of local dignitaries; but such plays seem to have had no connexion with religion (Fancourt, *History of Yucatan*, London, 1854, p. 122). Both in ancient Mexico and in Peru mimetic dances were known (Klein, *Gesch. des Drama's*, Leipzig, xi. [1874] 97 f.), the former being in great part fertility-ceremonies, and accompanied with phallic gestures. The Aztecs also had, however, a more developed drama, of which an example has survived in the *Rabinal-Achi*, a sort of ballet with dialogue. This play is concerned with the tragic fate of Prince Cavec Quiche Achi, who is captured after a long struggle by the hero, Rabinal-Achi. As a dramatic production the *Rabinal-Achi* is of little value, excepting as an interesting example of a play produced by a people devoid of contact with other nations possessing a developed drama.

The Inca *amantas*, according to Garcilasso de la Vega, ii. 26 (tr. by Markham, Hakluyt Society, London, 1869, xli. 194), composed both comedies and tragedies, which were presented at important festivals before the king and high nobles, while the actors, who received rich presents for their services, were themselves men of rank. The tragedies 'always related to military deeds, triumphs, and victories, or to the grandeur of former kings and of other heroic men. The arguments of the comedies were on agriculture and familiar household subjects. . . . They did not allow improper or vile farces; but all the plays were on decorous and important subjects, the sentences being such as befitted the occasion.'

The only Inca drama which has survived in its entirety, however, is the play of *Ollanta*, which seems to date from the reign of the Inca Huayna Capac, in the first decade of the 16th century. The scene is laid in the reign of the Inca Yupanki, in the early part of the 15th cent., and the theme is one of love. Ollanta, raised from a humble station to the dignity of a chief by the Inca Pachacutec, falls in love with Cushi Cooyllur, the daughter of Pachacutec, but his suit is denied by the Inca. Ollanta then declares war upon his sovereign, and, though at first successful, is at last betrayed to his enemy. Meanwhile the princess had been imprisoned, and in her cell had given birth to a daughter, who, however, was allowed her freedom. The captive Ollanta, condemned to death by Yupanki, who had succeeded Pachacutec in

the course of the ten years' war, is later spared, and even declared the heir-apparent to the throne. At this juncture, Ollanta's daughter, learning that her mother is a captive, implores the Inca to release her, whereupon he repairs to the cell, accompanied by his retinue, and in the happy *dénouement* Cushi Cooyllur is re-united with Ollanta. The drama may well have a historic basis, and it is noteworthy that it contains songs which strikingly correspond to the Greek chorus.

Another Inca drama has been preserved, the *Usca Pawcar*, treating of the love of its hero for the beautiful Coori-tica; but it has been so changed by later interpolations that it is of relatively little value for a knowledge of the Inca drama. While a generalization on such scant data may be deemed hazardous, it may perhaps be suggested that in the bloody fate of the Aztec Rabinal-Achi, who dances to his death on the sacrificial stone amid twelve eagles and wild beasts, as contrasted with the beauty and pathos, with a happy ending, of the drama of *Ollanta*, there is a suggestion of the cardinal traits of the ancient Mexicans and Peruvians themselves. Dramatically, moreover, the Aztec play is far inferior to the Inca—the former a mass of repetition, the latter a work of art, which is most closely paralleled in its supreme devotion to the theme of love, as Klein has well pointed out, with the drama of ancient India. In the number of acts, exceeding the conventional five, and in the disregard of the 'unities,' the *Ollanta* presents another point of similarity with the Sanskrit drama.

LITERATURE.—Gerland, *Anthropol. der Naturvölker*, iii. 210 (Leipzig, 1862); Fewkes, 'Tusayan Katsinas,' in *16 REEW* (1897) 251-313; 'Hopi Katsinas,' *21 REEW* (1903) 1-126; Klein, *Gesch. des Drama's*, iii. 513-598 (Leipzig, 1866); Preuss, 'Phallische Fruchtbarkeit-Dämonen als Träger des altmexikanischen Dramas,' in *AA*, new series, i. 129-188; Brasseur de Bourbourg, *Gramm. de la langue quiché* (Paris, 1862; containing the text and a French tr. of the *Rabinal-Achi*); Tschudi, 'Ollanta, ein altperuanisches Drama,' in *DWAW*, philos.-hist. Classe, xxiv. 169-384; Fletcher, 'Dramatic Representation,' in *Bull. 30 BE*, part 1, p. 400 (Washington, 1907).

LOUIS H. GRAY.

DRAMA (Arabic).—It is a strange feature of Arabic literature (otherwise so rich, developed even to the point of degeneration) that the art of the drama has never advanced beyond the very crudest beginnings.¹ Even to-day there is no Arabic drama; there is only a drama in the Arabic language; for all plays that have appeared in the language of Muhammad during the last fifty years are nothing but translations, or, at best, imitations, of European works; and, before this period, all that was written and played in the form of dialogue can hardly be called drama in the real meaning of the word; it was simply a rudimentary form of it.

The earliest traces of Arabic dramatics are to be found, as Horovitz says, in the art of the *haki*,² or *mugallid*, the imitator of dialectic³ and personal peculiarities. This individual, though not now known under the same name, is still to be frequently seen in modern Egypt. A certain Ahmad Fahim al-Far in Cairo, for instance, enjoys a wide-spread popularity because of his ability to reproduce the cries of different animals and to depict comic scenes of all kinds, especially those of harem and peasant life.⁴ Women, in particular, are very fond of such

¹ Richard F. Burton, in the terminal essay of his tr. of *The Thousand Nights and a Night* (Benares, 1885), vol. x. p. 166, says: 'Turkey is the only Moslem country which has dared to produce a regular drama.'

² Horovitz, *Spuren griech. Mimen im Orient* (Berlin, 1906), pp. 18-21; Sachau, *Am Euphrat und Tigris* (Leipzig, 1900), p. 66.

³ Dialectic peculiarities still play an important part in the Arabic farce, the shadow-play, and the puppet-show.

⁴ Ahmad al-Far, known under the name Ibn Rabiya, works with a troupe of about 12 persons, exclusively men, who also play the female rôles. His most popular pieces are the *fasl etturugi*, a most indecent farce picturing the deeds of a charlatan who expels a devil, an *'afrit*, from a woman; the *fasl ega'idi*, wherein

performances. A similar figure in the streets of Cairo is the well-known, but nowadays rarely seen, fun-maker, 'Alī Kākā,¹ who appears occasionally at *mūlids* (birth festivals), and at the fair held every week on the open square below the Citadel. He is the prototype of the coarse, half-idiotic, clownish peasant who, to the music of two flutes and a *darabukka* (earthenware drum), performs ape-like, obscene dances and makes absurd jokes. He goes barefoot, and wears a bent tail of stiffened cotton; in one hand he holds a long peasant's stick (*nabbūt*), and in the other a so-called *fargilla*, a kind of long, thick, noisy, but harmless, whip of twisted cotton, with which he constantly lashes his musicians, and even his audience.

The recitations of the story-tellers (*rāwī*), who were formerly to be found throughout the Arabic Orient, and who related in public places tales from the *Arabian Nights*, had without doubt, as the manner of the stories themselves proves, a dramatic character;² and this is certainly so in the case of the recitations of the modern epigones of the *rāwīs* — the *šū'ara* and *muḥaddithin*,³ who, to the accompaniment of the *rubāba* (a kind of stringed instrument), recite in coffee-houses the stories of 'Antar, Abū Zaid, Ṣāhir Bibars,⁴ and other national heroes. Worthy of note is the fact that Dozy,⁵ quoting Pedro de Alcalá, gives for the word *šā'ir* the meaning 'acteur, qui joue un rôle (representador de comedias, de tragedias).' Female reciters are also occasionally, though not often, seen at fairs in Cairo.

Of this kind of folk-literature the classical and highest expression was reached by the poets of the *Maḡāmāt*, by Hamadhānī⁶ (967–1007), Ḥariri⁷ (1054–1122), and many others. The *maḡāma*, called by Cheney⁸ 'a kind of dramatic anecdote,' relates, in a most vivid and animated but somewhat artificial style, the deeds and speeches of wandering scholars, beggars, and jugglers, and has not even yet entirely disappeared from modern Arabic literature.⁹

In spite, however, of all these preparatory mimic and dramatic elements in their literature, the Arabs, as has already been stated, have never found their way to the actual drama. At all events, there seems to be no positive proof of the existence of an early Arabic stage. If, occasionally, we meet with the word *ḥijāl* or *ḥajāl*,¹⁰ it means, in all probability, nothing more than the already mentioned *taḡlād*,¹¹ the mimicry of comical personal characteristics, or the presentation of short, loosely connected scenes, not a theatrical piece. The complete lack of all dramatic texts, the absence even of the description of any dramatic

representation, would be, when one considers the numerous chronicles of mediæval Arabic amusements, an altogether too remarkable omission to be regarded as possible, had there been a stage. The earliest description of an Arabic drama known to the present writer is that given by the famous Danish traveller, Carsten Niebuhr,¹ who visited Cairo a hundred and thirty years ago; but even this performance, which bears a close resemblance to the scenes of Aḥmad al-Fār, seems to correspond in form only, not in substance, to our conception of the drama.

The reasons for this curious failure of the Arabic mind to produce anything really dramatic have been discussed upon at length by Jacob in his history of the shadow-play.² He points out that the Muhammadan view of life, with its autocratic idea of God and fate, has absolutely no comprehension of individual conflict, of rebellion against the 'eternal mover,' the Muḥarrrik, or of any combat between will and duty, and has therefore no comprehension of the dramatic. Joy in tragedy, that most individualistic form of dramatic art, must seem to the passively feeling and thinking Arab a very great absurdity. The artistic pleasure which we feel in the beauty of the awe-inspiring, in magnificent decline, in the grandeur of the desperate battle of life, without hope and without success, is entirely foreign to the Arab. His ideal hero is too practical to allow himself to be uselessly conquered, and no Arab poet would venture to represent him in such a manner. He does not defy fate: he gets round it! It never occurs to the Arab to try to determine the main lines of his own life, for 'there is no strength or power but in God the Great'; his eye is turned towards that which lies nearest, to the detail, that which is decorative only; all Arabic art is nothing but detail work, merely putting on the finishing touches; it is never original creating; the great decisive tendencies and forms of art have always come to the people of Muhammad from other lands.³ Their manner of thinking, too, is epic, and opposed to all rapid development. For them accumulation, repetition of the same motif, is not tiring or an evidence of bad taste; on the contrary, they consider it a most effective artistic principle. Quick action in the progress of a story, that which is really dramatic, is therefore actually unpleasant to the Arab. He relates everything with epic breadth, never referring to an already related incident without repeating the whole story to the point of tediousness. Tension in the plot is unknown to him; when he has found a theme that pleases him, he makes variations upon it until the subject is completely exhausted. This is well illustrated by Arabic music. A European listener, after half an hour of such music, with its constant reiteration of the same series of tones, its interminable variations of the same melody consisting of scarcely a dozen notes, sinks into a state of despair, whereas the Oriental never has enough of it.

The only form of dramatic art which, though probably not originated by the Arabs, has nevertheless been developed to a certain degree by them, is the shadow-play, the *ḥajāl eddill*.⁴ The history of the Arabic shadow-play, thanks to the thorough investigations of Jacob,⁵ and to the publications of Littmann,⁶ Kern,⁷ Prüfer,⁸ Wetzstein-Jahn,⁹ and, lately, those of Kahle,¹⁰ is now, in its essential points, very well known. There is undoubtedly no question that the shadow-play was brought to the Muhammadan peoples of the Orient from the Far East.¹¹ Which of those peoples was the first to cultivate this curious kind of theatrical art, it is

are described the adventures in Cairo of a stupid, yet shrewd, peasant of Upper Egypt; and the *faṣl el-Higāz*, the pilgrimage to Mecca. Aḥmad al-Fār's performances are given only at weddings and other private festivities.

¹ See Kern in the Appendix (p. 104) to Horovitz's work cited above.

² Burton (*op. cit.* x, 9, note 1): 'No wonder that the *Nights* has been made the basis of a national theatre amongst the Turks.'

³ An exact description of the *šū'ara* and *muḥaddithin* and of their performances is to be found in Lane's *Manners and Customs of the Modern Egyptians*, 1836, chs. 21–23.

⁴ The subjects of these recitations have all been published in romance form. See, for example, *Širet ez-Zāhir Bibars* (Cairo, 1908, 50 vols.); *Širet Bani Ḥilāl* (Beirut, 1891, 62 vols.); *Ṭaḡribet Bani Ḥilāl* (Beirut, n.d., 26 vols.); and *Širet 'Antara* (Cairo, A.H. 1306–11, 24 vols.).

¹¹ 'Die Forschung der letzten Jahre hat darüber keinen Zweifel benommen, dass die Heimat des Schattentheaters im fernem Osten zu suchen ist' (p. 4).

difficult to say, but there is no great probability that the credit belongs to the Arabs. The earliest mention of the shadow-theatre in Arabic literature is found in the verses of Wagih ad-Din Dihjā' b. 'Abd al-Karim el-Munawi (13th cent.), quoted by Ghuzūlī and translated by Jacob.¹ It is obvious, however, that the play must have been known in Egypt before that time, because Ibn Higge² speaks of a shadow-player who performed before the Sultan Ṣalāh ad-Din (1169-1193) in Cairo. From this time onwards the existence of an Arabic shadow-stage, especially in Egypt, which, as Jacob observes,³ seems always to have been the land where the *ḥajāl eddill* has flourished the most, has been proved by several passages in Oriental and Occidental literature.⁴ If Kahle,⁵ influenced by statements made by a modern shadow-player of Cairo, and by the self-glorifying poetry of the father of the same player, thinks that the *ḥajāl eddill* was unknown in Egypt from the beginning of the 19th cent. until about 1860, the present writer fears that his opinion is not wholly tenable. There is evidence that the shadow-play existed during this period of time in Egypt. Lane, for instance, of whom Kahle asserts that he does not mention the shadow-play with a single word,⁶ speaks of such a play, although the *ḥajāl ed-dill* (sic!) which he mentions was given in the Turkish language.⁷ It is not clear from the statement of Didier,⁸ who saw a 'lanterne magique' (*kara-queuz*) in Cairo, in the year 1859, whether he witnessed a Turkish or an Arabic performance, but at all events it was a shadow-play at which he was present. The probable truth of the matter is that the play did in fact become for a time almost obsolete in Egypt, and that Hasan el-Qassās, the father of Kahle's informant, the self-styled re-inventor of the play in this country, came into possession, in some manner, of the old manuscripts, and may thus very likely have acquired an influence on the development of the play. Certain it is that the Egyptian shadow-performers of to-day regard Ḥasan el-Qassās and his son Derwīš as their masters.⁹ Some of the manuscripts are now in Kahle's hands.¹⁰

Kahle's texts and three pieces written by the Egyptian physician, Muḥammad ibn Dānījāl,¹¹ in the 12th cent. A.D., are up to the present time the only two known shadow-play manuscripts. The poetic form that is common to both has given place, in the modern productions, to a prose dialogue, which is only occasionally interrupted by songs and passages in rhymed prose. In the Syrian pieces, published by Littmann, the poetic lines seem to be entirely lacking. The pieces of Ibn Dānījāl have disappeared from the present shadow-stage, while

Kahle's plays, although in essentially different form, are still given in Cairo. The repertoire of the Cairo shadow-players is not very large; only the *li'b eddēr*,¹ consisting of many acts (*faṣl*), and the much shorter *li'b elmarkīb*,² undoubtedly influenced by the Turkish Karagöz-play, *Kayk cünü*,³ are still frequently produced. The other pieces mentioned by Prüfer and Kern⁴ are very seldom given, and then only by special request. The above-mentioned Syrian plays are, in material and *dramatis personæ*, much nearer to the Turkish Karagöz than are the Egyptian pieces.⁵

The shadow-theatre, as a folk-amusement, can now hardly be said to fill an important rôle in the Arabic Orient. In fact, most of that which is indigenous, including native art-ideas, is slowly disappearing behind a thin veneering of European culture. The Europeanized *efendi* snobbishly prefers the Frankish theatre, even though it bore him, to his own native stage; and the *seḥ* and small bourgeois do not dare to risk their reputations by letting themselves be seen in the obscure dens in which the shadow-play has been obliged to take refuge from European innovation. Thus there now remains only the lowest class to form an audience for a production, of which an unknown Arab poet has written: ⁶

A meaning deep is in the shadow-play
For him who sits on wisdom's highest throne.
Figures and forms pass by and fade away,
Then all is gone, the ruler stays alone.

The scenic apparatus (*idda*) of the *ḥajāl eddill* is the simplest imaginable.⁷ The player (*uṣṭā*) sets up his *kusk*, a movable wooden booth, wherever he wishes it; there he sits behind a tightly stretched muslin curtain (*sās*), which is lighted from behind by a primitive oil lamp (*š'la*), and presses the transparent leather figures against the curtain by means of wooden sticks fastened to the figures at the back, and serving at the same time to move their limbs. The player is supported by his troupe (*gag*), who help him with the manipulation of the figures and in reciting the different rôles.

The only shadow-stage where continual performances were given, the little theatre in the ill-famed Cairo Fish Market, has been closed, by order of the police, since the beginning of the summer of 1909; so that, for the time being, at any rate, the play can be seen only on the occasion of folk-festivals, or, sometimes, at weddings and other family merry-makings.

As Kahle⁸ tells us, figures older than forty years are not to be found in the hands of the Egyptian shadow-player of to-day, and one can hardly judge from the present figures what the old ones were like. Derwīš shows, with pride, pictures and fashion-plates of the early seventies, and says that they were the models for the modern figures.

Besides the *ḥajāl eddill*, there exists in Egypt a marionette show; whose hero bears the same name as the protagonist of the Turkish shadow-play—Karagöz, pronounced in the Cairo vernacular, *Aragöz*.⁹ Under this name the puppet-show is mentioned in the *Description de l'Égypte*.¹⁰ Carsten Niebuhr¹¹ also describes at length the Cairo marionettes. The picture, however, which he

³ Jacob gives an exhaustive index of the shadow-play literature in his *Erwähnungen des Schattentheaters in der Welt-Litteratur* (Berlin, 1906). It may be added that the shadow-play was mentioned in a work written at the end of the 17th cent., the *Hazz el-ghufi* of Serbini (Bulaq, A.N. 1274 [A.D. 1857]), p. 32.

⁴ See Kahle, *Zur Gesch. des Schattentheaters in Ägypten*, p. 4 f. Kahle himself, in his very important *Islamische Schattenspielfiguren aus Ägypten* (1911), modified his former opinion somewhat.

⁵ *Ib.* p. 3.

⁶ Lane, *Manners and Customs of the Modern Egyptians*, p. 359. 'Les ombres chinoises' are mentioned also in *Description de l'Égypte*, vol. xviii, p. 441.

⁷ *Les Nuits du Caire*, Paris, 1860, p. 853: '... et à côté la lanterne magique, *kara-queuz*, ravissait la foule par de fabuleuses obscénités.'

⁸ Parts of the texts of the shadow-player Mūsā Eṣṣā'ir are in Kern's possession.

⁹ Derwīš is still in possession of a number of fragments of shadow-play manuscripts.

¹⁰ An extensive study of these three pieces may be found in Jacob's *Gesch. des Schattentheaters*, pp. 34-75. Besides the two manuscripts of Ibn Dānījāl's plays described by Jacob, another exists in Cairo. It is in the hands of Ahmad Bē Teimūr, who kindly gave the present writer permission to have it copied. The manuscript, which is not clearly dated, seems to be not much older than 800 years.

⁷ See the description given by Prüfer in *Ein ägypt. Schattenspiel*, pp. v-ix.

⁸ *Zur Gesch. des arab. Schattentheaters in Ägypten*, p. 6 f. After this was written Kahle found in Egypt a great number of very fine old shadow-play figures, which may have been manufactured as early as the 13th century.

⁹ Kern, *Das ägypt. Schattentheater*, p. 104.

¹⁰ *Description de l'Égypte; Etat moderne*, xviii. 170 (1825).

¹¹ *Reisebeschreibung nach Arabien und anderen umliegenden Ländern*, I. 188.

shows on plate xxvi. does not give a correct idea of the modern marionette stage, and very likely not of the old one. Didier¹ speaks of 'polichinelle arabe.' But an exact description of the Egyptian Aragöz-play² has never been published, nor have its texts ever appeared in print.

The only Aragöz-player known to the writer at the present time [1911] is the *usta* Ahmad 'Ali el-Hudari, who lives in Bulag, in the Turguman quarter. His little theatre is even simpler than that of the shadow stage; it consists of a folding booth of cloth, not much higher than a man's head; the front side is somewhat lower than the other sides, and the player sits inside this *kuşk*, moving on his fingers, just above the edge of the front side, the roughly made wooden figures, which are dressed in bits of coloured cloth, the puppets being visible to their hips. More than two figures cannot appear at the same time. The repertoire is very limited, and, just as in the Turkish shadow-play, but in contrast to the Egyptian *hajal eddill*, some types of the *dramatis personæ* re-appear in every play (if these loosely strung scenes and dialogues can be called plays): e.g. Aragöz, the cruel, stupid, yet sly clown, similar to the characters Punch, Kasperle, and Pulcinello, and the dialect types,³ such as the loud-mouthed Turkish soldier, the uncouth Nubian, and the Italian or Greek priest; then the sancy beggar, and the different female figures from the lively Ezbekije quarter. A characteristic feature of Aragöz is the high, nasal voice, produced by the player by means of the *zummar*, a little whistle which he holds in his teeth. Aragöz wears the *tarfûr*,⁴ or pointed fool's-cap. The player has an assistant who joins the audience and carries on the conversation with Aragöz when the latter is alone on the stage and addresses the public.

Considered æsthetically and as an element in the development of Arabic culture, the Aragöz-play stands on a much lower plane than the *hajal eddill*. Written texts apparently do not exist, and the tradition has therefore not much stability. Improvised jokes and the mood of the player change the wording of the piece without let or hindrance. The show is occasionally to be seen at fairs and at weddings of the lowest order.

The following is a *faşl*, or marionette play, dictated to the writer directly by Ahmad el-Hudari:

Aragöz: essalâm 'alékum nahârak salîd wemûbarak salâm! 'akrafîna⁵ wâgarastûnâ.⁶ âh jâna min gharâmuh win kunt ahibbak lam 'alai ja malâma.

Gindî (a Turkish soldier who had been asleep): abradana sana sitikihim? fallâh haşşâş banzir jaba elkalb jin'al abû ummak.

Aragöz: inta magnûn wallâ masfûl.⁸
Gindî: ana ba'dên amauwitak.

¹ *Les Nuits du Caire*, p. 353: "... et tout près le polichinelle arabe débitait aux badauds ses lazzi grivois, car le théâtre de guignol n'est pas le privilège exclusif des Champs-Élysées."

² For the connexion between the figure of Aragöz (Karaköz) and the Egyptian vizier Karakûş of the 13th cent., see Casanova in *Mémoires publ. par les membres de la mission archéol. française du Caire*, vi. (1897) 447; and Kahle, *Zur Gesch. des arab. Schattentheaters in Egypten*, p. 17 f.

³ Dialectic peculiarities form an essential part of Egyptian folk-humour, just as they do in Turkish folklore. Cf. Jacob, *Türk. Litteraturgesch. in Einzeldarstellungen*, pt. I. "Das türk. Schattentheater," Berlin, 1900, pp. 29-37.

⁴ See Prüfer, *Ein ägypt. Schattenspiel*, p. 40, note 3.

⁵ A comical over-politeness such as one often finds among ignorant Egyptians. Cf. Prüfer, *op. cit.* p. 38.

⁶ Said jokingly for *amistûnâ*, "we are glad to see you."

⁷ Barbarous Turkish for *örada anasnyin silidim*.

⁸ "Intoxicated" (Spiri, *Arab.-Eng. Vocabulary*, Lond. 1895).

Aragöz: taljib rûh ihâlak.

Gindî: win ma-kuntîs arûh. (*Aragöz* beats him.) ti mil é ja wâd ba'dên amauwitak.

Aragöz: 'akrafîtinâ wânistînâ ja si mauwitak.

(The soldier beats him and goes away.)
Aragöz (to the audience): mauwitûni wâgarabûni wâmazza'û minna 'esakkô wazza-bûl.¹

Voice from the audience: wâba'dên baqâ.

Aragöz: aqûl limrâti.

Voice: ismihâ é.

Aragöz: Bahîta ja bint jâ Bahîta ja mara ja Bahîta.

Bahîta (who is not his wife, but a woman of a public-house): sabâhak bër.

Aragöz: a'ûzu billâh jâ Bahîta.

Bahîta: mâ lak ja habibi mâ lak ja salât ennabi 'alek wa 'ala tarfûrak ja habbet 'eni ta'ala ja habibi nerûh genenet el-Ezbekije nittassah sauwa.

Aragöz: rûhi 'tlassahî fi harârâ imshî nin hina ja mara jalla.

Bahîta: ana wihsâ ana muş a'gibak.

Aragöz: inti wişşik zaiş wişş abû sabat.²

(*Aragöz* beats Bahîta off the stage, and knocks with his *nabbûl* on the wall.)

Aragöz: jâ bint jâ Dûdû (calling another woman).

(Dûdû, abominably ugly, appears, coughing excessively.)

Aragöz: bass bass 'ala bêt abûki 'ala 'tûl.

(He beats her away from the stage.)

Aragöz: (knocking again) ja wûled jâ barbari.

Barbari (from inside): jâ Aragöz mâ lak.

Aragöz: fên hûwa 'Ibarbari (the Berberine appears) da barbari iswid wamukâssar tijdim ja barbari.

Barbari: haddâm markûbak 'ala habbet 'enak min foq.³

Aragöz: elbadawije⁴ ja salâm 'alék wâ'alaija.

(Berberine disappears.)

Sahhât (beggar): 'âgiz mas-kin ardabbé bânja⁵ wânûş lillâh.

Aragöz: wûdê da kamân.

Sahhât: 'ahhât 'âwiz jakul.

Aragöz: takul é.

Sahhât: âkul ruzzê wûruze.

Aragöz: ruzzê é wûruzzê é.

Sahhât: ruzzê bilaban wûruzzê mefalil.

Aragöz: (imitating his accent) wûruzzê mefalil.

Sahhât: wâbitûngân qûta.

Aragöz: (beats him) hûd ruzzê wûruze.

Gindî: kamandârî⁶ nimritak fîlet fî 'I askarije tâhûd rubet sawîş riglak eljenin gamb eššimâl imsik elbarûda.

Aragöz: tôb 'I'alaija jâ rabb.

All right! Go about your business.

And if I won't go? What are you doing, boy? Afterwards I shall kill you!

You have honoured us and made us happy, Mr. I-shall-kill-you!

(They have killed me, and beaten me, and torn my jacket and my smock-frock!)

Well, and then?

I shall tell my wife!

What's her name?

Bahîta. Girl! Bahîta Woman! Bahîta!

May your day be happy!

God save me, Bahîta!

What is the matter with you, my dear? What is the matter with you, oh you, on whom and whose *tarfûr* be the prayer of the prophet! You pupil of my eye! Come, my dear! Let us go to the Ezbekije garden, and take a walk there together.

Go to walk in the cesspool! Go away from here, woman! Go!

Am I ugly? Don't I please you?

Your face is like the face of a centipede.

(*Aragöz* beats Bahîta off the stage, and knocks with his wall.)

Girl! Dûdû!

Enough, enough! [curses] upon the house of your father at once!

Little boy, Berberine!

What's the matter, Aragöz?

Where is the Berberine then! That is a Berberine, black and sullen! Are you in service, Berberine?

Servant of your shoe! Upon the pupil of your eye from above.

Oh, ye saints! Mercy on us, you and me!

(I am) infirm, poor! For the sake of God, one and a half *ardabb bânja*!

Now what's this again?

A beggar, who wishes to eat What do you wish to eat?

I would like to eat rice and rice.

What kind of rice and what kind of rice?

Rice with milk and rice *pilaw*.

And rice *pilaw*!

And tomatoes.

Take some rice and rice!

Who is there? Your number came out for military service. You will have the rank of a *sawîş*. Your right foot beside the left! Take the musket!

Lead me to repentance, O Lord!

¹ 'Sarrau de laine brune, ouvert depuis le cou jusqu'à la ceinture et ayant les manches larges, que les hommes du peuple portent en Egypte, surtout en hiver' (Dozy).

² Instead of *sabâth* ('millepieds, scolopendre' [Dozy]).

³ The meaning of this sentence is very ambiguous. It may mean the expression of obedience as well as that of a curse.

⁴ The derwishes of the order of Saiyid Ahmad el-Badawi.

⁵ One *ardabb*, a measure for cereals, is equal to 197.75 cubic litres. *Bânja*, hibiscus (leguminous plant) (Spiri, *Arab.-Eng. Vocabulary*).

⁶ For *kimdir*.

⁷ For *tauwîb*.

Gindī: hāz dūr bir hik.¹
Aragōz: hāz dūr (kills him).
Voice from audience: mau-wittūn.
Aragōz: wana mā li jā būja ana mā-mauwittūā.
 (He brings a bier, on which he puts the dead body.
 A priest appears and sings a parody of a mass.)
Priest: morto buona sera Dead! Good evening! Adieu, addio si forjī.
Aragōz: lā ilāha illa 'llāh wā-Muhammad rasūl allāh qūl kida jā 'akrūt.
Priest: Mā ilāha illa 'llāh. There is no God but God!
 (Exit *Aragōz*.)
Priest (singing): morto, Dead, dead, dead!
 morto, morto!
 (Enter *Aragōz*.)
Aragōz: kaffartina jā šēh You have made us infidels, (kills him). old chap!

Real dramatic art, in the European sense of the word, is, as we said before, a foreign and comparatively recent phenomenon in the Arabic literature. The farce which Carsten Niebuhr saw in the house of an Italian in Cairo, and which had to be broken off prematurely owing to its lasciviousness, seems, according to his account, to have been nothing more than a series of lewd-comic scenes without any kind of plot or catastrophe, in the manner of the *Thu Rābiya* performances, manifestly neither more nor less than an *Aragōz* representation, played by living persons.² The piece described by Lane,³ giving a vivid picture of the corruption of public officials of the time of Muhammad 'Alī, is of a little higher order, and is of the same type as the modern Arabic comedy, the *faṣl muḍḥik*, as it is played in Cairo to-day. All that Lane, that unrivalled observer of Egyptian folk-life, has said about the *Mohabbazeen*, the actors of such dramatic performances, is true now of the *faṣl muḍḥik*: 'Their performances are scarcely worthy of description. It is chiefly by vulgar jests and indecent actions that they amuse and obtain applause.' To-day, too, the 'actors are only men and boys,' the latter appearing in female rôles;⁴ and the *faṣl muḍḥik*, like Lane's example, still has some didactic elements, even when the only lesson taught is that of getting the better of a European by beating and cheating him. A shade better are the productions of the Syrian *faṣl muḍḥiks* from Beirut or Damascus.⁵ A Syrian troupe, with women taking the female rôles, was playing, until a little while ago, in Cairo in the Syrian Café Kāmil; but there is no great difference between the performances of this company and those which one could see, up to a short time ago, in the two small theatres that were formerly in the Fish Market but are now in the Sārī Wagh el-Birke.

The *faṣl muḍḥik* last seen by the present writer in one of these cafés consists of a number of clownish scenes, that always end in the whipping of one of the participants. The chief character of the flimsy plot is the servant Ḥusēn, who appears in a pierrot costume.⁶ He makes a dupe of his master (an officer) by entering into illicit relations with the latter's wife. The deceived husband notices from time to time, of

course, the love-making that is going on behind his back, and the result is a series of roughly ludicrous mistakes and mystifications. For instance, the servant embraces his master, who has seated himself, unnoticed by the servant, in his wife's chair, and receives as a reward a box on the ear. A boastful, silly European—a Greek (dialect type), with a battered tall hat and a bright red British uniform—is beaten continually throughout the play. The other characters are a saucy beggar woman, a cook, and three *ḥaramiye* (robbers); the last named, with the help of the servant, steal the clothes of the officer from his body while he sleeps. The dialogue, as is always the case in a *faṣl muḍḥik*, is in prose, and in the vernacular of the lowest elements of the population. It is full of invectives and obscenities. Sometimes the *faṣl muḍḥik*, of which there is a great variety, are preceded by a performance of the famous *dance de ventre* or by a *faṣl* of the shadow-play.

A number of such farces in the vernacular have been published in Cairo of late;⁷ but they are very seldom played, as they naturally do not contain the flagrant indecencies which would make them popular with the public. One of the best of these pieces is *Hāt li min de*, 'Give me some of That,' by Ahmad Hamdi er-Raṣīdī. The piece, a modern variation of an old fairy-tale subject, shows clearly the characteristics of the *faṣl muḍḥik*. Nadīm Efendi has engaged the Syrian Amin as a servant and watcher for his daughter Farīda. Amin, who is a very impudent man towards his master, and falls in love with Farīda. The three friends of Nadīm—Si Gara, Si Fān, and Si Finga—come one by one to sue for the hand of Farīda for their sons 'Aziz, Gamīl, and Farīd. Nadīm gives his consent to each one provided he presents a bridal gift of unsurpassable value. The curious names of the guests ('Cigarette,' 'Siphon,' and 'Sponge') are a source of rude jokes for the jealous Amin. In the second act the three suitors meet by chance in a hotel in Malta. Each displays his bridal gift. Gamīl has a mirror in which one can see things at a great distance; Farīd has lemons that can waken the dead; and 'Aziz has a carpet upon which one can ride through the air. In order to test their presents they look into the mirror and see Farīda upon her death-bed, whereupon they travel quickly on 'Aziz's carpet to Cairo, and by means of the lemons bring Farīda back to life. Then (third act), since they cannot agree among themselves as to who shall marry her, they go to the *qāḍī* Si Bōja, whose daughter gives a *fatwa* (judgment founded on canon law) in favour of Farīd, and, in characteristic Oriental manner, consolingly advises the other two suitors to sell their bridal gifts. Amin, who acts the clown throughout the piece, also goes with the others to the *qāḍī*, but his suit naturally meets with no success.

Besides these more or less original Arabic works, there is to-day a European drama that has been consciously and artificially transplanted into the Arabic Orient. The initiative herein came from Syria. Mārūn b. Iljās b. Miḥā'il-Naqqāš (born 1817 at Saïda in Lebanon) was the first who tried to make this innovation. Of the life and works of this man we have an excellent account in the records made by his brother and follower Niqālā.⁸ While he was still a boy, Mārūn's family moved to Beirut, which was then, as now, the intellectual centre of Syria. Here he was brought up according to old-fashioned Arabic ideas, his naturally good taste being therefore quickly spoiled by the forced learning of syntax, grammar, stylistics, metrics, and all the rest of the huge chaos of scholastic knowledge. When he was but eighteen years of age, he began to compose poems. This did not prevent him, however, from studying European book-keeping and commercial law, and from learning Turkish, French, and Italian. In his thirtieth year he went to Italy, where he saw for the first time a large European theatre. The play so impressed him that, after his return to Beirut in the year 1848, he wrote a drama in the Euro-

¹ *Riwāyat hāt li min de*, by Ahmad Hamdi er-Raṣīdī (Cairo, 1907). Other pieces of this kind are: *Riwāyat Ba'gar*, by Muhammad Efendi Husni (Cairo, n. d.); and the *Riwāyat ez-zawaj binnabih walbāḥil el'akrūt* (Cairo, anon. and n. d.). The latter is a variation of the popular type of *L'Avare*, who is cured of his greed after great money-losses. The same theme is treated by Muhammad Efendi Safig, in the *faṣl elbāḥil*. Still other pieces are *Sadr elbaghāka*, by Amin Saiyid Ahmad 'Abd el-Wāḥid ez-Zaiyāt (Cairo, n. d.), a piece in which the different beggar types are shown; a play with a purpose of the kind described by Lane is the *Riwāyat elmuḥaddamin*, by Muhammad Bē 'Othmān Galāl, printed after the death of the author. This little comedy scourges the deceptions and tricks of servant-intermediaries.

² After the death of his brother, Niqālā published three of his theatrical pieces under the title *Arzat Lubnān* (Beirut, 1899). He gives an extensive biography of his brother in the preface. A strangely mistaken remark concerning this book is found in C. Huart's *History of Arabic Literature* (Enc. ed. London, 1903), p. 420: 'Nicolas Naqqāš, who was born at Saïda in 1817, died at Tarsus in 1856, having written a play called *Arzat Lubnān*.'

¹ Military terms in barbarous Turkish.

² Almost the same description is found in *Description de l'Egypte* (1825), p. 172 f.

³ *Manners and Customs*, pp. 357-359.

⁴ See Kern, *Das ägypt. Schattentheater*, p. 103 f.

⁵ See Kern, 'Neuere ägypt. Humoristen und Satiriker' (*Mitteilungen des Seminars f. orient. Sprachen*, ix. [Berlin, 1906]). A Syrian *faṣl muḍḥik* is the *Riwāyat elghulā elmuḍda 'in bil'um*, by Ibrahim Bek ef-Taḥib, Beirut, n. d.

⁶ The European fool's costume of Ḥusēn points to the Frankish origin of the *faṣl muḍḥik*, and, just as in the *Aragōz*-play, which is without doubt nothing but a Pulcinella theatre orientalized by the influence of the Turkish *Karagöz*, some of the dramatic persons are the same types for all pieces. From these types one easily recognizes Italy as the home of the *faṣl muḍḥik*. The Arlecchino of the Italian *commedia dell'arte* is the stupidly bold, silly servant; and the cowardly boasting Greek we also find in *Saramaica*; the coquetish, amiable little woman, who is not altogether too scrupulous in keeping her nuptial vows, is the Columbine type. The dialectic humour is perhaps the result of shadow-play influence.

pean style, called it *Elbaḥūl*¹ ('The Miser'), and soon afterwards produced it in his own house before an invited audience, amongst whom were all the foreign consuls and the governor of the Lebanon Province. The actors were young friends of the author. This attempt was followed by a second in 1850, *Abū Ḥasan el-Mughaffal*, a dramatic version of the well-known story of Ḥārūn ar-Rašīd and Abū Ḥasan from the *Arabian Nights*; and then, encouraged by the success of this piece (which, by the way, is still given), Mārūn Naqqāš, with the permission of the Sultan, founded in Beirut a permanent stage, where he brought out his *Riwāyat elhasūd* ('The Jealous Man'). The plays of his brother Niqlā, *Eṣṣḥ elghāhil* (written 1840) and *Rabī'a ibn Zed elmukaddam* (written 1852) also made their first appearance in this theatre. In 1855, while on a business trip, Mārūn died of fever in Tarsus, and two years later his body was transferred by his family to Beirut and there buried with great ceremony.

After Mārūn's death the theatrical art suffered a decline,² and it was not until 1860 that Niqlā Naqqāš resuscitated the *Hasūd* on his brother's old stage. In the same year Niqlā published, in one book,³ Mārūn's three pieces, which are a kind of light opera, comedies with musical accompaniment and interspersed with numerous songs and dances.

We give, as an example, the contents of the first piece. The extremely miserly, rich Qarrād, a man of advanced years, had made an agreement with the greedy old Tha'labi to marry the latter's daughter Hind, a young widow. He comes for the wedding to the house of Tha'labi, but Hind loves young 'Isā, the friend of her brother Ghālī. These three, and the old servant Umm Riṣa, slyly plot together to make Qarrād give up his plans of marriage, and at the same time to part with some of his beloved money. Hind makes such extravagant demands of Qarrād that he finally wishes nothing more ardently than to be rid of her. Hind, however, now declares that she will not release him; in the meantime Ghālī appears, disguised as a Turkish *aga*, with his secretary 'Isā and several soldiers. By means of threats and thrashings they force Qarrād to pay to 'Isā a large sum of money as a compensation to Hind, who thereupon marries 'Isā. Finally, the supposed Turks confess their deception to Qarrād, who is by this time very much ashamed of himself, and freely forgives them.

The language of the play is affected and heavy, the piece itself, with its five weak acts, extremely tiresome. When the author makes a joke, the publisher thinks it necessary to call the reader's attention to the fact in a footnote. Here again we have, as the comic elements, the dialect types—Umm Riṣa the peasant woman from Lebanon, Ghālī the Turk, and 'Isā the Egyptian secretary.

Under the influence of the brothers Naqqāš, several theatrical companies were formed in Syria; but, as there were no trained actors to be had, the authors or translators saw themselves obliged, if they wished to have their plays produced, to form and train a troupe of amateurs. Famous as author, director, and *régis seur* all in one person, were especially Sēḥ Abū Ḥalīl el-Qabbānī in Beirut, and Iskander Farāḥ in Damascus. The latter, more organizer and actor than author, was born in Damascus in 1855, the year of the death of Mārūn Naqqāš. He attended the Jesuit school in that city and there became acquainted, through amateur school dramatics, with European drama. Encouraged by Midhat Pasha, who lived at the time in Damascus, he produced, in a public garden, his first play, a translation from the French. He then moved to Beirut, where he joined with Sēḥ Abū Ḥalīl in forming a theatrical enterprise; but owing to intrigues his licence was taken from him, so that he saw himself compelled to settle permanently with Abū Ḥalīl in Cairo (in 1882), where he and his partner had already made successful tours. From this time dated the existence of a theatre in European style in Egypt. In the *Gōg elmiṣrī el'arabī* (in the *Šārī* 'Abd el-Aziz in Cairo)

¹ See *Arat Lubnān*, p. 4: '... The play *Elbaḥūl*, which was the first drama given in our Arabic tongue.'

² *Id.*, p. 5: 'Hereafter this kind of art was buried with its initiator and nearly forgotten.'

³ *Arat Lubnān* (Beirut, 1860)

a great many pieces—mostly translations and only a few original works—have appeared above the footlights.

This theatre has not proved to be a success of late, owing partly to the death of Iskander Farāḥ's partner, Abū Ḥalīl, but especially because of the attitude of one of the actors, Sēḥ Salāma el-Higāzī, whom Farāḥ himself had taught. Salāma separated from his master and founded a theatre of his own,—the *Dār ettamthīl el'arabī*,—and induced a number of Farāḥ's actors to accompany him. In contrast to the Christian Syrian Iskander Farāḥ, Salāma was a Muslim and an Egyptian, and that was enough to secure him the affections of the Cairo public. Then, too, he laid more weight on the musical part of his performance than his old master had done, and the Egyptians love nothing so much as singing and the music of their national orchestra. In 1909, Sēḥ Salāma had an apoplectic stroke, which partially paralyzed him, so that his acting days are probably over.

A number of small wandering theatrical troupes have branched off from the theatre of Iskander Farāḥ. One often stumbles upon them in Syria and Egypt. The best known in Egypt are the companies of 'Anwād Farīd, Aḥmad Higāzī, Ibrāhīm Aḥmad, and Sēḥ Aḥmad el-Šāmī. The last named was to be seen in the winter of 1908 in Luxor in *Romeo and Juliet*. The late Nagīb el-Haddād, one of the most prolific translators of European plays, also experimented with a troupe of his own. In Syria, 'Aziz 'Id and Raḥmīn Bibis are the chief followers of Iskander Farāḥ's school; the only one of Farāḥ's pupils who went to the Maghrib—Solīmān el-Qirdāḥī—died in the summer of 1909 in Tunis.

Amateur theatrical clubs have been started in several places in Egypt. The most important of these is the *Gamīyet el-Ma'arīf* in Cairo; it was founded by Iskander Farāḥ in 1886, and is still under his direction. There was a similar club by the name of *Gamīyet taragqī 'ttamthīl el'adabī* in Mansūra.¹

It is utterly impossible to give an approximately complete bibliography of the Arabic dramatic literature of to-day, as there is an unusually great productivity along this line at the present time. Most of the works are translations, of which the only really valuable ones are the excellent renderings, in the vernacular, of some of the writings of Racine and Molière by the late Muḥammad Bē 'Othmān Galāl.² Unfortunately these pieces, in which the highly talented translator has shown his ability to render the tone of the originals in the idiomatic peculiarities of his own language, have never been recognized by the stage. The stiff, ridiculous Shakespeare translations³ do not show the least trace of the spirit of the great British master, and still less worthy of mention are the childishly Arabized French dramas⁴ of the Romance period. A little better are the different dramatizations of the stories from the *Arabian Nights*⁵ and

¹ We are indebted to Mr. Tawfīq Farāḥ, the brother and manager of Iskander Farāḥ, for the greater part of these statements.

² See Nallino, *L'Arabo parlato in Egitto* (Milan, 1900), pp. 349-351. The translations of Muḥammad Bē 'Othmān Galāl are as follows:—*Eṣṣḥ elmatlūf* (*Tartuffe*, by Molière), Cairo, 1873, reprinted in 1890 with *Ennisā' ul 'alimāt* (*Femmes savantes*); *Madrasat el'azwāg* (*Ecole des Maris*); and *Madrasat ennisā' (Ecole des Femmes)* under the title *El'arabā riwāyat min ruḥab etṭijārāt*; *Eṣṣawāḥ elmuḥāda fi 'lma' ettararīda* (*Esther, Tiphaine and Alexandre*, by Racine), Cairo, 1895; *Riwāyat atṭuḡalā* (*Les Fâcheux*, by Molière), Cairo, 1896. The *Sēḥ matlūf*, the *Madrasat el'azwāg* and *Ennisā' ul 'alimāt* have been published in European transcription. See Vollers, 'Der neuarab. Tartuffe' (ZDMG xlv. [1891] 88-96); Sobernheim, *Madrasat el'azwāg*: arab. Comédie transkribiert und ins Deutsche übersetzt (Berlin, 1896); Kern, *Innisā' ul 'alimāt*: neuarab. Bearbeitung von Molière's Femmes savantes transkribiert, übersetzt, etc. (Leipzig, 1898).

³ For example, *Romeo and Juliet*, *Hamlet*, and *Othello*.

⁴ *Hernani*, *Marie Tudor*, by Victor Hugo; *Katherine Howard*, by A. Dumas; *Fernande*, by Sardou; *Séville Torrel*, by Olmet; *L'Africaine*, by Scribe, and many others. The chief translators, besides the already mentioned Nagīb Haddād, are Tanūs 'Abduḥ, Ḥalīl Mīrṣāq, Farāḥ Anṭīn, Bisāra Kanān, and Sam'an el-Aṣḡar.

⁵ From the *Arabian Nights* have been dramatized, among others, the stories of Ḥārūn ar-Rašīd and Qūt al-Qulūb, by Maḥmūd Wāḡīf, and Uns al-Galīs, by Abū Ḥalīl el-Qabbānī.

from the Arabian history and hero-legends.¹ The only other class that is somewhat worthy of notice is the drama with a political purpose.² Here genuine feeling has succeeded in instilling a little life into the inflexible, stilted, Arabic literary style.

Whether a well-developed branch will ever grow from the scion of Western dramatics that has been grafted upon the Arabic literature seems to the present writer to be somewhat doubtful, and it is not only the lack of dramatic feeling, natural to the Arab through race and religious peculiarities, that prevents him from finding the way to dramatic art; it is also the character of his language. The Arabic literary language is petrified—an artificially preserved corpse, which pleases only its preservers, the literary gild and the *ulamâ*. The people hardly understand this language, and do not recognize themselves or their feelings when so presented to them. The living idiom, on the other hand, that in which the Arab thinks and speaks, is scorned and regarded as vulgar by priests and pseudo-learned men, who see the end of their own glory in the decay of that idolized, thousand-year-old mummy, the fetish of the holiness of God's language. Before anything great can be created, either in the province of the drama or in Arabic literature in general, the modern writer must cease to work with forms, words, and metaphors of the language of nomadic desert tribes of fifteen hundred years ago.

LITERATURE.—The literature has been given fully in the footnotes.

CURT PRÜFER.

DRAMA (Chinese).—Music and dancing are frequently mentioned in the Chinese classics. For instance, in the days of Confucius we read of the services held in the ancestral temples of princes and great nobles, when there were men arranged in rows, who moved in time with the music, and brandished feathers, flags, or other articles. Moreover, in those times, and even later, dancing of a slow and dignified character formed part of civil as well as of religious ceremonies. Thus at public feasts there were performances representing the joys of harvest, the fatigues of war, the pleasures of peace, and suchlike subjects. According to one theory, the regular drama was gradually evolved from these displays; but there are persons who maintain that it was purely exotic, having been introduced into China from the West. One writer says, perhaps with some boldness:

'The whole idea of the Chinese play is Greek. The mask, the chorus, the music, the colloquy, the scene, and the act are Greek.' 'The Chinese took the idea, and worked up the play from their own history and their own social life.' 'The whole conception of the play is foreign, while the details and language are Chinese' (J. Dyer Ball, *Things Chinese* 4, p. 707).

The highest literary authorities among the Chinese agree in dividing the history of their drama into three distinct periods. The first of these is the latter part of the T'ang dynasty (A.D. 720-906); the second, the Sung dynasty (A.D. 960-1126); the third, the Chin and Yüan dynasties (A.D. 1126-1367). One very great writer of the 13th cent., Ma Tuan-lin, gives 581 instead of 720 as the earliest date; but it is generally agreed that his view was based on a misconception.

No specimens of the T'ang dynasty plays have been preserved; but it is said that they were historical in character, and also that pieces were played of which the prologue was recited by an actor called 'the introducer of the play.'

In the time of the Sung dynasty, it was custom-

ary to sing the greater portion of the play. The plot was very simple, and everything was sacrificed to the lyric parts. Further, the action was hampered by a convention limiting the number of the actors in the play to five.

The third, or Yüan, period is the golden age of the Chinese drama. The plays written at that time, or shortly afterwards, not only surpassed their predecessors, but have never been equalled by later writers. Moreover, the alterations and novelties then introduced have since remained unchanged. Indeed, it may be said that the drama of the Yüan times 'is to all intents and purposes the drama of to-day' (H. A. Giles, *Chinese Literature*, p. 258).

The list of the Yüan dramatic authors comprises 85 persons, of whom four were women ('actresses,' as the name by which they are described should probably be translated). There are extant 564 plays, of which 105 are by anonymous writers. Practically all kinds of subjects are represented among them. There are mythological, historic, religious, and domestic plays; comedies of character, and comedies of intrigue. There is no formal division into tragedy and comedy; but a play belongs to one class rather than to the other, according to the subject and the way in which it is treated. Every rank of life is represented, from the Emperor to the humble slave girl. Even gods and goddesses appear and speak. It is nominally illegal to put on the stage Emperors, Empresses, and great men of old; but the law is entirely disregarded. The dialogue is in the ordinary spoken language, varying in some degree according to the social position of the character speaking. In the historical plays it is further removed than in the others from the language of common conversation. There is no chorus, but the actors constantly break out into song. These songs express the most passionate parts, and therefore they are given only to the leading characters.

A play consists usually of five acts, or rather of four acts and an introductory part, called 'the opening,' in which the principal characters come on, describe themselves, and give any information that may be necessary as to former doings. If there is no 'opening,' the descriptions and information are given in the first of the four acts, and the unfolding of the story is left to the second. But, as there is no curtain to fall, and no stopping at the end of the acts, the distinction between them is hardly noticeable on the stage. Entries and exits are marked in the books, and so are the 'asides,' for which there is a technical name. The famous play called the *Pi-pa-ki* consists of 24 scenes, or, according to another arrangement, of 42 scenes.

In theory every Chinese play should have a moral object, and the serious drama is supposed to place on the stage scenes which will lead the spectator to the practice of virtue. Actually, their tendency is on the side of justice and morality; and, as regards decency, they are, at any rate in their written form, entirely free from objection.

In addition to the serious pieces, which form the bulk of the plays acted, there are also farces, which are generally brought in at the conclusion of the bill, and are highly appreciated by the audience. They 'depend for their attractiveness upon the droll gesticulations, impromptu allusions to passing occurrences, and excellent pantomimic action of the performers' (S. W. Williams, *Middle Kingdom*, i. 715). In these farces there is much 'gagging,' and the actors often lapse into coarseness.

To return to the serious drama. It is true that Chinese plays do not, as a rule, possess much intricacy of plot; but we think that their merits, in many respects, will not be denied by any one who

¹ e.g. *Riwāyat Salāh addin*, by Nagīb el-Haddād, Alexandria, 1898.

² The most prominent are *Riwāyat al-'Azhār* (Cairo, 1909), and *Riwāyat Denkalādī* (Cairo, 1907), by Hasan Mar'ī. The latter is reviewed in the *Revue du Monde musulman*, vol. III. Nov.-Dec., nos. 11-12, Paris, 1907, pp. 504-509. The representation of both pieces is forbidden by the Egyptian Government.

can keep in mind that both Chinese ideals and Chinese modes of expression often differ considerably from our own. They are certainly remarkable in both distinctness and consistency of characterization. As regards other qualities, a very high authority has recently said of the famous 'Story of a Lute' (*Pi-pa-ki*), that 'it is not only truly pathetic in the conception and the main situations of its action, but includes scenes of singular grace and delicacy of treatment' (A. W. Ward, in *EBR*¹¹, viii. 486). Of another great play, 'The Sorrows of Han,' its distinguished translator, Sir John Davis, wrote that 'the grandeur and gravity of the subject, the rank and dignity of the personages, the tragical catastrophe, and the strict award of poetical justice, might satisfy the most rigid admirer of Grecian rules' (*China*, p. 92). In order to give the reader some idea of what the Chinese historical drama is like, we insert here a short sketch of this play. The events described in it are partially founded upon fact. The scene is laid in the 1st cent. B.C., at a time when China was weak and the Tatars were strong.

The play opens in Tartary. The Tatar Khan appears, and announces that, in accordance with an hereditary right, he has sent to demand of the Emperor of China the hand of a princess in marriage. The second scene is in China, and shows the Emperor entrusting a minister with the task of selecting beauties for his harem. The minister discovers a maiden of surpassing loveliness. He demands from her parents a large sum of money as a bribe, but they are too poor to give it to him. He therefore contrives that, though the maiden is admitted to the palace, her charms shall remain unknown to the Emperor. A chance causes them to be discovered, and she becomes the Imperial favourite. The faithless minister is condemned to death; but he escapes, and takes refuge at the court of the Khan. To revenge himself, he shows the Khan the lady's picture, declaring that she would have come in response to the Khan's demand, but the Emperor would not permit her; he (the minister) had remonstrated with his master for thus embroiling two nations, and had been forced to flee for his life; let the Khan demand the princess, and she must be given to him. Overcome by the beauty of the portrait, the Khan despatches an envoy with a threat of war, and prepares for the invasion of China. Next, the lady, now a princess, is adorning herself in the palace; the Emperor comes in, and shows his admiration. The chief minister enters and reports the arrival of the envoy with the Khan's demand. The envoy is received. After the audience the Emperor takes counsel with his ministers. He wishes to appeal to arms; but the case is adjudged hopeless. The princess declares her willingness to sacrifice herself for her country's sake, in spite of her love for the Emperor. The Emperor at last consents, and the sad parting takes place. The Khan is seen at the head of his troops, leading away the princess. The army is on the march. It arrives at the bank of a river, the boundary of the Chinese empire. The princess addresses the Khan: 'Great King, I take a cup of wine and pour a libation towards the south, my last farewell to the Emperor.' She pours the libation, and cries, 'Emperor, this life is finished. I await thee in the next.' She throws herself into the river and is drowned. The Khan laments, orders her burial, and declares that he will maintain peace with China. Now we are back again in China. The Emperor is wandering in the palace at night, still overwhelmed with grief, and unable to attend to affairs of state. He sleeps, and we see the princess, escaped from her captors, appearing to him in a vision. A Tatar soldier comes in and carries her off again. The Emperor awakes to fresh grief. The arrival is announced of a Tatar envoy. He is come to tell the sad story and bring back the faithless minister. The traitor is led away to execution.

We think the reader will acknowledge that this story is one well fitted for dramatic representation.

The scenery of a Chinese theatre is very simple. It consists of a few mats, perhaps rudely painted, arranged at the back and sides of the stage, and some tables, chairs, and couches, which serve for many purposes, and are brought in from the robing rooms as required. The imperfections of the scenery are made good by simple devices: a courier, on being despatched, seizes a whip, and lifts his leg as though he were mounting a horse; passing over a bridge is indicated by stepping up and then down, crossing a river by imitating the rolling motion of a boat. The actors are dressed in costumes appropriate to their parts, and of antique style. The robes are very splendid, made of bright-coloured silks and satins and really magnificent embroideries, which have cost large sums of money; but in the humbler theatres they are much tarnished and worn.

Only in Peking and the great towns of the North are there permanent play-houses. The simplicity, however, of Chinese theatrical arrangements enables performances to be given without difficulty all over the country, even in small towns and villages. Subscriptions are collected on the occasion of a festival, or a rich man wishes to give his neighbours a treat. A travelling company of players is engaged; and, in a couple of days, sheds, which serve their purpose sufficiently well, are erected, at little cost, with rough planks, poles, and mats. The humbler members of the audience stand in the pit, without any protection from the weather. The performances frequently last for three days, with intervals only for eating and sleeping. This does not mean that the plays are long. In the acting editions they are usually short, but a very large number are produced on such occasions.

As was the case not long ago in France, the profession of an actor is, at least nominally, considered disreputable. Members of it are classed with barbers and domestic servants, and, with their sons and grandsons, they are not allowed to compete in the public literary examinations.

Translations into French of several Chinese plays will be found in the published works of A. Bazin and Stanislas Julien.

T. L. BULLOCK.

DRAMA (Greek).—I. Origin of the drama.—From the time of its origin down to the days of its latest representatives, Greek drama was closely associated with religion. A Greek tragedy or comedy was a religious service rendered by the State to one of its gods. Plays were performed only at the festivals of Dionysus—at the *Lenææ*, the festival of the wine-press in January; at the country *Dionysia* held in the villages in December; and at the city *Dionysia* in March (this the most important and brilliant). There was no long season, and plays were given all day long during the festivals, the spectators paying no admission fee except what the State provided, and often bringing their own lunch and cushions. Not until the 3rd cent. B.C. did the drama, as was natural, become a secularized performance arranged by the head of a troupe and often financed by private liberality.

The development is paralleled in mediæval times by the Mystery and Miracle plays, which at first were attached to the Church but in time became dissociated from religion and formed a true dramatic literature, the actors, like Thespis, wandering about and performing their plays wherever convenient, whether in church or inn-yard. In modern times we have the Passion Play at Oberammergau, which is beginning to be more than a merely religious performance, although the Bavarian peasants have refused an enticing offer to play in America. Just as the old Greek play always began with a sacrifice to Dionysus at the altar or *thymele*, so to-day at Oberammergau every performance is preceded by Mass, in which all the actors and members of the Greek-like chorus participate.

That the spirit of the Greek drama was strictly religious is evident from its early history. In a larger, more philosophical sense, it is the outgrowth of the mimetic or play instinct in humanity, and the sense of the pathetic. The mimetic element is well illustrated in the dances and burlesques on Greek vases from the 7th to the 4th cent. B.C., especially on Corinthian, Cæretan, Boëtian, and Attic vases. The sense of the pathetic Croiset (iii. 24 f.) finds in the legends of heroes and the religion of Dionysus. As Plato (*Rep.* 394, 595, 598 f.) and Aristotle (*Poet.* ch. 4 f.) say, Homer is the real author of tragedy, which is a novel all dialogue, or an epic all speeches, wherein the poet omits his own narrative comment and leaves in the amebian speeches. Æschylus (cf. Athenæus, 347 E) said

that his tragedies were but crumbs from Homer's table. But historically the drama, though latent in the epic and drawing upon it for subject-matter and retaining much of the epic technique, especially in the messenger's speeches, developed out of the lyric—not the personal passionate lyric of Archilochus, Sappho, and Alcaeus, but the choral lyric of a disciplined chorus chanting in unison to the measure of the dance. This choral lyric of Alcman and Stesichorus, which later reached its zenith in Simonides, Bacchylides, Pindar, and the choruses of the Greek drama, flourished chiefly among the Dorians of early Sparta, Sicily, and Magna Graecia. There were many forms, such as hymns to the gods, marching songs, dancing songs for boys and girls.

We have preserved to us, on a papyrus discovered by Mariette in Egypt, a penthemimeron, or highly dramatic virginal song, by Alcman, which consisted of 140 verses in ten strophes, of which the first two and part of the third are missing. This song gives a pretty picture of a dance of Spartan maidens in honour of Artemis, by the banks of the Eurotas, such as we see on a beautiful Attic red-figured crater in the Museo di Villa Papa Giulio at Rome (cf. Furtwängler-Reichhold, *Griech. Vasenmalerei*, Munich, 1904, pls. 17-18). The chorus addresses the poet, and the poet speaks to the whole body of dancers or to an individual.

This kind of choral lyric combined with its praise the epic recital of a local or national or religious legend.

The specific and immediate origin of the Greek drama, however, is in one form of this choral lyric—the dithyramb or hymn, usually to Dionysus, though not confined to his ritual. The word 'dithyramb' first occurs in Archilochus (fl. c. 670 B.C.), who was the first to use to any great extent the iambic trimeter and trochaic tetrameter, the two chief metres in Greek tragedy. We do not know its derivation. Many etymologies might be given, each more absurd than another. Originally it may have been an epithet of Dionysus, the name not of the hymn but of the god to whom the hymn is sung, commemorating possibly his double birth from Semele and from the loins of Zeus—the scene on Greek vases which perhaps was the prototype of the Christian representations of Eve springing out of Adam's side (cf. Eurip. *Bacch.* 519 f.). More probably 'dithyramb' is connected with *thriambos*, meaning 'mad song.' It appears from Archilochus that the dithyramb was either a banquet song or more probably a popular rude rustic hymn in honour of Dionysus, who introduced from Thrace the wild orgiastic ceremonies so foreign to Greek soberness. Out of these rustic dithyrambs—not always licentious, but often solemn hymns—after they had received a systematic form under the Dorian choral lyric, tragedy grew (cf. Aristotle, *Poet.* iv.). The dithyramb, pathetic as well as comic, flourished throughout Greece long before Arion of Lesbos (600 B.C.) gave it a distinct artistic and recognized form, fixing the number of the chorus at fifty and dressing them in the likeness of satyrs, half-animal, half-human, with the legs, ears, and snub-nose of a goat; although, according to Herodotus (i. 23), who tells the famous dolphin story about him, Arion was the best lyricist of his time and the first to compose, name, and teach the dithyramb at Corinth. His chorus had fifty satyrs or goat-men, the same number as we find in the earliest play of Aeschylus, the *Suppliants*, noted for its depth of religious feeling. The chorus of satyrs or goat-men (singers clad in goat-skins) danced and sang about a circular orchestra, and so were called a cyclic chorus (from *kúklos*, the orchestra) or tragic chorus (from *τράγος*, a goat or satyr; cf. Aesch. fr. 207). Of course, this chorus of satyrs was replaced in later times by a chorus appropriate to the plot, except in the Satyr-drama, which retained the satyr chorus; but tragedy originally meant a goat-song rather than a spelt-song,

as Miss Harrison (*loc. cit. infra*) argues. This is also more likely than that the goat was the prize, as might be argued from a vase in the British Museum, which, however, is not Attic. It is more likely than that the goat was the sacrifice, because other prizes were given, and the bull was equally associated with Dionysus. Dionysus was a bull-god as well as a goat-god, and often appears in Greek art with bull's horns. He had no monopoly of the goat-skin, which was the primitive costume in ancient times, and is worn by peasants in Greece to-day and at modern Dionysiac plays in Thrace (cf. *JHS*, 1906, p. 191 ff.) and at the performances of rude dramas in Thessaly and elsewhere. It is difficult, then, to agree with Farnell that the origin of Greek tragedy is an ancient European mummery which was a winter-drama of the seasons, in which the Black Personage, Dionysus *Μελαγάρης* or *Μελαρβός*, killed Xanthus, the Fair One, the actors wearing the black goat-skin of their god. The word 'tragic' did not mean at first dramatic or pathetic, and Aristotle (*loc. cit.*) says that the grotesque diction of earlier times was not discarded till late for the statelier manner of tragedy. But tragic soon became associated with the pathetic, because the habitual theme of the dithyramb was the adventures and sorrows of Dionysus, the new religion which had to struggle to win its way. The limitation to Dionysus was not essential, as the story in Herod. v. 67 shows. About 600 B.C. the people of Sikyon honoured their local hero Adrastus and celebrated his sufferings in tragic choruses, but Cleisthenes, being hostile to the cult of Adrastus, restored the choros to Dionysus.

Ridgeway makes large use of this to support his theory that the origin of Greek tragedy was in the worship of the dead. There is, to be sure, much of this in our extant dramas, since they naturally deal with death for the most part, and undoubtedly the worship of the dead, the Orphic and Eleusinian Mysteries in which Dionysus or Iacchus was associated with Persephone, the farces and burlesques, as at the later sanctuary of the mystic chthonic Cabiri near Thebes, who became closely connected with Dionysus, and the rude choral songs and mimetic dances contributed much, but they were all swallowed up by the coming of Dionysus, whose cult spread over the whole Greek world and was easily grafted on the native worship. Cf. and cf. art. *DRAMA* (Introductory).

Many elements, therefore, combined to make the Greek drama, but the main one was the worship of Dionysus, the god of wine, vegetation, and moisture. Dionysus, the youngest of the Greek gods, a mystic Phrygian deity, came into Greece over the mountains of Thrace, met with opposition in Thrace and Boeotia, but finally reached Delphi and the villages of Icaria and Eleutherae. From the country he made his way into the town of Athens under Pisistratus, although legend said that, under king Amphictyon, Pegasus of Eleutherae had introduced him into Athens (cf. Paus. i. 2. 4, and schol. to Aristoph. *Acharn.* 243). Dionysus is already known to Homer, by whom he is mentioned twice in the *Iliad* (vi. 132, xiv. 325) and twice in the *Odyssey* (xi. 325, xxiv. 74). The opposition to his worship in Thrace is embodied in the story of his harsh treatment by Lycurgus (*Il.* vi. 132); in Boeotia in the legend of Pentheus, the subject of lost plays by Thespis and Aeschylus, and of the most Dionysiac play of Euripides, the *Bacchae*, written at the court of Archelaus at the very birthplace of Dionysiac performances. The village of Eleutherae claimed to have been founded by Dionysus and to have been his birth-place, whence the archaic wooden image, or *Ekavor*, of the god was brought to Athens by Pegasus to the precinct beside the Dionysiac theatre on the southern slope of the Acropolis, where in the front row is still to be seen the seat of the chief priest, *tepeis* 'Eleuthereis', so named from Eleutherae. At Icaria, where Thespis, the founder of Greek tragedy, was born, there was a story, of which there are many illustrations in art, that Dionysus came and was hospitably received by the farmer Icarus. Dionysus gave

him wine, which the people thought was poison, and they slew Icarus. Erigone, his daughter, hanged herself, and Dionysus sent a plague, which was appeased by instituting the festival of the swing.

The Americans excavated Icaria in 1888 and found many inscriptions illustrating the origin of the Greek drama and many traces of the worship of Dionysus (cf. Dyer, *Gods in Greece*, 1891, pp. 104-117; Frazer, *Pausanias*, li. 461 f.; *Papers of American School at Athens*, v. [1892] 48 f.; Nonnus, *Dionysiaca*, bk. xlvii.).

The story was a favourite subject in the Greek drama. Phrynichus, Philocles, Cleophon, and others treated the theme, although it was avoided by the three great dramatists. Naxos, where the story of the waking of Ariadne is laid, Crete, Corinth, Athens, and other places are also intimately associated with the beginnings of the Greek drama and Dionysus. Dionysus was the god of life, enthusiasm, and rustic merriment, the liberator of men's lips and hearts, rightly called Dionysus Eleutherius. His orgiastic and religious influence was connected with the resurrection of life and immortality (cf. Wheeler, *Dionysus and Immortality*, 1899). Legends told how the god slept in winter and awoke in summer, or was bound in winter and released in spring. Flogging also filled an important rôle in the rites of Dionysus, as in the Dionysiac rites in Thrace to-day. Even women were flogged in being initiated into the Dionysiac rites (cf. Paus. viii. 23. 1, and the recently discovered Pompeian painting, *Notizie degli Scavi*, 1910, 4, pl. xvii.). At Delphi, the centre of Greek religion, where a ceremony described by Plutarch represented his mystical resurrection and the waking of the new-born child after his winter sleep, he was important enough to have his coffin beside the image of Apollo and to share with him the pediment of the temple. So Dionysus was also the god of sorrow and pathos, acquainted with grief. What more natural than that tragedy and comedy should arise in the worship of a deity the thought of whom covered the whole field of human emotion, whether grief or gaiety, 'a complete religion, a complete sacred representation of the whole of life'? Even before the coming of Dionysus there were the crude beginnings of the drama. If we seek the ultimate and final source, perhaps we can find it mainly, but not entirely, in the cult of the dead. The main real historical source was the poetic and literary inspiration of the wine-god, especially as exhibited in the dithyramb. Aristotle rather than anthropology should guide us in this question.

The dithyramb of Arion was, if not dramatic, mimetic, and the chorus by its dancing illustrated the story told in words. The drama proper, however, began to evolve when the choral chant was interrupted by a rude dialogue, perhaps improvised, between the leader and the chorus. The dithyramb was sung at the spring festival of the wine-god, and at any time the coryphaeus may have stepped out and spoken to the chorus as a whole. When that happened, the song became dramatic, and drama was born. Pollux (iv. 123) and the *Etym. Magnum* (s.v. θυμέλη) say that there was a kind of table on which, before Thespis, one mounted and answered the chorus. This rustic use of tables as extemporized platforms is confirmed by illustrations on Greek vases (cf. Cook, *CR* ix. [1895] 370 f.; Ridgeway, p. 44 f.). While tragedy developed out of the dithyramb, the dithyramb continued at Athens and elsewhere. The intermediate forms have been lost, and only a few notices and a list of poets from Arion to Thespis remain to fill the gap. Pindar is said to have composed seventeen tragic dramas in addition to his dithyrambs, but we know almost nothing of their character. A few years ago, however, a new piece of evidence was found in the newly-discovered eighteenth poem of Bacchylides—a short dramatic lyric dialogue,

which some call a dithyramb, between Ægeus and the chorus. Although written about the time of Sophocles, it illustrates the development from the dithyramb to the drama. The evolution of the drama consists, as Croiset says, in the elimination of the satyric element, the transformation of the primitive narrator into an actor, and the constitution of a regular plot. Thespis did this and employed a regular actor. Thus the element of acting was now added to that of impersonation, that is, he himself stepped out and recited to the others, for in early days the poets were also actors. Thespis was born in Icaria, where, as we have seen, the worship of Dionysus flourished and where tragic choruses performed in his honour. Thespis first produced his tragedies at the city *Dionysia* in 534 B.C. He is also said to have invented the mask, which is ritualistic and reflects the origin of tragedy in a Dionysiac festival. The successors of Thespis and immediate predecessors and rivals of Æschylus were especially Pratinas, Chœrilus, Phrynichus.

According to Suidas, Pratinas was the first to compose a satyr-drama. During the performance of one of his plays in competition with Æschylus (499 B.C.), the temporary wooden seats collapsed, leading to the erection of a regular theatre at Athens. His son Aristæas wrote among other satyr-dramas one called *Cyclops*—the title also of the only extant satyr-drama, written by Euripides and translated by Shelley. Chœrilus also distinguished himself in the satyr-drama, and won for himself the title of king among the satyrs. The satyr-drama, illustrated by the satyric masks with semi-bestial features, was originally a gross licentious Dionysiac rite, which with its Sileni and satyrs came down into Greece from Thrace. There dwelt a tribe called Satyræ, among whom was the chief sanctuary of Dionysus, and who were thought to be lax in their morals and given to wild orgiastic rites. Even to-day in Thrace and Greece one may see phallic and Dionysiac dances [the writer has witnessed them in Boeotia and Thessaly], which resemble the scenes on Greek vases which were inspired by, and inspired, the satyr chorus (cf. Furtwängler-Reichhold, pls. 47, 48). So from the Satyræ perhaps arose the name 'satyrs,' the constant companions of Dionysus in art and literature. It was necessary only to change the costumes of the chorus to widen the scope of subjects. This was done, and Greek tragedy got further and further away from Dionysus; and almost the whole of Greek mythology was drawn on for the plots of the Greek plays. Even the chronicle-play, or drama of contemporary events, was invented. The only extant example is the *Persæ*, in which Æschylus avoided the fate of Phrynichus (who was fined a thousand drachmas for his *Sack of Miletus*) by mentioning no contemporary Greek name in the play, and by placing the scene at the remote court of Susa. But the Dionysiac element was kept to a large extent in the coarser satyr-drama, which every tragic poet must present after a trilogy, or set of three dramas. Sometimes, however, a tragedy of a comic character, like the *Alcestis* of Euripides, could be substituted, and later only one satyr-drama instead of three was given at each festival, to remind one of the origin of tragedy in the worship of Dionysus. Then, as we know from inscriptions, it had the least important place, namely, at the beginning of the festival, and not at the end as previously. The satyr-drama, like tragedy, was a regular ritual supported by the State.

2. Tragedy.—The three great Greek tragedians were Æschylus, Sophocles, and Euripides, whose plays are full of religious and ethical ideas (discussed in the articles about them in this Encyclopædia). Æschylus added a second actor, thus introducing true dramatic action, and diminished

the songs of the chorus. Of about seventy dramas by Æschylus we still have seven, among them the only Greek trilogy preserved, the *Oresteia*, the masterpiece of Greek drama, produced in 458 B.C. Æschylus, born at Eleusis in the strong religious atmosphere of the Mysteries, extended the bounds of tragedy to deal with the great moral and religious problems of life and the relation of man to man and to God. He developed the plot, made tragedy a dignified instructor in ethics and religion, and laid down the principles followed by all succeeding Greek tragedians with few changes. One of the great features of Æschylean theology is the predominance of Zeus, to whom even Destiny is coadjutor. This is perhaps best seen in the *Suppliants*, which has been pronounced 'one of the most truly religious poems in ancient literature' (Adam, *Rel. Teachers*, p. 142). Æschylus verges almost on monotheism, or rather pantheism (fr. 70: 'Zeus is æther, Zeus is earth, Zeus is heaven; Zeus in truth is all things and more than all'). Sin is *ὄψος*, or insolence, and must be expiated by suffering; and punishment is for the most part retributory. He protests against the doctrine of the envy of the gods (cf. *Agamemnon*, 749 f.), and emphatically affirms that the world is governed by Justice. As is well expressed in Abbott's *Hellenica* (1880, p. 66), 'the undertone of Divine vengeance running through the dramas of Æschylus seems in Sophocles to pass away into an echo of Divine compassion, and we move from the gloom of sin and sorrow towards the dawning of a brighter day in which strength is made perfect in weakness.'

Sophocles, who added a third actor and raised the number of the chorus from twelve to fifteen and employed scene-painting, in contrast to Æschylus, is the poet of reconciliation and not of strife between right and wrong. He was the most religious of the Greek poets, and piety is the basis of his religion. In Euripides, the gnomic poet of everyday life and realism, there is much polemic against popular religion, much scepticism and cynicism. He robbed tragedy of its idealism, but brought in romance and pathos and melodrama, which made him very popular in his own and later times. Euripides still further diminished the importance of the chorus as an organic part of the drama, made the prologue serve to tell who the persons were, and largely employed the *deus ex machina* to close his dramas, of which we still have nineteen, including the doubtful *Rhesus*. After Euripides, new tragedies continued to be written, down to the 3rd cent. A.D., and old tragedies of the 5th cent. were reproduced along with the new. But there was little growth or innovation except in better stage-machinery and improved scene-painting. Professional actors took the stage in the 4th cent. B.C., and troupes were sent out to the villages by the guilds of the Dionysiac artists. Almost every town after the 4th cent. B.C. had its theatre and its performances. For Delos, Samos, Delphi, and other places we still have several of the choregic inscriptions.

3. Comedy.—As in the case of tragedy, the origin of Greek comedy is connected with the worship of Dionysus, and especially with the Dorians. Comedy arose in the phallic song of Bacchic dancers and revellers, a comus-song (from *κῶμος*, 'a revel,' not *κῶμῳ*, 'a village,' as Aristotle says). One sees such a phallic procession in honour of Dionysus in Aristophanes' *Acharn.* 237 f., and on many Greek vases. The primitive rude impromptu performance was developed by Susarion of Megara, who substituted verses of his own, and introduced into these indecent performances the abuse of individuals. Susarion brought these comic performances from Megara first to Icaria, where, as we have seen, tragedy also was born.

Till Epicharmus, comedy was only a series of unconnected episodes and burlesques; but Epicharmus, the Sicilian father of Greek comedy, introduced unity of subject and plot, though he seems not to have had the comic chorus, which developed out of the comos. He was the first to bring forward the character of the parasite. His comedies were of two kinds—mythological travesties, and comedies with scenes from daily life, which developed into comedies of intrigue. But the comos of Attica was combined with the episode-comedy of Epicharmus and Sicily to form Attic comedy, though, of course, the *agon*, or contest, also played an important part, as Zielinski has shown. But the *agon* theory, according to which comedy arose from *γεφύρισμα*, or the jibing at one another at the bridge passed over by the initiates on their procession to Eleusis (cf. Gildersleeve, in *AJP* x. [1889] 383, xviii. [1897] 243), would make comedy belong to Demeter and Persephone rather than to Dionysus. Whichever theory is right, Attic comedy in its origin certainly was clearly separated from tragedy and the satyr-drama, which were regarded as regular rituals by the State. But comedy grew out of mere buffoonery, and had no claim to religious respect, though it was given unofficially at festivals of Dionysus. The State did not take it up until comedy was developed on the lines of tragedy as a legitimate form of drama. Probably about 487 B.C., as Capps thinks,—and not so late as 467, as Wilamowitz argues,—comedy was officially recognized at the city *Dionysia*. Chionides and Magnes are the first great names, and from their time onwards comedy developed after the pattern of tragedy. Three comedies were given at the *Dionysia* and *Lenæa* by five separate poets. From 425 to 405 B.C. the number was only three. The number of actors who could take part in the discussion at any time was three, as in tragedy (though, as Rees has shown, this does not mean that only three actors were employed to give a tragedy or comedy). The number of the chorus was twenty-four—double the number in tragedy before Sophocles. Comedy, like tragedy, had its prologue, *parodos*, *exodos*, and choruses; but two features, the *agon* and *parabasis*, are peculiar to comedy alone. The *agon* is a debate between two antagonists and the chorus, and often seems to be the essence of the comedy. So, in the *Clouds* of Aristophanes the *agon* is the contention of the Just and Unjust Arguments for the Athenian boy. The *parabasis* is the part where the chorus faces the spectators and addresses them in the name of the poet.

Three periods of comedy are distinguished—the Old (down to, say, 390 B.C.), the Middle (from 390 to, say, 324—the date of Menander's first play), and the New (from 324 onwards). The Old Comedy, of which Cratinus, Eupolis, and Aristophanes are the three great poets, ridiculed with gross abuse and obscenity an individual or any subject, whether from mythology, literature, Utopias, daily or public life. Imitations of animal life were common, and there were choruses of snakes, wasps, fishes, or birds, as in the *Birds* of Aristophanes, the prototype of Rostand's *Chanticleer*. Such choruses existed even before Aristophanes, since a vase in the British Museum of the 6th cent. B.C. shows men dressed as birds dancing to the sound of the flute. Great licence was allowed in ridiculing statesmen and politics, but for a while it became necessary to curb the satire and forbid the comedians to satirize individuals by name. The plays of the middle period of Aristophanes are not so pungently political as the earlier ones, and the *Plutus* belongs to Middle Comedy. Aristophanes was the greatest representative of the Old Comedy, and of his fifty-four plays we have eleven preserved entire—the

only extant examples of a complete Greek comedy. The Middle Comedy, best represented by Alexis and Antiphanes, in which political and personal satire hardly appears at all, is a period of transition to the more refined and less personal New Comedy, which developed the comedy of manners with its stock characters and with the every-day interests of eating, drinking, and intrigue. The greatest poets of the New Comedy were Philemon (who in a life of ninety-nine years produced about ninety plays), Menander, Diphilus, Apollodorus, and Posidippus. Recently considerable fragments of four plays of Menander have been recovered in Egypt (cf. Capps, *Four Plays of Menander*, 1910), but we still get our best idea of the Greek New Comedy from the Roman comic poets Terence and Plautus, who took their plots from the Greek, and led the way to the comedy of Molière and modern Europe. See DRAMA (Roman).

4. The structure of the theatre.—It is impossible even to touch on all the subjects connected with the Greek drama in this article, but something should be said about the form of the Greek theatre, which to-day is the most conspicuous ruin throughout Greek lands. The best preserved auditorium is that of the beautiful and harmonious theatre of Epidauros; the best preserved stage-building is that of Priene. All date after the middle of the 4th cent. B.C. The first stone theatre in Athens dates from the time of Lycurgus,—long after the days of Aeschylus, Sophocles, and Euripides,—and would seat about 15,000 people. With the semi-circular auditorium rising in tier after tier of seats divided into *kekphides*, or wedges, by aisles, the theatre of Lycurgus probably reproduces the plan of the temporary structure in which Aeschylus acted his own dramas. The performance was always out of doors, and the spectators sat on the slope of the hill, which was made into the form of a semi-circle with the ends extended. Generally even in later times the side of a hill was used for the auditorium of stone, but at Eretria an artificial embankment had to be heaped up. The chorus and actors performed in a circular orchestra at the bottom of a semi-circular auditorium. Here was an altar of Dionysus, at which every performance was begun with sacrifice; and, as the Greek drama was essentially a religious service, not far away there often was a temple, generally of Dionysus, in whose precinct the theatre was. Part of the 6th cent. temple of Dionysus remains even to-day, to the south of the stone theatre of Dionysus in Athens, although the later 4th cent. temple is better preserved. However, we must remember that, while Dionysus was the usual deity associated with the theatre, we sometimes find others. So the stage-building of the theatre at Oropos, which seems to have had wooden seats, with the exception of a few stone ones for the priests and dignitaries, bears an inscription to Amphiaraus. At first there was no scenic background, but, when painted scenery had been introduced, a *skênê* was erected behind the orchestra containing dressing rooms, and was later adorned with a proscenium of half columns, originally wood, but later stone, between which were slabs, or *pinakes*, on which the scenery was painted. These slabs could be removed when the actors came out into the orchestra. Even when there was a stone *skênê* and proscenium, most scholars now agree that the actors performed in the orchestra, where even a whisper could be heard by the topmost row, as the writer can bear witness from experiments at Epidauros. The gods, of course, appeared on top of the proscenium, or *theologion*. Ghosts, like that of Darius in the *Persæ*, would appear by 'Charon's stairs,' which descended in the middle of the orchestra and connected with an underground passage to the *skênê*,

as at Eretria and Sicyon. The actors were distinguished from the chorus by their costume, often padded, and by their wigs and masks. It used to be thought that their height was increased by the *cothurnus* on the feet and the *onchos* on the head. But it is likely that the *cothurnus* was unknown till late times. Doubt has also been thrown on the use of the *ecycloëma*, or machine to roll out the corpse, since no murder could be represented in full view of the spectators. But there seems to be evidence for its use. Men played the part of women. There was no curtain, as in the Roman theatre, so that there was rarely a change of scene; but the three unities of time, place, and action were often violated, and not consciously formulated by the Greeks.

LITERATURE.—Of the different histories of Greek Literature, esp. Croiset, *Hist. de la litt. grecque*, iii. (1891), tr. in abridged form by Heffelflower (1904); Christ, *Gesch. der griech. Literatur* 4, 1905; Fowler, *Hist. of Ancient Gr. Literature*, 1902; Capps, *From Homer to Theocritus*, 1909, pp. 182-300, 414-440 (one of the best accounts of the subject); Wright, *Short Hist. of Gr. Literature*, 1907; Verrall, *Student's Manual of Gr. Tragedy*, 1891; Barnett, *Gr. Drama*, Temple Primer, 1900 (an excellent little book, with a good account of the origin and early history of the drama); Haigh, *Tragic Drama of the Greeks*, 1896, *The Attic Theatre*, 1889 (3rd ed. by Pickard-Cambridge, 1907); Moulton, *Ancient Classical Drama*, 1890; Weil, *Études sur le drame antique*, 1897; Campbell, *Guide to Gr. Tragedy for English Readers*, 1891; Ridgeway, *The Origin of Tragedy*, 1910 (the most recent and important treatment); Farnell, 'The Megala Dionysia and the Origin of Tragedy' (*JHS* xxix. [1909] p. xvii), also *Cults of the Greek States*, v. [1910], s.v. 'Dionysus'; Reisch, 'Zur Vorgesch. der attischen Tragödie' (*Festschrift für Gomperz*, 1902, p. 459 f.). For the religious side, cf. esp. J. Adam, *The Religious Teachers of Greece*, 1908; Campbell, *Religion in Greek Literature*, 1898; Dyer, *Gods in Greece*, 1891; Foucart, *Le Culte de Dionysos en Attique*, 1904; J. E. Harrison, *Proleg. to the Study of Greek Religion* 3, 1908 (esp. pp. 359-458); Pater, *Greek Studies: A Study of Dionysus*, 1895; Wernicke, 'Böckschöre und Satyr-drama' (*Hermes*, xxiii. [1897] 200 f.). For the ruins of theatres and their interpretation, cf. Dörpfeld, *Das griech. Theater*, 1896; Puchstein, *Die griech. Bühne*, 1901. On the dramatic inscriptions, cf. Wilhelm, *Urkunden dram. Aufführungen in Athen*, 1906, and the art. by Capps cited there, esp. the 'Introduction of Comedy into the City Dionysia' (*Chicago Decennial Publications*). Other important works are the editions of Aristotle's *Poetics* by Butcher (1898) and Bywater (1909); O'Connor, *Chapters in the History of Actors and Acting in Ancient Greece*, 1908; Rees, *The So-called Rule of Three Actors*, 1908; Smith, 'The Use of the Buskin in Greek Tragedy' (*Harvard Studies*, xvi. [1905]); Hains, 'Gr. Plays in America' (*Classical Journal*, vi. [1910] 24 f.). Other books on the Greek drama are being prepared by Capps, Harris, Harry, Flickinger, and others. DAVID M. ROBINSON.

DRAMA (Indian).—1. The classical Indian drama.—The extant masterpieces of the Indian drama belong to the most flourishing period of classical Sanskrit literature, which may be supposed to begin with the establishment of the Gupta Empire in A.D. 319, and to extend to about the year 800, though the literature of the next three or four centuries, which may be regarded as the silver age, includes a number of dramas of considerable interest and importance; and this species of composition has continued to be cultivated in India even down to the present day. But these later productions are destitute of originality. They are either imitations of the old models, or exercises constructed in accordance with the rules of the rhetoricians and the writers on the dramatic art. Recent discoveries have, however, shown that the antiquity of the classical drama is much greater than is represented by the extant literature. Fragments of Indian palm-leaf MSS found in Central Asia show that a dramatic literature possessing substantially the same chief characteristics (§ 2) was flourishing several centuries earlier in the Kuṣāṇa period (§ 3).

Like all other works of the classical period—such as the romances, the literary epics, and the lyrical poems—the Sanskrit dramas are of an artificial and highly elaborated character. The rules which govern their language, their structure, the choice of their *dramatis personæ*, and their plots are

those which had been already fixed by grammarians and theorists. Dependent as they are for their interest, not so much on originality of plot or a life-like portrayal of character, as on their power to excite emotion, on refinement of language, and on subtlety of expression, they can have appealed only to cultivated audiences. We thus find the drama, at its first appearance in literature, to be a perfected work of art, the form of which, already definitely settled, does not subsequently undergo any important modification.

This drama must have had a history; but such earlier forms as might have enabled us to trace its origin and growth directly were either not committed to writing or have disappeared in the course of time. References in early literature prove, indeed, that a drama of some kind flourished in India at least as early as the 4th cent. B.C. (see § 8); but there is nothing actually extant in Indian literature which stands to the classical drama in the same relation as the early epics, the *Mahābhārata* and the *Rāmāyana*—the oldest portions of which probably go back to c. 500 B.C.—stand to the later epics of the classical period. All that can be now known of the history and development of the Indian drama must be inferred: (1) from the plays themselves, (2) from works dealing with the arts of dramatic composition and dramatic representation, (3) from references in other literature, and (4) from a consideration of the popular theatre which continues still to flourish in India.

2. **Chief features.**—Some of the most important characteristics which are common to all Sanskrit plays are the following:—

(1) *The benediction.*—Every play begins with a solemn prayer in verse, addressed to some deity—usually Śiva or Viṣṇu or some Divine personage connected with them. In the case of one drama, the *Nāgānanda*, Buddha is invoked.¹ This prayer, called the *nāṇḍī*, was pronounced by the manager of the theatre (*sūtradhāra*), who was also usually the principal actor. It formed part originally of an introductory religious ceremony called the *pūrvavāṅga*, and remained prefixed to the drama as a sign of its religious origin.

(2) *The prologue.*—At the conclusion of the *nāṇḍī*, the manager calls to his side one of the actors or actresses; and the dialogue which follows is adroitly used to bespeak the good-will of the audience, to give some account of the piece to be performed, and to lead up to the action of the opening scene by calling attention to the character or characters who now appear on the stage. This introduction (*āmukha* or *prastāvanā*) differs from the prologue in the Latin, French, or English comedy, in so far that it is not definitely separated from the play itself, and is intended to set the plot in motion.

(3) *The acts.*—The play thus begun divides itself naturally into acts (*akṣa*), each forming, as it were, a chapter in the story. The hero appears in each act; and an act comes to an end when all the characters have gone off the stage. The unity of time is preserved only within each act and not throughout the whole play; and even within the act the rule is liberally interpreted by a proviso that the events described must not be supposed to have lasted more than twenty-four hours. The time supposed to elapse between one act and another is, in theory, limited to a year; but in practice a longer interval is sometimes permitted.² The audience is made acquainted with events which have taken place between acts by means of interludes (*viṣkambhaka* or *praveśaka*), which take the

form of monologues or duologues. The unity of place is not observed. Journeys from one spot to another, or from the earth to the sky, for instance, may be represented dramatically within the act.

(4) *Expression of emotions.*—The object of the dramatic art is to produce emotion in the mind of the spectator; and to this end everything else is subordinated. In the course of a play all the emotions (*rasa*), enumerated as eight,³ may be excited; but those of love and heroism should preponderate. Death and fighting must not be represented on the stage; and every play must have a happy ending. Tragedy, therefore, in the ordinary sense of the word, finds no place in the classical Hindu theatre. These characteristic aims and limitations produce in Sanskrit plays a sentimental and conventional atmosphere which distinguishes them in a very marked manner from the tragedies and comedies of ancient Greece and Rome.

(5) *Verse and prose mixed.*—A no less striking contrast is presented by their form. Sanskrit plays are written partly in verse and partly in prose. The verse portions consist of short lyrical poems descriptive of the beauties of Nature, the charms of women, feelings of love, joy, despair, etc., and these are connected by a prose dialogue. The action of the plot is carried on almost entirely in prose, while the personal feelings of the characters inspired by their surroundings are expressed in the most formal verse. These lyrics, couched in a great variety of metres, and adorned with all the devices of rhetoric, are highly polished specimens of the poetic art such as could have been appreciated, or even understood, only by a cultured audience. It seems probable that, in the earlier stages of the drama, the verses only were fixed, while the connecting dialogue was left to improvisation, as in the popular plays at the present day.

(6) *Sanskrit and Prakrit.*—The *dramatis personae* speak either the literary language (Sanskrit) or one or other of the popular dialects (Prakrit). The distribution of languages among the various characters may be given as follows from the *Dasa-Rūpa* ii. 97-99 (ed. and tr. Haas, p. 75):

'Sanskrit is to be spoken by men that are not of low rank, by devotees, and in some cases by female ascetics, by the chief queen,⁴ by daughters of ministers, and by courtesans. Prakrit is generally (to be the language) of women, and Sauraseni in the case of male characters of low rank. In like manner Pāṣāṇas, very low persons, and the like are to speak Pāṣāṇī and Māgadhī. Of whatever region an inferior character may be, of that region is his language to be. For a special purpose the language of the highest and subsequent characters may be changed.'

This diversity of tongues would seem to indicate that the drama assumed its final form at a period when the educated classes were in the habit of using Sanskrit as an ordinary means of communication, while the uneducated classes still continued to employ their own dialects. But, though the classical drama may thus show conventionalized a state of things which must at one time have had its basis in actual fact, its Prakrits are no longer the genuine language of the people. They, too, have become conventional; that is to say, they are merely Sanskrit changed into the various Prakrits in accordance with what were supposed to be the phonetic peculiarities of each, in much the same way as the Scotch and Irish characters on the English stage are often made to speak a jargon which is nothing more than perverted English—the work of a dramatist who has no knowledge of the living dialects. These dramatic Prakrits are, further, assigned to different classes of characters, and applied to different uses in the plays, in a manner which is also purely conventional. The Prakrits thus represented most commonly are three in number—Sauraseni, Māhā-

¹ See § 3; cf. also the fragments of plays discovered in Central Asia (ib.). These are definitely Buddhist in character.

² See Jackson, 'Time Analysis of Sanskrit Plays,' in *JAOS* xx. (1899) 341-359, xxi. (1900) 88-108.

³ For an elaborate study of the *rasas*, see Regnaud *Rhetorique sanskritte*, Paris, 1884, pp. 267-364.

⁴ In the extant plays the queen regularly speaks Prakrit.

rāṣṭri and Māgadhī; but a number of others are found occasionally. Śaurasenī, the dialect of the region of the Mathurā (Muttar), is used in prose by the queen and her attendants and by the higher subordinates generally. In verse the same characters use Māhārāṣṭri, the language of the Mahāratta country. The lower subordinate characters speak either Māgadhī, the dialect of Māgadhā (Bihar), the country around Pāṭaliputra (Pāṭna), or some peculiar *patois* of their own. A fourth Prakrit, Pāśācī, spoken in certain districts of N.W. India, is said by the grammarians to have been used in the drama, but is known at present only from their quotations, and has not been found in any extant play.¹

The predominance in the plays of Śaurasenī, the dialect of the country of Mathurā, the holy land of Kṛṣṇaism, lends some support to the theory, which is not improbable otherwise, that the drama had its origin in religious performances celebrating the life and exploits of Viṣṇu-Kṛṣṇa.

(7) *The characters, etc.*—The characters in a play may be either semi-Divine or human; and, as according to Hindu ideas there is no very definite line of demarcation to be drawn between these two classes, they are often brought into association, as, for instance, when a king falls in love with an *apsaras*, one of Indra's nymphs.

The plot may be taken from legend or from history, or it may be founded on contemporary life and manners. In any case, the main interest almost invariably centres in a love-story. For a rare exception, see § 3, vi. 'Mudrārākṣasa.'

The scenes are predominately, though by no means exclusively, those of court life; and the persons most frequently represented are kings and queens and their *entourage*. There can be no doubt that the classical drama was developed mainly under the influence of royal patronage, and that the dramatists were usually also court poets. The dependants of the court, too, supplied certain types which are especially characteristic of the Indian stage. The most noteworthy of these are the *vidūṣaka* (who appears in nearly all the plays except those of Bhavabhūti), the *viṭa*, and the *śakāra* (who are known chiefly from the *Mṛcchhakatikā* [see § 3] and the text-books).

The *vidūṣaka*, who has often been compared with Shakespeare's clown, is the king's confidant and go-between. His gluttony, his stupidity, and his foibles make him the comic character of the piece. Although a Brahman, he speaks Prakrit, like the uneducated characters. This fact probably denotes that the type has been borrowed by the literary drama from the popular stage.²

The *viṭa*, another associate of the king, is a person of wit and refinement, who combines the graces and the subserviency of the courtier.

The *śakāra* is the brother of one of the inferior wives of the king, and is represented as an insolent, overbearing upstart. The name, according to the grammarians, denotes a person of Śaka descent (Patañjali, *Mahābhāṣya*, ad Pāṇini, IV. i. 130). As Sylvain Lévi (*Le Théâtre indien*, p. 361 f.) has pointed out, this etymology is historically important, as showing that the character in question first found a place in the Indian drama at a period

when Śaka princes were ruling in India, and matrimonial alliances between royal houses of Hindu and Śaka nationality were possible. The peculiar language spoken by this character is also said to be that of the Śakas (*Sāhityadarpaṇa*, 81, 85).

Historically interesting also on account of their name are the *yavanis*, who attend the king as armour-bearers. These must have been originally Yavana ('Greek') women, although, like the French word *suisse*, the term may at a later date have been used to denote any attendant of a particular kind.¹

(8) *Buildings and stage-properties.*—From the prologues to the dramas we learn that they were usually performed on the occasion of a festival—most frequently the Spring Festival (see § 10). The simple arrangements of the Indian stage required no building fitted with special contrivances like our own theatres or the Greek *thēatron*. The plays were, as a rule, given in the hall of a royal palace which was used for exhibitions of singing and dancing (*samgita-sālā*).

No doubt the hall was sometimes specially intended for dramatic representations, and was, therefore, called *prekṣa-grha*, 'play-house.' Such buildings are described in the *Nāṭya-śāstra* (see § 4). Inscriptions in a cave at Rāmāgadh seem to indicate that it was intended to be used as a theatre (see Bloch, *ZDMG* lviii. [1904] 466; *Ann. Rep. of the Archaeol. Survey of India*, ii.).

The stage was open to the audience in front, while the background was formed by a curtain divided in the centre. The tiring-room (*nepathya*) was immediately behind the curtain. When characters came on the stage in a dignified manner, the two halves of the curtain were drawn aside by attendants; but, when haste was to be indicated, the actor entered 'with a toss of the curtain' (*apāti-kṣepṇa*).

One of the names for this curtain, *yavanikā*, was supposed by Weber (*ZDMG* xiv. [1860] 269, *Ind. Stud.*, Leipzig, 1863, xiii. 492) to mean 'the Greek cloth,' and the etymology was used by him to support his theory of Greek influence in the Indian drama. The word, however, more probably denotes some fabric made by the Yavanas. If so, it is, like *śakāra* and *yavani*, interesting as evidence of the period in which the drama assumed its form.

Stage-properties of the most obvious description only, such as thrones and chariots, were used; and there was no scenery in the ordinary sense of the word. Its lack was supplied by lyrics describing the imaginary surroundings, supplemented by mimetic action, and by an elaborate system of gesture to which a conventional significance well understood by the audience was attached, somewhat in the style of the modern ballet.

3. The most important plays.—

The earliest specimen of the Sanskrit drama was formerly supposed to be the *Mṛcchhakatikā*, which was referred to the 4th cent.; but, since the appearance of Sylvain Lévi's *Le Théâtre indien*, it is now generally believed to belong to a later period (see below, iii. 'Sūdraka'). The earliest complete plays which have been published would seem to be those of Kālidāsa, who probably lived in the reign of the Gupta monarch Chandragupta II. Vikramāditya (A.D. 401-415). But, in the prologue to what is usually regarded as Kālidāsa's earliest drama, the *Mālavikāgnimitra*, he records the names of some 'far-famed' predecessors—Bhāsa, Rāmilla, Saumilla, and Kavi-putra. Until recently only fragments of plays by these dramatists were known; but, in May 1910, Pandit T. Ganapati Śāstri discovered, in an old library in Travancore, MSS of ten dramas of Bhāsa, including the *Śvapna-vāsavadattā*, of which Bhāsa was previously known to be the author, and the *Daridra-chārudattā*, from which the plot of the *Mṛcchhakatikā* was borrowed. Editions of these plays may be expected to appear shortly in the Trivandrum Sanskrit Series (see Sylvain Lévi, *J.A.* xvi. [1910] 383).

Fragments of Indian (Buddhist) dramas of a much earlier date have been discovered in Central Asia. These belong to the early Kusana period, when Central Asia formed part of the Indian Empire; and one of them is actually the work of Aśvaghoṣa, the court poet of Kaniska. The chronology of the Kusana period is at present in an unsettled state; and the age of these fragments will be variously estimated according to the different views which scholars hold as to the epoch of Kaniska.

¹ For the period to which these foreign invaders belong, see § 10.

¹ For a fuller account of the Prakrits, see R. Pischel, *Gram. der Prakrit-Sprachen* (GIAP i. 8, Strassburg, 1900); on the Pāśācī, see also Konow, 'The Home of Pāśācī,' in *ZDMG* lxiv. [1910] 95-118.

² Pischel (*Home of the Puppet-play*, Eng. tr., London, 1902) supposes the *vidūṣaka* to be the original of the buffoon who appears in various forms in the popular theatres of medieval Europe. It is perhaps more probable that some such character is inevitable wherever a popular drama is developed. A nearer parallel to the *vidūṣaka* would seem to be supplied by the friar, who was often represented as a comic character. On the *vidūṣaka*, see especially Huizinga, *De vidūṣaka in het indisch Tooneel* (Groningen, 1897). Cf. also Schmidt, *Beiträge zur ind. Erotik*, Leipzig, 1902, pp. 200-208.

That is to say, while some will suppose them to belong to the 1st cent. B.C., others will assign them to the 1st or to the early part of the 2nd cent. A.D. These dramas are of the conventional form (see § 2), and do not differ essentially in language or style from the well-known examples of the classical period. Their evidence is extremely important, as showing that the structure of the drama was already settled at a period which may be from three to four and a half centuries anterior to Kālidāsa (see § 10 (4)). See *Königlich Preussische Turfan-Expeditionen: Kleinere Sanskrit-Texte*, Heft 1, 'Bruchstücke buddhistischer Dramen herausgegeben von Heinrich Lüders', Berlin, 1911; *Das Śāriputra-prakarapa, ein Drama des Aba-gghosa*, by Heinrich Lüders, Berlin, 1911 (Sitzungsber. der Königl. Preuss. Akad. der Wissenschaften, Phil.-Hist. Klasse, p. 388).

The number of extant plays recorded in Schuyler's *Bibliography of the Sanskrit Drama* exceeds five hundred, but a great number of these are late and purely imitative productions of little interest or literary value. The following list contains the titles, with short descriptions, of the most important:

I. KĀLIDĀSA.—(1) *Mālavikāgnimitra*: the story of King Agnimitra and the Princess Mālavikā (repeatedly translated, e.g. Tawney², Calcutta, 1891). The play is singular in the sense that some of the characters are known to history. Agnimitra was the second member of the Śunga dynasty, which succeeded the Mauryas in the kingdom of Vidisha (E. Malwa), c. 178 B.C. Incidents referred to in the play, such as the war with Vidarbha and the defeat of the Yavanas, are also perhaps historical. (2) *Sakuntalā* (the most popular of Skr. plays; first tr. Jones, Calcutta, 1789): the story of King Dussyanta and the nymph Sakuntalā, taken from bk. i. of the *Mahābhārata*. (3) *Vikramorvāṣī* (repeatedly translated, e.g. by Wilson): the story of King Purūravas and the Nymph Urvaśi, which goes back to Vedic times. A dialogue between these two personages is found in the *Rigveda* (x. 95).

II. HARṢA (reigned A.D. 606–c. 648).—(1 and 2) *Ratnāvalī* (Eng. tr. by Wilson) and *Priyadarśikā* (tr. Strehly, Paris, 1888; Eng. tr. in preparation by A. V. W. Jackson), named after their heroines. The plots are taken from the cycle of stories about the adventures of King Udayana of Vatsa. (3) *Nāgānanda*: founded on the Buddhist story of the Bodhisattva Jīmūtavāhana (Eng. tr. by Boyd, London, 1872). In the opening benediction Buddha is invoked.¹

III. ŚŪDRĀKA. *Mr̥cchhakaṭikā*, 'The Clack Cart': a comedy of middle-class contemporary life. The plot gathers around the love of the rich courtesan Vasantasenā for the poor but well-born Chārudatta (Eng. tr. by Wilson, and especially Ryder, Cambridge, Mass., 1905). This, the most human and amusing of Sanskrit plays, is now known to be an adaptation of Bhāsa's *Daridra-chārudatta*, 'Poor Chārudatta'.²

IV. BHAVABHŪTI (flourished at the court of Yaśovarman of Kanauj, c. A.D. 690).—(1 and 2) *Mahāvīra-charita* (tr. Pickford, London, 1871) and *Uttararām-charita* (several translations, e.g. by Wilson): founded on the story of Rāma. (3) *Mālatī-mādhava*: a comedy of contemporary life named after the two chief characters Mālatī and Mādhava (Eng. tr. by Wilson).

V. BHĀṬYA NĀRĀYAṆA (before the second half of the 9th cent.).—*Veṇiśāhpāra* (Eng. tr. by Tagore, Calcutta, 1880): the plot is taken from the *Mahābhārata*.

VI. VIŚĀKHADATTA or VIŚĀKHADĒVA (about the same date as the last).—*Mudrārākṣasa*: a political drama with no principal female characters and no love interest (Eng. tr. by Wilson). The plot is historical. It turns on the fall of the Nandas and the coming to power (c. 315 B.C.) of Chandragupta, the founder of the Maurya dynasty, the *Σανδρόκοττος* of Alexander the Great's historians.

VII. RĀJĀŚEKHARA (lived at the court of Mahendrapāla of Kanauj, c. A.D. 900).—(1) *Viddhaśālābhajikā*, 'The Pierced Statue' (Eng. tr. by Gray, JAOIS xxvii. [1906] 1–71); (2) *Karpūramajirī*, 'The Camphor Cluster' (ed. and tr. Konow and Lanman, Cambridge, Mass., 1901); (3 and 4) *Bāla-rāmāyana* and *Bāla-bhārata*. The first of these is, in some respects, an imitation of the *Ratnāvalī*; the second is noteworthy as being the only extant example of a play written altogether in Prakrit; the third and fourth are founded respectively on the stories of the *Rāmāyana* and the *Mahābhārata*.

VIII. KṚṢṆAMIŚRA (11th cent.).—*Prabodha-chandrodaya*, 'The Rising of the Moon of Wisdom': an allegorical play in which the characters are abstract ideas, virtues, or vices.³ Its object

is to glorify the Vedānta philosophy and to inculcate the worship of Viṣṇu (Eng. tr. by Taylor², Bombay, 1893).

For dramas inscribed on stone, see Kielhorn, 'Bruchstücke ind. Schauspiele in Inschriften zu Ajmere' (GGN, 1901); and Hultzsch, *Epigr. Ind.* viii. [1906–6] 96.

4. Works on the theatre.—Of the Sanskrit treatises which deal with dramatic composition and theatrical representation the following are the most important:—

The *Nāṭya-śāstra* is an encyclopædia dealing with the theatre and all the arts associated therewith. It is regarded as the highest authority, and is supposed to be of Divine authorship. It is said to have been revealed as a fifth Veda by the god Brahmā to the sage Bharata, who is often mentioned in the plays as the stage-manager of the gods. It is at least as old as the earliest extant dramas, and may be much older. The list of foreign invaders of India mentioned in it—Sakas, Yavanas, Pahlavas, Bāhlikas—seems to indicate the same period as the dramas themselves (see Sylvain Lévi, *op. cit.*, Appendix, p. 3).

The *Dasa-Rūpa* (ed. and tr. Haas, New York, 1911) of Dhananjaya, who lived in the reign of Muñja or Vākpatirāja, king of Malwa (last quarter of the 10th cent.), deals only with the dramatic art, which it analyzes under four headings: (1) the plot, (2) the hero and the other characters, (3) the prologue and the various species of dramatic composition, (4) the poetry and the sentiments to be expressed.

The *Sāhityadarpana* (ed. and tr. Ballantyne and Mitra, Calcutta, 1875) of Viśvanātha, of uncertain date, treats not only of the drama but also of the whole art of poetry.

These works show a subtle power of analysis which is characteristically Indian; but the analysis is rather of the form than of the spirit, and is as alien as possible from what has, since the days of Aristotle, been regarded as dramatic criticism in the West. Thus, the principles in accordance with which dramas are classified are founded on what we should consider accidents rather than essentials; for example, the rank of the hero, the number of the acts, the kind of language (whether partly in Sanskrit and partly in Prakrit, or altogether in Prakrit, etc.). According to such principles, all dramas are divided into two main classes—a higher (*rūpaka*), of which there are 10 varieties; and a lower (*uparūpaka*), of which there are 18 varieties. Of the *rūpaka*, the first variety is the *nāṭaka*, which must consist of not fewer than 5 and not more than 10 acts, and in which the hero must be a god or a prince, e.g. *Sakuntalā*. The next variety is the *prakaraṇa*, a love-story of real life, in which hero and heroine must be of good family, e.g. *Mr̥cchhakaṭikā*. Of the *uparūpaka* the chief variety is the *nāṭika*, which has the same type of hero as the *nāṭaka*, but is confined to 4 acts, e.g. *Ratnāvalī*. Another variety, the fourth in the enumeration, is the *saṭṭaka*, which (according to the *Sāhityadarpana*) is like the *nāṭika*, except that it is written entirely in Prakrit, e.g. *Karpūramajirī*.

[In addition to the *rūpaka*s and *uparūpaka*s just noted, the following types described by the Indian dramaturgists are also accessible, though the majority of them are still untranslated.

1. RŪPAKAS.—(i) The *Bhāga*, or monologue, descriptive of the passing throng or of a rasal's exploits (e.g. *Vasantatilaka* of Varadacharya, ed. Vidyāśāgara, Calcutta, 1872; Eng. tr. in course of preparation by L. H. Gray). (ii) *Prasana*, or farce (e.g. *Jyotiśvara's Dhūrtasamāgama*, tr. Marazzi, *Teatro scelto indiano*, Milan, 1871–74, li. 189–231). (iii) *Dina*, or presentation of terrible events, the effect of the combats, etc., often being enhanced by sorcery, colicopes, and the like (e.g. *Rāma's Man-mathonmathana*, ed. R. Schmidt, ZDMG lxiii. [1909] 406–437, 629–664). (iv) *Vyayoga*, or military spectacle, on which the sentiment of love is excluded (e.g. *Kāncanacharya's Dhananjayavijaya*, ed. Śivadatta and Parab, Bombay, 1896).

2. UPARŪPAKAS.—(i) The *Trotaka*, merely a variety of the *nāṭaka* (e.g. the *Vikramorvāṣī* [§ 3, i.]). (ii) *Srīgadita*, in which the name of the goddess Śrī ('Fortune') is frequently mentioned, or the divinity is imitated by the heroine (e.g. *Mā-*

¹ Although these three plays bear the name of King Harṣa-vardhana Śilāditya of Thanesar, and each contains a verse asserting the royal authorship, it is probable that they were the work of a court poet, perhaps Bāna, to whom also a play entitled *Pārvaṭi-parīkṣā*, 'Pārvaṭi's Wedding' (tr. Glaser, Trieste programme, 1886), is attributed (on this whole problem, see Eisinghausen, *Harṣa Vardhana, empereur et poète*, Paris, 1906).

² King Śūdraka, to whom this comedy is attributed, is the central figure of a group of legends, from which no exact information as to his date or locality can be obtained. As in other similar cases, it is probable that the actual author was some court poet. The *Mr̥cchhakaṭikā* may perhaps belong to the 6th or 7th century.

³ Allegorical characters are also found in one of the Buddhist plays of which fragments have been discovered in Central Asia.

dharma Bhatta's *Subhadrāharana*, ed. Durgaprasāda and Parab, Bombay, 1888). (iii.) *Bhāṣikā*, a comic piece in one act (e.g. Kūpa Govardana's *Danaketikaumudī*, ed. Jiva Govāmi, Muralidābād, 1881).

To these should be added, though unmentioned by the native dramaturgists, the very interesting *Chāyānāṭaka*, or 'shadow play' (e.g. Subhata's *Dūtāngada*, tr. Gray, *JAOS* xxxi. [1911]; see below, § 6).—L. H. GRAY.]

In the same spirit the theorists delight in arranging into divisions and sub-divisions—according to rank, character, and circumstances—all the conceivable types of hero and heroine, and all the possible varieties of plot. Artificial and meticulous as is the theory of drama thus presented, it is substantially observed in all the plays extant, and it acquires a more binding power as time goes on, so that the later productions are no longer works of art, but exercises written to illustrate rules.

5. Prakrit nomenclature a sign of popular origin.—The whole nomenclature of the drama, however, as employed and expounded by the theorists, supplies indisputable evidence of its popular origin. The terms denoting acting and actors, the different kinds of plays, theatrical appliances, etc., are pre-dominantly Prakrit and not Sanskrit, as they must have been if the drama had been literary from the first. The very root *nat*, 'to act,' is the Prakrit equivalent of the Sanskrit *ṛt*, 'to dance,' in the Indian sense, that is, 'to express by mimetic action.' It occurs in Pāṇini's grammar (iv. iii. 110, 129; 4th cent. B.C.), and both Pāṇini himself and, still more explicitly, his commentator Patañjali (2nd cent. B.C.) show that, at their respective dates, the educated classes spoke Sanskrit, while the common people still continued to use their native dialects. The drama, then, had its origin among the common people; and, at the later period when it assumed a literary form, its nomenclature was so firmly established as not to suffer change through the influence of its new surroundings.

6. Influence of the puppet-play.—Further evidence of a popular origin has been seen in the titles *sūtradhāra* and *sthāpaka* applied to the manager and to his principal assistant. The word *sūtradhāra* means literally 'the holder of the strings,' and *sthāpaka* 'the placer.' These terms are supposed to have been borrowed from the puppet-play, which was undoubtedly a very ancient form of dramatic representation in India, and is alluded to by Nilakantha in his commentary on *Mahābhārata*, XII. cxcv. 5 (Shankar Pandit, in notes to *Vikramorvaśī*, p. 4, Bombay Sanskrit Series, 1879; Pischel, *Home of the Puppet-play*, and 'Das altind. Schattenspiel,' *SBW* xxiii. [1906] 482-502; Gray, introduction to his tr. of the *Dūtāngada*, in *JAOS* xxxii. [1912]).

The *sthāpaka*, who is well-known from the text-books, has almost vanished from the stage. He probably, however, appears in the *Karpūramahārī*, although the MSS are not in agreement on this point (see Konow and Lannan, *Karpūramahārī*, p. 196, Harvard Oriental Series, vol. iv. [1901]).

7. Popular plays (yātrās).—The classical drama is, therefore, a popular product which has received a literary development. This development took place, as is, indeed, true of classical Sanskrit literature generally, under royal patronage. The plays, as we learn from the prologues, were most frequently performed at palaces on the occasion of the Spring Festival; the characters represented are most commonly kings and queens and the *personnel* of the court; the dramatists are usually court poets; and the authorship of a number of plays is attributed to the kings themselves.

The popular drama, however, did not cease to exist because it assumed a more polished form at courts. While the works of a Kālidāsa or a Bhavabhūti were being performed before a courtly audience in the hall of the palace, the popular

plays were appealing to humbler folk in the open air. They still survive in India under the name of *yātrās*, a name which declares their religious origin; for *yātrā* means a festival in honour of some deity. The plots, too, of these popular plays are still religious in character. They are still taken from the legends of the gods and heroes of the *Mahābhārata* and *Rāmāyaṇa*. The striking similarity between the *yātrās* and the 'mysteries' of mediæval Europe has been pointed out by Nisikānta Chattopādhyāya (*The Yātrās, or the Popular Dramas of Bengal*, London, 1882, p. 3; *Ind. Essays*, Zürich, 1883, p. 3), and there can be no doubt that the theatre in India, as in Europe, had its origin in religion.

8. References to drama in early literature.—The earliest certain mention of a dramatic literature appears to occur in Pāṇini's grammar (c. 350 B.C.), iv. iii. 110-111, where he gives rules for the formation of the names denoting the followers of two text-books on the drama—those of Sīlālin and Kṛśāśvin. These treatises are lost; it is probable that they and all other works of the same nature were superseded by the *Nāṭya-sāstra* (see § 4). Pāṇini's commentator, Patañjali (c. 140 B.C.), often refers in his *Mahābhāṣya* to actors, and mentions two plays by name—*Kamsavadha*, 'the Slaying of Kamsa,' and *Balibandhana*, 'the Binding of Bali'—with the additional information that in the former the adherents of Kamsa and Vāsudeva respectively reddened and blackened their faces (Weber, *Ind. Studien*, xiii. 487; cf. also Keith, *ZDMG* lxi. [1910] 534-536). As both of the earliest recorded plays celebrated the exploits of the god Viṣṇu, it has been suggested that the drama may have taken its origin from religious performances in his honour. There are also other indications that this view may possibly be correct (see § 2 (6)).

9. Dramatic character of some early literature.—The earliest literature of India, extending back to a period c. 1200 or 1500 B.C., includes certain compositions which are to some extent dramatic in character, and which may well have supplied the germ of a regular drama. In the *Rigveda* there are fifteen hymns written in the form of dialogues, which, if recited with appropriate action and with the parts assigned to separate actors, would make diminutive plays.¹

The ancient epic poems, the *Mahābhārata* and *Rāmāyaṇa*, contain many scenes which might well be acted. The step from the epic to the drama, if such a development had taken place in India, would have been a short one, since the change of speaker in the epic is denoted by a short prose statement, which is little more than a stage direction—'A. spake'—and not by a line of verse incorporated in the poem, as in Homer.

The Brāhmaṇa literature, dating from c. 800 B.C., also contains accounts of performances of a dramatic character which took place in connexion with certain religious ceremonies:

'On solemn occasions, such as that of the sacrifice of a horse, it was the custom in Vedic times to recite old histories and songs; and the performers, the priests of the *Īg*-veda and the *Yajur*-veda spoke turn and turn about' (Hillebrandt, *Ritual-Literatur* *GLAP* iii. 2, Strassburg, 1897, p. 160). On the day of a *Mahāvratā* an Ārya and Śūdra appeared, who disputed about a skin (Hillebrandt, *Roman. Forsch.* v. [1890] 827); and at the ceremony of the purchase of soma a buyer and seller were introduced, who held an animated conversation about the price. The buyer made his offer, the seller raised his price. If the soma-dealer proved refractory, the purchaser was bound to tear the soma from him, and also to take away the gold and the cow which he had given for the soma. If the dealer resisted, the buyer had to beat him with a leather strap or with billets

¹ For these '*samvoda*' hymns, see Oldenberg, *ZDMG* xxxvii. (1888) 64, and xxxix. (1885) 52; Sylvain Lévi, *op. cit.* 301; von Schröder, *Mysterium u. Mimus im Rig-veda*, Leipzig, 1908, p. 1; Winternitz, *WZKM* xlii. [1909] 102; Hertel, 'Ursprung des ind. Dramas und Epos,' *ib.* xviii. (1904) 59-63, 187-168; Keith, in *JRAS*, 1911, p. 979.

of wood (Hillebrandt, *Vedische Mythologie*, Breslau, 1891-1902, I. 75; Pischel, *Home of the Puppet-play*, p. 12).¹

10. Origin of the drama.—The foregoing paragraphs contain a summary of such evidence as bears on the question of the origin of the drama. From a consideration of the evidence thus summarized, the following four points would seem to be established:

(1) The drama was of popular, not of learned, origin (see § 5). It is, therefore, difficult to suppose any connexion between it and the *saṃvāda* hymns of the R̥gveda (see § 9).

(2) The drama is of lyric, not of epic, origin. The actual plays are essentially lyrical. Their frame-work consists of a number of little poems about the beauties of Nature, or personal feelings, somewhat after the manner of Heine's *Lieder*. The prose dialogue which connects these is of minor importance, and originally was probably left to improvisation (see § 2 (5)). It is probable, then, that the drama arose from songs associated with gestures, i.e. 'dancing,' in the Indian sense. Its form could not be explained if it were supposed to be of epic origin (see § 9).²

(3) Its origin was religious. This is inferred from the existence of the *nāṇḍī* (see § 2 (1)), from the analogy of the *yātrās* (§ 7), and from the titles of the earliest recorded plays (§ 8). The fact that dramas were regularly performed at the Festival of Spring would seem to indicate that the rites from which they derived their origin may have been originally associated with some primitive form of Nature-worship, like those which are found incorporated in Brāhman ritual (§ 9). It is quite possible that, in certain parts of India, the worship of Viṣṇu-Kṛṣṇa, with which the drama would appear to be especially connected (§§ 2 (6), 8), may have been at a later date superimposed on some popular festival of the kind.

(4) A drama of some kind certainly existed as early as 350 B.C. (see § 8), and, at some period between this date and the date of the fragments found in Central Asia (see § 3), the form of the classical drama was stereotyped. The peoples of foreign nationality who have left their traces in the drama, and who are mentioned in the dramatic text-books, are those who occur in the other literature—epics, grammatical works, law-books, etc.—and in the inscriptions which fall within this period (Rapson, *B. M. Cat.*, 'Andhra Dynasty,' etc., London, 1908, p. xeviii).

11. The question of Greek influence.—The view, formerly widely accepted, and most fully expounded by Windisch ('Der griech. Einfluss im ind. Drama' [*Verh. d. 5 Internat. Or.-Cong.*, Berlin, 1882, II. ii. 3]), that the Indian drama had been influenced by the Newer Attic Comedy of Menander and Philemon (340-260 B.C.), probably finds few supporters at the present day. The arguments of Windisch are carefully considered one by one by Sylvain Lévi (*op. cit.*), who finds none of them convincing; and, as has been pointed out (§§ 2, 10), there are so many fundamental differences between the Indian and the Greek drama that, *prima facie*, they have all the appearance of being independent developments.

LITERATURE.—The standard work on the Sanskrit drama is Sylvain Lévi, *Le Théâtre indien*, Paris, 1890; the best collection of English translations is still that of H. H. Wilson, *Select Specimens of the Theatre of the Hindus* = vols. xi. and xii. of *Works of H. H. Wilson*, London, 1871; the best *Bibliography of the Sanskrit Drama* is that of Montgomery Schuyler, vol. iii. of the Columbia University Indo-Iranian Series, New York,

¹ To the reference given by Pischel add von Schröder, *Mysterium u. Mimus*, and Keith, *Sāṅkhayana Arāṇyaka*, London, 1908, Appendix on the Mahāvratā, p. 73.

² An extremely polished form of the primitive *yātrā* probably exists in Jayadeva's *Gitagovindā* (12th cent.), made accessible in Sir Edwin Arnold's *Indian Song of Songs* (London, 1876).

1906. A survey of Indian dramaturgic literature, with references to parallel passages, is given by G. C. O. Haas, in his ed. and tr. of the *Dakṣa-Rūpa* in the same series (New York, 1911). Reference may also be made to A. V. Williams Jackson, 'Certain Dramatic Elements in Sanskrit Plays, with Parallels in the English Drama,' in *AJPh* xix. (1898) 241-254, and 'Children on the Stage in the Ancient Hindū Drama,' in *Looker-On* v. (1897) 509-516; and to L. H. Gray, 'The Sanskrit Novel and the Sanskrit Drama,' in *WZKM* xviii. (1904) 48-54.

E. J. RAPSON.

DRAMA (Japanese).—1. Origin.—The Japanese themselves do not hesitate to carry back the drama to mythological times.

The *Kojiki* tells us how the great sun-goddess Amaterasu-ō mikami-no-mikoto, angry with her mischievous and turbulent brother Susa no ō, god of winds and storms, hid herself in a cave and refused to come forth. The gods, distressed by the eclipse of light which ensued, sought to lure her from the cavern, and at last succeeded in doing so by means of a simple play. A young and beautiful deity, Amatsu-uzume-no-mikoto, clad in moss from the mountain of Kayou, garlanded with flowers from the spindle-tree, and bearing in her hand a bunch of bamboo-fronds, was set to dance a hieratic dance at the entrance to the cavern. The dance (it is still exhibited at Ise and Nara, and in Izumo) was found vastly amusing by the crowd of gods assembled at the cave to witness the success or failure of the experiment, and a roar of delighted laughter went up from them. The sulking sun-goddess was filled with woman-like curiosity, peeped out from her hiding-place, and was finally persuaded to return to her proper sphere. Thus the *Amatsumiwado-no-kagura*, or 'play before the celestial gate,' came to be looked upon as the germ from which has sprung the classical drama of old Japan.

The value of the above legend depends on the view taken as to the historic value of the *Kojiki*, a compilation of the 8th cent. A.D., to which few foreigners would assign the same high position that is accorded to it by the Japanese. Under the year A.D. 671, however, the *Nihongi* speaks of a *tamai*, or 'rice-field-dance,' connected with the ingathering of the harvest; and this, by the beginning of the 11th cent., had developed into a more or less formal pantomime under a Chinese name *dengaku*, which signifies the same thing as *tamai*. The *tamai*, however, seems to have been a purely Shintoistic dance, connected with the indigenous Nature-worship: the *dengaku* was more or less buddhized, and was performed by men with shaven crowns who were called *dengaku-bōshi*, or teachers of the law connected with the rice-field-dance, and who belonged (doubtless irregularly) to the Buddhist clergy. We have here a point of contact with the history of Buddhist developments in Japan. During the 9th and 10th cents., when the miseries of the country were very great, and when little, if anything, was done for the amelioration of the people by the selfishly cultured monks whose chief seats were in Nara, Kyoto, Hieizan, and a few other seats of monastic piety, travelling priests belonging to no particular sect of Buddhism itinerated throughout the country, gathering the people round them by simple dances and religious performances, and teaching the elements of popular religion. These men were known as *odori-nembutsu*, 'dancing reciters of prayers.' They were also *dengaku-bōshi*. The most famous of these men was Kāya Shōnin (9th cent.), a prince of the Imperial blood, who travelled all through the country with his mystery plays and dances. It is in these itinerant preachers that we find the true successors of that faith in Amitābha alone, which, developed in the 7th cent. by the Chinese patriarch Zendō, and encouraged by Shōtoku Taishi, disappeared for a while under the ritualistic burdens of the systems in vogue at Nara and Kyoto, to reappear in the simpler Jōdo systems of Hōnen and Shinran.

But the 'rice-field-dances' developed in another direction. By the side of the solemn and sedate *dengaku*, with its religious tone, there arose the *sangaku*, or 'Chinese dance,' full of humour and comedy, and hence changed in popular parlance to *sarugaku*, or 'monkey-dance,' which presently became the most popular of all the forms of

dances, and eventually developed into the 'nō' *par excellence*.

The word *nō* presents certain difficulties. Used as a verb it means 'to be able,' 'to have the power'; as a noun it signifies 'power,' 'faculty,' 'capacity,' 'talent.' It is much used in Buddhist philosophy, though this fact does not throw much light on its employment as a designation for lyrical dramas. Péri (*op. cit. infra*) quotes Motoori (1730-1801) as suggesting that the character is a contraction for *waza*, a term frequently used to denote 'actions,' 'liturgies,' 'dances.' We have *kami-waza*, 'liturgies'; *mai-waza*, 'dances'; *oko-waza*, 'comic spectacles'; and Fujiwara Akihara (1020-1068) even speaks of *sarugaku-no-waza*. There is much to be said for this theory, but it still leaves untouched the problem as to how the pronunciation *waza* came to be changed to *nō*. Can it be that there lurks in *nō* some echo of the Indian word *nāṭa* ('naught')? The *nō* came into vogue in Japan at a time when Japan had close intercourse with China, when China was greatly influenced by India; and there is much in the *naught* that reminds one of the *nō*. Motoori's theory, that *nō=waza*, is strengthened by the fact that the principal actor in a *nō* drama is called *shī-te* (lit. *ποικητής*).

2. The 'nō.'—Apart from the philological difficulty involved in the name, the *nō* is a lyric drama composed mainly of two factors—singing and posturing. Of these, posturing is the more ancient. We have seen that the Japanese assign the origin of the *nō*, as of the temple-dance itself, to that original *kagura* dance which was performed at the cave of the sun-goddess, and which is still perpetuated in the *kagura* dances at shrines and temples. The *tamai* was also mainly a dance, probably not unlike the country dances which still survive in remote country districts, wherever the police can be persuaded to shut their eyes, in connexion with the Feast of *O-bon*. These dances are almost invariably accompanied by some rude instrumental music, and it is almost inevitable that singing should ensue when the bodies of a company of men and women are set in harmonious motion by the sound of some simple instrument. The country dances of all peoples are accompanied with song. The dialogues connecting the various songs and dances came in later, but so subsidiary is the place assigned to what in Europe would be considered the most important portion of the drama, that they are frequently omitted altogether from the *utabon*, or printed copies of the *nō* dramas! The place where the dialogue should come in is indicated by the simple addition at the end of the song of the words *shika-jika*, 'and so forth,' or *serifu ari*, 'there are words spoken' (Péri, *op. cit.* 263).

When the *nō* appeared in its perfected condition during the Nambokuchō and Muromachi periods (1332-1603), it had a libretto, or book of words, many of which have come down to us. Over a thousand *nō* dramas are known to have existed: they were divided into two classes—*uchi*, the inner circle, the plays most commonly represented; and *soto*, the outer ring of less familiar, because less popular, plays. Common parlance speaks of *naigwai* (= *uchi soto*) *ni-hyaku ban*, 'the 200 pieces inner and outer,' but the number extant is a little in excess of that. There are about 250 which are now actually current (for their names see Péri). A new *nō* play occasionally finds its way to the stage even now, but rarely with great success.

The *nō* are classified according to their subjects, as follows: (1) *Kami nō*, or *shinji nō*, dramas which concern the gods or things divine, i.e. mythological pieces or pieces relating to the legends connected with some particular god or temple. These pieces are also termed *waki nō*, though the reason for this term is not quite clear. (2) *Shūgen nō*, or 'dramas of good wishes,' written for the purpose of celebrating heroes, famous men, emperors, etc. Some dramas evidently are capable of being treated as either *kami nō* or *shūgen nō*. This class includes nearly all the so-called *otoko mono*, or *shūra mono*—pieces relating to warriors, whom Buddhism relegated to the path of the

Shura (or *Asuras*) as a punishment for the bloodshed connected with their lives. (3) *Yūrei nō* and *seirai nō*, dramas connected with apparitions, ghosts, spirits—the former class referring to the spirits of warriors or women; the latter, to the manifestations of the spirits of animals, plants, flowers, etc. In these plays (hence called *jo* or *onna mono*) the principal actor, or *shī-te*, is always a woman, the name *katsura mono* being also given to them from the *katsura* head-dress worn by the female character. Many of the plays classified as *kami nō* or *genzai nō* may be put down as *onna-mono* as well. (4) *Genzai nō*. Whilst all the dramas hitherto considered have dealt with problems of another world, the gods great and small, the spirits and souls of the righteous and unrighteous, the fourth class deals with problems, not of the present time, but of the present world. It represents the human side of the lyrical drama, scenes more or less historical, illustrations of manners and customs, etc.

A second classification, dating apparently from the Tokugawa period (1603-1868), gives a fivefold division—*jin*, *dan*, *jo*, *kyō*, *kī*, 'god, man, woman, folly, demon'—the fourth practically corresponding to the *genzai nō* of the classification just given.

3. The 'kyōgen.'—The writers of the *nō* dramas were all either Buddhist monks or persons impregnated with the spirit of Buddhism. The present world is to Buddhism nothing but 'folly,' and it is easy to see how the plays of the *genzai nō* came to be classed as *kyō*, 'folly.' But the present world has a constant tendency to assert itself even in the most monastic of minds, and not only do we find the *kyō*, or *genzai mono*, occupying their own position among the legitimate dramas of the *nō*, but we find evolving out of them a new species of theatrical composition, the *kyōgen*, or satirical farce, which came to form a pendant to the lyrical drama, just as a satiric drama was appended to the conclusion of a Greek trilogy.

Nō and *kyōgen* are acted on the same stage, but never by the same actors. In the *nō* the actors wear masks, in the *kyōgen* they wear none; the dances are the same, but the manner of execution is different. In the *nō* everything is solemn, stately, impressive; in the *kyōgen* there is a sound of laughter, mixed with an undertone of sadness. In the *nō* we have the Buddhist clergy preaching their highest doctrines of life, and setting up an ideal which shall influence society; in the *kyōgen* there is the sense of the ridiculous and the sense of sadness which both alike come from the consciousness of failure to attain to an ideal. If the *nō* gives us the high ideals of life as dreamed of by the recluse priesthood of the period, the *kyōgen* gives us a true picture of the degenerate national life of the Ashikaga (or Muromachi) age. It would be possible to re-construct a picture of the social conditions of the age from the texts of the extant *kyōgen*. Following the analysis given by Florenz, we should see, in the sketches made by these anonymous satirists, a nobility and clergy effeminate and worldly, and meriting the disdain of the fighting classes whose hand was uppermost in the affairs of the distracted empire, a low state of social morality, much poverty and distress, no efficient system of police, and, above all, a general callousness and indifference to suffering which acquiesced in the ridiculing of the blind, the maimed, and the suffering. Read in connexion with works like the *Tsurezure gusa* and the voluminous correspondence of men like Nichiren, Rennyo, and others, now being gradually made accessible to Western readers, the *kyōgen* texts are invaluable for all students of Japanese life and society during the Middle Ages.

4. The 'kabuki.'—The *nō* and *kyōgen* were never popular performances. They were composed for the amusement of certain privileged

classes in the capital and elsewhere; they were patronized by Shōguns and courtiers; and, when the *kyōgen* had lost their sting by reason of the *pax Tokugawica* introduced by Iyeyasu (1603-32), almost every *daimyō* of any importance or wealth kept his own troupe of actors at his little court. But for the common people, the merchant, the farmer, and the artisan, the lyrical dramas were never intended.

About the year 1569 there appeared in Kyoto a woman named Izumo no O Kuni, whose genius produced a remarkable revolution in the dramatic world of her country. O Kuni was the daughter of an Izumo blacksmith, and, being a girl of prepossessing appearance, was early engaged as a *mikō*, or *kagura*-dancer, at a temple in the village of Kitsuki. The temple was destroyed by fire, and O Kuni started on a quest for money to rebuild it. It is probable that she went first to Sado, where gold had recently been discovered, and where money was readily spent. Soon afterwards, in 1569, she made her appearance at Kyoto, where she set up a booth (or *shibai*) in the dry bed of the Kamogawa, and began giving performances which speedily became very popular. She was dressed in the black robe of a priest of the Shinshu sect of Buddhists, and her dancing was of the style known as *yaya-odori*, or *nembutsu-odori*, the pantomimic sacred dance which, as we have seen, Kuya Shōnin and others used in their itinerant preachings through the country. She accompanied her dancing by rude songs on the impermanency of this transient world. Her performances attracted much attention, and her quest for the temple was soon accomplished. In the meantime she had discovered her vocation. To this she was helped by a certain Nagoya Sanza-burō, the son of a *samurai* in Owari, who had been educated by monks at Odawara, and adopted later by Gamo, lord of Aidzu, one of the political supporters of the Taikō Hideyoshi. Nagoya was a handsome and brave man, with a great reputation as a lady-killer. It was said that the fair Yodogimi was one of his conquests, and that Hideyoshi's reputed son, Hideyori, was in reality his. Gamo died in 1595, and Nagoya, now a *rōnin*, or masterless knight, came presently to Kyoto, where he became attached to O Kuni, who was some fifteen years his senior. Under his influence, she changed her methods. She discarded her priest's robe for the dress of a two-sworded *samurai*, sang popular ditties instead of *nembutsu* hymns, and began to act on themes of a purely secular nature. Her popularity increased still more. Nobunaga, Hideyoshi, and Hideyoshi's son, Hideyasu, invited her to act in their presence, and there is an old print in the Museum at Ueno, which represents her performing before a crowded house in which several Europeans are to be seen. This touch of the West in contact with the East is not without its significance. Every resident in Japan knows how marvellously quick the Japanese are to adopt the latest ideas from foreign countries, and it is quite possible that the modernized drama which was thus instituted by O Kuni and Nagoya contained elements derived from the European drama. Shakespeare was in the zenith of his power when O Kuni was acting, and there were but few Englishmen in Japan who could have told the Japanese of him. Corneille was not yet born; but the Spanish drama had been at its topmost point of fame for many years, and there were many Spaniards, clerical and other, in the Imperial city. It is possible that the Europeans represented in the old print in the Tokyo Museum are Spaniards.

The popular name for these representations was *shibai*, a name still in universal use to denote a

theatre, the secular drama, or a secular play. The name chosen for it by its founders was *kabuki*, a word originally signifying comedy and licence, but in later days ennobled so as to denote 'the art of singing and dancing.' Tokyo still boasts of a *kabuki-chō*, or street devoted to this sort of drama, and of a *kabuki-za* theatre, which has hitherto attracted to itself some of the greatest names of the Japanese theatrical world.

The year 1604 marks the height of O Kuni's personal popularity. About that year, Nagoya, who had returned to his *samurai* life, was killed in a brawl, and O Kuni, who was getting on in years, retired to a nunnery in her native place, where she died in obscurity, nine years later.

5. The 'onna-kabuki.'—Imitation is always one of the greatest tests of popularity. Before O Kuni retired from the histrionic life, her theatres had already found imitators in various cities, notably at Osaka and Yedo, and the movement showed signs of permanent vigour. But the *onna-kabuki*, as it was called, fell into disgrace with the Shōgunate, and its prominent feature was prohibited by the police of Iyeyasu in 1629. One of the chief novelties of O Kuni's representations had been her bold assumption of male attire. But when she fell in with Nagoya she was no longer a young woman, and it does not seem that there were other women directly associated with her in the enterprise. What was probably harmless in her case became a precedent of doubtful character in the hands of others. Women of uncertain reputation were brought on the stage in the rival *kabuki* theatres; with them were associated men of low life, and the result seemed very dangerous to the public morals. The employment of women in *kabuki* plays was therefore prohibited by the Shōguns' police. No woman was employed as an actress in a theatre from the year 1629 until the début, in the so-called *sōshi-shibai*, of Sada Yakko, at the end of the 19th century.

6. The 'ningyō-shibai.'—The prohibition of women actors was, for the time being, an almost crushing blow to the *kabuki*. The place of the women, banished by the decree of 1629, was taken by young boys, who played the women's parts; but the moral consequences of the so-called *wakashū-shibai* were worse than those of the *onna-shibai* had been. Besides, the boy-actors had not yet been trained, and some time had perforce to elapse before the *kabuki* could regain its former popularity. In the meantime a new species of dramatic performance got an innings, which its promoters used to great advantage. The visitor to Japan will still sometimes meet with a travelling mendicant, carrying on his back a portable shrine containing some religious image or symbol which is the pilgrim's object of devotion. It is probable that in these mendicant vagrants we have a relic of the ancient *odori-nembutsu*, and that the itinerant preachers carried with them an idol, before which they performed their simple religious dances, and which they used as a visible emblem of the faith they preached. O Kuni had discarded the emblems, whilst retaining for a while the religious dance and song; but there were (and still are) travelling priests who retained them. The founders of the *ningyō-shibai*, or 'dolls' theatre, made these dolls or images the central feature of their art. The itineration ceased, and the idol, settled in a permanent abode, developed into a marionette, or set of movable dolls. The marionettes of the *ningyō-shibai* were extremely popular during the whole period of the Tokugawa government, and performances of this sort are still to be met with, especially in Osaka. Strange to say, the marionettes had a considerable influence on the subsequent developments of the *kabuki*.

'Among the things,' says Balet, in a lecture delivered before the Alliance Française at Yokohama, Feb. 1911, 'which strike and shock us most in the popular theatre must be placed the singular gesticulation of the actors. Stiff, and moving by brusque starts, their gestures completely lack the ease and naturalness of real life; one would say they were marionettes, and not without good reason; for the actors of the *kabuki* took the marionettes of the booths in the fairs as their models. By an incomprehensible aberration, the Japanese have imitated these gestures, have elaborated them, and have fixed them permanently in the drama—except in comedy,—thus keeping aloof from the true imitation of life, falsifying the expression of even the simplest sentiments, to the point of making them a pure pantomime. From the theatre, these gestures passed insensibly into daily life. It is not difficult to find traces of them in the current expression of certain emotions; anger, scorn, especially defiance, are often expressed among the Japanese in the manner of the actors of the *kabuki*. Apart from this influence of gestures, the other—that of the manners and morals preached up *ad nauseam* in bloodthirsty tragedies—has not been the least effective in the formation of the Japanese mentality.' It is not necessary to follow Balet in all his conclusions and inferences. The main thing is to note the effect of the marionette theatres on the gestures of the *kabuki* actors.

7. The 'jōruri.'—Japan, like every Oriental country, has always had its story-tellers and wandering minstrels, whose répertoire included stories and legends of gods, heroes, and personages famous in national history, such as Benkei, the fighting monk. One of the most popular of these stories was the history of Jōruri, the famous mistress of Yoshitsune—a story belonging to the same cycle of epos as Benkei (see *Saitō Musashi-bō Benkei*, by de Benneville, Yokohama, 1910). The story of the loves of this celebrated woman was so popular that it overshadowed all the rest and gave its name to the whole class of minstrel narrative, so that a *jōruri* came to be the generic name for this class of recitals. The *jōruri* stories were originally unwritten, handed down from minstrel to minstrel in substance but not in letter. Ōta Nobunaga, the rival of Hideyoshi, and a man of considerable literary judgment, is said to have suggested that it would be an improvement to the *jōruri* to have an established written text, and his mistress, Ono no Ō Tsu, is said to have been the first person to commit a *jōruri* to writing. A few years later, about A.D. 1600, a *jōruri* singer, Menukiya Chōzaburō, conceived the idea of a partnership with the master of a marionette show near Osaka, and the result was a form of *ningyō-shibai*, which soon gained the popular favour. In 1635, a certain Takemoto Gidayū opened a marionette theatre, bearing his own name, in Osaka, and the *jōruri* came to be equally well known under the new name of *gidayū*.

8. The Genroku theatre.—The influence of the marionette show on the legitimate drama is seen in the fact that some of the greatest dramatists of Japan under the Tokugawas, notably Chikamatsu and Takeda (middle of 18th cent.), were also writers of *gidayū*. From the marionette theatre they had learned the value of the literary side of the drama. They appreciated the fact that it was something more than a mere collection of lyric songs loosely strung together by words which were scarcely worth recording, more than a mere exhibition of gestures and movements such as could be done by marionettes quite as well as by living men—above all, that it was more than the diversion of the passing hour by realistic, but motiveless, imitations of scenes of real life. Chikamatsu Monzaemon (1653–1724) stands a very long way behind Shakespeare, but he understood, as Shakespeare and his contemporaries had done, the vocation of the dramatic poet. He aimed at, and to a certain extent succeeded in, putting the dramatic poet into his proper place as the creator of a drama with ideals, representing life, and forming manners. The mediæval *nō* had been the sole property of the ruling military and cultured classes; Ō Kuni's work had been an appeal to the vulgar; Chika-

matsu and his school, without excluding the educated or despising the ignorant classes, made their appeal to the great common-sense *bourgeoisie*, which forms the mainstay of every nation. That their appeal was not made in vain, may be seen in the immense influence exercised by Takeda's *Chūshingura* in keeping alive in the people's heart the spirit of loyalty to the Imperial throne.

9. Difficulties besetting the 'kabuki.'—One of the great difficulties in the way of realizing the highest dramatic ideals lay, and still lies, in the despised position of the actors. The *kabuki* has never quite effaced the bar sinister in its escutcheon. Its founders, Ō Kuni and Nagoya, were deemed none too respectable; the *onna-kabuki* were performed mostly by prostitutes; the lads who acted in the *wakashū-kabuki* were connected with vices which flourished in one of the 'cities of the plain.' There was reason in abundance for the Tokugawa government to take alarm: there was not merely the love of pleasure and the increase of luxury among the people to be feared, but also the danger to the social order, and the confusion of classes and castes. The Shōgunal government did not weaken in the carrying out of what it conceived to be its duty. In 1609, Iyeyasu prohibited all theatres in Shidzuoka, which was at that time his residence; in 1610 certain court ladies at Kyoto were sent into exile for going to a theatre, the manager of the theatre being executed. In 1629 every performance in which women appeared was forbidden. In 1641 a manager who had allowed his 'young men' to appear as women on the stage was severely punished. A few years later, under strict regulations, a few actors were allowed to appear in female characters, but they were forbidden to wear silk or brocades, and had to shave the front of their head. Theatres, like brothels, were relegated to certain quarters, *samurai* were forbidden to attend them, and the actors were not allowed to associate with the ordinary citizens. They were classed apart, like the *eta*, and the numeral substantive used for them classed them with animals rather than with men, as though one should say, 'so many head of cattle,' 'so many head of actors.' The term *kawara-mono* refers to the origin of the *kabuki* amongst the heap of broken 'tiles' and rubbish in the dry river-bed of the Kamogawa. Under such circumstances it was extremely difficult for the *kabuki* drama to struggle into respectability.

10. Earliest written 'kabuki.'—We have already seen that the writing of *jōruri* influenced the production of regular dramas. It is worthy of notice that, in 1655, a theatre in Yedo produced a consecutive drama of several acts, entitled *Soga no Jūban Kiri*, which required 15 actors. Another play, in 1666, also produced in Tokyo, was written by Kawara Jonnosuke, and was entitled *Soga no Kyōgen*. One may see from the titles of these plays how strong was the appeal made to the national imagination by the stirring events of the Middle Ages, which have furnished Japan with a genuine, if informal, epic poem.

11. Actor families.—One of the results of the Tokugawa legislation, which compelled the actors to live by themselves, apart from their fellow-citizens, was the formation of an actor class. This was quite in accordance with ancient Japanese tradition. Japan has, from the earliest times, had castes of doctors, wrestlers, sword-makers, painters, etc., and the result of the system may be seen in the specialized skill of production combined with a marvellous lack of creative power, which marks almost all Japanese work, especially in the various departments of art. In the Japanese drama, we observe the rise of great actor families, e.g. that of Ichikawa Danjurō, which has, as it were, stereo-

typed the dramatic art along certain definite lines, and thereby produced an article perfect in its own way, but which has stifled originality and well-nigh killed the art of the playwright. Judged by its own standards, the Japanese *kabuki*, with its posturings and intonations reminiscent of the recitatives of the *nô* and the *jôruri*, its stilted language, and its simple dignity, is a thing as perfect as an art influenced by very imperfect ideals can make it. But what playwright could do his best, if he were 'bossed' from the beginning to the end of his composition by a clique of hereditary actors, who said that things had always been just so in their family?

12. The Meiji theatre.—Like everything else in Japan, the drama stagnated from about the end of the second decade of the 18th cent. to the end of the seventh decade of the 19th. The actors were a class of social outcasts, but they had the supreme sway in their own little kingdom, where things went leisurely along the old grooves. The Meiji Restoration swept away all class distinctions, and the actors emerged from their isolation. In 1876, at the opening of the Shintomiza theatre in Tokyo, the Foreign Ministers and members of the *corps diplomatique* accepted invitations to be present at the opening performance. It was a great shock to Japanese conservatism, but it proved to be a wholesome example; in 1886, Count Inoue ventured to give a performance at his own residence, at which Ichikawa Danjurô acted, in the presence of the Emperor himself. The visits of distinguished personages, e.g. Prince Arthur of Connaught, gave opportunities for official recognition of the dramatic profession; and, in 1903, Prince Ito delivered a funeral oration in honour of the popular Danjurô. The old ostracism has not yet quite gone; a statue of Danjurô, erected a few years ago in front of the Kabukiza theatre, had to be removed; but it is abundantly evident that the actors are winning for themselves a recognized position in the Japanese world.

13. The 'sôshi-shibai.'—One of the most hopeful signs connected with the modern Japanese stage is that the monopoly of the great actor families has been broken. The *sôshi-shibai*, born some 25 years ago, presents many points of resemblance to the earlier enterprise of O Kuni and Nagoya, coming into the world, as did its predecessor, at a time when 'a fever of reform and innovation' was raging throughout Japan. Kawakami Otojiro, the flighty son of a toy-dealer, had an undistinguished course at school at Fukuoka, and then flung himself into political stump-oratory, after the fashion of young Japan in the early days of Meiji. He had many fellow-travellers along the paths of stump-oratory; the Japanese of the day invented a word to denote these political adventurers. They were known as *sôshi*; they were oftener than not impecunious. Kawakami and a few brother-*sôshi* formed themselves into a sort of amateur dramatic company, and their plays were called *sôshi-shibai*. They gave representations of actual life, and gained many hearers. Their first object was to make money, but success gave them higher ambitions. They declared war against the *kabuki* school, and announced a programme of theatrical reform. In this they have not succeeded. Kawakami has been ably seconded by his wife, Madame Sada Yakko, and the Kawakami troupe has been well received in Europe and America. They draw their material from many quarters: from Dumas and Maeterlinck, from Shakespeare and Ibsen. But they have presented crude, ill-adapted matter, strongly impregnated with a Western flavour, to an audience that can only relish the sauces of Japan, and they have not yet succeeded in capturing the popular taste. The dramatist is lacking

who can draw, as did Shakespeare, on all the wealth of accessible literature, and yet present it to his audience in a thoroughly native form. The lack of a dramatist has been acknowledged in many quarters. Writers like Fukuchi, Tsubouchi, Ihara, and Masuda have tried to supply the vacancy. They are undoubtedly on the right track; but a Shakespeare is born, not made, and Japan may perhaps still be said to be waiting for the 'mother of Shakespeare.'

Efforts have also recently been made to conform the architecture of Japanese theatres to European ideas and requirements. This is notably the case in Tokyo with the Yurakuza (built 1909) and the Teikokuza (opened 27th Feb. 1911). It is impossible as yet to say what effect these buildings are likely to have on Japanese dramatic developments. A recently established training school for young actors and actresses will, if successful, be a step in the right direction, as eliminating the hereditary principle which has done so much in the way of fossilization. It also provides a way by which a young woman of respectable family can adopt the stage as a profession in an honourable manner without the loss of caste.

14. Actors in the 'nô.'—The *nô* is essentially a piece to be acted by two players, and this fundamental idea is maintained, however great may be the number of players actually employed in the performance of any particular piece. The principal personage is the *shi-te*, the *πρωτης*, or actor. His duty is both to dance and to sing, and his rôle is the pivot on which the whole piece turns. We may call him the protagonist. By his side is the *waki* ('side'), who may be compared with the deuteragonist of the Greek classical stage. As the name implies, his rôle is secondary to that of the *shi-te*; but he is nevertheless a necessary adjunct, because it is his presence on the stage that gives the requisite stimulus to the activities of the *shi-te*.

Some plays require the presence of only two actors; and we may with justice consider them as types of the primitive drama. When more actors are required, they are considered as assistants or companions to the *shi-te* or *waki*. They are designated as *tomo*, 'companions,' but more frequently as *tsure*, and appear as *shi-te-dzure* or *waki-dzure*, according to the part they represent. But they can scarcely be said to have an independent personality: 'ce sont deux voix qui se répondent, et non deux personnages qui se parlent' (Péris). In some pieces there appears another actor, known as the *kogata*, or 'child,' whose rôle is occasionally of some importance, as when, e.g., he represents an emperor or nobleman; and in a few places we find indefinitely designated personages, *otoko* and *onna*, 'man' and 'woman.' Again, in one or two plays we have companies of people representing, e.g., pleasure-seekers, or attendants. These are known as *tachi-shii*. The clown's part is assigned to a personage known as *kyôgen* or *okashi*. He is sometimes entrusted with comic parts during the play itself, but more frequently with the comic interlude, *ai*, which separates the first act of a *nô* drama from the second. This *ai no kyôgen* is not to be confounded with the independent *kyôgen* which comes between two distinct *nô* dramas. He had his part in these also.

15. The chorus.—The chorus, *ji* or *ji-utai*, consists of from 8 to 10 musicians, under the command of a *ji-gashira*. The musicians wear the ordinary clothes of the citizen, and have no functions beyond those of music and singing. The chorus sometimes takes part in the *nô* drama by acting as a substitute for a *shi-te* in the rendering of some song, and sometimes it will take part, in a sort of impersonal way, in the dialogue. It has some of the functions of a Greek chorus, but it never represents

a definite group of persons, such as, e.g., the Phœnician women.

In addition to the actors and chorus, there are two persons whose functions are of the greatest importance in the performance of the *nō*—the *kōken* and the *mono-kise*. The former, in plain clothes, has the duty of looking generally after the performance, bringing in swords, fans, etc., as required, and removing them unostentatiously when no longer needed. The *mono-kise* has the superintendence of the wardrobe, and assists the actors in their changes of costume, etc.

16. The orchestra.—This is composed of three, sometimes four, instruments. These are: (1) *fue*, (2) *ko-tsutsumi*, (3) *ō-tsutsumi*, (4) *taiko*. The first is a flute; the second and third are a small and a large drum, struck with the hand, the former carried on the right shoulder, the latter on the left knee. The fourth, which is a species of tambourine, is used only when something awe-inspiring is going on, such as the appearance of a demon or spirit, or the 'lion-dance.' The general name for the musicians is *hayashi-kata*, each individual being designated by his instrument—*fue-kata*, *taiko-kata*, etc. It is extremely probable that a comparison of these instruments with the musical instruments in use in ancient China, India, etc., might throw much light on the origin of the *nō* dramas.

17. Schools of 'nō' actors.—We have seen that the *nō* actors are divided into three classes—*shi-te*, *waki*, and *kyōgen*. These are further subdivided into various schools, or *ryū*. The most important are the schools of the *shi-te*—*kwanze*, *hōshō*, *komparu*, *kongō*, and *kita*—which between them furnish most of the *shi-te* and *shi-te-dzure*, also the *tomo*, *kogata*, *jū*, *kōken*, and *mono-kise*. These five 'schools' are by far the most important. The *waki* are also subdivided into five schools—*harufuji*, *fukubō*, *shindō*, *takayasu*, and *hōshō*. There is a further distinction made in these two classes, which is of some importance. They are divided into *kami-gakari*, and *shimo-gakari*, according as they base their acting on traditions derived from Kyoto (*kami*) or Nara (*shimo*). We shall see the importance of this distinction if we remember that the Kyoto Buddhism, mainly that of the Tendai sect, with its offshoots, is of Chinese origin, whilst the Nara Buddhism was predominantly Hindu. The *kyōgen* actors are subdivided into three classes, each named after its founder—Sagi, Izumi, Ōkura—as indeed are also the various classes of the *shi-te* and *waki*. All these families of *nō* actors were originally connected with the *kagura* dances of the Shinto and Ryōbu-Shinto rites, and it is in the *kagura* that the origin of the *nō* drama as found in Japan must be sought.

18. The 'nō-kyōgen' stage.—The *nō* was originally intended, like the *kagura*, for outdoor performance, and this fundamental theory is still preserved in the arrangement of the stage. It is a perfectly simple platform about six yards square, with three of its sides open. The fourth side is a wall of plain wood panel, with a painting of an old pine-tree to suggest an open-air performance. The actors have their exits and entrances on the right hand of the stage, the chorus on the left. One of the pillars supporting the roof is called the *kōken bashira*, and it is from behind this pillar that the *kōken* keeps a watchful eye on the performance. The green room or vestry is behind the wood-panelled wall.

19. Sung forms.—The *nō* drama is a metrical composition, the measure adopted being known as a *kusari*, or 'chain,' for the structure of which the reader is referred to Péri's solid treatise already quoted. Terms especially noticeable are, e.g., the

shidai, very often used as an introduction, and containing a statement of the general purpose and 'circumstances' (*shidai*) of the piece. The *issei* is very similar to it, only more definite, the *shidai* giving, as it were, only a general statement, while the *issei* explains some particular point. The *uta*, or 'song,' is the prerogative of the *waki* and his assistants; it has nothing in common with the *tanka* of later Japanese literature. To take an example: in the *uta*, the *waki* and his friends will describe the journey they have taken in order to reach the scene of action. The *sashi* and *kuri* are two minor forms: the former a simple recitative, which is not used by the *kami-gakari* schools, the latter a lively song, serving as an introduction to the *kuse*. The *kuse* may be looked upon as the form out of which the *nō* has developed. It is accompanied by a dance, and is a remnant of the ancient *kuse* dances which have been so popular in Japan since the 10th century. It is the *kuse* which brings us into touch with the itinerating *odori-nembutsu* preachers. The *rongi*, or 'discussion,' a dialogue chanted by *shi-te* and chorus, is another remnant of the Buddhist influence. It is a relic of the scholastic discussions of the Buddhist monasteries, especially of those in the Kyoto schools of Buddhism. In the *waka*, which follows the *rongi*, we have, it is said, the remnants of the popular songs chanted by the *shirabyōshi*; and the gestures of the actors at this point are generally suggestive of the same origin. The *kiri* is the closing song, and is often closely connected with the *waka*.

20. Spoken forms.—The spoken forms are the *nanori*, or 'announcement of the name,' spoken by the actor on his first appearance, or, for a woman, by the chorus; the *mondō*, or dialogue; the *yobikake*, or words addressed to a person supposed to be at some distance from the speaker; and the *katari*, or narration. In the *kyōgen* we have also various forms of *ai*, 'interludes.' In the *katari-ai* the *kyōgen* actor gives a new exposition, sometimes with considerable variations, of the plot of the drama. The *tachi-ai*, while ultimately connected with the development of the drama, is spoken by outside personages, as, for instance, by a *deus ex machina* in the form of a god or spirit. The *ashirai-ai* is an interlude in which a servant, boatman, etc., plays a principal part.

21. Masks used in the 'nō'.—There are about thirty masks in common use for *nō* representations—though there are, of course, special masks for use in the rarer pieces. The particulars of these masks are given in Kamen-fu, Nōgaku Unnōshū, and Nōgaku Shōzoku.

The introduction of masks into Japan is generally attributed to Shōtoku Taishi (572), the great patron of Buddhism. This is another indication of a point made elsewhere in this article, that the *nō* is of Indian origin, for the Buddhism which Shōtoku favoured was notoriously of the Indian variety. Other famous mask-makers of primitive times are Tankaikō, Kōbō Daishi, and Kasuga—all well-known carvers of Buddhist images. These were succeeded by the Jissaku, or ten mask-makers, of the Heian (800-1186) and Kamakura (1186-1332) ages, and these by the Rokusaku and Chūsaku schools, who bring us down to the end of the Ashikaga period. We then come to the well-known Kawachi, who at one time worked as a saddler in the retinue of the great Taikō Hideyoshi (1536-98). Hideyoshi was a great patron of the lyrical drama, which he treated with almost religious respect. One day Kawachi peeped from behind some curtains at his master robing himself for a dramatic performance. Before he donned his mask Hideyoshi held it over his head and did obeisance. From that moment Kawachi determined to abandon the calling of a saddle-maker and devote his energies to the making of masks.

22. Fans.—The fans used are of two kinds—*sukeyō* and *shimai-ōgi*. The former seem to correspond with the rôle of the actors. Thus we have *okina-ōgi*, the 'grown man's fan,' with a representation of waves and of *hōrai*, the Elysium of perpetual felicity, which, like the classical Islands of the Blest, is supposed to exist in the midst of the Ocean. Another, the so-called *shūra-*

ôgi, represents the world of the Asuras, the Buddhist world of bloodshed and slaughter. Significantly enough, there are two forms of *shûra-ôgi*, the *genji-shûra* and the *heike-shûra*, which thus perpetuate the memory of Japan's most famous period of internal strife. Other memorials of that sad time may be found in the *kyôjô-ôgi* and *kyôjô-ironashi-ôgi* (respectively, the 'insane woman's fan,' and the 'insane woman's colourless fan'), the latter with its sad pictures of the heron amongst the snow, and the ill-omened crow sitting on a withered tree. It would be beyond our scope to describe all these varieties. The *shimnai-ôgi* does not present so many varieties. The simplest form, the *midzumaki-no-ôgi*, 'water-sprinkler's fan,' is used by the lowest grade of actors, whose humble performances are fitly symbolized by the unobtrusive but necessary work of the 'water-sprinkler'—an important functionary in hot dusty countries. When the actor-student has been promoted to a higher grade, and is allowed to dance for the first time, he uses a *midzuhiki* fan, i.e. the fan of the 'water-drawer'; while the next promotion, to the rank which permits him to perform the *mochidzuki* dance, is marked by the use of a fan known as *chidori*. Buddhist influence, chiefly of the Hosso and Kogon schools, may be seen in the clouds—five, seven, or nine, according to circumstances—which distinguish other fans of a higher order. But the gradation of actors, dramas, and dances is very clearly due to Chinese thought.

It would take us too long, for the purposes of this article, to trace the connecting points between the Japanese lyric drama and the drama of the Hindus. But there certainly are such points of connexion, traceable through fans, masks, musical instruments, dresses, and dress-materials, not only with India, but with the Levant. Thus, for instance, there are two names for dress-materials much used in the *nô-donsu* and *shu-su*, translated by Brinkley as 'damask' and 'satin'—which are said, though perhaps not with much probability, to point to a Damascene and Syrian origin for these materials. But these are points which still await investigation.

23. Peculiarities of construction of the 'kabuki' theatre.—The word *shibai* means 'a lawn,' or 'on the lawn.' There is an old tradition, connected with the Nan-yen-dô temple at Nara, which says that, at a very remote period, the earth opened with a yawning cavity right in front of the temple, with much exhalation of poisonous gases and smoke. It being evidently advisable to propitiate the incensed deities who had brought about this calamity, the Government of the day ordered that the *okina* and *sanbasô* dances should be performed in front of the chasm. This was done on the smooth grass before the temple, and with the desired effect. This incident is still commemorated by the *Takigi-no-Nô* at Nara, which is always performed 'on the lawn.' It is possible, therefore, that O Kuni, in inaugurating the *shibai* or *kabuki* drama, meant it to be a resurrection, as far as possible under altered circumstances, of the primitive dances of pre-historic times.

The first theatre in Kyoto was erected in 1632; in Osaka, in 1633; in Yedo, in 1624; and the construction of these places of amusement was speedily followed by others. The first theatrical building in Yedo was the Saruwakaza, which was the outcome of the philanthropic efforts of a certain Saruwaka Kanzaburo. The Genna period (A.D. 1615-1643), whilst enjoying the firm hand of the Tokugawa Shôgunate, was still one of considerable confusion and unrest. The cessation of the long-continued civil wars and the subsequent dissolution of many of the opposition clans had filled the country with unemployed men-at-arms (*rônin*), who flocked to the larger cities in search of employment. Yedo was naturally their chief place of refuge, and in the crowded quarters of Asakusa, Ryôgoku, and Shiba, they might be seen in their hundreds, concealing their faces beneath large

straw hats, and waiting for any chance opportunity of congenial occupation. When they could do nothing else, they beat drums and sang ballads, and thus gained a few *rin* from the good-natured citizens. Saruwaka saw that these unemployed fighting men constituted a real danger to the State, and set to work to find safe outlets for their superfluous energies. He built himself a large villa, the construction of which gave employment to many hands; he lived luxuriously and ostentatiously, and kept large retinues of servants; at last, the idea occurred to him of founding a theatre as an institution by which many of these unemployed warriors might gain a living, and all might find recreation and amusement. The idea was very well received, the *rônin* organized themselves *con amore*, the Government gave its consent to the undertaking, and a dream in which Saruwaka saw a crane flying towards him, with the leaf of an *ichô* (*Ficus religiosa*) on a plate in its bill, was interpreted as an omen of the best sort. Saruwaka's theatre was the first permanent *kabuki* building in Japan, and gave a model which all subsequent *kabuki* theatres have followed. The *nô* dramas in the Middle Ages were performed in the most flimsy of temporary booths.

The construction of the old *kabuki* theatres may be understood by the consideration of certain theatrical words which are still in use, but which cannot be made clear except by reference to old usages and peculiarities. Thus the word *haneru*, 'to turn aside,' is, in theatrical parlance, 'to finish a performance.' In Saruwaka's building, the entrance was protected by a hanging mat, which the spectators had to push aside in order to enter. When the performance came to an end, the mat was 'turned aside' to facilitate egress, and left so. Similarly, *futa wo akeru*, 'to open the lid,' is used of the opening of a theatre—the heavy, lid-like shutters all round the building being tightly closed when there was no drama in course of performance. The quasi-military character of the actors in Saruwaka's theatre showed itself in the *yagura*, or castle-tower (now disused), erected on the roof to give the building something of the appearance of a feudal castle. On two sides of the *yagura* were suspended *zai*, the baton used by a Japanese general in the direction of a battle. But these theatrical *zai* were known as *bonten*—the name given by Buddhists to Brahmâ, the greatest of the guardian deities—and replaced the Shintô *gohei* which O Kuni had used in her temporary erections. The use of the *bonten* and *gohei* is a proof of the existence of a certain amount of religiosity, but need not be pressed further.

While certain of the minor structural features of the early *kabuki* have disappeared, certain others remain. Thus the modern Japanese stage is distinguished by: (a) the *hanamichi*, or 'flower-way'—a raised platform or corridor by which the actors have access to the stage from the other end of the theatre, passing right through the spectators in the pit. The *hanamichi* was at one time bordered with flowers, hence its name. It is always on the left hand of the spectators; on their right there is sometimes another passage of the same sort, called the *karibanamichi*, or 'temporary flower-bridge.' (b) Between the *hanamichi* and the stage is a space called *hashi-gakari*, 'bridge-space,' sometimes also known by a term derived from the usages of the camp—*musha bashiri*, 'warriors running.' It is through this space that warriors reach the stage. Near it is the *okubyô-guchi*, 'coward's hole,' the significance of which is obvious. (c) The *butai-ban*, or 'stage-watch,' with its reliefs of sentinels, again betrays a quasi-military origin. (d) The central part of the stage is made to revolve (*maruari-butai*)—an arrangement which calls to

mind the *ἐκκόκλημα* of the Greek stage; the machine which works this is situated in the *naraku*, 'hell,' below the stage, where is also to be found the *seriage*, or *serdashi*, by which actors are 'pushed up' through the flooring of the stage. There are two or three trap-doors for this purpose (*kiri-ana*) on the stage itself, and a similar one (*suppon*) on the *hanamichi*. Only the larger theatres were allowed to have *mawari-butai*—possibly only they could afford the luxury. (e) The *kōken* calls to mind primitive conditions in the history of the European drama. He is the attendant (supposed to be invisible) of the principal actors, wears black clothes, removes articles that are not required, adjusts the actors' robes, and holds a candle for them. (f) The *tedai*, who represents the proprietor and is charged with the business of the theatre, sits, during the performance, near the main entrance of the house. When there is nothing on, his office is in the *shikiri-ba*, or accountant's room. The *tōdori* has the supervision of everything connected with the performance and the actors. His office (*tōdori-ba*) is in the back part of the building, as are also the *hayashi-beya*, or room for the musicians, the *gakuya*, or 'green room,' for the actors, and the *sakusha-beya*, or 'authors' room.' This last calls for a few words. The Japanese have scarcely any dramatic writers, and none of great note. Very few of the *nō* dramas can be assigned to any particular writer, and the same remark holds good of the *kabuki* drama. The actors themselves, sitting in committee, compose the play as a joint-effort, and it is this, perhaps, more than anything else that has helped to keep the Japanese stage so stagnant and unprogressive. Recent efforts at reform, such as Kawakami's *sōshi-shibai* and the construction of the new Imperial Theatre, must be looked upon as so many efforts to overthrow the tyranny of the player-actors. The student of English literature will see here the point of analogy with the pre-Shakespearean dramatists of the Elizabethan age.

24. Influence of the drama on the development of 'Bushidō.'—The *nō* drama had its first glory in the Middle Ages, when the military and chivalrous spirit of Japanese knighthood was at its prime. We may seek for its origin in the oldest religious sentiment of the people, in the Buddhism of the Nara age, in Chinese and Indian influences. But the fact still remains that the drama never took root until the spirit of the nation was moved by the incidents of that great national epic (for it was nothing less) which gathers round Yoshitsune, Benkei, Yoritomo, and the great warriors of the Genji and Heike. Then it was that the heart of Japan went forth in sympathetic response to the great ideals set before it during that period of national distress. It was then that the imagination was quickened, and the image formed of the ideal hero, brave, loyal, patient, quick in honour's quarrel—and yet a religious mystic, whose poetic insight enabled him to see, dimly perhaps, but with faith, the underlying verities of existence. This is the ideal set before us in the *nō*, and the idealization was much assisted by the quietistic teachings of the Zen school of Buddhism.

The ideals were, however, indistinct, and the principles underlying *Bushidō*, or the 'Way of the Ideal Knight,' were felt rather than understood. It was reserved for a later age to elaborate the philosophy of life with which *Bushidō* presents us, and Yamaga Sokō (born 1622), the disciple of Hayashi Razan, and the instructor of Oishi Kuranosuke, who headed the celebrated band of the forty-seven *rōnin*, has been often singled out as the first formal exponent of *Bushidō*. According to Yamaga (the present writer is here following the Rev. J. T. Imai, who in his turn follows Prof.

Inouye Tetsujirō), *Bushidō* may be summarized somewhat as follows:

To know one's proper work or duty, to have the will to do it, and to carry out one's good intentions with diligence and zeal. True manliness is shown by not being moved by poverty, wealth, or power. In order to reach that ideal, there should be acquired large-mindedness, a noble ambition, gentleness, courtesy, contentment; a power of discerning right from wrong, gain from loss; uprightness, honesty, constancy. These virtues are to show themselves in the deportment, in gravity, in the care taken in seeing, hearing, and speaking, in the expression of the countenance, in temperance and propriety in dress, houses, furniture, diet. The knight must have a right way of using his time, his wealth, his pleasures (J. T. Imai, *Bushidō*, Tokyo, 1910).

It has been said that the old-fashioned *Bushidō* of the mediæval knights gave its last expiring flicker in the deaths of Oishi Kuranosuke and his band of *rōnin* in 1703. Certainly the *paw Tokugawica* which lay on Japan from the middle of the 17th to the middle of the 19th century was no favourable soil for the production of so delicate a flower. But Yamaga Sokō and his Confucianist successors were in the meantime busy laying the foundation of a new *Bushidō*, and in this they were ably aided and abetted by the dramatists, both of the *kabuki* and of the *ningyō-shibai* (marionettes).

'It was at this period,' says Imai (*op. cit.*), 'that the historic dramas began to be produced by Chikamatsu, Takeda, Izumo, and later writers. They were exponents of *Bushidō* to the mind of the people, to men and women alike of all classes, just as Sokō and others were to the learned. It was through these historical plays . . . that *Bushidō* influences acted and re-acted on the Japanese people.'

We can scarcely over-estimate the influence that the stage has had and still has in forming popular ideas of religion and morality in Japan, but we must remember that the words 'honour,' 'loyalty,' 'duty,' 'honesty,' and 'truth,' which these plays directly and indirectly illustrate, are not quite the equivalents of the same words when found in Christian writings. They must be interpreted according to the standards of morality which were generally accepted in 18th cent. Japan.

LITERATURE.—Students desiring to pursue their studies beyond the limits traced by this article are recommended to consult, for European and American authorities, the very complete Bibliographies published by von Wenckstern, in 1894 and 1904; and, for Japanese writers, the list given by Péri in *Bulletin de l'École Française de l'Extrême Orient*, vol. ix. pp. 254-273. The writer's own obligations are to the works of W. G. Aston, esp. *History of Japanese Literature*, London, 1898; K. Floren, *Geschichte der japanischen Literatur*, Leipzig, 1901; M. Revon, *Manuel de la littérature japonaise*, Paris, 1910; Péri, articles in *Bulletin de l'École Française de l'Extrême Orient*, 1904-5; Balet, articles in *Japan Daily Herald*, Yokohama, Nov.-Dec. 1910; and B. H. Chamberlain, *Things Japanese*, London, 1905; also to various articles which have appeared from time to time in the *TASS*. A. LLOYD.

DRAMA (Javanese and Further Indian).—The Javanese drama is one of the most interesting of the entire Orient, particularly through its high development of the 'shadow-play.' Seven distinct forms of drama in Java are enumerated by Juny-boll (*AE* xiii. 4-5): (1) *wayang purwa*, which are played with puppets of buffalo leather, which cast their shadows on a curtain, and draw their themes from the *Mahābhārata*, the *Rāmāyana*, or the Javanese *Manik Maya*; (2) *wayang gedog*, the same as the preceding, except that the subjects are drawn from the native Javanese *Panji-cycle*; (3) *wayang klitik* or *kertutyl*, which are played with flat unclothed wooden puppets, and draw their themes from the cycle of *Damar Wulan*; (4) *wayang golek*, which are played with round clothed puppets, and draw their themes from the *Damar Wulan* and the Muhammadan *Amir Ambiyah* cycles; (5) *wayang topeng*, with a repertoire identical with that of the first three classes, but played with masked actors; (6) *wayang wong*, the same as the last, except that the actors are unmasked; and (7) *wayang beber*, with the same repertoire as the preceding, but represented by a pictured scroll which is unrolled and explained by the *dalang*. The usual mode of presentation of a

wayang is as follows:—A white sheet (*kélar*) is stretched on a wooden frame (*panggung*). At the top of this frame a lamp (*blékon*) is placed so as to cast its light upon the screen, and on the same side as the lamp the 'director' (*dalang*) squats, having on his left a chest (*kotak*) containing the puppets (*wayang* or *ringgit*). On the side of this chest are a few small plates of metal, which are struck by the *dalang* to imitate warlike sounds. Near him, moreover, is a bowl of incense, and also a basin containing the offerings (*sayen*) for the spirits. The men in the audience are seated on the same side of the curtain as the *dalang*, while the women are placed on the opposite side, so that they do not see the puppets, but only their shadows. All the lines are recited by the *dalang*, who varies his voice or gives other indications of the change of character. This holds good, at least in some cases, even in the *wayang wong*, or plays with unmasked human actors. In the *wayang topeng*, played with masked actors, on the other hand, the players themselves speak the lines. Both women and men may act, as in the ancient Sanskrit drama.

The *dalang* of the Javanese drama corresponds closely to the *sūtradhāra* of India (cf. Pischel, *Heimat des Puppenspiels*, Halle, 1900, pp. 8–10), both being primarily 'thread-pullers (of the puppets),' although the word *dalang* itself seems to connote originally much the same as the English 'stroller' (Hazeu, *Bijdrage*, pp. 23–24).

The Javanese *wayang* was undoubtedly religious in origin, as has been elaborately shown by Hazeu (*op. cit.* pp. 39–59), who calls attention to the offerings (*sayen*) to the spirits, to the incense offered before the presentation begins, to the fact that the plays are given at night, when the spirits are abroad, and to the circumstance that the presentation is a meritorious act on the part of the patron who hires the troupe, and that a *wayang* should be given by all means at certain important periods in the life of the individual, such as the festivals at the seventh month of pregnancy and the cutting of the navel-string. According to him, moreover, the entire shadow-play sprang from a desire to represent the ghosts of departed ancestors by what resembled them most closely, that is, by shadows, while the *dalang*, who causes the puppets to cast their shadows on the screen and recites lines for them, is primitively a priest performing a religious ceremony of ancestor-worship. The religious character of the Javanese *wayang* is also confirmed, perhaps, by the phallic character of many of the puppets, since nudity is not only a well-known fertility-charm (cf. Serrurier, *De Wajang Poerwā*, pp. 187–203), but also a potent means of frightening away demons (Hazeu, *op. cit.* p. 43; cf. Crooke, *PR*, 1896, i. 68–72). At a later period this phallicism may, of course, degenerate into mere obscenity, as in the Turkish *karagöz*.

The age of the drama in Java is uncertain, but it is at least clear from allusions to it in the literature that it was popular by the beginning of the 11th cent. A.D. Its origin is still more problematical, the leading authorities on the subject holding views diametrically opposed. Serrurier, Hageman, Poensen, and others believe that the Javanese drama was profoundly influenced by the Hindu; while Crawford, Niemann, Brandes, and especially Hazeu, deny that Hindu plays formed the model of the *wayang*. An absolute decision of the matter is not easy, but in the present state of knowledge it would seem that the Javanese drama is indeed an original device. India, it is true, numbers among its dramatic categories a 'shadow-play' (*chāyānāṭaka*), which has been elaborately discussed by Pischel in his 'Das altindische Schattenspiel' (*SBAW*, 1906, pp. 482–502; cf. his

Heimat des Puppenspiels), with the conclusion that the shadow-play in the technical sense of the term was known in India. Nor is there any inherent impossibility that the *Dūtāṅgada* of Subhata (produced in Feb.–Mar. 1243; tr. Gray, *JAOS* xxxii. [1912] 1–20)—the only *chāyānāṭaka* thus far edited—was produced somewhat like the Javanese *wayang*; nevertheless, the difference in spirit between this and other plays of the Rāma cycle in India (cf. Lévi, *Théâtre indien*, Paris, 1890, pp. 267–295), as compared with the Rāma plays of Java (Juynboll, 'Indonesische en achter-indische tooneelvoorstellingen uit het Rāmāyana,' in *Bijdragen tot de Taal-, Land-, en Volkenkunde van Nederlandsch-Indië*, 6th series, vol. x. pp. 501–565), must be taken into serious consideration. The profound influence of the literature of India upon Java is too well known to require emphasis (cf. Lassen, *Ind. Alterthumskunde*, Leipzig, 1861, iv. 524–531), and it is obvious, moreover, that both Hinduism and Muhammadanism have given themes to the Javanese drama. If a conclusion may be hazarded, one may say that the Javanese *wayang* is indigenous, and that foreign influence is manifested only, or at least chiefly, in the subjects of many of the Javanese plays.

From Java the drama seems to have spread to Burma, Siam, and Cambodia (cf. Serrurier, *op. cit.* pp. 170–186; Hazeu, *op. cit.* pp. 28–37). In all these countries the Rāma cycle forms the favourite theme, although Buddhistic plays are also frequent in Burma. The Burmese drama is divided into *zahl-pués*, in which men and boys (but never women) act, and *yoht-thays*, or puppet-plays. Here again the drama is partly religious, not only in subject, but also in occasion, as at the birth of a child. It is, furthermore, produced chiefly at night, and is thus obviously designed to frighten away demons. The Siamese plays, in many of which only the verse is written, the prose being improvised, deal chiefly with the theme of Rāma, while the classifications recall those in Java, the chief ones being *len khon* (plays by masked actors), *len hun* (puppet-plays), and *len nang* (rolls of ox-hide pricked with patterns through which the light of a fire is allowed to shine).

Among the Malays, finally, the *Rāmāyana* is likewise an important theme, and the drama shows the influence not only of Siam and India, but also of China. Here the religious basis of the plays is strongly evidenced both in the invocation (*lagu pémanggil*), which is performed by a *pawang* ('magician') to the accompaniment of various musical instruments, and in the propitiation of spirits (*buka panggong*). The Malays are extremely partial, moreover, to shadow-plays, where, as in Java, the showman repeats all the lines, while in Siam this monologue becomes a real dialogue between two persons. Throughout Java and Further India, then, the drama is characteristically either a shadow-play or a mask. There seems, therefore, to be little association with the mimetic dance-drama of the Polynesians; while, on the other hand, masks are undoubtedly one of the most primitive forms of all drama, as is clear from the analogies of the American Indian and of Greek tragedy, to say nothing of the early Roman *fabula Atellana*. So far as evidence now accessible goes, it would seem that the dramatic art of Java and Further India is an indigenous product, despite later undoubted influence from India.

LOUIS H. GRAY.

DRAMA (Jewish).—Dramatic literature among the Hebrews, as among all Semitic peoples, was scanty. Attempts have indeed been made to interpret the song of Moses (Dt 32¹⁻⁴³), the song of Miriam (Ex 15²⁰⁻²¹), and, above all, the Song of Songs (cf. *HDB*, s.v.), as dramatic; but these endeavours have been unsuccessful. Nor is the Book of Job a drama in any true sense of the term. Whatever the Jews accomplished in the drama was, and is, due to imitations from the Indo-Germanic races with whom they have come in contact. The earliest Jewish play dates from the 2nd cent. B.C., when Ezekiel of Alexandria attempted to dramatize the events of the Exodus. Fragments of his play have been preserved by Clem. Alex. (*Strom.* i. 23, 155) and Eusebius (*Præp. Evang.* ix. 29); and Schürer (*GVV* iii. 373-376) believes that this drama was intended for the stage, although it is difficult to imagine its production. In Ezekiel's work the influence of the spirit of Euripides is evident, and his object seems to have been not only to instruct the Alexandrine Jews in Biblical history, but also to wean them away from Gentile plays.

The general attitude of the Jews, however, towards the drama was extremely hostile, in conformity with their policy of self-imposed isolation, and their bitterness was increased by their hatred of the Romans and their suspicion of the Greeks. It was not until the middle of the 17th cent. that the increased scope allowed to Jews gave rise to a Neo-Hebrew drama, modelled, of course, upon the theatre of the Christians by whom they were surrounded. The first of these plays was the *Yesodh 'Olam*, by Moses Zacuto, a Marano, or renegade crypto-Jew, of Amsterdam, and its theme is the Talmudic legend of Abraham's destruction of his father's idols. The plots of the Neo-Hebrew drama are either religious or ethical, as in the *Asire ha-Tikkoth* of Joseph ben-Isaac Penzo (Amsterdam, 1673) and the *La-Yesharim Tehillah* of Moses Hayyim Luzzatto (Amsterdam, 1743), the former play having as its theme the attempts of Understanding, Providence, and an angel to lead back to the path of rectitude a king distracted, against his will, by his impulses, his wife, and Satan; while the latter drama is an allegory designed to show the victory of truth over falsehood. No fewer than forty-six Neo-Hebrew plays are enumerated by Seligsohn, the majority of them based on Biblical or ethical themes.

Many foreign plays have also been translated into Hebrew, including, for instance, the *Gemul 'Athalyah* of David Franco-Mendes—an adaptation from Racine and Metastasio (Amsterdam, 1770)—and versions of Racine's *Esther*, Schiller's *Die Räuber*, Lessing's *Nathan der Weise* and *Die Juden*, and Shakespeare's *Othello*, *Romeo and Juliet*, and *Macbeth*. The Yiddish dramatists are active, and many great cities support one or more Yiddish theatres which cater to the Jewish population. These plays are, however, for the most part translations or adaptations of dramas by non-Jewish authors. The Jewish drama must, therefore, be regarded merely as a literary parasite; even its apparently original productions are really copied from Indo-Germanic sources.

LITERATURE.—Kuyper, 'Le Poète juif Ezéchiel,' in *REV* xiv. 48-78, 161-177 [French tr. from *Mnemosyne*, new series, xxvii. 237-280]; Seligsohn, 'Drama, Hebrew,' in *JE* iv. 648-661;

N.Y. Pub. Lib.* xi. 18-51.

LOUIS H. GRAY.

DRAMA (Persian).—The drama of Persia is both scanty and late, due in part, at least, to Muhammadan rule, which has never been favourable to the development of this art, reflecting herein the dramatic poverty of the entire Semitic race. There are, however, two categories of Persian plays, exclusive of the marionettes or shadow-plays (*karagöz*), which are of Turkish origin. The native Persian drama, then, may be divided into comedies (*tamāsa*) and mysteries (*ta'ziya*, lit. 'consolation, condolence'). The comedies are, for the most part, improvised by *lūlīs*, or itinerant buffoons, and offer little of interest. It is very different, however, with the *ta'ziya*, which is the most striking mystery-play of the entire Orient, and possesses a sway over the Shi'ite Persians comparable with that of the Passion-Play of Oberammergau over Christians. The individual *ta'ziyas* are comparatively short, and are concerned entirely with religious subjects, especially with the martyrdom of Hasan and Husain, the sons of 'Ali, who was the first cousin of Muhammad and the husband of the Prophet's youngest daughter Fatima. 'Ali, the rightful successor of Muhammad, was rejected in favour of Abu Bakr at the instigation of 'A'isha, and was later assassinated, while Hasan's own wife poisoned him in obedience to the Sunnite Muawiyah, and Husain was later slain in battle with the adherents of the rival sect. The Persians, being Shi'ites, have accordingly adopted Hasan and Husain as martyrs of the faith, and commemorate their death annually during the first ten days of the month of al-Muharram. In each house that can afford it a place is constructed for the representation of the mystery, and on the side towards Mecca is set the model of the tombs of the martyred Hasan and Husain. The actors of the drama are not specially trained for the purpose, but their deep religious feeling, and their regard for their performance as for a sacred duty, lend a power to the presentation which works the audience into a frenzy and renders it necessary to provide for the safety of the hated Sunnites whom they may meet as they go in procession through the streets. These processions occur especially on the fifth, seventh, and tenth days of al-Muharram, the most important being the two last, symbolizing respectively the marriage of Kasim with Fatima and the death of Husain. The concluding day is often marked by bloody conflicts between the Shi'ites and Sunnites.

Dramatically the mystery-play of Hasan and Husain, which is essentially a series of *ta'ziyas*, is rude but effective, gaining strength from the very popularity and vulgarity of its style. Its length is prodigious, and the unities of time, place, and even action are set at defiance. The author of the play as a whole or of its parts is unknown, and it is doubtless a product of the people, revised and altered according to need by those who act it, rather than a definite dramatic work. The number of *ta'ziyas* composing it varies, but it would seem that the play is of comparatively recent development, possibly as late as the beginning of the 19th century. As an independently developed Passion-Play, untouched, apparently, by non-Persian influence, the drama of Hasan and Husain is one of the most remarkable dramaturgic creations in the history of the religious stage.

Husain, Collected from Oral Tradition (2 vols., London, 1879); Montet, 'Religion et théâtre en Perse,' in *RHR* xiv. 277-290.

LOUIS H. GRAY.

DRAMA (Polynesian).—Among the Polynesians, rudiments of the drama may be traced. While these embryo plays were often comic in character and analogous to the early Roman *fabula Atellanæ*, particularly in Raiatea (Cook, *Voyage towards the South Pole and round the World*, London, 1777, i. 173-176), they were evidently derived ultimately from religious sources. This is distinctly affirmed by Moerenhout (*Voyages aux îles du Grand Océan*, Paris, 1837, i. 133-134), who states that the dramas were presented under the auspices of the *Arii*, while the plays themselves were devoted to the description of the two principles, Taaroa and the matter with which he unites, the creation of the universe, the gods, elements, spirits, plants, and other productions of the earth; then the life of the demi-gods or heroes, their journeys, combats, and the like; then love-themes, dialogues between lovers (laments, quarrels, true comedy-scenes); and the presentations invariably ended in dances. It is also noteworthy that, according to the same traveller, the 'musicians, singers, and declaimers' at these plays had an orchestra slightly elevated above the rest, while the 'actors or dancers' occupied a special place before or in a house. It would therefore seem that the function of the Polynesian actor was primarily that of the mimetic dancer, the words being supplied by separate reciters, a proceeding for which parallels may be found elsewhere, as among the Javanese. The religious basis of the Polynesian drama receives an additional confirmation in the fact that plays were also presented in connexion with funerals.

LOUIS H. GRAY.

DRAMA (Roman).—**1. Native Italic drama.**—The Roman critics were deeply interested in the Italic beginnings of their drama, and investigations of the subject seem to have begun as early as the time of Accius (c. 100 B.C.). Two generations later the whole subject was taken up and examined anew by Varro, notably in his lost *Origines Scenicae*. His views, so far as they survive, are found in the treatises of Diomedes and Donatus de *Comedia*. The intermediary was probably Suetonius. Apart from scattered references in various authors, we also have Horace (*Epist.* ii. 1. 139 ff.) and Livy (vii. 2). It is quite clear, however, that the Roman critics discovered nothing very definite.¹ This is shown by their lack of agreement on any given point, by their inconsistencies and incredible combinations; above all, by their frequent appeals to etymology, that last resort of the desperate investigator. It is impossible, for example, to reconcile Livy's famous account with facts, probabilities, or even possibilities. Jahn saw that it was the result of etymology and of mere philological 'combinations'; Leo pointed out that there was a more than suspicious parallelism with Aristotle's *ὑποκρίματα*, the standard work on the origins of the drama at this time; Hendrickson² followed and elaborated Leo by showing that Livy goes back to Accius—perhaps by way of some Annalist (Valerius Antias). Horace's account adds something to Livy's, but seems to have been derived more or less indirectly from the same source. Varro, as Hendrickson

¹ For the remains of antique discussion and criticism of the drama, see esp. G. Kaibel, *Comic Græcor. Frag.*, Berlin, 1899, vol. i. 1, p. 87. For the early period of the Roman drama the most important literature is cited by Schanz, *Röm. Literatur*, i. 1, 1898, par. 9.

² 'The Dramatic Satura and the Old Comedy at Rome,' *AJP* xv. (1894) 1-80. For Jahn, see *Hermes*, ii. (1867) 225; and for Leo, *ib.* xxiv. (1889) 67.

shows, was inclined to distrust the earlier (Accian?) account, and appears to have concluded that the Italic origins were a *terra incognita*.

Such were the views of the greatest Roman scholar; and, on the whole, we are still constrained to agree with them. Neither for him, however, nor for us do they preclude the existence of a native Italic drama in the wider sense. The Romans, like the Greeks, were gifted with a keen dramatic instinct and a large modicum of the mimetic faculty.

The liturgies of the *Salii* and of the *Arval Brothers*, the *carmina triumphalia*, the *versus Fescennini*, the songs of beggars and of shepherds—all indicate clearly enough that the temperament which is responsible for the modern *Commedia dell'Arte* is the same as that which greets us at the very dawn of history on the Italian Peninsula. Irrespective of the character and credibility of the testimony offered by the Roman critics, we may safely agree with Mommsen—and so far as the present discussion is concerned this is quite sufficient—that the simplest elements of the mimetic art were in Latium and Hellas altogether the same. The dance (*triumphus*, *θρίαμβος*, *διόθραμβος*), the use of masks or their equivalent, the accompaniment of the pipe, the rude songs ceremonially abusive and obscene (to avert the evil eye, as the *carmina triumphalia*, and the *versus Fescennini* at weddings), the wearing of the phallus for the same purpose—all in honour of the gods and associated from the first with rustic festivals—this protoplasm of the drama, to which Horace gives the indefinite name of *Fescennina licentia*, may be assumed for Italy quite as much as for Greece. In fact, if *Fescenninus* in this connexion (*Fescenninus versus*) is to be derived from *fascinum*, *Fescenninus* literally = *φαλλικός*, and the parallelism is complete between *Fescennina licentia* and *ῥὰ φαλλικά*, the phallic verses characterizing Aristotle's first division of the Comedy. The derivation from Fescennium (another antique theory) might have been suggested, though this is more than doubtful, by a trustworthy tradition that this old Latin town, so long under the influence of Etruria, was a centre of the worship referred to.

It is neither possible here nor necessary to discuss the vexed and vexing question of the dramatic *satura*, the name given by Livy to a play with a more or less amorphous plot and rude improvised dialogue assumed by his authority as the second stage in the development of dramatic art on Latin soil. It is not unlikely *per se* that a play of the type described did develop in Latium as it did in Greece, but, if *satura* is the traditional name of such a play instead of being (as Hendrickson suggests) merely a later invention, we should agree that the word was a corrupted form of *σάτυρος*, and look to Southern Italy for its ultimate origin.

However that may be, it is fairly certain that the Romans were affected at an early period by the Dorian comedy of their neighbours to the South. This is shown by Bethe's investigations,¹ and is in harmony with Livy's statement (vii. 2), under the year 364 B.C., that *histrío* is an Etruscan word, and that the artistic beginning of the drama came from Etruria. This means ultimately Magna Grecia, for in such matters Etruscan influence was Greek influence at second hand. Etruria was not creative in the sphere of art, it was not even a first class imitator; but it was a good purveyor.

2. The 'Palliata.'—Let us turn, however, from the crude beginnings of mimetic art, Italic or otherwise, to a brief consideration of the Roman drama as a literary production. From this point of view the Roman critics, especially after Varro, agreed that the first definite event in the history

¹ *Proleg. zur Gesch. des Theaters im Alterthum*, Leipzig, 1896.

of the department was associated with the year 240 B.C. The long war with Carthage had just been brought to a successful termination, and it is a matter of record that, in order to indicate its especial gratitude for Divine protection, the Government, among other things, commissioned the Greek freedman Livius Andronicus to enlarge the usual scope of the *Ludi Romani* by the presentation of two plays, a comedy and a tragedy, translated, or, more properly speaking, adapted from the Greek for a Roman audience. For the one he resorted to the New Comedy, which, being both contemporary and cosmopolitan, was best fitted to reach the hearts of another nationality; for the other he had a large body of old favourites from which to choose. The experiment was eminently successful, and it is characteristic of Roman conservatism, especially in connexion with any religious rite, that the types thus established were in certain respects rigidly adhered to. The *Comœdia Palliata* (from *pallium*, a Greek soldier's cloak) is always the adaptation of a play from the sphere of the New or occasionally (as perhaps in the case of the *Amphitruo*) of the Middle Comedy; the scene, the characters, and, as the name indicates, the costumes, are all Greek. The Greek atmosphere is not always consistently preserved, especially in Plautus; but even here, though the man lived and wrote during and immediately after the blazing excitement of the Second Punic War, deviations are for the most part unimportant and, so to speak, accidental. Comparison, however, with fragments of the Greek originals, wherever available, shows that the poet treated his exemplar with great freedom, both in content and in form, changing what was originally a dialogue in trimeters into the lyric measures of a *canticum*, abridging here, expanding there, and otherwise manipulating his text to suit his taste and that of his Roman audience. Frequently, too, he enlivened the action of his play by constructing an underplot from a certain number of scenes supplied by a second Greek exemplar. This process was technically known as *contaminatio*. On the whole, however, the *Palliata* is a faithful representation of the New Comedy of Greece. Indeed, owing to the loss of all complete originals, it is our only representative. The characteristics of this comedy of manners, or, as Ben Jonson would say, of 'humours,' are familiar to all.

The popularity of the *Palliata* and the creative period of its existence belong in round numbers to the century lying between 240 and 140 B.C. The names of at least twelve comic dramatists belonging to this period are known, and the number of *Palliata* written by them must have been not less than four hundred. We now have the six plays of Terence and twenty plays, more or less complete, of Plautus. Of the remainder, we have the names of about one hundred and forty plays, and fragments amounting in the aggregate to about eight hundred lines. Apart from Plautus and Terence, the great names of the department were Nævius and Cæcilius Statius. In the famous canon of Volcacius Sedigitus—which from time to time some scholar claims to understand—the order of merit is Cæcilius, Plautus, Nævius, Licinius, Atilius, Terence, Turpilius, Trabea, Luscius Lanuvinus, Ennius. Apparently the latest of the group was Turpilius, who died at Sinuessa in 103. He had already outlived the popularity of his department by nearly a generation.

The *Palliata* was carefully studied in the two great eras of Roman scholarship—the age of Varro and the age of Suetonius. Many plays of that type were doubtless composed, especially by 'persons of quality,' in the time of Domitian, when it was the fashion to write books. But, after the

first great period of its existence, the stage tradition of the *Palliata*, so far as we are now able to trace it, is largely the stage tradition of Plautus and Terence. Indeed, the only Roman comedy to survive, apart from these two authors, is a re-working of the *Aulularia*, belonging probably to the second half of the 4th cent. A.D., and known as the *Querolus*.¹

3. The 'Togata.'—This was the successor of the *Palliata* in public favour. Its *floruit* belongs to the two generations between the fall of the *Palliata* and the time of Sulla, and the great names of the department are Titinius, L. Afranius,² and T. Quintius Atta. Little is known of these men personally, except that Atta died in 77 B.C., and that Afranius was an older contemporary. Seventy titles and about four or five hundred fragments, mostly lexical, are all that remain of this type.

According to the ordinary Roman definition (e.g. esp. Horace, *Ars Poetica*, 288), which we have inherited, the *Togata* was the Roman parallel of the *Palliata*. It was a Roman comedy of manners, representing Roman life, as the *Palliata* was a Greek comedy of manners representing Greek life. The scene was Roman and the costumes were Roman; hence, of course, the name. Thanks to Varro, however, we learn that this is not a definition of the *Fabula Togata* as a whole (which ought to mean any play distinctively Roman), but of its most important sub-variety, the *Tabernaria*. The distinction is valuable to us, because the word itself is more significant and descriptive than is *Togata*. Moreover, Diomedes adds that '*tabernariae dicuntur et humilitate personarum et argumentorum similitudine comoediis pares, in quibus non magistratus regesve sed humiles homines et privatae domus inducuntur, quae quidem olim quod tabulis tegebantur communiter tabernae vocabantur.*' This statement is amply supported by the titles and, so far as they go, by the fragments. The scene was generally (perhaps always) outside of Rome, and for the most part in the small towns of Southern Latium. Indeed, Mommsen claimed that the scene had to be laid in a town of the Latin league, because the poet was not allowed to represent either Rome or a Roman citizen on the stage. Hence Mommsen would connect the death of the *Togata* in Sulla's time with the extension of citizenship to the Latin towns at that date. If so, why was it that the *Togata* of the great masters were popular on the stage until late in the Empire?

The fifteen titles of Titinius represent what was originally about twenty thousand lines of text. About one hundred and eighty fragmentary verses survive. So far as form is concerned, the model was the *Palliata*. In his metrical art, Titinius followed the greater regularity of Terence, but in language and temperament he seems to have had more in common with Plautus. His plays were all family pieces, and it is clear that the life depicted was that of the lower classes and of the country folk. The prominence of women, noticeable not only in Titinius but in other authors of this type, is itself characteristic of Italian life. There is no sign of the kidnappers, and very little of the slaves which Festus tells us were standard characters in these plays. The only type suggesting the *Palliata* is the parasite. The others are more Italic, and remind us rather of the *Atellana* and the mime than of the *Palliata*.

By far the greatest, the most prolific, and the best known of the trio was Afranius. Indeed, like Molière and Ben Jonson, Afranius seems to have

¹ *Querolus* sive *Aulularia*, ed. by R. Peiper, Leipzig, 1876, etc.

² F. Marx, in Pauly-Wissowa, i. 708 f. For the *Togata* as a department, see esp. Edmond Courbaud, *de Comœdia Togata*, Paris, 1899.

been an excellent illustration of Gildersleeve's statement that 'in literature as in life the greatest borrowers are often the richest men.' Cicero (*Brut.* 187) says that he imitated G. Titius the orator, and even in the disjointed fragments now surviving we hear echoes of Pacuvius, possibly even of Cato, but above all of Menander. In fact, enough is left of his prologue to the *Compitalia* to show not only that he followed Menander, but that he was criticized for it. His reply was that 'he borrowed not alone from Menander, but from any other writer, Greek or Latin, whenever he found something suitable to his purpose.' 'Why not? Is any Latin writer comparable with Terence in either language or wit? At the same time, was there ever such a borrower?' Evidently we have here the echoes of a lively discussion among the critics of the Gracchan Age—one which was doubtless taken up in some of the lost satires of Lucilius. Cicero (*de Fin.* i. 7) explains the nature of the debt to Menander. It concerned not plots, or scenes, or characters, but *locos quosdam*, detached passages; it was the same relation which Ennius bore to Homer that every first-class Roman poet bore to his Greek models. But in itself the genius of Afranius seems to have had much in common with that of Menander, and Horace's (*Epist.* ii. 1. 57) 'dictur Afranili toga convenisse Menandro' was evidently the prevailing opinion of critics in his time. Doubtless, he did not entirely accept it; nevertheless, he quotes it without comment. Forty-three titles and over four hundred lines of fragments survive. Noticeable in Afranius as compared with Titinius, and in Atta perhaps as compared with Afranius, is the steady growth towards the literary *Atellana* and mime, those rivals of the *Togata* which were already at hand.

The *Togata* was much read and admired as a classic in the age of Hadrian and the Antonines. After that we hear little of it. In all the great library of antique realism, now gone beyond recall, there is probably no department, at least so far as Rome is concerned, which we could so ill afford to lose. The literature of Rome as it now survives is largely the literature of a great capital—in other words, that portion of the written word which was capable of appealing to the common denominator of taste for a long stretch of time in a universal empire. Whatever was local or peculiar in form or content was for that very reason heavily handicapped in the struggle for existence all through the arid waste which lies between the 3rd or 4th century and the Renaissance. The *Togata* was the artistic comedy of the Roman bourgeoisie. It must have been an incomparable picture of the ordinary life of the Italian countryside, of old towns like Præneste or Veliternum, with all their local ambitions, characters, and peculiarities, during the 2nd cent. B.C. As it is, our knowledge of this aspect of antique Italian life must be derived for the most part from the priceless fragments of Petronius, and the great palimpsest of Pompeii written over by the hand of Vesuvius.

4. Tragedy.—The rules of the Roman tragedy founded by Livius Andronicus and developed by his followers are practically the same as those already stated for the *Palliata*. The great names are Ennius, his nephew Pacuvius, and Accius. Accius survived until the youth of Cicero, but it is clear that even then the stage tradition of the tragedy lived in the fame of the great actor Asopus rather than by the popularity of the department as such. The tragedy of this period, the only great period of its existence on Roman soil, is now represented by nearly one hundred titles and about twelve hundred lines of fragments. Among the numerous lost tragedies written in later times the famous *Thyestes* of Varius and the equally famous

Medea of Ovid were the most important. Irrespective of such monstrosities as the *Medea* of Hosidius Geta (a Vergilian cento [see *Anth. Lat.* 17, R]), the only survivors of this department are the plays of Seneca, belonging to the time of Nero. It has often been said, though the statement is really quite without warrant, that they were never intended for the stage. However that may be, it is certain that their influence on the early tragedy of England and France is one of the most important chapters in the formative history of the modern drama. Their connexion, if they have any, with the tragedy of the Republican period cannot be stated definitely. Formally speaking, the choruses go back to the school of Horace, and the plays throughout were deeply affected by contemporary rhetoric.

5. The 'Prætexta.'—The *Prætexta*, the Roman parallel to the *Tragædia* of Livius and his followers, as the *Togata* was the Roman parallel to the *Palliata*, was the invention of Nevius, the greatest constructive genius, perhaps, of Roman poetry. But, owing in part, no doubt, to the comparative poverty of native Roman legends, the idea was not especially fruitful. One example, however, survives. This is the *Octavia*, a play by some unknown author, probably of the Flavian period, and possibly connected in some way with the house of the Annæi, inasmuch as it has come down to us in the corpus of Seneca's tragedies.

So much for a brief survey of the Roman drama as a purely literary production from beginning to end (*Palliata* and *Togata*, *Tragædia* and *Prætexta*). It remains to consider those types of the drama which had a popular as well as a literary history. The most important of these, and the only ones with which we need to be concerned in the present inquiry, are the mime and the *Fabula Atellana*. Strictly speaking, the *Atellana* should be considered a variety of the mime. Here, however, we take it up first, not only because as a literary form it is the immediate successor of the *Togata* in public favour, but also because as a popular form it is probably the oldest dramatic entertainment known to have existed on Roman soil.

6. The 'Atellana.'—The *Fabula Atellana*¹ is the 'play from Atella,' a little town in Campania. Campanian origin is also attested by the fact that the play was known as 'Oscan,' and the characters as 'Oscæ personæ' (Diomedes, i. 490, i.e. Varro). Generally speaking, of course, these plays were acted in Latin, but Strabo (v. 233; cf. Sueton. *Jul.* 39) tells us that in his time (the Augustan Age) they were still acted in Oscan *κατὰ τὴν ἀρχαίαν πάτριον*, 'during the national festival.' This statement, so far from being incredible, as many have thought, is merely an excellent illustration of the well-known tendency of liturgy to linguistic conservatism (compare the use of Sumero-Akkadian by the Babylonians; of Greek in the Roman worship of Ceres, as attested by Polybius, xxx. 14, and Cic. *Balb.* 55; of Greek in the Russian, and of Latin in the Roman Church, etc.). It proves beyond a doubt not only that the play was Oscan, but that the Romans took it over in the first place in consequence of some vow or in connexion with some special occasion, and acted it at 'the national festival.' It is, therefore, reasonable to suppose that the small and obscure town of Campania recorded in the title *Atellana* was either the centre of the worship commemorated or in some way associated with its adoption. The date, though uncertain, was at least anterior to the time of Livius Andronicus, and probably by a considerable period. This is shown in two ways. The first is

¹ F. Marx, in Pauly-Wissowa, ii. 1914 ff., with ref.; A. Dieterich, *Pulcinella, Pompejanische Wandbilder und römische Satyrspele*, Leipzig, 1897.

derived from the special and peculiar privileges of the actors. The first actors hired by Livius Andronicus were either slaves or freedmen. Hence the invariable rule of later days that no Roman citizen could go on the stage without *ipso facto* incurring *infamia*, i.e. the loss of certain important civic rights (as exemplified, for instance, by the famous case of the mimograph Laberius in Caesar's time). The one exception was the *Atellana*. Here and here only the actor was not obliged to remove his mask, and a citizen could take part without incurring any legal disability. This can only mean that the *Atellana* was introduced at a time when the Romans had no professional actors, and probably no festival at which theatrical performances were regularly given. The *Atellana* had been acted by Campanian citizens. The Romans followed their model, and acted the play themselves as best they could. When the Greek drama was introduced in 240 B.C. with its professional actors (slaves and freedmen), the business ceased to be honourable, and Roman citizens gave it up. But that they had once taken part in the *Atellana* was reflected in the freedom from *infamia* which ever after remained a privilege of the actors in this particular type of drama. The special privilege of retaining the mask also shows that the *Atellana* came early to Rome; not, however, because the professional played without a mask in early times, but because of the extreme antiquity of masks in the religious rite.

The second argument for the high antiquity of the *Atellana* among the Romans is derived from the well-known principle that, unless the ground is already occupied, the play always brings its theatre with it. Now, Bethe (*Proleg. zur Gesch. des Theaters im Alterthum*, Leipzig, 1896) has shown, we think conclusively, that the peculiar shape of the Roman stage, about which so much has been written, is not due to the fact that it was a modification of the Hellenistic type. On the contrary, it reflects the type associated from time immemorial with the *Atellana*. In other words, when Livius Andronicus brought out his first Greek plays, the *Atellana* was already in possession, and he adopted its stage as a matter of course. The same rule and the same line of investigation applied to the stage of the *Atellana* itself tend to prove that this play was not an Oscan invention. It was a popular Oscan representation of the *φλόακες*, one of the oldest types of the ancient Dorian comedy in Southern Italy.

The importation of the *Atellana* to Rome may have been due to some incident in connexion with the fall of Campania in 338. Perhaps, too, Livy's description of the play which he calls a *satira* may go back ultimately to a confused recollection of the Roman *Atellana* in those early days.

Like all genuine folk-dramas, the *Atellana* was not committed to writing. The actors merely agreed upon the plot. The dialogue was improvised. The characters were confined to a certain number of fixed types, each with a generic name, and there were no women. These features are all typical of genuine folk-drama the world over, and the last two, especially, indicate the high antiquity of the play. The use of masks has already been mentioned. This and the wearing of the phallus are ceremonial, and show the antiquity of the type. The use of masks also accounts for the extreme liveliness of gesture characteristic of the *Atellana* (Juvenal, vi. 71). They were also peculiarly applicable for 'Oscan personae,' for a play in which all the characters were fixed. The plot, whatever it happened to be, attached itself to these familiar personified types, and represented their various adventures in the given situations. As befitted the roaring farce, the situation was always ludicrous and the plot

full of intrigue. In fact, 'intrigue' is derived from *trix* (Dieterich, *Pulcinella*, 98, n. 2), and *trix*, 'tricks,' was the word used to describe the action of these plays (Varro, *Sat. Men.* 182 B; cf. Ribbeck, *Leipzig. Stud.* ix. [1886] 337). The language was conversational, and the life depicted was the life of ordinary people (Varro, *de Ling. Lat.* vii. 84). Obscenity was notably prominent (Quint. vi. 3. 47, etc.); but this, too, was ceremonial and traditional as well as a matter of choice. The most striking and instructive modern parallel—in fact, if we may believe Dieterich, the actual descendant and representative of the *Atellana* in the world of to-day—is the Neapolitan *Commedia dell' Arte*.

The four fixed characters of the *Atellana* are Maccus, Bucco, Pappus, and Dossenus. Maccus (probably Oscan and borrowed from μακκοῦς, to sit 'mooning') is stupid, greedy, and lustful—the butt of every one. He corresponds to *Strupidus* in the mime. His weapon is the 'clava scirpea' (Novius, 79 R), for which we have a striking parallel in Bajazzo (of the *Commedia dell' Arte*), i.e. Pagliazzo, the man with the 'hay club' (Dieterich, p. 112). Bucco (a popular derivation from vulgar Latin *bucca*, as the name indicates; cf. Gr. *βυβων*) is a great eater, a huge talker, an unconscionable braggart, an arrant coward. 'Over-large jaws,' as we learn from the old *Scriptores Physiognomonici* (i. 412, 7 Foerster), 'betoken a blockhead, a babler, a well-spring of words, words, words,' a man who 'talks with his mouth' (*bucca*), as our popular expression goes. Bucco is the talkative and aggressive fool, the 'cheerful ass,' as opposed to Maccus the great gaby, the simple and confiding blockhead. Pappus (from Greek πάππος) is the 'old man,' avaricious, surly, lustful, foolish, conceited, therefore always being overreached: in short, Pappus is Pantalone. Dossenus (from *dorsum*, a pure Latin word) is 'the man with the back,' i.e. the hunchback. In the popular conception this affliction has always implied wisdom and cunning (cf. Æsop) as well as certain powers more or less uncanny. Hence, in the *Atellana*, Dossenus, like his modern representative *Il Dottore*, in *Pulcinella*, is the sly and cunning rascal, the 'professor,' the caricature of the scholar and philosopher. His second name of Manducus (cf. *manducare*, *mangiare*, *manger*) shows that, like Bucco, he is also a great eater.

Such were the standard characters, and such seem to have been the main characteristics of the *Atellana* in its traditional and purely popular form.

For a brief period this old folk-drama was raised to the dignity of a literary department, and succeeded the *Togata* in public favour. The period is the time of Sulla, and the great names are Pomponius of Bologna and Novius. The lines upon which they worked out the problem were doubtless suggested in no small degree by the dramatic studies of Accius and his contemporary, C. Julius Cæsar Strabo. These men investigated the Roman drama in connexion with Greek models, the question of correct titles (Varro, *de Ling. Lat.* x. 70), of masks, etc. Influence of the *Palliata* and *Togata* is suggested, though not proved, by occasional identity of titles. We also hear of *cantica* in Galba's time (Suet. *Nero*, 39, *Galba*, 13), and it is natural to suppose that in raising the old farce to the dignity of a literary product something was borrowed from the higher types. It is clear, however, that the essential characteristics of the folk-drama were all preserved. The dialogue was now written out, of course, and the statement of Terentianus Maurus (vi. 396 K), that the metre used was the *septenarius*, is borne out by the fragments. In other words, there was no recitative, the play was all comic. Indeed, in language, humour, and situation these plays were more distinctly

Aristophanic than anything else in Roman literature. Equally Aristophanic was the habit of personal criticism, the *ὀνομαστικὴ κωμωδία*, of which we hear during the Empire from Tiberius to Trajan (Tac. *Ann.* iv. 14; Suet. *Tib.* 45, *Calig.* 27, *Nero*, 39, *Galba*, 13, etc.).

With the rise of the *Atellana* to a literary form, we have to deal with a confused and confusing tangle of testimonies regarding the *Atellana*, the *Exodium*, the *Rhinthonica*, and the Greek Satyr-drama.

The conclusion seems to be (cf. schol. Juv. iii. 175, vi. 71; Suet. *Tib.* 45; Cic. *Fam.* vii. 1, ix. 16) that the literary *Atellana* was used as an *exodium*, and the first mention of the word in Lucilius (180-103 B.C.) coincides with its development in this sphere. A short piece of three to four hundred lines, and with only a few actors (Ascon. on Cic. *Verr.* 15), it seemed hardly worth while, so to speak, to put it on the stage by itself. Apparently, therefore, it was the analogy of the Satyr-drama that suggested the use of the literary *Atellana* as an *exodium*, an after-piece. By later critics it actually was identified with the Satyr-drama (schol. Juv. vi. 71; Porphy. on Hor. *Ars Poet.* 221, etc.). But it is hard to see how the two could coalesce. The literary model for the *Atellana* to follow ought to be the *Hilarotragedia*, the *Rhinthonica* (Porphy. l.c.; schol. Juv. l.c.), and that it actually did so is suggested by certain titles of Pomponius (Vahlen, *Rhein. Mus.* xvi. [1861] 472). As Rhinthon's plays were travesties of Euripides, so the *Rhinthonica* of Pomponius and Novius were travesties of Pacuvius and Accius. Were the *Rhinthonica* of Pomponius and Novius *Atellanae*, or is this idea of later critics due to the fact that Pomponius and Novius wrote both kinds and used both kinds as *exodia*? We believe Marx is right in adopting the second alternative. In fact, the loss of all these departments, the similarity in type, use, titles, and characters, make it extremely difficult to decide whether the *Atellana*, *Rhinthonica*, and Satyr-drama ever did coalesce to any extent. Probably not. The explanation seems to be that Pomponius and Novius wrote all three and used them for *exodia*.

The *Atellana* was evidently popular under the Empire; the old folk-drama was never forgotten, but as a living department of literature it seems to have been largely the creation of these two men, and as early as 55 B.C. (cf. Cic. *Fam.* vii. 1, 3 [written in 46]) the literary *Atellana* as an *exodium* had already given way to the mimes of Decimus Laberius and Publius Syrus, the only two men of note who raised the mime to a literary form in the Latin language. If this were all, or if this chapter could be dealt with independently, the mime might be dismissed with the few phrases usually accorded to it. We have learned from Reich,¹ however, that this cannot be done, and with his general conclusions we must agree in the main. The literary productions of Laberius and Syrus, like the *Atellana* by which the mime was preceded, are a mere branch of the parent stock.

7. The mime.—In its larger sense the mime is the most important phenomenon in the history of dramatic art; it appears in a dozen different forms, it is responsible for a dozen others; the history of it is the history of the growth of realism, of the rise of the democracy; it has popular periods and literary periods, a Greek history, a Roman history, a Græco-Roman history, a modern history. Indeed, after reading Reich one may sum up the whole story of the antique drama with the simple phrase, 'Mime thou wert, to mime didst thou return.' For the complete and detailed discussion of this long and interesting development, the reader is referred to Reich himself. Here it is manifestly impossible to give anything more than some of the important facts in outline.

The earliest appearance of the word 'mime' is as a title for the famous compositions of Sophron (5th cent. B.C.). These dramatic presentations of single incidents or situations, according to Suidas, were in prose and written in the Doric dialect. The substitution of the *scæzon* for prose gives the form and the atmosphere of the *mimiambi* of Herondas, the Teniers of Alexandrian life. A more elevated metre, on the other hand, starts us, by way of Sophron's imitator Theocritus, on the long history of bucolic poetry. A convenient generic term for

this type is Reich's *mimologia*, i.e. the mime as a recitation.

There were also purely lyric mimes, which were sung. To these Reich gives the generic title of *mimodia*. Particular species of it are *magodia*, *Simodia*, *hilarodia*, *Lysiodia*. Between the two we have *kinaidologia* and *Ionikologia*, all in verse, but partly recited, partly sung. Finally, in the Alexandrian period, comes the fully developed mimetic drama, which was a combination of *mimologia* and *mimodia*, and retained the characteristics of both. With a fully developed plot, it had prose parts and iambic parts, like the *mimologia*, and lyric parts—*cantica*—like the *mimodia*. With the conquests of Alexander this new invention began to spread in the Greek East, and soon took entire possession of it. Indeed, the time came when it ruled the stage, even to the exclusion of its ancient rival, the comedies of Menander.

Toward the end of the 2nd cent. B.C., after the Romans conquered the East, and especially after Sulla's time, they brought the dramatic mime to Rome. From Rome it spread over the West, and thenceforth held possession of the entire Græco-Roman theatre until the fall of the Empire. The irruption of the Barbarians upon the West made an end of the theatre. Only the *mimi* survived, and they did so by returning to their primitive original function of *θαυματοποιὸι* and *γελωτοποιὸι*. Such were those tumblers, jugglers, etc., of later times who went on with the ancient art of the *mimus*. It was thus that the mime of antiquity was enabled to survive the Middle Ages and reach modern days alive. In the Greek East the mime was not subjected to the same strain. For centuries the Byzantines clung to the classic dramatic mimes of Philistion. They also produced a large number of mimographs, and a number of new mimic types and figures were added to the old stock inherited from classical times. Here, as in the West, the regular classical drama had long since disappeared from the stage. When Byzantium fell, the remains of Greek culture took refuge in Italy, to reappear there at the Renaissance. Only the mime remained, and in a debased form survives to-day in the Turkish popular drama known as the *karagöz*. Two distinguishing features of the mime from beginning to end and in all its types and variations have been the mimic dance and the wearing of the phallus. The mime of all times and forms is also realistic; the very name implies it. Of course, all poetry was properly defined as *μυμνῆσις*, but the mime was felt to represent a specific type; to give the substance of Diomedes' definition (i. 491 K), it was realism unmitigated and undiluted. We get an idea of the relentless realism of the mime when we see how much of it is still left in the refined literary representatives of it furnished by Theocritus and Herondas. Without the restraint of higher genius and literary form, it was easy for the realism of the mime to sink to mere obscenity and its wit to mere dullness.

The realism of the mime is also seen in its characters. Many of them, perhaps all, were creations of the ancient folk-mime, and had long been familiar to all classes from this source. As early perhaps as the 6th or 7th cent. B.C. we have the first development of this species of folk-composition by quasi-professionals, those *θαυματοποιὸι*, jugglers, rope-dancers, ventriloquists, and other homeless nomads who had been wandering about through Greece and elsewhere from time immemorial. They must soon have seen the advantage of the mimic dance, and of the mime itself, whether spoken or sung, for getting together an audience. In this way, thinks Reich, sprang up a new profession, that of the wandering *mimi*.

Among all the varieties of dramatic composition

¹ Reich, *Der Mimos, ein literar-entwickelungsgeschichtl. Versuch*, vol. i., Berlin, 1908.

the mime was the lowest, as it were, in the social scale. The same was true of the actors. Even the players of the *kithara* and flute were admitted to the Dionysiac gild, but never the *mimus*; he was always looked down upon by his more distinguished colleagues. The difference was marked from the first by the fact that the actors wore no masks, and that women's parts were taken by women. Doubtless, this was inherited from their early days as jugglers, but the 'regulars' even in their own later and evil days would never join the *mimi* on account of the women.

A convenient division of the mime as a whole is afforded by the words *παλινος* and *ὑπόθεσις*. The mimic *ὑπόθεσις* is the developed mimic drama, the regular dramatic mime; the *παλινος* is everything below it, i.e. *hilarodia*, *magodia*, etc., mentioned above, *kinaidologia*, *Ionikologia*, *φλόακες*, even the works of Sophron, etc., none of which were regular dramas. Frequently the *παλινος* is what we should call a music-hall 'turn.' It was extremely popular in both Greece and Rome; and there were many varieties, such as educated animals (Vopiscus, *Carinus*, 19; Plutarch, *de Sollert. Anim.* 19, etc.), and special feats of imitation. Imitation of pigs seems to have been particularly popular (Phaedrus, v. 5; Plutarch, *Mor.* 674 B; *Paræm. Græc.* ii. 84, etc.). Plato (*Rep.* iii. 8) speaks of performers who could give perfect imitations of animals, the sound of running water, the sea, thunder, etc. See also Friedländer's *Petronius*, 1891, pp. 64, 68, 69, and 293 (note). These varieties of *μῦθους* are eternally popular.

The most important figure in the history of the department is Philistion, who lived and wrote in Rome during the 1st cent. A.D. He is the classic of the mimic *ὑπόθεσις*, the regular dramatic mime; hence the comparison of him with Menander, the classic of the New Comedy.¹ The statement of Cassiodorus (*Var.* iv. 21), that he invented the (dramatic) mime, is doubtless due to the fact that he was the first to write it all out, i.e. the dialogue as well as the songs. Evidently he was the culmination of the mime among the Greeks. But the beginnings of it take us back to pre-historic times. The mime of Sicily and Italy came from the Peloponnese with the early Dorian settlers. It was extremely popular in Sicilian Megara and Syracuse. Tarentum was especially fond of the Italic mime, the *φλόαξ*. All these cities were founded near the beginning of the 8th cent. B.C.

The original kernel of the mime, the source from which it sprang, was the mimic dance, the beginnings of which belonged to the Stone Age, and may be seen to-day among all peoples who still belong to that stage of civilization. The ancients never forgot the connexion between the two. The mimic dance survived in all types, and the *mimus* himself was always a trained dancer. The *kinaidologi*, for instance, were originally dancers who thus accompanied their *δοῦρα ἰωνικά* (cf. Petron. 23); Hesyehinus describes the *magodia* itself as *ὀρχήνης ἀπαλή*, the Romans designated the action of the *ὑπόθεσις* by *saltare*, and the actresses were known as *saltatriculæ*. The use of *gesticulatorius* in the same connexion indicates the kind of dance.

The development of troupes of regular professional *mimi* from the old wandering *γελοιοποιοί* of primitive times seems to have taken place about the 3rd cent. B.C. These primitive ancestors of the mediæval *jongleurs* had gradually taken up all the types and themes of the old rustic mime. They travelled everywhere, they were great favourites at the court of Philip, and hordes of them followed Alexander into Asia Minor. Here the Dorian

mime met the Ionian mime, and the result was the *ὑπόθεσις*, the regular dramatic mime. The Dorian mime was originally prose (hence Sophron), although great artists like Epicharmus put it into metre. The dramatic mime (*ὑπόθεσις*), however, was noted for its *cantica*, and this combination of Dorian prose (*mimologia*) and Ionian song (*mimodia*) is what ensured the lasting success of the dramatic mime. Great emphasis was laid upon *mimodia*, and this brings the dramatic mime near to the modern opera or operetta. In this way, too, we get a substitute for the missing chorus of the *Palliata*. Plautus took over *mimodia*, and the result is the mimic *canticum* of his comedies. Pomponius and Novius seem to have done the same thing for their *Atellanae*.

Now, the Ionian *mimodia* itself, like the *ὑπόθεσις*, throughout its entire history, falls into a mythological and a 'biological' type (cf. Aristox. *ap. Athen.* xiv. 621 C), the one, *hilarodia* (and *Lysiodia*), dealing with mythology and the gods (paratrage and burlesque), the other, *magodia*, with real life. Both were entirely melic, and in both singing was accompanied and supported by mimic dance and gesture; but the accompaniment of *hilarodia* was stringed instruments, of *magodia*, drums and cymbals (Athen. 620 D-621 D), and the choice of instruments itself indicates that the dancing of the latter was much freer and more lascivious.

Hilarodia and *magodia* were wide-spread and very popular in Ionia, and acquired literary form—*hilarodia* through Simos of Magnesia, *magodia* through Lysis. Hence these new literary types were called after their founders *Simodia* (*hilarodia*) and *Lysiodia* (*magodia*). Through famous poets and a regular class of actors these two types of Ionian *mimodia* survived into Roman times. Sulla's friend Metrobius was an actor of the *Lysiodia*.

Kinaidologia, or *Ionikologia*, was another type of the Ionian mime. This was not really sung, although accompanied by the mimic dance (hence it was more *mimologia* than *mimodia*). This also was very popular in Ionia, and was cultivated by such famous poets as Sotades, Alexander Aetolus, Pigres, etc.

It will thus be seen that we have an unbroken connexion between the mimic-dramatic dances of the primitive Greeks, the ancient folk-mimes of the Dorians, the Italic *φλόακες* of the 8th cent. B.C., and the dramatic mime of later times (not only in its popular form, but in its literary form; Laberius and Syrus on the Latin side, Philistion and his successors on the Greek side).

The relation of Rome to Greece in the matter of the mime now becomes more definite. Antiodemis (Antipater Sidon. *Anth. Pal.* ix. 567), the actress of *Lysiodia*, came to Rome in the 2nd cent. B.C.; Metrobius, as we have seen, in the 1st cent. B.C. In 211 B.C. an old *mimus* (Festus, 326) danced to the flute in the Roman theatre. His dance was an intermezzo, but his mere presence shows that the *mimi* had already reached Rome. The *mimi* who satirized Lucilius and Accius (150 B.C.) from the stage were following an old-established custom of the dramatic mime (*ὑπόθεσις*). The fact that they took such liberties shows that even then they must have been in Rome for a long time. The satire in question must have taken place at the *Floralia* (April 28-May 3), which was the special feast at which mimes were given. The *Floralia* were first celebrated in 238 B.C., and every year after 173. It is quite possible that the mime was connected with this feast from the first. In that case, the dramatic mime, which was established in the Greek East by the 3rd cent. B.C., was already settled in Rome in connexion with the *Floralia* by the end of the same century. Thus we see how the mimodic portion of the dramatic mime was the suggestion

¹ Σίγκριππος Μενάνδρου καὶ Φιλιστίωνος, ed. Boissonade, *Anecd. Græcæ*, 1829, l. 147-152; and by Studemund, *Lektionskatalog*, Breslau, 1887.

of the *cantica* of Plautus and Cæcilius Statius. The introduction of the mime and of *mimi* at that time was facilitated by the fall of Tarentum in 272, and by the fact that in 190 Scipio Asiaticus returned from Antioch, a centre of the dramatic mime, just as long afterwards Verus (Capitol. viii. 7) came back from his Parthian campaign with shiploads of *mimi*.

The early *mimi*, of course, acted in Greek, and the *scena Græca* remained in Rome until Theodoric.¹ One is reminded of such modern parallels as the *Théâtre italien* in Paris, etc. The Latin mime was a copy of the Greek (technical terms, rules, etc.).²

Having traced the history of the department as a whole, let us pause a moment upon the fully developed dramatic mime of the best period. We have already seen that it inherited dialogue in prose and iambic verse, also lyric portions (*cantica*), accompanied by music and the traditional mimic dance. The same principle also justified the introduction of *salvina*, such as trained animals, imitations, etc. In plot, too, and in length it was fully equal to the old classical drama; in compass and variety it was superior.

A good example of the type is an old favourite, well known to Ovid, and still popular in the days of Chrysostom and Choriokios.³ The name of the piece has not survived; we might, however, for convenience call it *Divorçons*, as it is an early exploitation of the inevitable 'triangle'. In the first scene we have the facile young wife and the jealous husband. Then the lover, the *cultus adulter* as he is called, appears, and with the help of Thyme's faithful abigail, the *cata carressa*, gains an interview with her mistress in the absence of Corinthus. In the following scenes the jealous husband is subjected to all sorts of tricks and mystifications, *artes mimice*. Finally, the lover has to hide from him in a large chest (*perituri cista Latini*). He is discovered. The husband, breathing fire, tells the slave to fetch him a knife, large and very sharp, as he proposes to render the *cultus adulter* harmless. Then he changes his mind, and decides to air his wrongs in court. Then comes the court scene, and the piece is brought to an end in some farcical fashion.

The final tableau of *Divorçons* requires not only the three principal characters and the judge to be on the stage at the same time, but also a throng of slaves, witnesses, court officials, supernumeraries, etc. Other plays show even more clearly that in the mime, as in the modern drama, with which, in fact, it has much in common, the actor played but one part and the number was unrestricted. It is also clear that the 'unities' were disregarded.

Variety in form was accompanied by variety in characters. True to its composite origin, the mime is hospitable to all, from thieves and prostitutes to emperors and gods.⁴ The same was true of costume. The *Stupidus*, or clown (a typical character inherited from the primitive stock), wore the regular clown's costume, the *centunculus* (cf. the mediæval 'motley'), a shaved head, an *apeca*, a mimic club (like Maccus and Bajazzo), and always the phallus. The old women, too, wore a burlesque costume. Otherwise, as in the modern drama, the dress was according to the character and the situations.

So, too, the whole gamut of human emotions was played upon: comic and tragic, humour and sentiment, go hand in hand, as in the Romantic comedy of the Elizabethan Age. The titles of Laberius suggest realistic plots for the most part. It is doubtful, however, whether such mimes as his *Necyomantia* and *Lacus Avernus* were altogether realistic. In fact, even when the mime dealt with contemporary life and was purely realistic, great emphasis was laid on the unusual, strange, and astonishing. Nothing indicates more clearly the really popular origin of the mime.⁵ A favourite character was the beggar who suddenly

becomes rich (Cic. *Phil.* ii. 27); another, the rich man who becomes a beggar (Sen. *Epist.* 113. 6). Shipwreck was a favourite *motif* (Sen. *Dial.* iv. 2, 5; Petron. 114 and 115). The *Laureolus*, a favourite mime of Domitian's time, gave the romantic adventures of a robber chieftain, and ended with his execution. Especially characteristic of the mime was some serious crime, something unusual and horrible, like parricide or incest or poisoning. Trials for perjury or poisoning are frequent, and generally serve for the *dénouement*. An interesting example, which will also illustrate the part occasionally taken by animals (cf. such titles of Laberius as *Catularius* and *Scylla*, and see Petron. 95), is given by Plutarch, *de Solert. Anim.* ix. 7.

This was a mime with a large number of characters and a complicated plot, which he saw in the theatre of Marcellus. Vespasian himself was present. The intrigue centred in what purported to be a poison, but was in reality a sleeping potion. As in the case of Juliet, whoever took it apparently died, but after a time revived. One of the star actors was a trained dog, and the most important incident of the mime, because it doubtless led to the *dénouement*, was trying the effect of the supposed poison upon him. As soon as he had eaten the piece of bread upon which the poison had been placed, he began to tremble and stagger, his head grew heavy, and he finally stiffened out as if dead, and allowed himself to be carried about in that state. When it was time to recover, he imitated perfectly all the phases of returning consciousness, and, while the actors indicated their astonishment at the fact that the supposed victim of a deadly dose had come to life again, the dog himself ran to his master and joyously fawned upon him.

The connexion of this incident with the plot is not stated, but we may believe with Reich that there was a connexion, and that the probable nature of it is illustrated by (the mime from which was derived?) the famous story of Apuleius, *Met.* 10. 2. A rich old grandee took for a second wife a young and very beautiful woman. She fell violently in love with her stepson, but was rejected by him, and her passion was turned to hatred. (Note that this *motif* has been a popular favourite ever since the days of Joseph and Hippolytus. It appears constantly in folk-tradition, in the mime, in that echo of the mime, the rhetorical *controversie* and *suasoria*, in the Italian *novelle*, etc.) A slave procures her a sudden and deadly poison, she drops it in a cup of wine, and the pair leave it where the young man will take it without arousing suspicion. Presently, however, her own son returns from school, and, being thirsty—as small boys always are—drinks the wine and falls dead on the spot. (Hell is the unexpected turn of fortune which the mime, that faithful interpreter of the popular mind, so dearly loves.)

It is, of course, clear to all that the child has died of poison. The woman accuses her stepson of the deed, and alleges as a cause that he had attempted incest with herself. The young man is arrested, there is a great trial scene in court, and, after much oratory on both sides, he is condemned to death. At this point, however, we have another unexpected turn. An old judge, who is also a skilful physician, has been quietly listening to the trial all this time. At this point he rises to his feet and informs the court that he himself had sold the drug to the slave, and that it is not a poison at all, but a sleeping potion. 'Let us go now to the tomb,' said he, 'the child will soon be waking up.' Thus the woman's guilt was discovered; but, true to the mime, she was merely turned adrift, not executed.

Another plot eminently characteristic of the mime is Phædrus, *App.* xiv. 'The two suitors,' which reappears in an old French *fabliau* known as 'Le vair Palefroi,' 'The grey Horse.'

This is Romantic comedy. So, too, the mime takes us into the world of phantasy. Witches, warlocks, magicians, prophets, ghosts, are all favourite characters. In the old Dorian mime popular demons were presented, and the metamorphosis of men into animals, which is well attested for the mime of all periods, takes us straight into the fantastic land of 'the Frog King,' of 'Beauty and the Beast,' of 'the Golden Crab,' of 'the Three Citrons,' and the like. In this function the mime is a curiously complete prototype of Carlo Gozzi's famous experiment with the fairy tales of Italy. To the same category belong the mythological mimes, *Priapus*, *Anna Perenna*, *Anubis Moechus*,¹ *Kinyras* and *Myrrha* (Jos. *Ant.*

the survival of the *Sententie* of Syrus. These were extracted from his mimes at an early date, and published as a sort of *vademecum* for the use of students and professors, from which might be drawn those sententious observations so dearly loved by the rhetoric of the Silver Age. For those who wish to recover the plots, scenes, and *motifs* most characteristic of the mime, the practice declamations of the rhetorical schools probably afford the richest field for investigation.

¹ See esp. Zieliński, *Die Märchenkomödie in Athen*, St. Petersburg, 1885; Weinreich, *Trug des Nektanebos*, Leipzig, 1911, p. 25.

¹ Cicero, *Fam.* vii. 1; Sueton. *Jul.* 20, etc.

² See Reich, *op. cit.* p. 561 f., for details.

³ Ovid, *Trist.* ii. 497 f., etc.; Juvenal, viii. 193, vi. 42; Chrysost. II. 318. 13; Choriokios (Reich, p. 204 ff.). In Juvenal's time the wife was acted by Thyme, the husband by Corinthus, the lover by Latinus. They were all famous 'artists.' Thyme well might be called the Mrs. Bracegirdle of the Flavian period.

⁴ See esp. Cyprian, *de Spect.* 6. Many titles of Laberius and Syrus speak for themselves in this respect.

⁵ The Latin mimes were carefully studied in the rhetorical schools during and after the Augustan Age. To this fact is due

XIX. i. 15), *Paris and Cēnone* (cf. Suet. *Dom.* 19), Philistion's *Deukalion* and *Pyrrha*, etc.

It will be seen that in form and type the mime was not subject to the restrictions of the classical drama most familiar to us. It may be added that the same was true of many details of its presentation. First and most important, the actors, as we have already seen, never wore masks. It is not necessary to explain what this means for dramatic art. The *mime* wore his own face only; indeed, one of the principal characters of the mime was known in Latin as *Sannio* (Cic. *de Orat.* ii. 61), i.e. 'the man who makes faces'—a speciality of the mime.¹ So, too, as we have seen, only in the mime were women's parts always taken by women. And, as there was no restriction of type, the characters included women of all ages and kinds. It is characteristic of the mime as a whole, however, that old women should be a speciality. This enabled a talented actress to keep on indefinitely (Pliny, *HN* vii. 48).

The original stage of the mime, as we see from old vase paintings of the *phylakes*,² was a platform on props about three feet from the ground, and with steps in front by which the actor mounted. Change to the regular stage was very slow. With the beginning of the theatres the mime was acted on a small platform in the orchestra and in front of the regular stage. It was thus given as an *emboliarium* (Diomed. 490) or *intermezzo*. The next step was to the regular stage, upon which in Cicero's time the mime took the place of the *Atellana* as an *exodium* (Cic. *Fam.* ix. 16). At the *Floralia*, however, it had always been acted independently, and it gradually drew away from its function as an *exodium* (Diomed. 491 f.), until in the early Empire it took to the regular stage, upon which, together with the pantomime, it finally ruled alone. One distinction, however, survived. The mime was acted in front of the *siparium*, and it was through this that the actors made their exits and entrances. The stage was dressed as in Shakespeare's time, but, as also in Shakespeare's time, there was no scene-shifting. Claudian (*Epig. Græc.* 6) shows that there was, as we might assume, a regular *corps de ballet*. Doubtless it filled the same place and did much the same thing as in our times.

In view of what has been said, it is not difficult to understand why the fully developed dramatic mime, in spite of its faults, finally ruled alone. If the drama springs from the people, and if its highest function is to represent their life and their point of view, then the dramatic mime has a greater right to be called the national drama of the Græco-Roman world than has the classical drama of Greece or its short-lived and always more or less exotic representative in Rome. It is likely that Quintilian's verdict of 'in comœdia maxime claudicamus' might have been applied with equal justice to the Roman tragedy. Cicero was a notorious lover of the mime, a man of judgment and taste in such matters, if there ever was one. It is true, of course, that the mime was the drama of the age, and that the age was an age of realism. For that reason alone the average man of to-day would doubtless have agreed with him. But, after all, the realism of Cicero's time, however relentless, was not the realism of our time. The mimograph of those days, realist though he was, still possessed the vivid imagination, the nimble fancy, and, therefore, the sentiment of his race and time—those qualities without which the bubbling well-spring of humour and invention must soon dry up. Moreover, his audience was

endowed with the same qualities. It still believed in ghosts and magic, it still had a folk-lore, it still possessed an incomparably rich mythology. Hence the real world of antiquity finds its parallel in the age of Elizabeth rather than in our own. It was only partially real after all. And so the mime, like the Elizabethan 'tragi-comedy,' was now wildly humorous, now fantastically horrible. The Romantic and the real, humour and pathos, comic and tragic, fact and fancy—all these and more were called upon to picture a life which, real as it once was, is no longer ours and will never be ours again.

The dramatic mime, however, seems never to have taken its position as a great literary department. In the long run the habit of leaving the dialogue to the actors proved to be inveterate, and this alone would have been fatal. But the most serious menace to the mime was its own splendid inheritance of versatility. Dialogue and plot, music, singing, dancing, an occasional weakness for 'specialities'—the combination is unstable, and, except in the hands of a great genius like Philistion, one or another was sure to be magnified at the expense of the rest. Audiences are uncritical, playwrights are human, actors are—actors. Between the three the mime of the 4th cent. A.D. no doubt deserved the adverse criticism bestowed upon it by Donatus and Cassiodorus. But, whatever its faults and virtues, the vitality of the mime was amazing. Time and change, national ruin, ecclesiastical fulmination and anathema—nothing could prevail against it. We cannot ignore a dramatic type which finally ousted both Euripides and Menander from the stage, and ruled alone for over half a millennium.

8. State control of the theatre.—The Roman theatre,¹ like the Roman play, and, for the most part, the details of its presentation, were a continuation and development of the Greek prototypes as they existed in the Alexandrian period. All derive ultimately from the one fact that the Roman play, like its predecessor, was clearly and distinctly an act of worship to the gods. It was, therefore, given at festivals, more especially at those festivals which the State religion, hence the State itself, had set apart for purposes of public worship. The plays were merely one item of the ritual observed. Other items were the races, gladiatorial combats, etc., which gave the general name of *ludi* to these occasions. In the time of Augustus, the regular annual *ludi*, during which plays were given, were the *Megalenses* (April 4–10), the *Ceriales* (April 12–19), the *Florales* (April 28–May 3), the *Apollinares* (July 6–13), the *Romani* (Sept. 4–19), the *Plebeii* (Nov. 4–17). Other *ludi* of the Augustan Age, during which plays were or could be given, were generally sporadic and meant to commemorate some special occasion, such as a great victory or the death of some distinguished man. Later in the Empire the tendency to increase the regular annual *ludi* became very marked, and serious attempts to reduce the number were made by several of the Emperors, notably Nerva, Septimius Severus, and Macrinus. Nevertheless, according to the calendar of 354, not less than 175 days in the year were given to *ludi*, and 101 of this number to plays.

The play was managed by the State. It is true that *ludi* were given by persons more or less in private life, but they were still an act of worship, the consent of the State had first to be secured, and, lastly, they were supposed to be under the

¹ Quint. vi. 8, 8; the epitaph of the *mime* Vitalis, in *Anth. Lat.* 487a, R. etc.

² See Bethe, *op. cit.* ch. 13, for the full discussion.

¹ The best authority for Rome here is L. Friedländer in Marquardt-Mommsen's *Handbuch der röm. Altertümer*, vi. (1885) 482 f. See also G. Oehmichen, 'Das Bühnenwesen der Griechen und Römer,' in Müller's *Handbuch der Klass. Altertumswissenschaft*, Munich, 1890, v. 3, pp. 181–804. For colour in theatrical tradition, see especially Donatus, *de Comœdia*.

general supervision of State officials. At no time apparently was the antique theatre a purely private enterprise; still less was it ever a purely financial one. One or two exceptions under the Empire are mentioned by Tacitus, but with such disapprobation that they illustrate rather than invalidate the rule.

Until the time of Augustus five of the six great annual *ludi* mentioned above were in charge of the various *ædiles*. The sixth, the *Apollinæres*, which occurred in July, was managed by the *prætor urbanus*. The officer in charge had everything to do. Indeed, in earlier times, as we learn from Plautus, he even attended to the matter of costumes. He also built the theatre, and afterwards had to clear it away and put the place in order. Oddly enough, Rome never seems to have had but two permanent theatres—the theatre of Pompey, built in 55, and the theatre of Marcellus, which belongs to the Augustan Age. The *ædile* also had charge of the audience during the performance. In this he was assisted by his corps of *designatores*, or ushers. The *designator*, however, was a vastly more important person than is the modern usher. He was a regular deputy of the civil magistrate in charge, and as such the majesty of the law was with him. He had lictors, and was expected to move or remove people whenever necessary. In the 2nd cent., as we learn from the jurist Ulpian, this office was in the gift of the Emperor, and was of great value. The *ædile* had a regular sum allowed him from the State treasury to meet the bills incurred. But this *lucrum*, as it was called, had been fixed as early as the Second Punic War, and was far from keeping pace with the growing expenses of the function for which it was designed. Nevertheless, the office of *ædile* as *maître de plaisir* made one so prominent and popular that it was much sought after by the aristocracy as a means to further advancement, and they spent fabulous sums in giving the shows devolving upon them. But at the accession of Augustus no patricians could be found who were willing to accept the office. He, therefore, transferred the management of theatrical matters to the *prætors*, and this remained the law under the Empire.

It is well known that one's seat at the theatre was determined by one's position in the State, and that it was regulated by law. The theatre was a religious institution, in charge of the Government. Such being the case, a seat at the theatre, like a right to vote or to bear arms, was a privilege of citizenship, and therefore to be assigned according to that principle. For that reason, in the earlier days of the Republic, slaves could not attend the theatre; and the same must have been true of strangers unless they were guests of the State. But in the time of Augustus these restrictions had ceased to be in force. The law on the subject of seating as it existed under the Empire rested for the most part upon enactments of Augustus, although these had been largely anticipated by generations of growth in Republican times. The orchestra, though the name reflecting its original use was and still is retained, was set apart for the senators. This rule had been in force since 194 B.C. Representatives of foreign States and, under the Empire, certain members of the reigning house were allowed to sit here. The position of the knights was finally established by the *Lex Roscia Theatralis*. This famous law was pushed through by L. Roscius Otho, tribune of the people in 67 B.C. Among other things it provided that the property qualification of a Roman knight should be raised to 400,000 sesterces, and that the first fourteen rows behind the orchestra should be set apart for the exclusive use of this order. The law

also provided that even within these rows careful distinctions should be made among the knights themselves. For example, the first two rows were reserved for those knights who had served as military tribunes or land-commissioners. The younger knights also had a separate section, which under the Empire was known as the *Cuneus Germanici*. Even insolvent knights, *decoctores*, were obliged to sit in a group by themselves.

Previous enactments were extended and strengthened by the *Lex Julia Theatralis* of Augustus. This law, which was much affected by Greek theatrical ordinances, prescribed the place of every one in all parts of the house. The general public sat according to *tribus*, or wards. But even here distinctions were made—for instance, in favour of husbands and fathers as against bachelors and spinsters. The women, and with them the young children, had to sit by themselves on the back rows. The one most notable exception was the Vestals, who had seats of honour near the front. So the various colleges of priests and other officials had seats of their own, often of a special form, with backs, arms, etc. Sometimes a certain seat was given a man in *perpetuum*, usually in return for distinguished services rendered to the State. Such a seat was also used by his family and could be inherited.

The usual time for a play to begin was early in the morning. A play of Plautus, including the music, would take about three hours. Whether two or more should be given in succession, as was sometimes the case, was left to the official in charge. Plays were never given at night except for ceremonial reasons. This was always the case when mimes were acted at the *Floralia*. Other details, so far as they bear upon the present discussion, have already been dealt with elsewhere.

9. The Roman drama not truly national.—In view of what has been said in the previous pages, we might perhaps conclude that as a literary production the life of the Roman drama was surprisingly brief, its great authors comparatively few, its genuine popularity problematical. We cannot agree, however, that the reasons for it were that the *Palliata* died of too much Greek, that the mimic sorrows of the tragedy could not appeal to an audience steeped in the bloody realities of the arena, that idealism does not and cannot reach a generation of realists. These are all true, but they are symptoms, not causes. There were plenty of men in the Golden Age of Pericles who preferred cock-fighting to comedy, and athletics to *Æschylus*. Nevertheless, the drama really did reach the hearts of the people. This was because it was theirs, because it was truly national. The Roman drama, on the contrary, both as an institution and as a department of literature, was profoundly affected by the intrusion upon it at an early date of the fully developed Hellenic tradition and the long-established Hellenic masterpieces. The consequence was that the Roman drama as we know it, and as the Romans themselves knew it during the historical period, was not really national, and had no deep roots in the national life. The atmosphere of the *Palliata* was foreign, the material of the tragedy was not only foreign but comparatively remote; even the worship of Dionysus—god of the drama—was an exotic, and the feeling of mistrust entertained by the genuine old Roman is clearly indicated by the famous *Senatusconsultum de Bacanaliis*. His affections, his traditions, his beliefs were deeply rooted in his own deities, the old rustic deities of the Italian countryside. Foreign gods, above all foreign gods with 'mysteries,' did not appeal to him. He was opposed to Dionysus, as long after

wards he was opposed to the Christians, and it was the same feeling which prompted him to ignore for generations the intrusion of the Hellenistic week of seven days, each under the protection of a planetary deity. The actor, too, as we have seen, was a foreigner or its equivalent. In other words, the profession which in Greece was a consecration, involved in Rome the loss of civic rights. Who shall say how far the development of histrionic talent and the appreciation of it as such were affected by this absurd but entirely logical rule?

We have seen that two types of drama among the Romans remained popular for an indefinite period. The statements just made, however, are proved, rather than disproved, by these exceptions. The *Atellana* was a folk-drama, which in itself ensures longevity; it was also very old, and for the average Roman it was Roman from the first. The mime also was very old, but in its developed dramatic form it was neither Greek nor Roman, but really the child of the new era. It was Græco-Roman, and belonged to the Empire. The mime, too, as was said above, maintained itself for an indefinite period. In the long run, however, its vitality was due not to its superiority as an organic play, but to its enormous flexibility and to its power of adapting itself to the tastes of the passing hour. It always had a residuum of folk-elements, such as a few fixed characters and the habit of improvising dialogue; it could introduce popular songs and dances, also imitations and other music-hall 'turns.' In short, whatever it was capable of or had once been under Philistion and his compeers, it survived only as a theatrical performance, not as a high-class dramatic composition.

10. Parody of Christian rites.—Hatred of the Christians, for example, was long popular, and the consistent appeal of the mime to the populace is seen in the fact that as early, perhaps, as the beginning of the 2nd cent. the 'Christian' (ὁ Χριστιανὸς κομψοδούμενος [Greg. Naz. *Orat.* ii. 84]) had become a regular character in the mime. The favourite act was parodying the rites of the Christian Church, especially baptism. The candidate was brought on the stage accompanied by bishops, priests, and deacons; and all the ceremonial was gone through with.¹ A number of early saints were *mimi* who in the course of time had been converted then and there by the Divine power of the rite they were parodying, had confessed their faith from the stage, and had suffered martyrdom soon after. The most famous was Genesius in Diocletian's time. His speciality had been to imitate the 'working of the spirit' with a pretended fit, after which he proceeded to baptism. A church was erected to him, and to this day Saint Genesius still remains a specialist on epilepsy.² Even martyrdom was depicted in the most realistic fashion. But this was nothing new. In the old mime of *Laureolus*, the robber chieftain was (apparently) nailed to the cross, and, as Josephus tells us (*Ant.* xix. i. 13), the realism was heightened by a large supply of blood brought in for the occasion. In fact, Domitian once put the last touch to this delectable speciality by substituting the genuine crucifixion of a condemned criminal. That such an entertainment could still remain a burlesque is partly due to the fact, as Reich observes, that the sufferer was the clown. It is expressly stated that Saint Gelasinos was the *μῦθος δειρεπός*, i.e. the *μῦθος* or *stupidus*.

Occasionally the *mima* was converted. The famous case was that of Pelagia by Bishop Nonnos.³ As a rule, however, the *mima* was a

much harder nut to crack. The Christian Fathers were especially fond of designating her as a *πορνή* (Chrys. vii. 665 f. etc.).

It is only just to add that the *mimus* was not really to be blamed for his parodies. Throughout paganism he had ridiculed the ancient gods. This was characteristic of Hellenism, and no one thought anything of it. In their case, however, the Christians objected to it—a new point of view had come in from the East. And, when Christianity won the upper hand, the mime returned again to the old gods of paganism.

11. Christian opposition.—Attacks on the theatre begin with the first Christian writers (so Minucius Felix, Tatian, Arnobius, Augustine, Lactantius, Gregory Naz., etc.). Special works aimed at the theatre alone were written by Tertullian and Cyprian; and Chrysostom rarely forgets this his special vessel of wrath. In the course of time all this bitter polemic was systematized, supported, and connected by the dialectic of the law and of the Church.

All the old gods are devils (Tert. *Spect.* 19): Dionysus the old god is the lord of the theatre; therefore, the theatre belongs to a devil, the devil. He built it himself, and says expressly that it belongs to him (Tert. *op. cit.* 26). In the same way all dramatic arts come from the devil (pseud.-Cyprian. *Spect.* 4; Tatian, *Orat. ad Græc.* 22). This is a favourite topic for Chrysostom: through the mouth of the monks Christ speaks, through the mouth of the *mimi* the devil speaks (vii. 676 B). The songs of the mime are Satan's own, the dances of the mime are not otherwise (vi. 77 B, vii. 422). Πορνὴ πάντα ἔστί, etc., the whole show and all that is said and done by and during the same is inspired of hell, a demon's litany, a devil's sacrament (viii. 6 C, ix. 323 B). All who go to the mime become the devil's own (viii. 114 C). Therefore the Christian who goes to it is a perjurer, for when he was baptized he swore to renounce the devil and all his works (viii. 6 C). Everything about the mime shows that it comes hot from hell. Disssembling, disguise, imitation, *μῦθος*, is the devil's stock-in-trade, his reason for existence, the origin of his name. The chief aim of the mime is to raise a laugh. But laughter and gaiety come not from God—θεὸς οὐ γαίγεται—but from the devil (x. 590, vii. 97).

Long and fiery passages are given up to the various actors, above all to the *mimæ*. They curl their hair, they paint their cheeks, they roll their eyes, they glitter in jewels and gold—and who are these *mimæ*? The daughters of butchers, of shoemakers, even of slaves! Most seductive of all is the beautiful voice with which they know how to sing their *ὄδαι πορνικαί*, their *ὄδαι σατανικαί*, their 'ballads of the brothel,' their 'devil's own ditties.' Then, too, the language is common, vulgar, frivolous, full of oaths, not even intelligible, eking out its meaning with shouting and squealing! Yet the Christians are forever talking about the actresses, what they say, how they look, what they wear. Which one of these Christians can repeat the Psalms or passages from the Scriptures? Which one of them does not know all the songs from the mimes? The young people are singing them the entire day long. The mime is the theatre of concupiscence, an incurable plague, a poison, a snare of death (vii. 172), the training school of immorality, the seed of iniquity, the haunt of impurity and lewdness, the fiery furnace of the Babylonians heated to seventy times seven by the devil himself, etc. etc.

The above is a fierce arraignment, but of no great value except to indicate why Bishop Johannes was given the name of 'Chrysostomos.' As a matter of fact, the anathema of the Church was utterly powerless. Indeed, the Church actually lost ground, as there was evidently a large body of more or less conscientious Christians that saw no such harm in the mime as Chrysostom would have us suppose. Until the very end of the Eastern Empire interest in the mime never abated in the slightest degree, and it is well known that the metres, if not the music, of these same *ὄδαι πορνικαί* and *ὄδαι σατανικαί* attacked by Chrysostom actually entered into the hymnology of the Greek Church. Arius was accused of the same thing by Athanasius. Every hymnology bears traces of a similar process, and, as a matter of fact, this is by no means the only indication that neither time, nor change, nor creed has ever been able finally to sever the ancient bond between the Church and the theatre.
